BERI-BERI, a singularly fatal disease, often attended with swelling in the feet, and paralysis, first written on by Dr. J. G. Malcolmson, Madras Medical Service, and published by Madras Government, 1835.—*Dr. Buist's Catalogue.*

BERIA, a robber tribe of Central India. See India, p. 328.

BERING. HIND. Nima quassioides.

BERLINER-BLAU. GER. Prussian blue.

BERMUDA CEDAR. See Cedar. Deodar.

BERNIER; a traveller and long a resident in India, in the reigns of Shah Jahan and Aurung Zeb. He states that by the time of his arrival at the Court of Shah Jehan, the various robbers whom he had met on the road, had left him little money. He was physician at the Court of Aurung Zeb.

BEROSUS, a Babylonian and a learned Chaldean, who lived in the time of Alexander. He was a priest of Belus.

BERRA, Pashtu, Zizyphus Jujuba.

BERRYA AMMONILLA.—*Ro*

Trincomallie wood.	ENG.
Somendilla	SINGH.
Halmililla	„
Hamaniel	„
Tircanamalay maram	TAM.
„ chettu.	TEL.
Sarala devadaru	„

This is a native of Ceylon, but introduced into the continent of India. The wood is annually imported from Trincomallee, by which appellation it is known in the Madras market. It is highly esteemed for its lightness and strength, is straight grained, slightly pliant, tough and little affected by the atmosphere, and is employed in the construction of the massoola boats of Madras. It is also used for the spokes of wheels, for helves, handles, planes, frames, poles and shafts of carriages, it is inferior to *Sal* for spokes, and to the babool for some other purposes, but it is comparatively light and easily worked. The Madras market is still dependent on importation from Ceylon. Dr. Helfer mentions this tree, as growing on King's Island opposite Mergui, and as a light, strong, and valuable wood. Flowers, small, white with gold coloured anthers. The tree yields the best and most useful wood in Ceylon for naval purposes. It grows straight, for twenty to forty feet high, and from twelve to thirty inches in diameter. It and satin wood, were reported by Mr. Eyde, in his time, to be the most plentiful and valuable found in Ceylon; and obtainable at a moderate rate to answer the demands of the navy in India. He said that this may be considered superior to any wood for capstan bars, cross and trussel-trees, cask-staves, battens for yards, fishes for masts, boat-building, &c. And he adds that, at Madras, it was highly valued for coach-work from the toughness and fineness of its grain.—It grows in the Northern and Southern side of Ceylon a cubic foot weighs 48 lbs., the wood lasts 10 to 80 years, and is there used for casks, tubs, carts, waggons and house building. It is the best wood for oil casks in the island.—*Drs. Mason, Wight, Cleghorn, Mr. Edye, Mr. Rohde, Mr. Mendis, Dr. Helfer, M. E. J. R. Mr. Thwaites. Roxb. Vol. II.* p. 639 ; *Voigt.* 128

BERRYA MOLLIS, *Wall.*

Petwoon. Burm.

Found on elevated ground of British Burmah Wood red, much prized for axles, the poles o carts and ploughs, also used for spear handles A cubic foot weighs lbs. 60 to 62. In a full grown tree, on good soil, the average length of the trunk to the first branch is 50 feet, and average girth measured at 6 feet from the ground is 7 feet. It sells at 12 annas per cubic foot.—*Dr. Brandis.*

BER-SAHIBAH. Borneon. Brother-making.

BERSU. Hind. Leptopus cordifolius.

BERTHA, in Rajputanah, a form of landholdingyria, the ryots or peasantry are distinguished into Kobhrya and Perja. The former are those settled in Bertha proprietory, or other rent-free lands, and are not liable to be called on by government for any services, except the repair of roads, and attendance in the army upon particular occasions. The Perja, who occupy lands actually belonging to the Prince, though perhaps in the immediate possession of Jagheerdars, are, on the contrary, obliged to perform various services, both at the call of the Jagheerdar and of the Prince.—*Tod.*

BERTHELOTIA LANCEOLATA, *D. C. var.* Indica.

Reshami, Reshambuti, Sarmei. Hind.

Leaves, rasanna (kura sanna.)

An annual plant which grows abundantly in many parts of the plains up to Peshawar, in places forming thickets up to 4 and 5 feet high. They are mentioned in Dr. Royle's Illustr. of Himal. Bot. p. 19, as having been given to him as those of *Salvadora indica*, Royle, which they a good deal resemble, and are produced in the same arid tract of country extending from the banks of the Jumna towards Central India. It also grows in the Punjab. Dr. Royle pronounces the leaves to be an excellent substitute for Senna, and to be remarkable for growing with their edges vertical, and for having both sides covered with stomata. But Dr. Honigberger says that they are seldom used by the hakims. The plant occurs in many parts of the plains of the Punjab, where it forms thickets.—*Stewart, Honigberger*, p. 243. *Royle*, p. 456.—*Ill. Him. Bot. p.* 19.

BERU. Duk. Pens; writing reeds.

BERWAJA. Hind. Calligonum polygonoides.

BERYL.

Berullos	Gr.	Zamarrud	Pers. Hind.
Tarshish	Heb.		

The beryl is mentioned in Exodus 28, 10. It is found in the Siberian Altai range, but many beryls come from Khotan, Ilchi and the Chinese provinces, and many are imported from Ceylon. There is a beryl mine at the village of Paddioor or Patialey, about 40 miles E. N. E. of the town of Coimbatore found imbedded in a vein of magnesian limestone, traversed by hornblende rock. Beryls are also found in the sands of the Irawady. The beryl and emerald are of a similar nature, their component parts viz. silica, alumina, and glucina, coloured by the oxide of chrome, being the same. The only important difference is their colours, the emerald being of its own peculiar emerald green, which it derives from a small proportion of chrome. All the varieties of other colours, tinged more or less yellow, or blue or altogether colourless d beryls. But beryl is the harder being 7-the 8. It is also more compact and retainshe surface polish more perfectly than almost at other material. Not so the emerald. Them- mans cut it in facets and in the form of a st angular pyramid.

The constituents of the beryl and emerald are

	Beryl.		Emerald.
lucina............	15·50		12·50
Silica..	66·45		68·50
Alumina	16·75		15·75
Oxide of Chrome			0·30
of Iron			1·00
Lime......			0·25
Sp. Gr . .	2·76	to	2·73.
Hardness.	7·5	to	8·

The native form is a hexaedral prism terminated in a six-sided pyramid.—*King.*

BES, Hind, of Hazara, Salix, *Sp.* See Bais.

BESABIRAJA. See Surya-vansa.

BASADA. See Veddha.

BESALI, a river of Bhopal. See Sat-dhara. Sonari.

BESAN, Hind., the flour of a pulse such as gram, Cicer arietinum. It is also compounded into a cosmetic powder, with aromatics and the flour of several pulses, and is also used made of pea meal and orange peel as a detergent for cleaning the hair.—*Powell. Simmonds.* See Abir.

BESEN. Ger. Brooms.

BESH. Pers. More; hence Beshi, increase.

BESH KIMAT, of high price.

BESHBOLAH, in Long. 70° 50' E. and Lat. 33° 53' N.

BESISI. A race in the Malay Peninsula.

BESISIK, a Malay tribe in Kedah. See Kedah or Quedah. These seem to be identical.

BE-SITUN, a little village at the foot of rocky mountains, which are covered with bas-reliefs. The inscriptions are in the Bactro-medo, or Persian cuneiform writing character, of the Achæmenidæ, which was first deciphered by Burnouf and Lassen, afterwards by Rawlinson. The most important is the list of the Iranian nations subject to Darius in the Naksh-i-Rustam, which the Persians attribute to the chisel of their famous sculptor Ferhad. A description of them is to be found in Sir John Malcolm's Persia. Enormous marble capitals of columns are to be seen at Besitoon. There are two tablets. The one containing a mutilated Greek inscription, declaring it to be the work of Gotarzes; the other a Persipolitan sculpture, adorned with nearly 1,000 lines of cuneiform writing, exhibiting the religious vows of Darius Hystaspes after his return from the truction of Babylon, on the revolt of its pati or Governor, Nebukadnazzar, the on of Nebunet. Both C'tesias and Isodore tion a statue and pillar of Semiramis at aptane, but the sculptures of Semiramis and the inscription in Syriac characters have wholly disappeared. Baghistan is traditionally described as the pleasure grounds of Semiramis.

According to Sir H. Rawlinson, however, —"D'Anville first suggested the identity of Besitoon with the Baghistane of the Greeks, and there are good grounds from the ancient notices of this place for supposing him to be correct. Etymologically considered the evidence is even more striking. To solve all difficulties it may perhaps, he adds, be admitted that the sculpture did really exist in the lower part of the rock, scarped by the Assyrian queen; and that Khosroo Parviz, when he was preparing to make the scarped surface the back wall of his palace, and for that purpose began to excavate deeper in the mountain, destroyed the sculptures, and removed all further trace of them. With regard to the pillar of Semiramis, it is very curious than an Oriental writer of the 15th Century should describe the rock of Besitoon from his own observation, as though it were sculptured in the form of a minareh, or minaret. Certainly nothing of the kind now remains.—*Ferrier, Journ. Bunsen, Vol. III. p.* 457. See Rawlinson.

BESSI. SUMATRAN; Fruit of Averrhoa bilimbi.

BESSENT, properly, Basant'h HIND. The spring. See Basant'h, Kama, Vasant'ha.

BESSUS, the murderer of Darius. He was put to death in a cruel manner: his body was fastened to the ground, and the boughs of two trees were bent, and after being fastened to one of his limbs, allowed to spring back to their natural position. They tore him asunder. This fact is mentioned by Plutarch. This mode of executing criminals, is still occasionally used in Persia.—*Malcolm's History of Persia, Vo' I. p.* 73.

BEST, Captain, a scientific officer Madras Engineers. *Ob.* 1851. He wrote an account of the Guntoor famine of 1833 in the Mad. Lit. Trans. 1844. On the embankments of the Godavery in a Blue Book of 1851. On rain guages, and the registration of river freshes in the Mad. Lit. Trans. 1844, No. XXX. 178. A biographical notice of him appeared in the Madras and Bombay papers, October 1851.—*Dr. Buist's Catalogue.*

BESTA. KAR. TEL. A caste of fishermen in Madras and Mysore to which the palankeen bearers usually belong. They are also called Bestaru.—*Wilson's Glossary.*

BET or **BETA**. BENG. and HIND. Ratan cane. Calamus rotang; any cane.

BET or **BENT**, Panjab: land along a river, subject to periodical inundation.

BET, a name of the Bhot. See Bhot. India, *p.* 317. Tibet.

BETA, the beet-plants, a genus of which several species are used as vegetables. The leaves of B. cicla or white beet, are used as salads; and their midrib as a substitute for asparagus. Beta maritima or Sea Beet, requires a sandy soil; used as spinach, or a pot herb. The *red beet* and *mangel wurzil* affords abundance of amylaceous and saccharine matter. Beta Bengalinensis, the Bengal Beet, is the Paluk Sag or Palung Shak. BENG. and is cultivated in Bengal and the Northern Circars and its leaves are used by natives in their curries. when boiled it resembles spinach in flavour. The leaves shoot out again after being cut down.—*Roxb. II.* 59, *Voigt.* 321. *O'Shaughnessy, p.* 524.

BETCH, a branch of the Kuki in Cachar. See Kuki.

BETEEKH. Arab. Cucumis melo.

BETEL BOX. These boxes are in use in all parts of the South East of Asia. They are of gold, silver, or other metal and in Peninsular India, about one-fifth of the people have one always in their pockets. In Burmah the frame work of these boxes is formed of thin strips of bamboo plaited into the shape of a box; the basket-work foundation is then coated with 'Theetsee,' painted and varnished. Every Burman has one or more of these shaped boxes to hold his betel, cigars, money, &c.; and their women, in addition to the above purposes, use them as jewel and dressing cases. Specimens were exhibited from Pagan, in Burmah, celebrated for their manufacture. Inferior sorts are made all over Pegu and in the Shan states. The higher classes of Burmese use boxes of silver, whilst the nobles of the court of Ava use gold.

BETELA, Maleal. Betel Leaf.

BETEL-NUT, Areca Nut, Penang Nut.

Jambi	Jav.	Paaku	Tam.
Penang	Mal.	Vukka	Tel.
Araca	Maleal.	Wakka	„
Araca	Port.		

The Betel or Areca or Penang nut palm is grown in many parts of the East Indies and Eastern Archipelago, from the Red Sea to the Pacific Ocean, and the people to a very great extent use the kernel of its fruit as a masticatory. The areca palm is of elegant growth and rises with a very erect and slender trunk to a height of forty or even sixty feet, the summit terminating in a tuft of dark green foliage; the trunk is seldom more than eighteen inches to two feet in circumference. The tree produces fruit from the age of five to its twenty-fifth year: it begins to blossom in March and April and the nuts are fit to gather in the months of July and August and are fully ripe in September and October. Fourteen pounds is the average annual produce of a single tree. The fruit ripens only once during the year, but the nuts vary greatly in size, though their quality depends solely on the amount of astringent matter they contain, a point which is judged of by cutting them. If the white or medullary portion, which intersects the white or astringent part, be small, has assumed a bluish tinge, and the astringent part is very red, the nut is considered of good quality; but when the medullary portion is in large quantity, the nut is considered more mature, and, not possessing so much astringency, is esteemed less valuable.

The ordinary nuts have a thin brown rind, and in size are intermediate between walnuts and hazel nuts. Their general substance is of a feint oily grey colour, thickly marked with curly streaks of dark brown or black. The betel-nuts, although softer, resemble ivory, and in the arts are made into necklaces, rulers, tops of walking sticks, and other small objects. The best betel nut of the Madras Presidency grows in the Nuggur district of Mysore, and in Travancore. It occurs in the market sliced and in whole nuts, also boiled and raw, or split and dried hastily over a fire, or dried slowly in that manner. That used by families of rank in Travancore, is collected while the fruit is tender, the husk or outer pod is removed; the kernel, a round fleshy mass, is boiled in water. In the first boiling of the nut, when properly done, the water becomes red, thick, and of a consistence like starch, which is afterwards evaporated into a substance like catechu and is indeed known by the same name. The boiled nuts being then removed are sliced and dried the catechu like substance is rubbed over them, and, on being dried in the sun, they assume a deep black colour. Whole, unsliced nuts are also similarly treated. Nuts are fit for the slicing process in the months of July and August. Ripe nuts preserved in the pod are also in use. Nuts for exportation to Trichinopoly, Madura and Coimbatore, are prepared in thin slices, and colored or left in their natural hue. For Tinnevelly and other districts, the nuts are simply dried. The quantity of nuts produced on the coast of Sumatra, is stated at 80,000 piculs. The quantity imported annually by the Chinese, amounts to 45,000 or 48,000 piculs, exclusive of that brought there from Cochin China. It is carried by the people of the East in pouches and presented to guests in the houses of the rich, on silver trays, wrapped in gold and silver leaf, and in this form becomes an essential part in all ceremonial visiting. Indeed among some of the inhabitants of the Eastern Archipelago, to refuse to accept betel nut when offered, would give irreconcilable offence. It is believed to sweeten the breath, strengthen the stomach, and preserve the teeth: and when chewed with betel leaf, the piper betel, (*Linn.*) gives the saliva a red colour which it imparts to the lips and gums. But only some nations chew it with the betel-leaf, others add to it lime, tobacco, gambir, (an extract from the foliage of Uncaria gambir, (*Roxb.*) and the leaves of various species of pepper. White areca nuts form an article of trade with Burmah from Penang and Acheen. Ordinarily in Malabar they are dried, or cut into two or three slices; nuts are exported in their pods to Bombay. 2,000 candies on the average are annually exported from Travancore. In China they are met with both cut and whole and the imports are mostly the growth of Java, Singapore, Sumatra and Penang. The number of the trees of the Betel palm, in Travancore alone, is calculated at 1,02,32,873. It may give an idea of the great extent to which this masticatory is used in Southern Asia to notice the quantity and value of their Imports and Exports into the Madras Presidency alone, for the four years 1852-53 to 1855-56 inclusive.

IMPORTS.	Quantity.	Value.
Betel nut boiled.	Cwt. 2,09,827	Rs. 11,63,361

The Piper Betel, belongs to the pepper family of plants and furnishes the celebrated leaf of the Southern Asiatics, in which they enclose a few slices of the areca nut and a little shell lime. This they chew to sweeten the breath and keep off the pangs of hunger. It is, also, slightly narcotic. Rumphius describes six species of this vine, besides several wild and uncultivated varieties. It is very easily reared in the Indian Archipelago, but in the Peninsula of India, it requires manuring, frequent watering and great care, and in the northern parts of Hindustan it becomes an exotic very difficult to rear. The vine affords leaves fit for use in the second year, and continues to yield for more than thirty, the quantity diminishing as the plants grow older. The leaf mixed with betel nut, and quick-lime, forms a hot and acrid masticatory, is in common use in India and the Malayan Archipelago. In the Tenasserim Provinces the Karens plant the vines on their uplands, where there are tall forest trees. The branches of the trunks are lopped off, leaving only the topmost boughs, and the vines readily climb up and weave their dark, glossy leaves all over the summits, making a betel-vine farm a most beautiful object. Karen boys and maidens engage in this leaf harvest with great zest, and it is not uncommon for young men in seeking companions, to inquire who are the most agile climbers of poo-lah, or betel-leaf trees. The karen forests produce a wild species of piper, the leaf of which is used as a substitute for the common betel-leaf. The leaves are taken the utmost care of by the dealers, and are moved every day lest one leaf should touch another decayed one ; the decayed parts are carefully clipped away with scissors.—*Mason.*

BETEL LEAF PEPPER, ENG. Chavica betel, Mig. Piper betel.

BETHAL also PETHAL. HIND., of the Chenab, &c. Juniperus squamosa, the creeping Juniper.

BETHANY. A small village, now called Al Azirizah, about two miles from Jerusalem, on the eastern side of the Mount of Olives. On the summit of the Mount of Olives, within the area of a mosque, is a small circular chapel covering the stone which bears the foot-print shown as that of our Lord. From here the Ascension took place. Near the site of Bethpage is a wild and magnificent view of the mountains beyond the Dead Sea, where rises the peak from which Moses surveyed the Promised Land. The barren country around Jericho, with the desolate region of caves and precipitous rocks that compose the whole space between this and the Dead Sea, the pale waters of wich lie in the most perfect stillness below it, well deserve the name of wilderness.—*Skinner's Overland Journey, Vol.* I. p. 215.

BETHARA. A town of Chaldea.

BETHEL of Gen. xxviii, 2, 19, a compound word meaning God's house, El of the Greeks (Yl. in Hebrew and Phœnician) *i. e.* God, the strong, whence comes Elohim, literally the Gods and the Greco-Phœnician Bætylia or sacred stones supposed to have fallen down from heaven (Diopeteis) perhaps Aerolites which were honoured and held sacred on account of divine power supposed to be inherent in them : whether it was a common stone or an aerolite that Jacob had for a pillow cannot be known as he rose from his dream exclaiming (v. 17) How holy is this place, this is none other but the house of God, (Bait El)—and Jacob took the stone that he had made his pillow and set it up for a pillar and poured oil upon the top of it and called the name of the place Beth-el.—*Bunsen, Vol.*.IV. *p.* 242-3. See Betyli.

BETHESDA. A large tank on the east of Jerusalem, 360 feet long, 120 broad and 75 deep.

BETHLEHEM, now with 2,000 inhabitants mostly christians, lies about six miles south of Jerusalem.

BET-I-MUJNUN, Pers. Also Khilaf Balki, also Lejla-o-Mujnun. Hind. Salix Babylonica.

BET KA PHALL, Duk. Fruit of Calamus viminalis.

BETOOA, Beng.' also BETOO-SHAK. Beng. Chenopodium viride. White goosefoot.

BETRIAH, a river near Nabaroon in Kishnagurh.

BETTONGIA GRAYII of Gould, one of the Macropopidæ, is found in N. and S. Australia.

BETTA. Ancestor of rajah, of Mysore.

BETA-GANNAPPA, or DADUGA, Tel. Nauclea cordifolia, R.

BETTAMU or Bettapu Chettu. Calamus rotang, L. R. iii. 777.

BETTIAH. A town in India in Long. 84° 35 E. and Lat. 26°. 46' N. There are notices by Mr. Hodgson of three tall pillars or columns, in north Behar, two of the pillars surmounted by a lion, and each having an inscription upon the shaft, which was unintelligible at the time Mr. Hodgson wrote, 24th April, 1834. The Bettiah inscription is precisely the same as that of Delhi and Allahabad, No. I. (*Vol.* III. *p.* 482. *Vol.* IV. *p.* 125.) These are at Mathiah near Bettiah. Bahra and Rediah. The language of Inscription.—Pali. and character Old Pali. Date.—315, B. C. The Budhist king mentioned is Piadasi, or Asoka.

BETTUTNAUL, in Long. 75°. 22' E. and Lat. 14°. 52' N.

BETULA. The Birch, one of the Betulaceæ, about eight species of which occur in India; of those known in Nepaul are nitida, alvoides, utilis and acuminata. Some species of this genus grow in the Himalaya. B. acuminata grows on many of the mountains of Nepaul in the great valley of that country, following the course of its rivers and B. cylindrostachya and B. nitida are plants of Kamaon. The white birch yields a bark which the Kamtschadales chop up with the eggs of the sturgeon, and use as their ordinary food. The sap is acid, and an agreeable beverage, and may be kept for years without undergoing fermentation.

BETULA species? Atees Hindi? its bark in Northern India used to dye chintz red?

BETULA JACQUEMONTII, Spach.

Syn.

Betula bhojputra.—*Wall.*

This plant grows in Kamaon, Gharwal, and abundantly in the Punjaub Himalaya at from 7,000 to 11,500 feet, and the two plants appear to Dr. Stewart to be the same or very closely allied species. It also occurs on the border of western Tibet. It grows to a higher elevation than most other trees, and may generally be seen occupying a tract above Coniferous forests. The tree at times reaches 6 or 10 feet in girth and 35 feet high. The wood is almost valueless, and is only used for ploughs, small bridges, &c., at altitudes and in tracts where other trees are scarce. Mr. Watson, however, told Dr. Stewart that it is good for turning, and in Kanawar poles of it are used for carrying and swinging a heavy kind of ark in religious processions, which implies some strength and elasticity. In Ladak the striking part of the stick for polo, "hockey on horseback," is made from it. In Kangra, "being sacred," the bark is used for funeral piles, and at the shrines of Umrnath, in Kashmir, the pilgrims are said to strip and indue themselves with this. In Kashmir and Kumaon it is found very durable put under the earthen roofs, and it is largely used for covering umbrellas and packing apples, pomegranates tobacco, and drugs. It is also employed for writing paper, for which it is said to do excellently, and is exported to the plains for warpping round hooka tubes. It sells for three rupees a kharwar, (ass-load) in Kashmir, according to Lowther. The price in Chumba was stated to be ten to sixteen seers for a rupee. Longden mentions that the old bridge at Koksar, (now replaced by a more civilized one,) was made of birchen twigs.—*Ell. Fl. Andh. Royle, p.* 383. *Dr. J. L. Stewart.*

The Indian paper birch, was found by Dr. Wallich on the alps of Gharwal and Kumaon, in the Sutlej valley between Rampur and Sungnam at an elevation of 10,000 to 13,000 feet, and it is a plant of Kaghan, Pangi, Busahir and Lahaul. It is nearly allied to Betula papyracea of North America. So late as the age of the hindu dramas, about the beginning of the christian era, Professor Wilson mentions that the hindoos still used the inner bark of this birch as paper and the same is mentioned by Dr. Cleghorn in his recent Punjaub Report. The bark peels off in large sheets, and is used for umbrellas, for writing upon, and for the flexible tubes of hookhas. Every consignment of the ornamental papier mache ware of Kashmir reaches the Punjaub packed in wrappers of birch-bark. The houses in Kashmir are often roofed with it. The bark is used for chatta or rude umbrellas, and for covering tubes of hookas, or native smoking pipes and being of a sacred character it is burnt on the funeral pile. Hindoo pilgrims visiting the shrine of Amrnath in Kashmir divest themselves of their ordinary clothes before entering the shrine, covering their bodies with the bhojpatra. It is now brought to the plains for lining the tubes of hookahs and the leaves or bark are used to cover the baskets of Ganges water sold by itinerant pilgrims. Wood good: used for cups, common turnery, and for fuel by travellers in the higher ranges.—*J. L. Stewart, M. D. Royle Ill. p.* 383. *Eng. Cyc.* 452. *Elliot's Fl. Andh. Powell, Econ. Prod. Punj. BEUERRE. Fr. Butter.

BEURA. Can. Margosa bark.

BEUTH, called also Beruth, also Behuth, and in Byblius called Baltis, means void of genesis, *i. e.* identical with space, the mother's womb, the primeval mother. The fundamental idea is that of the mother of life or source of life, which is the meaning of Havvah (Eve) of Genesis.

BEWA. See Inscriptions, p. 389.

BEYAH, according to Rennell anciently called Beypast'ha, is the Hyphasis or Huphasis of Alexander—the modern Ravi.—*Rennell, Memoir, p.* 102.

BEYREE, in L. 70° 31' E. and Lat. 22° 7' N.

BEYREE BUNDER, in L. 70° 20' E. and Lat. 22° 30' N.

BEYPORE RIVER, on the Malabar Coast in Lat. 11° 10' N., 6 miles south of Calicut has 8 or 10 feet on the bar at high tides.

BEZ also **BAZ.** Pers. Mace.

BEYLA, towns in India : one in L. 70° 52' E. and Lat. 22° 43' N. another Beylah in Long. 71° 0' E. and Lat. 23° 41' N. a third in Long. 74° 24' E. and Lat. 19° 10' N.

BEYT in L. 22° 28½' N. L. 69° 9' E. also written Beit, Bete and Bate, an island in the gulf of Cambay. It was taken possession of by the pirates of Jugut, after they had been defeated by Kutub Shah. In A. D. 1482, Beyt fell, after having fought twenty naval engagements. Beyt fort was taken and destroyed on the 15th October 1859. The rise of the tide is 14 feet. See Waghir, India, p. 335.

There are several kinds of bezoar, most of them concretions found in the gall-bladders or intestines of various animals. Some are of a deepish olive green colour. They also said to be found in the stomach of goats, dogs, cows, or other animals ; the hog bezoar, the bovine bezoar, and the camel bezoar are also mentioned and this last the hindoos turn into a yellow paint ; but the harder substances the hindoo jewellers polish and thread into jewels. The word bezoar is from the Persian pa-zahr, from pao, to purify and zahr poison. Ouseley says that the pazen bezoar, from the mountain goat, the boz-i-kohi is the most prized in Persia. Indeed the name was at first applied to a concretion found in the stomach of a goat in Persia, but is now used to designate similar substances found in various other animals, as the cow, horse, boar, camel, &c. That produced by the goat was formerly much prized as medicine, sometimes selling for ten times its weight in gold; but since its constituent parts have been ascertained, it has ceased to be sought after. Different animals produce bezoar, the composition of which differs often in the same kind of animal, as well as in dissimilar species. The oriental bezoar is formed of bile and resin; other kinds are found to be made of hair, others of wood, and some principally of magnesia and phosphate of lime. The true bezoar from Persia is counterfeited so well by pipe-clay and ox-gall that even those have been deceived who procure the genuine from the animal. The genuine throws off only a small scale when a hot needle is thrust into it, and put into hot water it remains unchanged: when rubbed on chalk, the trace should be yellow, but green on quick lime. That found in the camel is highly esteemed as a yellow pigment by the hindus. The cow bezoar is valued in the Chinese market at from $20 to $25 a catty, and is used by the Chinese solely as a medicine. The little which is brought there is from India. In the interior of the Rajang district, in Borneo, are two species of monkey which produce the Batu Nakit, or Bezoar stone. One is large and black with a long tail called *Nakit*. One is large and red, but has no tail, and is called *basi*. In one out of ten or twenty of these two monkeys, are found the Bezoar; if not extracted quickly after the death of the animal, it is said to be of inferior size and quality. Crawfurd also mentions that *the Bezoar* stones brought from Borneo are said to be obtained from the stomach and intestines of monkeys. Dr. Honigberger, mentions that a Bezoar of the Eastern doctors (Padzahr seeah, Pers: kanee zahr mohra, Hind.) is dark green serpentine, and a specimen in the Madras Museum brought from Delhi by Mr. Charles Gubbins, as Zahr mohra, is undoubtedly this mineral. While this part was passing through the press, a mahomedan called to offer for sale two large rings of "Zehr mora," both formed of a serpentine marble. Faulkner's description seems also that of a serpentine. It is brought to Bombay from Guzerat and Malabar in small quantities, and is chiefly re-exported to China. Ainslie mentions that it is brought to India from Ceylon, Bussorah and the sea ports in the gulf of Persia, also that as a medicine, Bezoar is supposed, by the native practitioners, to possess sovereign virtues as an external application in cases of bites of snakes, stings of scorpions, hydrophobia, &c. Bezoars do not deserve the least confidence. That known as Oriental Bezoar, was formerly used in medicine in Europe, and formerly in India a stone weighing an ounce was sold for £5 and one of 4½ oz. for £100. The Fadaniya Bezoar of the Punjaub are intestinal calculi, consisting of phosphate of lime, &c. They occur there in the intestines of various animals.—*Dr. Honigberger, p.* 244. *O'Shaughnessy, page* 691. *Crawfurd, page* 52. *Powell, Hand Book, Econ. Prod. Punjaub, p.* 153. *Morrison.*

BEZOMMAR is the seat of the Patriarch, or spiritual head of all the Armenian catholics in the East. He is assisted by several bishops, and about twenty or thirty monks.—*Robinson's Travels, Vol. II. p.* 45.

BGHAI. A Karen tribe. One of the great sections of the Karen race, the other two being the Sgau and the Pwo. The Bghai tribes are the Bghai-ka-ten; Bghai-ko-hta; Bghai-muhtai; Lavmay, and Manu manam. See Karen.

BHABAGUPTA. Name of a king in the inscription at Baolee. See Inscriptions, p. 391.

BHABAR, HIND. Urtica heterophylla also Andropogon involutum.

BHABOOT, HIND. Ashes of dried cow-dung which hindus smear over their foreheads and bodies. See Atteet.

BHABRA, near Bairath on the road between Jeypore and Delhi whence a stone now in the Calcutta Museum was got. It contains an edict of king Pyadasi, and specifically refers to the precepts and doctrines of "Bhagavat Boodha."—*Prinsep's Tibet, Tartary and Mongolia, p.* 155. See Inscriptions, p. 372.

BHABRI, HIND. Amarantus anardana.

BHABRIA. A section of the Koli race, dwelling from Baroda north to Mahee Kanta.—*Wils.*

BHABUR. HIND. Eriophorum cannabinum.—*Royle.* See Cotton Grass; Cyperaceæ.

BHABUR. A dense forest tract of jungle on sloping ground 10 or 12 miles broad under the Sewalic hills.

BHADARIA. A tribe of mendicants of brahminical descent, who profess astrology.—*Wilson's Glossary.*

BHADAUREA. A branch of Chouhon rajputs in Bhadawar.—*Wilson's Glossary.*

BHADER, a river of Kattywar, in L. 22° 10' N., L. 71° 18' S. E. runs S. W. into the Indian Ocean, near Poorbunder, in L. 21° 38' N., L. 69° 46' E., Length 135 miles.

BHADERPOOR, in L. 78° 3' E. and L. 24° 20' N.

BHADON, the fifth month of the hindu luni-solar year, August and September. On the 3rd of this month, amongst rajputs there is a grand procession to the Chougan; the 8th, or Ashtami, is the birth of Crishna. Amongst rajputs, there are several holidays in this month, when the periodical rains are in full descent; but that on the last but one (*súdi* 14, or 29th) is the most remarkable. *Tod's Rajasthan, Vol. I, p.* 581. See Nat'-hdwar.

BHADORAH, in L. 77° 22'. E. and L. 24° 56' N.

BHADRA, a hindu month. See Krishna; Vishnu; Yama.

BHADRA-KALI, Sans. from bhadra, goodness, and Kali, a goddess. See Bhadra.

BHADRA MUSTE, Sans., also bhadra tunga gaddi, Tel. Cyperus hexastachya.

BHADRAPADA. A hindu month, when the sun is in the sign Sinha, corresponding to the Tamil month of Auvani. See Varsha.

BHADRASENA, king of Magadha, one of the Sisunaga dynasty, B. C. 400 —*Bunsen, Vol. III, pp.* 538,9 and 42. See Bhattiya.

BHADRI-NATH. The town and temple of Bhadri-Nath are situate on the west bank of the Alacknunda, in the centre of a valley of about four miles long, and one mile in its greatest breadth. The east bank rises considerably higher than the west bank, and is on a level with the top of the temple. About the middle of the bank is a large cistern about twenty or thirty feet square, covered in with a sloping roof of deal planks supported on wooden posts. This is called Tapta-kund, and is a warm bath, supplied by a spring of hot water issuing from the mountain by a subterraneous passage, and conducted to the cistern through a small spout representing a dragon's or a griffin's head. A little to the left of it is Surya-cund, another hot spring, issuing in a very small stream through a fissure in the bank. There is no basin or reservoir to receive the water. The principal idol, Bhadri-nath, is placed opposite the door, at the farther extremity: above its head is a small looking glass, which reflects the objects from the outside: in front of it are two or three lamps which furnish all the light the apartment receives excepting from the door diffusing such feeble glimmering rays, that nothing was clearly distinguished. It is dressed in a suit of gold and silver brocade. Below it was a table, or board, covered with the same kind of cloth.—*Fraser's Himalaya Mountains, pp.* 373-375. See Badri-nath.

BHAEE also **KARAKA**, Duk. Sterculia colorata.

BHAEE-GOOROO VALEE, Sans. From bhaee, a brother, and gooroo, a teacher.

BHAEOUL. Seemingly the Grewia oppositifolia. Lieut. Pogson says it grows in the ravines of Simla. The ropes made from it are strong and durable; during the depth of winter, the villagers feed their cattle on the leaves, which sell from three to five annas per load of 25 to 45 seers. The tree seems to thrive as well in the hot valleys, as at higher and colder situations. It supplies a crop of twigs annually.

BHAG, in Long. 68° 24′ E. and Lat. 28° 18′ N.

BHAGA, a river in Ladak. See Linga; Ladak, Lahoul.

BHAGADA KOT, in Long. 73° 59′ E. and Lat. 32° 9′ N.

BHAGADATTA. The king of the Yavana, who submitted to king Jarasandha. But one royal person defeated by one Jarasandha, king of Bhagadha, was Semiramis.—*Bunsen, Vol. p. III.* 555.

BHAGANA. Sans. The circumference of a circle. Independently of astronomical purposes, the hindus frequently divide the circumference of the circle into 12 Rasi or Signs, subdivided sexagesimally into Bhaga, Cala, Vicala, &c., *i. e.* degrees, minutes, seconds, &c. Bhagana means also a revolution.—*E. Warren.*

BAGAR, Hind. The grass Eriophorum cannabinum.

BHAGAT, Hind. A hindu religious puritan initiated by a necklace of beads round the neck, and a circle on the forehead. After initiation the puritan abstains from flesh and spirits. But Bhagat, Bhakt, simply means a follower, or worshipper as Siva bhagat, or Vishnu bhagat, a worshipper or follower of Siva or Vishnu. Bhagat is also the name given to the head of the math or temple of Kanoba. He works himself into a state of hysteria, on the Janm Ashtami, and the people believing him to be then possessed by Krishna, worship him with incense and prostration, and present sick people to be touched and cured.

BHAGAVADA, a hindu goddess. Bartolomeo says that her figure was on the pagoda coin, and gave it the name. See Bhagavati; Pagoda.

BHAGAVAN or **BHAGAVAT.** A name of deity, denoting God. The derivation, reduced from metaphor, means the primary cause of creation. Bhagwan is the name by which all hindus recognise the Supreme Being.—*Taylor.* See Inscriptions, 388; Krishna; Narayana.

BHAGAVAN DASA. The slave of Bhagavan. See Narayana.

BHAGAVAT, Sans. Divine. See Bhakta; Kali; Kasambi; Krishna; Vallabha Acharya; Vaishnava; Yama.

BHAGAVATA, Sans. From Bhagavat, divine. See Inscriptions, 375. Veda.

BHAGAVATA. An extinct Vaishnava sect, who wore the usual marks, the discus, club, &c., of that divinity and likewise reverenced the salagram and tulasi; the Bhagavat of the present day is one who follows particularly the authority of the Sri Bhagavat Purana.

BHAGAVATA SARIRA of the Bactro-Pali inscriptions discovered by generals Ventura and Court and Mr. Masson; certain titles in them such as Maharaja or King and Chhatrapa, "Satrap," and particular terms, such as Bhagavata Sarira, or relics of Buddah; mata-pita or mother and father, putra son, and vihara, a monastery, had long been known.

BHAGAVAT-GEETA. Sans. From Bhagavat, divine, and geeta, a hymn, *i. e.*, Divine Song, a Sanscrit poem in the form of a dialogue between Arjuna and Krishna. It is an episode containing Krishna's instructions. The brahmins regard it as only inferior to the Vedas; first translated by Charles Wilkins in 1785. It is the most intelligible and most interesting of all the Sanscrit writings. It is written in splendid metre and belongs to a literary age. The dates of the Schools of Philosophy, the Dirasana of the hindus, depend on that of Buddha, who lived 544 B. C. according to the hindus, and 350 B. C. according to German critics. The Bhagavat Gita, the Mahabarat and the Ramayana are to the hindu all that the bible, the newspaper and the library are to Europeans.—*Taylor.*

BHAGAVATI. Sans. In hindu mythology is the wife of Bhagavan. Bhagavati, Sans. is from bhoga, to endure or enjoy.

BHAGAVAT PURANA. One of the books of the hindus, styled Purana, of which there are eighteen. The Vishnu Purana is that best known. See Sumatra.

BHAGAVEN SAKYA MUNI. A name engraved on a copper plate found in the relic chamber of one of the Kenneri caves, age 2nd century, B. C. See Inscriptions, p. 391.

BHAGELA. See Bagela.

BHAGELCUND. "The land of the Bhagel." Rewah is the capital of Bhagelkhund, founded by the Bhagela Rajpoots, a branch of the Solanki kings of Anhulwarra.—*Tod's Rajasthan, Vol. I.* See Bagelkand, Guzerat.

BHAUGELPOOR. A revenue district of Bengal, formed out of the ancient Bahar.

BHAGIRATHA. One of the Solar dynasty. See Surya Vansa.

BHAGIRATTI PEAK, in L. 30° 56′ N. 5; and L. 78° 59′ 1. E. is in Garhwal, near the origin of the Bhagiratti river, and 21,390 feet. G. T. S. in height. Herbert and Hodgson call this peak the "Pyramid," and give Lat. N. 30° 54′ 6″; Long. Gr. 79° 2′ 8″; E. Height 21,379 feet.—*Schlag.*

BHAGMUTTY. A river of Nepaul. Katmandu, the capital is built at the junction of the Bhagmutty and Bishmutty.

BHAG-NUGGUR. The ancient name of Hyderabad in the Dekkan.

BHAGNUR The rich alluvial lands under the Jumna.

BHAGOOL. A river of Shahjehanpore and running near Shahi in the Bareilly district.

BHAGTA. A tribe of the Ahir race.

BHAGALPUR, in L. 25° 14′ 8″, N. Long. 86° 56′ 6″ E., in Bahar, on the right bank of the Ganges, 143 miles E. of Dinapur. At the level of the railway it is 154 feet above the sea. Hooker mentions that he found growing here the Tecoma jasminoides, Erythrina; Adansonia, Bombax, teak, banyan, peepul, sissoo; Casuarina, Terminalia, Melia and Bauhinia.—*Him. Jour. Vol. I. p.* 92. See India, 328 9, Kol. 536.

BHAGWAN. Hind. God, Lord, the deity, the supreme Creator. Amongst Vaishnava hindus, a name of Vishnu. See Bhagavan.

BHAGWANA, in Baluchistan, is a cave in a rock filled with the dried mummy-like bodies of infants some of which when seen by Dr. had a comparatively recent appearance.

BHAI, Hind. Brother, comrade, from which are many compound words: *Bhai-band*, relatives, connections, fellow townsmen. *Bhyachara* or Bhai-bhant lands held in common by relatives.—*Elliot, Sup. Glos. p.* 64.

BHAI Latterly the title of Bhaee was in practice frequently given to any Sikh of eminent sanctity, whether his ancestor were the companion of a gooroo or not. The Behdi and Sodhi, however, confine themselves to the distinctive names of their tribes, as the Behdee called themselves Bâba and the Sodhee sometimes arrogate to themselves the title of gooroo, as the representatives of Govind and Ram Das.—*Cunningham's History of the Sikhs, p.* 65.

BHAI BHAGTOO. The founder of the Kythul family. He was a useful partizan of Lord Lake, but was subsequently reduced to comparative insignificance under the operation of the British system of escheat. Dhurrum Singh, the ancestor of the respectable Bhai of Bagreean, a place between the Sutlej and Jumna, was likewise a follower of Hur Raee.

BHAIAD, Hind. A brotherhood, a term given to the kinsmen of a Jharejah chief. See Bhai.

BHAI-BIRRUNG. The seed of a plant brought to Ajmere, from Harowtee, considered warm and used in mesalih, and in prescriptions to promote digestion.—*Genl. Med. Top., p.* 126.

BHAI-BYA, Burm, ? In Amherst, a timber used for house posts, commonly called White Jarool.—*Captain Dance.*

BHAIL, Hind. Salix, sp.

BHAINS, Hind. a male buffalo. Mhains. Hind. a she buffalo.

BHAINSH, Hind. Salix tetrasperma.

BHAI-PHAMBA. The flowers of a plant brought to Ajmere from Harowtee, considered warm, and used to promote digestion.—*Gen. Med. Top., p.* 126.

BHAIRA. See Oryza sativa.

BHAIRAVA, Sanscrit, Tremendous. A title of Mahadeva, as the destroyer. Bhairava or Bharui is an incarnation or a son of Siva, in

traveller from the West, Professor Bikmore, from America, who was in Sumatra in 1865 mentions that they are an inland people, the Malays from Menangkabau having spread and occupied all the coasts. They believe in evil spirits and omens. On the Dutch acquiring the possession of the plain of the Mandeling valley, the Batta dwelling there were compelled to abandon their cannabalism but all beyond Dutch territory, the race still continue to pursue their old customs. He had not, however, been able to verify that part of Sir Stamford Raffles information which includes marrying into another tribe, ... incurring the penalty. The Rajah of
red the Dutch Governor at Pedang
eaten human flesh at least forty
he relished it above everything
ever tasted.—*Bikmore's Travels*,

A rajput tribe of Yadubansi des-
are the rulers of Jeysulmer which
A. D. 1156 and give their name
country, between Hissar and the
lled Bhattiana. The tract from Loni
as called Bhatner after them. Some
became converts to mahomedanism, after Timour's invasion. Shortly after that event, a colony migrated from near Bhawalpur under a leader Bersi, and captured Bhutnere from a mahomedan Chief.—(*Elliot*)

The Jit and the Bhatti seem to have been so
distinction is now impossible.
the advance of Mahmud of
arfare on the Indus,
Tod to have long
themselves in the
in the Panjab, and
power as they were
six royal races.
twelve years after
Shahab-ud-din the
northern desert attempted to wrest
om the mahomedan empire, and Kutub-
s successor, conducted in person the
the invading Jit. When the dethron-
zzia sought their protection, they
r forces with their Scythic brethren
nd marched with the queen at
meet her foes, but she fell in
attempt to regain her kingdom.
mentioned that in A. D. 1397, when Timour invaded India, Bhutnair was attacked for "having distressed him exceedingly on his invasion of Multan," when he "in person scoured the country and cut off a tribe of banditti called Jit." The Batti of Jessulmer retain their hindu notions, though with some degree of laxity from their intercourse with the mahomedans on the northern and western frontiers; while those which long occupied the rth-east tracts, towards Phoolra and the arah, on becoming pr

to have either interest in or connection with the parent state. The Bhatti did not enjoy the same martial reputation as the Rahtore, Chohon, or Seesodia, but he was deemed to equal if not surpass the Cuchwaha, or any of its kindred branches, Nirooka or Shekhavat. He is not perhaps so athletic as the Rahtore, or so tall as the Cuchwaha, but generally fairer than either, and possesses the jewish features of the Bikaner rajpoots. The Bhatti intermarries with all the families of Rajwarra, though seldom with the Ranas of Mewar. The late Juggut Sing of Jeipoor had five wives of this stock. The dress of the Bhatti consists of a *jamah*, or tunic of white cloth or chintz reaching to the knee; the *cumerbund*, or ceinture, tied so high as to present no appearance of waist; trowsers very loose, and in many folds, drawn tight at the ancle, and a turban, generally of a scarlet colour, rising conically full a foot from the head. A dagger, shield and sword complete the dress. The Bhattiani wears a fine woollen brilliant red gagra or petticoat, and scarf thirty feet in width. They, also, wear the chaori, or rings of ivory or bone, which cover their arms from the shoulder to the wrist, of value from sixteen to thirty-five rupees a set, and silver kurri (massive rings or anklets) are worn by all classes, who deny themselves the necessaries of life until they attain this ornament. The poorer Rajpootni assist in the husbandry. The Bhatti is addicted to the immoderate use of opium or umlpani, "infusion," and the pipe. The Bhatti annals may be divided into four distinct epochs: 1st, that of Heri, the ancestor of the Yadu race. 2nd, their expulsion, or the voluntary abandonment of India by his children, with their relations of the Hericula and Pandu races, for the countries west of the Indus: their sarundhati, the ...rust'hali: the founding of Gu... suggests that with the kings of Room and ... orasan. 3rd, their expulsion from Zabulist'han, colonization of the Punjab, and creation of the new capital of Salbahanpoor. 4th, their expulsion from the Punjab, and settlement in Mer, the rocky oasis of Maroo to the erection of Tunnote in the Indian desert in A D. 731.

The Bhatti, are a branch of the Yadu or Jadoo race, whose power was paramount in India three thousand years ago; and the prince now governing this distant corner of India, claims descent from those Yadu kings who ruled from the Yamuna to the "world's end," at that remote period. Colonel Tod is of opinion that the Yadu-Bhatti is the original Yuti colony from Central Asia, and that the Jit prince of Salpur was the predecessor the Yadu Bhatti races.—*Tod's Rajasthan, Vol. II. pp.* 212,285.

BHATTHI HIND. A distillery, a still, a ...er, a ...

BHATTIAH, a mercantile race, supposed by Colonel Tod to have been one of the equestrian order converted into the commercial. The habits of the Bhattiah are like those of the Arorah, next to whom he ranks as to activity and wealth. The Arorah and Bhattiah have commercial houses at Shikarpoor, Hydrabad, and even at Surat and Jeipoor.

BHATOO. A wandering tribe in the south of India who perform as athletæ. They are not numerous, they are known as dumur in the Canarese districts as kollati in the Dekhan. Dumbram in Tamil and Dumberwar in Telugu, and as jugglers and tumblers. Their young women are prostituted or are devoted at Chinchor, as murli girls, and they reverence the idols at Triputty and Gudaloor (Cuddalore) ? They keep no idols, do not respect brahmins. They bury the dead.

BHATTIYA, a brahminical dynasty of five kings of Magadha in ancient India who reigned from B. C. 578 to B. C. 447 all parricides. According to Bunsen (iii. 539) the Bhattya dynasty, was also called Maha-padma, "abounding in stones," Bhattya lost his independence and the dynasty commences with his son, Bimbasara who reigned 52 years, and was succeeded by his son Agata Satru who reigned 32 years. The seventh king after Bimbasara was named Sisunaga who reigned 18 years. He was five years younger than, and was the friend of Buddha. He was succeeded by Kalasoka (28 years) whose son Bhadrasena, with 22 years for himself and his nine brothers, was the predecessor of Nanda.—*Bunsen, Vol. III. p.* 539.

The Bhattiya Sisunaga and Nanda dynasties ruled as under.

BHATULA, Hind. a hard bread made from the grain of "arhar," "chenna" and "mung."—*Elliot.*

BHAU, Mahr. A title of respect as Hari-bhau several of the mahratta leaders were termed Bhao as Sedaseva (Sadashi) Bhao. See Bhao.

BHAU, Hind. A daughter in-law.

BHAUCHYA. One of the 14 Patriarchs who are supposed to preside successively over the 14 Manwantara of the Calpa.

BHAU DAJI, Dr., a learned medical man, a native of Western India of the middle of the nineteenth century. He was born near Sawantwaree in the Concan, and educated a medical man at the Elphinstone and Grant Medical Colleges. He has written on female infanticide, he founded the Bombay Reform Association and the Boards of Education, museums and learned societies owe much to his exertions.

BHAUMA. One of the names of the planet Mars.

BHAU MALLANG, Lat 19° 6, N., L. 73° 12 E. in the Konkan, a hill 10 miles N. E. of Panwel. Top of the hill, is 2,250 feet, above the sea.

BHAUTTOOI, Beng. Chrysopogon acicularis

BHAVA, Sans. The world, hence Bhavanada, Sans. from bhava, the world, and anunda, joy.

BHAVA-BHUTI. A learned brahman. See Kala Priyanath.

BHAWAN. A house, a temple.

BOWANY. A river that rises at the eastern foot of the Neilgherry Hills, among the Kundah group, Lat. 11° 15' Lon. 76° 4' and joins the Cauvery in Coimbatore.

BHAVANJI CHETTU. See Psoralea corylifolia.

BHAVER, Hind. In the N. W. Himalaya, forest tract below the Sewalik range : this term is not used in the Punjab.

BHAVAN, Sans. From Bhăvă, a name of Siva.

BHAVANI, wife of Siva, a hindu goddess, to whom also, the names Aparajita, Chandika, [illegible]ri, Parvati, Prakriti, are seed or cucumber seed, and strain. The spices render it more inebriating. The hemp-plant in tropical countries also exudes a gum, a very powerful stimulating narcotic, which it does not produce in cold countries. It is the Charras of India The dried leaves under the name of bangh partake of this narcotic principle, and are used all over India, to produce intoxicating effects. Under the Burmese government at Tavoy, no one was allowed to cultivate the plant withou a licence from Government. Sometimes a general permission was given, and at other times a general prohibition would be issued. Throughout India also bhang is one of the exciseable articles and the plants are taxed for revenue.—*Faulkner. Herklots. Mason. Powell. Faulkner.* See Cannabis.

BHANGAR BIJ, HIND. Asphodelus fistulosus.

A person acting as a scavenger in a household They are often mahomedans and often of the Madega caste. They are found all over India well to do, earning very large incomes, but they are becoming fewer daily as many emigrate and, under British rule, educate their children for higher avocations. The word is probably from Bhangi, the shoulder stick for carrying weights. The descriptions given of them by Wilson and Elliot are no longer applicable. One man in a small hamlet in Berar was earning Rs. 37 monthly.

BHANGI. A labourer who carries burthens with a shoulder pole like a milk-maid.

BHANGI, HIND. A shoulder pole with slings from which boxes are suspended. In the Panjab, Dandy poles, Banghy poles and shafts are made of the timber of Acer cultratum ; Bambusa arundinacea ; Betula bhojputra ; Cotoneaster obtusa ; Ficus Indica ; Fraxinus floribunda ; Fraxinus Xanthylloides ; Grewia oppositifolia ; Lagerstrœmia parviflora ; Quercus dilatata ; Quercus semicarpifolia ; Taxus baccata and Alnus campestris.

BHANGRA, HIND. Eclipta erecta, also Viscum album.

BHANPOORA in Long. 75° 50′ E. and Lat. 24° 30′ N.

BHANPOORA, near Bhanpoora, is a small rivulet called the Rewa, coming from the glen the pass, near which is the mausoleum of swunt Rao Holcar, adjoining the scene of his atest glory.—*Tod's Rajasthan, Vol. II. p.*

[illegible] Bambusa arundinacea :

[illegible]

[illegible]h of the Ahir tribe.

BHANT, [illegible]G Volkameria infortunata.—*Roxb.* Clerodendron infortunatum.—*Linn.* Syn. of Clerodendron viscosum.—*Vent.*

BHANTA, SANS. Solanum melongena.

BHANWAR, HIND. Ipomæa sessiliflora.

BHAO, MAHR. A brother, a cousin, an honorific adjunct to names, as Sadaseva Rao Bhao.

BHAO, HIND. A daughter-in-law. Bhao Begum, the Begum daughter-in-law.

BHAOLEE. Rent of land paid in kind.

BHAORA. A scattered migratory tribe in the peninsula of India who snare game and wild beasts. They are styled Pardhi by the Canarese, and Harn Pardhi, and Harn Shikari in the Dekhan, and the British style them the Shikari and hunter caste.

BHAR, also written Bhur are an aboriginal race in Central India, of whom the Raj-bhur, the Bhurut and Bhurputwa are sections though they do not eat together nor intermarry. They are said to have occupied the tract from Gorukpur to Bundelcund and Saugor, and many old stone forts there are ascribed to them, but in that part of India they are now filling the meanest situations, on the hills to the east of Mirzapur, the principalities of Korar, Kurrich and Huraha, are however each held by Bhurrajahs.—*Elliot, p.* 83. See India, p. 327.

BHARA, HIND. Hir[illegible]

BHARADI, the godd[illegible] learning, a name of Saraswati.

BHARADWAJA appears in the Ramayana as a sage residing at Prayaga or Allahabad, where a temple dedicated to him still exists on the high bank of the Ganges. In the Mahabharat, Bharadwaja, is described as residing at Haridwar, and the father of Drona the military preceptor of the Pandava and Kaurava princes. He is also the parent of Arundhati, the wife of Vaishtha. Sir H. Elliot suggests that there may have been two saints of nearly the same name, Bhāradwaja and Bhăradwaja ? In Sanscrit the long A indicates descent : as Sá[illegible] from Sagara, Bhagirathee from Bhagiratha. [illegible] the same way Drona the son of Bháradwa[illegible] called Bháradwaj in the Mahabharata. [illegible] Hindu.

BHARAJAY BUNDER in Long 46' E. and Lat. 24° 30' N.

BHARANGI. Verbesina prostrata. [illegible] bark of the stem of this small plant is [illegible] to Ajmere from Harowtee. It is considered [illegible] and is used to promote digestion.—*Gen.* [illegible] *Top. p.* 126.

BHARANGI CHETTU, also Gantu [illegible]angi, Clerodendron, Sp. W. 68.—Bhar[illegible] and Br. 1259—Bhargni, which are ex[illegible] to be Clerodendron Jiphonanthus but [illegible] refer to another species of Clerodend[illegible] Gantu bharangi. q. v.

BHARAO from Bharava, a field of a size to require a bhara of seed. It is a term in use in the Himalaya.

BHARATA. Bharata the founder of a dynasty in the vicinity of the Indus. The line ended with Samvarana, being driven from the Indus country, westward by the Pankala. Bharata is said to have been the first to establish a raj in India, but this probably means merely a new dynasty.—*Bunsen, Vol. iii. p.* 558, 589). See Balla.

BHARATA, a dynasty in India known as the Bharatidæ finally overwhelmed by the Pankala. Their last ruler was Samvarma who was driven by the Pankala westward. Under this name, Bunsen supposes two historical accounts. The first Bharata, a supposed son of Bhumanya, he thinks is the name of the primitive race, who settled in Central Hindustan, the Madhyadesa or Aryavarta. The Bharata kingdom seems to have been established between B. C. 2,600 and 2,200. The country was overwhelmed by the Pankala, and it was followed by an interregnum B. C. 589. (See Inscriptions.) Wheeler says that Bharata, son of Dushyanta was of the Aryan race, and established the Bharata kingdom in Hindustan, amidst a preceding people. Some authors of Europe have lately endeavoured to apply the term Bharata, to the entire of India, but the extent of the kingdom formed by the Bharata is extremely uncertain. It seems however to have had tributary kings or kingdoms in alliance, and it probably varied in extent with the usual fortunes of nations. A slokam in the Sanskrit work, the Amarakosha,

Ariavartaha punia bhumi hi,
Mad'hiam Vindhya Himava Yoho,

i. e. "The Arian country, the sacred land (lies) between the Vindhya and the Himalaya," indicates the ruling race and the boundaries of the kingdom held by them at the period that Amara Sinha wrote the Amara-kosha. Duryodhana, son of rajah Draupada of Panchala aided the Kaurava in the battle at Kurukshetra, as also did the king of Magadha. The poem of the Mahabharata contains 100,000 verses, each verse containing 32 syllables. The groundwork of the poem, the Kaurava and Pandava war, contains 24,000 verses. This leading story commences with Atri, a flash of light from whose eye produced the moon (which in Sanskrit is male), and that being was the ancestor of the lunar dynasty of kings. One of these kings was Parū ravas, whose love for the heavenly nymph Urvasi is detailed in Kalidasa's drama Vikramorvasi:—his descendants in a direct line were Ajas, Nabusha and Yagati the last becoming the father of Puru and Yadu. The line of Yadu cquired celebrity through Vasudeva and his ter Kunti or Pritha, and also through his sons Krishna and Balarama, who have become reputed as incarnations of the god Vishnu. Puru's son was Dushyanta, who married Sakuntala, and their son was Bharata. From Bharata descended successively Hastin, Kuru and Santanu. Santanu married Satyavati, already the mother of Vyasa, but their children died without offspring, and Satyavati then asked her son Tyasa to marry her widowed daughters-in-law, by one of them he had Dhritarashtra born blind and by another Pandu born a leper or an albino. Dhritarashtra married Gandhari, and amongst their many children were Duryodhana also called Suyodhana and Duhsasana, these were the Kaurava. Pandu married two wives, viz. Pritha sister of Vasudeva and aunt of Krishna, and Madri. By Pritha, he had three sons, Yudhishthira, Bhima and Arjuna, by Madri. twins Vakula and Sahadeva and these were the Pandava. Both the Kaurava and the Pandava were related to Krishna, but the Pandava more nearly so, owing to their mother Pritha being aunt of Krishna. Vyasa the compiler of the Mahabharata is the reputed grandfather of both the Kaurava and the Pandava. It is the series of events, which happened in the life of the Kaurava and Pandava, that forms the ground work of the great epos of the Mahabharata, and they may thus be briefly related:

Santanu had resided in Hastinapur, the ancient Dehli and after his demise, Dhritarashtra was by seniority entitled to succeed. But as he was blind, he resigned the throne in favour of his brother Pandu. The latter became a powerful monarch, but after a while, having become tired of his regal duties, he abdicated and retired to the forests of the Himalaya, to indulge in his favourite sport, the chase. His brother Dhritarashtra, then resumed the reins of government, but being blind, his uncle Bhishma governed for him and conducted the education of his sons. After a while Pandu died and his widow Pritha ar[illegible] her five sons ret[illegible]l to Dhritarasht[illegible] court to be educ[illegible] long with his own children, their c[illegible] A lear. But the Pandava brothers were sup[illegible]s and their cousin Duryodhana out of se, a te [illegible]y tried to destroy them, first by poison, hat ri at trials of arms: Subsequently, Drona, a br[illegible]man, who had taught the Kaurava, brought about a reconciliation, and the relatives unitedly attacked Drupada, king of Panchala (Canouj) who, principally by the Pandava's aid was defeated. On this, the blind king Dhritarashtra resolved to pass over his son Duryodhana and named his nephew Yudhisthera, the eldest of the Pandava to the throne, and their cousin, Duryodhana made another effort to destroy them by burning them alive. This, also, they escaped, but they considered it advisable to conceal themselves, which they did by assuming the form of mendicant brahmins and retired to the forests. After some time they were informed by Vyasa that Drupada king of the Panchala would make his daughter Draupadi, queen of a tournament to be won by the most successful competitor, and she was won by Arjuna. On this occurred a civil commotion in which Drupada nearly lost his life,—but Draupadi went with the Pandava brothers and became their joint polyandric wife.

At that time, chastity prior to marriage does not seem to have been adhered to, for Satyavati, who married Kuru, had previously born a son (the celebrated Vyasa). And, to an impetuous son, Pritha, aunt of Krishna, who subsequently married Pandu, had previously born a son Karna, in some miraculous manner: and, both Krishna and Bal Rama are said to have associated with their sister before she was married to Arjuna, as his second wife. After the tournament, the Kaurava and Pandava made peace, the former to reign at Hastinapur, the ancient Dehli, and the Pandava at Khandavaprastha, the modern Dehli. Yudhishthra the eldest of the Pandava, reigned so successfully that he resolved to declare himself emperor, by the performance of the Rajasaya sacrifice. This was accomplished with much splendour, but Yudhishthra was afterwards involved by his cousin Duryodhana, in a game at dice, and Yudhishthra lost everything, kingdom, wealth, and his joint wife Draupadi. Duryodhana offered to restore their kingdom if they would exile themselves for 13 years. In these 13 years, they all took service with king Virata of Matsya and ultimately defended him against an attack of Duryodhana. On this account, Virata gave his daughter Uttara in marriage to Abhimanya, son of Arjuna by Subahdra. In claiming restoration to their kingdom, at the close of the 13 years, the Pandava first tried negotiations, offering to be content with five small towns, and they ultimately resolved to fight it out on the plain of Kurukshetra, the rules of battle being duly laid down. In the battle that ensued, and which lasted 18 days, the Kaurava lost successively all their chiefs, Bhishma on the 10th day, Drona on the fifth day, Karna on the second day, and their last commander Salya was killed on the first day of his command. In these battles, much foul play was practised on both sides. After the close of the battle Yudhishthira was elected heir apparent of the old blind king Dhritarashtra. But the latter subsequently abdicated and led the life of a recluse, along with his wife Gandhari, Pritha the mother of the Pandava and their uncle Vidura. Vidura soon died and all the rest of the royal exiles perished in a forest conflagration. The grief of the Pandavas, for this was great and they too after hearing also of Krishna's death and of the destruction of Dwarka, resolved to abdicate, and they all set out for Mount Meru but all save Yudhishthira perished before reaching it. Yudhishthira ultimately entered Indra's heaven and there found all the Kaurava relatives and his brothers.

The Mahabarata contains as an episode, the Bhagavadgita, a discourse on the Yoga philosophy. Both Professors Lassen and Mr. Wheeler consider that the Pandava history in the Mahabharata convey a history of India in successive periods.—*Westminster Review, April* 1068.

BHARATA-VARSHU. Sans. from bharata, and varshu, a place. Bharatavarsa, is an ancient name of India, so called from king Bharat. It is still the hindu name for the continent of India and was the only name formerly used by the natives for the countries that the British include in the term India. Hindu, for the people, and Hindustan, for the country, now generally applied by natives and foreigners, are pro[illegible] of Arian origin, from the rivers, Haft Hindu, which the Arians met in the Punjab. Bharata was an ancient king of India, and hence Mr. Wilkins derives its name; in so doing of course rejecting the supposition, that the river Indus (properly Sindhu, vulgarly pronounced Sindh and the S. altered to H, Hindh, either gave a name to the country, or received one from it: rejecting also Indu, a name of the moon) being the origin of Hindu and Hindustan, the Sanscrit having no such words. See Hetopadesa, p. 333; Inscriptions; Hindu.

BHARATI. Sans. Speech, or its goddess: perhaps "Bharadi," a name of Saraswati, the goddess of learning. The prevailing title of the latter Sringagri gurus.

BHARATKANDA. See Magadha.

BHARAVA, Hind. Same as Bharao, a field of a size needing a bhara of grain to be sown.

BHARBHANI, Hind. Argemone Mexicana.

BHAR-BUNJA, Hind. Grain parchers, selling sweet-meats.

BHARGAVA, Sans. The son of Bărigoo.

BHAROUDEN, in L. 76° 30′ E. and L. 25° 55′ N.

BHARI, Hind: Cajanus bi-color.

BHART-KUL. A sub-division of Gour brahmans

BHARTTIHARI JOGI. An order of hindu mendicants who say that they were instituted by Bharatri hari, brother of Vikramaditya, a century before Christ.

BHARWI, Hind. Imperata Kœnigii.

BHARWUTTIA. See Bahr-Wattiah. Rajpoots.

BHASKARA, Sans. From bhas, light, and kri, to do. A treatise on the sun, its true nature, in the Mimansa-Upanga. See Vidya.

BHASKARA ACHARYA. An Indian astronomer, who wrote a commentary on the Siddhanta in Hindu books. He is stated to have flourished in the 4252d year of the Cali

Yug (A. D. 1150); but it is known that he was posterior to Arya-bhatta who wrote his treatise in A. D. 1322.—*Capt. E. Warren.* See Sanakadi Sampradayi.

BHASHA, SANS. A dialect, from bhash, to speak. The terms Bhasha or Pracrit mean vernacular tongues. See Gaura, India, p. 321.

BHASHYA, SANS. From Bhasha, a tongue, a lingual treatise. One of these treatises was written by Vallabha Acharya.

BHASNUAM, SANS. Ashes.

BHAT, GUZ. HIND. Paddy. Boiled rice. Curry-bhat, Anglo-Beng. Curry and rice. Doodh-bhat, rice and milk. A British nursery rhyme, in Calcutta, goes

Kitsha kitsha kowa k'hai.
Doodha bhata Baba k'hai.
Baba k'hai chori.
Musalah ka thori

BHAT, HIND. The Bard.

Bhatta	SANS.	Bardeit	[illegible]D.
Phatis	GREEK.	Parat	[illegible]EB.
Vates	LAT.	Bard	ENG.

This is the court ministrel of India, the almanac maker, the chronologist, the family bard, the astrologer, the genealogist. They are found all over India, but are numerous in and near Rajputanah, the Birm-bhat and Jaga-bhat, the former at weddings and the other at festive occasions, recite the deeds of ancestors; the latter keep the family records of rajputs. Bhat, is however a word seemingly of different origins, as its applications are very various. According to Professor Wilson in the Glossary and Sir Henry Elliot concurs in this, it is a title or cognomen of learned brahmans; (2) also the name of a brahmanical tribe in Benares said to have sprung from a Mahratta [illegible] and a mother of the Sarwaria tribe of [illegible]ns; (3) a common title of Mahratta [illegible], especially if they live by begging. [illegible] Bhat of Southern India, is also the bard, the [illegible]ger and genealogist, but, brahmans often [illegible] their work, as in Rohilcund. According [illegible]e fable of their origin, Mahadeva created [illegible]at to attend to his lion and bull, but the bull was daily killed by the lion. On which, Mahadeva, tired with daily creating a bull, formed the Charun, equally devout as the Bhat, but of bolder spirit, and gave him charge of the animals, from which date the bull was never destroyed by the lion.—*Wilson's Gloss. Elliot's Supple. Gloss. Malcolm's Central India.* See Bard; Charun; Cutch; India, p. 334; Rajput.

BHATA, HIND. Crotalaria Burhia.

BHA-TA-KA. BURM. In Tavoy, a wood used for common carpentry.—*Captain Dance.*

BHATANI, a race of people, said to be of mixed origin.—*A. Cunningham.*

BHATGAON, a district of Nepal. town of same name is perhaps superior to Khatmandoo, for though the least considerable of the three chief towns in point of size, yet its buildings in general have a more striking appearance; and its streets, if not much wider, are at all events much cleaner than those of the metropolis, a distinction which it owes to its admirable brick pavement. Bhatgong lies E. by S. of Khatmandoo, at a distance of nearly 8 road miles. Its ancient name was Dhurmapatan, and it is called by the Newar race, Khopodaire; by whom it is also described to resemble in figure the Dumbroo, or guitar, of Mahadeo. It is the favorite residence of the brahmins of Nepaul, containing many more families of that order than Khatmandoo and Patun together.

BHAT-KATAI, also Bhat-katia. SANS. Solanum Jacquini.—*Willde,* also Solanum Xanthocarpum also Argemone Mexicana.

BHATKOORAL, HIND. A hard close grained wood, of a light grey color and not heavy. Rather scarce in the Santhal jungles from Raneebahal to Hasdiha about forty miles. Well adapted for timber bridges, where strength and toughness require to be combined with lightness.—*Calc. Engineers' Journal.*

BHATMIL, HIND. Argemone Mexicana.

BHAT-NAGAR, HIND. A tribe of Kayets, originally from Bhatner.—*Elliot.*

BHAT-NIGGI, HIND. Wikstræmia salicifolia.

BHATOTAR, HIND Lands allotted to bard

BHAT-SHOLA, BENG. Æschynomene Roxburghii.

BHATTA, SANSC. A sage; according to Wilson, a brahmin who is acquainted with Sanscrit literature.—*Elliot. Wilson.*

BHATTA ACHARYA. A teacher of Sanscrit literature.—*Wilson.*

BHATTA, HIND. TAM. TEL. Any extra allowance in India, ploughman's wages in kind.

BHATTA, BATTA OR **BATTAK.** A Malay race, addicted to eating human begins. They have long been known to be given to this unusual practice. They occupy the valley of Mandeling and to the west, and the easterly portion are under the dominion of the Dutch. The language they use is said to be different from the Malay and to have several dialects, but it has an alphabet invented by themselves, and in this matter they are perhaps the only human beings who have advanced to a knowledge of letters, but continued to eat each other. Marsden in his history of Sumatra notices them. The writings of Marco Polo show that so long ago as A. D. 1290, they were known to be addicted to indulgence in this propensity, and Sir Stamford Raffles, in 1820, after visiting Tampanuli bay, mentioned that for a person convicted of adultery, of midnight robbery, prisoners of war, a person intermarrying with another tribe, a person treacherously attacking a village, a house or another person, the punishment was to be cut up and eaten alive. The most recent

BHAL. A tribe of proprietory rajputs, in Secundrabad, Balundshahr, Hatras and Tuppul in Aligurh.—*Elliot*

BHALABIPOORA. A submerged city in Kattiwar, inland from Bhownuggur, covered with 18 feet of alluvium. Half the towns and villages around are built from the bricks and carved stones of the ancient city.—*Dr. Nicholson, Bombay Times, February* 1852. See Balabhi.

BHALGAON. Two towns in India one in L. 78° 20' E. and L. 22° 53' N. the other in L. 85° 19' E. and L. 27° 45' N.

BHALIKA, contemporary with Dhritarashtra, and the five brothers Pandu, Bhalika means the Bactrian, from Balkh, the later form of the name of that city.

BHALLATAKI, SANS. also Bhallátamu. also Arushkhara. SANS. Bhilawa, HIND. Semecarpus anacardium, L. Marking nut.

BHALLA, BENG. Semecarpus anacardium. Marking nut tree.

BHALLODE in L. 73° 20' E. and L. 21° 51' N.

BHALOO, HIND. A bear.

BHALLOO SOOR. HIND. Meles collaris, wi[illegible] albogularis.—*Blyth.*

[illegible]I-SULTAN. The Bhal rajput clan [illegible]e in Benaudhra and Goruckpoor.

[illegible]ALUNJ. A town in L. 84° 4' E. and [illegible]7° 33' N.

[illegible]HAMAH. A race in the valley of Nepaul [illegible]osed to be an offshoot of the Newar. The [illegible]mah shaves his head like the Bhotiah.

BHAMADATASA. The name of a king on one of the coins of the Ramadatta series of Kalinga.

BHAMADATTA. A king of Kalinga, supposed to be the Brahmadatta, who at Buddha's death received the tooth relic at Kalinga. See Inscriptions, p. 384.

BHAMBUR. A ruined town in Sind, on the banks of the Indus, captured during the khalifat of Harun-ur-Rashid.

BHAMO in upper Burmah, distant about one hundred and eighty miles N. N. E. from the royal city of Mandalay. The old town of Bhamo lies two days journey up the Tapan river, one of the nearest tributaries of the Irrawaddy in that locality, Shans were once the principal settlers in the old town. The present city is situated about forty miles west of the Chinese frontier, and contains about two thousand houses, having a wall and raised embankment all round it. Many of the houses are of brick, built principally by the Chinese, of whom about one-half of the population is composed. The remainder are Shan and Burmese. It carries on a trade by means of caravans, with some of the large cities in Western China, in [illegible]llen, cotton and silk goods. Several large found in the neighbourhood. There is a Chinese temple, which is one of the most remarkable buildings in that town. Though not kept in very decent repair, it is considered rather a handsome building, one of the first erected on the site of the present town. See Bamo, China, India, p. 344. Ka-khyen. Panthay, Mahomedan.

BHAMOREE in Long. 78° 24' E. and Long 23° 18' N.

BHAMTI, also Bhamatya; in Berar, Bhamwatya, a pick-pocket, a thief.

BHAN. A captive seized by a Bahr-Wattiah. See Bahrwattiah, Rajpoots.

BHAN, HIND. SINDI. Populus Euphratica, the Euphrates poplar, grows in N. W. Himalaya; used in Sind for rafters and turning work. It is to be found nowhere else in the Bombay Presidency.

BHAN, HIND. Rhus cotinus; its leaves are used as a tan.

BHAN-BHWAY, BURM. In Tavoy, used for house posts like Sissoo. (*Qu.* is this the Bhai Bya)?

BHAND. A clan descended from the Bahrupia clan, they are singers, dancers and change their costumes as mimics. Bahrupia is from two hindi words, "Bahu" many, "rupia" countenances.—*Elliot.*

BHAND, HIND. Geranium nodosum.

BHANDAR, a mixture sacred to Kandoba, of powdered turmeric and another substance.

BHANDAR in Long. 83° 10' E and Lat. 27° 33' N.

BHANDAR. A cocoanut tree toddy drawer.

BHAND BHAGTEEAH, HIND. Mimics, actors.

BHANDER. The desert, S. W. of Rajputanah. See Mewar.

BHANDIBAJAN, HIND. Sageretia Brandrethiana.

BHANDUCK in Long. 79° 12' E. and Lat. 20° 11' N.

BHANDUGAON in Long. 75° 41' E. and Lat. 18° 21' N.

BHANG, HIND. PERS. SANSC.

Subjah, Subji,		Banghi..... ...	TAM. TEL.
Sidhi .. .	GUZ. HIND.		

The larger leaves and capsules of the dried hemp plant, Cannabis sativa are usually termed Bhang. They are used by the natives of India for making an intoxicating drink bearing the same name, also for smoking; the powdered leaves are used in infusion and in sweetmeats as an intoxicating drug. It is generally in a liquid form, and is fiercely intoxicating. Its recipe is hemp leaves, washed in water, 3 drams; black pepper, 45 grains; cloves, nutmegs and mace, of each 11½ grains; triturate, the ingredients with eight ounces of water, or milk, or with the juice of water-melon his destructive character, and of Kali. He is a terrific deity, and can only be satisfied by blood. He cut off the fifth head of Brahma, with his thumb nail. According to Major Tod there are two Bhairava, the fair, and the black (Gora and Kala,) who in the field of battle are the standard-bearers of their mother. The sable deity is the most worshipped. The dog is sacred to him, and in sculptures he is commonly represented on one. He is also called Bajranga, or of thunderbolt frame. Mr. Ward, states that, under the name of Bhairava, Siva is regent of Kashi (Benares). All persons dying at Benares are entitled to a place in Siva's heaven ; but if any one violate the laws of the Shaster during his residence, Bhairava grinds him to death. At the celebrated Lat of Bhairva at Benares, the Kan-phata jogi ascetics officiate as priests. A temple is dedicated to Bhyru and his wife Jayeesuri at Loni, about twelve miles from Poona, into which people bitten by snakes are brought, and, hindus believe, invariably recover. Bhyru will not even permit the neem-tree, used as a preservative against the bites of snakes, to grow near the place, as all persons so bitten are under his special care. In the temple of Kylas at Ellora is a beautiful sculpture of him bearing in his hands the damara, the hooded snake, and apparently a richly sculptured sceptre.—*Cole Myth. Hind. p.* 73,

BHAIRAVA-JOAP.. " At some distance to the north of the Jaina temples of Girnar and above them on the verge of the hill, stands a huge insulated rock, the Bhairava joap, or 'Leap of Death,' otherwise styled the Rajamela-vanapathar—the ' desire realizing rock,'—whence hindus have often been tempted by demoniac superstition to throw themselves away in the hope of a happy future. Laying a cocanut on the dizzy verge of this rock, the deluded victim attemps to poise himself upon it and in another instant he is beyond humanity's reach, and his body a prey to the vultures that soar under the lofty cliff. Such suicide has long been forbidden, but only three or four years ago three Kunbi, keeping secret their intentions, ascended and made the fatal leap ; some Rabari had also determined to do the same, but were restrained."

BHAIYACHARA villages owned by people descendants from a common stock. See Bhai, Bhaiad.

BHAJEPOOR, in Long. 80° 53' E. and Lat. 28° 19' N.

BHAJI, HIND. SANS. Greens.

BHAKRA, HIND. Tribulus lanuginosus and T. terrestris.

BHAKRI. A yellow earth used in coarse dyeing at Multan.

BHAKTA OR BHAGAT, a term amongst the Vaishnava, now usually applied to a tan, or any individual more devout than his neighbours. The Bhakta formerly were a sect who worshipped Vishnu as Vasudeva.—*Wilson.* See Bhagavata. Hindu.

BHAKTA. HIND. See Dakshina.

BHAKTA MALA, a work in which is embodied the legendary history of all the most celebrated Bhakta or devotees of the Vaishnava order. It was originally written in a Hindi dialect, by Nabha Ji, about A. D. 1580, but was added to by Narayan Das who probably wrote in the reign of Shah Jehan. This termed the *Mala* was added to in A. D. 1713 by Krishna Das, the additions being named the Tika.—*Wilson.*

BHAKTI in hinduism, signifies a union of implicit faith with incessant devotion. The doctrine of the Bhakta was an important innovation upon the primitive hindu religion. The object of the Vedas, as exhibited in the Vedanta, seems to have been the inculcation of fixed religious duties as a general acknowledgment of the supremacy of the deities or of any deity ; and, beyond that, the necessity of overcoming material impurities, by acts of self-denial and profound meditation ; and so fitting the spiritual part for its return to its original source. This system was diffused throughout the old pagan world. But the fervent adoration of one deity superseded all this necessity, and broke down practice and speculation, moral duties and political distinctions. In the Bhagavat, Krishna is made to declare that to his worshipper, such worship presents whatever he wishes,—paradise-like rations, godhead, &c. and is infinitely more efficacious than any or all observances, than abstraction, than knowledge of the divine nature, than the subjugation of the passions, than the practice of the Yoga, than charity, than virtue, or anything that is deemed most meritorious. An important consequence results from these premises—that as all men are alike capable of feeling the sentiments of faith and devotion, it follows that all castes become by such sentiments equally pure. Amongst the Vantswara sectarians founded by Chaitanya, all persons of all castes are admitted into the sect and all are at liberty to sink their civil differences in the general circulation of mendicant and ascetic devotees in which character they receive food from any hands, and of course eat and live with each other, without regard to former distinctions. In like manner, as followers of one faith, all individuals are equally entitled to the prasad, or food which has been previously presented to the deity and it is probably the distribution of this, annually, at Jaganath, that has given rise to the idea that at this place all castes of hindus eat together.

BHAKULKAIRY in L. 78° 2' E.

be given, according to her worshipper's opinions of her, Durga and Bhavani, are two names of Prakriti the symbol of created nature, and, as Parvati, Kali, Durga, and Bhavani the wife of Siva bears a strong resemblance to the Isis of Egypt, to the Juno of Homer, to Hecate, to the armed Pallas, and to the Lucretian Venus. As Kali, she is the agent for her husband's decisions, she is often depicted with the pasha or string in her hands, for binding and strangling incorrigible offenders. As Durga, or active virtue, she destroyed the Asura. Bhavani, in the form of Parvati is nature personified; in which character she is fabled, in one of the hypotheses of the hindus, to have been the mother of Brahma, Vishnu, and Siva, and to have divided herself and become their *sacti.* The Saiva hindus are worshippers of Siva and his wife Bhavani conjointly, and adore the lingum, and yoni, in the compound type of the god and goddess. Speaking of Bhavani, as distinguished by a variety of names implying nature, and, among others, using that of Sakti, or Sacti, Paolino, in his voyage, gives an account of her as the Magna Mater of the hindus: he says, she changes and transforms herself into a thousand shapes, and appears sometimes as a man and sometimes as a woman. This author observes that on her own forehead, as well as on that of her votaries is painted the yoni, or medhra which is represented by two side strokes, and a red one in the middle. In page 341, he again uses the word Medhra: when describing the marks on the forehead, &c., by which hindus distinguish their sect, he says, that the mark of Devi's sectaries is made of 'three strokes; the lateral, white or yellow, the middle always red. This mark represents the medhra, that is, the womb of Bhavani, from which everything existing was produced: This word medhra is supposed to be a term used in Malabar, similar to yoni. Bhavani and her consort Siva are extensively worshipped in the South of India, have a multitude of small temples, but there is little or no reverence. It would seem as if a Scythic and an Egyptian goddess, with their respective attributes and mixtures of war, love, philosophy, physiology, cosmogony and final judgment had all been amalgamated. As a war goddess, Bhavani is often invoked. Tod tells us that, in the belief of rajputs, the double edged sword, presented by Goruknath, in the forest of the Tiger mount, could with the proper incantation, "sever rocks." It is surmised to be the individual blade which is yet annually worshipped by the sovereign and chiefs on one of the nine days sacred to the god of war; a rite completely Scythic. The genealogists of the family, repeated to him the incantation: "by the preceptor Goruknath, and the great god, Eklinga; by Takyac the serpent, and the sage Harita; by Bhavani (Pallas), strike!"—*Tod's Rajasthan, Vol. I. p.* 226. *Cole. Myth. Hind. p.* 96. *Moor. Hindoo Pantheon. Sir William Jones. Paolino's voyage.* See Aparajita, Bhavani, Bhawani Chandica, Devi; Durga, Hooli; Kali; Osiris; Parvati, Prakriti, Sacti; Sects, Siva.

BHAWULPORE STATE skirts British territory for about 300 miles. Its territory is partly under cultivation and partly desert. The cultivated tract (*i. e.* exclusive of the desert portion) lies along the left banks of the Sutlej, Chenab and Indus, successively, for about 300 miles and is on an average eight miles in breadth. The area is 2,483 square miles of which 702 are uncultivable, but only 1,111 square miles are under cultivation, of which 537 square miles or 3,43,702 acres are irrigated by inundation canals, 168 square miles by wells, and 406 square miles by inundation from the river. There is no rain cultivation. The population is estimated at 364,502 souls, of whom 10,000 reside in forts and villages in the desert, the numbers to the square miles in the fertile portion being 147. Bhawulpur state is inhabited by the Daoodputra race, the Jut, and hindus. The Daoodputra claim to be of Arabian extraction and the reigning family it is said, trace their descent to Harun-al-Rashid the caliph of Bagdad. When in Sind they formed two sections, the Kalora and Daoodputra. The Kalora expelled the Daoodputra, who settled in Bhawulpur, Bhawul Khan was the most prosperous ruler. The Bhawulpur nawabs have been grossly licentious, and a vein of insanity has run through all their family. The country became independent during the dismemberment of the Dourani empire which followed the expulsion of shah Soojah from Cabul. The first British treaty with Bhawulpore was in 1833. The intercourse with the State has been chiefly about the navigation of the Indus. The British bound themselves not to interfere with the internal administration. In 1838, they pushed on a little further. They stipulated that the Nawab should act in subordinate co-operation with the British Government and acknowledge its supremacy. They prohibited him performing any alliances without their consent, and enjoined upon him to submit all disputes to their arbitration. He bound himself, moreover, to furnish troops at the requisition of the British Government, according to his means. With all this the State retained its independence, and does so still. The Nawab was true to his engagements, and afforded them valuable aid in 1847-48 in the operations against Mooltan. From 1850 the seeds of internal discord began to be sown. The Nawab

Bhawul Khan, with the audacious folly common to eastern princes determined to make his third son, Sadik Yar, Mahomed Sadik Khan, his heir, to the exclusion of the eldest son. The British Government disapproved of this whim of the Nabob's, but allowed him to carry it out. In a very short time the elder son Futteh Khan with the aid of the Daoodputras succeeded in deposing the younger and seating himself upon the ancestral musnud. The British Government recognised him, and he on his part accepted the engagements entered into by his father. The ex-Nawab found an asylum in Lahore and received a grant of sixteen hundred rupees per month for his retinue, jewels, and private expenses. Not a year passed before his restless spirit led him again into trouble. He would not relinquish the idea of ruling Bahawulpore. This dangerous design induced the Government to place him under strict surveillance and to reduce his allowance by one-half. The other half was allowed to accumulate for him till it should seem proper to make it over to him or his heirs. This turbulent, ambitious prince died in the Fort of Lahore. Nabob Fattah Khan died 3rd October 1855, and was succeeded by his eldest son, Rahim Yar Khan, on whose demise in 1866, Bhawulpore, was assumed by the British during the minority of its chief. Bhawulpore town is built on the banks of the river Gharra. Multan, Bahawulpur, and Lahore, have long been celebrated for silks; Bahawulpur, especially, for its figured and fancy silks, and Lahore for striped and plain silk pieces. Pattiala, Gurdaspur, Shapur, Peshawur, Ludhiana and Amritsar, also manufacture silks.—*Aitchison. Powell. Newspapers.*

BHA-WOON, Burm. A tree of Moulmein, converted into planks for building.—*Cal. Cat. Ex.* 1862.

BHED MANGI, Hind. Cyamopsis psoraloides.

BHEEL. See Bhil.

BHEEL, in L. 73° 14' E. and L. 22° 19' N.

BHEELALAH. A tribe of Central India claim a descent, by their father, from the Rajputs, their mother being of the Bheel tribe.—*Malcolm's Central India, Vol. I. p.* 550.

BHEELAZZA, in L. 73° 41' E. and L. 26° 5' N.

BHEER. Three towns in India, one in L. 75° 49' E. and L. 19° 2' N., a second in L. 75° 0' E. and L. 26° 24' N., a third in L. 73° 20' E. and L. 34° 19' N.

BHEEM. A prince of Mewar who was celebrated for activity, and could, while his steed was urged to its speed, disengage and suspend himself by the arms from the bough of a tree; to one of these experiments, however, he owed his death as he dislocated his spine in a feat of strength.—*Tod's Rajasthan, Vol. I p.* 392.

BHEEMAH. A river of the Mahratta country which joins the Kistna to the east of Zorapoor. It is often confined to a narrow bed, as at Korygaon where it is crossed in the rains by a flying bridge.

BHEEMA-TERAI. The valley of the Bheemah river, famed for its breed of hardy poneys or small horses. The breed is known in Northern India, as the Beemrathali. Mawa, the horse which bore Holcar in many a desperate strife, was of this breed. The head is a model, exhibiting the highest quality of blood: ears small and pointed, eyes full and protruding, and a mouth that could drink out of a tea-cup. This is the type of the Bheemah t'herra breed. One of them, "Cupid" long in our possession, was a perfect model.

BHEKEL, Hind. Prinsepia utilis.

BHEKKAR, Hind. Adhatoda vasica.

BHEKLING, also Bhekul, Hindi of Kanawar, Prinsepia utilis.

BHEELA, Hind. Semecarpus anacardium, Marking nut.

BHEL, Hind. Andromeda ovalifolia.

BHELA, Sans. Duk. Hind Semecarpus anacardium.

BHENDEE, Tam. also BENDAY KAI, Tam. Pods of Abelmoschus esculentus. The capsules, when green, are boiled whole and eaten or sliced and put into soup or curries; the inside is filled with albumen, but, when dressed, not unpleasant. The seed is sometimes laid upon toast with butter, pepper and salt. Another species, A. moschatus, has a smaller capsule; the seeds when rubbed between the fingers have a strong scent of musk; the Arabs flavour their coffee with them.

BHENG, Hind. Nelumbium speciosum.

BHENLA? BHEULA, Mar. Pterocarpus marsupium.

BHER, Hind. Mahr. also, BHOR, Mar. Zizyphus jujuba.

BHERANDA, Beng. Castor oil plant, Ricinus communis.

BHERBAND, Hind. Argemone mexicana.

BHERI, Tel. also Béri, Leonotis nepetæfolia.—*R. Br.*

BHERLI, Mahr. Caryota urens.

BHERRA, Hind. Also bharra, wheat and grain sown together.

BHESNA. A river in Purnea.

BHET, Hind. Also bhent, land alongside a river, subject to periodical inundation.

BHEWNDI. A district in the vicinity of Bombay, in which reside many christianized Koli. See Kols.

BHI, Hind. BIHI, Hind. Cydonia vulgaris, quince.

BHIDAIRA. The root of a small bush found in Ajmeer, and brought from Delhi, has little taste: used in medicine; women take it during pregnancy, believing it can cause the womb to rise out of the pelvis when tardy in so doing.—*Gen. Med. Top. p.* 129.

BHIHAR, HIND. The name of a tribe which, according to local tradition appears to have been one of the aboriginal races of Rohilcund and the Upper Doab. They were expelled from Nerowlee Buhjoee and the neighbouring districts by the Bir-Gujar Rajputs. In the Doab they are commonly called Beimhar and in Rohilcund Bihar.—*Elliot, p.* 68. *Wilson's Glossary.*

BHIKH, HIND. Alms: begging. Bhikhshu or Bhikkari, a beggar. Three religious garments, a begging pot, razor, sewing needle, waistband and bathing cloth, are peculiar to the Bhikshu, or hindu mendicant ascetic.

BHIKSHUNI. A woman who follows the life of a buddhist devotee. See Buddha, Sakya Muni.

BHIL. One of the races, that early occupied India. According to Malcolm, in a sanscrit vocabulary at least seven hundred years old, the term Bheel occurs to denote a particular race of barbarians subsisting chiefly on plunder, and found more particularly in the mountainous woody tract of the Nerbudda. But there is still earlier mention of them in the Mahabharat, in which the Bheels are not only minutely described, but a long fabulous account given of their origin. The Caba race now almost extinct, was famed, even in the days of Krishna, as the savage inhabitants of Saurashtra. It was a forester Bhil who mortally wounded Krishna having mistaken him for a deer. When the Bhil was expressing his contrition for the unintentional act, he was forgiven, with the remark, that it was only retributive justice, as, "in a former birth," as the godlike Rama, Krishna had slain him. Thus Rama appears as the subjugator and civilizer of these indigenous tribes, of whom the Caba are described as plundering Krishna's family after his decease. The Bhil are one of the many tribes who entered India prior to the Aryan hindu and the rajput, and been forced by the later emigrants into the forest tracts. There are many such tribes in Central India, the Bheel, Kol, Gond, Meena, Mera, Choоar, Serya, Sarja, Ahir, and Goojur, many of them dwelling in the forest tracts of the Son, Nerbudda and Mahanuddy, the mountains of Sargooja, and the lesser Nagpore, many of whom are still but little removed from savage life, and whose dialects are as various as their manners. These are content to be called the 'sons of the earth,' or 'children of the forest,' while their conquerors, the Rajpoots, arrogate celestial descent. The census shows that the Indian aborigines amongst whom are the Bhil, still number twelve millions or one-twelfth of the population of India.

Excluding the feudatory states, the following may be roughly accepted as the relative proportions of creeds and races in India:—

Asiatic Christians.	1,100,000
Buddhists .	3,000,000
Aborigines .	12,000,000
Mahomedans .	25,000,000
Hindoos	110,000,000

It is to the non-Aryan Bhils and similar races to whom such terms as aborigines and autochthones are applied, Elphinstone describing these tribes says of them in his day, the hills and forests of Central India are inhabited by people many of whom differ widely from those who occupy the plains. They are small and black, slender but active with peculiar features and a quick and restless eye. They wear few clothes, are armed with bows and arrows, make open profession of plunder and, unless the government is strong are always at war with all their neighbours. When invaded, they conduct their operations with secrecy and celerity and shower their arrows from rocks and thickets whence they can escape before they can be attacked and often before they can be seen. They live in scattered and sometimes moveable hamlets, are divided into small communities and allow great power to their chiefs. They subsist on the produce of their own imperfect cultivation and on what they obtain by exchanges or plunder from the plains. They occasionally kill game, but do not depend on that for support. In many parts, the berries of the Mahwa tree form an important article of their food. Besides one or two of the Hindu gods they have many of their own, who dispense particular bles- [illegible] calamities. The one who presides [illegible] pox is, in most places, looked on [illegible] awe. The early history of all [illegible] tribes is uncertain. In the Dekhan, [illegible] were in their present state at the time of [illegible] Hindu invasion and probably some of them [illegible] allies of Rama whom tradition and [illegible] have turned into a nation of monkeys. [illegible] whole country was then a forest: and the [illegible] tribes are in those portions of it which [illegible] not yet been brought into cultivation. The great tract of forest called Gondwana lying between the rich countries of Berar and Cuttack, and occasionally broken in upon by patches of cultivation, gives a clear idea of the original states of the Dekhan and the progress of its improvement. In Hindustan they may be the unsubdued part of the nation from whom the servile class was formed, or if it be true that even there their language is mixed with Tamil, they may possibly be the remains of some aboriginal people anterior even to those conquered by the hindus. There are other tribes of mountaineers in the north-eastern hills, and the lower branches of the Himalaya, but they all differ widely from those above described, and partake more of the features and appearance of the nations between them and China. No separate mention is made of the mountain tribes by the Greeks, but Pliny more than once speaks of such communities.

They sacrifice fowls, pour libations before eating, are guided by inspired magicians, and not by priests, bury their dead and have some ceremonies on the birth of children, marriages and funerals. In common they are all much addicted to spirituous liquors, and most of them kill and eat oxen. Their great abode is the Vindya mountains which run east and west from the Ganges to Guzerat, and the broad tract of forest which extends north and south, from the neighbourhood of Allahabad to the latitude of Masulipatam and with interruptions, almost to Cape Comorin. In some places the forest has been encroached on by cultivation and the inhabitants have remained in the plains as village watchmen, hunters and other trades suited to their habits. In a few places their devastations have restored the clear country to the forest and the remains of villages are seen among the haunts of wild beasts. The points of resemblance above mentioned lead to the opinion that all these rude tribes form one section of the human family; but, they differ in other particulars and each has a separate name, so that by comparing their languages, where t tain a distinct language, that we can h see the question of their identity settled. race at Bagalpur, are called Paharia or m taineers under the name of Kol, occupy a g tract of wild country in the W. of Bengal a Bahar, and extend into the Vindya mountains near Mirzapoor. In the adjoining part of the Vindya range and in the centre and south of the great forest are Gond: further west, in the Vindya range they are the Bhil; and in all the western hills Koli.

The Bhil clans, are now in a state of great moral transition; but those of Khandesh nearly to the middle of the 19th Century continued to sally from their fastnesses and committed great ravages upon the villages of the plains. When measures were taken by the Bombay Government in 1818 to reclaim the Bhils of Khandeish, Sir John Malcolm considered that success would only be partial unless corresponding measures were adopted for reclaiming the Bhils of Burwanee, and this was given effect to. The Bhils says *Latham* occupy the petty states of Dunduka, Rompur and Gogo—between the Mahi and the Nerbudda and Nerbudda and Tapti, and Rajpipla N. E. of Surat, and as a rule, Kandesh is Bhil.

Fire-arms says Tod (*Travels, p.* 34) are only used by the chiefs and headmen; the national weapon being the *kumpta,* or bamboo bow, having the bowstring (*chulla*) from a thin slip of its elastic bark. Each quiver contains sixty barbed arrows, a yard long.' Although they claim descent from every race of Rajpoot, and prefix the tribe, as Chohan Bhil, Gehlote Bhil, Pramar Bhil, &c., &c., their origin is best evinced in the gods they worship and their prejudices as to food. They will eat of nothing white in colour, as a white sheep or goat; and their grand abjuration is, by the white ram!" These prejudices, however, belong only to those who affect to call themselves *Oojla*, or pure Bhils. Their ancient position is well illustrated by the circumstance of their claiming the right to instal Rajput princes. When Bappa fled were two Bhils the companions of his flight, one of Oondree, in the valley of the present capital; the other of Solanki descent, from Oguna Panora, in the western wilds. Their names, Baleo and Dewa, have been handed down with that of Bappa, and the former had the honour of drawing the teeka of sovereignty with his own blood on the forehead of the prince, on the occasion of his taking the crown from the Mori. The descendants of Baleo of Oguna and the Oondree Bhil still claim the privilege of performing the teeka on the inauguration of the descendants of Bappa.

Oguna Panera says Colonel Tod, is the sole spot in India which enjoys a state of natural freedom. Attached to no state, having no foreign communications, living under its own patriarchal head, its chief, with the title of Rana, whom one thousand hamlets scattered over the forest-crowned vallies obey, can, if requisite, appear at the head of five thousand bows." He is a bhoomia Bhil of mixed blood, from the Solanki rajpoot, on the old stock of pure (oojla) Bhil, of Mewar. Besides making the teeka of blood from an incision in the thumb, the Oguna chief takes the prince by the arm and seats him on the throne while the Oondree Bhil holds the salver of spices and sacred grains of rice used in making the teeka. The Bhil, from ancient times, use the fore and middle fingers of their right hand to the string of their bow holding the arrow between the two fingers. A thorough study, says Col. Tod, of the uncivilized tribes of India, the Bhil, Koli, Gond, Meena, Mair, would disclose important links in the physical history of man. There is not a greater difference between the squat, flat-nosed, Tartarian-visaged Esquimaux, and the ancient noble Mohican savage, than between the Bhil of Mewar and the Kol of Sirgoojur; nor are the habits of the dweller on the verge of the Polar sea more distinct from those of the migratory races of the Missouri, than are those of the forest indigenes of India from the more locomotive rajpoot. Their very names imply this principle: Vanaputra, 'child of the forest;' Mairote, 'born of the mountain,'—Gond, apparently a compound of Gopa and Indra, 'Lord of the cave:' Pal-Indra, 'Lord of the pass.' In like manner, Kol, signifying 'mountaineer,' from Ko, 'a mountain,' which, though less commonly used than the Sanscrit word Gir, is beyond a doubt a primitive root with the Indo-Scythic nation. With the great Bhil family, he somewhat fancifully continues. I would not hesitate to class the Sairea, inhabiting the mountains that separate Malwa and Harouti, and all those complicated ranges which running from the verge of the table-land of Malwa, through Chanderi and Nurwur, terminate, some branches in Gohud, while others merge into the masses of Bundelcund, anciently peopled by the tribe of Sarja, now extinct, but in all probability the Sairea of Central India. Amongst the thirty-six royal tribes of Rajpoots, one is called the Sari-aspa, contracted Saria, of whom we have inscriptions of a very remote date, indicative of their consequence amongst the ancient races of India. Whether this degraded Saria tribe may be descended illegitimately from these, it is useless to enquire. The Aspa or Aswa race is decidedly of Indo-Scythic origin, the first (aspa) being the Persian, the latter (aswa) the Sanscrit term, for 'horse,' and were the Sairea illegitimately descended from them, it might account for the introduction of the horse into their ceremonies. I have, he adds, elsewhere remarked the habit, amongst the old tribes of Central Asia, of assuming the names of quadrupeds. Thus, besides the Aspa or 'horse,' we have the Noomri or 'foxes,' a great branch of the Getæ or Jit of Transoxiana, and the Varaha, or 'hog,' of Mooltan and the Upper Indus. But the habit of distinguishing families by epithets derived from objects in the animal or vegetable creation, has prevailed in every land, and many a name, which receives our homage from blending phonetic dignity with historical recollections, traces its origin to some humble and often ludicrous incident; as that watch-word of chivalry, Plantagenet, derived from the lowly broom. Besides the horse, fox, and hog tribes of the Indus and Oxus, we have the hare, Seesodia, properly Sussodia, the Cuchwaha, with many others.—*Wheeler's Hist. of India, p.* 85. *Elphinstone's History of India, p.* 366-367. *Malcolm's Central India, Vol. I. p.* 518. *Coleman. BHILADAR, HIND. Semecarpus anacardium.

BHILAWA.

Belader...	...ARAB.	Bhalataka...	...SANS.
Bhilawun...	...HIND.	Bhela...	...DUK.

The nut of the Semecarpus anacardium, common throughout India: the acrid viscid oil which the nut contains, is used as an escharotic and counter-irritant: it leaves a mark for life: it creates great pain and often very intractable sores, but natives, unacquainted with the blisters of Europe, have a greater dread of them than of the Bhilawa. It is given in medicine in small doses, and is considered a stimulant and narcotic; is much used in the mesalih of elephants; given in large doses, it renders these animals furious, is considered good in venereal diseases, especially of women. The farina of the anthers of the flowers, is very narcotic and irritating; people of a peculiar habit accidentally sleeping under the tree when in blossom, or even going near the flowers, are stupified and have their faces and limbs swollen: and the use of the Bhilawa as a counter-irritant very frequently causes the whole body and face to swell with erythematous inflammation and much constitutional disturbance. The mature corolla and the receptacle are fleshy and sweetish sour, and are eaten roasted or as a vegetable, and are deemed, along with cocoanut and chironji, aphrodisiac. The Bhilawa nut is worn on the arm, as a charm, in guinea worm.—*Gen. Med. Top. p.* 127.

BHILAWA-KA-TEL, HIND. Marking nut oil

BHILIUNG. A river tributary to the Ganges, in Lat. 30° 46′ N. Long 78° 55′ E. runs S. W., into the Bhagarutti, after a length of 50 miles. It is between 60 and 70 feet wide in the beginning ofMay, 5 miles from its mouth.

BHILSA. A town in India, in L. 77 ° 54′ E. and L. 23 ° 37′ N. The brothers Schlagentweit say it is in L. 23 ° 30′ N. and L. 77 ° 45′ E. It is in Malwa, 190 miles south of Gwalior and at the railway is 1,406 feet above the sea. It is famous for the buddhist topes at Andher, a little village 10½ miles S. of Bhilsa and five miles W. of Bhojpur. See Bhojpur; Buddha; Inscriptions, p. 380; Karli; Lat. Sanchi; Topes; Wasso.

BHILU, BURM. Amongst the Burmese buddhists, a spirit, a ghost.

BHILWAN. A district in Central India, taking its name from the Bhil race. See India, p. 327.

BHILWARA, same as Bhilwan.

BHIMA. The second of the five Pandava brothers. He was of great bodily strength and ferocious courage. He closed the great Mahabarata war by following Duryodhana into a pond and killing him with a mace.—*Taylor.* See Bharata; India, p. 324, Inscriptions, pp. 376. 391. Indra, Mahabarata. Pandu. Polyandry, p. 107.

BHIMAL, HIND. Grewia, species, in Kamaon, &c.

BHIMA-RATRI. The 7th night of the 7th month of the 77th year of a man's age, lunar reckoning, after which a hindu is exempted from all instituted observances, it being considered the end of his natural life. He would then be in his 75 solar year.—*Wilson.*

BHIMA-CHANDI, SANS. From Bhima, terrific, and chandi, furious.—*Ward.*

BHIMBUR. A town and district of the Panjab. See Sikh.

BHIM-SEN'S GADA or Club. An ancient stone pillar at Allahabad, which has four inscriptions engraved on its surface.

BHIN AUNLAH, DUK. Phyllanthus niruri.—*Linn.*

BHINDA TORI, ALSO BHINDI. HIND. Abelmoschus esculentus.

BHIND in Long. 78 ° 41′ E. and Lat. 26° 32′ N.

BHIRBUTI, HIND. A beautiful scarlet colored insect resembling a piece of scarlet velvet. They are collected during the rains. They yield an oil, and have a use similar to the Cantharis, as a blister and irritant.—*Powell.* See Entomology Raughan.

BHIRMI-SUGAN. Leaves of a small plant brought to Ajmere from Delhi employed in making scents.—*Gen. Med. Top. p.* 129.

BHIRMI-VIDAYA. Leaves of a climber from mount Aboo, very stimulating, and, in Ajmere, used in the "seet," a disease simulating catalepsy.—*Gen. Med. Top. p.* 129.

BHISHMA. A surname given to Santanava, for his dreadful vow of celibacy. Bhishma was fourth in descent from Bharata. See Bharata.

BHISTEE, ANGLO. HIND. Properly bahishti a water carrier, who conveys water in a skin slung from his shoulders, resting over his loins.

BHISTU DHARI. A sect of the Dadu Panthi.

BHITARI LAT. A buddhist pillar at Ghazipur, has an inscription on it in Sanskrit, not pure nor easily intelligible. This inscription, like one of Allahabad, is intruded on a Buddhist column, and is subsequent to it, as it carries on the Gupta family from Samudra to the boy Mahendra. Chandra Gupta 2nd, and Kumara Gupta followed the Vishnu worship, but Skandra Gupta attached himself to the opposite doctrines, now so prevalent, of the mysterious and sanguinary Tantra. Skanda Gupta was dispossessed of his kingdom, for a time, by a treacherous minister. This was the case when the Chinese traveller, Huian-theang reached Behar, in the seventh century, and he may refer to the event mentioned in the inscription; but he calls the king by a name construed to be Siladitya, and no king of this name reigned in Behar; nor nearer than in Gujerat. The Gupta, probably, succeeded the Buddhist kings of Behar. The absence of the insertion of the Tantra in the Allahabad inscription, and their insertion here, would seem to indicate the period of the origin of this worship. The language of inscription is not pure Sanskrit, nor easily intelligible. The character used is the same as Allahabad, No. 2, or Kanouj Nagari, with numerous mis-spellings. The date is subsequent to Allahabad, No. 2; and, Dr. Mill says, not earlier than Charlemagne in Europe, A. D. 800, if the Gupta be those of the Purana. Moreover, the mention of the sectarial worship of the Bhagavata and Tantra makes the date comparatively modern. Indra, Varuna, Yama, Krishna, Siva, Sita, the Tantra, Devaki, the mother of Krishna, Rudra, are mentioned and loads of forest timber are collected for the completion of sacrifices for Indra, Varuna, and Yama only; and not for Siva or Vishnu. These last, therefore, may have had honour, but not sacrifice. The kings or princes mentioned are the great king, Gupta. His son, do., Ghatot Kacha : do. King of kings, Chandra Gupta, do. King of kings, Samudra Gupta, do. Chandra Gupta 2nd : do. Cumara Gupta, do. Skanda Gupta, a minor, Mahendra Gupta ?—*Vol. V. p.* 661. See Lat.

BHOGA, S. Food offered to idols. See Prasadh.

BHOGA PANEE. A river near Mophlung in Chirapunji.

BHOGRA, Hind. Cleome pentaphylla, Mar. Casearia elliptica.

BHOI MUNG, Hind. Fruit of Arachis hypogæa : Ground nuts.

BHOI-PHUL, also Bhonphor, Hind. Phelipæa calotropidis.

BHOIRAVA, Sans. The fear-exciting, from Bhaya, fear. See Bharava.

BHOIRAVI, Sans. The wife of Bhoirava.

BHOIRAVI CHAKRA. Sans. Bhoiravee, a name of Doorga, and chakra signifies a circle or wheel. See Bhairava.

BHOI-WANLU also called Ur-Bhoiwanlu, Telugu. Mercenary soldiers in Southern India, who serve native sovereigns. They are never found in the ranks of the British army. There are a few of them in every large town in the South.

BHOJPOOR in L. 78° 49′ E. and L. 28° 57′ N. is a ruined town where remains of buddhist topes stand on the southern end of a low range of hills, 6 miles S. S. E of Bhilsa and 7 miles E. S. E. of Sanchi.—*Cunningham.* See Bhilsa ; Buddha ; Topes.

BHOJNAM, Tel., Food.

BHOJ RAJ. A name of several kings of India.

BHOJ. The last of the great Pramara race of hindus who ruled over Ujein and Dhar. He was a great patron of learning. Bhoja Pramara is a very celebrated name in the annals of India, but there appear to have been many of this name or title. The derivation of the word may be traced to the root "bhuj" to enjoy, and in that sense it has been used by the brahmans from the remotest antiquity.

BHOJPATRA, Hind. The birch and bark of the Betula bhojpatra, Betula tartarica.

BHOKUR, Hind. Cordia latifolia.—*Roxb.*

BHOLAN. See Bolan.

B'HOLA NAT'H or the 'Simple God,' is one of the epithets of Siva, whose want of reflection is so great, that he would give away his own divinity if asked.

BHOLSERI, Dukh. Mimusops elengi. —*Linn.*

BHOM, Hind. Literally, land, is an ancestral inheritance, a patrimony.

BHOMIA, H. From bhom, land, a landed proprietor, in Rajputanah, the allodial proprietor of Mewar, offshoots of the earliest princes. The term bapota implies the inheritance or patrimony, its holder, if a military vassal, is called 'Bhomia,' meaning one actually identified with the soil (bhom). It is the mahomedan term wuttun-dar, or meeras-dar, is the Caniatchi of Malabar, and is the Bhomia of Rajasthan. The Bhomia is vested with the rights of the crown, in its share of the bhog or rent. But when their own land is in the predicament called 'gulthas,' or reversions from lapses to the commune, he is 'seised' in all the rights of the former proprietor ; or by internal arrangements, they can convey such right by cession of the commune. The bhom is exempt from the jureeb or measuring rod ; it is never assessed, and his only sign of allegiance is a quit-rent, in most cases triennial, and the tax of khur-lakur, a war imposition, now commuted for money. These allodial tenants, are the yeomen of Rajasthan, and as in the districts of Komulmer and Mandelgurh, constitute the landwehr, or local militia, the Rajpoot vaunts his aristocratic distinction derived from the land ; and opposes the title of 'Bhomia Raj,' or government of the soil, to the 'Bania Raj,' or commercial government, which he affixes as an epithet of contempt to Jeipoor ; where "wealth accumulates and men decay." 'Bhom rakhwali or land, [in return for] 'preservation,' is one kind of Bhom, the crown itself holds 'bhom rekwali' on its own fiscal demesnes consisting of small portions in each village. In S. 1782, the turbulent Bhomia on the western frontiers were checked by the Rajput chief on their borders and the Sindil the Deora, the Bala, the Bora, the Balecha and the Soda were then compelled to servitude. The ancient clans, prior to SangaRana, had ceased, on the rising greatness of the subsequent new division of clans, to hold the higher grades of rank ; and had, in fact, merged into the general military landed proprietors of the country under the term 'bhoomia,' a name, importing absolute identity with the soil : bhoom meaning 'land.' These Bhoomia, the scions of the earliest princes, are to be met with in various parts of Mewar ; though only in those of high antiquity, where they were defended from oppression by the rocks and wilds in which they obtained a footing ; as in Komulmir, the wilds of Chuppun, or plains of Mandelgurh, long under the kings, and where their agricultural pursuits maintained them. Their clannish appellations, Kombawut, Loonawut, and Ranawut, distinctly shew from what stem and when they branched off ; and as they ceased to be of sufficient importance to visit the court on the new and continually extending ramifications, they took to the plough. But while they disdained not to derive a subsistence from [illegible] bouring as husbandmen, they never abandoned their arms ; and the Bhoomia, amid the crags of the alpine Aravalli where he pastures his cattle or cultivates his fields, preserves the erect mien and proud spirit of his ancestors, with more tractability, and less arrogance and folly, than his more courtly but now widely separated brethren. They form a considerable body in many districts, armed with matchlock, sword and shield. In Mandelgurh, when their own interests and the prince's unite, four thousand Bhoomia could be collected. They held and maintained without support the important fortress of that district, for their prince during half a century of turmoil.—*Tod's Rajasthan, Vol. I. pp.* 169, 498. See Rajput.

BHOOIN-BAR. A cultivating hindu tribe who say they were originally brahmans settled in the districts of Goruckpur, Azimgarh and Benares. They style themselves Thakur, and append Sandal Gautam : Dikshit : Upadhayaya, Pande, Misr, Tonwar, Tewari—*Wilson.*

BHOOIN KOOMRA, Beng. and Hind. Batatas paniculata.

BHOOMI-NIM, Beng. Bonnaya serrata; Serrated hedge hyssop.

BHONGSHO—? An ordinary brahman.

BHONSLA RAJAS OF NAGPUR commenced in 1734, when Raghoji Bhonsla was nominated Sena Sahib Suba or General of the Mahratta confederacy. Appa Sahib was the ruler of the Mahratta state of Nagpore, who surrendered to Sir John Malcolm, in 1818. He succeeded to the office of Peshwa, by strangling Parsaji, an idiot. His real name was not Appah Sahib, but Mudaji. He afterwards on the 12th May 1818, fled from the place allotted to him, to the Sikh territories, but he ultimately died, in 1840, almost forgotten, at Judhpur. The family became extinct during the Administration of Lord Dalhousie, on the demise of Goozur, grandson of Raghoji, who, in 1818, had been seated on the throne when Mudaji, (Appa Sahib) was deposed.

BHOO, Beng. Contraction of Bhoom, the earth, hence,

Bhoo-ada, Beng. Scarlet garland flowers, Hedychium angustifolium.

Bhooin-Champa, Beng. Round rooted Galanga, Kæmpferia rotunda.

Bhooin-Dalim, Beng. Careya herbacea.

Bhooin-Doomoor, Beng. Ficus repens.

Bhooin-Jam, Beng. Premna herbacea.

Bhooin-Kamri, Beng. Ipomœa Gangetica.

Bhooin-Koomra, Beng. and Hind. Batatas paniculata, also Beng. Trichosanthes cordata.

Bhooin-Okra, Beng. Creeping vervain, Zapania nodiflora.

Bhooin-Pat, Beng. Creeping Dentella, Dentella repens.

Bhui-Sing, Guz. Arachis hypogæa, ground nut.

BHOOJH or BHUJ, in L. 23° 17' L. 69° 40' E. capital of the province of Cutch. The Dak bangalow is 281 feet above the sea, and the hill fort is 678 feet by trigonometric measurement. Bhuj is the chief town of Cutch, and is built on a plain at the foot of a fortified hill on which there is a snake temple. It has manufactures in gold and silver. It was taken by Sir W. Keir's Army on the 23rd March 1819. A large number of articles in gold and silver are annually made at Bhooj, principally for Europeans. Goolabdana or rose-water sprinklers, are, however, manufactured for native use. The silver and gold used is very nearly pure. The charge is at the rate of 8 annas per tola weight. A stone procured from the Hubba hills is polished at Bhooj and is also used as a substitute for marble in the decoration of temples. See Cutch. Hindu, Kattywar.

BHOO-KAILASU, Sans. From bhoo the earth, and Kailasu, the name of a mountain.

BHOOKHA MATA. In a temple at Oudeypore is a picture so called, personifying famine. Her necklace, like that of her lord Siva or Maha-deo, is of skulls. Two persons are represented lying near who have died of famine, and a beast of prey is approaching to devour them.

BHOO-LOKA, Sans. from bhoo, earth, and loka, a world. The earth.

BHOORJAPATTRA, Beng. Indian Birch, Betula bhojpatra.

BHORA, Beng. Mangrove. Rhizophora mangli. R. mucronata.

BHORA. A river in Baitool.

BHORALEE. a river of Gowhatty.

BHOR GHAT, in Lat. 18° 44' N. 73° 22' E. in the Dekhan, the principal pass on the route from Bombay to Puna. It has been formed into part of the Great Peninsular Railway. The top of the ghat is 1,798 feet above the sea. See Railway.

BHOOSA, Hind. Bran either of wheat or rice : it is often mixed with chopped straw and given as food for cattle.

BHOOT, Beng, also bhoota, Hind. Zea mays.

BHOOTAN. In Kurdistan, through which the river Cheba flows.

BHOTAN on the N E. of British India, is situated between Lat. 26° 30' and 28° N. and 88° 45' to 92° 25' E. and occupies from the southern declivities of the great central ridge of the Himalaya mountains to the level ground in front of that portion of their inferior chain which constitutes the natural northern boundary of the Assam valley eastwards from Sikkim to where the Brahmaputra passes through the mountains. Bhootan is one of the long narrow states lying upon the southern slopes of the Himalayas; and consists of a number of rough transverse chains of hills at right angles to the parent range which forms the backbone of Asia. Between the ridges are precipitous valleys, at the bottom of each of which run a mountain stream. After passing through some of the most romantic scenery of the world, with cascades that outshine the best of Europe, at every few miles of their course, these streams find their way to the ghaut. The branch river falls 17,000 feet in little more than fifty miles. The River Pachoo rises on the upper slopes of the gigantic Chinnulari, which tops the clouds at a height of 28,000 feet, and, before its stream is 100 miles in length, has descended to an ordinary altitude of 3,700 feet, it must be denominated a country of mountains, to give any idea of the character of the surface of the district. Its northern boundary is at an average elevation of 25,000 feet while its southern boundary, about 75 miles nearer the equator enjoys an altitude of about 5,000 feet, so that there is an average fall per mile of upwards of 250 feet. It is 220 miles long with an average breadth of about 90 miles and is mostly rugged with lofty mountains. The people styled Bhooteah are a colonial branch of the Thibetans, who have acquired independence. The real capital is *Tassisudon* which is the official residence of both the Deb and Dhurm Raja. The Dharm Raj resides at Poonakho. But neither of these Rajas has anything like general authority. The kingdom is divided into a number of districts, each governed by a "Soubeh," whose residences greatly resemble the castles of the greater barons during the active existence of the feudal system. These castles in fact are, as far as we have been able to learn, peculiar to Bhootan. They are not "droogs" like those at Nundidroog, Gingee, and other places in Southern India, but real baronial residences with ditch, wall, and battlements, like those still existing in England and on the banks of the Rhine. The chief of these castles, each of which is the capital of a soubahship, are Dalimcote, Durbee, Benkar Sengloong, Wandipoor, and Teelagong. The country has a spiritual head, the Dhurm Raj and a political ruler the Deb-raj, elected for three years, but for the last fifty years, Bhotan has been in a state of civil war, caused by the strife of the Penlows of eastern and western Bhotan, and the Deb-Rajahs have been mere puppets. According to Aitcheson, (*Vol. I. pages* 105-142) in Bhootan the political Government is conducted by a central authority the Deb-Raj, at Tassisudon for the summer and Poonakha for the winter quarters. There is also a Dhurm Raj, also the Tongso Pillo or Penlow in the Eastern Doars, the Paro Pillo in the Western Doars, each Doar being also under a separate soubah or governor.

According to Mr. Aitcheson the districts of Bhootan between the hills and the British frontier are known as the Doars, and take their names from the different passes which lead through the hills into Bhootan. Besides the Kooreapara Doar, formerly governed by the Twang Rajah, who was immediate dependent on Lassa, there are in all eight the Doars, eleven on the Bengal frontier and on the frontier of Assam,

Bengal Doars.
1. Dalimkote.
2. Zamerkote.
3. Cheemarchee.
4. Lukhee.
5. Buxa.
6. Bulka.
7. Bara.
8. Gooma.
9. Reepoo.
10. Cheerung or Sidlee.
11. Bagh or Bijnee.

ASSAM DOARS.

Kamroop Doars.
12. Ghurkola.
13. Banska.
14. Chappagoree.
15. Chappakhamar.
16. Bijnee.

Durrung Doars.
17. Booree Gooma.
18. Kulling.

Over the Bengal Doars, which extend from the Teesta, on the eastern boundary of Sikhim, to the Monas, the Booteah have for long years held sovereign dominion; and previous to annexation of Assam by the British Government during the first Burmese war, the Booteah had also wrested four of the Assam Doars from the Native government, while the other three were held on a sort of joint tenure by the Booteah and Assamese. How long this state of things had existed is not precisely known. The Bootiahs paid to the Assam government for the Doars a tribute of Rupees 3,049, partly in money and partly in goods; and after the annexation of Assam, the tribute was paid to the British Government, who also continued the system of joint occupation of the three Doars of Kooreapara, Booree Gooma, and Kulling, holding them for four months every year, and making them over to Bhootan for the other eight months. In 1828 the Booteah began the long series of outrages on the British frontier, which ended in the annexation of all the Doars. The first attack was on Chatgaree, in the Durrung Zillah, by freebooters from the Booree Gooma Doar, and was followed by the occupation of the Doar by the British Government till 31st July 1834, when it was restored on evidence being given, afterwards ascertained to be false, of the death of the leader of the freebooters. In 1838, the unsatisfactory sate of affairs on the frontier determined Government to send a friendly mission to the Bhootan Court, and, if practicable, to Lassa: Captain Pemberton was appointed envoy. Besides procuring information and statistics of the nature and resources of the country, and its political relations with Nepal and China, the object was to obtain the transfer accession of the Doars.

The deputation of another mission was suggested in 1841. The Deb Rajah was believed to be willing to farm all his Doars to the British Government; but as Bootan was at the time in a state of anarchy, no result could be expected from further negotiation, and on the 6th September 1841, the Assam Doars were ordered to be attached to Assam.

In 1863, another deputation was sent, but members were treated with great insult and gagement extorted from them. It was pudiated by the British Government, and as punishment for the outrageous treatment to which the mission had been subjected, the Amoaree Fallacottah was declared to be permanently annexed to the British dominions, and the payment of revenue to Bhootan from the Assam Doars was stopped for ever. And in 1865 they were permanently annexed to the British territories.

The missions, first of Mr. Bogle, and afterwards of Captain Turner, to Teeshu-loomboo had their origin in a petty war in the time of Warren Hastings.

The Booteah are fairer and more robust than Bengalees—hair black and close cut—eye small, black, with long pointed corners—eye-lashes scarcely preceptible—thin mouth.

Bhootan is bounded on the north by Thibet; on the west by Sikhim; on the east by the country of the Towang Rajah, and on the south by the British Territory; and from their unscrupulous marauding habits, the Bhootanese are on bad terms with every one of their neighbours. Though nominally subject to Thibet, were the annual tribute withheld, it would not be enquired after, so anxious are the Thibetans to have no dealings with the Bhooteah who used to make the transmission of the yearly fee of subjection (a few pieces of cloth, silk, and some rice) the excuse for a series of robberies and outrages on the journey to Lhassa. For the last few years, however, all the Bhooteah entering Thibet are disarmed at the frontier, beyond which the tribute-bearers are now permitted to proceed. The British annexed the Dooars of Bhootan from the L'hopa in 1865, and it is hoped there may spring a large and important trade between British India, Thibet, and the Western and Central Provinces of the Chinese Empire. From the new frontier to the Bhooteah town of Paro is, by the longest route, but a rather difficult eighty miles, and from the latter place to Lhassa, the rich capital of Thibet is only fifteen marches between Lhassa and Western China, there is constant and uninterrupted communication. In 1809, the trade between Bhooteah and Assam amounted to two lakhs of rupees per annum, the lac, madder, silk, erindi cloth, and dried fish of Assam exchanging for the woolleus, gold-dust, salt, musk, horses, chowries, and fabrics of Bhootan, or rather of Thibet, for the share of the Bhooteah in the business was at best but that of carriers or toll-takers. At one time the Deb Rajah used annually to dispatch a caravan with goods to a large value, chiefly cloth, pearls, and coral from Bengal to Lhassa, whence in return came one year gold alone to the value of Rs. 70,000. The articles thus obtained were sent into the British territory to be there disposed of, and for a long time the Bengal Government kept up regular accommodation at Rungpore for the Bhootan traders. This interchange has, however, for some years almost altogether ceased, and is now confined to the purchase of a little tobacco and indigo. The cause of the decline is simply the incorrigible rascality of the Bhooteah chiefs, who have come to be so distrusted that no Thibetian trader will place himself or his goods within their reach. "With Darjeeling, Mr. Eden reports, "the Bhootan trade is now nominal. With Thibet, their trade is scarcely more important. The easiest road from Bengal into Thibet is through Bhootan, and the articles in chief demand in Thibet on its northern frontier, namely, tobacco and indigo, are produced in great quantities in Rungpore, the District on its south frontier.

The Sikhimese have, less than the Thibetians, to do with the Bhooteahs, whom they look upon as unscrupulous robbers while to the East the Towang Rajah has to keep up a frontier force for the especial purposes of preventing Bhooteah raids. The little Fort of Dumsong 5,000 feet above the sea, is situated on a bluff jutting down into the valley of the Teesta between Sikhim and Bhootan. The view from this place is magnificent; the snows of the Choolah Nitai, and Yaklah passes are all quite close; on three sides are the different snowy ranges of Bhootah, Sikhim and Nepal: within a space of sixteen miles are seen the four countries of Thibet, Sikhim, Bhootan, and British Sikhim; Darjeeling is plainly visible, and below is the beautiful and fertile valley of Rhinok in Sikhim, for many miles can be seen the road from the Thibet passes to the Rungeet river on the Darjeeling frontier, the route followed by the Thibetian traders who annually visit Darjeeling.

Captain Gerard says *(Capt. Gerard's Account of Kanawar, p.* 100,) that Bhot, Bootuut, or Thibet, is often confounded with Bhootan, or the hilly country south of the Himalaya, forming the Deb Rajah's country, which lies between Teshoo Loomboo and Lhassa and the plains, the lower hills are not called Bhootan, west of the Tons.

Turner says *(Embassy, p.* 84-5) the Bhooteah have invariably black hair, which it is their fashion to cut, close to the head. The eye is small, black, with long pointed corners, as though stretched and extended by artificial means. Their eyelashes are so thin, as to be scarcely perceptible, and the eyebrow is but slightly shaded. Below their eyes, is the broadest part of the face, which is rather flat, and narrows from the cheekbones to the chin, a character of countenance appearing first to take its rise among Tartar tribes, but is by far more strongly marked in the Chinese. Their skins are remarkably smooth, and most of them arrive at a very advanced age, before they can boast even the earliest rudiments of a beard: they cultivate whiskers, but the best they produce are of a scanty straggling growth. Many of these mountaineers are more than six feet high, and their complexion is not so dark by several shades as that of the European Portuguese.—*Turner's Embassy, p.* 84-5.

Fraser writing of them *(Him. Mount.)* says like the people of the southern hills, their notions of female delicacy and virtue are loose and disgusting. Polygamy is permitted; promiscuous intercourse is by no means disgraceful to either party; the female is not considered as less eligible on account of her frailty. The debauching of a woman is either held as nothing, or is only punishable by a small fine. She may marry her betrayer, but he is not obliged to marry her. The offspring is the property of the mother.

A severe beating is administered to the adulterer by order of the headman of the village, and he is moreover obliged to pay a fine to the injured party. Chastity is indeed little regarded, and very little practised. The disgusting custom of a community of wives between brothers, five or six cohabiting with one woman, obtains here, as well as among the countries we have seen in the hills.—*Aitchison's Treaties, Vol. VII. p.* 360. *Prinsep's Thibet, Tartary and Mongolia, p.* 17. See India, 307, 309, 336, 338, 344. *Fraser's Himalaya Mountains, pages* 335,336. See Bhootan; Bhuddah; Chepang; Haiyu Chetang; Hasora; Hindoo, India, pp.313, 316, 336, 338, 344; Gurhwal; Lhopa; Kunawar; Polyandry.

BHOOT BAMIAN, literally idol-Bamian; a name of Bamian.

BHOOTA-SHOODDHI, SANS. bhoota signifies the four elements, and shooddhi, purification.

BHOOTESHA, SANS. from Bhoota, great, and Eesha, a lord.

BHOOTIAH, the people of Bhootan.

BHO-PHALLI, a small scandent plant, abundant about Ajmere. It contains a great quantity of mucus, and is used in great quantity, as an aphrodisiac, rubbed up with water and strained. It is also considered cooling, and is used in prescriptions as such.—*Gen. Med. Top. page* 127.

BHOOTA, SANS. the primary elements, from bhoo, to be,

BHOOT-BHERUBI; BENG. Premna barbata.

BHOO-TOOLSEE, BENG. Salvia plebeia.

BHOOTRAJ, BENG. Adder's tongue, Lygodium flexuosa.

BHOOVA-LOKA, SANS. from bhoova, the sky, and loku, a world. The world.

BHOOVANESH, SANS. from bhoovana, the world, and eeshu, lord.

BHOOT-THA. A tree of Akyab. Not much in use. Grows to a large size, and is plentiful in Ramree and Sandoway districts.—*Cal. Cat. Ex.* 1862.

BHOPAL, a town in India, in Lat. 77° 20' E. and Lat. 23° 16' N. It is in Malwa, 325 miles S. W. of Allahabad and at the level of the railway is 1,690 feet above the sea. Bhopal is a feudatory territory, 6764 square miles in extent, with a revenue of Rs. 13,76,252 and a population of 663,656. It has an army of 723 horse, 3,428 foot, and 73 guns with 223 artillery men. It was formed into a principality by Dost Mahomed, an Afghan in the service of Aurungzeb, on whose demise, Dost Mahomed established his independent authority, and died in 1723, aged 66. Many changes in the succession occurred, and during the Mahratta rule, the country was harrassed by that race and overrun by Pindari. When Colonel Goddard in 1778 marched through the territory en route to Bombay, its ruler treated Goddard with great kindness, and this has never been forgotten by the British. Since 1817, the alliance has been intimate, and in 1847, the regency devolved on Secunder Begum, daughter of Nuzzur Mahomed. But in 1847, Secunder Begum was proclaimed ruler and her daughter the Shah Jehan Begum her heir. During the revolt, Secunder Begum adhered firmly to the British for which she was rewarded by the grant of the pergunnah of Bairseah, and created a knight of the Star of India. She died in 1868, and was succeeded by her daughter Shah Jahan Begum.—*Aitchison's Treaties, Vol. IV. p.* 309. See Kunjana; Inscriptions, pp. 380-388. Airun.

BHOPALPOOR in Lat. 76° 54' E. and Lat. 23° 54' N.

BHOPAWAR. A British political agency which superintends four petty feudatory states, viz. that of Jobut whose chief is a Rahtor rajput, with a population of about 7,000 chiefly Bhils. Mutwara, also with a Bhil population: Khuttewarra and Ruttonmul; Mota Burkhera; Kalee Bouree. The guaranteed states are Alirajpore, of Dhar; Jabooa; Neemkhera or Tirla, Chota Burkhera or Sorepoor, Mota Burkhera and Kali Bowree.—*Aitchison, Vol. IV. p. 405.*

BHORT, HIND. Cenchrus echinatus.

BHOT. This word, according to Latham, under the appellations of *Bult* in Bultistan: *But* in Butan; *Bet* in Thibet, or in such words as the Bhooteya or Bhotiya, in ethnology comprises the Little Tibetans, the natives of Ladak, the Tibetans of Tibet Proper, and the closely allied tribes of Butan. Balti, or Baltiyul is called Palolo or Balor by the Dards, and Nang Kod by the Tibetans. It is preserved in Ptolemy in Byltæ. The country is frequently called Skardo or Iskardo from the name of its well known fort and capital. Balti Proper is a small table land, and with that of Deotsu, is about 60 miles long and 36 broad,—the mean height of its villages above the sea is about 7,000 feet. The Balti, the people of Little Tibet, the Byltæ of Ptolemy, though Tibetan in language and appearance, are all mahomedans, and differ from the more eastern Tibetans of Le (who call themselves Bhotia or inhabitants of Bhot) by being taller and less stoutly made. Their language differs considerably from that of Le, but only as one dialect differs from another. The Bhot of Ladak is strong, hardy, short and square with a decidedly Mongol physiognomy—by which is meant a flat face, broad cheek, depressed nose, very large ears, oblique and narrow eye curtained at the corners, black hair and low stature, their average height being 5 feet 5·1 inches: the skulls are less Mongolian, having a capacity of 72 cubic inches, 80 cubic inches being a fair capacity for a European. The grand Lama is a Bhot. The ordinary monk or priest in Tibet is the Gylong,—above whom are the Lamas or Presidents, and below whom are the Tohba and Tuppa. The Tuppa is a probationer who is admitted into the establishment to which he would attach himself at the age of 8 or 10 and receives instruction accordingly. At 15, he becomes a Tohba, and at 24 a Gylong, provided his acquirements be satisfactory. There are two sects, the Gyllupka, who dress in yellow, and the Shammar in red, the Shammar Gylong being allowed to marry. The Bhot of the Tibetans have been extending westward. As a general rule, the Himalaya divide Hindustan from Bhotland, but there are Bhots in several parts south of the crest of those mighty mountains in Garhwal and Kemaon. The people of Le, the eastern Tibetans, call themselves Bhotiah, or inhabitants of Bhot. They are not so tall and are stouter made than the Tibetans of Balti or little Tibet, who though Tibetan in language and appearance are all mahomedans.—*Dr. Thomson's Travels in Western Himalaya and Tibet, p. 247. Latham's Ethnology. A. Cunningham.* See Balti; Byltæ; Dard; Kailas; Gangri Range; Kara-koram; Ladak; Tibet.

BHOTIAH RAI, HIND. Sinapis ragosa.

BHOT-PA. A name of Ladak. See India p. 337.

BHOULIYA is a lighter description of the Bajra boat, varying in dimensions between the Dhengi or passenger boat and a middle sized Bajra. It is in general use on the Ganges, alike for a suburban trip or for a long up-country journey.

BHOWNAGGAR in L. 72° 21' E. and L. 21° 47' N., in Kattywar, the principal talukdars are their Highnesses the nawab of Junagurh,—the Jam of Navanaggar, the Rawal of Bhownaggar: and the Rana of Porebandar, the Raj of Drangdra and the Thakur of Murvi, Junagarth, the most important, is held by a descendant of Sher Khan Babi, a soldier of fortune who seized it in the general anarchy which preceded the subversion of the Moghuls. 20 miles to the west are the ruins of Balabhipura.

BHOWRA. The wild hunter race of India, called Pardhi, Hirn-Pardhi, Shikari, and Hirn Shikari. See India, p. 327 and 328.

BHRAMARA MARI, TEL. Clerodendron serratum. Volkameria ser. R. iii. 602. The Telugu word signifies "bee-killer." See remark on Brahmi chettu.—*Bl. W. Ic.* 1472.

BHRAMUK, BENG. Sun flower, Helianthus annuus.

BHRATHI-DWITAYA, SANSC. A hindu festival on the 2nd of the hindu month Kartik, when hindu sisters entertain brothers in memory of Yamuna entertaining her brother Yama.—*Wilson.*

BHRIGA, Vasishtha, and Atri are three of the great saints or sages called Prajapati or Brahmadika, that is, mind-born sons of Brahma. They are variously described as seven, nine, ten, and even twenty-one in number.—*William's Story of Nala, p.* 214. See Brahmadica. Lakshmi. Vishnu Purana, p. 49.

BHRIGU. A name of the planet Venus.

BHRINGAR, BENG. Verbesina prostrata.

BHU, SANSC. Bhum, Bum, Bhun, Bhuin, Bhumi, HIND. Land, Earth.

BHU. In Hindu astronomy seems to imply the middle place. Bhu-chacra, when applied to the celestial sphere, means the equinoctial line. Bhu-carna, the Radius of the Equator. Bhu-paridhi, the same as Bhu-chacra.

BHU. SANSC. Bhuvar, Swar, earth and sky and heaven.

BHUBANESWAR. A prince of Orissa. Aniyanka Bhima was celebrated in Orissa and endowed Jagannatha. He had the misfortune to kill a brahman, and raised numerous temples in expiation of his offence, at one of which was a slab; with a Saiva inscription.—*Vol. VI. p.* 278. See Inscriptions, p. 380.

BHUCHAKRA GADDA, also Nela gummudu. Tel. Batatas paniculata, *Ch.*—Convolvulus paniculata.—*R. i.* 478.

BHU-DADIMBAH, Sans. Careya herbacea.

BHUDUCK. A predatory race of the Nepal Terai.

BHU-DEVI, also Bhuma Devi, also Prit'hivi, names of the earth and fabled to be married to Prithu. Bhu Devi, in hindu mythology, is the terrestrial name of Parvati, as goddess of the earth, as the names of Diana were varied to suit her various forms, she being Luna in heaven, Proserpine or Hecate in hell, so her archetype, the hindu Parvati, is the heavenly Bhavani, on earth Bhudevi, and Patala-Devi as consort of the regent of the infernal regions. Bhu-Devi, as spouse of the earthly goddess is a name of Siva.—*Hindu Infanticide, p* 28.

BHUDOWRIA. A branch of the Chouhon rajputs.

BHUGRI, Hind. An inferior kind of date boiled in oil and water and dried; used in Mooltan and Derajat; also the Ber fruit, dried.

BHUI. Head of a Gond village.

BHUIAN. A tribe in Orissa. See India, p. 329.

BHUI CHAMPA, Hind. Kæmpferia rotunda.

BHUIN-DAGDHA, *Lit.* Earth-burning: Gifts of hindus at marriage and funerals from the ceremony of burning earth prior to their presentation.

BHUI-SING, Guz. Hind. Arachis hypogæa; Ground nuts.

BHUI-SING-KA-TEL, Hind. Oil of Arachis hypogæa.

BHUI VANSA. A Zemindari race, called Khurda raja and Bhui Vansa, who ruled in Orissa from 1580 to 1804 when Mukund Deo was deposed. See Orissa.

BHUINHAR. See Bhunhar.

BHUJ, Hind. Betula bhojputra.

BHUJAPATRI CHETTU, Tel. Betula Bhojpatra. A Himalayan tree, the leaves or bark of which are used to cover the baskets of Ganges water sold by itinerant pilgrims. Heyne erroneously calls it a *Nepeta.*—*Wall. Royle, III. p.* 343.

BHUJYU. See Hindu, p. 134.

BHUK, Hind. Allium, Sp.

BHUK OKRA, Hind. Zapania nodiflora.

BHUKRI, Hind. Tribulus alatus.

BHUKSA. A forest tribe under the hills from Purunpur Subna on the Sapda to Chandpur on the Ganges. They claim to be Powar rajputs expelled from Dhar and to have 15 got or clans.

BHUKTI,—RASAMRITA—SINDHOO, Sans. From bhuktee, devotion; rasa, juice; amrita, the water of life, and sindhoo, the sea. See Bhakti.

BHULL. Like all large rivers which flow for a very lengthened course, through an alluvial soil, the Indus throws up patches of alluvial deposit at its mouth. In Sind, these are called bhull and they are of great value in the cultivation of the red rice of the country. They are swampy and exist on both sides of the principal mouths of the Indus, in the Gora baree and Shahbunder pergunnahs, but produce a considerable portion of the rice consumed in Sind.—*Simmonds, p.* 293.

BHULLEH. One of the clans of the Agnicula Rajputs. See Khutri.

BHUM, Sans. Hind. The land, Bom, Pers. Bhumia, a landlord. Bhumiawat a general plundering. Bhun-bhai, a landowner in a village.—*Ell.*

BHUMI in hindu astronomy, the terrestrial globe, supposed to be in the centre of the universe. Bhumi savana; proper, natural, to the earth. Bhumi savana dina; a natural day.

BHUMIJ, Uraon. Earth-born: Prior inhabitants of Orissa, with whom the Uraon or Ho or Kol mixed when driven eastward. Wilson describes the Bhumij to be a caste of low hindus numerous in Ghatsila. See India, p. 329.

BHUMI PALA. See Inscriptions, p. 392.

BHUMI-TAILUM. Sans. Tam. Tel. Earth Oil: Naphtha.

BHUMOWRA, Hind. Cornus capitata.

BHUM-PHOR, Hind. "Earth-splitter." Philipæa calotropidis, Tulipa stellata.

BHUMTAS, Hind. Salix tetraseperma.

BHUN CHAMPA. Sans. Kæmpferia rotunda.

BHUNGHE, Beng. Corchorus olitorius.

BHUNHAR, A hindu tribe numerous in Gorukpur, Azimghur and Benares. The rajah of Benares is one of this caste; they claim to have been brahmins.—*Elliot.*

BHUN KE DUM, Hind. Verbascum thapsus.

BHUPAL. See Bhopal: Sanchi.

BHUPALA. The first dynasty of rajas of Bengal. See Bengal.

BHUR, Hind. Sandy hillocky soils, the "tibba" of the Punjabi.

BHUR, Hind. A thatch grass, growing in the jungles of N. India to a height of 9 feet.

BHUR and RAJBHUR, a race in Northern India, known by tradition as the oldest of Indian races.

BHURANYU, in hindu mythology, a fab lous golden winged falcon who stole the sa Soma.

BHURJ or Bhojaputra. Betula the putra. Paper birch, of the delicates of used as paper, for covering um lining hookahs, &c.—*Cleghorn, on Kullah and Kangra.*

BHURKUNDA, Hind.? also BHURSOO, Hind. A tree of Chota Nagpore with soft, white timber.—*Cal. Cat. Ex.* 1862.

BHURTPOOR. A town in India in Long. 77° 32′ E. and Lat. 27° 15′ N. It is 32 miles west of Agra. Aitchison tells us that it is the capital of a Jat principality founded by a freebooter named Birj, who held the village of Sinsunnee in the pergunnah of Deeg, but the power of this State was chiefly extended during the decline of the Mogul empire by his great grandson Sooruj Mull, who was killed in 1763. Sooruj Mull left five sons, three of whom administered the state of Bhurtpore in succession. During the rule of the third son Namul Singh, the fourth son Runjeet Singh rebelled and called in the aid of Nujjuf Khan, who stripped the family of all their possessions except the fort of Bhurtpore, which was held by Runjeet Singh. After much internal and external trouble, Sindhia gave back to the family, first eleven, then three pergunnahs, which now form the State of Bhurtpore. In 1863, the chief Runjeet Singh entered into a treaty with the British: but he gave shelter to Holkar when pursued by Lord Lake, after the battle of Deeg, and on refusing to deliver him up, Lord Lake made four assaults which were each repelled, but the chief then agreed to expel Holkar from his territory and a new treaty was entered into. On the recurrence of differences, Bhurtpoor was again besieged and fell to Lord Combermere on the 18th January 1826. Since British India was taken under direct British rule, the Maharajah has received a Sunnud (No. III), conferring on him the right of adoption and to a salute of seventeen guns. The area of Bhurtpore is 1,974 square miles, the population 650,000, and the revenue Rupees 21,00,000. Bhurtpore pays no tribute and no contribution to any local corps or contingent. The army consists of 3,368 infantry, 2,214 cavalry, and 313 artillery.—*Treaties, Engagements and Sunnuds, Vol. IV. pages* 121, 132 *and* 133. See Jat, Statistics of Battle.

BHURUNDI, Sansc. or Telu Mani. Tel. Tiaridium Indicum.—*Lehm.*

BHUS, Sans. Bhusa, also Bhusi, Hind. bran of wheat; chaff, or cut straw or leaves, &c., for feeding cattle.

BHUSHANA. See Inscriptions, p. 383.

BHU-SARKARA, Tel. or Morinika and ta Tige. Niebuhria oblongifolia, DC.— & A. 79.—Capparis heteroclita, R. 0 The sweet tuberous roots, dried and d to powder, are used medicinally for cooling drink.

BHUSKI, Hind. A carbonate of soda.

BHU-STRUNAM,—S. or Chippu gaddi, Tel. Andropogon schœnanthus.—*L.*

BHUT, Hind. Said to be the Soy bean, the Sojahispida.

BHUT. See Bhot, Bhooteah, Kunawar, Ladak, Tibet.

BHUTA or BHOOT. A ghost, an evil spirit.

BHUT-BALI. Offerings to evil spirits, ghosts, goblins; offerings at funerals to demons and spirits, offerings to all creatures.—*Wilson.* See Bali.

BHUT-BAMIAN. A name of Bamian.

BHUTALA BHAIRI, Tel. Bhatamkusam S. Croton oblongifolium, R. iii. 685. The Telugu name signifies "demon-driver" or "devil goad"—and sticks made of it are carried as a protection against evil spirits.

BHUTAN. See Bhootan, Bara Lacha, Kashmir.

BHUTARI. A town on the southern slope of the Himalaya. Its ancient name was Madra.

BHUT JHATA, Hind. Apium graveolens.

BHUTNERE. The tract from Loni to Kasna called after the Bhutti race. See Bhutnair.

BHUTNAIR has attained great historical celebrity from its position, it being in the route of invasion from Central Asia to India. The Bhutti and the Jit seem to have been so intermingled that distinction is impossible. The Jit, in a naval war on the Indus resisted the advance of Mahmud of Ghazni. In A. D. 1205, only twelve years after Shahab-ud Din conquered India, his successor, Kutub, in person conducted a war against the Jit of the northern desert, to prevent their wresting Hansi from the mahomedan empire. When the dethroned queen Razzia, heiress of Feroz, was compelled to abandon her throne, she sought protection amongst the Jit, who with their Scythic brethren, the Ghikar, assembled all their forces and marched with their queen at their head, to meet her foes, but she fell in battle in the attempt to re-gain her kingdom. Again, in A. D. 1397, when Timur invaded India, Bhutnair was attacked for having distressed him exceedingly on his invasion of Multan, when as he mentions, he in person scoured the country, and cut off a tribe of banditti called Jit. Shortly after Timur's invasion, a colony of Bhatti under their leader Berai migrated from Marote and Phoolra, and assaulted and captured Bhutnair from Chagat khan, a noble of the Chagtai tribe, but whether an officer of Timur or of the Delhi Court is not known. But he had conquered Bhutnair from the Jit and had acquired a considerable territory, which the Bhatti colony took advantage of his departure to re-conquer. The tract depending on this, and that north of it to the Garah river, in Colonel Tod's time presented a scene of absolute desolation. But in former times were many villages, of which in his day, remains only were to be seen.—*Tod's Rajasthan, Vol. III. p.* 212. See Bhatnair.

BHUTNI SAJJI. HIND. *lit.* Devil's soda.

BHU-TULASI, Ocimum Basilicum, *var.* and O. pilosum.—*R. III. p.* 16.

BHUTTEE. See Bhatti, Jut.

BHUTWA, HIND. Chenopodium.

BHYNEE, CAN. Caryota urens.

BHYENG-TSENG, BURM. In Amherst, a close-grained, compact, grey wood, fit for general purposes, and seemingly exempt from attacks of insect.—*Captain Dance.*

BHYNSROR, is the tract named Puchail, or the flat, between the river Chumbul and the pass, and contains about twenty-four villages in the lordship of Bhynsror. According to the local tradition of some of the wild tribes, its more ancient name was Bhadravati, the seat of the Hoon race; and the traces of the old city in extensive mounds and ruins are still beheld around the more modern Bhynsror. Tradition adds, that the Chirmitti the modern Chumbul had not then ploughed itself a channel.—*Tod's Rajasthan, Vol. II. p.* 713.

BHYRUL, a river of Jessore.

BIA, Ptero-carpus marsupium. See Beba.

BIA in L. 100° 50′ E. and L. 18° 16′ N.

BIADE: GRANI. IT. Corn.

BIADIAH. Green turbans.

BIANA, the chieftain of this was the Dahima, one of the most powerful vassals of the Chouhon emperor or Pirthi rajah, the brothers of this house held the highest offices under the emperor, and the period during which the elder Kaimas was minister, was the brightest in the Chouhone dynasty.—*Tod. Rajasthan, Vol. I. p.* 119.

BIAR-WOOD. A tree of Mehra forest, near Abbottabad, Hazara. Natural order, Coniferæ, it is Pinus longifolia, Pinus excelsa, or lofty pine.—*Cal. Cat. Ex.* 1862.

BIARMI. A river of Dumoh.

BIAZ, HIND. PERS. Interest of money.

BIBA BIBA, CAN. Holigarna.

BIBACHA, HIND. Brassica Griffithii.

BIBI, HIND. Lady; Bibi Sahib, Anglo-Hind. properly bibi-sahibah, an Englishwoman, the mistress of a house.

BIBEEPOOR, in L. 80° 53′ E. and L. 26° 50′ N.

BIBLA, HIND. Bibla Honi. MAR. Pterocarpus marsupium.

BIBLE. From Greek biblos and Latin biblum, a book. The Bible is divided into two portions, the Old Testament and New Testaments. The former contains the writings of Moses and the prophets and is the Canonical book of the Semitic religion of the Jews or Hebrews, the latter contains the doctrines of Jesus Christ but both books are Canonical in the religion of Christians. The two books of the Old and New Testament are reverenced by the mahomedans of the S. and S. E. of Asia, and the possessors of the Taurait, Anjil, Zabur, Koran and Furhan, viz., the books of Moses, the Evangils, the Psalms and the Koran, are styled Ahl-i-Kitab or People of the Book, *i. e.*, people possessing a revealed religion. The New Testament of the Bible was written originally in Greek, but the book has now been translated into all the European and most of the Semitic, Aryan and Tartar tongues, and largely distributed. The Old Testament, too, has been, in parts, turned into the vernacular tongues of India, and the whole of the two books has appeared in Arabic, The Old Testament part of the Christians' Bible is supposed to have been written in Hebrew from which it was translated into Greek. It is related that Philadelphus sent Aristæus, a man whose wisdom had gained his friendship, and Andræus, a captain of the guard, both of them Greek Jews, with costly gifts to Eleazer the high-priest of Jerusalem; and asked him to employ learned and fit men to make a Greek translation of the Bible for the library at Alexandria. Eleazer named seventy Elders to undertake the task, who held their first sitting on the business at the king's dinner-table; and Menedemus the Socratic philosopher, the pupil of Plato, was also present, who had been sent to Philadelphus as ambassador from Eubæa. The translators then divided the work among themselves; and when each had finished his task it was laid before a meeting of the seventy, and then published by authority. Thus was said to have been made the Greek translation of the Old Testament, which, from the number of the translators, we now call the Septuagint; but a doubt is thrown upon the whole story by the fables which have been mingled with it to give authority to the translation—(*Sharpe's History of Egypt, Vol. I. pp.* 308-309.) The Canonical books of three of the principal religions of the ancient and modern world, viz., the Veda of the brahman, the Zend-Avesta of the Zoroastrian and the Tripitaka of the buddhist, have lately been recovered for Europe. These books have discovered the real origin of Greek and Roman and likewise of Teutonic, Slavonic and Celtic mythology. The Koran and the literature connected with it, affords information regarding another Semitic religion, the doctrines of Mahomed, and the discovery of the monuments of Babylon and Nineveh has furnished new materials for the study of the Semitic religions, and images of Bel and Nisroch have been produced. Movers has illustrated the religious worship of Phœnicians and Carthaginians, from their temples, and the religious ideas of the Arab nomades, prior to the time of Mahomed have been described by others. The idols and temples, the hierohic inscriptions, the hieratic and demotic have afforded much information regarding the religion of Egypt. Besides the Aryan and Semitic families of religion, there are in China, three recognised forms of public worship,—the religion of Confucius, that of Lao-Tye, and that of Fo (Buddha). Among the Turanian nations, a few only, such as the Finn and Mongolian have preserved some remnants of their ancient worship. And something is known of the religions of Mexico and Peru, and of the savage inhabitants of America, Africa and Polynesia. To gain a full knowledge of the Veda, the Zend Avesta, the Tripataka, of the Old Testament, the Koran or the sacred books of China would be the work of a long life —(*Max Muller, Chips from a German Workshop, Vol. I. p. 12 to 15.*) In British India, the religious of the Aryan and Semitic families predominate: buddhism in Ceylon and Burmah and beyond the Himalaya. But the believers in one God, are the Jewish worshippers of the Western Coast of India; the mahomedans all over Asia and the christian disciples, and to all these the mahomedans apply the term Ahal-i-Kitab, *i. e*, People of the Book. The great body of the people however are the Turanian races, many of them servile, who worship spirits, ancestors and idols, with the followers of the brahminical hindu faith, and the Jain worshippers of Western India, amongst all of whom is found every conceivable kind of worship from the grossest sensualism to the most exalted spiritualism and the worship of stocks and stones to the sublimest conceptions of the omnipresent God. There is however in all their religions a secret yearning after the true, though it may be, unknown God. The Veda of the hindus is in Sanscrit. It does not seem to have been translated as a whole, into any of the Vernacular tongues of India and there are but few brahmans who can read it and understand it, though they learn portions of it by heart. It is considered a revelation; and the laws of Manu, the Purana or legendary histories of India, and Tantra and the six orthodox hindu systems of philosophy, derive their authority from their agreement with the Veda. It was this book of which the buddha, Sakya muni, denied the authority. In the Vedanta philosophy, the beginning of all wisdom is said to be a desire to know God, who is the cause of the universe and this is to be learned from the scripture. The Nyaya philosophy acknowledges four sources of knowledge,—perception, induction, analogy and the word or Veda. The Vaiseshika philosophy, is an atomistic system, not favourably looked on by the Brahmans, nevertheless proclaims the absolute authority of the Veda. The Sankhya philosophy is atheistic, it maintains that a personal God cannot be proved though it so far conforms as to admit the received doctrine of the Veda as evidence in addition to perception and induction. The Purana, or old books, superseded the Veda. The buddhist religion of Burmah, is likewise a philosophy. The British rulers of India, have allowed the utmost religious freedom to all the races under their sway and the bible has never been used as a class book in any Government School. This has been denounced by earnest men as time serving. However, the Koran, the Vedas are equally excluded, but the Grant-in-aid rules of 1854 permit money allowances to every school in India, where education up to a certain standard is imparted, and in these grants every christian school can equally share.

BIBLIOTHECÆ SANSKRITÆ. A Catalogue, by Professor Gildemeister, of Bonn on the Rhine, published in 1847, of Authors, Indian and European, who have edited or translated Sanscrit works, or treated of Sanscrit literature.—*Cal. Rev.*

BIBOR, JUBAR, KULTA or KOLITA, are populations to the north and east of the Abor and Mishmi localities, on the drainage of the Brahmaputra.—*Latham.*

BICHE DE MAR.

Hoy-shup...	CHIN.	Swala......	JAV.
Esculent Holothuria	ENG.	Holothurion...	LAT.
Swalloe of English sailors and traders	,,	Suala..	MALAY of Celebes.
Sea-slug	,,	Tripang,	,,
Sea cucumber	,,	Beche de mer, (or sea worm)............	PORT.
Beche de mer...... ...	FR.	Balate...	PHIL.

The names given to species of Holothuria, found in most of the shallow seas of the Malay and Philippine Archipelagos. The word tripang is Malay, and the animal is called by the people of Celebes, suala which British traders write swalloe. It is the Beche de mer, or sea-worm of the Portuguese, and our own "sea-cucumber," for in appearance and shape, although not in colour, for it is a dirty brown, it greatly resembles a cucumber. The esculent holothuria is by no means confined to the seas of the Archipelago; it is found in the upper part of the Gulf of Siam, and is so abundant on the northern coast of Australia that the people of Celebes, receiving advances from the resident Chinese, have been long in the habit of making annual voyages thither in quest of it. Gutted, dried in the sun and smoked, it is considered cured, and fit for its only market, that of China, to which many hundred tons are yearly sent for the consumption of the curious epicures of that country. The fishery of the tripang is to China what that of the sardine, tunny, and anchovy is to Europe. It is, for the most part, caught by hand, for it has little power of locomotion, but in deep water, sometimes by diving. Mr. Windsor Earl, in his account of the fishery on the shores and banks of the Aru Islands where this animal appears to be very abundant, mentions that their great sources of wealth are the pearl and tripang banks, which lie on the eastern side of the group. These extend the entire length of the islands, and are often several miles in width, being intersected by deep channels, some of which will admit vessels of burthen. The tripang, or sea-slug, on that coast, is of several varieties. The greater portion is caught in shallow water, where it can be picked up off the bank without diving." (See *Journal of the Indian Archipelago*, *Vol. IV. p.* 480.) The tripang, although an article of considerable importance in the trade of the Indian Islands, is never found in the printed price-currents of an European emporium, be- se seldom dealt in by Europeans, which rises from nice or rather capricious distinc- ions in their quality, which no European is competent to appreciate. We can discover no mention of the tripang in the early Portuguese writers; which seems to be another proof that the Chinese, who carry on the trade and advance the funds, had not yet settled in the Archipelago when the Portuguese first appeared in it.(*Crawfurd Dict. page* 440.) The Hon'ble Mr. Morrison mentions that it forms one of the important articles of commerce between the islands of the Indian Archipelago and China. That it is found on all the islands from New Holland to Sumatra, and also on most of those in the Pacific: but is produced in the greatest abundance on small coral islands, especially those to the south and east of the Sulu group. Among the Islanders it is known by the name of tripang, the Chinese at Canton call it hoy-shun, which means sea-ginseng. It has but few powers of locomotion. It is sometimes two feet long; but its common length is from four to ten inches, and its diameter two or three. Its tentaculae are short, and when the animal is captured are folded up under its body. It is taken with the hand by natives, who often dive for it; and after it has been cleansed, dried, and smoked it is fit for sale.

The Holothuria of Raffles Bay is about 6 inches long and 2 inches thick. It forms a large cylindrical fleshy mass almost without any outward sign of an organ. The tripang is first thrown into a kettle filled with boiling sea water after a few minutes, it is removed and ripped open with a knife, to cleanse it of its intestines. It is then thrown into a second kettle where a small quantity of water and the parching rind of a mimosa produce dense vapours. This is done to smoke the tripang for better preservation. Finally, it is dried in the sun or in case of bad weather under a shed. For a long time the Chinese were the sole carriers of the article; but recently foreigners have engaged in the trade. In the market, it appears hard and rigid, and has a dirty brown color; when brought to the table it resembles pork rind in color and consistency. The Chinese use it by itself, or as an ingredient in other dishes, and consume large quantities under the belief that it is an aphrodisiac. The varieties into which they divide it are above thirty, varying in price from $80 down to $1½ per pecul, but unless one is well acquainted with the article it is impossible to distinguish them; a great deal of this article is imported into Macao, in junks and Portuguese vessels. In the Chinese tariff, all the sorts are arranged under the two heads of black and white. (*Morrison, p.* 141.) Mr. Faulkner mentions as its localities, the Eastern Archipelago, Australia, Mauritius, Ceylon, Zanzibar, &c., and that it is occasionally brought to Bombay from the latter place, and re-exported to China.—*Journal of the Indian Archipelago, Vol. IV. p.* 480. *Hon'ble Mr. Morrison's Compendious History, p.* 141. *Crawfurd's Dictionary,* 440. *Faulkner.* See Holothuria; Tripang.

BIDNANDA KALLANG. See Biduanda Kallang.

BIDNUR. A town in the northern part of Mysore. It belonged to the ancient Chalukya dynasty. It is usually written Bednore and is also called Nagar. See Chalukya.

BIDOKUH, in L. 78° 8′ E. and L. 27° 47′ N.

BIDOWLY. Two towns in India, one in L. 82° 53′ E. and L. 27° 10′ N. The other in L. 77° 6′ E. and L. 29° 32′ N.

BIDUANDA KALLANG. A race who with the Orang Sleetar dwelt in Singapore, but were removed from it by the British when they occupied in 1818. They speak Malay with a guttural accent. They are now dwelling in the Malay Peninsula. They are called by Latham Bidnanda Kallang.

BIDURU NANA BIYYAM, TEL. Euphorbia thymifolia, *L.*, has the signification of "green or raw rice of *Biduru*." The term "raw rice" or *pachchi arisi* TAM. is applied in the Tamil tongue to several of the smaller species of *Euphorbia.*

BIDUL, BENG. Bauhinia purpurascens: var. B. variegata.—*Roxb.*

BIER, GER. Beer.

BIERE, FR. Beer.

BIGHA. Bigha, Beegha, corruptly Beegha, Beegah, &c. A land measure varying in extent in different parts of India. The standard Bigha of the Revenue surveys of the North-West Provinces is equal to 3,025 square yards, or 5-8ths of an acre. In Bengal, the Bigha contained only 1,600 square yards, or little less than 1-3d of an acre. In Benares, it was, at the time of the settlement, determined at 3,136 square yards. In other pergunnahs it was 2,025 to 3,600, or to 3,925 square yards. A kacha (immature, crude, small) Bigha is in some places a third, in others only a fourth of a full or standard Bigha. Akbar's Bigha contained 3,600 Ilahi-gaz which have been considered as equal to the 3,025 square yards of a Bigha of Hindustan.

In the N. W. Provinces of India it is nearly five-eighths of an acre. In the Lower Provinces it is 120 feet square, or 4,800 superficial feet nearly one-third of an English acre.—Tod says that in Rajputana 120 are = 40 acres. Sir H. Elliot specifies the following as some of the variations found in the Upper Provinces, for 100 acres, viz.

	Bigha.	Biswa.	Kitta.
Farakhabad, ...	175	12	0
East and South Gorakhpur.	192	19	7
Allahabad & part of Azimghur... ...	177	5	6
Part of Azimghur and Gazipur ...	154	6	8
Bijnur...	187	19	15
In the Upper Doab (Kachhu)... ...	582	3	0

In Cuttack, the Bigha is now considered to be an English acre. The Maratha bigha is called twenty pand, or 400 square kathi or rods, each five cubits and five hand-breadths: as the rod varies, so does the bigha: under the Adil Shahi dynasty it was equal to 4683 square yards, or only 457 square yards less than an English acre. The Guzerat Bigha contains only 284$\frac{4}{9}$ square yards.—*Glossary of Indian Terms by Wilson, p.* 85. *Elliot, Supplement. Tod's Rajasthan, Vol. I. p.* 553.

BIGNI, HIND. Celtis Caucasica.

BIGNONIACEÆ, An order of plants. See Bignonia; Calampelis; Spathodea uncinata, Calosanthes Indica. Evergreens.

BIGNONIA of this genus of plants, one of the Bignoniaceæ, about 70 species are known and 18 occur in China, the Moluccas, Assam, Morung, Peninsula of India and Malacca. They have ornamental flowers and amongst them are B. adenophylla of Burmah, B. undulata of Hindustan and Guzerat. B. chelonoides and B. suaveolens of Hindustan and Dekhan, multijuga of Silhet and Penang, suberosa of Burmah and Peninsular India. B. xylocarpa of the Neilgherries and jungles of Kandesh and Concans. Several of these plants were formerly ranged under the genus Tecoma. The leaves of Bignonia chica yield a red colouring matter. The bark and capsules of B. indica are astringent, and used in tanning and dyeing. The pleasant tasted and fragrant flowers of B. chelonoides (suaveolens) are described as being used as a cooling drink in fevers.—Dr. Mason mentions that the Karens often build their boats with the wood of a species of Bignonia, which is frequently used in joinery. Several of the species which grow in Burmah and Tenasserim are not yet specifically identified. Of these may be enumerated. "Ky-oung-sha-touk" Than-theet, Burm. thu-gai-nee. Burm. Ky-wai-tha," Burm. Sp. "lain-bha" Burm.—*Mason's Tenasserim. O'Shaughnessy, p.* 489. *Voigt.* 471. See Cocao.

BIGNONIA, *Species.*

Tha-thee. BURM.

A very large tree of Tavoy.—*Captain Dance.*

BIGNONIA, *Sp.*—Thug-gai-nee. BURM.

A large tree of Tavoy, used in building.—*Captain Dance.*

BIGNONIA, *Species.*

Lainbha. BURM.

A middle-sized tree of Tavoy.—*Captain Dance.*

BIGNONIA, *Species.*

Than-day. BURM.

A light, loose grained wood of British Burmah, not much used. Breaking weight 125 lbs. A cubic foot weighs lbs. 33 to 36. In a full grown tree on good soil, the average length of the trunk to the first branch is 30 feet, and average girth measured at 6 feet from the ground is 7 feet. It sells at 4 annas per cubic foot.—*Dr. Brandis.*

BIGNONIA, *Species.*

Kyoun-douk. BURM.

Wood of British Burmah, not used. A cubic foot weighs lbs. 23. In a full grown tree on good soil, the average length of the trunk to the first branch is 15 feet, and average girth, measured at 6 feet from the ground, is 2 feet.

BIGNONIA, *Species.*

Thau Thet Ngai BURM.

A tree of Moulmein. Used in common purposes of building.—*Cal. Cat. Ex.* 1862.

BIGNONIA CHELONOIDES, *Linn.*

Stereospermum chelonoides, *D.* C.

This tree is wrongly supposed to be identical with the B. suaveolens of Roxburgh. In Southern India, it is found in Coimbatore and various parts of the Madras Presidency: both above and below the ghats in Canara and Sunda, though not common there: abundant in the Dekhan, on the right bank of the Godavery and in Ganjam and Gumsur: also in the Bombay ghats, at Khandalla, and Parr, also in Sylhet and Assam. It is a native of the mountainous parts of the coast of Coromandel, where it grows to be a large tree. Flowers during the hot and rainy seasons and the seed ripens in December and January. The wood of this tree is high colored, hard, durable, and of much use amongst the inhabitants of the hills where it is plentiful. It attains an extreme height of 20 feet, with a circumference of one foot, and the height from the ground to the intersection of the first branch is 8 feet. The tree is held sacred by the hindus in consequence of which it is difficult to obtain the timber, but it is a good fancy wood, and suitable for buildings. The bark and fruit are used medicinally, and the pleasant tasted fragrant flowers are used to make a cooling drink in fevers.—*Drs. Mason, Wight, and Gibson, Voigt, Captains Beddome and Macdonald, Flor. Andh. O'Shaughnessy, p.* 405. *Rohde, M.S.S. Jaffrey. Roxb. iii.* 106.

BIGNONIA CORONARIA. A large tree with white flowers, very plentiful in the Tharawaddy and Pegu districts; it and Bignonia spathoidea, also found throughout the province, both afford from their inner bark material for rope employed for local purposes. The inner bark of Sterculia ramosa also affords a strong and durable rope in common use.—*McClelland.*

BIGNONIA FALCATA, Koen. Spathodea Rheedii: *Spreng.*

BIGNONIA INDICA, *Linn.*

Calosanthes Indica,—*Blume.*
Bignonia pentandra,—*Lour.*

Spathodea Indica...	PERS.	Tat Palangu...	...HIND.
Mulin...	...HIND.	Tat Morang...	
Sori.	,,	Tetoo. ...	....MAHR.

On the Bombay side, this is common near water streams, chiefly below the ghats, but the wood is described by Dr. Gibson as of no value, neither does it, there, ever reach any size. Mr. Rohde says that this is one of the tallest trees on the Coromandel coast where it grows chiefly up amongst the mountains. Flowering time the beginning of the wet season. Seed ripens in January and February. The wood is soft and spongy so much so as to render it unfit for use. It grows in Behar and in the Siwalik hills and immense pods hang from its branches in its leafless state. In the Tenasserim Provinces, it is often seen near the dwellings of the natives; it grows luxuriantly in the cold regions of the Himalaya, and might probably grow in the open air of Europe also. At Lahore there was received from the hills a gigantic pod, not less than half a yard in length and four inches in breadth. The bark and capsules of this tree are astringent and used in tanning and dyeing. Dr. Stewart says that the leaves are called "Sionak" in the Punjab, and are used in medicine. The wood is there, also soft and useless.—*O'Shaughnessy, p.* 480, *Hooker's Him. Jour. Vol. I. p.* 86. *Mason, Powell, Honigberger, p.* 244. *Rohde, MSS. Dr. J. L. Stewart. Roxb. iii,* 110.

BIGNONIA LEUCOXYLON. See Cedar.

BIGNONIA LONGIFLORA. Syn of Bignonia chelonoides.—*Vent.*

BIGNONIA PENTANDRA, LOUR. Syn. of Calosanthes Indica.—*Blume.*

BIGNONIA QUADRILOCULARIS—*Roxb.*

Spathodea Roxburghii.—*Spreng.*

Wurrus. MAHR.

This large tree is found in the higher hilly places of the Concan, the higher valleys of the ghats, Circar mountains, Malabar Hill Bombay, Elephanta, and is very common in Padshapore jungles, in the Southern Mahratta country. It flowers during the beginning of the hot season and its flower is very beautiful. The wood strong, tough, durable, serviceable, both for beams and for planks, is much used as planking for carts and is employed for many purposes by the natives ?—*Roxb. Gibson. Rohde, MSS*„ *Roxb. iii.* 107.

BIGNONIA RADICANS. This ash-leaved trumpet-flower has stems with rooting joints ; flowers in large bunches of a scarlet orange colour : is of easy cultivation.—*Riddell.*

BIGNONIA SPATHACEA—*Linn. fil.*

Spathodea Rheedii, *Spreng.* 118 longifolia, *Vent.*

A tree of the Coast forests.

BIGNONIA SPATHOIDEA. This large tree is found throughout the Tenasserim Provinces. It is plentiful and its inner bark affords a material for rope.—*McClelland.*

BIGNONIA STIPULATA.—*Roxb.*

Spathodea stipulata.— *Wall.*

Pha bhan of Akyab.	Ma shoay of Moulmein.
Ka-mhoung „	

Stipuled trumpet-flower tree with a long twisted pod. It is a common flowering tree throughout Tenasserim, common at Moulmein and the flowers are often seen in bazaars where they are sold for food. The tree enters the native materia medica, as affording a cure for psora. The tree of Moulmein is said to afford a strong wood for any ordinary purpose, and in Ayab, where the natives make a spirituous liquor from the bark, it is small, very plentiful, and its wood used by natives for bows, &c. Dr. McClelland describes it as affording a strong, very dense and most valuable wood for purposes requiring strength, elasticity and density.—*Drs. Mason, McClelland, Cal. Cat. Ex.* 1862.

BIGNONIA SUAVEOLENS.—*Roxb.*

Stereospermum suaveolens.— *W. Ic.*
Tecoma suaveolens.—*G. Don.*

This middle sized tree is quite different from B. chelonoides. It grows in the Dandelle forest above the ghats, in Canara and Sunda. It occurs; though not very common, in Ganjam and Gumsur, where it attains an extreme height of 20 feet, with a circumference of 1½ feet, and the height from the ground to the nearest branch is 12 feet. A native of the southern parts of the Coromandel coast ; it also occurs in the Dekhan, Bengal, in Sukanuggur, Gorukpur, and the Kheree jungle, in Dehra Dhun and Kangra. It has large, dark, dull crimson flowers. Its wood is very similar to B. chelonoides, but of a redder hue elastic and long grained ; used for buggy shafts, plough yokes, &c. The bark is employed medicinally, -- *Voigt. Dr. Gibson, Captains Beddome and Macdonald. Rohde, MSS., Powell. Hand-book. Econ. Prod. Punjab. Roxb. iii.* 104.

BIGNONIA SUBEROSA—*Roxb.*

Millingtonia hortensis.—*Linn. fil.*

Indian Cork tree . ENG.	Akas Nim... HIND.
Neemi Chambeli. HIND.	Cork maram. ANGLO-TAM.

This very handsome tree is common in gardens of India. It grows in Tanjore, Madras, Segaon, between Ava and Taong Dong. In January the tree is covered with beautiful and fragrant pure white blossoms. It grows with great rapidity, sending out numerous suckers, from which it may be easily raised. It is a good tree for planting in avenues. The rough bark peels off in small pieces about once a year. It is deeply cracked and spongy and an inferior sort of cork can be made from it. The wood is soft, and can only be of use for firewood, the bark is very cork-like.—*Dr. Cleghorn in M. E. J. R., Voigt. Powell. Hand-book. Econ. Prod. Punjab, p.* 569. *Roxb. iii.* 111.

BIGNONIA UNDULATA—*Roxb. iii.* 101.

Tecoma undulata.—*G. Don.*

Wave-leaved Bignonia. ENG.	Rukt Reora....MAHR.
Bohira Reora..... ...HIND.	Khew... ...SINDI.

A tree with drooping branches like the weeping willow leaves covered with micaceous scales ; flowers in lateral racemes, very large, orange coloured, and scentless. Dr. Gibson says it is rare in the Bombay forests, but is found in the northern parts of Baglan and in Kandesh : it is more common in Sind, in some of the valleys of the Pubb Hills, and at Shah Bilawul : yet Voigt says it is abundant in one locality of Kandesh, and that it occurs in Guzerat. It is very common in Marwar and other parts of Rajwarra, and when covered in the month of March with its immense quantities of orange coloured blossoms, it is a most splendid object and would be highly ornamental in compounds, the wood is fine grained and valuable, having a scent like the walnut leaf. The wood is reckoned very strong and durable, but from its size, applicable only to small purposes.—*Dr. Irvine, Gen. Med. Top. p.* 200, *Dr. Gibson.*

BIGNONIA XYLOCARPA, *Roxb. iii.* 108.

Tecoma xylocarpa, *G. Don.*

Ghan seng... ...CAN.	Vadenkurni maram. TAM.
Khurseng... ...MAHR.	

This large tree has been noticed by Dr. Wight as growing in Coimbatore. It is found, also, though rare, in the Godavery forests, but grows on the Neilgherries, in the Thull-ghaut, Jowar jungles, hills about Nagotnah, jungles about Ratnagherry and on the Parr ghat. Dr. Gibson says it is common in the forests both inland and on the coast, and that it may be easily distinguished by its peculiar rough pods, two feet or more in length. The wood is never large, is very hard and good if ripe; of a brownish yellow colour, rather close-grained, takes a good polish, is used in turnery and in cabinet making. It also affords an oil, obtained by a simple process of reverse distillation, and said to be of great efficacy in cutaneous affections. *Drs. Wight and Gibson, Captain Beddome.*

BIHI-DANA. PERS. HIND. GUZ. TAM Seeds of Cydonia vulgaris, (Pyrus cydonia,) Quince seed, from Bihi. PERS. Cydonia vulgaris, the Quince. There is a "tursh" or bitter and "shirin" or sweet, quince.

BIHISHTI, HIND. A water-carrier who conveys it in a skin over his back. The word seems to be derived from Bihisht, the paradise of the mahomedans.

BIHUL, in L. 75° 41′ E. and L. 28° 39′ N.

BIH RECHNI, HIND. Euphorbia dracunculoides.

BIHULL. The inner bark of Grewia oppositifolia, employed in the Himalaya for making ropes.—*Royle.*

BIJ, HIND. also Binj, H. seed, any seed, hence bijwar, seed corn. "Bij Band," HIND. is the Sida cordifolia, and Rumex acutus. "(Kamud) bij," HIND. is Nymphæa alba. "Suka-ki-bij," HIND. is the Cannabis sativa. "Bij-gai," HIND. is the Lonicera quinquelocularis.

BIJAPOOR. The seat or capital of the mahomedan Adăl Shahi dynasti, which ruled there from A. D. 1501 to A. D. 1660. Yusuf Khan, a son of Amurath II. of Anatolia, was purchased, in 1499, at Ahmedabad, for the Bijapoor Body Guard. But in 1501, he assumed independence, under the title of Adal Shah. The territories over which this dynasty ruled varied considerably, in extent, as the Nizam Shahi of Ahmednuggur and the Bahmani kings of Beder pressed on them. The successive sovereigns were

1501, Yusuf Khan, styled Adal Shah,
1511, Ismail Adal Shah I.
1534, Mulloo Adal Shah
1535, Ibrahim Adal Shah I. In his reign, his minister, Ram Rajah, assumed the throne of Vijyanuggur.
1557, Ali Adal Shah I.
1579, Ibrahim Adal Shah II. in his reign Chand Bibi was regent.
1626, Mahomed. Adal Shah,
1660, Ali Adal Shah II.

The tombs of this family at Gogi and Bijapur are domes on basements. Bijapur was taken by Aurungzeb, and is now in ruins, only inhabited by a few hundred inhabitants. A great brass gun is still on the ramparts of this city, said to have been cast on the 13th December 1685, at Ahmednuggur by a European whom tradition styles Rumi Khan. It weighs 41 tons. See Beejapoor, India, p. 323-4. Jain.

BIJAPURAMU, S. also Madiphala chettu, TEL. Citrus medica, L.

BIJARA SALA, SANS. Nut of Anacardium occidentale.

BIJBAN. The seed of a plant found in all Rajpootanah. It is heating, and used at Ajmere in aphrodisiac prescriptions.—*Gen. Med. Top., page* 126.

BIJBAND, HIND. Polygonum *sp.* also, Sida cordifolia.

BIJH-GAH, HIND. A scare crow.—*Elliot.*

BIJHONIA. A tribe of rajputs in Jounpur Zillah.—*Elliot.*

BIJI, HIND. Mongoose; Herpestes.

BIJI, HIND. Emblica officinalis.

BIJIANAGAR, also written Vijianagar, properly Vidia-nuggur or the town of learning; was founded in the reign of Mahomed Toghalak according to one account, by two fugitives from Telingana: according to Prinsep, in 1338 by Bilal Deo, of Karnata, who resisted Mahomed Toghalak, and founded Vijianuggur. In 1347, Krishna Rai, ruled there: in 1425, Deva Rai: in 1478, Siva Rai. Vijiyanuggur was the seat of the last great hindu empire in India. The sovereigns claimed to be of the Yadu race. In the latter part of the 16th century they granted to the E. I. C. the tract around Madras, engraved on a gold plate, which was lost in 1746 when Madras was captured by the French, under Labourdonnais. Towards the fifteenth century it was the capital of a great hindu power which ruled over the hindu chiefs to the south of the territories of the Adil Shahi, Nizam Shahi and Kutub Shahi kings of the Dekhan. In the middle of the 16th century, these three mahomedan kings, fearing the growing power of Ramarajah, the sovereign of Bijianuggur, made war against him, king Rama was then in his 70th year. He met the confederates at Talicottah on the 25th January 1565 with a great army of 70,000 horses, 90,000 feet, 2,000 elephants and 1,000 pieces of cannon, but he was defeated with a loss of 100,000 men, and was taken prisoner. The authors Khafi Khan and Shahab-ud-din, state that the elephant on which he was mounted ran away with him into the confederate camp. He was beheaded at Kala Chabutra in the Raichore doab, and his head remained for 200 years at Bejapore as a trophy. Bijanuggur sank into an insignificant place, and is now known as the ruins of Humpy. The rajah's brother, however, took refuge in Penicondah, and subsequently at Chandargiri, whence it is, also, said the English merchants obtained the grant of the ground on which Madras was built.—*Wh. H. N. I.*, *p* 459. See Humpee, Bejapore.

BIJION, Burm. In Amherst, a timber used for house posts, rafters, and the like purposes it is a heavy, compact, grey, close-grained wood. —*Captain Dance.*

BIJNORE. A town of Rohilcund.

BIJNUGUR. See Kurumbar.

BIJOLI. The Rao of Bijoli, is one of the sixteen superior nobles of the Rana of Mewar's court. He is a Pramara of the ancient stock of Dhar, and perhaps its most respectable representative. There is an ancient inscription at Bijoli. See Lat.

BIJUCO. A fibre exhibited from Manilla in the Exhibition of 1851. Its source is not known.

BIJWARRA, in L. 76° 41′ E. and L. 22° 46′ N.

BIYU, Bali. Plantains.

BIZCOCHO also Galletta. Sp. Biscuits.

BIKANEER, in L. 72° 20′ E. and L. 27° 56′ N. is the chief town of an independent sovereignty, chiefly in the great Indian desert. It has an area of 17,676 square miles, with the population estimated by Tod in the beginning of the 19th century at about 539,000, the revenue is about six lakhs of Rupees. Bikaneer maintains a force of 2,100 cavalry, and about 1,000 infantry and 30 guns. Bikaneer was originally inhabited by various small tribes of Jats and others, the quarrels among which led to the conquest of the country in 1458 by Bika Sing, a son of rajah Jodh Sing of Jodhpore. After consolidating his power he conquered Bagore from the Bhattee of Jessulmere and founded the city of Bikaneer; he died in A. D. 1505. Rai Sing, the fourth in descent from Bika Sing, succeeded to power in 1573, and in his time the connection of Bikaneer with the Delhi Emperors began. Rai Sing became a leader of horse in Akbar's service and received a grant of fifty-two pergunnahs including Hansi and Hissar. The earliest treaty with the British Government was in 1801. Sirdar Sing succeeded to power in 1852. He did good service during the mutinies both by sheltering European fugitives and by co-operating against the rebels in the districts of Hansi and Hissar. He received a salute of seventeen guns and the right of adoption. The people most numerous are the Jit and the territory was once populous and wealthy, but the plundering Beedawat bands, with the Sahrai, the Khasa and Rajur robbers in the more western desert so destroyed the kingdom, that while formerly there were 2,700 towns and villages in Colonel Tod's time, not one-half of these remained. Three-fourths of the population are the aboriginal Jit, the rest are their conquerors—the descendents of Bika, including Sarsote (Saraswati) brahmans, Charuns, bards and a few of the servile classes.—*Tod's Rajasthan, Vol. I, p.* 420, *Vol. II. p.* 98. *Prinsep's Antiquities, p.* 259. *Aitchison's Treaties, Vol. IV. p.* 147. *Elphinstone's Cabul, p.* 10. See Brahman, Charun, India, p. 327, Jit, Rajput.

BIKEEAKEE SYN. in L. 79° 16′ E. and L. 29° 42′ N.

BIKH; Bikhma; Bish; Vish; Visha and Ata visha, the names of a powerful vegetable poison. Dr. Wallich refers the plant to the Aconitum ferox; it seems however to be a name given to the roots of several Aconites, for Dr. Hooker, in one part of his journal, mentions that he met with Aconitum palmatum, which yields one of the celebrated "Bikh" poisons. Bikh, he adds, is yielded by various Aconita. All the Sikkim kinds are called "gniong" by Lepcha and Bhoteea, who do not distinguish them. The A. napellus he says is abundant in the north-west Himalaya, and is perhaps as virulent a Bikh as any species. At another place he mentions that magnificent gentians grow in the Lachoong valley, also Senecio, Corydalis, and the Aconitum luridum, a new species, whose root is said to be as virulent as A. ferox and A. napellus. The result, however, of Dr. Thomson and Hooker's examination of the Himalayan aconities (of which there are seven species) is that the one generally known as Aconitum ferox, and which supplies a great deal of the celebrated poison, is the common Aconitum napellus of Europe. Bikhmaura is also a name for A. ferox. —*Hooker. Him. Jour. Vol. I. p.* 168 and *Vol. II. p.* 108. *Engl. Cyc. page* 455. See Aconitum.

BIKH, Hind. Drugs: medicines; one of the fourteen valuable substances eliminated from the ocean when churned by Vishnu. See Kurma.

BIKKI, Tel. also Konda manga, Tel. Gardenia latifolia, *Ait.* Gardenia inneandra.—*Kon.*

BILAUR, HIND. Rock crystal.

BILAURI, HIND. Polygonum bistorta.

BILDI, HIND. Pharbitis nil.

BILE. ENG.

Pit..................HIND. | Pittam...... ....TAM.

Modern chemists regard bile as a soda-soap; and, as such, that of the ox, or oxgall, is used in the arts, by painters in water colours, scourers of clothes, and many others, but from its green colour it requires, for many purposes, to be clarified or prepared. Prepared gall combines with colouring matters and pigments, and gives them solidity either by being mixed with or passed over them on paper. Mixed with lamp black it forms a good imitation of China ink. It is, also, useful for transparencies, by passing them over the varnished or oiled paper and allowing it to dry. The colour is mixed with gall and then applied, and cannot afterwards be removed. It takes out spots of grease and oil, and is useful to the laundress in washing dresses, the colours of which would, run or be removed by the ordinary process of washing. A small portion dropped into ink renders it fluid.—*Tomlinson.*

BILLI LOTAN, SANS. Valerian, also, a species of Melissa or Nepeta; N. ruderalis. The words mean Cat-rolling, from the circumstance that cats roll amongst these plants.

BILLITON ISLAND, in its southern point, is in Lat. 3° 23′ S. It is surrounded by islands in the Caramata Passage.—*Horsburgh.* See Tin.

BIL-PAT, BENG. Lochennia corchorifolia.

BILLU, also Billu Kurra, also Billudu Chettu, TEL. Chloroxylon Swietenia, —*W. and A.* 407.—*R. ii.* 400; [illegible] 64. Karra in Telugu means wood, Ch[illegible] means a tree.

BILLU GADDI, V. Rellu Gaddi, TEL. Saccharum spontaneum, L—*R. i.* 235.

BIL-LUTA, BENG. Pogostemon plectranthoides.

BIL-NALITA, BENG. Corchorus fascicularis.

BILODAR, HIND. Biddoja. HIND. Falconeria insignis.

BIL-RAI, BENG. Sinapis patens.

BILLSEEAGUR, in L. 85° 11′ E. and L. 22° 48′ N.

BILSEN-KROUT, GER. Henbane seed.

BILU, BURM. The Bilu, in the Burmese buddhist myths, are the equivalents of the hindu Rakshasa. They are generally, howev[illegible] described as engaged in some humourous [illegible] chief.—*Yule's Embassy, p.* 27.

BILUCHISTAN. The country of the [illegible]luch tribes. See Beluchistan Affghan, Bozd[illegible] Hindu, India, p. 308, Jut, Kakar, Kelat; S[illegible]riani, Tajak.

BILVAMU, S. Ægle marmelos is [illegible] to Mahadeva: he alone wears a chap[illegible] of its flowers, and they are not offered in sacrifice to any other deity; if a pious Saiva hindu should see any of its flowers fallen on the ground, he would remove them reverently to a temple of Mahadeva. See Maredu : Kali.

BILVUBTHITHA MARA, CAN. Feronia elephantum.

BILWA, HIND. Ægle marmelos. See Bilva. Ægle. Kali.

BIMA. One of the three peoples speaking distinct languages current in the island of Sumbawa. Their alphabet, once distinct, has been displaced by that of the Celebes. See India, pp. 356-359.

BIMAK KABULI, HIND. Myrsine africana.

BINB OR VIMBA, SANS. Bryonia grandis.

BIMB. Abyssinian, Bruce thought that this might be the creature which is alluded to in Scripture, as the plague of flies. See Tsal-tsal, Tsal-tsai, Tse-Tse.

BIMBA. A race who occupied the rugged mountains along with the Kukha. They were under the Sikh rule, but are shiah mahomedans.

BIMBASARA. King of Magadha, B. C. 578, reigned 52 years. He was first of the house of Bhattya, and was murdered by his successor—this dynasty from B. C. 578 to B. C. 447, in succession being parricides. See Bhattya ; Vindusara.

BIMLIPATAM. A seaport town in India, in Long. 83° 33' E. and Lat. 17° 52' N. It has an open roadstead with a small river. It is on the eastern side of the Peninsula of India. The Dutch had a factory there which was plundered by the Mahrattas in 1754.—*Orme, Horsburgh.*

BINA, HIND. The musk deer.

BINA ALSO BINABI, BENG. Avicennia tomentosa.

BINA. A river in Sagar.

BINAULA, HIND. Seed of the Cotton tree: also the cotton plant Gossypum herbaceum.

BIN BHANTA, SANS. Solanum melongena.

BIMBU, BENG. Great flowered Coccinia grandis or a Momordica.

BINCHA, DUK. Flacourtia sapida.

BIND. A predatory race in Ghazeepur (Qu. Rind ?)

BINDAEEGA, in L. 76° 33' E. and L. 24° 23' N,

BINDAK, HIND. Also Findak, Corylus avellana, the hazel nut.

BINDAKAI, HIND.? TAM.? Sapindus emarginatus ; Soap nut.

BINDAL, HIND. Momordica echinata.

BINDERWAR. A Gond tribe who dwell in the hills of Amarkantak, near the source of the Nerbuddah river.—*Coleman, p.* 297. See Go

BINDHAWSIR, in L. 74° 32' E. and L. 27° 40' N.

BINDICK, BENG. Corylus avellana. Hazel nut.

BINDH MADHU, A great temple at Benares, described by Tavernier 1680, destroyed by the emperor Aurungzeb. It was in the form of a St. Andrew's Cross.

BINDRABUN, or Vrindawan, signifying a grove of "Toolsee" trees, is a holy hindoo town situated on the right bank of the river Jumna from over which in a boat, a most picturesque view may be obtained of it, presenting a panorama of great beauty. The circumstance which imparts most to the sacredness of Bindraban, is its having been the seat of the early revels of Krishna, the Apollo of the hindoos ; Mutra having been his birth place. While many a hindoo Anacreon courts the muses with lays dedicated to this youth, prominent in hindoo mythology, minstrels and maids join in soft strains to his praise. Bindraban, among other things, is now noted for the manufacture of pretty toys made of a composition that may be mistaken for mineral. Indeed the vendors pass them off as such, and to enhance their value, declare that they are brought from Jeypoor, where articles of this description and marble toys especially receive a fine finish. The Valabba Charya sect of the Vaishnava hindu have many hundreds of their temples at Mathura and Bindraban. At Benares and Bindraban, the annual dances constituting the Ras Yatra, in commemoration of Krishna and the sixteen Gopi are performed with much display —*Tour of India by French, p.* 214. See Ras Yatra. Rudra Sampradayi.

BINDU-SAROVARA. A name of Lake Mana saravara. See Ganga : Manasaravara.

BINDWILL, in Long. 81° 40' E. and Lat. 23° 45' N.

BENGA DILLAH. The last Talien king.

BINGANIPILLY. A town in S. India in L. 80° 7' E. and L. 15° 13' N. It is he capital of a small principality lying beween Kurnool and Cuddapah. The chief is a Syed. There are diamond washings near.

BINGHAR BIJ, HIND. Asphodelus fistuosus.

BINHAR, in L. 86° 16' E. and L. 20° 6' N.

BINJ, GUZ. HIND. also Bij, HIND. Seed. See Bij.

BINJARA. See Banjara, India, p. 326.

BINJI DOAR. A tract of country in the N. Eastern frontier of India, towards Bootan, in L. 91 East. The language spoken thence to the Kuriapera Doar in 92° is a dialect of the Bhooteah or Thibetan. It is occupied by the Changlo race, a word which means black.

BINLANG. A kind of stones worshipped as emblems of Siva. They are formed at Muheswur, on the Nerbudda, where a whirlpool occurs and rounds and polishes fallen stones into the form of a lingam. See Hindu : Siva.

BIN NELLI, SINGH. Phyllanthus urinaria.

BINNA, HIND. Vitex negundo.

BINNUGE. According to Thunberg, is the name given by the Singhalese to a species of Ipecacuana. There are two kinds, one called Elle Binnuge, the other, which is red, is called Rat Binnuge. The red is reported to be the better. Both are species of Periploca, both creep on the sandy downs, or twine round the bushes which grow in the loose sand.—*Thunberg's Travels, Vol. IV. p.* 186.

BINOULY, in L. 77° 24′ E. and L. 29° 4′ N.

BINOURIA, HIND. A herb with little purple colours, used as fodder.

BINT, ARAB. A daughter, a girl. In Egypt, every woman expects to be addressed as "O lady!" "O female pilgrim!" "O bride!" or, "O daughter!" even though she be on the wrong side of fifty. In Arabia, you may say "y'al mara!" O woman; but if you attempt it near the Nile, the answer of the offended fair one will be "may Allah cut out thy heart!" or, "the *woman*, please Allah, in thine eye!" And if you want a violent quarrel, "y'al aguz!" (O old man!) pronounced drawlingly,—"y'al ago-o-ooz,"—is sure to satisfy you. In India, Ho-ma, O! mother is a usual and acceptable exclamation and the Ma-Saheba or lady mother is a term which the highest in the land would accept. On the plains of Torrento, it was always customary when speaking to a peasant girl, to call her "bella fé," beautiful woman, whilst the worst of insults was "vecchiarella." So the Spanish Calesero, under the most trying circumstances, calls his mule "Vieja, ravieja," old woman, very old woman. Age, it appears, is as unpopular in Southern Europe as in Egypt.—*Burton's Pilgrimage to Mecca, Vol. I. p.* 121.

BINSIN, HIND. Myrsine Africana.

BINTANG. The largest island on the south side of Singapore Strait. Bintang Hill is in Lat. 1° 5′ N. Long. 104° 28′ E.—*Horsburgh.* See Marco Polo, Singapore.

BINTANGOR. A wood of the Malay Peninsula, in general use for planks, masts and spars, &c. It holds the same position in the Straits Settlements that the pine holds in America. It is in the greatest abundance around Singapore, is used in ship building, serving for planks, masts, spars, &c. and is exported in large quantities to the Mauritius, California, &c.—*Exh. of* 1851.

BINTAGON? A large Penang tree; occasionally used for masts. This is probably the Bintangor.

BINTENNE. A town in Ceylon, where hot springs occur. See Hot springs.

BINTULU. A river of Borneo on the banks of which the Kyans dwell. See Kyans pp. 567-8-9.

BINUA. Under this name may be classed the various local tribes, known under the terms, Jakun, Orang Bukit, Rayet, Utan, Sakkye, Halas, Belandas, Besisik, and Akkye. These tribes are regarded by Newbold (Vol. II. p. 382) merely as divisions of the Binua, and sometimes owe their appellations to their chiefs or to the localities they frequent. The term Binua however is not very legitimately used, "orang Binua" literally meaning the people of the country. But it did not appear from enquiries made in many places, that they ever had any distinctive name. The Malays term them "orang-utan" men of the forest, "orang darat liar" wild men of the interior, &c. epithets which they consider offensive, and the Malays generally address them as 'orang-ulu" people of the interior, or rather of the upper part of the river. The Binua people occupy all the interior of Johore properly so called or that portion of the ancient kingdom of that name over which the Tamungong now exercises the rights of royalty. They also possess the interior of the most southerly portion of Pahang. The most definite description of their territory however is, that they occupy the upper branches of the last or most southern system of rivers in the Malay Peninsula, that is of the rivers Johore (the Lingiu and the Sayong) Binut, Pontian, Batu, Pahator, Rio, Formosa (the Simpang, Kiri, Pau, and Simrong, with their numerous affluents) and Indau (the Anak Indau, Simrong and Made), with the country watered by them. By means of these rivers a constant communication is maintained between the families of the Binua on the two sides of the Peninsula.—(*Jour. Ind. Arch. Vol. No. V: page* 246, 1847.)

The lofty Gunong Bermun, nearly 100 miles to the north of the Lulumut group with the mountains which adjoin it, may be considered the central highlands of these tribes. In the ravines and valleys of Gunong Bermun, two of the largest rivers of the Peninsula, the Pahang and the Muar, with their numerous upper tributaries have their source. The Simujong which unites with the Lingi also rises there.

The upper part of these rivers and many of their feeders are occupied by five tribes of aborigines differing somewhat in civilization and language. The Udai (who appear to be the same people who are known to the Binua of Johore under the name of Orang Pago) are found on some of the tributaries of the Muar, as the Segamet, Palungan and Kapi, and in the vicinity of Gunong Ledang. This tribe has less approximated to Malayan habits than the others. The Jakun partially frequent the same territory, the lower part of Palungan, Gappam, &c., and extend northwards and north westward within the British boundaries. The Binua bear a strong family resemblance to the Malay; and it was remarked of many of them, as was previously done of the Besisi, that the difference was scarcely appreciable so long as they remained at rest and silent —(*Journal Indian Archipelago*) The features of all the tribes that fell under Captain Newbold's (ii. p. 388) observation, viz. the Jakun, or Sakkye, the Belanda, the Besisik, the Akkye, and two other tribes from Salangore, bear a common resemblance to the Malay, whose blood has not been much intermingled with that of Arabs or mahomedans from the coast of India. In stature, they are on the whole, a little lower than the ordinary run of the latter. The eye of the Binua surpasses that of the Malay, in keenness and vivacity, as well as in varying expression; nor is it so narrow, nor are the internal angles so much depressed as among the Chinese and Javanese. The forehead is low, not receding. The eye-brows, or superciliary ridges, do not project much. The mouth and lips are large, but often well formed and expressive; the beard is scanty, as among the Tartars. They have the same sturdy legs, and breadth of chest, the small, depressed, though not flattened nose, with diverging nostrils, and the broad and prominent cheek bones, which distinguish that race of men. The round swelling forehead of the Bugi, however, which rises evenly from the cheek bones and gives a distinctive character to their physiognomy, detracts from the resemblance of Binua Malay, which appears to be caused mainly by the almost feminine fulness, smoothness, and symmetry of all the outlines, the absence of angular prominences or depressions, and the pleasing softness and simplicity of the expression, all which are wanting in the Malay. It should be added that the Bugi countenance bears an impress of intelligence, feeling, and sometimes, if it does not belie them, of a genial sensibility and imaginativeness. In many cases the Binua face is fat and fleshy, and all the features heavy, but in general, although full and rounded, it is not fat. The greatest breadth is commonly across the cheek bones, but in several instances where the jaws were prominent, the lower parts of the face was broadest. Many of the Mintira around Gunong Bermun still wear the bark of the tirap, the menusing the Chawat, and the women a piece of rude cloth, formed by simply beating the bark, which they wrap round their persons, and which, like the sarong of the Johore women, reaches only from the waist to the knees. The Udai women wear the Chawat like the males. The only employment at a distance from the ladang which they share with the men, and sometimes pursue by themselves, is angling. Many families have small huts on the bank of the nearest stream where they keep canoes, and men, women and children, usually one in each canoe, are every where met with engaged in this quiet occupation. They have other modes of catching fish. The most common is by small portable traps woven of rattans. Rows of stakes are also used. But the most elaborate engine by which the rivers are sifted of their denizens consists of a large frame work, like the skeleton of a bridge, thrown right across the stream, and at a level some feet higher than the banks so as to be above inundation. A line of stakes is fixed across the bed, an opening being left in the middle. Above this the Binua takes his seat on a small platform, sometimes sheltered by a roof, and suspends a small net in the opening. On this he keeps his eyes intently fixed, and as soon as a fish enters, he raises his net and extracts it. The rivers and streams abound in fifty species of fresh water fish.

At certain periods of the year nearly every man in the country searches for taban, or guttah percha. They use the sumpitan made of bamboo and light bamboo arrows and darts.

The boundary between Pahang and Johore intersects the country of the Binua, the whole of the Anak Indau, and the lower part of the Simrong being in Pahang, and all the other rivers, including the Made, on which they are found, appertaining to Johore. The authority of the Bindahara and the Tamunggong is little more than nominal, the affairs of the Binua being entirely administrated by their own chiefs, each of whom has a definite territorial jurisdiction.—(*Journal India Archipelago.*)

According to Newbold, (Vol. ii. p. 392.) The Binua are divided into tribes, each under an elder, termed the Batin, who directs its movements and settles disputes. In the states of Sungie-ujong and Johole are twelve tribes, consisting of upwards of 1,000 individuals. The [illegible]un he says are extremely proud, and will not submit, for any length of time, to servile offices or to much control. Attempts have been made to domesticate them, which have generally ended in the Jakun's disappearance on the slightest coercion. One of a tribe from Salangore staid with him for some days, but as he had no occasion for his services, the man went back reluctantly to his tribe.—*Newbold's British Settlements, Vol. II. p* 397.

So far as could be ascertained the Burmun tribes have no idea of a Supreme deity, have a simple, and, rational theology. They believe in the existence of one God, Pirman, who made the world and every thing that is visible, and at whose will all thin continue to have their being. Pirman dw above the sky, and is invisible. Intermediate between Pirman and the human race are the Jin,—the most powerful of whom as the Jin Bumi or Earth Spirit, who is Pirman's minister. He dwells on the earth, feeding on the lives of men and of all other living things. It is the Jin Bumi who sends all kinds of sickness and causes death ; but this power is entirely derived from Pirman. Each species of tree has a Jin. The rivers have a spiritual life but it is that of the Jin Bumi, who haunts them with his power. The mountains are also animated by him. He does not, therefore, appear to be entirely a personification of the destructive power of nature, but to be, to some extent, identified with its living force also. There is no religious worship, but to avert death recourse is had in sickness to a Poyang, no other person being supposed to have the right of imploring mercy from Pirman. The Poyang combine the functions of priest, physician and sorceror. A complete parallel exists between the religions of the Dyak, Binua and Batta. The primitive religion of the Archipelago, a variety of the Shamanism, which probably prevailed before Buddhism over all eastern Asia, which lingers around the mosque, and has not entirely faded away in the West in the presence of nearly 2,000 years of Christianity, is still the essential belief of the Dyak, the Binua and the Batta. In it they repose a practical faith. By it they seek to defend themselves from diseases and other misfortunes, to secure the ministry of good spirits, and counteract the maleficence of evil ones. It is one of the living springs of their habitual thoughts and actions, and as such remains a prominent link between the extreme south and the north of Eastern Asia.

Amongst the Bermun tribes we recognize a pure Shamanism with its accompanying charms and talismans ; a living faith fresh from the ancient days of eastern and middle Asia, preserving its pristine vigour and simplicity in the nineteenth century, untouched by the Budhistic deluge which has passed over the vast south eastern regions, and sent so many waves to different parts of the Archipelago ; and resisting the pressure of mahomedanism which surrounds it. The Poyang and Pawang of the Bermun tribes, the Poyang of the Binua the Batta, the Dyak, and Dato and the Si Basso of the Batta, are all the shaman, the priest, wizier, physician, in different shapes. The character of the Binua, the Dyak and the Batta is essentially the same, and may still be recognized in the Malay. The Binua [illegible] development of intellect, and less cor[illegible] the passions. The Batta and Dyak [illegible] outgrown the close pressure of nature, and agglomerated into social masses in which the passions have fermented, and the intellect and imagination been quickened. But these social masses have been small, nature has not been driven back on all sides as in the plains and slopes of Menangkabau. Hence both the Batta and most of the Dyak still preserve the Binua character at bottom ; but, unlike the Binua, they have elaborated their superstitions and their social habits, and have acquired some vicious propensities, such as gambling, which the Batta carry to a mad excess, and the unnatural customs of head hunting and man eating, which are only more startling illustrations of the universal truth, that, without a religion like Christianity, which does not stop at precepts and doctrines but spiritualizes the very springs of action, and fills the soul with the divine idea of the world, virtues and vices, and particularly those which are national, may dwell together in harmony. It is undeniable that the Batta as a people have a greater prevalence of social virtues than most European nations. Truth, honesty, hospitality, benevolence, chastity, absence of private crimes, exist with cannibalism.—*Jour. of the Indian Archipelago, p.* 293. *No. V. November* 1847.—*Newbold's British Settlements, Vol. II. p.* 392. See Batta, Damak, Semang, S[illegible]putan, India, pp. 329-351. Quedah, Taban.

BIOPHYTUM SENSITIVUM D.C. Syn. Oxalis sensitiva. A plant of the Moluccas and of both the Peninsulas of India.—*Roxb. Vol. ii. p.* 457. *Voigt.* 191.

BIPAL.—? Ægle marmelos.

BIR OR VIR. A man, the Latin, vir. Birbani, the term, amongst the Jat, for a man's own wife. A femme couverte.

BIR. A town of Mesopotamia. See Mesopotamia.

BIRA, SANS. A betel leaf made up with areca nut, spices and lime into a small folded packet, and presented to visitors in the hindu and mahomedan houses of India.

BIRA, or Nerasi, TEL. Elæodendron. *Roxburgh, ii. W. and A.*

BIRAGI. See Vairagi.

BIRA KAYA, TEL. Luffa fœtida—*W. and A.* 713.

BIRAMDANDI, HIND. Microlonchus divaricata.

BIRAR, HIND. Zizyphus nummularia.

BIRAT. A town in India, with buddhist inscriptions. See Buddha.

BIRBA, HIND. Terminalia belerica.

BIRBAT, SANS. Coral.

BIRBAT, SANS. Areca nut, spices and lime.

BIRBHUM. A district in India. It lies to the west of Murshedabad, and contains coal and iron. See India, p. 328.

BIRCH TREE. Eng.

Tag-pa...	Bhot.	Brzoza...	Polish.
Berke...	Dutch.	B'hurjia...	Sanskrit.

Betula...	Lat.		

The Birch tree is essentially a northern plant. It is found in the N. W. Himalayas and in Japan. The birch, "tagpa," of the Chenab river is usually a crooked and stunted tree, but sometimes exceeds one foot in diameter. The annual bridges over the mountain torrents are made of birch twigs, and the bark is used instead of paper for the draft forest returns.—*Cleghorn.* See Betula.

The birds of India are scarcely less beautiful than numerous. Perhaps the choicest of them all are those of the Himalayan pheasant tribe, birds distinguished for their very graceful and rich plumage and the beautiful paradise birds of the Eastern Archipelago. The Himalayan bustard is remarkable for its form and varied colour. Peacocks, eagles, falcons, vultures, kites, cranes, wild geese, wild fowl, snipes, bustard, parrots, and parroquets, the latter in every conceivable variety, abound in India at various seasons.—In England, on the return of spring,

> "Every copse
> Deep tangled, tree irregular, and bush
> Bending with dewy moisture o'er the heads
> Of the coy quiristers that lodge within,
> Are prodigal of harmony,

but, in the tropics generally, there are few Europeans who will dare the sun to search for the beauties of Nature ; as a rule, the natives of E. and S. of Asia do not pay any attention to natural phenomena, and comparatively little is known of the songs of birds. Few can say with the rustic poet Clare,

> "I've often tried when tending sheep or cow,
> With bits of grass and peels of oaten straw,
> To whistle like the birds. The thrush would start
> To hear her song of praise and fly away;
> The blackbird never cared, but sang again ;
> The nightingale's pure song I would not try,
> And when the thrush would mock her song, she paused
> And sang another song no bird could do.
> She sang when all were done, and beat them all."

The Birds of Eastern and Southern Asia have been described by many naturalists. In 1831 a Catalogue of birds collected by Major Franklin, on the banks of the Ganges and the Vindhian range of mountains was published in the Proceedings of the Zoological Society of London. This comprised 156 species, of which more than 20 were described for the first time, many of them very common birds, as Otis bengalensis, Timalia, Chatarrhœa, Alauda gulgula, Mirafra phœnicura, &c., &c. Notwithstanding the difference of latitude in which these were collected, there are only 6 or 7 which Dr. Jerdon has not since met with in Southern India, which shows the very great similarity of the ornithology of India throughout. But this similarity continues to the birds of the Indo-Malay region, viz., the Western part of the Archipelago, which also have a close resemblance to those of India. There is not a single family group peculiar to Indo-Malaya and there are only fifteen peculiar genera, but, as might be expected, a very large portion of the species are quite distinct. There is more similarity between the Burmese, Siamese and Malayan countries and Indo-Malaya, than between India and the Archipelago. Of such well known families as the woodpeckers, parrots, trogons, barbets, king fishers, pigeons and pheasants, some identical species spread all over India, and as far as Java and Borneo and a very large proportion are common to Sumatra and the Malay Peninsula. In the Eastern Islands of the Archipelago, which Mr. Wallace designates the Austro-Malayan Group, in which he includes New Guinea 1,400 miles long and 400 broad, and its adjacent islands, its land birds belong to 108 genera, of which 29 are exclusively characteristic of it ; 35 belong to New Guinea, the Moluccas and N. Australia. About one half of the New Guinea genera are found also in Australia, and about one-third in India and the Indo-Malay Islands. In the birds of New Guinea are two species of Eupetes, a Malayan genus ; two of Alcippe, an Indian and Malay wren like form ; an Arachnothera, quite resembling the spider catching honey suckers of Malacca, two species of Gracula, the Mainahs of India, and a little black Prionochilus allied to the Malayan form.—(*Wallace, Vols. I. & II., pp.* 143, 263, 264.)

In 1832 a catalogue of birds, collected by Colonel Sykes in the Bombay presidency, was also published in the Proceedings of the Zoological Society of London. In this are enumerated 226 species, of which above 40 are described for the first time, many of them common and abundant birds. This catalogue was undoubtedly the most valuable enumeration of the birds of India published, and contains descriptions, with many highly interesting observations on the habits, food and structure of many of the species. Of those enumerated by Colonel Sykes there are about 9 or 10 which Dr. Jerdon, when writing in 1839, had not observed, most of which are probably peculiar to the more northern portion of the range of ghauts and neighbouring table-land. In that year, Dr. Jerdon published a catalogue of the Birds of the Peninsula of India, arranged according to the modern system of classification; with brief notes on their habits and geographical distribution, and descriptions of new, doubtful, and imperfectly described species. The total number of this catalogue was nearly 390: which, however, included 10 of Colonel Sykes' and nearly as many more observed by Mr. (now Sir) Walter Elliot, of the Madras Civil Service, who placed valuable notes on birds procured by him at Mr. Jerdon's disposal; by which, in addition to the new species added, this naturalist was enabled to elucidate several doubtful points, to add some interesting information on various birds, and to give the correct native names of most of the species. Subsequent to this, Dr. Jerdon published a series of supplements to his catalogue of Birds, correcting some points and adding others; and those were followed by a paper from the pen of Lord Arthur Hay. Mr. B. Hodgson of Nepaul, furnished a large amount of valuable information on the ornithology of the Himalaya, General Hardwick's labours were of great value, Captain Tickell of the Bengal Army has also contributed largely to our stock of knowledge regarding the ornithology of Central India and the other names who may be added to this list of naturalists are Captain J. D. Herbert who collected in the Himalaya, Dr. N. Wallich, who collected in Nepaul, Dr. McClelland who added birds from Assam and Burmah, Dr. W. Griffith whose collections of birds were made in Afghanistan, Dr. Hugh Falconer in N. India, and Captain (now Colonel) Richard Strachey in Kamaon and Ladakh. The birds of the Tenasserim provinces have been largely described by the Reverend Dr. Mason, and those of Ceylon by Dr. Kelaart. These were followed by a continued series of valuable articles from Mr. Blyth, who was constant in his pursuit of science. Dr. Horsfield and Mr. Moore's catalogue of Birds in the India House Museum appeared in 1856 and 1858, and Jerdon's Birds of India printed in 1862 and 1864 have done much to complete our knowledge of this class of the animal kingdom. The forthcoming comprehensive work of Mr. Allan Hume, C.B., will embrace all that previous writers on the birds of British India have described. Eastwards, from the Malay Peninsula into the Eastern Archipelago, the labours of Dr. T. Horsfield, in Sumatra, Sir T. Stamford Raffles in Java, Mr. G. Finlayson, Dr. Helfers Dr. Theodore Cantor, Professor Bikmore and Mr. Alfred Russel Wallace have given to Europe a very full knowledge of the birds of that extensive region.

The Israelites classed birds as clean and unclean, and in common life this arrangement may be said to be still followed. A scientific classification of birds, has been given under the title Aves. Amongst authors they are generally arranged into six orders, viz.:

I. Raptores, Birds of prey.
II. Insessores, perching birds.
III. Gemitores, pigeons.
IV. Rasores, game birds.
V. Grallatores, wading birds.
VI. Natatores, swimming birds.

The latest scientific writer on the birds of India, is Dr. Jerdon. He describes birds as vertebrate animals, warm blooded, oviparous, with lungs, a heart with two ventricles and two auricles; their anterior limbs in the form of wings; their body clad with feathers; their bill covered with a horny substance, and many of their bones hollow. He tells us that most birds moult or change their plumage, once a year only, after the season of pairing or incubation, but certain families or tribes of birds have two moults one of them immediately before pairing and the plumage then becomes showy and gay, with tufts or plumes. Some birds in spring actually change their colour, or portions of their feathers are changed as in the ear tufts of the lesser florikan or Otis aurita. The male of birds is the more highly coloured, except in birds of prey, the painted snipe (Rhynchea) and some species of Ortygis the little bustard quail. A few of the gallinaceous birds are polygamous, and their males are very pugnaceous. The nests of birds greatly vary. Those of the weaver bird, tailor-bird, honey-sucker and oriol are made with much art. The edible nest of the colocasia swallow is fo in caverns, of inspissated saliva: swallo swifts, bee eaters and weaver birds build in co panies: certain ducks breed on cliffs or tre and they must carry their young to the wat though this has not been observed. Megapodidæ, gallinaceous birds (says Mr. lace, Vol. I. p. 156), found in Australia, surrounding islands, and as far west as the Phillippines and the N. W. of Borneo, bury their eggs in sand, earth or rubbish, and leave them to be hatched by the sun or by fermentation. They have large feet and long curved claws, and most of them rake together rubbish, dead leaves, sticks and stones, earth and rotten wood, until they form a mound often six feet high and 12 feet across, in the middle of which they bury their eggs. The eggs are as large as those of a swan, and of a brick red colour, and are considered a great delicacy. The natives are able to say whether eggs be in the mound and they rob them eagerly. It is said that number of these birds unite to make a mound and lay their eggs in it, and 40 or 50 eggs are found in one heap. The mounds are found in dense thickets. The species of the Megapodiinæ in Lombok is as large as a hen, and entirely of a dark hue with brown tints. It eats fallen fruits, earth-worms, snails, and centipedes, but the flesh is white and well flavoured when properly cooked.—*(Wallace, p.* 156.*)*

In winter, many Indian birds assemble in large flocks. Amongst these are crows, starlings, finches, larks, parrots, a few thrushes, pigeons, rock pigeons, cranes, ducks, flamingoes and pelicans. Birds are chiefly guided by instinct.

The migratory birds of India are mostly residents of the colder northern countries; they come to India in September and October and leave it again, in March, April and May. Among the grallatores or waders, some cranes and storks, four-fifths of the ducks, and the great majority of the scolopacidæ breed in the north and come to India in the cold season. The peregrine falcon, the true hobby, the kestrel, the British sparrow hawk, all the Indian harriers and the short-eared owl are true migratory birds. Amongst the insessores, the wagtails, some of the pipits and larks, stonechats, several warblers, and thrushes, buntings and the shrike, hoopoe and two starlings are the chief groups amongst which migratory birds occur. In Lower Bengal, kites quit Calcutta and neighbourhood during the rains and return in the cold weather, it is supposed that they go the N. East. The kestrel, baza and Indian hobby are most frequent in Bengal during the rains, and in the rains, the Adjutant visits Calcutta and leaves in the cold weather. The European quail is the only real migratory bird of the gallinaceæ, but some other quails, bustard-quails and rock partridges, Pteroclidæ, wander about to different localities, and the Otis aurita, Ardea bubulcus, some rails, terns and gulls also wander. These birds travel with wonderful instinct direct to their homes, returning year after year to the same spot, often to the same nest. The song of birds is chiefly observed amongst the Merulidæ, Saxicolinæ, Sylviadæ, larks and some finches. In India there are few songsters in the groves, but some of the larks are kept in cages. Quails, bulbuls and cocks are trained to fight, falcons and hawks to hunt on the wing and pelicans and cormorants to fish.

In the 55th No. of the Calcutta Review, it is remarked that "few persons, other than professed zoologists, have an idea of the extent to which the feathered inhabitants of the British islands are found in Southern Asia, identically the same in species. In general, so limited are the opportunities which an ordinary Indian life allows for field observation, that the only familiar reminiscence of home which a European sojourner in the plains of India will recall to mind, among the feathered tribes of this country, is afforded by the pretty, little, clean-looking, sprightly Water Wagtail, usually the first and most welcome harbinger of the coming cold weather, and remaining with us so abundantly whilst the cold season lasts. This bird, and the harsh chattering of a very common kind of shrike (Lanius superciliosus) in Indian gardens, are regularly the earliest intimations that most of us receive of the coming change of season; but a snipe (Gallinago stenura) precedes them which, (though few sportsmen discriminate it from the common British snipe, makes its appearance somewhat later,) is nevertheless a different bird, at once distinguished by having a set of curious pin-feathers on each side of its tail, whereas the British snipe, (which is equally abundant with us) has a broad fan-shaped tail, as unlike that of the other as can well be. The pin-tailed is the common snipe of the Malay countries and is unknown in Europe, excepting as an exceedingly rare straggler from its proper habitat the East. But the [illegible] snipe is unobserved save by the many who delight in exercising their skill in shooting it, or who look [illegible] der to see it so soon in the provision-[illegible] all and our little piebald friend the water wagtail, in its season, and the common sparrow, at all seasons, so abundant as to be overlooked and forgotten, are probably all that the European reader, unversed in the study of ornithology, will be able to recall to mind, as yielding associations of home; unless, perchance, he may also recollect the common small Kingfisher of India, which differs from the British bird only in its more diminutive size. A writer has described the feelings of delight expressed by one who had been many years in India, at seeing, upon his return to his native land, the Sky Lark rise from the sod at his feet, and mount higher, and still higher, till reduced to a mere speck in the heavens, or utterly lost to view, all the while making the air ring with its music. Had he ventured forth into the fields of any part of India, he would have seen and heard the very same; although the species (Alauda malabarica) is different, and may be somewhat inferior to the European sky lark in song, so far at least as regards variety in the notes; but there is really so very little difference, that the two birds could assuredly not be distinguished by the voice alone, nor by the mode of flight. If examined, the common Indian lark may be described as resembling the European Wood Lark in size and shape, with the plumage of the Sky Lark. It may, indeed, be remarked that even the pied wagtails of India (Motacilla luzoniensis and M. dukhunensis) are specifically different from those of Europe (M. alba and M. Yarrellii), however similar in appearance and habits; but the Grey Wagtail of Britain (Calobates sulphurea) is identically the same in India and Java, and a specimen has been seen in a collection from Australia. This delicate little bird, so clean and bright in its appearance, is of very general diffusion over Southern Asia during the cold season, being indeed much commoner than in Britain. The most abundant lark, however, on the plains of Upper India and table land of the Peninsula, is the Chandul or Crested Lark, (Galerida cristata), which is also a European species, though of rare occurrence in Britain; and the song of this bird, also its mode of delivery of it in the air, are not very unlike that of the Sky Lark, although it does not soar to so lofty an altitude. The community of species among the birds inhabiting or visiting India and the British islands is most remarkable among the diurnal birds of prey, and, as might be expected, among the wading and swimming tribes; but as these are mostly rare in Britain, and do not fall much under common observation, their presence in India fails to convey any sort of reminiscence of home. The relentless persecution by gamekeepers has now very nearly extirpated, as a permanent inhabitant of Britain, that fine handsome bird, the common European kite (Milvus regalis); though, were it as numerous in England now as in the days of the Tudors, the Scavenger Kites of India (M. Govinda) might help to remind the British exile in this country of his distant home in the west. But whatever may be the amount of British species of birds actually obtained, in Lower Bengal for instance, there is nought in the ensemble of the various birds under daily observation in Eastern and Southern Asia, to remind us of the present familiar ornithology of Great Britain. In Bengal, the newly-arrived observer from that region will particularly be struck with the number of birds of large size which he sees everywhere, even in the most densely populated neighbourhoods; flocks of vultures, huge 'Adjutants' in their season, swarms of kites in their season too, for they disappear during the rains,—and all three soaring and circling high in air as commonly as at rest,—Brahmini kites, various other birds of prey, among which four kinds of fishing eagle, including the British Osprey, are not uncommon,—water-fowl in profusion in all suitable localities, Herons especially of various kinds very abundant,—several sorts of Kingfisher, mostly of bright hues, the common Indian Roller, also a bird of great beauty, and the little bright green Bee-eater (Merops viridis) conspicuous everywhere,—the common crow of India, of unwonted familiarity, impudence, and matchless audacity,—the different Mainas remarkable for their tameness, the Drongo or 'King Crow,' the Sat-bhais (or 'seven brothers') with their discordant chattering, two sorts of melodiously chirruping Bulbuls, the bright yellow 'Mango-bird' or Black-headed Oriole, the pretty pied Dhyali, the only tolerably common sylvan songster worthy of notice, the brilliant tiny Honey-suckers—also with musical voices, the lively and loud Golden-backed Woodpecker, and two monotonously toned species of Barbet,the pleasingly coloured Rufous Tree-magpie (*Dendrocitta rufa*), the noisy koel, remarkable for the dissimilarity of the sexes,and for parasitically laying in the nests of the Crow;' the Crested Cucoo (*Oxylophus*) during the rainy season (parasitical upon the *Sat-bhais*), with other *cuculine* birds, especially the Coucol or Crow-Pheasant,' another noisy and conspicuous bird wherever there is a little jungle; and last, but not least characteristic, in Lower Bengal, is the harmonious cooing of two or more kinds of Dove, soothing to repose and quiet, and the loud screaming of flocks of swift-flying green Parakeets, with sundry other types all strange to the new-comer. While he misses the familiar types of home, the various Thrushes, Finches, Titmice, &c., which are feebly or not at all represented in the ordinary observed ornithology of the Bengal part of India: the bright little *Iora* may perhaps seem to represent the Titmice, and the tiny 'Tailorbird' the wren; while the northern forms of Finches are replaced by the *Baya* or 'Weaverbirds,' with their curious pensile nests and the diminutive thick-billed *Munia*: but a stranger will be struck with the prevailing silence of the jungle, and the paucity of small birds even in the cold season, so different from the woods and gardens and hedge-rows of Britain, teeming with small feathered inhabitants, among which are so many pleasing songsters of all degrees of merit: of the swallows, occasionally and somewhat locally, a few of the *Hirundo rustica*, may be seen chiefly over water, and young birds of the past season; and along the river-banks, where high enough, the small Indian Bank Martin (*H. Sinensis*) will occur abundantly; but the swallows are replaced by two non-migratory swifts, the common House Swift (*Cypselus affinis*) and the little Palm Swift(*C.balasiensis*). The Roller and the 'King Crow' habitually perch on the telegraph wire to watch for their insect prey: the former displaying his gaily painted wings to advantage, as he whisks and flutters about, regardless of the fiercest sun. The small white Vulturine bird, *Neophron percnopterus*, the 'Rachamah' or 'Pharaoh's chicken,' is abundant and has been introduced as British, because a single pair has been known to stray so far beyond its ordinary haunts. Of the smaller British land-birds only few occur, and these are mostly rarities in the west; but the Wryneck is not uncommon, though little observed, and the European Cuckoo will now and then turn up, more frequently in the barred plumage of immaturity; the Hoopoe, too, is common, but is much too rare in England to awaken a reminiscence, and so with others. Of course we allude to the cold season, and to birds in their winter quarters. Among the hawks, the Kestrel will occasionally be observed in extraordinary abundance; and Harriers (*Circus*) are often seen beating over the open ground; but the small waders are particularly common in all suitable places, including most of those found in Britain, in greater or less abundance. It would be tiresome to particularrize further. But wonderful is the number of fishers, and vast indeed must be the consumption of their finny prey. Otters (*Lutra nair*) among the mammalia, but no Seals; and of birds, sundry fishing Eagles, and a great bare-legged fishing Owl, with various Kingfishers in abundance, numerous kinds of Heron in surprising numbers, Pelicans, Darters (*Plotus*), Pygmy Cormorants, and Grebes or 'Dabchicks;' besides Gulls, Terns, and rarely Skimmers (*Rhynchops*). Gulls, however, are less numerous than in Britain; but three species, the common British *Larus ridibundus* and a nearly affined species, with the fine *L. icthyaetus* are seen chiefly towards the mouths of the Gangetic rivers. Over the salt water lake near Calcutta, has been seen a very uniformly scattered flight of the great White Egret, so prized at home. The Gull-billed Tern is there one of the common birds, and the Whiskered Tern (*Hydrochelidon leucopariea*), replacing the Black Tern of the Kentish marshes; and the Peregrine Falcon may not unfrequently be seen, well meriting the name of 'duck Hawk' bestowed on it in North America: also great flocks of Longshanks (*Himantopus*) wading and seeking their subsistence in the expanse of shallow water. Along the reed-fringed *nullahs* or water-courses, the muddy banks are honeycombed with the footsteps of wild Pigs of all sizes, and various *Rallidæ* are swarming around, as the numbers of them captured in trap-cages abundantly testify. Passing from the delta of Lower Bengal, no matter in what direction, a considerable replacement of species may be observed, characteristic of the fauna of Behar and of the plains of Upper India to the west and north, and of the Burmese countries eastward: in the sub-Himalayas, the forms of Europe and of W. and N. Asia prevail more and more towards the N. W. Malayan forms eastward, and Chinese types, and particular sub-Himalayan genera and species, the range of which extends eastward to China. Again, on the highlands of the Peninsula of India, and still again in those of Ceylon distinct species of the northern types occur, *but no different genera.* Thus the jungle-fowl of N. India is replaced by a different species (*Gallus Sonneratii*) in the Peninsula, and by a third (*G. Stanleyi*) in Ceylon, and not a few similar instances might be adduced. Dr. G. Buist has mentioned that in Bombay on the approach of the monsoon, nearly all the Kites, Hawks, Vultures, and other carrion birds disappear from the sea coast, while the Crows begin to build their nests and hatch their young just at the season that seems most unsuitable for incubation, for the eggs are often shaken out, or the nests themselves are destroyed by the storms and the poor birds are exposed, in the performance of their parental duties, to all the violence and inclemency of rain and tempest. At the instigation of a sure and unerring instinct, the carnivorous birds, as the rains approach, withdraw themselves from a climate unsuitable to the habits of their young, betaking themselves to the comparatively dry air of the Dekhan, where they nestle and bring forth in comfort, and find food and shelter for their little ones. The scenes connected with this, which follow the conclusion of the rains, are curious enough. While the mahomedans bury, and the hindus burn their dead, the Parsees expose their dead in large cylindrical roofless structures, called Towers of Silence, where birds of prey at all times find an abundant repast. Their family cares and anxieties over for the season, the carrion-birds, which had left in May for the Dekhan, return in October to Bombay, and make at once for the usual scenes of their festivities, now stored with a three months' supply of untasted food. As they appear in clouds approaching from the mainland, the Crows, unwilling that their dominions should be invaded, hasten in flocks to meet them, and a battle ensues in the air, loud, fierce and noisy; the fluttering of the wings, the screaming and cawing of the combatants, resounding over the island, till the larger birds succeed, and having gained the victory are suffered henceforth to live in peace. In Bengal, the Kites and Bramini Kites breed chiefly in January and February, and disappear during the rains. The adult 'Adjutants' make their appearance as soon as the rains set in, and becoming in fine plumage towards the close of the rains, depart at that time to breed in the eastern portion of the Sunderbuns upon lofty trees, and along the eastern coast of the Bay of Bengal upon trees and rocks. Vultures are permanently resident; and the Crows propagate chiefly in

March and April, their nests being not unfrequently exposed to the fury of the nor-westers and destroyed by them altogether. A very large proportion of the feathered inhabitants of the British islands are equally natives of, or seasonal or irregular visitants to, Southern Asia. Not a few migratory species are common to the polar circle and to Lower Bengal, and even further towards the equator, according to season: but the individual birds may not migrate so far north and south. The *Calliope camschatkensis*, a delicate little bird much like a nightingale, but with a brilliant ruby-throat, which is not rare in the vicinity of Calcutta during the cold season, arrives "early in April, with the snowfleck, in the Lower Kolyma district" in Northern Siberia, as we are told by Von Wrangell; that is to say, before the last of them have left Bengal: but it is remarkable that this bird has never been seen in the very numerous collections from the Himalaya examined hitherto; though another and non-migratory species of the same genus (*C. pectoralis*,) peculiar, so far as known, to the Himalaya, is of common occurrence in such collections. It is, however, enumerated in Mr. Hodgson's list of the birds of Nepal: still it seems to follow that the *C. camtschatkensis* does not breed extensively on this side of the snow; although the Bengal birds may not have to find their way quite so far as to Northern Siberia to pass the summer. The Hoopoe (*Upupa epops*,) another species common in Southern Asia during the cold season, and on the table lands at all seasons, is, to all appearance, a bird of fluttering and feeble flight; but has repeatedly been observed, during the seasons of migration, at altitudes considerably above the limits of vegetation. "On the western side of the Lánák pass, about 16,500 feet, I saw a Hoopoe," writes Major Cunningham, and at Momay (14.000 to 15,000 feet elevation), under the lofty Donkia Pass in Northern Sikhim, Dr. J. D. Hooker observed, in the month of September, that "birds flock to the grass about Momay; Larks, Finches, Warblers, abundance of sparrows (feeding on the Yak droppings), with occasionally the Hoopoe: waders, Cormorants, and wild Ducks, were sometimes seen in the streams, but most of these were migrating south." Dr. J. D. Hooker's sketch of the grand but most desolate panorama beheld by him from the summit of the Donkia Pass (18,466 feet elevation) ought to be familiar to all readers; and he elsewhere remarks that "no village or house is seen throughout the extensive area over which the eye roams from Bhomtso, and the general character of the desolate landscape was similar to that which he had as seen from the Donkia Pass. The Kiang grazing with its foal on the sloping downs, the Hare bounding over the stony soil, the Antelope, the *Tchiru* and also the *Goa*, *Procapra picticaudata* of Hodgson, scouring the sandy flats, and the Fox stealing along to his burrow, all are desert and Tartarian types of the animal creation. The shrill whistle of the Marmot alone breaks the silence of the scene, recalling the snows of Lapland to the mind; while the Kite and Raven wheel through the air, with as steady a pinion as if that elevation possessed the same power of resistance that it does at the level of the sea. Still higher in the heavens, long black V-shaped trains of wild Geese cleave the air, shooting over the glacier crowned top of Kinchinjhow, and winging their flight in one day, perhaps, from the Yaru to the Ganges, over 500 miles of space, and through 22,000 feet of elevation: one plant alone, a yellow lichen (*Borrera*) is found at this height, and that only as a visitor for, Tartar-like, it migrates over the lofty slopes and ridges, blown about by the violent winds. I found he says, a small beetle at the very top, probably blown up also; for it was a flower-feeder, and seemed benumbed with cold." "An enormous quantity of water-fowl," remarks the same scientific traveller, Dr. Hooker, "breed in Tibet, including many Indian species that migrate no further north. The natives collect their eggs for the markets of Jigatzi, Giantchi, and Llassa, along the banks of the Yaru river, Ramchoo, and Yarbru and Dachen lakes. Amongst other birds, the *Saras*, or giant Crane of India (see Turner's Tibet, p. 212) repairs to these enormous elevations to breed. The fact of birds characteristic of the tropics dwelling for months in such climates is a very instructive one, and should be borne in mind in our speculations on the climate supposed to be indicated by the imbedded bones of birds." It may however be remarked that the *Saras* (*Grus antigone*) also breeds south of the Himalaya; and that specimens too young to fly are occasionally brought for sale even to Calcutta. Turner, describing the lake "Ramtchoo," remarks,—"that it is frequented by great abundance of water-fowl, wild-geese, ducks, teal, and storks, which, on the approach of winter, take their flight to milder regions. Prodigious numbers of saurasses, the largest species of the crane kind, are seen here at certain seasons of the year, and they say, that any quantity of eggs may there be collected, they are found deposited near the banks. "I had, " he says" several of them given to me when I was at Tassisudon, during the rains; they were as large as a turkey's egg, and I remember being told that they came from this place; but whether or not they were those of the Sauras, I cannot venture to pronounce." Instances have been known of the *Saras* breeding in captivity, when a pair was allowed the range of a large walled garden (protected from Jackals) containing shallow inundated enclosures for the growth of rice: in these the nest was commenced under water, and raised for some inches above the surface; the eggs were two in number, about 3¾ inches long by 2¼ inches broad, of a bluish-white, with a few distantly placed rufous specks and blotches. The nest of the European Crane (*Grus cinerea*), also a common Indian bird, is thus described by Major Lloyd, as observed by himself in Scandinavia. "It usually breeds in extended morasses, far away from the haunts of men. It makes its nest, consisting of stalks of plants and the like, on a tussock, and often amongst willow and other bushes. The female lays two eggs," &c. Again, Major Cunningham, in his 'Ladak,' &c., remarks that "the water-fowl swarm on the lakes and on the still waters of the Upper Indus. I have, he says shot the wild Goose on the Thogji, Chanmo and Chomoriri lake at 15,000 feet; and Col. Bates and I shot three Teal on the Suraj Dal, a small lake at the head of the Bhaga river, at an elevation of upwards of 16,000 feet:" but the time of the year is not mentioned by this author. Those birds which are common to India and the polar circle appertain for the most part, as might be supposed, to the wading and web-footed orders; and a few of them are of very general distribution over the world, as, especially, the common Turnstone (*Strepsilas interpres*), which seems to be found on every sea-coast. The *Lobipes hyperboreus* is a little arctic bird, of rare occurrence even in the north of Scotland, Orkney and Shetland: but a specimen was not long ago procured near Madras, which is now in the Calcutta museum; and there also may be seen an example of the nearly related *Phalaropus fulicarius*, obtained in the Calcutta provision-bazar so late in the year as May 11, 1846. The well-known naturalist of the Madras Presidency, Dr. T. C. Jerdon, obtained in Southern India a single example of a little Australian Plover, *Hiaticula nigrifrons*, which figures in [illegible] talogue as a supposed new species by the synonyme *H. russata*. The Tibetan Raven is considered as a peculiar species by Mr. Hodgson, an opinion to which the Prince of Canino seems to incline: it may be presumed to inhabit the lofty mountains of Butan to the north, but the smaller crow of Southern Asia is the *C. splendens*; while the common black crow of all India, *C. culminatus*, would seem to stand here alike for the 'Raven,' the 'Carrion Crow,' and the 'Rook!' The true Rook (*Corvus frugilegus*) however, is known to inhabit or visit the Peshawur valley, Afghanistan, and Kashmir. The Rook of China and Japan is considered a distinct species, *C. pastinator* of Gould; and the Jackdaw (*C. monedula*) accompanies it in those countries, while the true northern Raven *Corvus corax* is met with not only there, but also over a great portion of the Punjab. In other parts of India the comparatively small *C. culminatus* is popularly known to Europeans as "the Raven:" but the northern Raven would make a meal of one and not feel much the worse for it. Dr. Francis Buchanan Hamilton, remarking upon the hawking or falconry observed by him in the Shahabad district, mentions that "the only pursuit worth notice that he saw in several days' hawking was from a large bird of prey named *Jimach*, which attacked a very strong Falcon as it was hovering over a bush into which it had driven a Partridge. The moment the Falcon spied the Jimach it gave a scream, and flew off with the utmost velocity, while the Jimach equally pursued. They were instantly followed by the whole party, foot, horse, and elephants, perhaps 200 persons, shouting and firing with all their might; and the Falcon was saved, but not without severe wounds, the Jimach having struck her to the ground; but a horseman came up in time to prevent her from being devoured." The *Wokhab* or *Ukab*, as it is also termed, is a small Eagle, very abundant in the plains of Upper India, the Dukhun, &c., bearing many systematic names, the earliest of which is *Aquila fulvescens*; for it is a diff[illegible] bird, not quite so large and robust [illegible] *Aq. nævioides* of Africa, with which it has been supposed identical. The Hon. Walter Elliot, of the Madras C[illegible] remarks that—"the *Wokhab* is very troublesome in hawking, after the sun becomes hot, mistaking the *jesses* for some kind of prey, and pouncing on the Falcon to seize it. He had once or twice nearly lost 'Shahins' (*Falco peregrinator*) in consequence, they flying to great distances for fear of the "*Wokhab*," *i. e.* the Jimach. The principal species employed in Indian falconry are identical with those of Europe; namely, the *Bauri* of India, which is the Peregrine Falcon of the West; and the *Baz* of India, which is the Goshawk or 'Gentil Falcon' of Britain. In a curious Persian treatise on the subject, by the head falconer of the Mogul emperor Akbar, the various species used are enumerated, and may be recognised with precision: among them is the *Shangar*, which is clearly the Jer Falcon of the north; represented as extremely rare and valuable, taken perhaps once or twice only in a century, and then generally in the Punjab. The *Shahin* (*Falco peregrinator*), another favorite Indian Falcon, does not inhabit Europe, but is clearly the *Falco ruber indicus* of Aldrovand, rather than the small hobby-like Indian species (*F. severus*), on which Temminck bestowed the name *F. Aldrovandi*. With five or six exceptions only, the whole of the European diurnal birds of prey are met with in India, many of them being much commoner in this country ; and they are associated with numerous other species unknown in Europe. The sport of falconry is widely diffused over Asia, even to the Malayas ; but whether extending to China and Japan, we are unaware. It may further be noticed that the "quarry" hawked by Dr. Layard's Bedouin companions on the great plain of Mesopotamia, and rightly enough denominated by him a "Bustard," is no other than the Houbara (*Houbara Macqueenii*) of Sindh and Afghanistan ; being a different species from that of Spain and North Africa (*H. undulata* ;) and it appears that the former has most unexpectedly turned up, of late years, in England and Belgium, if not also in Denmark. The great spiny-tailed Swift of the Himalaya (*Acanthylis nudipes* of Hodgson) was obtained, a few seasons back, in England. Mr. Gould identifies this British-killed bird with his *Ac. caudacuta* of Australia, but it appears identical with the Himalayan species ; upon comparing Himalayan specimens with Mr. Gould's plate, no difference can be detected. The great Alpine Swift, (*Cypselus melba*) is common to the Himalaya, the Nilgiris, and high mountains of Ceylon, but the great *Acanthylis* of the Himalaya has never been observed in S. India, and is replaced in the Nilgiris, Ceylon, and also across the Bay of Bengal, (in Penang, &c.) by a distinct species, the *Ac gigantea.* Gold and Silver Pheasants are inhabitants of China ; but the Golden Pheasant, according to M. Temminck, inhabits not only China and Japan, but the northern parts of Greece, as also Georgia and the Caucasus ; and it has been met with even in the province of Orenbourg. M. Degland informs us, that M. Gamba, French Consul at Tiflis, met with this gorgeous bird in numerous flocks on the spurs of the Caucasus, which extend towards the Caspian sea ; and that now it has gone wild and multiplied in some of the forests of Germany. In Southern Asia, the birds familiarly known as 'Bulbuls' must not be confounded with the Persian Bulbul, which is a species of true Nightingale (*Luscinia*), a genus very closely related to some of the small Thrushes of America. We have no true Nightingale wild in India ; but the 'Shama' *Cercotrichas macrourus*, undoubtedly the finest song-bird of this part of the world, is not unfrequently designated the Indian Nightingale, a misnomer which only leads to confusion. It is common to India and the Malay countries ; and there is a second species (*C. luzoniensis*) in the Philippines, and a third (*C. erythropterus*) in Africa. We may remark that the *Orocetes cinclochyncha* is also termed *Shama* in the Madras Presidency. Our esteemed Indian songster is *le Merle trisolor de longue queue* of Levaillant (*Oiseaux d' Afrique pl.* 114). The *Bhimraj* (*Edolius paradiseus*) is popularly denominated "the Mocking-bird" by Europeans. Several eminent naturalists persist in ignoring the very great differences between 'Storks' and 'Cranes,' in their appearance, habits, anatomy, modes of breeding, and everything, except that both happen to be long-legged birds. They do so by designating the *Hurgila* or 'Adjutant' (*Leptoptilus argala*) '· the gigantic Crane." The three ordinary Indian Cranes (*Grus antigone, Gr. cinerea*, and *Gr. virgo* : the *Gr. leucogeranos*, occur rarely in the North West Provinces. Now the words *Crane* and *Grus*, and the Hindustani names of the three common Indian species, *Saras, Karranch*, and *Kakarra*, all have reference to the loud trumpeting of these birds, which have a curious internal conformation resembling that of the Trumpeter Swans : whereas the Storks are voiceless birds, having actually no vocal muscles, and can make no sound, but by clattering their mandibles together, which they do pretty loudly. *Yunx indica* appears to be met with in Afghanistan and Tibet. Mr. Gould describes a kind of Nuthatch to inhabit the Himalayan mountains towards Kashmir, but the bird in question is unknown in Central India properly so designated. The *Acrocephalus arundinaceus* (*Sylvia turdoides* of Temminck), and the *Acr. salicarius* (*S. arundinacea* of Temminck), and also the three common British species of *Phylloscopus*, have been noted by different authors as occurring in India ; but the three Indian species are different. In India, various instances occur of closely affined Indian and European birds, which every ornithologist would at once pronounce to be distinct : *e. g. Oriolus galbula* and *O. kundoo* ; *Lanius excubitor* and *L. lahtora* ; *Troylodytes europœus* and *Tr. sub-himalayanus* ; *Certhia familiaris* and *C. himalayana, &c.* : and not unfrequently the exact European species inhabits India in addition to another which would otherwise be regarded as its counterpart or representative, or according to the views of some naturalists a mere local or climatal variety of the same species : thus *Circus Swainsonii* (the *pallidus* of Sykes) is regarded by Prof. Schlegel as a local variety of *C. cineraceus* ; had he said so of *C. cyaneus* it would be more intelligible, as the affinity is much closer with *cyaneus* ; nevertheless, both *Swainsonii* and *cineraceus* appear to be common throughout Africa, as both likewise are in India, inhabiting the same districts, and each remaining ever true to its distinctive characters ; while *cyaneus* also inhabits the vicinity of the Himalaya, together with both the others. There are precisely the same grounds for regarding the European *Phy*[illegible]*scopus trochilus* & *Ph. rufus* as being [illegible] al or

'local' varieties of one species; only these birds happen to be better known, much as they resemble each other. Again, we have the true *Falco peregrinus* common in India, together with *F. peregrinator*, which would otherwise be regarded as its Indian counterpart: *Hypotriorchis subbuteo* found together with *H. severus*; *Hirundo sinensis* (the ordinary Indian Sand Martin,) together with *H. riparia*; *Cuculus canorus* (the European Cuckoo,) as also several affined species; and so on. In some cases, a European species may have two or more 'representatives' in India, or *vice versâ*. Thus *Nucifraga caryocatactes* of the pine forests of Europe and Siberia is replaced by *N. hemispila* in those of the Himalaya generally, and by *H. multimaculata* about Kashmir; *Parus major* by *P. monticolus* and *P. cinereus*, if not also *P. nuchalis* (in addition to *cinereus*) in S. India; *Picus major* by *P. himalayanus* and *P. darjellensis*; *Accentor alpinus* by *A. nipalensis* and *A. variegatus*: while, on the other hand, *Lanius lahtora* in India is represented both by *L. excubitor* and *L. meridionalis* in Europe; *Sitta cinnamoventris* by *S. europœa* and *S. cœsia*, *&c.* Some ornithologists regard the *Passer domesticus*, *P. italiæ* (vel *cisalpinus*), and *P. salicarius* (vel *hispaniolensis*,) of Europe, as being local varieties merely of the same: yet they hold true to distinctive differences of coloring, wheresoever found; and examples of the last-named race from Afghanistan and the extreme N. W. of India differ in no appreciable respect from Algerian specimens with which they have been compared moreover, this race is of far more gregarious habits even than *Passer domesticus*; a fact noticed of it alike in N. Africa and in Kohat. For the *Bauri* or Peregrine Falcon of India, Mr. Gould adopts Latham's name *F. calidus*, thereby implying a distinction from true *peregrinus*. It may be doubted exceedingly if any one difference could be detected. It is true, that many highly approximate races (considered, therefore, as species) do maintain their distinctness, even in the same region and vicinity; as *Falco peregrinus* and *F. peregrinator*, *Hypotriorchis subbuteo* and *H. severus*, *Circus cyaneus* and *C. Swainsonii* in India. *Coracias bengalensis* of all India meets, in the Punjab, &c., the European *C. garrula*; but in Assam, Sylhet, Tippera, and, more rarely, Lower Bengal, it co-exists with the *C. affinis*, specimens of
from the Burmese countries are ever
their proper coloration, as those of *C.*
are from Upper and S. India; but
is seen every conceivable gradation or
ion from one type of colouring to the
in examples from the territories where
wo races meet: so also with the *Treron*
of Upper India and the *Tr. chlo-*
India and Ceylon, which blend in Lower Bengal; and *Gallophasis albocristatus* of the W. Himalaya and *G. melanotus* of Sikhim, which produce an intermediate race in Nepal; and *G. Cuvieri* of Assam and Sylhet, and *G. lineatus* of Burmah, which interbreed in Arakan, &c., so that every possible transition from one to the other can be traced, as demonstrated by a fine series of preserved specimens in the museum of the Asiatic Society in Calcutta. If inhabiting widely separated regions, the (assumed) distinctness of such races, would be at once granted; as with *Phasianus colchicus* and the Chinese *Ph. torquatus*, which readily intermix and blend, wherever the latter has been introduced in Europe. Such races as the Crossbills, the *Bauri* and *Shahin* Falcons of India, the British *Phylloscopus trochilus* and *Ph. rufus*, and the different European Sparrows, maintain themselves persistently distinct; and this while the common Sparrow of India would probably blend with the British Sparrow (though considered distinct by some), if an opportunity should occur of its doing so.

The following birds are given in the Calcutta Review (March 1857), as common to England and Southern Asia.

Gyps Fulvus. (*Vultur fulvus*; 'Griffon Vulture.') Inhabits the high mountains of Europe and Asia, inclusive of the Himalaya and its vicinity: common in Dalmatia, Greece, and the islands of the Mediterranean; less so on the Alps, and exceedingly rare and accidental in the British islands and northern provinces of France. Replaced in the Pyrenees, Sardinia, and Barbary, by the nearly affined G. occidentalis: in E. Africa by G. Ruppellii: and in S. Africa by G. Kolbii; also generally over India and the Malay countries by G. Indicus, a much smaller bird. All are remarkable for possessing fourteen tail-feathers, whereas other birds of prey have twelve only; even their congener, G. bengalensis, which is the commonest Indian vulture about and near towns, and is also met with in E. Africa. As Mr. Yarrell does not appear to discriminate the G. occidentalis, it is just possible that the bird which he notices appertains to that particular race, rather than to the genuine G. fulvus of the Himalaya.

The G. fulvus is the 'great white Vulture' of the Himalaya; and the 'great black Vulture' of the Himalaya, Vultur monachus, may yet be found to stray so far west as Britain; since it has several times been shot in Schleswig and Holstein, also in Provence, Languedoc, Dauphiné, &c. It is not rare in the Pyrenees, Sardinia, Sicily, and mountainous regions of the S. E. of Europe.

The great African V. auricularis has been observed in Greece, and has once been killed in France (in Province); this resembles V. ponticerianus, the so-called 'king vulture' common over the plains of India, but is much larger, equalling V. monachus in size; while the latter has also an analagous diminutive in Africa, in the V. occipitalis.

Neopthron Percnopterus ('Egyptian Vulture) of the Appendix to Bruce's travels *Rachamah; Pharaoh's chickens, &c.* Inhabits Europe, Asia, and Africa, abounding in most warm regions; very common on the plains of Upper Hindustán, and the table-land of peninsular India; but not observed in Lower Bengal below the tideway of the Gangetic rivers: common in the southern parts of Europe; but very rare and accidental in the British islands, and also in Scandinavia. This bird is evidently the 'Kite' of Major A. Cunningham's 'Ladak' (p. 205). He writes—"the Eagle (*cha-nak*, or the 'black bird') and the kite (*cha-kor*, or the white bird) are common enough, and so is the large raven." A second species of this genus, the N. pileatus, inhabits Africa only.

Gypaetos. The Lämmergeyer (Gypaetos) inhabits the high mountains of Europe, Asia and Africa; from the Altai even to the Cape colony. Authorities differ with respect to the value to be attached to certain differences observed in specimens from different regions. The Prince of Canino identifies the Himalayan with G. barbatus of Gebler from the Altai, and G. nudipes of Brehm (*meridionalis* of Keyser and Blasius) from S. Africa. M. Malherbe remarks that specimens from the Pyrenees and Sardinia are of inferior size to those from the Swiss Alps; and this smaller race is the *G. barbatus occidentalis* of Schlegel. Even the Himalayan is said to differ from that of eastern Europe by having a pictoral dark band not observed in the other, and is the G. hemachalanus of Captain Hutton. The constancy of the alleged distinctions seems to need confirmation, preparatory to an estimation of their value. The Himalayan bird is commonly mis-called 'Golden Eagle' by English residents.

Aquila chrysaetos ('Golden Eagle.') Inhabits the mountainous regions of Europe, Asia, and N. America (being the only true Aquila in the New World); rare in N. Africa: and in India confined to the Himalaya. M. Degland inclines to the opinion that a larger and smaller race exist; the former inhabiting a colder region; but this much needs confirmation. No difference can be perceived between British and Himalayan examples.

Aquila mogilnik or 'Imperial Eagle' of Temminck (*Aq. heliaca*, Savigny) inhabits generally a warmer climate than Aq. chrysætos, and is extensively diffused over the mountainous regions of S. E. Europe, Asia, and N. Africa, including those of India (being the *chrysaetos* of Dr. Jerdon's Catalogue of Birds of S. India). In Europe it has been observed so far north as in Jutland; but never in the British islands.

Aquila nœvia. ('Spotted Eagle.') Inhabits Europe, Asia, and Africa; being common in the hilly parts of India, and even in the Bengal Sundarbans. Very rare in N. Europe: but has been shot near the town of Schleswig, and has even been known to breed in Ireland.

There are two affined species in India, Aq. hastata, nearly as large but less robust, and Aq. fulvescens, distinct from Aq. nævioides of Africa the 'Wokhab' noticed in *Cyc.* of *India*, which is smaller and more robust,—a miniature of Aq. mogilnik. Neither of them has been observed in Europe.

Eutolmaetos fasciatus. (*Falco Bonellii*, de la Marmora.) Inhabits the southern parts of Europe, with Asia, and N. Africa; being replaced in S. Africa by Eu. bellicosus: in India and Ceylon confined to the hilly parts, where far from rare.

Hieraetus pennatus. Inhabits E. Europe, Asia, Africa, India generally, and Ceylon: differing very little (if at all) from H. morphnoides of Australia: a rare species in Europe. Prof. Schlegel doubts the proper *habitat* of this bird: it is not uncommon in India, preying much on domestic pigeons.

Pandion haliætus. ('Osprey.') Of universal distribution; the Australian only differing but slightly. Common in India; and migratory in the far north.

Falco candicans. (*Falco gyrfalco*; 'Gyr Falcon.') An Arctic species, very rare in temperate regions: the *Shangar* of Indian falconry seems to denote it, as a bird of excessively rare occurrence in the Punjab. Some writers separate from it an Icelandic race, either as a distinct species or variety, respecting which there is much difference of opinion.

Falco sacer. Schlegel (*F. lanarius* apud Temminck and Gould), a very rare species in East Europe, seems to belong properly to Middle Asia, and occurs rarely in the Himalaya.

Falco lanarius. Schlegel, an inhabitant of the South East of Europe, differs very slightly from the Indian F. juggur, Gray.

Falco peregrinus. ('Peregrine Falcon.') Inhabits Europe, Asia, North Africa, if not also North and South America: the South African race smaller; and Australian F. macropus (*melanogenys* of Gould) very nearly affined. Common in India; also a nearly affined species, F. peregrinator, which resorts more to the hills, and is the *F. ruber indicus* of Aldrovand. Although the Indian and also the north American races are considered different the European by some, is doubted, the existences of any permanent distinction whatsoever.

Hypotriorchis subbuteo (*Falco subbuteo* the 'Hobby.') All Europe, Asia and Africa migratory: common in the Himalaya; rarer in S. India; a cold weather visitant in Lower Bengal, together with an affined species, H. severus. Both are somewhat crepuscular in habit.

Erythropus vespertinus. (*Falco rufipes;* the 'Red-footed Falcon.') Europe, Asia, and N. Africa: rare in Britain: not uncommon in India, in large flocks, which visit Lower Bengal during the rainy season.

Erythropus cenchris. (*Falco tinnunculoides* of Vieillot.) Resembles E. vespertinus in structure and habits and both appear to be exclusively insectivorous, siezing their prey on the ground and not habitually on the wing (like the 'Hobby'). Geographical range also similar, or nearly so; but this has not been known to stray into Britain. Both are migratory.

Tinnunculus alaudarius. (*Falco tinnunculus* the 'Kestrel.') All Europe, Asia, Africa, with the great Asiatic archipelago. Very common in India, sometimes in large flocks. The commonest bird of prey in England and France.

Astur palumbarius. ('Goshawk') Europe, Asia, and N. Africa: rare in Britain; much commoner in Scandinavia, and generally over Europe, where migratory: common in the Himalaya.

Accipiter nisus. ('Sparrow-hawk.') Europe, Asia, and N. Africa: common in the hilly parts of India; rare in the plains, where abundantly replaced by Micronisus badius. Migrates partially in northern regions. There is a nearly affined race in the Malay countries, Acc. nisoides, distinguished by having a white throat with three distinct dark stripes, and no rufous on the under-parts of the adult male. In other respects, quite similar to Acc. nisus; and by no means to be confounded with Acc. virgatus, which likewise has the throat-stripes.

Buteo vulgaris. ('Common Buzzard.') Europe, N. Africa, Asia Minor: higher mountains of India; being common in the W. Himalaya, rare in the Nilgiris, and replaced on the plains by B. canescens. Rare, and to the northward and far west only, in America: mostly migratory in Scandinavia.

Pernis apivora. ('Honey Buzzard.') Europe, Asia, N. Africa: migratory. In India common (if identically the same), in addition to P. cristata. In the crestless or subcrested Indian specimens (adults), there is a marked tendency to the development of three dark stripes on a white throat, and in the Astur trivirgatus and sundry other Indian species. Can such be of a hybrid race between P. apivora and P. cristata?

Circus æruginosus. ('Marsh Harrier.') Europe, Asia, N. Africa: very common in India. Migrates in Scandinavia.

Circus cyaneus ('Hen Harrier.') Europe, Asia, Africa: the American C. Uliginosus barely if at all, separable. In India common in the Sub Himalaya region and its vicinity: being replaced southward by C. Swainsonii (*pallidus* of Sykes.)

Circus cineraceus. (*C. Montagui*; Montagu's Harrier.') Europe, S. Asia, Africa: very common in India.

Circaetus gallicus is a bird of South Europe, Asia, and Africa, which is common in India, and has been killed in Denmark; but never in the British Islands.

Bubo maximus. ('Eagle Owl.') Europe, Siberia, China, Asia Minor, Babylonia, Barbary; Himalaya? If so, very rare.

Scops Aldrovandi. ('Scops eared Owl.') Europe, Asia Minor, N. Africa: migratory. In India replaced by affined species; more especially Sc. bekkamœna (*the Scops sunia et pennata* of Hodgson) which seems to be generally diffused over the country. Sc. Aldrovandi is admitted in the Catalogue of species from Nepal and Tibet presented to the British Museum by Mr. Hodgson; but referring doubtless to a grey specimen of the bakkamœna. Gradations from the grey to the chesnut-coloured varieties of Sc. bakkamœna may be seen in the museum of the Asiatic Society, Calcutta.

Asio otus. (*Otus vulgaris*; 'Longeared Owl.') Europe, N. Africa, Asia Minor, N. Asia, N. America: in India, confined to the Himalaya, where not uncommon.

Asio brachyotus. (*Otus brachyotus*; 'Short-eared Owl.') Europe, Asia, Africa N. and S. America: migratory. Common in India.

Syrnium aluco. (*S. stridulum*; 'Tawny Owl') Europe, N. Africa, Asia Minor, N. Asia to Japan (Temminck). S. nivicolum, common in the W. Himalaya, rarer eastward, is barely separable.

Athene psilodactyla. (*Noctua passerina;* Little Owl.') Europe, N. Africa, W. Asia, Afghanistan, N. W. Himalaya. A much larger species than the true Ath. passerina (*Strix acadica* of Temminck) of N. Europe, which has not been observed in the British Islands.

Turdus viscivorus. ('Missel Thrush.') Europe, W. Asia: its representative in the W. Himalaya appears to be constantly a little larger and has more of the whitish hue upon the outermost tail-feathers; upon which slight differences, M. Homeyer distinguishes it by the name T. Hodgsoni.

Oreocincla Whitei. (*Turdus Whitei;* 'White's Thrush.') A Siberian species, according to the Prince of Canino, with 14 tail-feathers! Distinct from the very similar O. dauma of India (from the Hindustani word *Dama*, equivalent to 'Thrush'), with which it has been supposed identical.

Turdus pilaris. ('Fieldfare.') Europe, W. Asia; migratory. One specimen has been killed at Saharunpur. In the Himalaya generally, replaced by T. atrogularis. a common bird of N. Asia, which occasionally strays into Europe and has been obtained so far west as in Denmark; in India it occurs sparingly in Lower Bengal during the cold season. T. fuscatus of Pallas (*Naumanni* of Temminck), another species inhabiting Siberia and Japan, and straying rarely into Europe, has been once obtained in Nepal.

Turdus iliacus. ('Redwing') Europe, W. Asia, Barbary; has been observed in large flocks in Kohat. Migratory: breeding in the extreme north.

Turdus merula. ('Blackbird.) Europe, W. Asia, N. Africa, Madeira; Afghanistan? Kashmir? China? Females have been seen from Afghanistan and Chusan, which could not be distinguished from the common European Blackbird; and it is said to be—common in the mountains surrounding Kashmir, at from 10,000 to 13,000 feet elevation. The Prince of Canino has recently distinguished a nearly affined "Merula dactyloptera" from Syria.

Turdus (*or Merula*) *simillima.* Of the mountainous parts of S. India and M. Kinnisii of those of Ceylon, though nearly affined, are sufficiently well distinguished from the Blackbird of Europe. In the Himalaya generally, the latter is replaced by M. boulboul (*pœciloptera* of Vigors), which is not unfrequently brought in cages to Calcutta, where known as the Kastura.

Cyanecula wolfi. (*Phœnioura suecica;* 'Blue-throated Warbler.') Europe, W. Asia, Japan (Temminck), N. Africa; rare in Britain: migratory: abundantly replaced in India by C. suecica, and in middle Asia, Afghanistan, &c., by S. cærulecula (*cyane* of Eversmann); the first known by its pure white pectoral spot, which spot is always deep ferruginous in the Indian bird, and is wanting in that from middle Asia.

Ruticilla phœnicurus. (*Phœnicura ruticilla* 'Redstart.') Europe, W. Asia, Siberia (Schlegel) Japan, (Temminck,) N. Africa; migratory. Replaced in Sindh and Afghanistan by R. phœnicuroides, which is probably the phœnicurus noted from Nepal. There are numerous Himalayan species; and one, R. rufiventris, is generally diffused over India.

Pratincola rubicola. (*Saxicola rubicola;* 'Stone-chat.') Europe, N. Africa, Japan (Temminck.) In India replaced by the nearly affined Pr. indica, and in Sindh also by Pr. leucura, as in S. Africa by Pr. pastor.

Pratincola rubetra. (*Saxicola rubetra* 'Whinchat.') Europe, N. Africa, Arabia (Schlegel): migratory. Erroneously assigned to India.

Saxicola œnanthe. ('Wheatear.') Europe, W. Asia, plains of Upper India, N. Africa, Artic regions, Greenland! Migratory.

There are several other Indian Wheatears, all of which are different from those of Europe excepting S. leucomela; but S. stapazina is replaced in India by S. atrogularis, and S. leucura by S. leucuroides (*opistholeuca* of Strickland) which occurs likewise in N. E. Africa.

Locustella rayi. (*Salicaria locustella;* 'Grasshopper Warbler.') Europe, Asia, N. Africa: migratory. Has once been obtained in Central India, and once in Lower Bengal; where an affined species. L. Rubescens, is not uncommon. Both specimens are in the Calcutta museum.

Acrocephalus arundinaceus. (*Salicaria turdoides;* 'Thrushlike Warbler.') Europe N. Africa, Arabia (Schlegel), Japan (Temminck); rare in Britain: migratory. Replaced in India by Acr. brunnescens.

Sylvia atricapilla. (*Curruca atricapilla;* 'Blackcap 'Warbler.') Europe, W. Asia, Arabia, (Schlegel), Japan (Temminck), all Africa. One killed in Java (Temminck.)

Sylvia cinerea. (*Curruca cinerea:* 'Common White-throat.') Europe, Asia Minor, Arabia (Schlegel), N. Africa: migratory.

Sylvia curruca. (*Curruca sylviella:* 'Lesser White-throat.') Europe, Asia, Africa: migratory. Common in India; and a nearly affined but larger species in S. India, S. affinis (*Curruca cinerea* apud Jerdon.)

Sylvia orphea (*Curruca orphea;* 'Orpheus Warbler.') Europe, N. Africa, Arabia, (Schlegel) rare in Britain: migratory. The Indian race seems to differ only in having a somewhat longer bill: inhabiting both Upper Hindustan and S. India.

Phylloscopus trochilus. (*Sylvia trochilus;* 'Willow Warbler.') Europe, Asia Minor, N. Africa; W. India (apud Gould, but needs confirmation): migratory. Has been known to stray to N. America.

Regulus cristatus. ('Golden-crested Regulus.') Europe, N. Asia, Japan, W. Asia, Barbary: partially migratory. Replaced in the W. Himalaya by R. himalayensis.

Reguloides proregulus. (*Regulus modestus;* 'Dalmatian Regulus.') Asia; very rare in Europe: one specimen obtained in Dalmatia and another in England. Common in India with several affiued species.

Parus major. ('Great Tit.') Europe N. Asia, Japan, N. Africa. Replaced in India, Ceylon, and Java, by P. cinereus, and in the Himalaya also by P. monticolus.

Parus cœruleus. ('Blue Tit.') Europe, N. Asia, Japan, China Formosa.

Parus ater. ('Cole Tit.') Europe. Siberia, Japan, Formosa. Replaced in Nepal by P. emodius.

Orites caudatus. (*Parus caudatus* 'Long-tailed Tit.') Europe, N. Asia, Japan.

Calobates sulphurea. (*Motacilla boarula;* 'Grey Wagtail.') Europe, Asia, Africa, Malay countries, Australia? Migratory within the British islands: common in India.

Pipastes trivialis. (*Anthus arboreus;* 'Tree Pipit.') Europe, N. Asia, Japan, W. Asia, N. Africa; Himalaya (but much confounded with the common *P. agilis* of India): migratory.

Anthus pratensis. 'Meadow Pipit.' Europe, N. Asia, Japan, Asia Minor, W. India; (Gould), Nepal (Hodgson, Gray); one specimen received from Pegu.

Anthus obscurus. (*A. petrosus.*; 'Rock Pipit.') Europe, Siberia, Japan. Replaced in the Himalayan region by A. Cervinus, which is likewise found in Europe.

Corydalla Richardi. (*Anthus Ricardi;* 'Richard's Pipit.') Europe, Asia, N. Africa; common in India; very rare in Britain.

Corydalla campestris. A common European bird which even abounds in the southern parts of Sweden, but has not hitherto been observed in Britain, is also common in parts of India.

Galerida cristata. (*Alauda cristata;* 'Crested Lark.') Europe, Asia, N. Africa; rare in Britain; common in India, where known as the *Chandul* or *Charndol.*

Calendrella brachydactyla. (*Alauda brachydactyra;* 'Short-toed Lark.') S. Europe, N. Africa; rare in Britain; extremely common in India, where currently known to Europeans as the 'Ortolan.'

Certhilauda desertorum of Spain and N. Africa inhabits Sindh.

Ammomanes Lusitonia occurs in the deserts of N. W. India, being replaced further south by A. phœnicura.

Emberiza miliaria. ('Common Bunting.') Europe, W. Asia, Arabia (Schlegel) Barbary.

Emberiza citrinella. ('Yellow Bunting.') Europe, to beyond the polar circle: replaced in the W. Himalaya by E. pithyornis, an inhabitant also of Siberia, which occurs rarely in W. Europe.

Emberiza Cia of S. Europe is common in the W. Himalaya; and E. Pusilla, which seems to be plentiful in Sikhim, has occasionally been observed in Europe, even so far west as Leyden. E. fuscata of N[illegible] common in the W. Himalaya, [illegible]. Asia, Japan, and in considerable numbers in L[illegible] occurs sometimes melanocephala of S. Europe [illegible]ower Bengal. E. parts of India. [illegible] is common in

Fringilla montifringilla. ('Mo[illegible] Mountain Finch.') Europe, N. Asia, Japan, Asia [illegible] Minor, Afghanistan, Kashmir. W. [illegible] istan at all [illegible] Himalaya; a winter visitant in Britain. The European Montifringilla nivalis has been obtained at Kandahar.

Passer montanus. ('Tree Sparrow.') Europe, Asia (commoner to the eastward) Siberia, Tibet, Sikhim, Arakan, Malayan peniusula, Java, China, Japan.

Passer domesticus. ('House Sparrow.') Europe, Asia, N. Africa; the Indian race (*P. indicus* of Jardine and Selby) differing slightly from the European in the paleness of the females and young, the much more albescent hue of the lower-parts, and bright rufous colouring on the back of the adult male.

Passer salicarius. (*vel hispaniolensis*) of Barbary and the southern parts of Europe, Asia Minor, Bokhara, and Afghanistan, visits the Peshawur valley and Kohat in large flocks, being everywhere more highly gregarious than P. Domesticus. P. Petronia (or Petronia stulta), also of S. Europe and N. Africa to Madeira; is common in Afghanistan.

Coccothraustes vulgaris. ('Hawfinch.') Europe, Siberia, China, Japan (*qu.* C. Japonicus, Schlegel?)

Chrysomitris spinus. (*Carduelis spinus;* 'Siskin.') Europe, Siberia, Japan: a winter visitant chiefly in Britain, breeding in the far north.

Linota cannabina. ('Common Linnet.') Europe, Siberia, Japan, Asia Minor, Barbary.

Linota canescens. ('Mealy Redpole.) Northern regions chiefly, Greenland, Japan: an irregular winter visitant in Britain.

Linota montium. ('Mountain Linnet.') Europe, N. Asia, Japan: N. or S. Britain according to season: replaced in Afghanistan by L. Brevirostris.

Carpodacns erythrinus, which is rare in the N. E. of Europe, is a common winter visitant over the greater part of India.

Loxia curvirostra. ('Common Crossbill.') Circuit of northern regions: all Europe; Afghanistan: an irregular visitant in Britain: in America it has been obtained so far south as in the Bermudas. A much smaller species inhabits the Himalaya, the L. Himalayana.

Loxia bifasciata. ('European White-winged Crossbill.') N. Europe and Asia. Himalaya (Gould): rare in Britain.

Sturnus vulgaris. ('Common Starling.') Europe, Asia, Africa, Azores: common in the Himalaya and N. India, Kashmir, Afghanistan &c., as in Britain. N. B.—An Afghan specimen, assigned to St. unicolor, appertains to the present species, being an old male with the pale specks obsolete: the true St. unicolor of Sardinia, Barbary, &c., is very distinct and much less bright in its glosses.

Pastor roseus. ('Rose-coloured Pastor.') Europe, Asia, and Africa; common in India; rare in Britain.

Fregilus graculus. ('Chough.') High mountains and sea-cliffs of Europe, Asia, and Africa; common in high Central Asia, the Himalayas, Afghanistan, &c.; as is also the Pyrrhocorax alpinus of the Swiss Alps and Pyrenees,

Corvus corax. ('Raven.') Circuit of northern regions; rare in N. Africa, Punjab, Kashmir, Afghanistan; the Tibetan species considered distinct, but probably on insufficient evidence.

Corvus corone. ('Carrion Crow.') Europe, Afghanistan, (Pushut), Japan *apud.* Temminck.)—Replaced in India by C. Culminatus.

Corvus cornix. ('Hooded Crow.') Europe, Asia Minor, Afghanistan, Japan (Temminck), Barbary.

Corvus frugilegus. ('Rook.') Europe, N. and W. Asia, Afghanistan, Peshawur valley, Kashmir: replaced in China and Japan by C. Pastinator.

Corvus monedula. ('Jackdaw.') Europe, Siberia, Barbary, W. Asia, Peshawur valley, Kashmir.

Pica caudata. ('Magpie.') Europe, W. Asia, Siberia, E. N. America, China? Japan? Replaced in Afghanistan and W. Tibet by P. bactriana, in E. Tibet by P. bottanensis, in China and Japan (?) by P. media and Barbary by P. mauritanica.

Yunx torquilla. ('Wryneck.') Europe, Asia, N. Africa, China, Japan, Kamschatka; common in India, as in Britain: migratory.

Upupa epops. ('Hoopoe.') Europe, Asia, Africa; a common winter-visitant in Lower Bengal but generally replaced by a nearly affined race in Upper Hindustan and S. India.

Sitta syriaca, or 'Rock Nüthatch' of S. E. Europe, and Asia Minor, or a species of similar habits (most probably the same), inhabits Afghanistan:

Trichodromus muraria or Wall Creeper of S. Europe, is very common in the Himalaya, Afghanistan, &c.

Cuculus canorus. ('Common Cuckoo.') Europe, Asia, Africa, Malay countries: common in the Himalaya, visiting the plains during the cold season.

Coracias garrula. ('Roller.') Europe, Africa, W. Asia, Afghanistan, Kashmir, Sindh, Punjab? migratory in Europe; and rare in Britain.

Merops apiaster. ('Bee-eater.') Europe, Africa, W. Asia, Afghanistan, Kashmir, Sindh, Punjab? migratory in Europe, and rare in Britain.

Hirundo rustica. ('Swallow.') Europe, Asia, Africa; migratory; common in the plains of India during the cold season.

Hirundo urbica ('Martin.') Europe, Africa, Asia, (Siberia;) somewhat rare (or local?) in India: migratory.

Hirundo riparia. ('Sand Martin.') Europe, Asia, Africa, N. America; migratory: in India local, and mostly replaced by H. sinensis.

Hirundo rupestris of S. Europe is common in the high mountains of India; and there is a diminutive of it also in the H. concolor of Sykes.

Cypselus Apus. ('Common Swift.') Europe, N. Africa, W. Asia, Afghanistan; migrato

Cypselus melba. (*C. alpinus*; 'Alpine High mountains (chiefly) of Europe, Asia, a. Africa: tolerably common in the Himalay Central India, Nilgiris, and Ceylon: rare in Britain.

Acanthylis caudacuta, or large Spiny-tailed Swift of the Himalaya, has once been shot in England, according to Mr. Gould.

Caprimulgus Europæus. ('Night-jar.') Europe, N. Africa, W. Asia; Siberia and Kamschatka (Pennant:) migratory. Several species inhabit India.

Columba livia. ('Rock Dove.') Europe, N. Asia to Japan, N. Africa; abundantly replaced in India by the barely separable C. intermedia.

Starna cinerea. (*Perdix cinerea*; 'Common Partridge.') Europe, S. Siberia, Asia Minor: Mesopotamia? Persia? Egypt? a near congener lately discovered in Tibet.

Coturnix vulgaris. ('Common Quail.') Europe, Asia, Africa: chiefly migratory. Abundant in India, though M. Gould considers the race of this country to be distinct.

Tetrax campestris. (*Otis tetrax*; 'little Bustard.') Europe, N. Africa, Asia Minor, Mesopotamia, extreme N. W. of India (Peshawar valley.

Houbara Macqueenii, (*Otis Macqueenii*; 'Maqueen's Bustard.') N. W. of India, Afghanistan, &c. Very rare in Europe.

Œdicnemus crepitans. ('Great Plover.') Europe, Asia, Africa: common in India.

Charadrius hiaticula. ('Ringed Plover.') Europe, N. Asia, Japan, Greenland.

Charadrius cantianus. ('Kentish Plover.') Europe, Asia: not uncommon in India.

Charadrius philippinus. (*Ch. minor*; 'Little Ringed Plover.') Europe, Asia, N. America: rare in Britain; exceedingly common in India.

Charadius pyrrhothorax, a very common Indian species, is known in Europe as a straggler.

Calidris arenaria. ('Sanderling.') Circuit of northern regions, N. and S. Africa, N. Guinea: rare in India (so far as observed hitherto; but probably not so along the sea-coast.

Squatarola helvetica (*Sq. cinerea*; 'Grey Plover.') Circuit of northern regions, Japan, Java, N. Guinea, Australia: tolerably common in India.

Vanellus cristatus. ('Lapwing.') Europe, N and middle Asia, N. Africa: common in N. India, Sindh, &c., but not seen in Lower Bengal.

Strepsilus interpres. ('Turnstone.') Inhabits sea-coasts, from the equator to the poles: on along those of India.

Hæmatopus ostralegus. ('Oyster-catcher.') Circuit of northern regions, to the equator, if not further south: not rare along the shores of the Bay of Bengal, &c.

Grus cinerea. ('Common Crane.') Europe, Asia, N. Africa: migratory; now rare in Britain: common in India during the cold season.

Ardea cinerea. ('Common Heron.') Europe, Asia, N. and S. Africa: common in India.

Ardea purpurea. ('Common Heron.') Europe, Asia, Africa: common in India.

Herodias alba: *Ardea alba*; ('Great White Heron,') Europe, Asia, N. Africa: very rare in Britain: very common in India, though the race is considered different by some.

Herodias garzetta. (*Ardea garzetta*; 'Little Egret.') Europe, Asia, N. Africa: exceedingly rare in Britain: very common in India.

Herodias bubulcus. (*Ardea russata*; 'Buff-backed Heron.') Europe, Asia, N. Africa, exceedingly rare in Britain: very common in India.

Ardetta minuta. (*Botaurus minutus*; 'Little Bittern.') Europe, all Africa, W. Asia, Himalaya, Kashmir; replaced in Lower Bengal by A. sinensis, and more abundantly by A. cinnamomea, which is common throughout India.

Botaurus stellaris. ('Common Bittern.') Europe, Asia, all Africa: common in India.

Nycticorax Gardeni. ('Night Heron.') Europe, Asia; Africa, N. America? (Species at least barely separable): very common in India.

Ciconia alba. ('White Stork.') Europe, Asia, N. Africa, migratory: common in India during the cold season in immense flocks in Lower Bengal.

Ciconia nigra. ('Black Stork.') Europe, Asia, N. Africa: not uncommon in India.

Platalea leucorodia. ('White Spoon-bill.') Europe, Asia, all Africa: common in India.

Falcinellus igneus. ('*Ibis falcinellus*; 'Glossy Ibis'.) Europe, Asia, Africa, N. and S. America, Australia: very common in India.

Numenius arquata. ('Common Curlew.') Europe, N. Africa, Asia (to Japan), Malasia: very common in India.

Numenius phæopus. ('Whimbrel.') Europe, Asia, N. Africa: common in India, along sea-coast and estuaries.

Totanus fuscus. ('Spotted Red-shank.') Europe, Asia; common in India.

Totanus calidris. ('Common Red-shank.') Europe, Asia: very common in India.

Actitis ochropus. (*Totanus ochropus* 'Green Sandpiper.') Europe, Asia, N. Africa; very common in India.

Actitis glareola. (*Totanus glareola*; 'Wood Sandpiper.') Europe, Asia, Africa; from Lapland to the Cape of G. Hope: Java, &c.: exceedingly common in India.

Actitis hypoleucos. (*Totanus hypoleucos*; 'Common Sandpiper.') Europe, Asia: exceedingly common in India.

Totanus glottis. ('Green-shank.') Europe, Asia, Africa, Australia; stragglers obtained in N. America: very common in India.

Recurvirostra avocetta. ('Avocet.') Europe, Asia, all Africa: not rare in India.

Himantopus candidus. (*H. melanopterus*; 'Black-winged Stilt.') Europe, Asia, all Africa: common in India.

Limosa ægocephala. (*L. melanura*; 'Black-tailed Godwit.') Europe, Asia, N. Africa, Australia: very common in India.

Limosa rufa. ('Bar-tailed Godwit.') Europe, N. Africa, W. Asia: Nepal (Hodgson, Grey), Java and Timor (Temminck).

Philomachus pugnax. (*Machetes pugnax*; Ruff.') Europe, Asia, N. Africa: common in India.

Scolopax rusticola. ('Woodcock.') Europe, Asia, N. Africa: very common in Himalaya, not rare in the Nilgiris, more so in the high-lands of Ceylon; a specimen occasionally shot in Lower Bengal.

Gallinago scolopacinus. (*Scolopax gallinago*; Common Snipe.') Europe, Asia, N. Africa: very common in India.

Gallinago gallinula; *Scolopax gallinula*; Jack Snipe.') Europe, Asia, Barbary: common in India.

Tringa Subarquata. ('Curlew Sandpiper.') Circuit of northern regions, to beyond the equator; Australia; very common in India.

Tringa canutus. ('Knot.') Circuit of northern regions: rare in India.

Tringa platyrhyncha. ('Broad-billed Sandpiper.') Europe, Asia; Sumatra, Borneo, Timor (Temminck): not uncommon in India: rare in the U. S. of America.

Tringa minuta. ('Little Stint.') Europe, Asia: very common in India.

Tringa Temminckii. ('Temminck's Stint.') Europe, Asia, N. Africa: common in India.

Tringa Alpina. (*Tringa variabilis*; 'Dunlin.') Arctic regions; circuit of northern regions; Japan; Timor (Temminck); Guina: not rare in India.

Phalaropus fulicarius. ('Grey Phalarope.') Circuit of northern regions: one specimen obtained near Calcutta.

Lobipes hyperboreus. (*Phalaropus hyperboreus ;* Red-necked Phalarope.') Circuit of northern regions: one specimen obtained near Madras, another in Nicaragua, and a pair in the Bermudas.

Crex pratensis. ('Landrail.') Europe, Asia, N. Africa: common in Afghanistan, rare in the N. W. of India: specimen obtained in the Bermudas.

Porzana Maruetta, Crex porzana ; ('Spotted Crake.') Europe, Asia, N. Africa: common in India.

Porzana pusilla (*Crex pusilla ;* 'Little Crake.') Europe, N. Africa, W. Asia, Japan: Nepal (Hodgson.)

Porzana Baillonii (*Crex Baillonii;* 'Baillon's Crake.') Europe, Asia to Japan, all Africa: exceedingly common in India.

Gallinula chloropus. ('Moor-hen.') Europe, Asia, all Africa: common in India.

Fulica atra. ('Common Coot.') Europe, Asia, N. Africa, where found additional to F. cristata): America and Javanese species distinct: common in India.

Anser cinereus (*Anser ferus ;* 'Grey-leg Goose.') Europe, and Asia: common in India.

Anser brachyrhynchus. ('Pink-footed Goose.') Europe, N. Asia: Punjab (rare)?

Bernicla ruficollis. (*Anser ruficollis ;* 'Red-breasted Goose.') N. Asia, chiefly: rare in N. India.

Cygnus musicus. (*Cygnus ferus ;* 'Hooper Swan') N. Europe and Asia; N. Africa; migratory: one specimen obtained in the valley of Nepal.

Casarca rutila. (*Tadorna rutila ;* 'Ruddy Shieldrake.') Europe and Asia, N. Africa (replaced in S. Africa by C. Cana): very common in India.

Tadorna vulpanser. ('Common Shieldrake.') Europe, Asia, N. Africa: common in the Punjab; not rare in Lower Bengal.

Spatula clypeata. (*Anas clypeata ;* 'Shoveller.') Circuit of northern regions, N. Africa: tolerably common in India.

Anas stepera. ('Gadwall.') Circuit of northern regions; Barbary: tolerably common in India.

Anas acuta. ('Pintail Duck.') Circuit of northern regions, Barbary: very common in India.

Anas boschas. ('Wild Duck') Circuit of northern regions, Barbary: in India confined to Sindh, Punjab, and the Himalaya and its vicinity; replaced southward by A. Pæcilorhyncha.

Anas querquerdula. ('Gargany.') Europe, Asia, N. Africa: very common in India.

Anas crecca. ('Teal.') Europe, Asia, Barbary; common in India.

Anas penelope. ('Wigeon.) Europe, Asia, N. Africa: common in India.

Fuligula ferina. ('Pochard.') Circuit of northern regions, Barbary: common in India.

Fuligula nyroca. ('Ferruginous Duck.') Europe, Asia, N. Africa: common in India.

Fuligula marila. ('Scaup Duck.') Circuit of northern regions: Punjab, Sindh, Nepal.

Fuligula cristata. ('Tufted Duck.') Europe, Asia, Barbary: common in India.

Clangula Glaucion. (*Fuligula clangula ;* 'Golden Eye.') Circuit of Northern regions N. Africa: Sindh, Punjab.

Mergellus albellus. (*Mergus albellus ;* 'Smew') Circuit of Northern regions; W. Asia, Sindh, Punjab, Oudh; apparently not rare along the Punjab rivers.

Mergus merganser. ('Goosander.') Circuit of northern regions: not rare in the Himalaya; rare in Central India (*M. orientalis* of Gould.)

Podiceps cristatus. ('Great-crested Grebe.') Europe, Asia, all Africa, America; the Australian barely separable: Himalaya, Bengal Sunderbans. Perhaps commoner than generally supposed in India, from its secluded habits and the great difficulty of procuring specimens.

Podiceps Philippensis. (*P. minor ;* 'Little Grebe.') Europe, Asia and its islands, N. Africa: very common in India.

Phalacrocorax carbo. ('Common Cormorant.') Circuit of northern regions, Barbary: common in the Himalaya; rare in Central India.

Sylochelidon caspia. (*Sterna caspia :* 'Caspian Tern.') Warmer regions of the old World generally, Australia (*S. strenuas,* Gould): not rare in parts of India; but doubtful as occurring in Lower Bengal.

Sterna paradisea. (*Sterna Dougalli ;* 'Roseate Tern.') Europe, Asia, Africa, America, Australia: coasts of India.

Sterna hirundo. ('Common Tern.') Europe Asia, Africa: S. India, Ceylon.

Hydrochelidon indica. ('*Sterna leucoparica;* 'Whiskered Tern.' Europe, Asia, Africa, Malay countries; very common in India.

Gelochelidon angelica. (*Sterna angelica ;* 'Gull-billed Tern.') Warmer regions of the old World, extending also to America; Java: common in India.

Sternula minuta. (*Sterna minuta ;* 'Lesser Tern.') Northern hemisphere; replaced in S. America and Australia by nearly affined species: common on the west-coast, and in parts of S. India.

Anous stolida. (*Sterna stolida ;* 'Noddy Tern.) Of general distribution, over the warmer parts of the ocean; common in the Indian seas.

Onychoprion fuliginosus. (*Sterna fuliginosa* 'Sooty Tern.') Very generally distributed, like the last ; Bay of Bengal.

Xema ridibunda. Larus ridibundus; ('Black-headed Gull') Europe, Asia, N. Africa : not rare in India, but less common than the nearly affined X. Brunneocephalus.

Larus fuscus. ('Lesser Black-backed Gull.') Atlantic, Mediterranean, Red Sea, Indian Ocean Cape of G. Hope, N. Zealand, Kabul (Burnes); Bay of Bengal.

Procellaria hœsitata. ('Capped Petrel.') Indian and southern oceans : a rare straggler in Britain, that has been obtained once only.

Puffinus obscurus. ('Dusky Petrel.') Tropical and S. Seas ; Australia ; rare northward.—(*Cal. : Rev. : No. IV. March* 1857.)

The migrations of birds has been the theme of poets and naturalists in all ages. Mrs. Hemans, asks of the swallows,

Birds, joyous birds of the wandering wing,
Whence is it ye come with the flowers of spring ?
" We come from the shore of the green old Nile,
From the land where the roses of Sharon smile,
From the palms that wave through the Indian sky,
From the myrrh-tree of glowing Araby.
" We have swept o'er the cities, in song renown'd,
Silent they lie, with the deserts round !
We have crossed proud rivers, whose tide hath roll'd,
All dark with the warrior blood of old ;
And each worn wing hath regained its home,
Under the peasant's roof-tree, or monarch's dome."
And what have ye found in the monarch's dome,
Since last ye traversed the blue sea's foam ?
" We have found a change, we have found a pall,
And a gloom o'ershadowing the banquet's hall,
And a mark on the floor, as of life-drops spilt,
Nought looks the same, save the nest we built !"
Sad is your tale of the beautiful earth,
Birds that o'ersweep it in power and mirth !
Yet, through the wastes of the trackless air,
Ye have a guide, and shall we despair ?
Ye over desert and deep have passed,
So shall we reach our bright home at last !

Another poet thus alludes to the migration of swallows :

" As fables tell, an Indian sage,
The Hindoostani woods among,
Could, in his desert hermitage,
As if 't were marked in written page,
Translate the wild bird's song.
" I wish I did his power possess,
That I might learn, fleet bird, from thee,
What our vain systems only guess,
And know to what wide wilderness,
You go across the sea."

The great migration of birds to and from Southern India Asia " says Mr. Hodgson, seems to take place across the mountains of Nepaul. The wading and natatorial birds, generally, make a mere stage of the valley, on their way to and from the vast plains of *India* and *Tibet*, the valley being too small, dry, open, and populous for their taste—especially that of the larger ones. Some, however, stay for a longer or shorter time, in their vernal and autumnal migrations : and some, again, remain throughout that large portion of the year in which the climate is congenial to their habits. Of all of them, the seasons of arrival, both from the north and from the south, are marked with precision ; and Mr. Hodgson was led to conclude from what he observed there, that the mass of the grallatores and swimmers are found in the plains of India, only during the cold months : for they all arrive in the valley of *Nepal*, from the north, towards and at the close of the rains ; and all as regularly re-appear from the south, upon, or soon after the cessation of the hot weather. In his enumeration of them, therefore, he divides the migratory birds into the three classes, below indicated.

1st.—Of such as usually pass over the valley, seldom alighting, and only for a few hours.

2nd.—Of such as alight and stay for a few days or, at most, weeks.

3rd.—Of such as seem to seek the valley, not as a caravansary merely, or house of call, for momentary or temporary sojourn, on their way to some remote abode—but, as their permanent dwelling place for the entire season.

A 4th class will be constituted of such as do not appear to migrate at all ; notwithstanding that all their nearest kindred (so to speak) do so regularly.

Class I. embraces,

Order NATATORES. Family *Anatidæ ; the* Genera Cygnus and Anser : Family *Colymbidæ*, none ; Family *Alcadæ*, none. Family *Pelecanidæ ;* the Genera Phalacrocorax and Pelecanus, Family *Laridæ ;* the Genera Sterna, Viralva, and Larus.

Order GRALLATORES. Family *Gruidæ ;* the Genus Grus. Family *Ardeidæ ;* the Genera Ardea, Phenicopterus, Platalea, Ciconia, Mycteria, Anastomus, Tantalus. Family *Scolopacidæ*, none. Family *Rallidæ*, the Genus Glareola. Family *Charadriadæ*, the Genera Himantopus and Œdicnemus.

Class II. embraces,

Order NATATORES. Family *Anatidæ ;* the following Genera, Tadoura, Anas, Hynchaspis, Dafila, Mareca, Querquedula, Merganser, Truligula. Family *Colymbidæ*, none. Family *Alcadæ*, none. Family *Pelecanidæ ;* the Genera Phalacrocorax and Pelecanus.

Order GRALLATORES. Family *Gruidæ ;* the Genus Apthropoides. Family *Ardeidæ*, the Genus Ibis. Family *Scolopacidæ ;* the Genera Numenius, Limicula, Recurvirostra, Limosa, Rhynchæa, Pelinda, Phæopus. Family *Rallidæ ;* the Genera Rallus, Parra, Gallinula, Porphyrio, Fulica. Family *Charadriadæ ;* the Genera Frolia, Squatarola, Vanellus, Charadrius.

Class III. embraces,

Order NATATORES. Family *Anatidæ ;* the Genera Mareca and Querquedula, (where *protected*, as in some sacred tanks). Family *Colym-*

bidæ, none. Family *Alcadæ*, none. Family *Pelecanidæ*, none.

Order GRALLATORES. Family *Gruidæ*, none. Family *Ardeidæ*, the Genera Botaurus, Ardæa, Ciconia. Family *Scolopacidæ*, the Genera Gallinago and Scolopax. Family *Rallidæ* ; the Genera Parra, Rallus, and Fulica (where protected in holy tanks). Family *Charadriadæ* ; the Genus Charadrius, (one small species of.)

Class IV. embraces,

Order NATATORES, none.

Order GRALLATORES. Family *Gruidæ*, none. Family *Ardeidæ* ; the Genera Ardea, (small species, or Baklas, only) and Nycticorax. Family *Scolopacidæ* ; the Genera Totanus ? and Gallinago ? Family *Rallidæ* ; the Genus Rallus. Family *Charadridæ* the Genus Vanellus, one species—the Tithir.

The Grallatorial and Natatorial birds begin to arrive in Nepal, from the *North*, towards the close of August, and continue arriving till the middle of September. The first to appear are the common snipe, and jack snipe, and Rhynchœa; next, the Scolopaceous waders (except the wood-cock ;) next, the great birds of the heron and stork, and crane families ; then, the Natatores ; and lastly, the woodcocks, which do not reach Nepaul till November. The time of the re-appearance of these birds, from the *South* is the beginning of March ; and they go on arriving, till the middle of May. The first which thus return to Nepaul are the snipes ; then come the teal and ducks ; then the large Natatores ; and lastly, the great cranes and storks. The Grallatores which visit Nepaul, or pass over it, are much more numerous than the Natatores. The wild swan was never seen there but once, in the mid winter of 1828, when the apparition suggested a new version of the well known hexameter.—

'Rara avis in terris, *alboque* simillima cygno.'

None of the Natatores stay in Nepaul beyond a week or two, in autumn, (when the rice fields tempt them) or beyond a few days, in spring, *except* the teal, the widgeon, and the coot, which remain for the whole season, upon some few tanks whose sanctity precludes all molestation of them. There are cormorants throughout the season upon the larger rivers within the mountains ; but none ever halt in the valley, beyond a day or two : for *so long*, however, both they and pelicans may be seen, occasionally, on the banks just mentioned.

The Larus and Sterna are birds which usually affect the high seas,—but Mr. Hodgson, had killed both the red-legged Gull, and a genuine pelagic Tern, in the valley of Nepaul. But so had he *fishing* Eagles ; and in truth, he adds, who, shall limit the wanderings of these long-winged birds in the etherial expanse ?

Larks are often domesticated in S. E. Asia. In China it is the Acridotheres cristellatus the Shantung lark. It has great facility in learning sounds and will bark, mew, crow, cough and sneeze, sometimes talk, and a single bird will fetch £6. The Acridotheres will imitate the human voice accurately. In China, a starling is often domesticated : it is lively good natured and easily tamed. They also tame the fork-tailed Parus (Leiothrix luteus of Scopoli). It is in form and habit like the robin of Britain, is pretty, olive green, black forked-tail, with wing primaries, bright yellow and red. It turns summersaults on its perch. They have a short loud song. Canaries are sold in many shops of Japan. The grackle, Gracula religiosa called the Mina is largely domesticated. The partridge, the bulbul shrike are also largely domesticated. The Hoopoe is to be seen occasionally.

The names, synonyms and localities of most of the Birds of Eastern and Southern Asia, are given in Mr. Blyth's catalogue, and are as follows :—

Class AVES, Order I. SCANSORES. Fam. PSITTACIDÆ. Subfam. CACATUINÆ. (Cockatoos).

Genus CALYPTORHYNCHUS, Vigors and Horsfield.

C. galeatum (Gould's *B. A.*, Vol. V. pl. 14.)

SYN. Psittacus galeatus, Latham.
Callocephalon australe, Lesson.

Inhabits S. Australia ; Islands in Bass's Straits ; V. D. Land.

Genus CACATUA, Brisson.

C. moluccensis (Lear's *Psittacidæ*, pl. 2.)

SYN. Psittacus moluccensis. Gmelin.
Ps. rosaceus, Latham.
Cacatua rubrocristata, Brisson.
C. erythrolophus, Lesson.

Inhabits the Moluccas.

C. cristata (Daubenton's *Pl. Enl.* 263.)

SYN. Psittacus cristatus, L.
Cacatua leucolophos, Lesson.

Inhabits the Philippines.

C. galerita (Lear's *Psittacidæ*, pl. 3 ; Gould's *B.* A. Vol. V, pl. 1.)

SYN. Psittacus galeritus Latham.
Cacatua chrysolophus, Lesson.

Inhabits (with local variation) N. Guinea, Australia, and V. D. Land.

C. sulphurea (Lear's *Psittacidæ*, pl. 4).

SYN. Psittacus sulphureus, Gmelin.
Cacatua luteocristata, Brisson.

Inhabits Timor, &c.

Subfam. PSITTACINÆ (Parrots).

Genus CORACOPSIS, Wagler.

C. nigra (Edwards, pl. 5)

SYN. Psittacus niger, L.

Inhabits Madagascar.

Genus TANYGNATHUS, Wagler.

T. macrorhynchos (Daubenton's *Pl. Enl.*, 713).

SYN. Psittacus macrorhynchos, Gmelin (the male).
Ps. sumatranus, Raffles (the female).
Ps. pileatus, Scopoli
Ps. marginatus, Gmelin } Young male ?
Kiki, Sumatra (Raffles).

Inhabits Sumatra ? Celebes ; N. Guinea.

T. malaccensis (Swainson's *Ill. Orn.*, 1st series, pl. 254).

SYN. Psittacus malaccensis, Latham (nec Gmelin).
Tana, Malayan.

Inhabits Malayan peninsula ; Sumatra.

Genus PALÆORNIS, Vigors.

P. Alexandri (Edwards, pl. 292 ; *Nat. Libr.*, *Psittacidæ*, pl. 2.)

SYN. Psittacus Alexandri, L.
Ps. eupatria, L.
Psittaca ginginiana, Brisson. } The female.
Psittacus guinneensis, Scopoli (nec guineensis, Gmelin).
Ps. Sonneratii, Gmelin.
Palæornis nipalensis, Hodgson. As. Res. XIX, 177.

Chandana (sandal-wood coloured, alluding to the yellowish tinge of the under-parts and upper portion of the back), Beng.: *Karan suga* and *Kararia* of Nepal (Hodgson) ; *Raee Totah (Royal Parrakeet)*, Hind. (Jerdon): *Kyai Phoungkha ?* Arracan. Inhabits the Hilly regions of all India Proper, from the sub-Himalayas to Ceylon inclusive : Assam ; Sylhet ; Arracan ; Tenasserim.

P. torquatus (Daubenton's *Pl. Enl.* 551).

SYN. Psittaca torquata, Brisson.
Psittacus Alexandri, var. B., Latham.
Ps. cubicularis, Hasselquist.
Ps. docilis, Vieillot.
Var. Sulphur Parrakeet, Shaw.

Tya, or *Teeah* (imitative of voice), Hind. : *Tent'hia suga*, Nepal (Hodgson) : *Lybar Totah*, S. India (Jerdon) : *Kyaigyot*, Arracan. Inhabits the Plains of India : Arracan, Tenasserim, and Malayan peninsula to the latitude of Penang. W. Africa (apud Swainson) : smaller variety.

P. bitorquatus (?)

SYN. Psittacus bitorquatus (?), Kuhl.
Ps. torquatus, var. B. (?), Latham (2nd. edit.)
Psittaca borbonica torquata (?), Brisson.

'Ring Parrakeet' of the Mauritius. Inhabits Mauritius. According to Latham *P. Bitorquatus* (*i. e.* his *Ps. torquatus*, var. *B.*,) "inhabits the Isle of Bourbon, and other parts of the same latitude both in Africa and Asia." The last named habitat is extremely doubtful.

P. columboides, Vigors, (Jerdon's *Ill. Ind. Zool.* pl. 18 ; and figured also in *Madr. Journ.* XI, 209.)

SYN. Psittacus melanorhynchus. Sykes, P. Z. S. 1832, p. 96. (The female.)

Muddun Gowr Totah, Hind. (Jerdon). Inhabits Nilgiris ; Malabar.

P. schisticeps, Hodgson, *As. Res.* XIX, 178.

SYN. Conorus himalayanus (?), Lesson, in Belanger's Voyage.
Madhuna suga, Nepal, Hodgson. The same name, slightly modified, which is applied to P. barbatus, and in S. India to P. colomboides.

Inhabits the Sub-Himalayan region, exclusively.

P. cyanocephalus (Edwards, pl. 233 ; Daubenton's *Pl. Enl.* 264).

SYN. Psittacus cyanocephalus, L.
Ps. flavitorquis Shaw.
Ps annulatus, Kuhl.
Palæornis flavicollaris, Franklin. } The female.
Psittaca bengalensis, Brisson.
Psittacus erythrocephalus, Gmelin.
Ps. gingianus, Latham.
Ps. rhodocephalus, Shaw.
Var. Ps. narcissus, Latham (with coloured figure)

Faridi, and *Fariadi* (Plaintive), Bengal. *Tuisuga* (the first or specific name imitative of cry), Nepal (Hodgson). *Tooeeah Totah*, S. India (Jerdon). *Totá bangáli*, Punjab. *Kyaita-ma*, Arracan. Inhabits the Hilly regions of all India Proper, Assam, Sylhet, Arracan Tenasserim. It occurs also in open jungle, in the Bengal Sundarbans. To the westward leaving the alluvial soil, it seems entirely to take the place of *P. torquatus*, which abounds throughout the Ganges delta.

P. Malaccensis (Daubenton's *Pl. Enl.* 887 ; Levaillant, pl. 72 ; *Nat. Libr. Psittacidæ*, pl. 3.)

SYN. Psittacus malaccensis, Gmelin, (nec Latham).
Ps. erubescens, Shaw.
Ps. ginginianus, var. C., Latham.
Ps. barbatulatus, Bechstein.
Barong Bayan, Sumatra (Raffles).

Inhabits Malacca ; Sumatra.

P. erythrogenys, Blyth.
Inhabits the Nicobar Islands.

P. caniceps, Blyth.
Inhabits the Nicobar islands ; Malayan Peninsula (latitude of Penang).

P. barbatus, (Swainson's *Ill. Orn.*, 2nd series, pl. 16 ; Daubenton's *Pl. Enl.* 517.

SYN. Psittacus barbatus, Ps. pondicerianus; et Ps. borneus, Gmelin.
Ps. bimaculatus, Sparrman.
Ps. javanicus, Osbeck.
Ps. Osbeckii, Latham.
Palæornis nigrirostris, Hodgson (the female).
Ps. modestus, Fraser, P. Z. S. 1845, p. 16 (young female).

Mádná (charming, pleasing), the red-billed bird: *Kajlá* (as having the black pigment, *kájal*, applied to the eyebrows; alluding to the black loral line),—the black-billed: Hind *Imrit Bhela* Nepal (Hodgson). *Bettet* Javanese. Inhabits the hilly parts of Bengal, Nepal, Assam, Sylhet, Arracan, Tenasserim, Malayan peninsula (to latitude of Penang), Sumatra, Java, and Borneo. It is extremely doubtful as an inhabitant of the Pondicherry coast, or any other part of peninsular India.

Subfam. PLATYCERCINÆ (Ground-Parrakeets).

Genus APROSMICTUS, Gould.

A. erythropterus, (Gould's *B. A.* Vol. V. pl. 18.)

SYN. Psittacus erythropterus, Gmelin.
Ps. melanotus, Shaw

Inhabits E. and S. Australia; Timor; N. Guinea.

Genus PLATYCERCUS, Vigors.

Pl. flaviventris, (Gould's *B.* A. Vol. V. pl. 24.)

SYN. Psittacus flaviventris, Temminck.
Ps. Brownii, Kuhl.
Ps. caledonicus? Latham.

Inhabits V. D. Land; Islands in Bass's Straits.

Sub-fam. LORIINÆ (Lories).

Section I. (With the tongue not filamented).

Genus ECLECTUS, Wagler.

E. polychloros, (Edwards, pl. 231; Daubenton's *Pl. Enl.* 514).

SYN. Psittacus polychloros, Scopoli.
Ps. magnus et Ps. sinensis, Gmelin.
Ps. viridis, Latham.
Ps. lateralis, Shaw.
Muscarinus prasinus, Lesson.

Hira-mohan ('prized favorite'), Hind. Inhabits the Moluccas.

E. grandis (Brown, *Ill. Zool.* pl. 6; Daubenton's *Pl. Enl.* 683).

SYN. Psittacus ceylonensis, Boddáert.
Ps. grandis et Ps. janthinus, Gmelin.
Ps. guebiensis, var., Latham.

Lal-mohan ('red favorite'), Hind. Inhabits the Moluccas.

Genus LORICULUS, Blyth.

L. pumilus (Edwards, pl. 293, f. 2).

SYN. Psittacus pumilis, Scopoli.
Ps. galgulus, Shaw.

Seren-dak, *Sindada*, Malayan: *Serindit*, Sum. Inhabits the Malayan peninsula, where very common: also Sumatra.

L. vernalis (Swainson's *Zool. Ill.*, 2nd series, pl. I; and figured as identical with the preceding species, apud Wagler, in *Nat. Libr.*, *Psittacidæ*, pl. 24).

SYN. Psittacus vernalis, Sparrman.

Latkan, ('pendent'), Hind. *Kyat-tha-da*, Arracan: *Silindid*, and *Silinditum*, Jav. Inhabits the Hilly parts of India, from the sub-Himalayan region to S. India, also Assam, Sylhet, Arracan, Tenasserim, Java: in the Malayan peninsula it appears to be completely replaced by *L. pumilus*; and in the Philippines and also in Ceylon, by the next species.

L. philippensis? (Edwards, pl. 6; Lear's *Psittacidæ*, pl. 41?)

SYN. Psittacus philippensis? Brisson.
Ps. asiaticus, Latham.
Ps. indicus, Gmelin.
Psittacula rubrifrons? Vigors, P. Z. S. 1831, p. 97

Inhabits Philippines (?): Ceylon.

Section II. (With filamented tongue.)

Genus LORIUS, Brisson.

L. philippensis, Brisson (Edwards, pl. 170; *Pl. Enl.* 168).

SYN. Psittacus lory, L.
L. tricolor, Stephens.

Inhabits the Moluccas; Philippines?

L. domicella (Edwards, pl. 171; *Pl. Enl.* 168; *Nat. Libr.*, *Psittacidæ*, pl. 18).

SYN. Psittacus domicella, L.
Ps. raja, Sha
Ps. rex, Bechstein.
Ps. radhea, Vieillot.

Inhabits the Moluccas.

L. garrulus (Edwards, pl. 172; *Pl. Enl.* 216; Swainson's *Zool. Ill.* 2nd series, 1; pl. 12).

SYN. Psittacus garrulus, et Ps. aurora, L.
Ps. moluccensis, Brisson.

Inhabits the Moluccas.

Subgenus EOS, Wagler.

E. rubra (Edwards, pl. 173).

SYN. Psittacus ruber, Gmelin.
Ps. borneus, Latham.
Ps. cæruleatus, Shaw.
Ps. cyanonotus, Vieillot.

Inhabits Borneo, Celebes, &c.

E. cyanostriata, G. R. Gray (*Ill. Genera of Birds*, pl. 103.

SYN. Lorius borneus, Lesson.
Blue-necked Lory, Latham.

Inhabits Borneo, Celebes, &c.

E. ornata (Edwards, pl. 174; *Pl. Enl.* 522.)

SYN. Psittacus ornatus, Gmelin.

Bangnu, and *Bandhnu*, Hind. (names referring to a mode of dyeing silk, whence *bandhana* handkerchiefs, &c.) Inhabits Eastern Archipelago (Malayan peninsula apud Raffles, but this very doubtful).

E. novae guineæ.

SYN. Psittacus novæ guineæ, Latham. } The young.
Ps. ater Scopoli. }
Ps. batavensis, Latham,—the adult.

Inhabits N. Guinea.

Genus TRICHOGLOSSUS ; Vigors and Horsfield.

Tr. hæmatodes (J. and S., *Ill. Orn.*, 1st series, pl. 111 ; *Pl. Enl.* 61).

SYN. Psittacus hæmatodes, L.
Psittaca amboinensis varia, Brisson.

Inhabits the Moluccas ; Amboyna. There have been seen several individuals devoid of the dusky marginings to the pectoral feathers, described as characteristic of this species.

Order II. RAPTORES. Tribe DIURNÆ. Fam. FALCONIDÆ. Sub-Fam. FALCONINÆ.

Genus FALCO, Lin.

F. gyrfalco, L. (*Pl. Enl.* 210 : Gould's *B. E.* pl.)

SYN. F. islandicus, Brunnich.
F. candicans, Gmelin.
F. grœnlandicus, Hancock.

Shanger, Hind. Inhabits northern regions.

F. juggur, Gray, (Hardw. *Ill. Ind. Zool.*)

SYN. F. luggur, Jerdon.

Juggur Falcon, and probably also *Justin Falcon*, Latham. *Jhaggar*, male ; *Laggar*, female ; *Hind : Luggadoo* (Jerdon), Telegu. Inhabits India generally. Common along the banks of the Ganges above the tideway ; rare and accidental in Lower Bengal within the reach of the tides.

F. peregrinus, L. (*Pl. Enl.* 421, 430, 469, 470).

SYN. F. barbarus, L.
F. communis, Brisson.
F. hornoticus and F. ater, Gmelin.
F. lunulatus, Daudin.
F. abietinus, Bechstein.
F. calidus, Latham.
F. anatum, Bonap.

Bauri, H. (female) : *Bauri Batcha* (male), H. : *Raja Wali*, Malay : *Sikap Lang*, Sum. : *Lagi Angin* of the Passummahs. Inhabits the Northern hemisphere chiefly : common in India, many adults remaining in Lower Bengal during the cold season, and especially frequenting the vicinity of jheels, to prey on the water-fowl which resort to them ; hence they are tolerably numerous in the Sunderbans.

F. peregrinator, Sundevall (Jerdon's *Ill. Ind. Zool.* pl. 12, 28.)

SYN. F. shahin, Jerdon.
F. sultaneus, Hodgson.
F. ruber indicus, Aldrovand.

Shahin ('royal') female ; *Koela* ('charcoal'), male : H. Inhabits India generally ; chiefly the hilly parts : much more rare in Lower Bengal than *F. peregrinus*.

F. chicquera, Shaw (Lev. *Ois d'Afr.*, t. 30 ; Gould's *Century*, pl. 2).

SYN. F. ruficollis, Swainson.
F. cirrhatus, var., and
Fasciated Falcon, Latham.
Probably F. biarmicus apud Vigne, P. Z. S. 1841 p. 6.

Tarmati, (*Turumtee*, Jerdon, *Toomtra*, Burnes), female ; *Chetwa* or *Chetoya*; male : H. Inhabits Asia and Africa ; very rare in the S. of Europe : common in India.

Sub-genus HYPOTRIORCHIS, Boie.

H. severus (*Pl. Col.* 128.)

SYN. Falco severus, Horsfield.
F. Aldrovandi. Reinwardt.
F. guttatus, G. R. Gray.
F. rufipedoides, Hodgson.

Jhuter quære (*Játá*, 'there goes ?'), H. : *Allap Allap Gingeng*, Jav. Inhabits Himalaya, Java, Philippines : visiting the plains of Lower Bengal in the cold season, where somewhat rare.

H. subbuteo.

SYN. Falco subbuteo, L.
F. barletta, Daudin.
F. pinetarius, Shaw ?

Karjanna, H.: Surkhpushtak ('rufous-vent'), of Kabul (Burnes). Inhabits Europe, Asia, and Africa : visits Lower Bengal in the cold season where far from common.

Subgenus TINNUNCULUS, Vieillot.

T. alaudarius.

SYN. Falco alaudarius, Brisson.
F. tinnunculus, Linnæus.
F. interstinctus, McClelland.
F. fasciatus, Retzius.
F. brunneus, Bechstein.

Khurmutia, Kurrowtia, Karontea, and *Narzi-Narzanak* ('tete a tete'), H. : *Nardunak*, Sinde ; (Burnes) ; *Gyo-thin*, Arracan ; *Allap Allap Sapi*, Jav. (Horsf.) Inhabits Europe and Asia : very common in Lower Bengal, where frequently seen in parties of 20 or 30 individuals, beating over the cultivated lands.

T. cenchris (Gould's B. E. pl.)

SYN. Falco cenchris, Naumann.
F. tinnunculoides and F. xanthonyx, Natterer.
F. tinnuncularius, Vieillot.
F. Naumannii, Fischer.

Inhabits the warmer parts of Europe and Asia ; and found near Calcutta ; also N. Africa.

T. vespertinus (Pl. Enl. 431 : Gould's *B. E.* pl.).

SYN. Falco vespertinus, L.
F. rufipes, Beseke.
F. subbuteo, var, Latham.

Inhabits Europe and Asia.

T. æsalon (Pl. Enl. 447, 468 : Gould's *B. E.* pl.).

SYN. Falco æsalon and F. lithofalco, Gmelin.
F. regulus, Pallas.
F. cæsius, Meyer.
F. intermixtus, Daudin.

Inhabits Europe and Northern Asia, N. W. Himalaya ?

T. punctatus (Pl. Col. 45.*)*

SYN. Falco punctatus, Cuvier.

Inhabits Madagascar ; Mauritius.

Genus HIERAX, Vigors.

H. melanoleucos, Blyth (J. A. S. XII, 179—*bis*). Inhabits Assam.

H. eutolmos, Hodgson.

SYN. H. bengalensis, apud Blyth, J. A. S. XII, 180
(bis) Bengal Falcon, var, A., Latham.

Doung-oo-nhouk, Arracan. Inhabits Nepal ; Sylhet ; Arracan.

H. fringillarius, (Dict. Class. d'Hist. Nat. pl. 21 : *Pl. Col.* 97*)*.

SYN. Falco fringillarius, Drapiez.
Hierax malayensis, Strickland.
Malayan F. cærulescens, auctorum,

Seeap Belang Penang : *Allap*, or *Allap Allap*, Java. Inhabits Western Malasia : replaced by other species in the more Eastern Islands.

Subfam. PERNINÆ.

Genus BAZA, Hodgson.

B. lophotes (Pl. Col. 10.*)*

SYN. Falco lophotes, Temminck.
B. syama, Hodgson.
Falco et Lepidogenys Lathami, Gray.
Lophotes indicus, Lesson.

Syama, ('black'), Nepal. Inhabits India generally ; rarer to the South ; not uncommon during the rainy season in Lower Bengal.

B. Jerdoni.

SYN. Lophastur Jerdoni, Blyth, J. A. S. XI, 464.

Probably *Falco Reinwardtii*, Muller. Inhabits Malayan peninsula.

Genus PERNIS, Cuvier.

P. cristata, Cuvier (Pl. Col. 44*)*.

SYN. Falco ptilorhynchus, Temminck.
P. Elliotti, Jameson.
P. maculosa, and probably P. torquatus, ruficollis, and atrogularis, Lesson.

Madhava, (from ***Madhu***, 'honey'), Nepal (Hodgson) : *Shahutela*, (from *Shahut*, 'honey'), H, (Jerdon). Inhabits India generally. Not rare in Lower Bengal.

Subfam. ELANINÆ.

Genus ELANUS, Savigny.

E. melanopterus (Lev., *Ois d'Afr.* t. 36.)

SYN. Falco melanopterus, Daudin.
F. sonninensis et vociferus, Latham.
F. clamosus, Shaw.
E. cæsius, Savigny.
Petite Buse Criarde, Sonnerat.
Kotta Falcon, and (the young) Indian Falcon, Latham.

Kapasi, ('cottony'), H. : *Angkal Angkal*, Java. Inhabits S. Asia ; Malayan Archipelago ; and all Africa, if not also the extreme S. of Europe occasionally ; common in Lower Bengal, and generally over India.

Subfam. CIRCAETINÆ.

Genus CIRCAETUS, Vieillot.

C. gallicus (Pl. Enl 413.*)*

SYN. Falco gallicus, Gmelin.
F. brachydactylus, Temminck.
F. leucopsis, Bechstein.
F. longipes, Wilson.
Aquila leucamphomma, Borkh.
A. pygargus, Brisson.

Sap-marilo, ('snake-killer'), Beng. : *Samp-mar* (ditto), H. : *Mulpatu*, Can. Inhabits Europe, Asia, and Africa. Common on the plains of India, preferring an open country. It preys chiefly on snakes.

Genus HÆMATORNIS, Vigors.

H. cheela (Gould's *Century*, pl. 1.)

SYN. Falco cheela, Latham.
H. undulatus, Vigors.
Circäetus nipalensis, Hodgson.
H. et Buteo bacha, apud Franklin and Sykes.
F. albidus, Cuv., and Buteo melanotis, Jerdon, the young.

Tilai-baj ('spotted Hawk'), Beng. : *Sabchur* ('full-crested'), young. *Goomcan-mooryala*, Mahr. : *Doung-tswon*, Arracan. Inhabits India generally : extremely common in Lower Bengal ; preferring a jungle country, with shallow jheels and tanks, where it preys much on frogs which it clutches in the mud.

H. bido.

SYN. Falco bido, Horsfield, Lev. Ois d'Afr. t. 15.
F. bacha (?), Daudin.
F. cheela, var. ?

Bido, Javan. Inhabits Malay countries, Africa ?

Subfam. CIRCINÆ.

Genus CIRCUS, Lacepede.

C. æruginosus (Gould's B. E. pl. 32).

SYN. Falco æruginosus, L.
F. rufus, Gmelin.
F. arundinaceus, Bechstein.
Accipiter circus, Pallas.
Circus palustris, Brisson.
C. variegatus, Sykes.
C. rufus var, indicus, and C. Sykesi, Lesson.
Konta Falcon, Muskooroo Falcon, and Rufous-eared Falcon, Latham.

Ch'oa or *Mat Chil* ('Meadow Kite'), Beng. (generic): *Kutar*, and *Kulehsir* (capped), Hind. *Sufid Sira* ('white-headed'), and *Tika Bauri* (Hawk with the *tika* frontal mark), (B. Ham). Inhabits Europe, Asia, and Africa.

C. cyaneus (Gould's *B. E*, 33).

SYN. Falco cyaneus, Linn.
F. bohemicus, albicans, griseus, et montanus, Gmelin, &c. &c.
F. uliginosus, (?), Gmelin.

Tupoos, or *Moosh-khor* (rat-eater), of Kabul (Burnes). Inhabits Europe and middle Asia: replaced on the plains of India by the next species.

C. Swainsonii, A. Smith (Gould's *B. E.* pl. 34.)

SYN. C. pallidus, Sykes.
C. dalmaticus, Ruppell.
C. albescens, Lesson.
Falco herbæcola, Tickell ?)
F. cyaneus, var. A. Latham.

Dast-mal ('hand-soiler'), Hind.: *Teea* (Burnes, from the voice), Derajat: '*Pandouvi* (B. Ham.); Inhabits India and Africa; very rare in Europe. Less Common in Lower Bengal than C. cinerascens.

C. cinerascens (Gould's *B. E.* pl. 35).

SYN. Falco cinerascens, Montagu.
C. Montagui, Vieillot.

Inhabits Europe, Asia, and Africa: all India; Ceylon.

C. melanoleucos.

SYN. Falco melanoleucos, Pennant.

Pahatai, H.: *Ablak Petaha* ('Pied Harrier'? ; *Petaha*, &c., probably from the voice), Nepal, (H.) *Thin-kya*, Arracan. Inhabits India generally inclusive of Ceylon.

Genus POLIORNIS, Kaup.

P. teesa. (Hardw. Ill. Ind. Zool.)

SYN. Circus teesa, Franklin.
Astur hyder, Sykes.
Zuggun Falcon, Latham.

Tisa, or *Teesa*, (from the voice), Hind. Inhabits plains of India, where very abundant: never met with on the mud-soil of Lower Bengal, though appearing immediately this is quitted in a westerly direction: Tenasserim provinces; Malacca ?

Subfam. ACCIPITRINÆ,

Genus ACCIPITER, Ray.

Acc. nisus (*Pl. Enl.* 467, 412).

SYN. Falco nisus, L.
F. nisosimilis, Tickell, J. A. S. II, 571.
A. fringillarius, Ray.
A. Dussumieri apud Jerdon, Madr. Journ. X. 84.
Bassun Falcon, Latham.

Basha, female;—*Bashin*, male—Hind. Inhabits Europe, Asia, and N. Africa; in India, numerous in the hilly parts, rare and accidental on the alluvium of Lower Bengal.

A. nisoides, Blyth, (J. A. S. XVI, 727.)

SYN. Falco soloensis (?), Horsfield.
F. cuculoides (?), Temminck, P. C. 110, 129.
Sumatran Acc. fringillarius of the Appendix to Lady Raffles's Memoirs of Sir T. S. Raffles, p. 549.

Sikap Ballam (?), Sum.: *Allap Allap Lallar* (?) Jav. Inhabits Malayan Peninsula.

A. virgatus (Jerdon's *Ill. Ind. Zool.* pl. 4, 29).

SYN. Falco virgatus, Temminck, P. C, 109.
Nisus minutus, Lesson (apud G. R. Gray).
A. besra, Jerdon; and the female.
A. fringillarius apud Jerdon Catal.
A. Dussumieri apud Sykes.

Basra (dimunitive of *Baz*, 'Goshawk'), and the male—*Dhasti* ('a handful', 'or held in the hand'), Hind. Inhabits India generally, but chiefly the hilly parts; also the Malay countries: rare and accidental in Lower Bengal.

Genus MICRONISUS, G. R. Gray.

M. badius, (*Pl. Col.* 308, 336).

SYN. Falco badius, Gmelin.
F. Brownii, Shaw.
F. Dussumieri, Temminck (nec apud Sykes's or Jerdon's Catalogues).
Accipiter dukhunensis, Sykes.
Calcutta Sparrow-hawk and Chippuck Falcon, Latham.

Shikra, from *shikar karna*, to pursue game), female, *Chippuck* (or *Chipka* Jerdon, from the voice), male H. *Thinkyet-ma*, Arracan. Inhabits India generally and Malay countries, being numerous throughout India, and in Ceylon; not uncommon in Afghanistan.

Genus ASTUR, Bechstein.

A palumbarius (*Pl. Enl.* 418, 461, 423).

SYN. Falco palumbarius et F. gentilis, L.
F. gallinarius, Gmelin.
F. albescens, Boddâert.
Accipiter astur, Pallas.

Baz or *Baz Khani*, female. *Jurra*, male, Hind. The *Kurungosh* is probably a variety. Inhabits Europe and Asia: in India, confined (or nearly so) to the sub-Himalayas.

A. trivirgatus (*Pl. Col.* 303).

SYN. Falco trivirgatus, Reinwardt.
Astur indicus, Hodgson.
A. palumbarius apud Jerdon, Madr. Journ. No. XXIV, 85.
S. cristatus, G. R. Gray.
Spizaetus rufitinctus, McClelland, P. Z. S. 1839.

Gar (fort or Mountain) *Bazra*, *Manik* (esteemed) *Bazra*, *Koteswar*, (fort-chieftain), H.: *Churiali*, frequenting peaks), Nepal. Inhabits India and Malay countries; being confined to the hilly parts.

Subfam. THRASAETINÆ.

Genus PSEUDASTUR, Blyth.

Ps. pæcilonotus (*Pl. Col.* 9).

SYN. Falco pæcilonotus, Cuvier.
F. skotopterus, Pr. Max.

Inhabits S. America.

Genus SPIZAETUS, Vieillot.

Sp. nipalensis.

SYN. Nisaetus nipalensis, crested variety, Hodgson, J. A. S. V. 229.
N. pulcher. Ibid., J. A. S. XII. 305.
Falco orientalis (?) et F. lanceolatus (?) Temminck and Schlegel.

Inhabits Himalaya, and mountain ranges N. of Sylhet.

Sp. limnaetus (*Pl. Col.* 127, 134).

SYN. Falco limnaetus, Horsfield.
F. caligatus, Raffles.
F. niveus, Temminck.
Limnaetus unicolor, Vigors.
Nisaetus nipalensis, crestless variety, Hodgson, J. A. S. V. 229.
N. pallidus, ibid, young.
Lake Falcon, Bauj Eagle, and probably Jerwied Eagle, Latham.
Lang Tanjbikar, Sum. Waru rawa, Sav.
Var. Falco cristatellus, Temminck.
F. Lathami, Tickell.
F. cirrhatus (?), Gmelin.

Shah Baj, and *Sadal*, Hind. Inhabits India and Malay countries; the crested variety found chiefly in the peninsula of India.

Sp. alboniger.

SYN. Nisaetus alboniger, Blyth, J. A. S. XIV. 173.

Inhabits Malayan peninsula (Penang, Malacca).

Sp. Kierneri.

SYN. Astur Kierneri, de Sparre.
Spizaetus albogularis, Tickell, J. A. S. XI. 456

Inhabits Himalaya; Central India.

Subfam. AQUILINÆ.

Genus EUTOLMAETUS, Blyth.

Eu. Bonellii (Jerdon's *Ill. Ind. Orn.* pl. I.)

SYN. Falco Bonellii, Temminck.
Aquila intermedia, Bonelli.
Aq. fasciata, Vieillot.
Nisaetus grandis, Hodgson, J. A. S., V. 230.
N. niveus ? apud Jerdon, Catal.
Genoese Eagle, Latham.

Moranga, or *Morangi*, Hind. Inhabits S. of Europe and Asia, and N. Africa. Nepal.

Genus AQUILA, Meyer.

Aq. chrysaetos.

SYN. Falco chrysaetos, F. fulvus, at F. melanaetus L.
F. niger, Gmelin.
F. melanotus, Latham.
Aquila nobilis, Pallas.
Aq. regia, Lesson.

Inhabits mountainous regions of Europe, Asia, and N. America, within the temperate zone, Himalaya and Nepal.

Aq. imperialis.

SYN. Falco imperialis, Bechstein.
F. mogilnik, Gmelin.
F. ferox, and Brown-backed Eagle, Latham.
Aquila heliaca, Savigny.
Aq. bifasciata, Gray.
Aq. nipalensis, Hodgson, As. Res. XVIII. pt. II, 13, pl. I.
Aq. chrysaetos apud Meyer et Jerdon, Catal.

Jumiz, or *Jumbiz*, Hind.: *Frus*, Bengal: *Wonlo*, Arracan. Inhabits S. E. of Europe, Asia, N. Africa, Mymunseng, Arracan, and Nipal.

A. nævioides.

SYN. Falco nævioides, Cuvier.
F. rapax. Temminck.
F. senegallus, Cuvier.
F. albicans, Ruppell.
F choka, A. Smith.
A. fulvescens, fusca, et punctata, Gray.
A. vindhiana, Franklin.

Wokhab, also *Jimach* (vide J. A. S. XV. 8), Hind. Inhabits the Plains of India and Africa generally: but not found on the alluvium of Lower Bengal.

A. nœvia.

SYN. Falco nævius et F. undulatus, Gmelin.
A. malanaetus, Savigny.
A. clanga, Pallas.
A. bifasciata, Hornsch.

Spotted Eagle, and *Brown-backed Eagle* var. A. Latham. *Kaljanga*, *Bakayari*. *Jiyadha* (B. Ham.) Inhabits S. E. of Europe, Asia, and N. Africa. Common in the Bengal Sunderbans, and found likewise in Central and S. India.

Aq. hastata.

SYN. Morphnus hastatus, Lesson.
Spizaetus punctatus, Jerdon.
Limnaetus unicolor apud Blyth, J. A. S. XII. 128.

Jiyadha, and *Gutimar* ('Cocoon-destroyer'), H. Inhabits, Common in the Bengal Sunderbans, and found likewise in Upper Bengal, and in Central and S. India.

Genus ICTINAETUS, Jerdon (nec Kaup).

I. malaiensis.

SYN. Falco malaiensis, Reinwardt.
Aquila et Heteropus et Neopus perniger, Hodgson.
Nisaetus ? ? ovivorus, Jerdon.
Black Eagle, Jerdon, Catal, and Sup.

Inhabits S. E. Himalaya; Nilgiris; Malay countries.

Genus HIERAETUS, Kaup,

H. pennatus.

SYN. Falco pennatus, Gmelin.
F. lagopus, Bengal variety, Latham.
Aquila minuta, Brehm.
Spizaetus milvoides, Jerdon.
Butaquila strophiata, Hodgson.

Inhabits S. E. of Europe, and Asia: India generally.

Subfam. BUTEONINÆ.

Genus ARCHIBUTEO, Brehm.

A. *hemiptilopus*, Blyth. (J. A. S., XV. 1).

SYN. A. cryptogenys, Hodgson, Calc. Journ. Nat. Hist. VIII. 96.

Inhabits Tibet; Sikim? Darjiling.

Genus BUTEO, Cuvier.

B. rufinus.

SYN. Falco rufinus, Ruppell.
B. canescens, Hodgson.
B. longipes, Jerdon.
Circus pectoralis (?), Vieillot.
Nasal Falcon, Latham.

Chuha mar ('Rat-killer'), Hind. Inhabits India generally; plains and lower hills. In Lower Bengal, found only above the tideway of the river: also N. Africa.

B. vulgaris, Bechstein (Jerdon's *Ill. Ind. Orn.* pl. 27.).

SYN. Falco buteo, Lin.
F. glaucopis, Merrem.
F. variegatus, Versicolor, cinereus, et obsoletus, Gmelin.
B. mutans et fasciatus, Vieillot.
B. albus, Daudin.
B. communis, Cuvier.
B. Swainsoni, Pr. Bonap.
B. montanus, Nuttall.
B. rufiventer, Jerdon.

Inhabits northern hemisphere; rare and to the northward only in America. The loftier hills, only, in India.

B. pygmæus, Blyth (J. A. S. XIV. 177).

Inhabits Tenasserim provinces.

Subfam. HALIAETINÆ.

Genus PANDION, Savigny.

P. haliaetus.

SYN. Falco haliaetus, L.
P. fluviatilis, Savigny.
P. indicus, Hodgson.
Bengal Osprey, Latham.

Match-morol, and *Bulla*, B.: *Mucherera*, H. (Jerdon); also *Match-manga*, H.: *Wonlet*, Arracan. It is of general distribution; the Australian race (*P. leucocephalus*, Gould,) alone slightly differing. Common throughout India, in all suitable localities.

Genus PONTOAETUS, Kaup.

P. icthyaetus.

SYN. Falco icthyaetus, Horsfield.
Icthyaetus bicolor, G. R. Gray.
I. plumbeus, Hodgson, J. A. S. VI., 367.

Match-morol ('Fish-tyrant'), Beng.: *Madhuya*. H. (B. Ham): *Jokomaru*, Java. Inhabits India and Malay countries: common in Lower Bengal.

P. nanus.

SYN. Icthyaetus nanus, Blyth, J. A. S. XI, 202, and XII, 304.

Inhabits Malayan peninsula.

Genus BLAGRUS, Blyth.

Bl. leucogaster.

SYN. Falco leucogaster, Gmelin.
F. blagrus (?), Daudin.
F. dimidiatus, Raffles.
F. albicilla, var.; Latham.
Icthyaetus cultrunguis, Blyth, J. A. S. XI. 110, the semi-adult.
Haliaetus sphenurus, Gould, young.

Sumpamar Eagle, the semi-adult; and *Maritime Eagle*, the adult, Latham. *T'hampa-mar* ('snake-killer'), Orissa; *Kohasa*, H.: *Lang-laut*, Sum. Inhabits India; Africa (?); the Malay countries; Australia, and the vicinity of Calcutta.

Genus HALIAETUS, Savigny.

H. Macei.

SYN. Falco Macei, Temminck.
H. albicilla apud Vigors and Horsfield.
H. ossifragus (?) apud Raffles.
H. fulvigaster, Vieillot.
H. albipes, Hodgson.
H. lineatus, (the young), and H. unicolor, (the semi-adult), Gray (Hardw, Ill, Ind. Zool.)

Mutcharang, *Mutch-manggar*, *Korol*, or *Match-korol* ('Fish-Eagle'), and *Bala*, *B.*: *Kokna*, or *Oogoos* (Tickell): *Lang-laut*, Sum. Inhabits Northern India generally: abundant in Lower Bengal, and the vicinity of Calcutta.

Genus HALIASTUR, Selby.

H. Indus.

SYN. Falco indus, Boddaert.
F. pondicerianus, Gmelin.
Milvus rotundicaudatus, Hodgson (young.)

Sankar Chil ('Shiva's kite'), *Dhobia Chil*, ('Washerman's kite'), and *Ru-mabarik*, ('Lucky-faced,' *i. e.* propitious), Hind. *Khemankari*, Sanskrit. *Rutta Ookab*, Sind. (Burnes), also *Pilyo*: *Tswon-goung phyoo*, Arracan: *Lang-bondol*, Sumatra: *Ulang*, Java. Inhabits India and Malay countries: extremely common.

Genus MILVUS, Cuvier.

M. ater.

SYN. Falco ater et F. austriacus, Gmelin.
M. govinda, Sykes.
M. ætoleus, Lesson.
M. affinis, (?), Gould.

Chil (from the voice), or *Pariah Chil*, *H.* *Tswon bop*, Arracan. Inhabits India; Malayan peninsula (Penang); Australia? Rare in the eastern parts of Europe. An abundant summer visitant in Afghanistan.

Fam. VULTURIDÆ.

Subfam. VULTURINÆ.

Genus VULTUR, L.

Gidh, (Hind). *Shakuni*, Beng. *Gid Gerni*, Tickell.

V. monachus, L.

SYN. V. cinereus, Gmelin.
V. arrianus, Temminck.
V. imperialis, Tem. (p. c. 426), apud Jerdon (in epistolâ.)
Ægypius niger et vulgaris, Savigny.

Inhabits mountainous parts of Europe and Asia. Nepal, Assam.

Genus OTOGYPS, G. R. Gray.

O. calvus.

SYN. Vultur calvus, Scopoli.
V. pondicerianus, Daudin.

Mulla-Gidh ('Priest Vulture'), H.: *Lal-mata Shukuni* ('Red-headed Vulture'), Beng. Inhabits India generally: common.

Subfam. GYPINÆ.

Genus GYPS, Savigny.

G. fulvus.

SYN. Vultur fulvus, Gmelin.
V. Kolbii. Daudin (apud Dr. A. Smith and G. R. Gray.)
V. percnopterus, Pallas (nec Linnæus).
V. leucocephalus, Meyer.
V. indicus apud Jerdon. Catal.
Gyps vulgaris, Savigny.

Maha-dho of the Mahrattas. Inhabits mountainous regions of the Old World; Nepal.

G. indicus (Gray's *Ill. Gen. Birds*, pl.).

SYN. Vultur indicus, Scopoli and Latham.
V. bengalensis apud Temminck (Jerdon in epistolâ).
V. tenuiceps et tenuirostris, Hodgson.

Inhabits India and Malay countries: common.

G. bengalensis (Hardwick's *Ill. Ind. Zool.*)

SYN. Vultur bengalensis, Gmelin, the young.
V. indicus apud Temminck (young, apud Jerdon in epistolâ).
V. chaguoun, Daudin. } Adult.
V. leuconotus, Gray. }

Lengta. Arracan. Inhabits India generally; very abundant. A summer visitant in Afghanistan.

Subfam. SARCORHAMPHINÆ.

Genus SARCORHAMPHUS, Dumeril.

S. papa, Pl. Enl. 428.)

SYN. Vultur papa, L.

Inhabits S. America.

Genus NEOPHRON, Savigny.

N. percnopterus, Pl. Enl. 407, 429).

SYN. Vultur percnopterus, Lin. (nec Pallas).
V. leucocephalus et V. fuscus, Gmelin.
V. ginginianus et V. albus, Daudin.
V. meleagris, Pallas.
V. fulvus, Boddaert.
V. stercorarius, La Peyrouse.
Perenopterus ægyptiacus, Stephens.

Soongra, or *Soonda*, Scinde (Burnes). Inhabits warmer regions of Europe, Asia, and Africa: abundant on the plains of India; rare and accidental below the tideway of the rivers in Lower Bengal. A summer visitant in Afghanistan.

Subfam. GYPAETINÆ.

Genus GYPAETOS, Storr.

G. barbatus, (Edwards, pl. 106).

SYN. Vultur barbatus et V. barbarus, Linn.
V. niger, Gmelin.
V. aureus, Brisson.
Falco magnus, S. Gmelin.
Phene ossifraga, Savigny.
Gypaëtos grandis. Storr.
G. alpinus, Daudin.
G. leucocephalus et G. melanocephalus, Meyer.
G. meridionalis. Brehm.
G. barbatus, var. occidentalis et var. orientalis, Fr. Bonap.
G. hemachalanus, Hutton (with dark pectoral mark), J. A. S. III. 522.
Bearded Eagle, Latham.

'Golden Eagle' of English residents in the Himalaya. *Urgool*, Masuri (Hutton). *Cajcer*, or *Foomaee*, Kabul (Burnes). Inhabits mountainous regions of Europe, Asia, and Africa.

Tribe II.—NOCTURNÆ.

Fam. STRIGIDÆ.

Subfam. BUBONINÆ.

Genus NYCTEA, Stephens.

N. nivea. (Gould's *B. E.* pl. 43).

SYN. Strix nivea, Daudin.
Str. nyctea, Linn.
" candida, Latham.
N. erminea, Stephens.

Inhabits Arctic circle, migrating within the northern temperate zone.

Genus BUBO, Sibbald.

B. orientalis, (*Pl. Col.* 174, 229).

SYN. Strix orientalis, Horsfield.
S. sumatrana, Raffles.
S. strepitans, Temminck.
B. et Huhua nipalensis, Hodgson.
H. pectoralis, Jerdon.

Inhabits Himalaya, S. India, and Malay countries.

B. maximus, Sibbald (Gould's *B. E.* pl. 37).

SYN. Strix bubo, L.
B. atheniensis, Daudin.
B. europæus, Lesson.

Inhabits Europe and N. Asia: Himalaya?

B. bengalensis (Gould's 'Century,' pl. 3).

SYN. Otus bengalensis, Franklin.
Bubo cavearius et Urrua cavearea, Hodgson.

Ghoogoo, H. (Jerdon). Inhabits India generally: Afghanistan: but not met with below the tideway of the rivers in Lower Bengal.

B. umbratus.

SYN. Urrua umbrata, Blyth J. A. S. XIV. 180.
Strix coromander, coromandra, et coromandelica, auctorum?
Str. coromanda, var., Latham.

Inhabits India generally.

Genus ASIO, Brisson.

A. otus (Pl. Enl. 29).

SYN. Strix otus, L.
Str. soloniensis, Gm.
Otus europæus, Stephens.
O. communis, Lesson.
O. vulgaris, Fleming.

Inhabits Europe and N. Asia, Himalaya.

A. brachyotus (Gould's *B. E.* pl. 40).

SYN. Strix brachyotus, Gmelin.
Str. ulula, S. ægolius, et S. accipitrina, Pallas.
S. arctica, Sparrman.
S. tripennis, Schrank.
S. palustris, Smies.
S. brachyura, Nilson.
Brachyurus palustris, Gould.

Chota Ghooghoo, H. (Jerdon). Inhabits Europe, Asia, Africa, N. and S. America, Calcutta.

Genus SCOPS, Savigny.

Sc. aldrovandi, Ray (Gould's *B. E.* pl 48; Jerdon's *Ill. Ind. Orn.*, pl. 41, chesnut variety).

SYN. Strix scops, Linnæus.
Str. zorca et S. giu, Scopoli.
S. carniolica, Gmelin.
Sc. europæus, Lesson.
Sc. senegalensis, Swai
Sc, capensis, Smith.
Sc. sunia (chesnut va[illegible] and S. pennata (grey variety), Hodgso[illegible]
Sc. Malayanus, A. Hay.
Ephialtes spilocephalus, [illegible] J. A. S. XV. 8
(?) Large specimen in [illegible]ture plumage ?
Otus Scops japonicus, Tem. [illegible] G. R. Gray.
Strix bahkamæna (?), Pennant.

Chitta Gool, Telinga (Jerdon): *Chugad Kusial*, or *Sunya Kusial*, Nepal (H.) Inhabits Europe, Asia, and Africa. Himalaya; Pen.: of India, Calcutta.

A. *lempiji, (Pl. Col. 99).*

(Var. A. Malayan race, in general deeply tinged with fulvous.)

SYN. Strix lempiji, Horsfield.
Str. noctula, Reinwardt.
Scops javanicus, Lesson.

Lempiji, Java. (Var. B. Larger race, but seldom tinged with fulvous: inhabiting the Himalaya, Assam, Sylhet, and Arracan.) *Sc. lettia*, Hodgson. *Tharkavi Chugad*, or *Lattya Kudyal*, Nepal (H.) (Var. C. Ordinary Indian race resembling the last, but generally smaller and greyer in colour,—being, when slightly tinged fulvescent, the *Sc. lempiji* apud Jerdon of Malabar and Ceylon. *Sc. lettioides* et *griseus*, Jerdon Inhabits (in different varieties.) India, China (?), and the Malay countries. Malacca (the undoubted *lempiji*). Var. B. F. N. W. Himalaya. Nepal. Arracan (Ramree.) Coromandel Coast (sent as *lettioides*, Jerdon): and two from Malabar (sent as *lempiji*.) T. C. Jerdon, Esq. (1844-6). Specimen (resembling last), from Ceylon. E. L. Layard, Esq. (1849.)

Genus KETUPA, Lesson.

K. flavipes.

SYN. Cultrunguis flavipes. Hodgson, J. A. S. XV. 364.

Inhabits Himalaya only (so far as hitherto observed).

K. ceylonensis.

SYN. Strix ceylonensis, Gmelin.
Str. Leschenaultii, Temminck.
S. Hardwickii, Gray.
S. dumeticola, Tickell.
Cultrunguis nigripes, Hodgson.

Ulu (generic), H.: also *Amrai ka Ghooghoo*, H. (Jerdon): *U'tum*, Beng.: *Tee-dook*, Arracan. Inhabits India generally; Arracan; Tenasserim. Very common in Lower Bengal, near Calcutta.

K. javanensis, Lesson.

SYN. Strix ketupu, Horsfield.
Str. ceylonensis apud Temminck.

Tamba, or *Ketombo Ratonapye; Hanta; Burong Pelow;* Malayan: *Blo-Ketupu*, Java. Inhabits Malayan peninsula and Archipelago; rare in Arracan. Specimen from Java.

Subfam. ATHENINÆ.

Genus NINOX, Hodgson.

N. scutulatus (Pl. Col. 289.)

SYN. Strix scutulata, Raffles.
Str. hirsuta, Temminck.
S. lugubris, Tickell.
Ninox nipalensis, Hodgson.
Athene malayensis, Eyton.

Kal Pancha, Beng.; *Choghud Besrah*, H. Jerdon): *Kheng-boop*, Arracan: *Raja Wali*, Malayan. Inhabits India generally; Tenasserim provinces; Malayan peninsula; Sumatra: not rare in Lower Bengal. Madagascar (Dr. A. Smith, *Afr. Zool.* p. 163).

Genus ATHENE, Boie.

Ath. cuculoides (Gould's 'Century,' pl. 4).

SYN. Noctua cuculoides, Vigors.
N. auribarbis, Hodgson.

D'zee-geet, Arracan. Inhabits Himalaya; Assam; Arracan; Tenasserim; China.

Ath. radiata.

SYN. Strix radiata, Tickell, J. A. S. II. 573 (1833).
Athene erythropterus, Gould. P. Z. S. 1837, p. 136.
Noctua perlineata, Hodgson.
N. cuculoides apud Jerdon, Catal.

Jungli Choghud, H. (Jerdon): *Chota Kalpancha*, Beng.: *Chugad*, Nepal (H.) Inhabits most parts of India; sub-Himalayan region: never on the alluvium of Lower Bengal, but appears immediately—this is quitted in a westerly direction.

Ath. malabarica, Blyth (J. A. S. XV. 280).

SYN. A. castanoptera apud Jerdon, supp.

Inhabits Malabar.

Ath. castanotus, Blyth.

SYN. Ath. castanoptera apud Blyth, J. A. S. XV. 280.

Inhabits Ceylon, (where common.

Ath. brama (Pl. Col. 68*).*

SYN. Strix brama, Temminck.
Str. persica ? Nouv. Dict. d' Hist. Nat.
Noctua indica, Franklin.
N. tarayensis, Hodgson.

Katoria Pencha, Beng.: *Chugad*, or *Choghud*. H.: *Panglah*, Mahratta. Inhabits India generally to foot of Himalaya ; extremely common in Lower Bengal : Persia, at about Erzeroum.

Ath. noctua (Gould's *B. E.* pl. 48).

SYN. Strix noctua, Retzius.
Str. passerina apud Latham and Temminck.
S. nudipes, Nilsson.
Noctua veterum, Lichtenstein.
Athene gymnopus, (?), Hodgson.
Ath. bactrianus, Blyth, J. A. S. XVI. 776.

Inhabits Europe ; N. and W. Asia ; Afghanistan ; Himalaya (?) ; N. Africa.

Ath. passerina (Gould's *B. E.* pl. 50).

SYN. Strix passerina, Linnæus.
Str. pygmæa, Bechstein.
Str. acadica, Temminck.

Inhabits N. Europe and Asia.

Ath. Brodiei.

Syn. Noctua Brodiei, Burton, P. Z. S. 1835, p. 152.
N. tubiger and Athene baudia, Hodgson.

Inhabits Himalaya.

Subfam. SYRNIINÆ.

Genus SYRNIUM, Savigny.

S. Indrani, Gray's *Ill. Gen. Birds*, pl. 14).

SYN. Strix indrani, Sykes (vide J. A. S. XVI. 463).
Ulula ? et Bulaca newarensis, Hodgson.
B. monticola, Jerdon.

Newar, Nepal (H). Inhabits India generally, mountainous parts ; Ceylon : Malayan peninsula.

S. sinense (Hardw. *Ill. Ind. Zool.)*

SYN. Strix sinensis, (?), Latham.
Str. orientalis, Shaw.

Inhabits most parts of India, to foot of Himalaya : not Lower Bengal (at least below the tideway of the rivers). China ?

S. nivicolum, Hodgson (J. A. S. XIV. 185 ; XV. 9 ; XVI. 464). Remark. This is probably a Himalayan variety of S. aluco. Gould, distinguished by its generally larger size, darker colour, and the usually greater development of the transverse markings of the plumage. Inhabits Himalaya.

Subfam. STRIGINÆ.

Genus PHODILUS, Is. Geoffroy.

Ph. badius (Horsfield's *Zool. Res. in Java.* pl.).

SYN. Strix badia. Horsfield.

Wowo-wiwi, or *Kalong wiwi*, Jav. Inhabits Nepal ; Sikim ; Assam ; Arracan ; Malayan peninsula and archipelago.

Genus STRIX, L. (as restricted).

Str. flammea, L.

SYN. S. javanica apud Sykes and Jerdon.

Lakkhi or *Jakkhi Pencha*, *B.* : *Kareya*, or *Kurail*, H., vulgo *Booree Chooree*, Jerdon. *Oilei*, Bhagulpore. Inhabits Europe and Asia ; Africa ? N. America ? vicinity of Calcutta.

Genus GLAUX, Blyth.

Gl. javanica (?), Jerdon's *Ill. Ind. Orn.* pl. 30).

SYN. Strix javanica de Wormb, apud Latham (vide J. A. S. XIV. 186).
Str. candida, Tickell, J. A. S. II. 572.
S. Longimembris, Jerdon.

Inhabits plains of India : very rare on the mud-soil of Lower Bengal, within the reach of the tide. A specimen from S. India was presented by T. C. Jerdon, Esq. (1842).

Order I. INSESSORES. Sub-Order. PICÆ. L. modified). Tribe. SYNDACTYLI, Cu. modified).

Fam. BUCEROTIDÆ.

Sub. fam. BUCEROTINÆ.

Genus BUCEROS, L. *(Dhan'es* Beng., generic).

B. Cavatus, Shaw. *(As. Res.* XVIII, pt. II. pl. Gould's *Century*, pl.).

SYN. B. bicornis (?). Linn.
B. homrai, Hodgson.

Ban Rao Jungle King), Masuri : *Homrai*, Nepal : *Young-yeng*, Arracan : *Juggang Papan*, Sumatra : *Concan*, Malay. Inhabits extensive hill forests of all India ; Assam ; Arracan ; Tenasserim ; Malayan peninsula ; Sumatra ; Philippines ?

B. rhinoceros L. (Pl. Enl. 934*).*

SYN. B. niger. Shaw nec (Vieillot). } Young.
B. sylvestris, Vieillot. } Young.
B. diadematus, Drapiez. } Young.

Juggang Danto, Malay : *Rangkok*, or *Jongrang*, Java. Inhabits Malayan peninsula and Archipelago.

B. hydrocorax, L. *(Dict. Class.' Hist. Nat., Atlas*, pl. 23, fig. 2.)

SYN. B. bicornis, var., Shaw.
B. cristatus, Vieillot.
B. platyrhynchos, Pearson, J. A. S. X. 652.

Inhabits Moluccas.

B. pica, Scopoli, (*Pl. Enl.* 813).

SYN. B. malabaricus, var. B. Latham.
B. monoceros, and probably B. violaceus, Shaw.

Bœgma Dunnase, White, *As. Res.* IV. 119, Inhabits Indian peninsula; Ceylon? Goomsoor, Kuttack.

B. affinis, Hutton, J. A. S. XVIII.

Inhabits Deyra Doon.

B. albirostris, Shaw, Vieillot, (Lev. *Ois. Rar.*, pl. 14).

SYN. B. malabaricus, Latham.
B. lencogaster, Blyth. J. A. S. X. 922 (the young).

Auk-khyeng, Arrakan. Inhabits Midnapore district; Rajmahal; Monghyr; Nepal; Assam; Sylhet; Arakan; Tenasserim provinces: never in Malabar, or S. India: replaced by *B. affinis* in the Deyra Doon, which merely differs in being constantly of the larger size of *B. pica.*

B. intermedius, Blyth, (J. A. S. XVI. 994.)

SYN. B. violacens of Wagler, apud Lord A. Hay Madr. Journ. XIII. 148.
probably B. malabaricus of Sumatra, apud Raffles.

Inhabits Malayan peninsula (in latitude of Penang); Sumatra?

B. malayanus, Raffles, (*Pl. Col.*)

SYN. B. anthracinus, Temminck.
B. bicolor, Eyton.
B. Elliotti, A. Hay (vide J. A. S. XVI. 995).
B. albirostris of Java (?), apud Horsfield.
Kiki (?), Malay: Angka Angka (?), Sum; Klinglingan (?), Java.

Inhabits Malayan peninsula; Sumatra; Java? Moluccas?

B. nigrirostris, Blyth (J. A. S. XVI. 995).

SYN. B. malayanus apud Lord A. Hay, Madr. Journ. XIII. 151.

Inhabits Malayan peninsula.

B birostris, Scopoli, (Lev. *Ois. Rar.*, pl. 15.)

SYN. B. gingimianus, Shaw.

Putteal Dunnase, White, *As. Res.* IV. 121. Inhabits India generally (nec Assam): never on the eastern side of the Bay of Bengal.

B. gingalensis, Shaw (Lev. *Ois. Rar.*, pl. 23).

SYN. B. bengalensis, Gray.

Inhabits Malabar; Ceylon: never in Bengal.

B. galeritus, Temminck (*Pl. Col.*).

SYN. B. carinatus, Blyth, J. A. S. XV. 187.

Mati Sakawan, Malay. Inhabits Malayan peninsula.

B. comatus, Raffles.

SYN. B. lugubris, Begbie, vide Ann. M. N. H. 1846, p. 405.

Inhabits Malayan peninsula; Sumatra.

B. exarrhatus, Reinwardt (*Pl. Col.* 211).

Inhabits Moluccas and Java.

B. panayensis, Scopoli, (*Pl. Enl.* 780, 781).

Inhabits Moluccas; Philippines.

B. nipalensis, Hodgson (*As. Res.* XVIII. pt. 1, 2 figs. of female.)

Inhabits S. E. Himalaya; hill ranges of Assam, and Munipur.

B. pasuran, Raffles.

SYN. B. ruficollis apud Blyth, J. A. S. XII. 176.

Inhabits Cherra Punji; Arracan; Tenasserim provinces; Malayan peninsula; Sumatra.

B. plicatus, Latham, Shaw (nec Drapiez).

SYN. B. obscurus, Gmelin.
B. subruficollis, Blyth, J. A. S. XII. 177.

Inhabits Arracan; Tenasserim provinces.

B. galeatus, L. (*Pl. Enl.* 933).

Toko, and *Burong Gading*, Sum.: *Tibbang Mantooa*, Malay. Inhabits Malayan peninsula and archipelago.

Sub-fam. IRRISORINÆ.

Genus IRRISOR, Lesson.

I. erythrorhynchos.

SYN. Upupa erythrorhynchos, Latham.

Inhabits S. Africa.

Fam. UPUPIDÆ.

Genus UPUPA, L.

U. epops, L. (*Pl. Enl.* 52).

Hud-hud, Hind. Toung-bee-tsot, Arrakan.

Inhabits Europe; Asia; N. Africa. Common in Bengal; also Nepal: generally replaced in S. India, and Ceylon, as likewise in the Deyra Doon, by the next; though occurring in the Nilgiris.

U. senegalensis (?), Swainson (vide J. A. S. XIV. 189).

SYN. U. minor apud Jerdon.

Inhabits S. India; Ceylon; Deyra Doon; W. Africa?

Fam. HALCYONIDÆ.

Genus DACELO, Leach.

D. monacha, ——— ?

SYN. D. concreta, juv., Temminck.

Inhabits Celebes? Moluccas

D. pulchella, Horsfield (*Pl. Col.* 277; *Zo Res. in Java*, pl.)

Tengki-watu. Jav. Inhabits Mergui; M layan peninsula and archipelago.

Genus HALCYON, Swainson.

Match-ranga (generic), or *Matchi-mar* (Masuri), H.: *Pin-ngyeng* (generic), Arracan, with the prefix of *Tsheng* for the larger species and *Glai* for the smaller: *Kaka*, Malayan.

H. leucocephalus, L.

Syn. Alcedo capensis, L. (*Pl. Col.* 599).

Bang Kaka, Sumatra: *Tengke Buto*, Java. Malacca.

H. gurial, Pearson (J. A. S. X. 633).

Syn. H. brunniceps, Jerdon, Madr. Journ. XIII. 143.
H. leucocephalus apud Horsfield, P. Z. S. 1839, p. 156.

Gurial, Beng.: *Malai Poymah*, Malabar (i. e. "Jungle King-fisher"), Jerdon. Inhabits India generally.

H. amauropterus, Pearson (J. A. S. X. 635).

Inhabits S. Bengal; Arracan; Tenasserim.

H. smyrnensis (*Pl. Col.* 232, 894).

Syn. Alcedo smyrnensis, L.
Ispida bengalensis minor, Brisson.

Sada-buk; *Match-ranga*, Beng.: *Kilkila*, H. Jerdon: *Pilly kudua* (*loco*, or 'large'), Cingh. Inhabits India generally; Assam; Arracan; Tenasserim; Malayan peninsula; Ceylon; Syria.

H. gularis, (*Pl. Col.* 135).

Syn. Alcedo gularis, Kuhl.
A. melanopterus, Temminck.
H. ruficollis, Swainson.
H. smyrnensis, var. albogularis, Blyth, J. A. S. XII. 998.

Tengke-arang, Java. Inhabits Java; Philippines: Madagascar (?) Vide *Ann. M. N. H.*, *n. s.*, 1848.

H. coromander.

Syn. Alcedo coromander, Latham.
H. coromandelicus, Vigors.

Tengke-sumbo, Java. Inhabits Nepal; Sikim; Bengal Sundarbans; Tenasserim; Coromandel?

H. atricapillus (*Pl. Col.* 613).

Syn. Alcedo atricapilla, Latham.
A. albiventris, Scopoli (inapplicable).

Udang, Malay. Inhabits eastern side of the Bay of Bengal; rare on the western: Bengal Sundarbans; Malayan peninsula and Archipelago; China.

Genus TODIRHAMPHUS, Lesson.

T. varius.

Syn. Halcyon varia, Eyton, P. Z. S. 1839, p. 101.
Probably H. chlorocephalus (as distinguished from H. sacer), in Zool. Appendix to Lady Raffles's Memoirs of Sir St. Raffles, p. 655.

Tengke-cheger (?), Java. Inhabits Malayan peninsula; Sumatra; Java?

T. collaris.

Syn. Alcedo collaris, Scopoli.
A. chlorocephala, Gmelin.
Malayan A. sacer (v. sanctus), Auct.
Var. T. occipitalis, Blyth, J. A. S. XV. 23, 51.

Tengke, Java. Inhabits Bay of Bengal, much more common on the eastern side; Tenasserim; Bengal Sundarbans; Sumatra; Java. Nicobar variety with broad white or rufous supercilium (*T. occipitalis*, Blyth). Ordinary variety, from the Nicobars, particularly bright.

Genus CERYLE, Boie.

C. guttata (Gould's 'Century,' pl. 5).

Syn. Alcedo guttatus, Vigors.
A. lugubris, Temminck.

Inhabits Himalaya.

C. rudis (Edwards, pl. 9).

Syn. Alcedo rudis, L.
Ispida bitorquata, Swainson.

Phatka Match-ranga, B. Inhabits Asia and Africa; rare in the S. E. of Europe. Specimens from S. Africa, from Lower Bengal. Ordinary Asiatic variety (*C. varia*, Strickland) from the neighbourhood of Calcutta. Specimen from Greece.

Genus ALCEDO, Linn.

A. grandis, Blyth (J. A. S. XIV. 190).

Inhabits Sikkim; Assam?

A. nigricans, Blyth (J. A. S. XVI. 1180).

Syn? A. euryzona, Temminck, Text de Pl. Col., and Kaup, Verhandlungen, &c., (1848), p. 77.

Inhabits Malacca.

A. ispida L. (*Pl. Enl.* 77).

Inhabits Europe; W. Asia: Afghanistan?

A. bengalensis, Gm. (Edwards, pl. 11).

Match-ranga, B.: *Chota Kilkila*, H. (Jerdon). *Raja Whodan* (generic for all the small species), Malay: *Mal Pilli hudua* (*pinchi*, or 'small'), Cingh. Inhabits India generally; Burmah; Malacca; China.

A. moluccensis, Blyth (J. A. S. XV. 11).

Inhabits Celebes; Moluccas.

A. meningting, Horsfield.

Syn. A. asiatica, Swainson, (Swainson's Zool. Ill., 1st series, pl. 50).

Binti Sum: *Meningting*, Jav. Inhabits Tenasserim provinces; Malayan peninsula and Archipelago.

A. biru, Horsfield (*Zool. Res. in Java*, pl.; Tem. *Pl. Col.* 239, f. 1).

Meningting Watu, or *Burong-Biru*, Jav. Inhabits Java.

Genus CEYX, Lacepede.

C. erythaca (Jerdon's *Ill. Ind. Orn.*, pl. 25).

SYN. Alcedo erythaca et tridactyla, Pallas.
A. purpurea, Gmelin.
A. rubra, Boddaërt.
C. microsoma, Burton.

Dein-ngyeen, Arracan ; *Raja Whodan*, Malay. Inhabits India generally, but rare ; Lower Bengal : more common on the eastern side of the Bay, southward to the Straits of Malacca.

C. rufidorsa, Strickland (J. and S., *Ill. Orn.* pl. 552).

SYN. C. tridactyla apud Jardine and Selby.
A. madagascariensis, L., apud, Latham.
A. purpurea, var., Shaw.

Binti Abang, Sum. : *Chuchak-urang*, Jav. Inhabits Malayan peninsula ; Java : never in India.

Fam. CORACIDÆ.

Genus CORACIAS, L.

C. pileata, Reinwardt ?

SYN. ? C. Temminckii, (Vieillot), (Vail. Ois. de Parad., t. 6).
C. papuensis, Quoy and Gaymard (Voy. de l' Astrolabe, Ois. t. 16).

Inhabits Celebes ; Moluccas.

C. garrula, L. (*Pl. Enl.* 486).

Inhabits Europe ; N. Africa ; W. Asia ; N. W. India ; Kashmir ; Mooltan ; Afghanistan.

C. indica Linn. (*Pl. Enl.* 285 ; Edwards, pl. 326).

SYN. C. bengalensis, L.
Garrulus nævius, Vieillot.

Subzuk, and *Nil-kant*, H. (from the colours) : *Tas*, *Mahr.* (from its call) ; *Kavolowa*, Cingh. Inhabits India generally ; replaced eastward by *C. affinis*.

C. affinis, McClelland (Gray's 'Illustrated Genera of Birds,' pl.).

Nghet-kha, Arracan. Inhabits Assam ; Arracan ; Tenasserim provinces.

Genus EURYSTOMUS, Vieillot.

Eu. orientalis (*Pl. Enl.* 619).

SYN. Coracias orientalis, Linn.
Eu. fascicollis et cyanicollis, Vieillot.

Tiong Lampie, and *Tiong Batu*, Malayan Inhabits India generally, China, and Malay countries ; Ceylon.

Eu. pacificus (Gould's B. A. Vol. II, pl. 17).

SYN. Coracias pacificus, Latham.
Eu. australis, Swainson.
Eu. orientalis apud Vigors and Horsfield. Lin. Tr. XV, 202.

Inhabits Australia.

Fam. MEROPIDÆ.

Genus ALCEMEROPS, Is. Geoffroy.

Alc. Athertonii (Jardine and Selby, *Ill. Orn.* pl. 58).

SYN. Merops Athertonii, J. and S.
Bucia nipalensis, Hodgson, J. A. S. V. 360.
Merops cyanogularis, Jerdon.
Nyctiornis amherstiana, Royle.

Pya-too-nghet, Arracan. Inhabits Deyra Doon ; Nepal ; Assam ; Arracan ; Tenasserim ; S. India.

A. amicta (Swainson's *Zool. Ill.*, 2nd series, pl. 56 ; *Pl. Col.* 310).

SYN. Merops amictus, Temminck.

Inhabits Tenasserim Provinces ; Malayan peninsula.

Genus MEROPS, L.

M. apiaster, L. (*Pl. Enl.* 938).

SYN. M. galilæus, Hasselquist.
M. schæghagha, Forster.
M. chrysocephalus (?), Latham.

Inhabits Europe ; W. Asia ; Afghanistan.

M. persicus, Pallas. (Sav., Descript. *de* l'Egypt, tom. 1, pl. 4, f. 3).

SYN. M. ægyptius, Savigny.

Inhabits N. Africa ; W. Asia ; Sind.

M. philippinus, L. (*Pl. Enl.* 215).

SYN. M. Leschenaultii, Levaillant.
M. javanicus, Horsfield.

Barai Barai, Malay. Inhabits India generally ; Malay countries ; Ceylon.

M. sumatranus, Raffles. (Griffith's *An. Kingdom*, VII. p. 422, pl.). Inhabits Malay countries.

M. erythrocephalus, Latham. (Swainson's *Zool. Ill.*, 1st series, pl. 8).

SYN. M. quinticolor, Vieillot.
M. urica, Horsfield.

Inhabits India generally (nec Lower Bengal) ; Malay countries ; Ceylon.

M. viridis, L. (Edwards, pl. 183 ; *Pl. Enl.* 740).

SYN. M. Lamarckii, Cuv.
M. Orientalis, Latham.
M. Indicus, Jerdon.
Var. M. coromandus, Latham.

Bans-pati. ('Bamboo leaf'), *H.* ; *Hurial, and Patringa*, H. (Jerdon). *Mo-na-gyee*, Arracan. Inhabits India generally ; Arracan ; Ceylon.

Tribe ZYGODACTYLI. Division I. (Devoid of cæca). Sub-division I. (Climbers).

Fam. PICIDÆ.

Lukkurphor, Hind. : *Kat-tokra*, Beng, : *Katbarya*, Masuri : *Theet-touk*, Burm. : *Glato*, Malay : *Tukki*, Sum. ; *Peatuk*, Jav. : *Pilli hudua* (same name as for King-fishers), Cingh.

Subfam. CAMPEPHILENÆ.

Genus CAMPEPHILUS, G. R. Gray.

C. validus (*Pl. Col.* 378, 402).

SYN. Picus validus, Reinwardt.

Inhabits Western Malasia. Malacca.

Genus HEMICERCUS, Swainson.

H. canente (Lesson's *Cent. Zool.* pl. 73 ; Jerdon's *Ill. Ind. Orn.* pl. 40).

SYN. Picus canente, Lesson.
H. cordatus, Jerdon (rather smaller race).

Inhabits Burmese countries (Arracan, Tenasserim, Pegu) : also S. India.

H. concretus. (*Pl. Col.* 90, f. 1, 2).

SYN. Picus concretus, Reinwardt.

Inhabits W. Malasia ; Malayan peninsula.

Genus HEMILOPHUS, Swainson.

H. pulverulentus (*Pl. Col.* 389).

SYN. Picus pulverulentus, Tem.
P. javensis, fœm., apud, Horsfield, *Linn. Tr.* XIII, 76.

Inhabits Burmese and Malay countries.

H. Hodgsonii, Jerdon (*Ill. Ind. Orn.* pl. 5).

Inhabits Neilgiris ; Malabar.

H. javensis.

SYN. Picus javensis, Horsfield.
P. leucogaster, Reinwardt.
'Great Malayan Woodpecker,' J. A. S. VI. 952.

Peatak cayam, Java. Inhabits Malay countries ; Tenasserim.

H. funebris.

SYN. Picus funebris, Valenciennes.
P. modestus, Vigors, P. Z. S.

Inhabits Philippines.

Genus CHRYSOCOLAPTES, Blyth.

Chr. sultaneus.

SYN. Picus sultaneus, Hodgson, J. A. S. VI. 105.
P. strictus apud, Jerdon, Catal.
P. strenus, Gould, mentioned P. Z. S. 1839, p. 165.

Inhabits India generally, chiefly the hill forests, rare in the plains : also Assam, Sylhet, Arracan, Tenasserim, and Malayan peninsula southward as far as Malacca.

Chr. goensis (*Pl. Enl.* 696).

SYN. Picus goensis, Gmelin.
Dendrocopus Elliotti, Jerdon, Catal.
Chr. melanotus, Blyth. J. A. S. XII. 1005.

Inhabits Indian peninsula : rare in most parts ; common in a few localities.

Chr. hæmatribon.

SYN. Picus hæmatribon, Wagler.
P. spilolophus, Vigors, P. Z. S. 1830, p. 98 (the female).

Inhabits Philippines.

Genus BRACHYPTERNUS, Strickland.

Br. ceylonus (*N. nat. Forsch.*, 13, *pl.* 4).

SYN. Picus Ceylonus, Forster.
P. neglectus, Wagler.
P. erythronotus (?), et P. rubescens (?) Vieillot.

Inhabits Ceylon, where very common.

Br. aurantius (Edwards, pl. 182 ; *Pl. Enl.* 695).

SYN. Picus aurauntius, L.
P. bengalensis, Gmelin (nec Horsfield, Linn. Tr. XIII. 176).
P. nuchalis, Wagler.
P. Tibetanus, Natterer.
P. psarodes, Lichtenstein.
P. hemipodius, Swainson.
Malacolophus ? melanochrysos, Hodgson, J. A. S. VI. 109.
Br. micropus, Blyth, J. A. S. XIV. 194.
Var. P. chrysonotus, Lesson.

Inhabits India generally ; Ceylon.

Genus TIGA, Kaup.

T. Shorei, (Gould's 'Century,' pl. 49).

SYN. Picus Shorei, Vigors, P. Z. S. 1831, p. 175 ; J. A. S. XIV. 193.

Inhabits Himalaya, and hilly regions of S. India.

T. intermedia, Blyth, J. A. S. XIV. 193).

Inhabits Nepal ; Assam ; Sylhet ; Arracan ; Tenasserim ; Penang ; S. India.

T. tridactyla (J. A. S. XIV. 193).

SYN. Chrysonotus tridactylus, Swainson.
Picus tiga, Horsfield.

Tukki Besor of Malays, Sumatra. Inhabits Malay countries.

T. Rafflesii. (J. A. S. XV. 16).

SYN. Picus Rafflesii, Vigors.
T. labarum, Lesson.
T. amictus, Gray.

Inhabits Malayan peninsula ; Sumatra.

Subfam. GECININÆ.

Genus GECINUS, Boie.

G. squamatus (Gould's 'Century' pl. 48).

SYN. Picus squamatus, Vigors.
P. dimidiatus apud Hardwicke and Gray (nec Temminck).

Inhabits Himalaya.

G. striolatus, Blyth, J. A. S. XII. 1000.

SYN. G. squamatus apud, Jerdon, Catal.

Inhabits Himalaya, and hilly regions of S. India : occurs, though rare on the plains.

G. dimidiatus.

Syn. Picus dimidiatus, Temminck.
P. Vitatus, Vieillot.
P. affinis, Raffles, apud Vigors, in Zool. App. to Lady Raffles's Memoir of Sir St. Raffles, p. 668.
G. viridanus, Blyth, J. A. S. XII. 1000.

Inhabits Arracan; Tenasserim provinces where common. Java.

G. occipitalis (Gould's 'Century,' pl. 47).

Syn. Picus occipitalis, Vigors.
P. barbatus, Gray.
P. affinis (?), Raffles.

Inhabits Himalaya; Assam; Tippera; Tenasserim provinces; Sumatra?

Division III. (with crested nape.)

G. flavinucha.

Syn. Picus flavinucha, Gould, P. Z. S. 1833, p. 120.
Dryotomus flavigula, Hodgson, J. A. S. V. 106.

Inhabits S. E. Himalaya; Assam; Arracan.

G. chloropus (Hardw. *Ill. Ind. Zool*).

Syn. Picus chloropus et chlorolophos, Vieillot.
P. nipalensis, Gray.
P. xanthoderus, Malherbe.

Inhabits Himalaya chiefly; N. India: rare on the plains.

G. chlorophanes (J. A. S. XV. 16).

Syn. Picus chlorophanes, Vieillot.
P. chlorigaster, Jerdon, Madr. Journ. XIII, 139).
P. mentalis apud Jerdon, Catal.

Inhabits S. India; Ceylon.

G. malaccensis (J. A. S. XIV. 192).

Syn. Picus malaccensis, Latham.
Le Pic de Malacca, Sonnerat.

Inhabits Malayan peninsula.

G. mentalis, (*Pl. Col.* 384).

Syn. Picus mentalis, Temminck.

Inhabits Tenasserim provinces: Malayan peninsula; Sumatra.

G. puniceus (*Pl. Col.* 423).

Syn. Picus puniceus, Horsfield, Linn. Tr. XIII, 661.
Chrysonotus miniatus apud Eyton (?) P. Z. S. 1839, p. 106.

Tukki Bajukarap or *Belatu*, Malayan (Raffles). Inhabits Tenasserim; Malayan peninsula; Sumatra; Java.

Division IV.

G. pyrrhotis.

Syn. Picus pyrrhotis, Hodgson, J. A. S. VI. 108.

Inhabits S. E. Himalaya.

G. rubiginosus.

Syn. Picus rubiginosus, Eyton (nec Swainson, B. W. Afr. II. p. 150).
P. melanogaster, A. Hay, Madr. Journ. XIII. 153.

Inhabits Malayan peninsula.

Genus GECINULUS, Blyth.

G. grantia (J. A. S. XIV. 192).

Syn. Picus grantia, M'Clelland, P. Z. S. 1839, p. 165.

Inhabits Sikkim; Assam.

Genus MEIGLYPTES, Swainson.

M. pectoralis (Pl. Col.)

Syn. Picus pectoralis, Latham.
P. marginatus, Reinwardt.
P. tukki, Lesson.
P. luridus, Nitzsch.
P. fasciolatus Lichtenstein.
Hemicercus brunneus, Eyton.

Inhabits Malayan peninsula.

M. tristis (Pl. Col. 197, f. 1).

Syn. Picus tristis, Horsfield.
P. poicilophus, Temminck.

Glato Bawan, Malacca: *Tukhi Boreh* of Malays, Sumatra: *Platuk-watu*, Java. Inhabits Tenasserim; Malayan peninsula; Sumatra; Java.

M. jugularis, Blyth, J. A. S. XIV. 195.

Inhabits Arracan; Tenasserim.

Genus MICROPTERNUS, Blyth.

M. phaioceps, Blyth, J. A. S. XIV. 195.

Syn. P. rufonotus, Malherbe.
P. rufus, Latham, apud Gray (nec Gmelin).
Rufous Indian Woodpecker, Latham.

Inhabits Bengal; Nepal; Assam; Sylhet; Arracan; Tenasserim provinces.

M. gularis, Jerdon, *Madr. Journ.* XIII. 139. Inhabits Indian peninsula.

Syn. Slight variety of preceding species?

M. badius.

Syn. Picus badius, Raffles.
P. brachyurus, Vieillot.

Tukki Kalabu of Malays (Raffles). Inhabits Malayan peninsula; Sumatra.

Subfam. PICINÆ.

Genus DRYOCOPUS, Boie.

Dr. martius (*Pl. Enl.* 596).

Syn. Picus martius, L.

Inhabits Europe; W. Asia.

Genus PICUS, L. (as restricted).

P. leuconotus, Bechstein (Naum. 35, t. 65).

Syn. P. cirris, Pallas apud Gray.

Inhabits N. Europe.

P. himalayanus, Jardine and Selby (*Ill. Orn.* pl. 116).

Syn. P. assimilis, Natterer.

Inhabits N. W. Himalaya.

P. darjellensis, Blyth, J. A. S. XIV. 196.

Syn. P. majoroides, Hodgson.

Inhabits S E. Himalaya.

P. mahrattensis, Latham (Gould's 'Century,' pl. 51).

Syn. P. hœmosomus, Wagler.

Inhabits India generally (but never on the alluvium of Lower Bengal).

P. brunnifrons, Vigors (Gould's 'Century,' pl. 52).

Syn. P. aurifrons, Vigors.

Inhabits Himalaya.

P. Macei, Vieillot (Hardw. *Ill. Ind. Zool*).

Syn. P. medius from India, apud, Latham.

Inhabits Bengal ; Nepal ; Assam ; Tippera ; Malayan peninsula.

P. hyperythrus, Vigors (Gould's 'Century,' pl. 50). Inhabits Himalaya.

P. cathpharius, Hodgson, J. A. S. XII. 1006. Inhabits S. E. Himalaya.

P. rubricatus, Blyth, (described as fine old male of No. 302 in J. A. S. XIV. 197). Inhabits Sikim.

P. pygmæus, Vigors, P. Z. S. 1831, p. 44.

Syn. P. trisulensis, Lichtenstein.

Inhabits N. W, Himalaya ; Nepal.

P. moluccensis, Gmelin, (*Pl. Enl.* pl. 748, f. 2).

Syn. P. bicolor, Gmelin, apud, Gray,
P. sizuki ? , Temminck.
Tripsursus aur itus, Eyton.

Tukky lilit, Malayan ; Sumatra. Inhabits Malayan peninsula ; Java.

P. canicapillus, Blyth, J. A. S. XIV. 197.

Syn. Qu. Permanent variety of P. moluccensis

Inhabits Arakan ; Tenasserim Provinces.

P. variegatus, Wagler (nec Latham).

Syn. P moluccensis, var. B, and Brown Woodpecker, Latham.
P. moluccensis, Hardw. and Gray Ill. Ind. Zool.
P. Hardwickii, Jerdon, Madr. Journ. XIII. 188.
Cawnporo Woodpecker, Latham.

Inhabits India, southward of the Himalaya.

P. gymnopthalmos, Blyth, J. A. S. XVIII. Inhabits Ceylon.

P. validirostris, Blyth (described and referred to *P. nanus*, Vigors, J. A. S. XIV. 197).

Inhabits

Subfam. PICUMNINÆ.

Genus PICUMNUS, Temminck.

P. innominatus, Burton, P. Z. S. 1835, p. 154.

Syn. Vivia nipalensis, Hodgson, J. A. S. VI. 107.

Wee-Wee. Nepal. Inhabits Himalaya.

Genus SASIA, Hodgson.

S. abnormis (*Pl. Col.* 371, f. 3).

Syn. Picumnus abnormis, Temminck.

Inhabits Malay countries.

S. ochracea, Hodgson, J. A. S. V. 778. Inhabits Nepal ; Sikkim ; Assam ; Sylhet ; Arracan.

Subfam. YUNCINÆ.

Genus YUNX, Lin.

Y. torquilla, L. (*Pl. Enl.* 698). Inhabits Europe and Asia : common in many parts of India, Calcutta, Ferozepore.

Subfam. INDICATORINÆ.

Genus INDICATOR, Vieillot.

I. xanthonotus, Blyth, J. A. S. XI. 166, XIV. 198 (Jerdon's *Ill. Ind. Orn. pl.*—) Inhabits Sikkim.

Sub-division II. (Perchers).

Fam. MEGALAIMIDÆ.

Genus MEGALAIMA, G. R. Gray.

M. virens (Gould's 'Century,' pl. 46).

Syn. B. grandis, Gmelin.
Bucco virens, Boddaert.

Inhabits Himalaya; Assam ; Cherra Punji ; China.

M. lineata (Tem. *Pl. Col.* 522).

Syn. B. lineatus, Vieillot.
B. corvinus, Tem.

Pho goung, Arracan. Inhabits Deyra Doon ; Nepal; Assam ; Sylhet ; Tippera ; Arracan ; Tenasserim provinces ; Sumatra (apud Vieillot).

M. caniceps (Vail. *Barb.* t. 38, apud Gray).

Syn. B. lineatus, apud Tickell. J. A. S. II. 579.
Bucco caniceps, Franklin.

Burra Bassunta, Central India : *Kootomra*, H. : *Kootoorya*, Mahr. : *Kootur-kakee*, Can. : *Kootooreal*, Cinghalese. Inhabits Indian peninsula, spreading northward to the Deyra Doon common in Mednapur jungles, and in Central India : replaced by a smaller and darker race in Ceylon. Specimens from the Nilgiris and specimens of rather smaller and darker-coloured race from Ceylon (*B. zeylanicus* ? (Linn.)

M. viridis (Jerdon's *Ill. Ind. Orn.*, pl.

Syn. Bucco viridis, L.

Inhabits Nilgiris ; Malabar.

M. flavifrons (Vail. *Barb.* t. 55).

SYN. Bucco flavifrons, Cuv.
B. aurifrons, Temminck.

Inhabits Ceylon.

M. chrysopogon, (*Pl. Col.* 285),

SYN. Bucco chrysopogon, Temminck.

Inhabits Malayan peninsula ; Sumatra.

M. versicolor (*Pl. Col.* 309).

SYN. Bucco versicolor, Raffles.
B. Rafflesii, Lesson.

Takoor, Malacca : *Takoo*, Sumatra (generic). Inhabits Malayan peninsula ; Sumatra.

M. quadricolor.

SYN. Bucco quadricolor, Eyton, P. Z. S. 1839, p. 105.
B. malaccensis, ?, Hartlaub, Rev. Zool. 1842, p. 337.

Inhabits Malayan peninsula.

M. armillaris (*Pl. Col.* 89, f. 1).

Inhabits Malayan peninsula ; Java ?

M. asiatica (Vieillot, *Gal. des Ois.*, t. 35).

SYN. Trogon asiaticus, Latham.
Capito cyanocollis, Vieillot.
Bucco cyanops, Cuv.
B. cæruleus, Dumeril.

Burra Bassunt-bairi, Bengal : *Koop-khaloung*, Arracan. Inhabits Bengal ; sub-Himalayan region to Deyra Doon, and valleys of the lower hills ; Assam ; Sylhet ; Tipperah : rare in Arracan.

M. Franklinii.

SYN. Bucco Franklinii, Blyth, J. A. S. XI. 167.

Inhabits S. E. Himalaya ; Cherra Punji, Assam ?

M. philippensis (Tem. *Pl. Col.* 331).

SYN. Bucco philippensis, Brisson.
B. flavigula, Boddaert.
B. indicus, Latham.
B. flavicollis, Vieillot.
B. rubricollis, Cuv.
B. luteus, Lesson (albino variety, Jerdon.

Chota Bassunt bairi, Bengal ; *Kut-khora* and *Tambayut* (' Coppersmith'), H. : *Chanda*, Sumatra : *Engku*, Java. Inhabits India generally ; nec Himalaya : Tippera ; Chittagong ; Ramree (Arracan) ; Tenasserim provinces ; Penang ; Sumatra ; Java ; Philippines ; Ceylon.

M. rubricapilla (Brown's *Zoology*, pl. 14).

SYN. Bucco rubricapillus, Gmelin.

Inhabits Ceylon.

M. trimaculata (Tem. *Pl. Col.* 536, f. 1).

SYN. Bucco trimaculatus, Gray.
B. frontalis, Temminck.
B. Duvaucelei, Lesson,
B. australis apud, Raffles nec Horsfield.
B. cyanotis, Blyth, J.A. S. XVI. 465, Arracan, variety.

Nget-pa-din, Arracan. Inhabits Malayan peninsula ; Sumatra : with distinct variety in Arracan.

Genus MEGALORHYNCHUS, Eyton.

M. Hayii, Gray (apud G. R. Gray).

SYN. Micropogon fuliginosus, Temminck.
Calorhamphus sanguinolentus, Lesson.
Megalorhynchus spinosus, Eyton.

Ampis, Sumatra : *Unkot Besea*, Penang. Inhabits Malayan peninsula ; Sumatra.

Fam. CUCULIDÆ.

Subfam. CUCULINÆ.

Genus CUCULUS, L.

C. sparverioides, Vigors (Gould's 'Century,' pl. 53).

SYN. Ferruginous-necked Cuckoo (?), Latham.

Inhabits Himalaya ; Nilgiris ; Malayan peninsula.

C. varius, Vahl (Hardw. *Ill. Ind. Zool.*)

SYN. C. fugax, Horsfield.
C. Lathami, Gray.
C. tenuirostris, Lesson.
C. ejulans, Sundevall.
C. nisicolor, Hodgson, variety ?
Bhrou and Bychan Cuckoo, and the young Sokagu, Cuckoo, Latham.

Chok-gallo, and *Popiya*, Beng. : *Kupuk*, or *Upuk*, H. (Jerdon). *Kutti pitta* (' Sword bird'), Telugu. *Zuk-kat* (Custom-house bird), Dukhun. Inhabits India generally and Malay countries.

C. striatus, Drapiez.

SYN. C. micropterus, Gould.
C. optatus, Gould, 'Intr. to Birds of Australia,' (Doubtful.)
C. affinis, A. Hay, J. A. S. XV. 18 (large variety).
C. flaviventris apud, Strickland (?), J. A. S. XIII. 390.

Bou-kotako, Beng. : *Kyphul-pucka* of hill-men, Masuri (Hutton). Inhabits India generally, and Malay countries : Australia ? Rare in S. India.

C. canorus, Linn. (*Pl. Enl.* 811).

SYN. C. borealis, Pallas.
C. hepaticus, Sparrman, var. ?

P'hu-p'hu, Deyra Doon. Inhabits Europe, Asia, and Africa, Darjiling, Calcutta.

C. himalayanus, Vigors (nec apud, Gould's Century,' pl. 54).

SYN. S. saturatus, Hodgson, J. A. S. XII. 942, XV. 18.

Inhabits Himalaya generally : Tenasserim provinces.

C. poliocephalus, Latham (Gould's ' Century' pl. 54).

SYN. C. himalayanus apud, Gould, Cent.

Inhabits Himalaya : S. India rarely.

C. tenuirostris, Gray (Hardw. *Ill. Ind. Zool*).

SYN. C. flavus apud, Lesson, et Jerdon, Madr. Journ. XI, 220 : C. flavus, Ind. Var. ?
C. lineatus (?), Lesson, Traité.
C. niger apud, Blyth, J. A. S. XI. 908.

Pousya, Mahr. Inhabits India generally.

C. merulinus, Scopoli.

SYN. C. flavus, Gmelin.
C. pyrogaster, Drapiez.

Gedasse, Java. Inhabits Malay countries.

C. Sonnerati, Latham.

SYN. C. rufovittatus, Drapiez.
C. pravatus, Horsfield.

Inhabits S. India and Malay countries.

Sub-genus SURNICULUS, Lesson.

S. dicruroides.

SYN. Pseudornis dicruroides, Hodgson, J. A. S. VIII, 136.
S. lugubris, Ind. Var. ?

Inhabits India : Tenasserim provinces : Ceylon.

S. lugubris.

SYN. Cuculus lugubris, Horsfield.
C. albopunctatus, Drapiez.

Awon-Awon, Java. Inhabits Malayan peninsula and archipelago.

Subgenus CHRYSOCOCCYX, Boie.

Chr. xanthorhynchos (Horsfield's *Zool. Res. in Java*, pl.)

SYN. Cuculus xanthorhynchos, Horsfield.
Lampromorpha amethystina, Vigors, P. Z. S. 1831, p. 98.

Inhabits Tenasserim provinces : Malayan peninsula and Archipelago : Philippines : S. E. Himalaya (? Gray).

Chr. chalcites (?), Temminck (*Pl. Col.* 102, f. 2).

SYN. Cuculus malayanus (?), Raffles.
Chr. smaragdinus, Blyth, J. A. S. XV. 53 (nec Swainson).
Trogon maculatus, Gmelin, Brown's Ill. Zool. pl. XIII. fig. Sup. (but the specific name quite inapplicable).

Inhabits Hill regions of India generally ; Arracan ; Tenasserim.

Chr. basalis.

SYN. Cuculus basalis, Horsfield.

Inhabits Malayan peninsula and Archipelago.

Genus EUDYNAMYS, Vigors and Horsfield.

Eu. orientalis.

SYN. Cuculus orientalis, Lin., the male.
C. punctatus
C. mindanensis } Linn. } the female.
C. scolopaceus
C. maculatus, Gmelin,
Var. ? C. indicus, Latham.
C. niger, Latham, (Edwards, pl. 58).

Coel, H. : *Kokil*, Beng. : male—*Tuhu* ; female *Chule*, Java : *Cowde-coha*, Cingh. Inhabits India, China, and Malay countries.

Genus OXYLOPHUS, Swainson.

O. melanoleucos (figured as the female *Edolio Cuckow* by Shaw).

SYN. Cuculus melanoleucos, Gmelin.
C. edolius, Cuvier.
Leptosomus afer apud, Franklin and Sykes.

Popiya, Hind. : *Kolu Bubul*, Beng. : *Golli Kokila* (' Milkman Cuckoo),' Telugu. Inhabits India generally ; Ceylon : rare on the eastern side of the Bay of Bengal, and never (?) in the Malay countries.

O. coromandus (*Pl. Enl.* 274, f. 2).

SYN. Cuculus coromandus, L.
C. collaris, Vieillot.

Inhabits India generally and Malay countries.

Subfam. PHŒNICOPHAINÆ.

Genus PHŒNICOPHAUS, Vieillot.

Cadow (generic), Malacca.

Sub-genus DASYLOPHUS, Swainson.

D. superciliosus, Cuv.

SYN. Ph. superciliosus, Cuv.

Inhabits Philippines

Subgenus PHŒNICOPHAUS.

Ph. pyrrhocephalus (Pennant's ' Indian Zoology,' p. 5).

SYN. Cuculus pyrrocephalus, Forster.
Ph. leucogaster, Dumeril.

Malkoha, Ceylon (Pennant). Inhabits Ceylon.

Ph. melanogaster (*Pl. Col.* 349).

SYN. Cuc. melanogaster, Vieillot—the young ?
Ph. calorhynchos, Temminck.

Inhabits Celebes : Moluccas.

Ph. curvirostris (Vail. *Ois. d' Afr.* t. 224).

SYN. Cuculus curvirostris, Shaw.
Ph. tricolor, Stephens.
Ph. viridis, Vieillot.
Cuculus melanognathus apud, Raffles nec Ph. melanognathus, Horsfield.

Inggang Balukar, Sumatra. Inhabits Malay countries.

Subgenus ZANCLOSTOMUS, Swainson.

Z. diardi.

SYN. Melias Diardi, Lesson.
Phœnicophaus tristis apud Blyth, J. A. S. XI, 928.

Cadow Kachie, Malacca. Inhabits Malay countries.

Z. sumatranus.

SYN. Cuculus sumatranus, Raffles.
Phœnicophus Crawfurdii, Gray.

Sepando, Sumatra. Inhabits Malay countries.

Z. tristis (Belanger, *Voy.* pl.).

SYN. Melias tristis, Lesson.
Phœnicophaus longicaudatus, Blyth.

Ban Kukil, Beng.: *Wa-pha-lai*, Arracan. Inhabits Bengal, Nepal, Assam, Arracan, Tenasserim provinces, Penang.

Z. viridirostris, Jerdon (*Ill. Ind. Orn.* pl. 8.)

SYN. Phœnicophaus Jerdoni, Blyth.

Kuppra Popya, Hind. *Wamaneh Kaki*, Telugu: *Handi Koota*, Ceylon (Daniell): *Mal caudatta*, Do. (Layard). Inhabits Peninsular India; Ceylon.

Z. javanicus (Horsfield's '*Zool. Res. in Java*,' pl.).

SYN. Phœnicophaus javanicus, Horsfield.
Coccysus chrysogaster, Temminck.
C. rubrirostris, Drapiez.
Chalybeate Cuckoo, Latham.

Kaka Apie, Malacca: *Bubut Kembang*, Java. Inhabits Malay countries; Tenasserim.

Genus RHINORTHA, Vigors.

Rh. chlorophæa (Belanger, *Voy.* pl. 1, the female).

SYN. Cuculus chlorophæus, Raffles.
C, sumatranus, Cuvier.
Phœnicophaus caniceps, Vigors.
Ph. viridirostris, Eyton.
Bubutus Isidorei et B. Davaucelei, Lesson.
Coccyzus badius, Gray.
Anadænus rufus et A. rufescens Swainson.

Slaya, *See-saya*, Malacca. *Bubut*, Sumatra. Inhabits Malay countries.

Genus TACCOCUA, Lesson.

T. infuscata, Blyth, J. A. S. XIV. 200.

Inhabits Tarai region bordering on Nepal and Sikkim.

T. affinis, Blyth, J. A. S. XV. 19.

Inhabits Central India; Mednapur jungles; Rajmahl; Mongbyr.

T. sirkee (Hardwicke's *Ill. Ind. Zool.*)

SYN. Centropus sirkee, Gray.
C. cuculoides, C. W. Smith, J. A. S. X. 658.
Coccyzus chrysogaster of Royle's list.

Inhabits vicinity of Cawnpore; Deyra Doon.

T. Leschenaultii, Lesson.

SYN. Zanclostomus sirkee apud, Jerdon, Catal.

Inhabits S. India.

Genus CENTROPUS, Illiger.

Mahuka, Hind.: *Kuka*, Beng.: *Atte Cuccula*, Cingh.: *Boop*, Arracan: *Bubut*, and *Kradok*, Malay.

C. eurycercus, A. Hay (J. A. S. XIV. 551.)

SYN. Cuculus bubutus apud Raffles, nec Centropus bubutus, Horsfield.

Inhabits Malayan peninsula; Sumatra.

C. philippensis, Cuvier (Horsfield's '*Zool. Res. in Java*', pl.).

SYN. Cuculus ægyptius, var. r, Latham.
Corydonyx pyrrhopterus, Vieillot.
Centropus bubutus, Horsfield.
C, castanopterus, Stephens.
C. fasciatus, C. W. Smith, J. A. S. X. 659.
Var. Polophilus sinensis, Stephens.

Inhabits S. E. Asia and its Archipelago.

C. chlororhynchos, Blyth, J. A. S. XVIII.

Inhabits Ceylon.

C. viridis (Brown's *Zoology*, pl. XIII. fig. *infra*).

SYN. Cuculus viridis, Scopoli.
C. bengalensis, Latham.
C. tolu apud, Raffles.
C. lepidus et C. affinis, Horsfield.
C. pumilus, and probably C. melanops, Lesson.
C. dimidiatus, Blyth, J. A. S. XII. 945.
C. rectunguis, Strickland, Ann Mag. N. H. XIX. 134.
Polophilus Lathami (?), Leach.

Inhabits India generally and Malay countries, more abundant in the latter.

C. bicolor, Lesson.

SYN. C. celebensis, Quoy and Gaymard, Voy de l' Astrolabe.

Inhabits Celebes; Moluccas.

Fam. TROGONIDÆ.

Genus HARPACTES, Swainson.

H. Hodgsonii, Gould (*Mon. Trogonidæ*, pl. 34).

Htoo-ta-roo, Arakan. Inhabits Nepal; Assam; Sylhet; Arracan.

H. kasumba (Gould's *Mon. Trogonidæ* pl. 29)

SYN. Trogon kasumba, Raffles.
Tr. condea, Cuvier,
Tr. fasciatus, Tem. (nec Pennant.)
Tr. Temminckii, Gould.

Kasumba, Sumatra. Inhabits Malayan peninsula; Sumatra.

H. Diardi (Gould's *Mon. Trogonidæ*, pl. 30).

Gumsoba, Kuna somba (Kasumba ?), Malacca. Inhabits Malayan peninsula; Sumatra.

H. fasciatus (Gould's *Mon. Trogonidæ* pl. 31).

SYN. Trogon fasciatus, Pennant.
Tr. malabaricus, Gould.

Kufni Churi of some, Hind: *Kurna* Mahr: *Kakurni*, *Kukki*, Can. Inhabits peninsula of India; Ceylon.

H. rutilus (Gould's *Mon. Trogonidæ* pl, 32.

SYN. Trogon rutilus, Vieillot,
Tr. cinnamomeus (?), Temminck.
T. Duvaucelei, Temminck.
T. fasciatus, var. B., Latham.

Ramguba, Malacca. Inhabits Malayan peninsula; Sumatra.

H. oreskios (Gould's *Mon. Trogonidæ* pl. 36).

SYN. Trogon oreskios, Temminck.

Inhabits Arracan ; Tenasserim provinces.

Fam. CAPRIMULGIDÆ.

Subfam. PODARGINÆ.

Genus PODARGUS, Cuvier.

P. Auritus, Vigors (Gould's *Icones Avium*).

SYN. Bombycistoma Fullartonii, Hay, J. A. S. X. 573.

Inhabits Malayan peninsula.

C. Javanensis, Horsfield (Tem. *Pl. Col.* 159; Horsfield's *Zool. Res. in Java.*)

SYN. ? P. cornutus, Tem. (the adult ?).

Inhabits Malayan peninsula, Java.

P. affinis, Blyth, J. A. S. XVI. 1180.

Inhabits Malayan peninsula.

Subfam. CAPRIMULGINÆ.

Genus EUROSTOPODUS, Gould.

Eu. cerviniceps (Gould's *Icones Avium*).

SYN. Lyncornis cerviniceps, Gould.

Twun-dweng-nghat, Arracan. Inhabits Burmese countries.

Eu. Temminckii (Gould's *Icones Avium*).

SYN. Lyncornis Temminckii, Gould.
Caprimulgus, imberbis, Temminck.
C. pulcher, Hay, Madr. Journ. XIII. 161.

Inhabits Malayan peninsula, Java.

Genus CAPRIMULGUS, Lin.

Chippuk, H *Dub chooree*, also *Dubbuk chooree*, also *Undhee chooree*, H. *and* B : *Tukang*, Malayan. *Ugeet payeen*, Arracan ; *Kuppo pitta* (Frogbird), Telugu ; also *As kappri gadu*, Tel.

C. indicus, Latham (Jerdon's *Ill. Ind. Orn.* pl. 24).

SYN. C. cinerascens, Vieillot.
C. innotatus, Hodgson (juv.)

Inhabits India generally, Malayan peninsula.

C. albonotatus, Tickell, J. A. S. II, 580.

SYN. C. gangeticus, Blyth, mentioned Ann. Mag. N. H. 1843, pl. 95.
C. macrourus apud Blyth, J. A. S. XI. 586.
C. nipalensis, Hodgson, Gray, Zool. Misc.

Inhabits northern and Central India : common in Lower Bengal.

C. macrourus, Horsfield (Gould's B. A. Vol. II. pl. 9).

Inhabits Arracan, Tenasserim, Malacca, Java, N. Australia ; very rare in Lower Bengal.

C. mahrattensis, Sykes P. Z. S. 1832, p. 83.

SYN. C. atripennis, Jerdon, Ill. Ind. Orn., art: C. asiaticus.
C. asiaticus, var. C. (?), Latham.

Inhabits S. India, Ceylon.

C. asiaticus, Latham (Vaill. *Ois. d' Afr., t.* ; Hardw. *Ill. Ind. Zool.*)

SYN. C. pectoralis, Cuv.
Bombay Goat sucker, Latham.

Bacca-meena, Cingh. Inhabits India generally.

C. monticolus, Franklin, P. Z. S. 1831, p. 116.

SYN. Great Bombay Goat sucker, Latham.

Inhabits India generally, Arracan (Ramree).

C. affinis, Horsfield.

Inhabits Java. This is the diminutive of C. monticolus ; wing 6½ inches.

Fam. CYPSELIDÆ.

Subfam. CYPSELINÆ.

Genus ACANTHYLIS, Boie.

Ac. caudacuta.

SYN. Hirundo caudacuta, Latham.
Cypselus giganteus, Temminck.

Inhabits Nilgiris, Ceylon, Malayan peninsula, rarely Arracan.

Ac. fusca (Gould's B. A. Vol. II. pl. 10 ; Swainson's *Zool. Ill., n. s.* pl. 42 ; Delessert, *Souvenirs*, &c., pt. 2, pl. 9, and *Mag. de Zool.* 1840, *Ois.* pl. 20).

SYN. Hirundo fusca, Shaw.
Chætura australis, Stephens.
Ch. macroptera, Swainson, Zool. Ill.
Ch. nudipes, Hodgson, J. A. S. V, 779.
Cypselus leuconotus, Delessert.
Acanthylis caudacuta, (Lath.) apud Gould, loc. cit.

Inhabits S. E. Himalaya, and Australia (at least as figured by Mr. Swainson and by Mr. Gould).

Ac. leucopygialis, Blyth, J. A. S. XVIII.

Inhabits Malayan peninsula.

Genus CYPSELUS, Illiger.

C. melba (Edwards, pl. 27).

SYN. Hirundo melba, Linn.
H. alpina, Scopoli.
Cypselus gutturalis, Vieillot.
C. gularis, Stephens.

Inhabits mountainous regions of the S. of Europe, Asia, and Africa. Rare in the British islands. Common in Central India, Nilgiris, &c.

C. apus (*Pl. Enl.* 542, fig. 1).

SYN. Hirundo apus, Linn.
Cypselus murarius, Tem.

Inhabits Europe and W. Asia : common in Afghanistan.

C. vittatus, Jardine and Selby (*Ill. Orn.* 2nd series, pl. 39).

Inhabits S. E. Asia, as China, and the Malayan peninsula, and archipelago: common at Penang. N. W. Himalaya.

C. leuconyx, Blyth, J. A. S. XIV. 218.

Inhabits India generally : rare.

C. subfurcatus, Blyth, J. A. S. XVIII.

SYN. C. affinis, var., Strickland, P. Z. S. 1846, p. 99.

Inhabits Malayan peninsula.

C. affinis, Gray (Hardw. *Ill. Ind. Zool*).

SYN. C. nipalensis, Hodgson, J. A. S. V. 780.
C. montanus, Jerdon, Madr. Journ. XIII. 144.

Ababil, Hind. Inhabits plains and lower hills of India generally ; rare in the Dukhun ; Ceylon.

C. balasiensis, Gray (Hard. *Ill. Ind. Zool.*)

SYN. C. palmarum, Gray.

Inhabits most part of India : wherever the *Borassus* grows, to the fronds of which it affixes its nest. Arracan (Ramree). Common in Ceylon.

Genus COLLOCALIA, G. R. Gray.

C. nidifica.

SYN. Hirundo nidifica, Latham.
H. esculenta apud Horsfield.
H. fuciphaga apud Shaw.
H. brevirostris, McClelland, P. Z. S. 1839, p. 155.
H. unicolor, Jerdon, Madr. Journ. XI. 238 ; referred to Cypselus, ibid. XIII. 173 ; and termed C. concolor, J. A. S. XI. 886.

Wahalæna, Cingh. Inhabits Nilgiris, Ceylon, Sikim, Assam ; and Malay countries.

C. fuciphaga.

SYN. Hirundo fuciphaga, Thunberg.

Inhabits rocky coasts bordering the Bay of Bengal, and of Malayan peninsula and archipelago.

Subfam. MACROPTERIGIINÆ.

Genus MACROPTERYX, Swainson.

caronatus.

SYN. Hirundo coronata, Tickell, J. A. S. II. 580 ; XV, 21.
M. klecho of India, Auctorum.

Inhabits jungles of Central and S. India, and of Ceylon.

M. klecho (Swainson's *Zooll. Ill.*, *n. s.*, pl. 74).

SYN. Hirundo klecho, Horsfield.
Cypselus longipennis, Temminck.

Inhabits Malayan peninsula, Java.

M. comatus (*Pl. Col.* 268).

SYN. Cypselus comatus, Temminck.

Inhabits Eastern Malasia ; Sumatra ?

Suborder PASSERES, L. modified.

Fam. CORVIDÆ.

Subfam. CORVINÆ (A.) Crows.

Genus CORVUS, Linn.

C. culminatus, Sykes (Hardwicke's *Ill. Ind. Zool.*)

SYN. C. orientalis, Eversmann.
C. corone, var., Franklin.
C. corax of Sumatra ? Raffles.

Dand kag, Beng. *Dhar kowa*, "*Dheri kowa* or *kurrial*" (Jerdon), Hind. *Pahari kowa*, Deyra Doon: *Burong gaga-gaga*, Malayan. Inhabits India generally ; Ceylon ; Assam ; Arracan ; Tenasserim ; Malayan peninsula ; Sumatra ? : also N. Asia (Eversmann). 'Raven' of Europeans in India.

C. corone, L. (*Pl. Enl.* 495).

Inhabits Europe; N. Asia ? Japan ? China ?

C. cornix, *L.* (*Pl. Enl.* 76.)

Inhabits N. Europe, and N. W. Asia ; Japan (Temminck).

C. splendens, Vieillot (*Pl. Col.* 425).

Kag or *Kak*, Beng. : *Kowa*, or *Path Kowa*, i. e. 'Common Crow' ; Hind. *Dasi kowa*, Deyra Doon : *Cac-co*, Cingh. Inhabits India generally ; Assam, Sylhet, Chittagong, and northernmost part only of Arracan, where its occurrence is of recent date.

C. macrorhynchos, Vieillot.

SYN. ? Fregilus enca, Horsfield.

Inhabits vicinity of Straits of Malacca.

C. frugilegus, L. (*Pl. Enl.* 484.)

Inhabits Europe ; Afghanistan ; Kashmir Japan (Temminck).

C. monedula, L, (*Pl. Enl.* 523).

Inhabits Europe ; Middle Asia ; Kashmir ; N. Africa.

B. NUTCRACKERS.

Genus NUCIFRAGA, Brisson.

N. hemispila, Vigors (Gould's 'Century,' pl. 36., Inhabits Himalaya.

C. CHOUGHS.

Genus PYRRHOCORAX, Vieillot.

P. alpinus, Vieillot (*Pl. Enl.* 35.)

SYN. Corvus pyrrhocorax, L.

Inhabits Alps, Himalaya, and other lofty mountain chains of Europe and Asia.

Genus FREGILUS, Cuv.

Fr. graculus (*Pl. Enl.* 255.)

SYN. Corvus graculus, L.
C. erythrorhamphus, Vieillot.
Fr. europœus, Lesson.
Fr. erythropus, Swainson.

Inhabits lofty mountain ranges of Europe and Asia: also high cliffs overhanging the sea.

Subfam. GARRULINÆ.

(A) MAGPIES.

Genus PICA, Brisson.

P. bottanensis, Ad. Delessert.

SYN. P. megaloptera, Blyth, J. A, S. XI. 193.

Inhabits Bootan.

P. media Blyth, J. A. S. XIII. 393, 1844.

SYN. F. sericea, Gould, P. Z. S. 1845, p. 2.

Inhabits China.

P. caudata, Ray (*Pl. Enl.* 488).

SYN. P. melanoleuca, Vieillot.

Inhabits Europe, N. Asia, and N. America west of the Rocky mountains range: variety common in Afghanistan.

Genus DENDRACITTA, Gould.

D. leucogastra, Gould, (*Trans. Zool. Soc.* Vol. I. pl. 12). Inhabits Nilgiris.

D. rufa (Vaill. *Ois. d' Afr.* pl. 59; Gould's 'Century,' pl. 42).

SYN. Corvus rufus, Scopoli.
Coracias vagabunda, Latham.
Pica rufiventris, Vieillot.

Handi-chacha ('pan-scraper,' imitative of cry) and *Takka-chor* ('rupee-thief'), Beng.: *Maha Lat*, H. (Jerdon).: *Mahtab*, and *Chand*, Sindee (Burnes). Inhabits India generally: plains and lower hills.

D. sinensis (Gould's 'Century,' pl. 43).

SYN. Corvus sinensis, Latham.

Kokiakak, Masuri. Inhabits Himalaya; China?

D. altirostris.

SYN. Crypsirina altirostris, Blyth. J. A. S. XII, 933.
D. frontalis (?), McClelland, P. Z. S. 1839, p. 163.

Inhabits Sikim: Assam?

Genus CRYPSIRINA, Vieillot.

Cr. varians (Horsfield's *Zool. Res. in Java*): Lev: *Ois. d' Afr.* 56).

SYN. Corvus varians, Latham.
C. temia, Shaw
Phrenotrix temia, Horsfield.

Chekitut, or *Benteot*, Java. Inhabits Tenasserim; Java.

Genus TEMNORUS, Lesson.

T. leucopterus (*Pl. Col.* 265).

SYN. Glaucopis leucopterus, Temminck.

Talong-gaga, or *Kolang-gaga*, Malayan. Inhabits Malayan peninsula and archipelago.

(B.) JAY-MAGPIES.

Genus CISSA, Boie.

C. venatoria (Hardw. *Ill. Ind. Zool.*)

SYN. Kitta venatoria, Gray.
Corvus sinensis (?), Boddaert.
C. speciosus (?), Shaw.
Corapica bengalensis, Lesson.

Inhabits S. E. Himalaya, Assam, Arracan, Tenasserim provinces.

C. puella, Blyth, J. A. S. XVIII.

Inhabits Ceylon.

Genus PSILORHINUS, Ruppell.

Ps. magnirostris, Blyth, J. A. S. XV. 27. Inhabits Ya-ma--dong mountains, separating Arracan from Pegu.

Ps. occipitalis, Blyth (J. A. S. XV. 27 Gould's 'Century,' pl. 41).

SYN. Pica erythrorhyncha apud Vigors and Gould.
Corvus sinensis (?), Linn.
C. erythrorhynchos (?), Boddaert.
Coracias melanocephala (?), Latham.
Ps. albicapillus, Blyth (the young).

Nil-khant, Masuri, Inhabits Himalaya: China?

Ps. flavirostris, Blyth (J. A. S. XV. 28).

Inhabits Sikim; Kashmir (vide J. A. S. XV. 284).

C. JAYS.

Genus GARRULUS, Brisson.

G. ornatus, Gray (Hardw. *Ill. Ind. Zool.* Gould's 'Century,' pl. 38).

SYN. G. bispecularis, Vigors.

Inhabits Himalaya.

G. gularis. (Hardw. *Ill Ind. Zool.* Gould's 'Century,' pl. 36, 40).

SYN. G. lanceolatus, Vigors.
G. Vigorsii, Gray (the young).

Ban-sarra, of hill men (Hutton). Inhabits Himalaya.

Genus PERISOREUS. Pr. Bonap.

P. infaustus (Gould's 'Bird's of Europe,' pl. 215).

SYN. Corvus infaustus, L.
C. sibiricus, Boddaert.
C. russicus, Gmelin.
C. mimus, Pallas.

Inhabits northern regions of the Old Continent.

D. Insertæ sedis.

Genus LOPHOCITTA, G. R. Gray.

L. galericulata (LeVaillant, *Ois. de Par.* pl. 42).

SYN. Corvus galericulatus, Cuv.
Lanius scapulatus, Licht.
L. coronatus, Raffles, (the female).
Vanga cristata, Griffith's An. Kingd.

Burong Jeri, Malayan. Inhabits Malayan peninsula: Sumatra: Java.

Genus TURNAGRA (?,) Lesson.

T. (?) striata (Gould's 'Century,' pl. 37)

SYN. Garrulus striatus, Vigors.

Inhabits Himalaya.

Subfam. GARRULACINÆ.

Genus GARRULAX, Lesson.

G. Belangeri, Lesson (*Zoologie du Voy. de M. Belanger*).

Inhabits Tenasserim provinces ; Pegu.

G. leucolophos, (Gould's 'Century,' pl. 18)

SYN. Corvus leucolophos, Hardwicke.

Inhabits Himalaya ; Assam ; Sylhet ; Arracan.

G. chinensis.

SYN. Lanius chinensis, Scopoli.
Corvus auritus, Daudin.
Turdus shanhu et T. melanopis, Gmelin.
Crateropus leucogenys, Blyth, J. A. S. XI. 180.

Inhabits China.

G. albogularis.

SYN. Ianthocincla albogularis, P. Z. S. 1835, p. 187.
Cinclosoma albigula, Hodgson, As. Res. XIX. 146.

Inhabits Himalaya.

G. pectoralis.

SYN. Ianthocincla pectoralis, Gould, P. Z. S. 1835, p. 186.
Cinclosoma grisaure, Hodgson, As. Res. XIX. 146.
G. melanotis, Blyth, J. A. S. XII. 149, variety.

Inhabits Himalaya ; Arracan ; Tenasserim Provinces.

G. moniliger.

SYN. Cinclosoma moniliger, Hodgson, As. Res. XIX. 147.
Ianthocincla pectoralis (?) apud McClelland, P. Z. S. 1839, p. 160.
G. McClellandii (?), Blyth, J. A. S. XII. 949.

Inhabits S. E. Himalaya ; Assam : Sylhet Tippera ; Arracan ; Tenasserim Provinces.

G. cærulatus.

SYN. Cinclosoma cœrulatum, Hodgson, As. Res. XIX. 147.

Inhabits S. E. Himalaya.

G. ocellatus (Gould's 'Century,' pl. 15.)

SYN. Cinclosoma ocellatum, Vigors.

Inhabits Himalaya.

G. rufogularis.

SYN. Ianthocincla rufogularis, Gould, P. Z. S. 1835, p. 187.
Cinclosoma rufimenta, Hodgson, As. Res. XIX. 148.

Inhabits S. E. Himalaya ; Cherra Punji ; Tippera.

G. squamatus (Jardine and Selby's *Ill. Orn.*, 2nd series, pl. 4).

SYN. Ianthocincla squamata, Gould, P. Z. S. 1835, p. 47.
Cinclosoma melanura, Hodgson. As. Res. XIX. 147.

Inhabits S. E. Himalaya.

G. subunicolor, Hodgson (described J. A. S. XII. 952 ; XIV. 599).

Inhabits S. E. Himalaya.

G. affinis, Hodgson (described J. A. S. XII. 950).

Inhabits S. E. Himalaya.

G. variegatus (Gould's 'Century,' pl. 16).

SYN. Cinclosoma variegatum, Vigors.
G. Abaillei, Lesson.

Inhabits N. E. Himalaya.

G. chrysopterus.

SYN. Ianthocincla chrysoptera, Gould, P. Z. S. 1835, p. 48.

Inhabits S. E. Himalaya.

G. erythrocephalus (Gould's 'Century,' p. 17.)

SYN. Cinclosoma erythrocephalum, Vigors.

Inhabits N. E. Himalaya.

G. ruficollis (Jardine and Selby's *Ill. Orn.* 2nd series, pl. 21).

SYN. Ianthocincla ruficollis, Jardine and Selby.
I. lunaris, McClelland, P. Z. S. 1839, p. 160.

Inhabits S. E. Himalaya ; Assam ; Sylhet ; Tippera.

G phœniceus (Gould's *Icones Avium*).

SYN. Ianthocincla phœnicea, Gould.
Crateropus puniceus, Blyth, J. A. S. XI, 180.

Inhabits S. E. Himalaya.

G. cachinnans ('Madras Journal,' X, 255, pl. 7).

SYN. Crateropus cachinnans, Jerdon.
Cr. Lafresnayii, Ad. Delessert.
Cr. Delesserti, LaFresnaye (nec Cr. Delesserti, Jerdon),

Inhabits Nilgiris.

G. (?) lineatus.

SYN. Cinclosoma lineatum, Vigors.
C. setiferum, Hodgson, As. Res. XIX. 148.

Inhabits Himalaya.

G. (?) imbricatus, Blyth, J. A. S. XII. 951.

Inhabits Bootan.

Genus ACTINODURA, Gould.

Act. Egertoni, Gould, P. Z. S. 1836, p. 18.

SYN. Leiocincla plumosa, Blyth, J. A. S. XII. 953.

Inhabits S. E. Himalaya ; Assam ; Sylhet.

Act. Nipalensis.

SYN. Cinclosoma nipalense, Hodgson, As. Rs. XIX. 145 (type of Ixops, Hodgson).

Inhabits S. E. Himalaya.

Genus SIBIA, Hodgson (*Sibya*, Nepal).

S. picoides, Hodgson (described J. A. S. VIII. 38).

Syn. Heterophasia cuculopsis, Blyth, J. A. S. XI. 187.

Inhabits S. E. Himalaya.

S. capistrata.

Syn. Cinclosoma capistratum, Vigors.
C. melanocephalum (?), Royle's List.
S. nigriceps, Hodgson.

Inhabits Himalaya.

Genus CUTIA, Hodgson.

C. nipalensis, Hodgson (J. A. S. XV. 772; XVI. 110).

Khatya, or *Khutya*, Nepal. Inhabits S. E. Himalaya.

Genus PTERUTHIUS, Swainson.

Pt. rufiventer, Blyth, J. A. S. XI. 183; XII. 954 (Gray's *Ill. Gen. Birds*).

Inhabits S. E. Himalaya.

Pt. erythropterus (Gould's 'Century,' pl. 11).

Syn. Lanius erythropterus, Vigors.

Inhabits Himalaya.

Subfam. LEIOTHRICANÆ.

Genus LEIOTHRIX, Swainson.

L argentauris.

Syn. Mesia argentauris, Hodgson, Ind. Rev. 1838, p. 88.

Inhabits S. E. Himalaya.

L. luteus.

Syn. Sylvia lutea, Scopoli.
Tanagra sinensis, Gmelin.
Parus furcatus, Temminck.
Bahila calipyga, Hodgson. Ind. Rev. 1838, p. 88.

Inhabits Himalaya ; China ?

L. strigula (Ad. Delessert, *Souvenirs*, &c. pt. 2, pl. 8).

Syn. Siva strigula Hodgson, Ind. Rev. 1838, p. 89.
Muscicapa variegata, Dellessert, Mag. de Zool 1840, Ois., t. 20.
L. chrysocephala, Jameson.

Inhabits Himalaya.

L. cyanouroptera.

Syn. Siva cyanouroptera, Hodgson, Ind. Rev. 1838, p. 88.
Leiothrix lepida, McClelland, P. Z. S. 1839, p. 162.

Inhabits Himalaya; Assam.

L. ignitincta.

Syn. Minla ignitincta, Hodgson, Ind, Rev. 1838, p. 32.
L. ornata, McClelland, P. Z. S, 1839, p. 162.

Inhabits S. E. Himalaya ; Assam.

L. cinerea.

Syn. Minla cinerea, Blyth, J. A. S. XVI, 449.

Inhabits S. E. Himalaya.

L. castaniceps.

Syn. Minla castaniceps, Hodgson, Ind. Rev. 1838, p. 33.

Inhabits Himalaya.

L. vinipectus.

Syn. Siva vinipectus, Hodgson, Ind. Rev. 1828, p. 89.

Inhabits S. E. Himalaya.

L. chrysotis (chrysopterus ? seu leucotis ?)

Syn. Proparus chrysotis, Hodgson, J. A. S. XIII. 938 ; XVI. 448.

Inhabits S. E. Himalaya.

Genus IXULUS, Hodgson.

I. occipitalis, J. A. S. XIV. 552.

Syn. Siva occipitalis, Blyth, J. A. S. XIII. 937.

Inhabits Sikim.

I. flavicollis.

Syn. Yuhina ? flavicollis, Hodgson, As. Res. XIX. 167.

Inhabits Himalaya (Masuri to Bootan).

Genus YUHINA, Hodgson.

Y. gularis, Hodgson (*As. Res.* XIX. 166).

Inhabits S. E. Himalaya.

Y. occipitalis, Hodgson (*As. Res.* XIX. 166).

Inhabits S. E. Himalaya.

Genus MYZORNIS, Hodgson.

M. pyrrhoura, Hodgson, (J. A. S. XII. 984; XIV. 561).

Genus ERPORNIS, Hodgson.

E. xantholeuca, Hodgson, J. A. S. XIII. 380.

Syn. E. xanthochlora, Hodgson, P. Z. S. 1845, p. 33.

Inhabits S. E. Himalaya; Arracan; Malayan peninsula.

Subfam. PARINÆ.

(A. *Paradoxornis* sub-series.)

Genus CONOSTOMA, Hodgson.

C. æmodius, Hodgson (J. A. S. X. 856).

Inhabits Nepal.

Genus HETEROMORPHA, Hodgson.

H. ruficeps (J. A. S. XII. 1010, pl. .)

Syn. Paradoxornis ruficeps, Blyth, J. A. S. XI. 187.

Inhabits Sikim ; Bootan ; Arracan.

H. (? *Paradoxornis* ?) *caniceps*, Blyth, J. A. S. XVIII. Inhabits Sikim.

Genus SUTHORA, Hodgson.

S. ruficeps.

SYN. Chleuasicus ruficeps, Blyth, J. A. S. XIV, 578.

Inhabits Sikim.

S. nipalensis, Hodgson (*Ind. Rev.* 1838, p. 32). Inhabits S. E. Himalaya.

S. fulvifrons, Hodgson (J. A. S. XIV. 579). Inhabits Nepal.

Genus FULCUNCULUS, Vieillot.

F. frontatus (Gould's B. A. Vol. II. pl. 79).

SYN. Lanius frontatus, Latham.

Inhabits E. and S. Australia.

Genus PARUS, Linn.

P. flavocristatus, Lafresnaye.

SYN. P. sultaneus, Hodgson, Ind. Rev. 1837, p. 81.
Melanochlora flavocristata et M. sumatrana, Lesson.

Inhabits Nepal; Sikim; Bootan; Assam; Malayan peninsula; Sumatra.

P. monticolus, Vigors (Gould's 'Century,' pl. 29, f. 2). Inhabits Himalaya.

P. cinereus, Vieillot (*Pl. Col.* 287, f. 2; LeVaillant, *Ois. d' Afr.* pl. 139, f. 1).

SYN. P. atriceps, Horsfield, Linn. Tr. XIII. 160.
P. nipalensis, Hodgson, Ind. Rev. 1838, p. 31.

Inhabits Himalaya; Assam; Central and S. India; Ceylon; Java.

P. xanthogenys, Vigors (Gould's 'Century,' pl. 29, f. 1).

SYN. P. aplonotus, Blyth, J. A. S. XVI. 444.

Inhabits N. W. Himalaya; Central and South India.

P. spilonotus, Blyth, J. A. S. XVIII.

SYN. P. xanthogenys apud Blyth, J. A. S. XVI. 445.

Inhabits Himalaya.

P. rufonuchalis, Blyth, J. A. S. XVIII.

Inhabits Tyne range, beyond Simla.

P. melanolophos, Vigors (Gould's 'Century,' pl. 30, f. 2). Inhabits N. W. Himalaya.

P. rubidiventris, Blyth, J. A. S. XVI. 445. Inhabits Nepal.

P. dichrous, Hodgson, J. A S. XIII. 943. Inhabits Nepal.

P. iouschistos, Hodgson, J. A. S. XIII. 943. Inhabits Nepal.

Genus ORITES, Mœrrhing.

O. erythrocephalus (Gould's 'Century,' pl. 30, f. 1).

SYN. Parus erythrocephalus, Vigors.

Inhabits Himalaya,

Genus SYLVIPARUS, Burton.

S. modestus, Burton, P. Z. S. 1835, p. 154.

SYN. Parus sericophrys, Hodgson, J. A. S. XIII. 942; XVI. 446.

Inhabits Himalaya.

Genus ÆGITHALUS, Vigors.

O. flammiceps, Burton, P. Z. S., 1835, pl. 153.

SYN. Dicæum sanguinifrons, A. Hay, J. A. S. XV. 44.

Inhabits N. W. Himalaya.

Subfam. PARADISEINÆ.

B. Sub-series with bills of medium length.

Genus PARADISEA, L.

P. apoda, Lin. (*Pl. Enl.* 254; Vieillot, *Ois. de Par.* t. 1.)

SYN. P. major, Shaw.

Inhabits N. Guinea.

P. minor, Shaw (Vieillot, *Ois. de Par.* pl. 2). Inhabits N. Guinea.

P. rubra, Cuvier (Vaill. *Ois. de Par.* t. 3).

SYN. P. sanguinea, Shaw.

Inhabits N. Guinea.

Genus CICINNURUS, Vieillot.

C. regius (*Pl. Enl.* 496; Vaill. *Ois de Par.* t. 7).

SYN. Paradisea regia, L.
C. spinturnix Lesson.

Inhabits N. Guinea.

Subfam. GRACULINÆ.

A. Maina and Starling sub-series. Inhabiting Europe, Asia, and N. Africa.

a. Of more bulky form; gait saltatory.

Genus GRACULA, L.

Gr. javanensis, Osbeck (Edwards, pl. 17, lower figure).

SYN. Mainatus major, Brisson described J. A. S., XV, 31.
M. sumatranus (?), Lesson.
Gr. religiosa, L., var. B., Latham.

Inhabits Malayan peninsula and archipelago; Nicobar Islands.

Gr. intermedia, A. Hay (J. A. S. XV. 32). *Paharia Maina*, Hind.; *Thale-gu*, Arracan, Inhabits Nepal; Assam; Arakan; Tenasserim Provinces.

Gr. religiosa, L. (Edward's pl. 17, upper figure).

SYN. Eulabes indica, Cuvier.
Pastor musicus, Daudin.
Mainatus javanus, Lesson, apud Jerdon, J. A. S. XII. 178 (bis).

Inhabits S. India; Ceylon.

Gr. ptilogenys, Blyth, J. A. S., XV. 285.

Inhabits Ceylon.

Genus AMPELICEPS, Blyth.

A. coronatus, Blyth, J. A. S., XI. 194; XV. 32.

b. **Of less bulky form, the gait ambulatory.**

Genus ACRIDOTHERES, Vieillot.

Acr. tristis (*Pl. Enl.* 219).

SYN. Paradisea tristis, L.
Gracula gryllivora, Daudin.

Bhat Salik, Beng.: *Maina*, H.: *Bunnee*, or *Saloo* (Tickell): *Saloonku*, Mahr: *Gorwuntra*, Can. (Jerdon). *Dza-ret-monk*, Arracan.

Acr. ginginianus (Vaill. *Ois. d'Afr.* t. 95, f. 2).

SYN. Turdus ginginianus, Latham.
Gracula grisea, Daudin (t. 95, f. 2).

Gang Salik, Beng.: *Ganga Maina*, H.: *Lali*, Sinde (Burnes.) Inhabits Bengal, Upper India, Scinde; Tenasserim Provinces.

Acr. cristatellus, (Edwards, pl. 19).

SYN. A. cristatellus, L.
Acr. fuliginosus Blyth, J. A. S. XIII. 362 (the young).

Inhabits China.

Acr. griseus.

SYN. Pastor griseus, Horsfield.
Maina cristalloides, Hodgson.
P. fuscus (?), Wagler.
P. mahrattensis (?), Sykes.

Jhont Salik (i. e. 'Crested Maina'), Beng.; *Dza-ret-monk-teng*, Arracan: *Jallak Sungu*, Java. Inhabits India generally (?); Bengal; Nepal; Arracan; Tenasserim; Penang; Sumatra; Java.

Genus STURNUS, Lin.

St. temporalis.

SYN. Pastor temporalis, Tem.

Inhabits China.

St. contra, L. (*Pl. Enl.* 280; Edwards pl. 187).

SYN. St. capensis, L.
Pastor auricularis, Drapiez.
P. jalla, Horsfield.

Ablaka, H.: *Guia-leggra*, Beng.: *Qwyai-dzaret*, Arracan: *Jallak*, or *Jallak-uring*, Java. Inhabits India; Sumatra; Java.

St. vulgaris, L.

SYN. st. indicus, Hodgson.

Telia Maina, Hind.: *Saruk*, Kabul. Inhabits Europe; Asia: common in Himalaya. Upper Bengal?

St. unicolor, Marmora.

Inhabits N. Africa; Sardinia: and a more brilliantly glossed variety in Afghanistan.

Genus PSAROGLOSSA, Hodgson.

Ps. spiloptera (Gould's 'Century,' pl. 34).

Syn. Lamprotornis spilopterus, Vigors.

Puli, Masuri. Inhabits Himalaya.

Genus STURNIA, Lesson.

St. sericea (Brown's 'Zoology,' pl. 21).

SYN. Sturnus sericeus, Latham.

Inhabits China.

St.——? Inhabits Ceylon.

St. erythropygia, Blyth, J. A. S. XV. 34.

Inhabits Nicobar islands.

St. Blythii (Jerdon's *Ill. Ind. Orn.* pl. 22).

SYN. P. malabaricus apud Jerdon, Madr. Journ. XI, 22.
Pastor Blythii, Jerdon.
St. Dominicana (?), apud Blyth. J. A. S. XIII. 363.

Inhabits India; Malabar.

St. malabarica.

SYN. Turdus malabaricus, Gmelin (No. 51, nec No. (125).
Pastor malabaricus, var., apud Jerdon, Madr. Journ. XI, 23.
P. nanus (?) et Gracula cinerea (?), Lesson.

Pawi, Hind. Inhabits India generally (but somewhat local), Assam; Arracan; Tenasserim.

St. Pagodarum.

SYN. Turdus pagodarum, Gm.
T. melanocephalus, Vahl.
Sturnus subroseus, Shaw (apud G. R. Gray.)

Monghyr Pawi, Beng. Inhabits India generally; Assam, Arracan (Ramree). Non-resident in Lower Bengal, but common in the jungles westward.

St. cana, Blyth, J. A. S. XIII. 365.

N. B. This is the young of a species nearly allied to, but distinct from, the next, some of whose reputed synonymes perhaps belong to it.

Inhabits China (Macao).

St. daurica (*Pl. Enl.* 627, f. 2).

SYN. Turdus dauricus et T. sturninus, Pallas.
T. dominicanus, Gmelin.
Pastor malayensis, Eyton.

Inhabits Malayan peninsula; China (?).

Genus CALORNIS, G. R. Gray.

C. *affinis*, A. Hay, J. A. S. XV. 36,369.

Inhabits Tippera; Arracan; Nicobar islands; Tenasserim (?)

C. *cantor* (*Pl. Col.* 199, f. 1. 2).

SYN. Turdus cantor, Gmelin.
T. chalybeus et T. strigatus, Horsfield.

Biang, *Kala loyang*, and *Burong Kling*, Malay. *Sling*, Java. Inhabits Malayan peninsula; Sumatra; Java.

Genus PASTOR, Temminck.

P. roseus (Edwards, 20; *Pl. Enl.* 250).

SYN. Turdus roseus, L.
T. suratensis, Latham.

Tillyer, H. (Jerdon). *Golabi Maina*, H. Beng.: *Bya*, Sinde (Burnes). Inhabits Europe, Asia and N. Africa; very common in Hindustan.

Genus ENODES, Temminck.

E. erythrophrys (Tem. *Pl. Col.* 267).

Syn. Lamprotornis erythrophrys, Tem.

Inhabits Moluccas, Java.

Genus MINO, Lesson.

M. calvus (*Pl. Enl.* 200).

Syn. Gracula calva, L.

Inhabits Moluccas; Philippines.

Fam. FRINGILLIDÆ.

Subfam. PLOCEINÆ.

Genus PLOCEUS, Cuvier.

Pl. hypoxanthus ? (Pl. Col).

Syn. Loxia hypoxantha (?), Daudin.
Pl. philippinus apud Horsfield, (Lin. Tr. XIII, 160,) et Temminck ; nec apud Strickland, J. A. S. XII. 945.

Inhabits Java ; Philippines.

Pl. philippinus (*Pl. Enl.* 135, f. 2).

Syn. Loxia philippina, T. (apud Strickland.)
Pl. baya, Blyth J. A. S. XII. 945.

Baya, H. : *Chindora*, and *Tal Babie*, Beng. Inhabits India generally ; Burmese countries ; Malayan peninsula ; Sumatra ?

Pl. manyar.

Syn. Fringilla manyar, Horsfield, Lin. Tr. XIII. 160.
Euplectes flaviceps, Swainson.
Eu. striatus, Blyth, J. A. S. XI. 873, and XII. 181 (bis).
Eu. bengalensis (?) apud Jerdon, Catal.
Ploceus flaviceps (?), Cuv.

Inhabits Bengal ; Nepal ; Assam ; Scinde ; S. India ; Java.

Pl. bengalensis (Edwards, pl. 189).

Syn. Loxia bengalensis, L.
L. regina, Boddaert.
Coccothraustes chrysocephala Vieillot.
Euplectes albirostris, Swainson.

Sarbo Baya, Hind. Inhabits Bengal.

Subfam. ESTRELDINÆ.

Genus MUNIA, Hodgson.

M. *maja* (Edwards pl. 306, f. 1).

Syn. Loxia maja, L.
L leucocephala, Raffles.
Maia sinensis Brisson.

Inhabits Malayan peninsula ; Sumatra.

M. ferruginosa.

Syn. Loxia ferruginosa, Latham.
La Maina, Buffon.

Inhabits Java.

M. rubronigra, Hodgson, *As. Res.* XIX. 153.

Syn. Lonchura melanocephala, McClelland, P. Z. S. 1839, p. 163.
Loxia malacca, Var., Lath.
L. indica, Lath.—Young ?

Pora Munia : *Nukroul*, Masuri. Inhabits Bengal ; Nepal ; Assam ; Arracan ; Tenasserim. Nec *Chinese Sparrow*, Edwards, pl. 43, on which is founded *Coccothraustes sinensis*, Brisson, *Loxia malacca*, 3, Linn., *Malacca Grosbeak*, var. *A*, Latham, and which is also *Loxia atricapilla*, Vieillot, *Dict. Class, d'Hist. Nat.*

M. malacca Edwards, pl. 355).

Syn. Loxia malacca, L.
Coccothraustes javensis, Brisson.
Amadina sinensis apud Blyth, J. A. S. XV. 36.

Nukl-nore, H. (Jerdon). Inhabits Indian peninsula ; Ceylon ; rare in Lower Bengal.

M. undulata (Edwards, pl. 40).

Syn. Loxia undulata and
L. punctulata, var. A. Latham.
L. bicolor, Latham, the young.
Munia lineoventer, Hodgson.

Tela Munia, H : *Simbaz*, Masuri : *Sing baz* or *Sheen baz* (Jerdon). Inhabits India generally ; Arracan ; Tenasserim.

M. punctularia.

Syn. Loxia punctularia, L.
Fringilla nisoria, Temminck.

Inhabits Malayan peninsula and Archipelago.

M. molucca ? (*Pl. Enl.* 139, f. 2).

Syn. Loxia molucca, (?) L.
Munia acuticauda, Hodgson.

Inhabits Nepal ; Malayan peninsula.

M. pectoralis.

Syn. Amadina pectoralis, Jerdon, J. A. S. XIII. 949, described in Madras Journ. XIII. 171.

Inhabits S. India.

M. striata.

Syn. Loxia striata, Latham.
Fringilla leuconota, Temminck.

Inhabits Indian peninsula ; Ceylon : Arracan ; not common in Lower Bengal.

M. melanictera ?

Syn. Fringilla melanictera (?), Gmelin.
Amadina leucogastra, Blyth, J. A. S. XV. 286.

Inhabits Malayan peninsula.

M. malabarica.

Syn. Loxia malabarica, L.
Lonchura cheet, Sykes.
Loxia bicolor, Tickell (nec Latham).

Sar Munia ; *Piduri*, B. : *Chorga*, H. Inhabits India generally ; Ceylon.

Genus ERYTHRINA.

E. prasina (Tem. Pl. *Col*, 96).

Syn. Fringilla prasina, Sparrman (nec Latham).
Fr. sphecura, Temminck.
Emberiza quadricolor, Gmelin.
E. varidis, Swainson.
Emberiza cyanopis (?), Gmelin.

Inhabits Indian Archipelago.

Genus AMADINA, Swainson.

A. (?) *oryzivora* (*Pl. Enl.* 388 ; Edwards, pl. 41, 42).

SYN. Loxia oryzivora, L.

Inhabits Indian Archipelago.

Genus ESTRELDA.

E. amandava (*Pl. Enl.* 115, f. 2, 3; Edwards, pl. 355, f. 1).

SYN. Fringilla amandava, L.
Fr. punicea, Horsfield, Linn. Tr. XIII. 160.
Fr. senegalensis, Vieillot (vide Dict. Class).

Lal or *Lal Munia*, H.: *Lal* (male), *Munia* (female), Masuri. Inhabits India generally and Malay countries.

E. formosa.

SYN. Fringilla formosa, Latham.

Inhabits Central India.

Genus SCISSIROSTRUM, Guerin.

Sc. Pagei. Guerin (*Mag. de Zool.*)

Inhabits Moluccas.

Subfam. PASSERINÆ.

Genus PASSER, Ray.

P. indicus, Jardine and Selby (*Ill. Orn.* pl. 118).

Charia, or *Chata*, B.: *Gourya*, H. Inhabits India generally; Ceylon; Arracan.

P. pyrrhonotus, Blyth, J. A. S. XIII. 946. Inhabits Scinde.

P. salicaria (Savigny, *Desc. Egypt, Nat. Hist.*, I, pl. f. 7).

SYN. Fringilla salicaria.
Fr. hispanioleusis, Temminck.

Inhabits N. Africa; Sardinia; Sicily; Syria; Afghanistan.

P. cinnamomeus.

SYN. Pyrgita cinnamomea, Gould, P. Z. S. 1835, p. 85.

Inhabits N. W. Himalaya.

P. flaveolus, Blyth, J. A. S. XIII. 946.

Inhabits Arracan; Tenasserim.

P. montanus (*Pl. Enl.* 267, f. 1).

SYN. Fringilla montana, L.

Inhabits Temperate parts of Europe and Asia; China; Burmah; Malayan peninsula; Java.

Genus PETRONIA, Pr. Bonap.

P. stulta (*Pl. Enl.* 225).

SYN. Fringilla stulta et Fr. bononiensis, Gmelin.
Fr. petronia, L.
Petronia rupestris, Bonap.

Inhabits Afghanistan; W. Asia; S. Europe; N. Africa.

P. flavicollis.

SYN. Fringilla flavicollis, Franklin, P. Z. S. 1831, p. 120.

Raji, or *Jungli Churia*, H. Inhabits India generally, but not on the alluvium of Lower Bengal.

Subfam. FRINGILLINÆ.

Genus MONTEFRINGILLA (?), Brehm.

M. (?) nemoricola.

SYN. Fringillauda nemoricola, Hodgson, As. Res. XIX, 158.

Inhabits Himalaya.

Genus FRINGILLA, L.

Fr. montifringilla, L. (*Pl. Enl.* 54, f. 2).

SYN. Loxia hamburghia, Gemelin.

Inhabits northern and temperate parts of Europe and Asia; Afghanistan; N. W. Himalaya.

Genus PYRRHOSPIZA, Hodgson.

P. punicea, Hodgson, J. A. S. XIII. 953.

SYN. Propyrrhula rubeculoides, Hodgson, P. Z. S. 1845, p. 36.

Inhabits Himalaya; Tibet.

Genus PROCARDUELIS, Hodgson.

Pr. nipalensis, Hodgson.

SYN. Carduelis nipalensis, Hodgson, As. Res. XIX. 157.
Linota saturata et. L. fusca (?), Blyth, J. A. S. XI, 92-3.

Inhabits S. E. Himalaya.

Genus CARPODACUS.

C. rodopepla (Gould's 'Century,' pl. 31, f. 1).

SYN. Fringilla rodopepla, Vigors.

Inhabits S. E. Himalaya.

C. rodochrous (Gould's 'Century,' pl. 31, fig. 2).

SYN. Fringilla rodochroa, Vigors.

Inhabits Himalaya.

C. erythrinus ? (Vieillot, *Ois. Chant.* pl. 65).

SYN. Fringilla erythrina (?), Meyer.
Coccothraustes rosea, Vieillot.
Loxia madagascariensis, L.
Pyrrhulinota roseata, Hodgson, P. Z. S. 1845, p. 36.

Tuti, or *Surkhar Tuti*, H. Inhabits India generally; Arracan.

Genus HÆMATOSPIZA, Hodgson.

H. boetonensis ?

SYN. Loxia boetonensis ? Latham.
L. indica ? Gmelin, nec Latham.
Corythus sepahi, Hodgson, As. Res. XIX. 151.

Inhabits Himalaya.

Genus PYRRHULA, Mœrhing.

P. nipalensis, Hodgson, J. A. S. XIX. 155. Inhabits S. E. Himalaya.

P. erythrocephalus, Vigors (Gould's 'Century,' pl. 32). Inhabits Himalaya.

Genus PROPYRRHULA, Hodgson.

Pr. subhimachala, Hodgson.

SYN. Corythus subhimachalus, Hodgson, As. Res. XIX. 152.

Inhabits N. E. Himalaya.

Genus LOXIA, L.

L. curvirostris, L. (*Pl. Enl.* 218). Inhabits Europe; Afghanistan.

L. himalayensis, Hodgson, J. A. S. XIII. 952.

SYN. L. himalayana, Hodgson, P. Z. S. 1845, p. 35.

Inhabits Himalaya.

Genus CHRYSOMITRIS, Boie.

Chr. spinoides (Gould's 'Century,' pl. 33, f. 2).

SYN. Carduelis spinoides, Vigors.

Inhabits Himalaya.

Genus CARDUELIS, Stephens.

C. caniceps, Vigors (Gould's Century, pl. 33, f. 1; Royle's *Ill. Him. Bot.* pl. 8, f. 2).

SYN. Fringilla orientalis, Eversmann.
Shiru, H.

Inhabits Middle Asia; Afghanistan; Kashmir, &c.

Genus LIGURINUS, Brisson.

L. sinicus (*Pl. Enl.* 257, f. 3).

SYN. Fringilla sinica, L.
Loxia sinensis Gmelin.
Lig. xanthogramma? apud Blyth, J. A. S. XIII. 956; vide XVI. 470.

Inhabits China.

Genus SERINUS (?), Brehm.

S. (?) *aurifrons.*

SYN. Emberiza aurifrons, Blyth, J. A. S. XVI. 476.

Inhabits Tyne range, beyond Simla.

Genus COCCOTHRAUSTES, Brisson.

C. melanoxanthus, Hodgson, *As. Res.* XIX. 150. Inhabits S. E. Himalaya.

C. carnipes, Hodgson, *As. Res.* XIX, 151.

SYN. C. speculigerus (?), Brandt.

Inhabits Himalaya.

C. icterioides, Vigors (Gould's 'Century,' pl. 45). Inhabits N. E. Himalaya.

Subfam. EMBERIZINÆ.

Genus EMBERIZA, L. (*Gundam* H.)

E. albida, Blyth, J. A. S. XVIII. Inhabits Tyne range, beyond Simla.

Genus EUSPIZA, Bonap.

Eu. simillima, Blyth, J. A. S. XVIII.

SYN. Emberiza melanocephala of India, Auctorum.
Tanagra radis (Mus. Carls), Lath.,—the female?

Inhabits S. India. (*N B.* Differs from Eu. melanocephalus in its much smaller size; the closed wing measuring 3½ in. instead of 4 in., &c.)

Eu. luteola (G. R. Gray, *Ill. Gen. Birds*, pl. ,).

SYN. Emberiza luteola (Mus. Carls, fasc. IV, t. 93), Latham,—the female.
E. icterica, Eversmann.
E. brunniceps, Brandt.
Loxia flavicans, var. A. Latham.

Inhabits plains of India; Afghanistan, &c.

Eu. flavogularis, Blyth, J. A. S. XVIII.

SYN. Emberiza aureola of India, Auctorum.

Inhabits Nepal; Tippera; Arrakan.

Eu. Lathami (Jardine and Selby, *Ill. Orn.* pl. 132).

SYN. Emberiza Lathami Gray.
E. cristata, Vigors.
E. subcristata, Sykes (the female).
E. erythroptera Jardine and Selby.
E. nipalensis, Hodgson.
Fringilla melanictera, Gmelin.

Inhabits plains and lower hills of India, China, &c.

Eu. hortulana (*Pl. Enl.* 247, f. 1).

SYN. Emberiza hortulana, L.
E. Buchanani, Blyth, J. A. S. XIII. 957.
E. chlorocephala apud Hodgson?

Inhabits Europe and Asia; India.

Eu. melanops.

SYN. Emberiza melanops Blyth, J. A. S. XIV. 554.
E. chlorocephala of Nepal apud Hodgson (?), vide J. A. S. XV. 39.

Inhabits Tippera.

Eu. fucata.

SYN. Emberiza fucata, Pallas.
E. lesbia apud Temminck (nec Gmelin).
E. cia apud Jerdon, Catal.

Putthur Chirta, (H. Jerdon). Inhabits Bengal; Deyra Doon; S. India?

Eu. pusilla ?

SYN. Emberiza pusilla (?), Pallas.
E. sordida, Hodgson, J. A. S. XIII, 958 (the female); male described, J. A. S. XV. p. 40.
E. (Ocyris) oinops, Hodgson, P. Z. S. 1845, p. 35.

Inhabits S. E. Himalaya.

Eu. cia (*Pl. Enl.* 30, f. 2; 511, f. 1).

SYN. Emberiza cia, L.
E. barbata, Scopoli.
E. lotharingica, Gmelin.

Inhabits Europe and Asia. Specimens from near Masuri. Capt. Hutton (1848.)

Subfam. ACCENTORINÆ.

Genus ACCENTOR, Bechstein.

A. nipalensis, Hodgson, J. A. S. XII. 958; P. Z. S. 1845, p. 34.

SYN. A. immaculatus, Hodgson, (in abraded plumage.)
A. cacharensis, Hodgson (in first plumage.)

From Nepal. B.

A. variegatus Blyth, J. A. S. XII. 958 (described XI. 187). Inhabits Sikkim.

A. strophiatus, Hodgson, J. A. S. XII. 959, P. Z. S. 1845, p. 34. Inhabits Himalaya generally

A. atrogularis, Hutton, J. A. S. XVIII. Inhabits Tyne range, beyond Simla.

A. mollis, Blyth, J. A. S. XIV. 581. Inhabits Sikkim.

Subfam. ALAUDINÆ.

Genus ALAUDA, L.

A. arvensis, L. (*Pl. Enl.* 363, f. 1).

SYN. A. cœlipeta Pallas,
A. italica, Gmelin. } apud G. R. Gray.
A. longipes, Latham,
A. dulcivox, Hodgson.

Inhabits Europe and Asia: Sub-Himalaya.

A. gulgula, Franklin.

SYN. A. gangetica, Blyth.
A. gracilis, Blyth, var.
A. leiopus, Hodgson, var.

Inhabits India generally.

A. malabarica, Scopoli.

SYN. A. deva, Sykes,

Inhabits S. India.

Subgenus CALANDRELLA, Kaup.

C. brachydactyla.

SYN. Alauda brachydactyla. Temminck.
A. calandrella, Bonelli.
A. arenaria, Stephens.
A. dukhunensis, Sykes.
Emberiza baghaira. Franklin.
E. olivacea, Tickell, J. A. S. II. 578.
Baay-geyra Lark, Latham.

Baghairi, H. *Ortolan* of Europeans in India. Inhabits Europe, Asia, and N. Africa. Common in India.

C. raytal, Blyth.

SYN. Alauda raytal, Buchanan Hamilton, J. A. S. XIII. 962, XV. 40.

Inhabits dry sand-dunes of Ganges, Indus, &c.

Genus CALERIDA, Boie.

G. chendoola.

SYN. Alauda chendoola, Franklin.
A. gulgula apud Sykes.
Crested Calandre Lark, Latham.

Chendul, H. Inhabits sandy plains of India.

G. Boysii, Blyth.

SYN. Certhilauda Boysii, Blyth, J. A. S. XV. 41.

Inhabits Bengal.

Genus MIRAFRA, Horsfield.

M. Hayii, Jerdon, J. A. S. XIII. 959. Inhabits Coromandel Coast.

M. affinis, Jerdon, J. A. S. XIII. 959. Inhabits Middle and S. India; Ceylon.

M. erythroptera, Jerdon, J. A. S. XIII. 958. (*Ill. Ind. Orn.*, pl. 38). Inhabits S. India.

M. cantillans, Jerdon, J. A. S. XIII, 960. Inhabits India generally; rare in Lower Bengal.

M. assamensis, McClelland, P. Z. S. 1839, pl. 162.

SYN. Alauda mirafra, Temminck (apud Jerdon, nec apud G. R. Gray).
Finch Lark, Latham.

Inhabits Bengal: Nepal; Assam.

M. phœnicura, Franklin, P. Z. S. 1831, p. 119. Inhabits S. India.

Genus PYRRHULAUDA, A. Smith.

P. grisea (*Pl. Col.* 269, f. 2).

SYN. Alauda grisea, Scopoli.
A. gingica, Gmelin.
Fringilla crucigera, Temminck.

Chak Bharái; *Dhulo Cháta*, Beng.: *Decora*, H., vulgo; *Dubhuk Chari* ('Squat Sparrow') H. (Jerdon). Inhabits India generally.

Fam. MOTACILLIDÆ.

Genus HETERURA, Hodgson.

H. sylvana, Hodgson, J. A. S. XIV. 556; P. Z. S. 1845, p. 33 (Jardine's *Contrib. Orn*, 1848, pl.   ). Inhabits Himalaya.

Genus ANTHUS, Bechstein.

Sub-genus DENDRONANTHUS, Blyth.

D. trivialis (*Pl. Enl.* 660, f. 1).

SYN. Alauda trivialis, L.
A. minor, Bewick.
Anthus arboreus, Temminck.

Inhabits Europe and N. Asia; Himalaya.

D. maculatus.

SYN. Anthus maculatus et A. brevirostris. Hodgson.

Musarichi, H. (Jerdon). Inhabits India generally.

Sub-genus ANTHUS, Auct.

A. similis, Jerdon (*Ill. Ind. Orn.* pl. 45).

SYN. Agrodoma similis, Jerdon, Madr. Journ. XI. 35.

Inhabits Nilgiris: N. W. Himalaya.

A. Rickardi, Vieillot (*Zool. Journ.* Vol. pl. 14). Inhabits Europe, Asia, and N. Specimens from the vicinity of Calcutta.

A. rufulus, Vieillot.

SYN. A. agilis apud Jerdon (nec Sy
A. malayensis, Eyton.
A. pallescens apud Su
A. pratensis of Sun
Slender Lark,

Rugail, H. (Jerdon); *Lancha-lancha*, or *Hamba Puyu*, Sum. Inhabits India generally and Malay countries.

A. striolatus, Blyth, J. A. S. XVI. 435.

SYN. A. pelopus (?), Hodgson, G. R. Gray, Brit. Mus. Catal.

Inhabits Himalaya, S. India.

A. montanus, Jerdon, J. A. S. XVI. 435.

SYN. A. rufescens apud Jerdon, Catal.

Inhabits Nilgiris.

A. campestris (*Pl. Enl.* 661).

SYN. Alauda campestris, L.
A. rufescens, Bechstein, Temminck.
A. rufulus apud Jerdon, Catal.

Chillu, H. (Jerdon). Inhabits Europe, Asia, N. Africa. Specimens from near Midnapur.

A. pratensis (*Pl. Enl.* 661, f. 2).

SYN. Alauda pratensis, L.

Inhabits Europe, Asia, N. Africa.

A. cervinus (Denon's Egypt, *Hist. Nat.* pl.).

SYN. Motacilla cervina, Pallas.
Anthus rufogularis, Brehm.
A. aquaticus ? apud Blyth, J. A. S. XVI. 437.

Inhabits S. E. Himalaya; N. Europe; N. frica.

Genus NEMORICOLA, Blyth.

N. indica (Vaill. *Ois. d' Afr.* t. 179).

SYN. Motacilla indica, Gmelin.
M. variegata, Vieillot (nec Stephens).

Mhamula, H. (Jerdon). *Nyet Rahat*, Aracan. Inhabits India generally; Burmah; alayan peninsula; Sumatra. Vicinity of alcutta at all seasons.

Genus MOTACILLA, L. (as restricted).

M. maderaspatana, Brisson (nec Linnæus; aill. *Ois. d' Afr.* t. 184).

SYN. M. maderaspatensis, Gmelin.
M. maderas et M. variegata, Stephens (nec Vieillot).
M. picata, Franklin.
Pied Wagtail, Latham.

Inhabits Hindustan generally; Rajmahl; arjiling: never in Lower Bengal.

M. alba L. (*Pl. Enl.* 652).

SYN. M. albida et M. cinerea, Gmelin.

Inhabits Europe and W. Asia; Afghanistan ? ery rare in the British Islands).

M. *dukhunensis* Sykes, P. Z. S. 1832, p. 91.

[illegible] M. alba apud Jerdon.

[illegible], H. (Jerdon). Inhabits N. W. Cenal, [illegible]. Afghanistan ?

[illegible] *luzonensis*, Scopoli.

SYN. M. alba, var. γ, Latham.
M. leucopsis, Gould, P. Z. S. 1837, p. 78.
M. alboides, Hodgson, As. Res. XIX. 190.

Khanjan, H. Inhabits Bengal; Nepal; Philippines.

M. boarula, L (*Pl. Enl.* 18, f. 1; Edwards, pl. 259).

SYN. M. Sulphurea, Bechstein.

Inhabits Europe, Asia and its Archipelago, Africa, and Australia. Specimen in summer dress, from Masuri.

Genus BUDYTES, Cuvier.

B. citreola.

SYN. Motacilla citreola, L.
M. scheltobriusk, Lepech.
B. calcaratus, Hodgson, As. Res. XIX. 190.

Zurcha, Kabul. Inhabits Asia generally, and E. Europe: Calcutta and Himalaya.

B. viridis (Brown's 'Illustrations,' pl. 33,—).

SYN. Motacilla viridis, Scopoli.
M. bistrigata, Raffles.
B. beema, Sykes.
B. flava (?) et neglecta apud Jerdon.
Wagtail Lark, Latham (young female).

Pilkya, H.; *Bessit*, Java. Inhabits India generally and Malay countries; S. Europe? N. Africa ?

B. melanocephala, Sykes, P. Z. S. 1823, p. 90; also of Lichtenstein ? Inhabits S. E. Europe; W. and Middle Asia; Hindustan.

Fam. SPHENURIDÆ.

Genus MEGALURUS, Horsfield.

M. palustris, Horsfield (P. C. 65, f. 2); . A. S. XIII. 372.

SYN. Malurus marginalis, Reinwardt.

Larri-angon, Jav. Inhabits Bengal; Tippera; Arracan; Java.

Genus SPHENURA, Lichtenstein.

Sph. striata (J. A. S. XIII. 373).

SYN. Megalurus ? striatus, Jerdon, Madr. Journ. XIII. 169 (the female).
Dasyornis locustelloides, Blyth, J. A. S. XI. 602.

Inhabits Bengal; S. India.

Genus SPHENÆACUS (?), Strickland.

Sph. (?) Burnesii.

SYN. Eurycercous Burnesii, Blyth, J. A. S. XII. 374.

Inhabits Sindh.

Genus DUMETIA, Blyth.

D. hyperythra.

SYN. Timalia hyperythra, Franklin.

Inhabits Central India.

D. Albogularis.

Syn. Malacocercus (?) albogularis, Blyth, J. A. S. XVI. 453.
Timalia hyperythra apud Jerdon, Catal.
Shah Dumri, H. ? (Jerdon).

Inhabits S. India; Ceylon.

Genus MALACOCERCUS, Swainson.

M. nipalensis.

Syn. Timalia nipalensis vel. leucotis, et T. pellotis, Hodgson, As. Res. XIX. 182.

Inhabits Nepal.

M. bengalensis (Edwards, pl. 184, badly coloured).

Syn. Merula bengalensis, Brisson.
Turdus canorus, L.
Pastor terricolor, Hodgson, J. A. S. V. 771.

Sat Bhai ('seven brothers'), H.: *Chatarrhea*, B. Inhabits Bengal; Nepal; Assam; Deyra Doon; Ceylon.

M. malabaricus Jerdon (*Ill. Ind. Orn.*, art. M. *griseus*).

Syn. M. Somervillei apud Jerdon, Catal.

Jungli Kur or *Kayr*, H. (Jerdon). Inhabits Malabar; sides of Nilgiris.

M. griseus (Jerdon's *Ill. Ind. Orn.*, pl. 19).

Syn. Turdus griseus, Latham.

Keyr, H.: *Chinda*, or *Sida*, Telugu: *Kullu Kooravi* ('Hedge-bird'), Tamool: *Kuliyan*, Malayalum (Jerdon). Inhabits Carnatic, and its immediate vicinity.

M. rufescens, Blyth, J. A. S. XVI. 453. Inhabits Ceylon.

M. Malcolmi (Hardwicke's *Ill. Ind. Zool.*

Syn. Timalia Malcolmi, Sykes.
Garrulus albifrons, (Gray and Hardw.)
Pale-eared Thrush, Latham.

Ghoghoye, H.: *Gougya*, Can.: *Kokutti*; Mahr. (Jerdon). Inhabits S. India: Cawnpore district.

M. subrufus, Jerdon.

Syn. Timalia subrufa, Jerdon, Catal.
T. pœcilorhyncha, de la Fresnaye.

Inhabits S. India: Wynaad, and along the margins of the W. Ghats.

M. Earlei, Blyth, J. A. S. XIII. 369.

Syn. M. geochrous, Hodgson.

Inhabits Bengal; Nepal; Tippera.

M. caudatus.

Syn. Cossyphus caudatus, Dumeril.
Megalurus isabellinus, Swainson, 2¼ cent.
Timalia chatarrhæa, Franklin.

Dumri, H.; *Huni*, Tam.? (Jerdon); *Hedo*, and *Laila*, Sindh. Inhabits India generally.

Genus DRYMOICA, Swainson.

Dr. criniger.

Syn. Suga criniger, Hodgson, As. Res. XIX, 183.

Inhabits Himalaya.

Dr. sylvatica.

Syn. Prinia sylvatica, Jerdon, Madr. Journ. XI. 4.

Inhabits Nilgiris.

Dr. robusta, Blyth, J. A. S. XVIII. Inhabits Ceylon. Specimen presented by E. L. Layard, Esq. differs from *Dr. sylvatica* in its darker shade of colour above, and larger and stronger bill and legs, which last appear to have been of a deep reddish brown colour: the flanks and sides of the breast are duskyish.

Dr. neglecta.

Syn. Prinia neglecta, Jerdon, Madr. Journ. XIII. pt. II, 130.
Dr. sylvatica of Mednapur apud Blyth, J. A. S. XVI. note to p. 459.

Inhabits Central India. Specimen procured near Mednapur differs from *Dr. sylvatica* in its more rufescent tinge throughout, the wingfeathers being margined with dull rufous; and the flanks are largely and deeply tinged with brown, extending up the sides of the breast.

Dr. ——— ? Inhabits Java. A. specimen presented by the Batavian Society (1845). is very like *Dr. sylvatica*, but smaller, with more conspicuously whitish lores and throat. Vide J. A. S., XVI. 459.

Dr. Jerdoni, Blyth, J. A. S. XVI. 459. Inhabits S. India.

Dr. inornata.

Syn. Prinia inornata, Sykes, P. Z. S. 1832. p. 89.

Inhabits Hindustan generally; S. India; Ceylon. This Ceylon race is darker above, especially on the crown, the lores and throat conspicuously whitish, as in Dr. robusta.

Dr. Franklinii.

Syn. Prinia Franklinii, Blyth, J. A. S. XIII. 376.
Pr. macroura, Franklin, P. Z. S. 1831. p. 118.
Pr. fusca, Hodgson, P. Z. S. 1845, p. 29.
Sylvia longicaudata (?), Tickell, J. A. S. II. 576.

Inhabits Bengal; Nepal; Arracan.

Dr. Buchanani, Blyth, J. A. S. XIII. 376.

Syn. Prinia rufifrons, Franklin (nec Ruppell).
Pr. brunnifrons, Hodgson, An. Mag. N. H. 1845, p. 29.
Sylvia longicauda, var. A (?) Latham.

Inhabits Nepal; Upper Bengal; S. India.

Dr. lepida, Blyth, J. A. S. XIII, 376; XVI. 460. Inhabits margins of sand-deposits of rivers in Bengal: also Sindh.

Genus PRINIA, Horsfield.

Pr. Hodgsonii, Blyth, J. A. S. XIII. 376.

SYN. Pr. gracilis apud Jerdon (nec Franklin, nec Malurus gracilis, Ruppell).

Inhabits Nepal; S. India.

Pr. gracilis, Franklin, P. Z. S. 1831, p. 119. Inhabits Central India.

Pr. rufescens, Blyth, J. A. S. XVI. 456. Inhabits Arracan.

Pr. socialis, Sykes, P. Z. S. 1832, p. 89.

SYN. Foodkey Warbler, Latham.

Inhabits S. India.

Pr. Stewarti, Blyth, J. A. S. XVI. 455.

SYN. Sylvia kalaphutki, B. Ham. MS.
Flaxen Warbler, var A., Latham.

Inhabits Upper Provinces of Bengal Presidency.

Pr. flaviventris.

SYN. Orthotomus flaviventris, Ad. Delessert.

Inhabits Nilgris? Bengal Sundarbuns; Tenasserim; Malacca.

Genus NEORNIS, Hodgson.

N. flavolivacea, Hodgson, J. A. S. XIV. 590 (the young).

SYN. Drymoica brevicaudata, Blyth. J. A. S. XVI, 459 (the adult).

Inhabits Nepal; Darjiling.

Genus ORTHOTOMUS, Horsfield.

O. longicauda.

SYN. Motacilla longicauda et M. sutoria, Gmelin.
Sylvia guzuratta, Latham.
S. ruficapilla, Hutton, J. A. S.
Orthotomus Bennetii, et O. lingoo, Sykes.
O. sphenurus, Swainson, 2¼ cent.
O. sutoria and O. patia, Hodgson, P. Z. S. 1845, p. 29.

Tuntuni, Beng. Inhabits India generally; Ceylon; Burmese countries; Malayan peninsula.

O. edela, Temminck.

SYN. Edela ruficeps, Lesson.
Motacilla sepium apud Raffles.

Kachichi, Malay. Inhabits Malayan peninsula; Sumatra.

O. cineraceus, Blyth, J. A. S. XIV. 589. Inhabits Malayan peninsula.

Genus HORIETES, Hodgson.

H. brunnifrons, Hodgson, J. A. S. XIV. 585.

SYN. H. schistilatus, Hodgson, P. Z. S. 1845 p. 30.
Nivicola schistilata, Hodgson, J.A.S. XIV. 586.

Inhabits S. E. Himalaya, near the snow region.

Genus CISTICOLA, Lesson.

C. cursitans (Jerdon's *Ill. Ind. Orn.*, pl. 6).

SYN. Prinia cursitans, Franklin.

Inhabits India generally. Not satisfactorily distinct from B. schœnicola.

C. omalura, Blyth, J. A. S. XVIII. Inhabits Ceylon.

Genus PELLORNIUM, Swainson.

P. ruficeps, Swainson.

SYN. P. olivaceum, Jerdon.
Cinclidia punctata, Gould.
Megalruus ruficeps, Sykes.

Inhabits Nepal; S. India; Tenasserim provinces.

Genus TURDIROSTRIS, A. Hay.

T superciliaris, A. Hay, *Madr. Journ.* XIII. pt. 2, 163. Inhabits Malayan peninsula.

Genus POMATORHINUS, Horsfield.

P. hypoleucos, Blyth, J. A. S. XIV. 599.

SYN. Orthorhinus hypoleucos, Blyth (the young), J. A. S. XIII. 371.

Inhabits Arracan.

P. erythrogenys, Vigors (Gould's 'Century.' pl, 55). Inhabits Himalaya.

P. schisticeps, Hodgson, *As. Res.* XIX, pt. 1. p. 181. Inhabits S. E. Himalaya; Sylhet; Tippera; Arakan.

P. leucogaster, Gould, P. Z. S. 1837, p. 137.

SYN. P. olivaceus, Blyth, J. A. S. XVI. 451.
P. montanus of Assam apud Horsfield, P. Z. S. 1839, p. 166.

Inhabits Deyra Doon; Nepal; Assam; Tenasserim provinces.

P. melanurus, Blyth, J. A. S. XVI. 451. Inhabits Ceylon.

P. Horsfield, Sykes, P. Z. S. 1832, p. 89. Inhabits Peninsula of India.

P. Phayrei, Blyth J. A. S. XVI. 452. Inhabits Arracan.

P. ferruginosus, Blyth, J. A. S. XIV. 597. Inhabits Sikkim.

P. ruficollis, Hodgson, *As. Res.* XIX. pt. 1, 182. Inhabits S. E. Himalaya.

P. montanus, Horsfield (*Zool. Res. in Java*, pl.). *Bokkrek*, Java. Inhabits Java.

Genus XIPHORHAMPHUS, Blyth.

X. superciliaris, Blyth, J. A. S. XII. 947.

SYN. Xiphorhynchus superciliaris, ibid J. A. S. XI. 175.

Inhabits Sikkim.

Genus TURDINUS, Blyth.

T. macrodactylus, J. A. S. XIII, 382.

SYN. Malacopteron macrodactylum, Strickland.
Brachypteryx albogularis, Hartlaub.

Tana, Malay. Inhabits Malayan peninsula.

Genus TRICHASTOMA, Blyth.

Tr. Abbotti.

SYN. Malacocincla Abbotti, Blyth, J. A. S. XIV. 601.

Inhabits Arracan.

Tr. olivaceum.

SYN. Megalopteron olivaecum, Strickland, Ann. Mag. N. H. 1847, p. 132.

Tr. Abbotti, var? Inhabits Malayan peninsula.

Tr. bicolor.

SYN. Brachypteryx bicolor, Lesson.
Malacopteron ferruginosum, Blyth, J. A. S. XIII. 333.

Inhabits Malayan peninsula ; Sumatra.

Tr. rostratum, Blyth, J. A. S. XI. 795. Inhabits Malayan peninsula.

Genus MALACOPTERON, Eyton.

M. majus, Blyth, J. A. S. XVI. 461. Inhabits Malayan peninsula.

M. magnum, Eyton, P. Z. S. 1849, p. 103. Inhabits Malayan peninsula.

Genus ALCIPPE, Blyth.

A. albogularis.

SYN. Setaria albogularis, Blyth, J. A. S. XIII. 385.

Inhabits Malayan peninsula.

A affinis (J. A. S. XIII. 384.)

SYN. Trichastoma affiane, Blyth, J. A. S. XI. 795.

Inhabits Malayan peninsula.

A. cinerea, Eyton.

SYN. Malacopteron cinereum, Eyton, P. Z. S. 1839, p. 103 ; J. A. S. XIII. 384.

Inhabits Malayan peninsula.

A. Phayrei, Blyth, J. A. S. XIV. 601.

Inhabits Arracan.

A. nipalensis.

SYN. Siva nipalensis, Hodgson, Ind. Rev. 1838, p. 80.

Inhabits S. E. Himalaya ; Arracan.

A. sepiaria.

SYN. Brachypterix sepiaria, Horsfield, Lin. Tr. XIII. 156.

Chichohan, Jav. Inhabits Java.

A. poiocephala.

SYN. Timalia poiocephala, Jerdon, Madr. Journ. XIII. 169.

Inhabits S. India.

A. atriceps.

SYN. Brachypteryx atriceps, Jerdon, Madr. Journ. X. 250.

Inhabits S. India.

A. (?) *striata.*

SYN. Timalia striata, Blyth, J. A. S. XI. 793.

Inhabits Malayan peninsula.

Genus MACRONOUS, Jardine and Selby.

M. ptilosus, J. and S. (*Ill. Orn.* pl. 150).

SYN. Timalia trichorros, Temminck.

Burong taal-uban, Malay. Inhabits Malayan peninsula.

Genus MIXORNIS, Hodgson.

M. gularis (Horsf. Zool. Res. in Java, pl.).

SYN. Timalia gularis, Horsfield.
Prinia pileata, Blyth, J. A. S. XI. 204.

Burong Puding, Malay. Inhabits Tenasserim provinces ; Malayan peninsula ; Java.

M. chloris, Hodgson, J. A. S. XI. 794.

SYN. M. ruficeps, Hodgson, P. Z. S. 1845. p. 23.
Motacilla rubicapilla (?), Tickell, J. A. S. II. 576.

Inhabits Sub-himalayan region ; Central India ? Tenasserim provinces.

Genus TIMALIA, Horsfield.

T. pileata, Horsfield (*Zool. Res. in Java*, pl.). *Dawit*, or *Gogo-stite*, Jav. Inhabits Bengal ; Nepal ; Assam ; Arracan ; Java.

T. nigricollis, Temminck.

SYN. T. erythronotus, Blyth, J. A. S. XI. 793.
Brachypteryx nigrogularis, Eyton.

Burong Tanah, Malay. Inhabits Malayan peninsula.

T. pectoralis, Blyth, J. A. S. XI. 793.

SYN. Malacopteron squamatum, Eyton.

Pampang, Malay. Inhabits Malayan peninsula.

T. erythroptera, Blyth, J. A. S. XI. 794.

SYN. T. pyrrhophæa, Hartlaub.
Brachypteryx acutirostris, Eyton.

Inhabits Malayan peninsula.

Genus CHRYSOMMA, Hodgson.

Chr. sinense (Jardine and Selby, *Ill. Orn.* pl. 119).

SYN. Parus sinensis, also Gotah Finch, and Emberiza calfat, Var. A., Latham.
Timalia hypoleuca, Franklin.
T. Horsfield, Jardine and Selby.
Pyctoris rufifrons, Hodgson, P. Z. S. 1845, p. 24.
Timalia bicolor, Lafresnaye.

Gulchasm; also *Shukar Dumri*, H.? (Jerdon). Inhabits India generally; China?

Genus STACHYRIS, Hodgson.

St. nigriceps, Hodgson, J. A. S. XIII. 378 P. Z. S. 1845, p. 22. Inhabits S. E. Himalaya.

St. pyrrhops, Hodgson, J. A. S. XIII. 379 P. Z. S. 1845, p. 23 (there spelt *pyrops*) Inhabits Nepal.

St. ruficeps, Blyth, J. A. S. XVI. 452. Inhabits Sikkim.

St. chrysæa, Hodgson, J. A. S. XIII. 379 P. Z. S. 1845, p. 23. Inhabits S. E. Himalaya; Arracan.

Fam. LANIADÆ.

Genus GAMPSORHYNCHUS, Blyth.

G. rufulus, Blyth, J. A. S. XIII. 370. Inhabits Terai region of the S. E. Himalaya Arracan, &c.

Genus THAMNOCATAPHUS, Tickell.

Th. picatus, Tickell, J. A. S. XVIII. Inhabit Darjiling.

Genus LANIUS, L.

L. lahtora, (Hardwicke's *Ill. Ind. Zool.*)

Syn. Collurio lahtora, Sykes.
Lanius excubitor, var C., Latham.
L. burra, Gray, Hardw., Ill. Ind. Zool.

Dudia lahtora, ('Milky Shrike'), H. Inhabits India generally (nec Lower Bengal).

L. schach, *L.*

Syn. L. beutet, Horsfield.

Burong Papa, or Terip api Malay; *Bentet*, Java. Inhabits China; Philippines; Java.

L. erythronotus (Gould's 'Century,' pl. 12, f. 2).

Syn. Cullurio erythronotus, Vigors.

Inhabits N. W. Himalaya.

L. caniceps, Blyth, J. A. S. XV. 302.

Syn. C. erythronotus of S. India, Auct.

Inhabits Indian peninsula; Sindh; Upper Bengal.

L. nigriceps.

Syn. Cullurio nigriceps, Franklin.
Lanius nasutus, Scopoli.
L. antiguanus, Latham.
L. tricolor, Hodgson, Ind. Rev. 1837.
Indian Shrike, Latham.

Inhabits Bengal; Kutak; Nepal; Assam; Arracan.

L. tephronotus.

Syn. Cullurio tephronotus, Vigors, P. Z. S. 1831, p. 43.
Lanius nipalensis, Hodgson, Ind. Rev. 1837, p. 445.
Grey-backed Shrike, Latham.

Inhabits Bengal; Nepal; Assam; Arracan.

L. superciliosus, L. (Vaill. *Ois. d' Afr.* pl. 66, f. 2.)

Syn. L. collurioides, Lesson.

Bengal variety.—

L. cristatus, L.
L. phænicurus, Pallas.
L. rutilus, var A, and L. superciliosus, var A. Latham.
L. melanotis, Valenciennes.
L. ferrugiceps, Hodgson, Ind. Rev. 1837, p. 446.

Sindh variety.

L. arenarius, Blyth, J. A. S. XV. 304.

Philippine variety?

L. lucienensis, Katkati. Beng.

Inhabits all S. E. Asia and its islands, except on elevated land.

L. tigrinus, Drapiez, *Dict. Class. d' Hist. Nat.*

Syn. L. magnirostris, Lesson, in Belanger's Voyage.
L. strigatus, Eyton, P. Z. S. 1839, p. 103.

Serara, Malay. Inhabits Malay countries.

L. Hardwickii, Vigors (Gould's 'Century,' pl. 12, f. 1).

Syn. Collurio Hardwickii, Vigors.
Bay-backed Shrike, Latham.

Pichanuk, H. Inhabits India generally (nec Bengal alluvium).

L. hypoleucos, Blyth, J. A. S. XVII. 249. Inhabits Tenasserim provinces.

Genus TEPHRODORNIS, Swainson.

T. sylvicola, Jerdon, *Madr. Journ.* X. 236. *Phari latora*, H. Inhabits S. India.

T. pelvica.

Syn. Tenthaca pelvica, Hodgson, Ind. Rev. 1837, p. 447.

Inhabits Nepal; Arracan.

T. gularis. (Tem. *Pl. Col.* 256. f. 1.)

Syn. L. virgatus, Temminck.
Lanius gularis, Raffles.

Baron Baron, Malay. Inhabits Malay countries.

T. pondiceriana. (Hardw. *Ill. Ind. Zool.*)

Syn. Muscicapa pondiceriana, Gmelin.
M. philippensis of India, Latham.
Lanius keroula, Gray.
L. muscipetoides, Franklin.
L. griseus, Tickell, J. A. S. II. 573.
L. sordidus, Lesson.
T. superciliosus, Swainson.
Tenthaca leucurus, Hodgson, Ind. Rev. 1837, p. 447.

Inhabits India generally.

T. affinis, Blyth, J. A. S. XVI. 473. Inhabits Ceylon.

T. grisola, Blyth, J. A. S. XII. 180.

Inhabits Penang; Java; Arracan; very rare in Lower Bengal.

Genus HEMIPUS, Hodgson.

H. obscurus (Horsfield's *Zool. Res. in Java.* pl.).

SYN. Muscicapa obscura, Horsfield.
M. hirundinaceus, Reinhardt.
Tephrodornis hirundinaceus, Swainson.

Inhabits Malay countries ; Tenasserim.

H. picata.

SYN. Musicapa picata, Sykes.
M. tyrannides, Tickell, J. A. S. II. 574.
M. hyrundinacea, apud Jerdon, Catal.
M. variegata (?), Linnæus.

Inhabits Arracan ; Central and S. India ; Ceylon.

H. capitalis.

SYN. Muscicapa ? capitalis, McClelland P. Z. S. 1839, p. 159.
H. picæcclor, Hodgson, P. Z. S. 1845, p. 33.

Inhabits Himalaya ; Assam.

Genus XANTHOPYGIA, Blyth.

X. leucophrys, Blyth, J. A. S. XVI. 123.

SYN. Musicapa xanthopygia, A. Hay, Madr. Journ. XI, 162 (the female).

Inhabits Malayan peninsula.

X. narcissina (Tem., *Pl. Col.* 577, f. 1).

SYN. Muscicapa narcissina, Temminck.
Z. chrysophrys, Blyth, J. A. S. XVI. 121.

Inhabits China ; Japan.

Fam. BRACHYURIDÆ.

Genus PITTA, Vieillot.

P. cærulea (Tem. *Pl. Col.* 217).

SYN. Myiothera cærulea, Raffles.
Pitta gigas, Temminck.

Inhabits Malayan peninsula : Sumatra.

P. nipalensis.

SYN. Paludicola nipalensis, Hodgson, J. A. S. VI. 103.
Pitta nuchalis, Blyth, J. A. S. XI. 188.

Inhabits Himalaya ; Arracan.

P. cucullata, Hartlaub (*Ann. Mag. N. H.* XIII. pl. 20.)

SYN. P. nigricollis, Blyth, J. A. S. XII. 960.
P. rodogaster, Hodgson, J. A. S. XII. 961 (the young.)

Inhabits Nepal ; Assam ; Malayan peninsula.

P. cyanoptera, Temminck (*Pl. Col.* 218).

SYN. P. malaccensis apud Blyth, J. A. S. XII. 960.

Inhabits Arracan ; Tenasserim provinces ; Malayan peninsula.

P. triostegus (Gould's 'Century,' pl. 23).

SYN. Turdus triostegus, Sparrman.
T. malaccensis, Scopoli.
P. superciliaris et abdominalis, Wagler.
P. bengalensis, Stephens.
P. brachyura of India, auctorum.

Inhabits India generally, from the sub-Himalayan region to Ceylon inclusive : never on the eastern side of the Bay of Bengal.

P. erythrogastra, Tem. (*Pl. Col.* 212). Inhabits Philippines.

P. granatina, Tem. (*Pl. Col.* 506).

SYN. P. coccinea, Eyton, P. Z. S. 1839, P. 104.

Inhabits Malayan peninsula.

P. cyanea, Blyth, J. A. S., XII. 1008 ; XVI. 153. Inhabits Arracan ; Tenasserim pro-

P. cyanura (*Pl. Enl.* 355).

SYN. Corvus cyanurus, Gmelin.
Myiothera affinis, Raffles.

Sintar, Sum. : *Punglor*, Jav. Inhabits Malayan peninsula ; Sumatra.

Genus HYDROBATA, Vieillot.

H. asiatica (Gould's 'Century,' p. 24).

SYN. Cinclus asiaticus, Swainson.
C. Pallasii apud Gould.

Inhabits Himalaya.

Genus TROGLODYTES, Cuvier.

Tr. nipalensis, Hodgson, J. A. S. XIV. 589.

SYN. Tr. subhemalayanus, Hodgson, Gray.

Inhabits N. W. Himalaya ; Nepal.

Tr. punctatus, J. A. S. XIV. 589.

Inhabits Sikkim.

Genus EUPETES, Temminck.

Eu. macrocercus, Tem. (*Pl. Col.* 516). Inhabits Malayan peninsula.

Genus ENICURUS, Temminck.

E. ruficapillus, Tem. (*Pl. Col.*). Inhabits Java.

E. maculatus, Vigors, (Gould's 'Century,' pl. 27).

SYN. E. fuliginosus, Hodgson (the young).

Inhabits Himalaya.

E. schistaceus, Hodgson, *As. Res.* XIX, 191. Inhabits S. E. Himalaya ; Tenasserim provinces.

E. immaculatus, Hodgson, *As. Res.* XIX. 190, J. A. S. XVI. 157. Inhabits Arracan. Rare in Nepal.

E. frontalis, Blyth, J. A. S. XVI. 156. Inhabits Malayan peninsula.

E. scouleri, Vigors (Gould's 'Century,' pl. 28). Inhabits Himalaya ; rare to the N. W.

Fam. MERULIDÆ.

Subfam. MERULINÆ.

Genus MYIOPHONUS, Temminck.

M. Temminckii, Vigors (Gould's 'Century,' pl. 21).

SYN. M. nitidus, Gray.

Inhabits Himalaya ; Assam ; Arracan.

M. Horsfieldi, Vigors (Gould's 'Century,' pl. 20). Inhabits Nilgiris (nec Himalaya).

Genus TURDUS, L.

Sub-genus ZOOTHERA, Vigors.

Z. monticola, Vigors (Gould's 'Century,' pl. 22). Inhabits Himalaya.

Z. marginata, Blyth, J. A. S. XVI. 141. Inhabits Arracan.

Sub-genus OREOCINCLA, Gould.

O. nilgiriensis, Blyth, J. A. S. XVI. 181. Inhabits Nilgiris.

O. mollissima, Blyth, J. A. S. XI. 188 ; XVI. 141.

SYN. O. rostrata, Hodgson, nn. Mag. N. H. 1845' f. 326.

Inhabits Himalaya.

O. dauma, (Gould's *B. E.* pl.),

SYN. Turdus dauma, Latham.
T. Whitei, Eyton.
T. doratus ?
O. parvirostris, Gould, P. Z. S. 1837, p. 136.

Inhabits Himalaya, Nilgiris: migrating to the plains in winter. Rare in Europe.

O. spiloptera, Blyth, J. A. S. XVI. 142. Inhabits Ceylon.

Sub-genus TURDUS.

T. viscivorus, L. (*Pl. Enl.* 439 ; Gould's *B. E.* pl. 77).

SYN. T. major, Brisson.

Inhabits Europe ; N. W. Himalaya.

T. Naumanni (?), Temminck (Gould's *B. E.* pl. 9).

SYN. T. dubius, Naumann.

Inhabits E. Europe N. Asia ; very rare in the Himalaya.

T. atrogularis, Natterer (Gould's *B. E.* pl. 75).

SYN. T. Bechsteini, Naumann.
T. dubius, Bechstein.

Inhabits N. Asia ; Himalaya ; Tippera.

T. ruficollis, Pallas.

SYN. (Perhaps a variety of Galerida cristata of which some specimens are partially rufous-tailed.)

Inhabits N. Asia ; Himalaya.

T. javanicus (?) Horsfield, *Linn. Tr.* XIII. 184).

SYN. T. concolor, (?) Temminck (Pl. Col).
T. rufulus, Drapiez, Dict. Class.
T. modestus, Eyton, P. Z. S. 1839, p. 103.

Inhabits Arracan ; Malayan peninsula ; Java ?

Subgenus MERULA.

M. vulgaris, Ray, Leach (Gould's *B. E.* pl. 72).

SYN. Turdus merula, L.

nabits Europe ; N. Africa ; Madeira ; W. Asia ; Afghanistan ; China (Chusan).

M. boulboul (Gould's 'Century,' pl. 14).

SYN. Lanius boulboul et Turdus persicus (?,) Latham.
T. pæcilopterus, Vigors.

Inhabit Himalaya.

M. simillima.

SYN. Turdus simillimus, Jerdon, Madr. Journ., X. 253.

Inhabits Nilgris.

M. nigropileus.

SYN. Turdus nigropileus, de la Fresnaye ; Ad. Delessert Voyage dans l'inde.

Inhabits S. India.

M. albocineta (Royle's *Ill. Him. Bot.* pl. 8. f. 3).

SYN. Turdus albocinctus et T. albicollis, Royle.
T. collaris, Sorel.

Inhabits Himalaya.

M. castanea, Gould P. Z. S. 1835, p. 185.

Inhabits Himalaya.

M. Wardii (Jerdon's *Ill. Ind. Orn.* pl. 8).

SYN. Zoothera melanoleuca, Hartlaub.
Oreocincla ? micropus, Hodgson (female).

Inhabits Himalaya ; S. India.

Sub-genus GEOCICHLA, Kuhl.

G. unicolor.

SYN. Turdus unicolor, Tickell, Gould.

Inhabits Himalaya.

G. dissimilis, Blyth, J. A. S. XVI. 144.

SYN. Calcutta Thrush, Latham.

Inhabits Bengal (during cold season.)

G. citrina (Tem. *Pl. Col.* 445).

SYN. Turdus citrinus, Latham.
T. Macei, Vieillot.
T. lividus, Tickell, J. A. S. II. 577.
T. rubeculus, apud Horsfield, P. Z. S. 1839, p. 161.

Inhabits Bengal ; Nepal ; Assam ; Arracan C. India.

G. cyanotus (J. and S., *Ill. Orn.*, 1st series, pl. 46).

SYN. Turdus cyanotus, Jardine and Selby.

Inhabits Indian peninsula.

G. innotata, Blyth, J. A. S. XVI, 146. Inhabits Malayan peninsula ; Nicobars.

Sub-genus PETROCINCLA, Vigors.

P. erythrogastra (Gould's 'Century,' pl. 13 ; J. and S. *Ill. Orn.*, 1st series, pl. 129).

SYN. Turdus erythrogaster, Vigors.
Petrocincla rufiventris, Jardine and Selby.
Petrocossyphus ferrugineoventris, Lesson.

Inhabits Himalaya.

P. cyaneus (*Pl. Enl.* 250 ; Edwards, pl. 18),

SYN. Turdus cyaneus, L.
T. solitarius, Gmelin.
Merula cærulea, Brisson.
P. longirostris, Blyth, J. A. S. XVI. 150.

Inhabits Europe; N. Africa; W. Asia; Kashmir; Punjab; Sindh. The Indian variety *P. paudoo* (the male), and *P. maal* (the female), Sykes: *Turdus solitarius*, var. A Latham is merely somewhat deeper-colored, the females especially, which are somewhat differently marked on the under-parts. The bill also is generally smaller. Inhabits Hindustan; S. India.

P. affinis, Blyth, J. A. S. XII. 177. Inhabits Sikkim; Butan; Assam; Sylhet; Tippera; Arracan; Tenasserim.

P. maillensis (*Pl. Enl.* 636).

SYN. Turdus manillensis, Gmelin.
T. olivaceus (?), Boddaert.

Inhabits Philippines; China.

Sub-genus MONTICOLA, Brehm.

M. cinclorhyncha (Gould's 'Century, pl. 19).

SYN. Petrocincla cinclorhyncha, Vigors.
Petrophila cyanocephala, Swainson.
Black collared Thrush, var. A. Latham.

Inhabits hilly parts of India generally, keeping to the forests: very rare in Lower Bengal in the seasons of passage.

Genus LUSCINIA, (Antiq.) L. (1735), G R. Gray.

L. philomela, Bonap (*Pl. Enl.* 615, f. 2).

SYN. Moticilla luscinia, L.
Sylvia luscinia, Lath. Tem. (nec S. philomela, Tem.)

Bulbul bosta, H.: *Bulbul-i-hazar dastan*, Pers. Inhabits Europe; N. Africa; W. Asia; common in Persia, but only known as a cage bird in Afghanistan.

Subfam. SAXICOLINÆ.

Genus THAMNOBIA, Swainson.

Th. cambaiensis.

SYN. Sylvia cambaiensis, Latham.
Saxicoloides erythrurus, Lesson (the female).

Inhabits Upper and Central India.

Th. fulicata (*Pl. Enl.* 185, f. 1).

SYN. Motacilla fulicata, L.
Ænanthe ptygmatura, Vieillot.
Th. leucoptera, Swainson.
Rusty-vented Thrush, and the female.—Sylvia fulicata, var. a, Latham.

Kulchuri, H. (Jerdon). Inhabits S. India; Ceylon; Philippines?

Genus KITTACINCLA, Gould.

K. macrourus (Vaillant, pl. 114).

SYN. Turdus macrourus, Gmelin.
T. tricolor, Vieillot.
Gryllivora longicauda, Swainson.

Shama, H.; *Abbeka*, H. (Jerdon): *Larwa*, Jav. Inhabits India generally (nec Lower Bengal); Ceylon; Burmese and Malay countries.

Genus COPSYCHUS, Wagler.

C. mindanensis.

SYN. Turdus mindanensis, Gmelin.
Lanius musicus, Raffles (nec Turdus amœnus, Horsfield).
Gryllivora magnirostra et Gr. rosea, Swainson (vide J. A. S. XVI. 139).

Choche, Malay; *Moorai*, or *Moorai Kichou*, Sum. Inhabits Malay countries.

C. saularis (Edwards, pl. 181).

SYN. Gracula saularis, L.
Gryllivora intermedia, Swainson.
Dahila docilis, Hodgson, As. Res. XIX. 189.

Dayal, B.; *Dayyur* or *Deyr*, H. (Jerdon): *Polichia*, Cingh: *Thabeitgyee*, Arracan. Inhabits Bengal; Nepal; India generally; Arracan; Tenasserim. The head and back of female invariably ashy.

Var. Gr. brevirostra (?), Swainson.

Inhabits Ceylon. The head and back of shining black, nearly as in the male.

Genus NOTODELA (?) Lesson.

N. (?) *leucura*, J. A. S. XVI. 188.

SYN. Muscisylvia leucura, Hodgson, P. Z. S. 1845, p. 27.

Inhabits Musari; Nepal.

Genus GRANDALA, Hodgson.

Gr. cælicolor, Hodgson, J. A. S. XII. 447. Inhabits Simla; Nepal: near snowy region.

Genus SAXICOLA, Bechstein, (*Jerka*, Sindh).

S. opistholeuca, Strickland.

SYN. S. leucura apud Blyth, J. A. S. XVI. 137.

Inhabits Upper Hindustan; Sindh.

S. picata, Blyth, J. A. S. XVI. 131. Inhabits Upper Hindustan; Sindh.

S. leucomela (*Pl. Col.* 257, f. 3.

SYN. Muscicapa leucomela et. M. melanoleuca, Stephens.

Inhabits S. Europe; N. Africa; W. Asia; Upper Hindustan; Sindh.

S. atrogularis, Blyth, J. A. S. XVI. 130-1. Inhabits Upper Hindustan; Sindh.

S. œnanthe (*Pl. Enl.* 554).

SYN. Motacilla œnanthe, L.

Inhabits Europe, W. Asia; Upper Hindustan.

Genus CYANECULA, Brehm.

C. suecica (*Pl. Enl.* 361, f. 2, and 610. f. 1, 2, 3).

Syn. Motacilla suecica, L.
Sylvia cæruligula, Pallas.
S. sperata, var. A, Latham (the female).
Blue-necked Warbler, Latham.

Husaini Pidda, H. : *Dumbuk*, Kabul. Inhabits N. Europe; India generally: very abundant in Lower Bengal.

Genus RUTICILLA, Brehm.

R. frontalis (Gould's *Century*, pl. 26, f. 2).

Syn. Phœnicura frontalis, Vigors.

Inhabits Himalaya generally.

R. erythrogastra.

Syn. Sylvia erythrogastra, Guldenstadt.
Muscicapa aurorea, Pallas.
Phœnicura Reevesii, Gray.

Inhabits N. and M. Asia, from the Caucasus to Japan; Nepal; Assam.

R. phœnicurus (*Pl. Enl.* 351, f. 2).

Syn. Motacilla phœnicura, L.
Phœnicura ruticilla, Swainson.
R. tythys of Afghanistan, apud Hutton, J. A. S. XV. 780.

Inhabits Europe; W. Asia; and variety in Afghanistan and Sindh.

R. leucoptera, Blyth, J. A. S. XII. 962; XVI. 134. Inhabits Malayan peninsula; Java.

R. indica, Blyth, (Jardine and Selby, *Ill. Orn.* pl. 86, f. 3).

Syn. Phœnicura atrata apud Jardine and Selby.

Thirt bira (i. e. 'Shaker'). H. (Jerdon). Inhabits India generally.

R. cæruleocephala (Gould's *Century*, pl. 26, f. 2).

Syn. Phænicura cæruleocephala, Vigors.

Inhabits Himalaya.

R. fuliginosa.

Syn. Phœnicura fuliginosa, Vigors, P. Z. S. 1831, p. 35.
Ph. plumbea, Gould, P. Z. S. 1835, p. 185.

Inhabits Himalaya.

R. leucocephala (Gould's *Century*, pl. 26, f. 2).

Syn. Phœnicura leucocephala, Vigors.
Sylvia erythrogastra, var. *a*. Latham.

Inhabits Himalaya.

Genus CALLIOPE, Gould.

C. pectoralis, Gould (*Icones Avium*). Inhabits Himalaya.

C. camtschatkensis (Lath. *Supp.*, pl. in frontispiece).

Syn. Sylvia camtschatkensis, Gmelin,
Motacilla calliope, Pallas.
Calliope Lathami, Gould.

Gangula, Nepal. Inhabits Asia. Common in Lower Bengal during the cold season; rare in C. India.

C. cyana.

Syn. Larvivora cyana, et L. brunnea (?). Hodgson, J. A. S. VI., 102.
Phœnicura superciliaris, Jerdon, Madr. Journ. XIII, 170.

Inhabits Himalaya chiefly: rare in Nilgiris: very rare and accidental in Lower Bengal during the seasons of passage.

Genus TARSIGER, Hodgson.

T. chrysœus, Hodgson, *Ann. Mag. N. H.* 1845, p. 198. Inhabits S. E. Himalaya.

Genus PRATINCOLA, Koch.

Pr. caprata (*Pl. Enl.* 235, f. 1. 2).

Syn. Motacilla caprata, L.
M. lucionensis, var *A*. Latham.
M. sylvatica (?, Tickell, J. A. S. II. 575.
Saxicola fruticola, Horsfield.
S. bicolor et S. erythropygya, Sykes.

Pidah or *Kala Pidah*, H.; *Lay khya*, Arracan; *Dechu*, Jav. Inhabits India generally (nec Lower Bengal); Arracan; Java.

Pr. rubicola (*Pl. Enl.* 678, f. 1).

Syn. Motacilla rubicola, L.

Inhabits Europe; N. Africa.

Pr. indica, Blyth, J. A. S. XVI, 129.

Syn. P. rubicola of India, auctorum.

Inhabits India generally.

Pr. leucura, Blyth, J. A. S. XVI. 447. Inhabits Sindh.

Pr. ferrea, Hodgson, J. A. S. XVI, 129. Inhabits Himalaya generally.

Genus IANTHIA, Blyth.

I. hyperythra, Blyth, J. A. S. XVI. 132. Inhabits Sikkim.

I. rufilatus, J. A. S. XVI. 132.

Syn. Nemura rufilatus, and the female—N. cyanura, Hodgson, P. Z. S. 1845, p. 27,
Erythaca Tytlerii (?), Jameson, Trans. Wern. Soc. (not described).
Motacilla cyanura (?). Pallas, the female.

Inhabits Himalaya generally; more numerous to the N. W.?

Genus ERYTHACA, (Antiq.) Cuv, G. R. Gray.

E. flavolivacea.

Syn. Ianthia flavolivacea, (Hodgson), J. A. S. XVI. 133, 774.
Nemura flavolivacea, Hodgson, P. Z. S. 1845, p. 37.

Inhabits Sikkim.

E. rubecula (*Pl. Enl.* 361, f. 1).

Syn. Motacilla rubecula, L.

Inhabits Europe; W. Asia (Trebizond).

Genus ERYTHROSTERNA, Bonap.

E. leucura (vide J. A. S. XVI. 474).

SYN. Muscicapa leucura, Gmelin.
M. parva of India, auctorum.
Saxicola rubeculoides, Sykes.
Synornis joulaimus, Hodgson, P. Z. S. 1855, p. 27.
White tailed Red-breast, and the young—probably Maculate Flycatcher, Latham.

Turra, H. Inhabits India generally; rare to the S.: extremely common in L. Bengal.

E. acornaus, (Hodgson).

SYN. Muscicapula acornaus of Nepal, J. A. S. XVI. 127.

Inhabits Himalaya.

E. pusilla, Blyth, J. A. S. XVIII.

SYN. Muscicapula acornaus of Central India, apud Blyth, J. A. S. XVI. 127.
Muscicapa poonensis apud Blyth, J. A. S. XI. 458.

Inhabits Central India.

Genus SIPHIA, Hodgson.

S. strophiata, Hodgson, *Ind. Rev.* 1837, p. 651. Inhabits Himalaya.

S. superciliaris.

SYN. Dimorpha superciliaris, Blyth, J. A. S. XI, 190 (altered to Muscicapula hyperythra, J. A. S. 885, and again by an oversight to M. rubecula, J. A. S. XII. 940).
D. (?) rubrocyanea, Hodgson, P. Z. S. 1845, p. 26.

Inhabits S. E. Himalaya.

S. (?) tricolor.

SYN. Digenea tricolor, Hodgson, P. Z. S. 1845, p. 46; J. A. S. XVI. 126.

Inhabits Himalaya.

S. (?) leucomelanura.

SYN. Digenea leucomelanura, Hodgson, P. Z. S. 1845, p. 26; J. A. S. 1845. XVI. 126.

Inhabits S. E. Himalaya.

Genus ANTHIPES, Blyth.

A. moniliger.

SYN. Dimorpha ? moniliger, Hodgson, P. Z. S. 1845, p. 26.
Niltava McGregoriæ, fœm (?), apud Hodgson, Ind. Rev. 1837, p. 650.
A. gularis, Blyth, J. A. S. XVI. 122,

Inhabits S. E. Himalaya; Arracan.

Genus MUSCICAPULA, Blyth.

M. melanoleuca, vide J. A. S. XVI, 137.

SYN. Muscicapa maculata apud Tickell, J. A. S. 11, 574.

Inhabits S. E. Himalaya; C. India; Arracan; Tenasserim provinces; Java.

M. superciliaris (Jardine's *Contrib. Orn.* 1848, pl.).

SYN. Muscicapa superciliaris, Jerdon, Madr. Journ. XI, 16.
Dimorpha albogularis, Blyth, J. A. S. XI, 190.
Muscicapa hemileucura, Hodgson, G. R. Gray.
Lucknow Flycatcher and Azure Warbler, Latham.

Inhabits Himalaya chiefly; C. and S. India.

M. sapphira (Tickell) Blyth, J. A. S. XII. 939; XVI, 473. (Jerdon's *Ill. Ind. Orn.* pl. 32). Inhabits Sikkim.

Genus CYORNIS, Blyth.

C. unicolor, Blyth, J. A. S. XII, 1007; XVI, 128. Inhabits Sikkim.

C. rubeculoides Gould's 'Century,' pl. 25).

SYN. Phœnicura rubeculoides, Vigors.
Niltava brevipes, Hodgson, Ind. Rev. 1837, p. 651.
Muscicapa rubecula, Swainson (the female).
Ætherial Warbler, Latham (and the female agrees with the supposed female of his Blue Indian Warbler).

Inhabits Himalaya; visiting the plains in the cold season, when not rare, in the vicinity of Calcutta: Arracan; Tenasserim.

C. banyumas (Horsfield's *Zool. Res. in Java*, pl.).

SYN. Muscicapa banyumas, Horsfield.
M. cantatrix, Temminck.

Inhabits Java: very rare in Nilgiris.

C. elegans.

SYN. Muscicapa elegans, Tem. apud Strickland.
M. hyacintha apud Tickell, J. A. S. II. 574.
C. Tickelliæ, Blyth, J. A. S. XII, 941.
Blue Indian Warbler ? Latham (vide J. A. S. XVI, 128.)

Inhabits Central (and W?) India.

C. ? (Allied to *Muscicapa pallipes*, Jerdon) *Madr. Journ.* XI, 15. Inhabits Sikim.

Genus OCHROMELA, Blyth.

Ochr. nigrorufa, J. A. S. XVI, 129.

SYN. Saxicola nigrorufa, Jerdon, Madr. Journ. X. p. 266.
Muscicapa rufula, la Fresnaye.

Inhabits summit of Nilgiris.

Genus NILTAVA, Hodgson. (*Niltouw*, Nepal).

N. grandis.

SYN. Chaitaris grandis, Blyth, J. A. S. XI. 189,
Bainopus irenoides, Hodgson, G. R. Gray.

Inhabits Sikkim.

N. sundara, Hodgson, *Ind. Rev.* 1837, p. 650. Inhabits Himalaya ; rare to the N. W.

N. McGregoriæ.

Syn. Phænicura McGregoriæ, Burton, P. Z. S. 1835, f. 152.
N. fuligiventer, Hodgson, Ind. Rev. 1837, p. 650 (the female only).
Dimorpha auricularis, Hodgson, J. A. S. XII. 240.
Leiothrix signata McClelland, P. Z. S. 1839, p. 163.
} The female.

Inhabits Himalaya ; Assam.

Genus CYANOPTILA, Blyth.

C. cyanomelanura, J. A. S. XVI. 125 (*Pl. Col.*).

Syn. Muscicapa melanops, Vigors.

Inhabits Java.

Genus STOPAROLA, Blyth.

St. melanops (Gould's 'Century,' pl. 6).

Syn. Muscicapa melanops, Vigors.
M. lapis, Lesson, Rev. Zool. &c. 1839, p. 104.
M. thalassina, Swainson (the female.
Verditer Flycatcher, Latham.

Nil Katkatea, Beng. Inhabits India generally ; visiting the plains in the cold season.

St.———? (Vide J. A. S. XVI. 125). Inhabits Java.

St. indigo.

Syn. Muscicapa indigo, Horsfield.

Inhabits Java.

St. albicaudata, Jerdon (*Ill. Ind. Orn.* pl. 14).

Syn. Muscicapa albicaudata, Jerdon, Madr. Journ, XI. 16.

Inhabits Nilgiris.

Genus MUSCICAPA, L.

Sub-genus BUTALIS, Boie.

B. terricolor, Hodgson, J. A. S. XVI. 120. Inhabits Nepal.

Subgenus HEMICHELEDON, Hodgson.

H latirostris.

Syn. Muscicapa latirostris, Raffles, Swainson,
M. poonensis, Sykes.

Zukki, H. (Jerdon). Inhabits India generally; common in Ceylon ; rare in L. Bengal : Malayan peninsula ; Sumatra.

H. fuliginosa, Hodgson, P. Z. S. 1845, p. 31, J. A. S. XVI. 119. Inhabits Himalaya.

H. ferruginea Hodgson, P. Z. S. 1845, p. 32. Inhabits S. E. Himalaya.

Genus ACANTHIZA, Vigors and Horsfield.

A.——? Inhabits Java ?

BRACHYPTERYX series.

Genus SYLVANIA, Blyth.

S. phœnicuroides, J. A. S. XVI. 135.

Syn. Brachypterus phœnicuroides, Hodgson, Gray's Catal.

Inhabits Himalaya.

Genus CALLENE, Blyth.

C. frontalis, Blyth J. A. S. XII. 1010. pl.), *ibid.* XVI, 186. Inhabits Sikim.

Genus BRACHYPTERYX, Horsfield.

Br. major.

Syn. Phænicura major, Jerdon, Madr. Journ. XIII. 170.

Inhabits Nilgiris.

Br. montana, Horsfield (*Zool. Res. in Java*, pl.). Inhabits Java.

Br. cruralis.

Syn. Calliope (?) cruralis, Blyth, J. A. S. XII. 933 ; XVI. 136.

Inhabits Sikkim.

Br. (?) *nigrocapitata.* Eyton, P. Z. S. 1839 p. 137. Inhabits Malayan peninsula.

Genus TESIA, Hodgson.

T. cyaniventer, Hodgson, J. A. S. VI. 101.

Syn. T. auriceps, Hodgson, J. A. S. X .137 474.
Saxicola ? olivea, McClelland, P. Z. S. 1839, 161.

Inhabits Nepal ; Sikim ; Assam.

T. castaneo-coronata.

Syn. Sylvia castaneo-coronata, Burton, P. Z. S 1835, p.
T. flaviventer, Hodgson, J. A. S. VI. 102

Inhabits Himalaya.

Genus PNOEPYGA, Hodgson.

Pn. squamata (Gould's *Icones Avium*).

Syn. Microura squamata, Gould.
Tesia rufiventer, T. albiventer, and T. concolor, Hodgson (varieties of colouring.

Inhabits Nepal ; Sikkim.

Pn. pusilla.

Syn. T. pusilla, Hodgson, J. A. S. XIV. 588.
T. squamata, small variety ?

Inhabits Nepal.

Pn. caudata.

Syn. Tesia caudata, Blyth, J. A. S. XIV. 588.

Inhabits Sikkim.

Genus ARUNDINAX, Blyth.

A. olivaceus, Blyth, J. A. S. XIV. 595.

Syn. Phragmaticola olivacea, Blyth, M. S. Jerdon, Madr. Journ. XIII. pt. II. p. 129

Inhabits Bengal; Arracan; S. India.

Genus ACROCEPHALUS, Naum.

Acr. brunnescens, J. A. S. XV. 288.

Syn. Acrobates brunnescens, Jerdon, Madr. Journ. X. 269.
Acroceph arundinaceus v. turdoides of India, auctorum.

Inhabits India generally; Arakan.

Acr. montanus.

Syn. Sylvia montana, Horsfield, Lin. Tr. XIII. 156.

Inhabits India generally; Java.

Genus LOCUSTELLA, (Ray) Gould.

L. rubescens, Blyth, J. A. S. XIV. 582. Inhabits Lower Bengal (in the cold season).

Genus PSEUDOLUSCINIA (?), Savi.

Ps. luteoventris.

Syn. Tribura luteoventris, Hodgson, P. Z. S. 1845, p. 30; J. A. S. XIV. 583.

Inhabits Kachar region of Nepal.

Genus DUMETICOLA, Blyth.

D. thoracica, Blyth, J. A. S XIV. 584.

Syn. Salicaria affinis, Hodgson, G. R. Gray.

Inhabits Nepal.

Genus PHYLLOPNEUSTE, Meyer.

Ph. rama.

Syn. Sylvia rama, Sykes, P. Z. S. 1832, p. 89 J. A. S. XVI. 440.

Inhabits India generall,.

Ph indicus, Blyth, J. A. S. XIV. 593. Inhabits Nepal; S. India; China (Chusan).

Ph. occipitalis, Jerdon, J. A. S. XIV. 593. Inhabits S. India.

Sub-genus ABRORNIS, Hodgson.

Abr. pulcher, Hodgson J. A. S. XVI. 592. Inhabits Nepal; Sikkim.

Abr. cantator.

Syn. Motacilla cantator, Tickell, J. A. S. II. 576; XVI. 440.
Culicipeta schisticeps, Hodgson apud G. R. Gray.

Inhabits Nepal; C. India; rare in Lower Bengal.

Abr. schisticeps, Hodgson, J. A. S. XIV. 592.

Syn. Phyllopneuste xanthoschistos, Hodgson, G. R. Gray.

Inhabits Himalaya generally; Arracan.

Abr. poliogenys, Blyth, J. A. S. XVI. 441. Inhabits Sikkim.

Sub-genus CULICIPETA, Blyth.

C. Burkii, J. A. S. XII. 968.

Syn. Sylvia Burkii, Burton, P. Z. S. 1835, p. 153.
Cryptolopha auricapilla, Swainson, 2½ Conten.
Muscicapa bilineata, Lesson, Rev. Zool. par la Soc. Cuv. 1839, p. 104.

Inhabits India generally; rare to the south.

Sub-genus REGULOIDES, Blyth.

R. trochiloides.

Syn. Acanthiza trochiloides, Sundevall.
Phyllopneuste reguloides, Blyth, J. A. S. XI. 191; XII. 963.

Inhabits Himalaya; migrating southward in cold season.

R. modestus (Gould's *B. E.* pl.) J. A. S. XIV. 963.

Syn. Regulus modestus, Gould.
R. inornatus, Blyth, J. A. S. XI. 19— (abraded plumage).
Phyllopneuste nitida, G. R. Gray.

Inhabits N. India, common in L. Bengal: very rare in Europe.

R. chloronotus, Hodgson, G. R. Gray. Inhabits Himalaya.

Subgenus PHYLLOSCOPUS, Boie.

Ph. nitidus, Blyth, J. A. S. XII. 965.

Syn. Muscicapa nitida (?) Latham, Franklin.
Sylvia hippolais apud Jerdon, Madr. Journ. XI. 6.
Hippolais Swainsoni, G. R. Gray.

Inhabits India generally; Ceylon.

Ph. trochilus, (*Pl. Enl.* 651, f. 1).

Syn. Motacilla trochilus, L.

Inhabits Europe; N. Africa; W. Asia; W. India (apud Gould); Japan.

Ph. tristis, Blyth, J. A. S. XII. 966.

Syn. "Sylvia trochilus ?" apud Jerdon, Madr. Journ. XI. 6.

Inhabits India generally.

Ph. montanus, Blyth, J. A. S. XVIII. Inhabits Himalaya.

P. viridanus, Blyth, J. A. S. XII. 967. Inhabits India generally; Arracan; very common in Lower Bengal.

Ph affinis, J. A. S. XVI. 442.

Syn. Motacilla affinis, Tickell, J. A. S. II. 576.

Inhabits Bengal (common).

Ph. lugubris, Blyth, J. A. S. XII. 968. Inhabits India generally: common in Lower Bengal.

Ph. javanicus ?

Syn. Sylvia javanica (?), Horsfield, Linn. Tr. XIII. 156.
Ph. magnirostris, Blyth, J. A. S. XII. 966.

Opior Opior, Java. Inhabits Nepal; Bengal; Arracan; Java.

Ph. brunneus, Blyth, J. A. S. XIV. 591 (described from a small specimen).

Syn. Ph. fuscatus, var., Blyth, J. A. S. XVI.
443-4.

Inhabits Bengal : common in Arracan.

Ph. fuscatus, Blyth, J. A. S. XI. 113 ; XII. 965. Inhabits Bengal ; Arracan.

Genus REGULUS, (Antiq.) Cuvier.

R. ignicapillus, Temminck. Inhabits Europe and Asia. N. W. Himalaya ?

R. cristatus, Ray (*Pl. Enl.* 651, f, 3).

Syn. Motacilla regulus, L.
R. auricapillus, Selby.
R. flavicapillus, Naum.

Inhabits Europe and Asia: N. W. Himalaya.

Subfam. SYLVIANÆ (frugivorous Warblers).

Genus SYLVIA, Latham (*Phularia* H., *i. e.* ('Flower pecker').

S. Jerdoni.

Syn. Curruca Jerdoni, Blyth, J. A. S. XVI.
439.
Philomela orphea apud Jordon, Madr. Journ. X. 267.

Inhabits S. India.

S. affinis.

Syn. Curruca affinis, Blyth, J. A. S. XIV. note to p. 564.

Inhabits S. India; Ceylon.

S. curruca, (*Pl. Enl.* 380, f. 3).

Syn. Motacilla curruca, M. sylviella, et M. dumetorum, Gmelin.
Curruca garrula, Brisson.

Inhabits Europe ; Asia ; Africa : India generally (nec Lower Bengal below the tideway).

Fam. CERTHIADÆ.

Subfam. CERTHINÆ.

Genus CERTHIA, L.

C. nipalensis, Hodgson, (Blyth, *Mon. Indian Certhiadæ*).

Syn. C. himalayana apud Blyth, J. A. S. XIV. 581.

Inhabits Nepal.

C. discolor, Blyth, J. A. S. XIV. 580. Inhabits Sikkim.

C. himalayana, Vigors. P. Z. S. 1831, p. 174.

Syn. C. asiatica, Swainson, 2½ cent.

Inhabits Deyra Doon.

Subfam. SITTINÆ.

Genus TRICHODROMA, Illiger.

T. muraria (*Pl. Enl.* 372.)

Syn. Certhia muraria, L.
T. phœnicoptera. Temminck.
T. europæa, Stephens.

Inhabits S. Europe ; W. Asia ; Afghanistan; Himalaya.

Genus SITTA, L.

S. formosa, Blyth (J. A. S. XII. 938, 1007). Inhabits Sikkim.

S. cinnamoventris, Blyth, J. A. S. XI. 459. Inhabits Himalaya.

S. castaneoventris, Franklin (J. and S., *Ill. Orn.*, 1st series, pl. 165). Inhabits Hill regions of India.

S. himalayana, Jardine and Selby (*Ill. Orn.* 1st series, pl. 164).

Syn. S. nipalensis, Hodgson, J. A. S. V. 779.

Sub-genus DENDROPHILA, Swainson.

D. frontalis (Swainson's *Zool. Ill.*, 1st series, pl. 2).

Syn. Sitta frontalis, Horsfield.
S. velata, Temminck.
S. corallina, Hodgson, J. A. S. V. 779.

Inhabits India, Burmah, and Malay countries.

Fam. GRAUCALIDÆ.

Genus GRAUCALUS, Cuvier.

Gr. Macei, Lesson.

Syn. Gr. papuensis of India, auctorum.
Gr. nipalensis, Hodgson, Ind. Rev. 1837, p. 327.
Ceblepyris javensis (?), Horsfield, vide J. A. S. XV. 306.

Kepodang-sungu, Jav. Inhabits India generally ; Ceylon ; Arracan ; Tenasserim.

Genus CAMPEPHAGA, Vieillot.

C. fimbriata apud Strickland (*Pl. Cl.* 247, 250.)

Syn. Ceblepyris fimbriatus, Temminck.
Lanius silens, Tickell, J. A. S. II. 573.
Volvocivora melaschistos, Hodgson, Ind. Rev. 1837, 328.
Graucalus maculosus, McClelland, P. Z. S. 1839, p. 159.
Ceblepyris lugubris, Sundevall.
Blue-grey Thrush, Latham.

Inhabits India generally ; commoner to the N., and breeding in the Himalaya : Java ?

C. melanoptera, Blyth, J. A. S. XV. 307. Inhabits Arracan, where common.

C. Sykesi, Strickland, *Ann. Mag. N. H.* 1844, p. 36.

Syn. Ceblepyris fimbriatus apud Jerdon, Catal.
C. canus, Sykes,—the young ?
Eastern Thrush, Latham.

Inhabits India generally ; Ceylon : nec Himalaya.

C. cœrulescens.

Syn. Ceblepyris, cærulescens, Blyth, J. A. S. XI. 463, XV. 308.

Inhabits Lucon.

Genus LALAGE, Boie.

L. orientalis (*Pl. Enl.* 273, f. 3).

SYN. Lanius orientalis, Gmelin.
Turdus striga, Raffles,
Sylvia leucophæa, Vieillot nec, Latham.

Kras, Malay; *Lenjettan*, Jav. Inhabits Malayan peninsula and Archipelago.

Fam.——— ?

Genus PERICROCOTUS, Boie.

P. speciosus (Gould's Century, pl. 7).

SYN. Turdus speciosus, Latham.
Muscipeta princeps, Vigors and Gould.

Nget-meng-tha, i. e. 'Prince bird,' Arracan. Inhabits Himalaya; C. India: rare in S. India and in L. Bengal: Assam, Sylhet, Arracan, Tenasserim, Malayan peninsula (Penang).

P. flammeus (Swainson's *Zool. Ill.* 2nd series, pl. 52; Jerdon's *Ill. Ind. Orn* pl. 11).

SYN. Muscicapa flammea, Forster, Pennant's Ind. Zool.
M. subflava, Vieillot.
Phœnicornis elegans, McClelland, P. Z. S. 1839, p. 156.
August Flycatcher, Latham (but the preceding species also referred to).

Phari Bulal Chusm, H, (Jerdon); Inhabits S. India: Ceylon. Assam? (vide J. A. S. XV. 309.

P. brevirostris (Gould's 'Century,' pl. 8).

SYN. Muscipeta brevirostris, Vigors and Gould.
Phœnicornis miniatus apud Swainson, Class. Birds.

Inhabits Himalaya; Assam; Sylhet; Arracan: rare in C. and S. India.

P. igneus, Blyth, J. A. S. XV. 309.

SYN. Malayan P. flammeus, Auctorum.

Uwis, or *Semuttan*, Java. Inhabits Malay countries.

P. solaris, Blyth, J. A. S. XV, 310. Inhabits Sikkim.

P. roseus.

SYN. Muscicapa rosea, Vieillot.
Phœnicornis affinis, McClelland, P. Z. S. 1839, p. 157.

Nget-meng-tha-mee (*i. e.* 'Princess-bird'), Arracan. Inhabits India generally; Arracan.

P. peregrinus (Gould's 'Century.' pl. 9).

SYN. Parus peregrinus et Motacilla cinnamomea, L.
P. coccineus et malabaricus, Gmelin.

Bulal Chusm, H. (Jerdon). Inhabits India generally; Ceylon; Arracan.

P. (?) *erythropygius* (Latham's *Gen. Hist.* Vol. VI, p. 178, pl. 98); Jardine's *Contrib. Orn.*, pl. 1).

SYN. Muscicapa erythropygia, Jerdon, Madr. Journ. XI. 17.
Turdus speciosus, var. B. and Cawnpore Flycatcher, Latham.

Inhabits Hindustan (nec L. Bengal).

Fam. AMPELIDÆ.

Genus COCHOA, Hodgson (*Cocho*, Nepal).

C. purpurea, Hodgson, J. A. S. V. 359 (J. A. S. No. 139, pl.). Inhabits Nepal; Sikim.

Fam. PIPRIDÆ.

Subfam. EURYLAIMINÆ

Genus EURYLAIMUS, Horsfield.

Sub-genus CORYDON, Lesson.

C. sumatranus (*Pl. Col.* 297).

SYN. Eurylaimus sumatranus, Raffles.
Eu. corydon, Temminck.
Eu. Temminckii, Lesson.
Eurylaimus? Hay, J. A. S. X. 575.

Kungquait, Malay. Inhabits Tenasserim provinces; Malayan peninsula; Sumatra.

Sub-genus EURYLAIMUS.

Eu. javanicus, Horsfield, (*Pl. Col.* 130. 131; *Zool. Res. in Java*, pl.)

SYN. Eu. Horsfieldi, Temminck.
Tamplana Lilin, Malay.

Inhabits Arracan: Tenasserim; Malayan peninsula and Archipelago.

Eu. ochromalus, Raffles (*Pl. Col.* 261).

SYN. Eu. cucullatus, Temminck.
Tamplana Quilin, Malay.

Inhabits Tenasserim provinces; Malayan peninsula and Archipelago.

C. nasutus (*Pl. Col.* 154).

SYN. Todus nasutus, Latham.
T. macrorhynchus, Gmelin.

Ujuu and *Tadak Whogan*, Malay; *Palano*, or *Tampalano*, Sum. Inhabits Tenasserim provinces; Malayan peninsula and Archipelago.

C affinis, Blyth, J. A. S. XV. 312. Inhabits Arracan.

Sub-genus PSARISOMUS, Swainson.

Ps. *Dalhousiæ* (Gould's *Icones Avium*; Royle's *Ill. Him Bot.* pl. 7).

SYN. Eurylaimus Dalhousiæ, Jameson.
Eu. psittacinus, Muller.
Raya sericeogula. Hodgson, J. A. S. VIII. 36.

Inhabits Himalaya; Assam; Sylhet; Arracan.

Sub-genus SERILOPHUS, Swainson.

S. lunatus (*Trans. Zool. Soc.*, pl. 25).

SYN. Eurylaimus lunatus, Gould.
S, lunulatus, Swainson.

Inhabits Tenasserim provinces.

S. rubropygia, J. A. S. XV. 311.

SYN. Raya rubropygia, Hodgson, J. A. S. VIII. 36.
Eu. lunatus apud Horsfield, P. Z. S. 1838, p. 156.

Inhabits S. E. Himalaya; Assam; Sylhet; Arracan.

Subfam. PIPRINÆ.

Genus CALYPTOMENA, Raffles.

C. viridis, Raffles. (*Pl. Col.* 316 : Horsfield's *Zool. Res. in Java*, pl.)

SYN. C. Rafflesii et C. caudacuta (the young), Swainson.

Seboo, Pachat, Sampo Penang, Malay. Inhabits Malayan peninsula ; Sumatra.

Fam. HIRUNDINIDÆ.

Genus HIRUNDO, L.

Ababil-Chatok, H ; *Mo-tswai-nghet*, or *Pgan-hlwa*, Arracan ; *Layang Layang*, Malay.

H. filifera, Stephens.

SYN. H. ruficeps (?), Lichtenstein.
H. filicaudata, Franklin, P. Z. S. 1831, p. 115.
H. indica et H. erythrocephala (?), Gmelin

Inhabits C. India chiefly ; rare in S. India ; Deyra Doon ; Katak.

H. rustica, L. (*Pl. Enl.* 543, f. 1).

SYN. H. gutturalis, Scopoli.
H. javanica. Sparrman.
H. panayana, Latham.
H. jewan, Sykes, P. Z. S. 1832, p. 83.

Inhabits Europe, Asia, and Africa ; visiting India during the cold season.

H. domicola, Jerdon, *Madr. Journ.* XIII. 173.

SYN. H. javanica apud Latham and Shaw.
Bungalow Swallow of residents in the Nilgiris.

Inhabits Malay countries ; Nilgiris.

H. daurica, L.

SYN. H. alpestris, Pallas.
H. erythropygia, Sykes, P. Z. S. 1832, p. 83.
H. nipalensis, Hodgson. J. A S. V, 780.

Inhabits E. Asia : common during the winter months in India, China, and Malasia.

H. hyperythra, Blyth, J. A. S. XVIII ; *Mon. Ind. Hirundinidæ.*

Inhabits Ceylon (resident).

H. urbica, L. *Pl. Enl.* 542, f. 2).

Inhabits Europe ; N. Africa ; rare in India.

H. rupestris, Seopoli (Gould's *B. E.* pl. 56.)

SYN. H. montana, Gmelin.
H. rupicola, Hodgson, J. A. S. V. 781.
H. inornata, Jerdon, Madr. Journ. XIII, 173.

Inhabits S. Europe ; N. Africa ; W. Asia ;
H. laya ; Nilgiris.
Inhabi*lor*, Sykes, P. Z. S. 1832, p. 83:
H. riparia, India.
Northern region (*Pl. Enl.* 543, f. 2). Inhabits
Sutlej) ; C. India (Africa ; N. India (banks of
H. sinensis, Hardw
SYN. H. brevicaudata, *Ill. Ind. Zool.*
156.
d, P. Z. S. 1839, p.
Inhabits river banks of all
and China (?). ia ; Burmah,

Fam. ARTAMID

Genus ARTAMUS, Vieillot.

A. fuscus, Vieillot (*Mem. Mus.* Tom. VI. fig.).

SYN. Ocypterus rufiventer, Valenciennes.
A. leucorhynchos, (L.) apud McClelland, P. Z. S. 1839, p. 158, et Jerdon, Catal.
Murasiny Chatterer and Brown coloured swallow, var. A. Latham.

Tal-chatok Beng. Inhabits India generally ; Assam ; Arracan.

Fam. DICRURIDÆ.

Genus DICRURUS, Vieillot (*Chibya*, Nepal ; *Chayon* or *Chagon*, Malay).

Sub-genus CHIBIA, Hodgson.

Ch. hottentota.

SYN. Corvus hottentotus, L.
Edolius barbatus, Gray.
E. crishna, Gould, P. Z. S. 1836, p. 5.
Criniger splendens, Tickell, J. A. S. II. 514.
Chibia casia, Hodgson, Ind. Rev. 1837, p. 324.
Krishna Crow, Latham.

Kesh-raj, B. ; *Kesya*, Nepal. Inhabits Bengal ; Nepal ; Assam ; C. India ; rare in the peninsula of India (vide *Madr. Journ.* XIII, pt. 2. 121.

Sub-genus CHAPTIA, Hodgson.

Ch. ænea (Vaill. *Ois. d' Afr.* 176).

SYN. Dicrurus æneus, Vieillot.
D. æratus, Stephens.
Ch. muscipetoides, Hodgson, Ind. Rev. 1837, p. 327.

Butchanga, Beng. ; *Chaptya* (i. e. 'flat-billed'), Nepal. Inhabits Nepal ; Bengal : Assam.

Ch. malayensis, A. Hay, J. A. S. XV. 294. Inhabits Malayan peninsula.

Sub-genus BHRINGA, Hodgson.

Bh. remifer, (*Pl. Col.* 178).

SYN. Edolius remifer, Temminck.
E. rangonensis apud Horsfield, P. Z. S. 1839, p. 158.
Bh. tectirostris, Hodgson, Ind. Rev. 1837, p. 325.

Nghet-dan ; Arracan. Inhabits Himalaya ; Assam.

Sub-genus EDOLIUS, Cuvier.

E. paradiseus.

SYN. Cuculus paradiseus, L.

Bherm or *Bhring raj*, H. ; *Kate-ongal*, Mahr. ; *Kalgia*, Nepal ; *Nghet-dau*, Arracan ; *Barong Saweh*, and *Chanwi*, Malayan. Inhabits India and Malasia.

Var. A. SYN. Chibia malabaroides, Hodgson, Ind. Rev. 1837, p. 325.
Lanius malabaricus as figured by Latham and Shaw (but not L. malabaricus as described by Latham from Sonnerat).
E. grandis apud Blyth, J. A. S. XI. 170 ; Ann. Mag. N. H. XIV. 46.

Inhabits Nepal; Tippera; Tenasserim provinces.

Var. B. SYN. E. grandis, Gould, P. Z. S. 1836, p. 5.
E. dentirostris and E. orissæ (?), Jerdon, Madr. Journ. XIII. pt. 2, p. 121.
Dicrurus platurus, Vieillot, apud G. R. Gray.

Inhabits India; Bengal Sundarbuns; Assam; Arracan; Tenasserim provinces.

Var. C. SYN. Cuculus paradiseus, L.
E. rangonensis, Gould, P. Z. S. 1836, p. 5.
E. intermedius, Lesson, apud G. R. Gray.
E. cristatellus, Blyth, J. A. S. XI. 171.

Inhabits Malay countries.

Sub-genus DICRURUS, Vieillot.

D. edoliformis, Blyth, J. A. S. XV. 297. Inhabits Ceylon.

D. viridescens, Gould (vide J. A. S. XI. 173, and 802, figs. 10 and 11). Inhabits Burmah.

D. balicassius (*Pl. Enl.* 603).

SYN. Corvus balicassius, L.
Oriolus fuscatus, Gmelin.
Bhuchanga annectaus, Hodgson, Ind. Rev. 1837, p. 326.
Dicrurus affinis, Blyth, J. A. S. XI. 147.
Corvus afer, Licht., and
C. assimilis, Bechstein, apud G. R. Gray.

Inhabits Malay countries; Nepal.

D. macrocercus, Vieillot (*As. Res.* XVIII. pt. 2, pl.).

SYN. Muscicapa biloba, Lichtenstein.
D. indicus, Stephens, Hodgson.
Bhuchanga albirictus, Hodgson, Ind. Rev. 1837, p. 326.
Edolius forficatus, Horsfield, in Linn. Tr. XIII. 144 (apud Strickland).
E. longus, Vaill., apud Horsfield.

Finga, Beng.; *Kolsa*, or *Bojunga*, sometimes also *Kotwal*, H. (Jerdon); *Qwyai-myeetshwai*, Arracan; *Sri Gunting*, Jav. Inhabits India generally; Arracan; Java?

D. longicaudatus, A. Hay (described in *Ann. Mag. N. H.* 1844, p. 46); Jerdon, *Madr. Journ.* XIII. pt. 2, p. 121; J. A. S. XV. 298.

SYN. D. macrocercus apud Jerdon, Catal.
D. cineraceus apud Gray, Hodg. Catal.

Nil Finga, and *Dhouh*, Beng. Inhabits India generally; Ceylon.

D. intermedius, Blyth, J. A. S. XV. 298. Inhabits Tenasserim provinces; Penang.

D. cærulescens (Edwards, pl. 56), vide *Ann. Mag. N. H.* 1844, p. 47.

SYN. Lanius cærulescens, L.
L. fingah, Shaw.

Phari Bajunga H. (Jerdon). Inhabits India generally; not common in L. Bengal.

D. leucopygialis, Blyth, J. A. S. XV. 298. Inhabits Ceylon.

D. cineraceus.

SYN. Edolius cineraceus, Horsfield, Linn. Tr. XIII. 145.
D. leucopæus (?), Vieillot.
D. ceylonensis (?), Stephens.

Chenta, Jav. Inhabits Malay countries.

Fam. TCHITREADÆ.

Genus TCHITREA, Lesson.

Tch. paradisi (Vaill., *Ois. d' Afr.*, pl. 44, 45, 46; Jerdon's *Ill. Ind. Orn.* pl. 7).

SYN. Muscicapa paradisi, L.
M. indica, Stephens. } the rufous
M. castanea, Temminck. } plumage.
M. mutata of India, Latham.
Muscipeta leucogaster, Swainson, Nat. Libr. Muscicapidæ.

Shah Bulbul, and *Hosseini Bulbul*, H.; *Kaddehoora*, Cingh.; (the white bird); and *Sultana Bulbul*, H.; *Ginihoora*, Cingh; (the chesnut bird;) *Tonka Peegeelee-pitta* (*i. e.* 'long-tailed Bulbul'), Telugu; *Walkardalatee*, Tamul.

Inhabits India generally; Bengal; Deyra Doon.

Tch. affinis, A. Hay, J. A. S. XV. 292; XVII. 1179.

SYN. Malayan Tch. paradisi, Auctorum.
M. castanea (?), Temminck.

Ahtap, and *Mira Jabone*, Malayan.
Inhabits Malay countries; Tenasserim; Arracan; Sikim; Nepal?

Tch. atrocaudata (?), Eyton, vide J. A. S. XV. 298.

SYN. Muscipeta atriceps, Blyth, J. A. S. XI. 203, 790.

Inhabits Malayan peninsula.

Genus MYIAGRA, Swainson.

M. cærulea (Vaill. *Ois. d' Afr.* 153).

SYN. Muscicapa cærulea, Vieillot.
M. occipitalis, Vigors.
M. cæruleocephala, Sykes (the female).
Azure-headed Flycatcher, Latham.

Kala-mata Kutkutia, B. Inhabits India generally; Burmese and Malay countries. Philippilnes.

Genus PHILENTOMA, Eyton.

Ph. velatum (*Pl. Col.*).

SYN. Muscicapa velata, Temminck.
M. pectoralis, A. Hay, Madr. Journ. XIII. pt. 2, p 161, Strickland, Ann. Mag. N. H. XIX (1847), p. 131.

Inhabits Malayan peninsula and Archipelago.

Ph. pyrrhopteron (*Pl. Col.* 596, f. 2).

SYN. Muscicapa pyrrhoptera, Temminck.
Muscipeta plumosa, Blyth, J. A. S. XI. 79.
Ph. castaneum, Eyton, Ann. M. M. N. XVI. (1845), p. 229.

Inhabits Malayan peninsula and Archipelago.

Genus CRYPTOLOPHA, Swainson.

Cr. cinereocapilla (Swainson's *Zool. Ill.* pl. 13 ; *Nat. Libr.* Vol. on Flycatchers, pl. 23).

SYN. Muscicapa cinereocapilla, Vieillot.
Platyrhynchus ceylonensis et
Cr. poiocephala, Swainson.
Muscicapa nitida, var. A. Latham.

Inhabits India generally ; Assam ; Arracan ; Tenasserim.

Genus RHIPIDURA, Vigors and Horsfield.

Rh. hypoxantha, Blyth, J. A. S. XII. 935.

SYN. Chelidorhynx chrysoschistos, Hodgson, P. Z. S. 1845, p. 32.

Inhabits Nepal ; Sikim.

Genus LEUCOCERCA, Swainson.

L. fuscoventris, Franklin, P. Z. S. 1831, p. 117.

SYN. Muscicapa sannio, Sundevall.
M. (Muscylva) alboguiaris (?), Lesson, the young ?
Broad-tailed Flycatcher, Latham.

Chok Doyal, Beng. Inhabits L. Bengal ; C. India.

L. albofrontata (Jerdon's *Ill. Ind. Orn.* pl. 2). *Rhipidura albofrontata*, Franklin, P. Z. S. 1831, p. 117. Inhabits India generally (nec alluvium of L. Bengal.)

L. pectoralis Jerdon. J. A. S. XII. 953 ; Jerdon's *Ill. Ind. Orn.*, Art. *Rh. albofrontata.* Inhabits Nilgiris.

L. javanica.

SYN. Muscicapa javanica, Sparrman.
Platyrhynchus perspicillatus, Vieillot.

Murai-Kandang, Sum. ; *Sikattan*, Jav. Inhabits Malay countries.

Fam. PYCNONOTIDÆ.

Genus HYPSIPETES, Vigors. (*Bulbul*, H. *Boot Boot*, Arracan).

H. olivacea, Jardine and Selby, *Ill. Orn.* 2nd series (figured erroneously as *H. ganeesa*, Sykes, in 1st series, pl. 168).

SYN. Ixocincla olivacea, Bl., described J. A. S. XIV. 575.

Inhabits Mauritius.

H. psaroides, Vigors (Gould's 'Century,' pl. 10). *Ban Bukra* ('Jungle Goat,' from voice), Masuri (Hutton). Inhabits Himalaya ; Assam ; Arracan.

H. nilgiriensis, Jerdon, *Madr. Journ.* X. 245. Inhabits Nilgiris ; Ceylon.

H. concolor, Blyth, J. A. S. XVIII. Inhabits Tenasserim provinces.

H. McClellandii, Horsfield, P. Z. S. 1839, p. 159. Inhabits Himalaya ; Assam ; Arracan.

H. malaccensis, Blyth, J. A. S. XIV. 574. *Chtap*, Malay. Inhabits Malayan peninsula.

H. virescens, Blyth, J. A. S. XV. 51.

SYN. Ixocincla virescens, Blyth. J. A. S. XIV. 579.

Inhabits Nicobars.

Genus IOLE, Blyth.

I. olivacea, Blyth, J. A. S. XIII. 386 ; XIV. 573. Inhabits Malay countries.

I. virescens, Blyth, J. A. S. XIV. 573. Inhabits Arracan.

Genus HEMIXOS, Hodgson.

H. flavala, Hodgson, J. A. S. XIV. 572. Inhabits Himalaya ; Assam ; Arracan ; Tenasserim.

H. icterica.

SYN. Criniger ? ictericus, Strickland, An. Mag. N. H. 1844, p. 411.
Turdus indicus (?), Gmelin, apud Jerdon.

Inhabits S. India ; Ceylon,

Genus CRINIGER, Temminck.

Cr. striatus.

SYN. Trichophorus striatus, Blyth J. A. S. [illegible]
Alcurus striatus, Hodgson, J. A. S. XII.

Inhabits Himalaya.

Cr. flaveolus.

SYN. Trichophorus flaveolus, Gould, P. Z. S. 1836, p. 6.

Inhabits Himalaya ; Arracan.

Cr. gularis.

SYN. Turdus gularis, Horsfield, Lin. Tr. XIII. 150.
Ixos phaiocephalus, Hartlaub.
Trichophorus caniceps, Lafresnaye.
Pycononotus rufocaudatus, Eyton, Ann. Mag. N. H. 1845, p. 228.

Marba-rimba, Malay ; *Bres* Jav. Inhabits Malay countries.

Cr. ochrocephalus.

SYN. Turdus ochrocephalus, Gmelin.
Trichophorus crispiceps, Blyth, J. A. S. XI. 204.

Barou Barou (same as Tephra dorius gularis) Malay ; *Chuchakrawa*, Jav. Inhabits Malay countries.

Genus PYCNONOTUS, Kuhl.

P. jocosus.

SYN. Lanius jocosus, L.
L. emeria, Shaw.
Gracula cristata, Scopoli.
Sitta chinensis, Osbeck, apud G. R. Gray.

Karra Bulbul, *Sepahi Bulbul*, Beng. Inhabits India generally ; Arracan ; variety (?) in the Tenasserim provinces and Penang.

P. bengalensis, Blyth, J. A. S. XVI. 567.

SYN. P. cafer of India, Auctorum.

Kala Bulbul, Beng. Inhabits Sub-Himalayan region ; Assam ; Bengal ; Mednapur District.

P. hæmorrhous.

Syn. Turdus hæmorrhous, Gmelin.
Hæmatornis pusillus et pseudocafer, Blyth, J. A. S. X. 841.
H. cafer apud Jerdon, Catal.

Touhi-bulbul, Beng. Inhabits Hindustan generally ; S. India ; Ceylon ; Arracan.

P. nigropileus, Blyth, J. A. S. XVI. 472. Inhabits Tenasserim provinces.

P. leucotis.

Syn. Ixos leucotis, Gould, P. Z. S. 1836, p. 6.

Bhooroo, Sindh. Inhabits Sindh.

P. leucogenys, (Hardw. *Ill. Ind. Zool.*)

Syn. Brachypus leucogenys, Gray.
Ixos plumigerus, Lafresnaye.
Hæmatornis cristatus, Burn.

Inhabits Himalaya ; Kashmir.

P. xantholaimus Jerdon (*Ill. Ind. Orn.* pl. 35), J. A. S. XIV. 568. Inhabits E. Ghats of Peninsular India.

P. goiavier (Sonn. *Voy.* t. 28).

Syn. Muscicapa goiavier, Scopoli.
M. psidii, Gmelin,
Turdus aualis, Horsfield.

Beribba, Malay ; *Chuchack*, Jav. Inhabits Malay countries.

P. flavescens, Blyth, J. A. S. XIV. 568. Inhabits Arracan.

P. flavirictus, Strickland, *Ann. Mag. N. H.* 1844, p. 413.

Syn. Trichophorus virescens, Tem., apud Jerdon, Catal.
Ixos virescens, Tem., apud Tickell, J. A. S. II. 571.
Criniger Tickelli, Blyth, J. A. S. XIV. 571.

Inhabits Peninsula of India ; Ceylon ; Mednapur jungles, and W. border of the Gangetic delta.

P. plumosus, Blyth, J. A. S. XIV. 567. Inhabits Malayan peninsula.

P. brunneus, Blyth, J. A. S. XIV. 568. *Merlia*, Malay. Inhabits Malayan peninsula.

P. Finlaysoni, Strickland, *Ann. Mag.* N. H. 1844, p. 411. Inhabits Burmese countries. Common in Arracan, Tenasserim, &c.

P. sinensis (Eydoux and Gervais, *Voy. de la Favorite*, pl. 14).

Syn. Muscicapa sinensis, Gmelin.
Turdus occipitalis, Temminck.

Inhabits China ; Philippines.

P. melanocephalus (Hardw. *Ill. Ind. Zool.*)

Syn. Brachypus melanocephalus, Gray.
Br. plumifer (?), Gould, P. Z. S. 1837, p. 137.
Vanga flaviventris, Tickell, J. A. S. II. 537.

Inhabits Himalaya ; C. India ; Assam, Sylhet, Tippera, Arracan, Tenasserim provinces.

P. atricapillus (Levaillant, *Ois. d' Afr.*, pl. 140 ; much too dully coloured).

Syn. Ægithina atricapilla, Vieillot—nec P. atricapillus, (Vieillot, apud Lord A. Hay, described J. A. S. XIV. 569.
Rubigula aberrans, Blyth, J. A. S. 287 ; XVI. 472.

Inhabits Ceylon.

P. gularis (Jerdon's *Ill. Ind. Orn.* pl. 37.

Syn. Brachypus gularis, Gould, P. Z. S. 1835, p. 186.
Br. rubineus, Jerdon, Madr. Journ. X. 246.

Inhabits S. India.

P. (?) *cyaniventris*, Blyth, J. A. S. XI. 792.

Syn. Ixodia (afterwards changed to Ixidia) cyaniventris, Blyth, J. A. S. XIV. 578.
Malacopteron aureum, Eyton, Ann. Mag. N. H. 1845, p. 228.
Turdus No. 6, Raffles, Linn. Tr. XIII. 311.

Inhabits Malayan peninsula ; Sumatra.

Genus MICROTORSUS, Eyton (*Macrocelis* ? Swainson).

M. melanoleucos, Eyton, P. Z. S. 139, p. 102.

Syn. Brachypodius tristis, Blyth, J. A. S. XIV. 576,—the young.

Labam, and *Mirba Tando*, Malay. Inhabits Malayan peninsula.

Genus BRACHYPODIUS, Blyth.

B. melano cephalus.

Br. cinereoventris, Blyth, J. A. S. XIV. 576. Inhabits Tippera.

Br. poiocephalus, Jerdon (*Ill. Ind Orn.* pl. 31) ; *Madr. Journ.* X. 246. Inhabits S. India.

Genus SETORNIS (?), Lesson.

S. (?) *criniger.*

Syn. Brachypus (?) criniger, A. Hay, J. A. S. XIV. 577.

Inhabits Malayan peninsula.

Subfam. PHYLLORNINÆ.

Genus PHYLLORNIS, Boie (*Hariwa*, Beng.)

Ph. Hardwickii (Ad. Delessert, *Voy. dans. l'Inde*, pt. 2, pl. 7).

Syn. Chloropsis Hardwickii, Jardine and Selby, Monag.
Chl. curvirostris, Swainson, 2½ Centen.
Chl. cyonopterus, Hodgson.
Chl. chrysogaster, McClelland, P. Z. S. 1839, p. 167.
Chl. auriventris, Guérin.

Boing-dan-thay, Arracan.

Inhabits Himalaya ; Assam ; Sylhet ; Arracan.

Ph. aurifrons (Jardine and Selby, *Orn. Ill.* pl. 5.)

Syn. Chloropsis aurifrons, Jardine and Selby, Monog.
Chl. malabaricus ibid. (tab. cit.)

Subz Hariwa, Nepal; *Nget-tsin*, Arracan. Inhabits S. India; Himalaya; Assam; Sylhet; Arracan.

Ph. malabaricus.

SYN. Turdus malabaricus, Gmelin, No. 125.
Chloropsis aurifrons apud Jerdon, Catal.

Inhabits Indian peninsula; Ceylon?

Ph. Jerdoni, Blyth, J. A. S. XIV. 566. (Jerdon's *Ill. Ind. Orn.* pl. 43).

SYN. Chloropsis gamsorhynchus (mispelt cæsmarhynchos, v. casmarhynchus apud Gray, Griffith's Transl. An. Kingd. VI. 391), apud Tickell, J. A. S. II, 577.
Chl. cochinchinensis apud Jerdon, Catal.
Blue chinned Thrush, Latham.

Ph. cochinchinensis (*Pl. Cl.* 414, f. 2, apud Strickland.

SYN. Turdus cochinchinensis, Lath., Gm., the adult; and
T. malabaricus apud Latham—the young.
Chloropsis malabaricus apud Eyton, P. Z. S., 1836, p. 102, and Blyth, J. A. S. XII. 967, (nec fœm).
Philemon nigricollis (?), Vieillot.
Meliphaga javensis, Horsfield.
Phyllornis moluccensis, Gray.

Nget-tsin (same as No. 1283), Arracan; *Chuchakiju*. Jav. Inhabits Burmese and Malay countries generally; Arracan.

Ph. Sonneratii (Jardine and Selby, *Orn. Ill.* pl. 100).

SYN. Chloropsis Sonneratii, Jardine and selby.
Phyllornis Mulleri, Temminck.
Chl. gampsorhynchus, Jardine and Selby.
Chl. zosterops, Vigors.
Turdus viridis, Horsfield.
} young.

Daon, or *Dawoan*, Malay. Inhabits Malay countries generally.

Ph. cyanopogon, Temminck, (*Pl. Col.* 512, f. 1).

SYN. Chloropsis mysticalis, Swainson, 2¼ Centen. the young; described as that of and was referred erroneously to Ph. malabaricus, J. A. S. XII. 957.

Inhabits Malay countries generally.

Genus IORA, Horsfield.

I. innotata, Blyth, J. A. S. XVI. 472. Inhabits Arracan.

I. zeylanica (Brown's *Ill.*; pl. 15, 32, Lev. *Ois. d' Afr.*, pl. 141).

SYN. Motacilla zeylanica, cingalensis, et melanictera, Gmelin.
Fringilla multicolor, Latham.
Iora melaceps, Swainson.

Show Bhugah, or *Shou Bheegee*, H. (Jerdon). Inhabits S. India; Ceylon; Deyra Doon (?).

I. typhia (Edwards, pl. 79).

SYN. Motacilla typhia, L.
Ficedula bengalensis, Brisson.

Fatikja, and *Toufik*, Beng. Inhabits Bengal; Nepal; Assam; Arracan; Tenasserim provinces; Malayan peninsula. The exceedingly common *Iora typhia* of Bengal very rarely exhibits any black about the cap and back at any season of the year; and those of the whole eastern side of the Bay of Bengal appear to be similar: but occasionally specimens are met with, which have assumed less or more of this colouring, and which are perhaps hybrids, like those between *Coracias indica* and *C. affinis*, *Treron phœnicoptera* and *Tr. Jerdoni*, and a few other analogously affined races).

I. scapularis, Horsfield (*Zool. Res. in Java*, pl. ,—the female), J. A. S. XIII. 381.

Durang Capas, Malay; *Cheetoo*, Jav. Inhabits Malay countries.

Genus IRENA, Horsfield.

I. puella (Horsfield's *Zool. Res. in Java*, pl.).

SYN. Coracias puella, Latham.

Nget-pya zak, Arracan; *Quayang*, and *Biang Kapoor*, Malay; *Bressi*, Jav. Inhabits C. and S. India; Assam; Burmah; Malay countries. *Malayan race* with lower tail-coverts reaching nearly to end of tail.

Fam. MELIPHAGIDÆ.

Subfam. ORIOLINÆ.

Genus ORIOLUS, L. (*Huldikaka*, Beng.)

O. Traillii (Gould's 'Century,' pl. 35; J. and S., *Orn. Ind. 2nd* series, pl. 26).

SYN. Pastor Traillii, Vigors.

Inhabits Himalaya; Assam; Burmah (Arracan, Tenasserim).

O. melanocephalus, L.

SYN. O. maderaspatanus, Franklin.
O. McCoshii, Tickell, J. A. S. II 577.
} the young.
O. Hodgsonii (?), Swainson.

Bania-bhou, Beng.; *Nghet-wa*, Arracan. Inhabits Bengal; Kutak; C. India; Nepal; Assam; Arracan; Tenasserim;—distinct race in Ceylon, and Malabar (?).

O. larvatus, Lichtenstein (Lev., *Ois. d' Afr.* pl. 261, 262).

SYN. O. radiatus (?), Gmelin.
O. condonguar, Temminck.
O. capensis, Swainson.
O. monachus (Gm.), apud Wagler.
O. chloris, Cuvier.

Inhabits S. Africa.

O. xanthonotus, Horsfield (*Zool. Res. in Java*, pl. ; *Pl. Col.* 214).

SYN. O. leucogaster. Reinwardt.
O. castanopterus. Blyth, J. A. S. XI. 795 (the young).

Sepong Rayate, Malay. Inhabits Malay countries.

O. chinensis, L.

Syn. O. cochinchinensis, Brisson.
O. acrorhynchos, Vigors, P. Z. S. 1831, p. 97.

Inhabits China.

O. macrourus, Blyth, J. A. S. XV. 46. Inhabits Nicobar Islands.

O. indicus, Brisson (Jerdon's *Ill. Ind. Orn.* pl. 15).

Syn. O. chinensis et cochinchinensis of India, Auctorum.
O. coronatus (?), Swainson, vel hippocrepis (?) Wagler.
Le Loriot des Indes, Buffon.

Inhabits Peninsular India ; rare in Bengal ; common in Burmese and Malay countries ; also China.

O. tenuirostris, Blyth, J. A. S. XV. 48. Inhabits————?

O. kundoo, Sykes (the young).

Syn. O. galbula apud Franklin and Sykes (the adult).
O. aureus, Jerdon's Catal.
O. galbuloides, Gould.

Peebeck, H. (Jerdon). Inhabits Hindustan generally ; nec L. Bengal.

O. galbula, L. (*Pl. Enl.* 26).

Syn. Coracias oriolus, Scopoli.

Inhabits Europe ; W. Asia ; N. Africa.

O. viridis (Gould's B. A. Vol. IV. pl. 13).

Syn. Gracula viridis and Coracias sagittata, Latham.
O. variegatus, Vieillot.
Mimeta viridis, King.
M. meruloides, Vigors and Horsfield.

Inhabits N. S. Wales.

Genus SPHECOTHERES, Vieillot.

Sph. viridis, Vieillot (Gould's B. A. Vol. IV. pl. 15).

Syn. Sph. virescens, Jardine and Selby.
Sph. australis et canicollis, Swainson.
Turdus maxillaris (?), Latham.

Inhabits Australia.

Subfam. MELIPHAGINÆ.

Genus ENTOMYZA, Swainson.

E. cyanotis (Gould's B. A. Vol. IV. pl. 68).

Syn. Gracula cyanotis, Turdus cyaneus, et Merops cyanops, Latham.

Inhabits N. S. Wales.

Genus ZOSTEROPS, Vigors and Horsfield.

Z. palpebrosus (*Pl. Col.* 292, f. 3).

Syn. Sylvia palpebrosa, Temminck.
S. annulosa, var. a, Swainson.
Z. maderaspatana (v. madagascariensis of India), auctorum (vide J. A. S. XIV. 562).

Inhabits India generally (nec L. Bengal), from the Himalaya to Ceylon ; Assam ; Arracan ; Tenasserim provinces ; Nicobar Islands.

Fam. NECTARINIIDÆ.

Shakar-Khora (i. e. 'Sugar-sucker ;') H. ; *Mon-chang*, Beng. ; *Tutika*, Cingh. ; *Pan-bweng-tsot* (*i. e.* 'Flower-pecker'), Arracan.

Genus ARACHNOTHERA, Temminck.

A. magna.

Syn. Cinnyris magna, Hodgson, Ind. Rev. 1837, p. 272 ; J A. S. XII. 981.
A. inornata of Assam apud Horsfield, P. Z. S. 1839, p. 167 ; vide J. A. S. XII. 981.

Inhabits Nepal ; Sikim ; Assam ; Sylhet ; Arracan.

A. flavigaster.

Syn. Anthreptes flavigaster, Eyton, P. Z. S. 1839, p. 105, J. A. S. XIV. 557.

Chechap Rimba or *Koleechap Pangone*, Malay. Inhabits Malayan peninsula.

A. chrysogenys, Temminck, (*Pl. Col.* 388, f. 1) ; J. A. S. XII. 981 ; XV. 43.

Syn. Certhia longirostra apud Raffles, Lin. Tr. XII. 299, (nec Latham).

Siap jantung, Malay. Inhabits Malayan peninsula ; Sumatra.

A. inornata, Temminck (*Pl. Col.* 84).

Syn. Cinnyris affinis, Horsfield, Lin. Tr. XIII. 66.

Chess, Jav. Inhabits Java.

A. modesta.

Syn. Anthreptes ? modesta, Eyton, P. Z. S. 1839, p. 105.
Ar. latirostris, Blyth, J. A. XII. 982.

Chichap Nio, Malay. Inhabits Malayan peninsula.

A. robusta, Muller (*Zool. Ind. Arch.*, t. 2, f. 1) ; described J. A. S. XV. 43, No. 6. Inhabits Sumatra.

A. longirostra (Griffith's *Transl. An. Kingd.* VII. 391, pl.)

Syn. Certhia longirostra, Latham (nec Raffles).

Prit Andun, Jav. Inhabits Java.

A. affinis, Blyth, J. A. S. XV. 43.

Syn. A. inornata apud Blyth, J. A. S. XII. 982.
Cinnyris longirostris, Jerdon, Madr. Journ. XIII. 172.

Inhabits Arracan ; Tenasserim provinces ; Malayan peninsula ; very rare in S. India.

Genus NECTARINIA, Illiger.

(*A.* With elongated middle tail-feather in the males).

N. goalpariensis (Royle's *Ill. Him. Bot.*, pl. 7), J. A. S. XII. 969.

Syn. Certhia goalpariensis, Latham.
Cinnyris Vigorsii (the male), and C. concolor (the female), Sykes, P. Z. S. 1832, pp. 98, 99.
C. miles, Hodgson, Ind. Rev. 1837, p. 273.
C. labecula, McClelland, P. Z. S. 1839, p. 167.
N. seheriæ, Tickell, J. A. S. II. 577.
N. Lathami, Jardine, Nat. Libr.

Inhabits Sub-Himalaya region ; C. and S. India ; Assam ; Sylhet ; Arracan ; Tenasserim provinces.

N. siparaja (*Pl. Col.* 126, f. 3).

SYN. Certhia siparaja, Raffles, Linn. Tr. XIII. 299.
N. mysticalis, Temminck.

Sipa Raja, Malay.

Inhabits Malayan peninsula and Archipelago.

N. Gouldiæ (Gould's 'Century,' pl. 56), J. A. S. XII. 974

SYN. Cinnyris Gouldiæ, Vigors, P. Z. S. 1831, p. 44.

Inhabits Sikim ; Sylhet ; Arracan.

N. ignicauda (*Nat. Libr., Nectariniidæ*, pl. 29) ; J. A. S. XII. 972.

SYN. Cinnyris ignicauda, Hodgson, Ind. Rev. 1837, p. 972.
C. rubricaudata, Blyth, mentioned J. A. S. XI. 192.
N. phœnicura, Jardine, Nat. Libr.

Inhabits Nepal ; Assam ; Sylhet.

N. nipalensis (*Nat. Libr., Nectariniidæ*, pl. 27) ; J. A S. XII, 974.

SYN. Cinnyris nipalensis, Hodgson, Ind. Rev. 1837, p. 273.

Inhabits S. E. Himalaya.

N. Horsfieldi Blyth, J. A. S. XII. 975.

Inhabits N. W. Himalaya.

N. saturata (*Nat. Libr., Nectariniidæ*, pl. 29) : J. A. S. XII. 976.

SYN. Cinnyris saturata, Hodgson, Ind. Rev. 1837, p. 273.
C. assamensis, McClelland, P. Z. S. 1839, p. 167.
C. Hodgsonis, Jardine, Nat. Libr.

Inhabits S. E. Himalaya ; Assam.

N. lotenia (*Nat. Libr., Necturiniidæ*, pl. 23—not good).

SYN. Certhia lotenia, L.
C. polita, Latham.
C. purpurata, Shaw.

Inhabits S. India ; Ceylon.

N. asiatica (*Nat. Libr., Nectariniidæ*, pl. 24) ; J. A. S. XII. 978.

SYN. Certhia asiatica, L.
C. mahrattensis, C. chrysoptera, C. cirrhata, et C. currucaria, Latham.
C. saccharina, Shaw.
Cinnyris orientalis, Franklin, P. Z. S. 1831, p. 122.
C. epauletta et C. strigula, Hodgson, Ind. Rev. 1837, p. 272.
C. cyaneus, Encl., Method.

Inhabits India generally ; Arracan ; Sindh.

N. malaccensis (Swainson's *Zool. Ill.* 1st series, pl. 121).

SYN. Certhia malaccensis, Scopoli.
C. lepida, Latham.
N. javanica, Horsfield.

Prit-gantil, Jav.

Inhabits Burmese and Malay countries (Ar- [illegible] Tenasserim).

N. simplex, Muller (*Zool. Ind. Arch.*, t. 8, f. 4).

SYN. N. frontalis, Blyth, J. A. S. XIV. 558.

Inhabits Malayan peninsula ; Sumatra.

N phœnicotis, Temminck (*Pl. Col.* 108. f. 1 ; 338, f. 2) ; J. A. S. XII. 979.

Inhabits Burmese and Malay countries (Tippera, Arracan, Tenasserim).

N. hypogrammica, Muller (*Zool, Ind. Arch.* t. 8, f. 3).

SYN. N. nuchalis, Blyth, J. A. S. XII. 980, and the female termed Anthreptes macularia, J. A. S. XI. 107.

Inhabits Malayan peninsula ; Sumatra : Borneo.

N. solaris, Temminck (*Pl. Col.* 347, f. 3).

Inhabits Moluccas.

N. pectoralis, Horsfield (*Pl. Col.* 138).

SYN. N. eximia, Temminck.
Certhia philippensis olivacea, Brisson.

Sri-ganti Jav. Inhabits Malayan peninsula and Archipelago ; Nicobar Islands.

N. flammaxillaris, Blyth, J. A. S. XIV. 557.

SYN. N. jugularis apud Blyth, J. A. S. XII. 979.

Inhabits Arracan ; Tenasserim.

N. zeylonica *Nat. Libr., Nectoriniidæ*, pl. 20,—not good).

SYN. Certhia zeylonica, L.
Cinnyris sola, Vieillot.
C. lepida apud Sykes (female).

Inhabits Bengal ; S. India ; Ceylon.

N. minima (*Nat Libr., Nectaraniidæ*, frontispiece.)

SYN. Cinnyris minima, Sykes, P. Z. S. 1832, p. 98.

Inhabits S. India.

N. Hasseltii, Temminck (*Pl. Col.* 376, f. 3).

SYN. N. Phayrei, Blyth, J. A. S. XI. 1008.
Certhia sperata, var., Raffles.
C. braziliana, Shaw.

Inhabits Burmese and Malay countries (Arracan, Tenasserim).

Genus DICÆUM, Cuvier.

D. cruentatum (Edwards, pl. 8).

SYN. Certhia cruentata, L. (nec apud Horsfield, Lin. Tr. XIII. 168, which = D. rubrocanum, (Tem.), Vaill, Ois. d' Afr, pl. 186).
C. coccinea, Scopoli.
C. erythronotus, Latham.

Inhabits Bengal ; Assam ; Arracan : Tenasserim ; Malayan peninsula.

D. trigonostiguta (Sonnerat, *Voy. aux Indes* pl. 117).

SYN. Certhia trigonostigma, Scopoli.
C. cantillans, Latham.
D. croceoventre, Vigors.

Beong Nalow, Malay.

Inhabits Arracan, Tenasserim ; Malayan peninsula ; Sumatra.

D. chrysorrhœum, Temminck (*Pl. Col.* 478).

SYN. D. chrysochlorum, Blyth, J. A. S. XI. 1009.

Inhabits Arracan ; Tenasserim ; Malacca.

D. concolor, Jerdon (*Ill. Ind. Orn.*, pl. 39)

Inhabits Nilgiris ; Malabar.

D. minimum.

SYN. Nectarinia minima, Tickell, J. A. S. II. 577.
Certhia erythrorhyncha, Latham (founded on the drawing of a young specimen, with colour of bill exaggerated.
D. Tickelliæ, Blyth. J. A. S. XII. 983.
Myzanthe inornata, Hodgson, Gray's Catal.

Inhabits India generally ; Ceylon ; Arracan. Common in L. Bengal.

Genus MYZANTHE, Hodgson.

M. ignipectus, Hodgson, J. A S. XII, 983.

Inhabits Nepal ; Sikkim ; Butan.

Genus PRIONOCHILUS, Strickland.

Pr. thoracicus (*Pl. Col.* 600, f. 1), J. A. S. XIV. 559.

SYN. Pipra thoracica, Temminck.
P. maculata (?), Temminck (female or young ?)

Inhabits Malayan peninsula.

Pr. percussus (*Pl. Col.* 394, f. 2), J. A. S. XIV. 559.

SYN. Pipra percussa, Temminck.
Dicæum ignicapillum, Eyton, P. Z. S. 1839, p. 105.

Nalloo, or *Nalow*, Malayan.

Inhabits Malayan peninsula ; Sumatra.

Genus PIPRISOMA, Blyth (*Semicrornis*? Gould).

P. agile, J. A. S. XIII. 314.

SYN. Fringilla agilis, Tickell, J. A. S. II. 578.
Pipra squalida, Burton, P. Z. S. 1836, p. 113.
Parisoma (?), vireoides. Jerdon, Madr. Journ. XI. 9.

Inhabits C. India ; Himalaya ? (Deyra Doon ?)

Order IV. GEMITORES.

Fam. COLUMBIDÆ.

Subfam. TRERONINÆ.

Genus TRERON, Vieillot. (*Hurrial*, H. ; *Hurtel*, Beng. ; *N'goo*, Arracan ; *Battagoya*, Cingh. ; *Poonai*, Sum.)

Sub-genus TORIA, Hodgson.

T. aromatica (*Pl. Enl.* 163).

SYN. Columba aromatica, C. curvirostris, and (the female).
C. tannensis, Gmelin.
Poonai ubar, Sum. (Raffles.)

Inhabits Eastern Archipelago.

Var. *T. nipalensis*, Hodgson, *As. Res.* XIX ; 164 ; J. A. S. XIV, 847. *Thoria* (*i. e.*, 'beaked'), Nepal ; *Krocha*, Malay.

Inhabits Nepal ; Assam ; Arracan ; Tenasserim provinces ; Malayan peninsula ; rare in L. Bengal.

T. Capellei (*Pl. Col.* 143).

SYN. Columba Capellei, Temminck.
Vinago giganteus, Vigors. Zool. App. to Lady Raffles's Biog. of Sir St. Raffles, p. 674.
Tr. magnirostris, Strickland, Ann. Mag. N. H. 1844, p. 115.

Inhabits Malayan peninsula ; Sumatra.

Subgenus TRERON, Vieillot.

Tr. viridifrons, Blyth, J. A. S. XIV. 849.

Inhabits Tenasserim provinces.

Tr. Phœnicoptera; (Gould's 'Century,' pl. 18 ; but the feet should have been coloured brilliant yellow) ; J. A. S. XIV. 849.

SYN. Col. phœnicoptera Latham.
C. militaris, Temminck.
C. Hardwickii, Gray.

Inhabits Bengal, Assam, Sylhet, Nepal, and all Upper India, southward to C. India, where mingled much with the next race.

Tr. chlorigaster, Blyth, J. A. S. XII. 167 ; XIV. 850.

SYN. Tr. Jerdoni, Strickland, Ann. Mag. N. H. 1844, p. 167.
Tr. phœnicoptera v. militaris of S. India, Auctorum.

Inhabits Peninsula of India ; rare in L. Bengal.

Tr. bicincta (Jerdon's *Ill. Ind. Orn.* pl. 21) ; J. A. S. XIV. 851.

SYN. Vinago bicincta (the male) and V. unicolor (the female), Jerdon, Madr. Journ. XII. 13, 14.
V. vernans, var., Lesson's Traité.

Inhabits India generally ; Ceylon, Nepal, Assam, Sylhet, Arracan, Tenasserim.

Tr. viridis (*Pl. Enl.* 138 ; J. A. S. XIV. 851.

SYN. Columba viridis Scopoli.
C. vernans, Gmelin.
C. purpurea, Latham.

Pouye, Malay. Inhabits Malayan peninsula and Archipelago.

Tr. chloroptera, Blyth, J. A. S. XIV. 852.

Inhabits Nicobar Islands.

Tr. malabarica (*Nat. Libr. Columbidœ.* pl. 1) ; Jerdon's *Ill. Ind. Orn.*, Art. *Tr. bicincta* ; J. A. S. XIV. 852.

SYN. Vinago aromatica (the male), and V affinis ; (the female), Jerdon. Madr. Journ. XII, 13,
Columba pompadora ? Gmelin (founded on Brown's 'Illustrations,' pl. 19, 20).

Inhabits S. India; Ceylon? rare in L. Bengal; common in Assam, Sylhet, Arracan, and Tenasserim.

Tr. Olax (*Pl. Col.* 241).

Syn. Columba olax, Temminck.

Sembooan, Malay. Inhabits Malay countries.

Subgenus SPHENOCERCUS, G. R. Gray.

Sph.—cantillans (Gould's 'Century,' pl. 57).

Syn. Vinago cantillans, Blyth, J. A. S. XII. 166 (cage variety).
V. sphenura, Vigors, P. Z. S. 1841, p. 173.
Columba aromatica, var. A. Latham (cage variety).

Kokla, or *Kokhela*, H. Inhabits Himalaya.

Sph. apicauda.

Syn. Treron apicauda, Hodgson, Gray's Catal.; J. A. S. XIV. 854.

Inhabits S. E. Himalaya; Assam.

Sph. oxyura (*Pl. Col.* 240).

Syn. Columba oxyura, Temminck.
Sphenurus semitorquatus, Swainson.

Inhabits Malay Countries.

Genus PTILINOPUS, Swainson.

Pt. melanocephalus (*Pl. Enl.* 214).

Syn. Columba melanocephala, Pennant.

Jowan Bondol, Jav. Inhabits Java.

Pt. jambu (Tem. *Pigeons*, *t.* 27, 28.

Syn. Columba jambu, Gmelin.

Paonag Gadang, Malay; *Poonai Jambu*, Sum. Inhabits Malayan peninsula; Sumatra.

Pt. purpuratus (Temminck, *Pigeons*, *t.* 24); vide J. A. S. XII. 178 (*bis*).

Syn. Columba purpurata, Latham.
C. Forsteri, Desmarest.
C. kurukuru, Bonnaterre.

Inhabits Ladrones, &c.

Pt. ? Inhabits Navigators' Islands.

Genus CARPOPHAGA, Selby. (*Dukul*, or *Dunkul*, H.)

C. sylvatica; vide J. A. S. XIV. 856.

Syn. Columba sylvatica, Tickell, J. A. S. II, 581.
Carp. ænea of India, Auctorum.

Dunkul, H.; *Soona Kubutra*, Uria; *Pyoonmadee*, Arracan; *Pagam*, Sumatra. Inhabits C. and S. India; Assam; Sylhet; Arracan; Tenasserim; Malayan peninsula; Sumatra; Java? Variety in Nicobar Islands.

C. pusilla, Blyth, J. A. S. XVIII. Inhabits Nilgiris.

C. perspicillata (*Pl. Col.* 246).

Syn. Columba perspicillata, Temminck.

Inhabits Java; Moluccas.

C. insignis, vide J. A. S. XIV. 855.

Syn. Ducula insignis, Hodgson, As. Res. XVIII. 162.
C. cuprea, Jerdon, Madr. Journ. XII, p. 12 (subsequently referred to Col. badia, Raffles, ibid. XIII, 164).

Inhabits S. E. Himalaya; Assam; Arracan; Nilgiris.

C. bicolor (Sonn. *Voy. t.* 103.)

Syn. Columba bicolor, Scopoli.
C. alba, Gmelin.
C. Littoralis, Temminck.

Barung dara luhut, Jav. Inhabits Malayan peninsula and Archipelago; Nicobar Islands.

Subfam. COLUMBINÆ.

Subgenus ALSOCOMUS, Tickell.

A. Hodgsonii.

Syn. Columba Hodgsonii, Vigors, P. Z. S. 1839, p. 16.
C. nipalensis, Hodgson, J. A. S. V. 122; XIV, 867.

Inhabits Himalaya.

A. puniceus, Tickell, J. A. S. XI, 462; XII, 867, 878. Inhabits C. India; Assam; Arracan; Tenasserim.

P. torquatus (*Pl. Enl.* 316).

Syn. Columba palumbus, L.

Inhabits Europe: variety in N. W. Himalaya.

P. pulchricollis.

Syn. Columba pulchricollis, Hodgson, vide J. A. S. XIV. 866.

Inhabits S. E. Himalaya.

P. Elphinstonei (Jerdon's *Ill. Ind. Orn.*, pl. 48).

Syn. Ptilinopus Elphinstonei, Sykes, P. Z. S. 1832, p. 149.

Inhabits Nilgiris.

Sub-genus COLUMBA (as restricted).

C. livia, Brisson (*Pl. Enl.* 510). *Jalalaya*, H.; *Parwi*, Mahr.; *Gola* of the dealers. Inhabits Europe; and variety in C. and S. Asia.

C. leuconota, Vigors (Gould's 'Century,' pl. 59), J. A. S. XIV, 864. Inhabits Himalaya, near snow region.

Genus MACROPYGIA, Swainson.

M. Reinwardtii (*Pl. Col.* 248).

Syn. Columba Reinwardtii, Temminck.

Inhabits Moluccas, &c.

M. rufipennis, Blyth, J. A. S. XV. 371. Inhabits Nicobar Islands.

M. amboinensis.

Syn. Columba amboinensis, L.

Derkuku-sopa, Jav. Inhabits Tenasserim provinces; Java; Moluccas.

M. leptogrammica (*Pl. Col.* 248); J. A. S. XIV. 869.

SYN. Columba leptogrammica, Temminck.
Coccyzura tusalia, Hodgson, J. A. S. XIII. 936.

Inhabits S. E. Himalaya.

Genus GEOPELIA, Swainson.

G. albiventris, Blyth (*Report on Australian Vertebrata in Mus. As. Soc*)

SYN. Columba Maugei (?), Temminck.

Inhabits Timor.

G. striata (Temminck, *Pigeons*, *t.* 47).

SYN. Columba striata et C. sinica, L.
C. malaccensis, Gmelin.
C, fowat, Bonnaterre.
C. bantamensis, Sparrman.

Katitiran, Sum.; *Berkutut*, Jav. Inhabits Malayan peninsula and archipelago.

Genus TURTUR, Selby. *G'hugu*, Beng.; *Fachta*, H.; *Cobeya*, Cingh.; *Gya*, Arracan; *Balam, or Terkuku*, Mal., Sum.; *Puter*, Jav.

T. risorius (Temminck, *Pigeons*, *t.* 44); vide J. A. S. XIV. 870.

SYN. Columba risoria, L.
T. erythrophrys, Swainson, apud Strickland.

Dhor Factah, H.; *Kalhak, Kahalak, Kahalaki*, or *Paur Ghughu*, Beng. Inhabits N. Africa; S. E. Europe ?; S. Asia.

T. bitorquatus (Temminck, *Pigeons t.* 40).

SYN. Columba bitorquata, Temminck.

Puter-genni, Jav. Inhabits Java; Moluccas; Timor.

T. humilis (*Pl. Col.* 258, 259).

SYN. Columba humilis, Temminck.
C. risoria (minor), Franklin—the female.
Asiatic Pigeon, Latham.

Seroti Fachtah, H.; *Golabi* (or 'rose-coloured'), *Tamakhuri* (or 'copper cup'), and *Itkuiya* (or 'brick coloured'), *Ghughu*, Beng.; *Gyolengbya*, Arracan. Inhabits India generally; Arracan.

T. chinensis (Sonnerat's *Voy. aux Indes*, *t.* 102); vide J. A. S. XIV. 875.

SYN. Columba chinensis, Scopoli.
C. risoria, var B, Latham.

Inhabits China.

T. suratensis (Temminck, *Pigeons t.* 43); J. A. S. XIV. 874.

SYN. Columba suratensis, Latham.
C. tigrina, Temminck.
C. turtur, L. var., figured in Griffiths' Trans. Ann. Kingd., VIII. 290.

Chitla, Upper Provinces; *Chitroka Fachtah*, H.; *Chanral Ghughu*, or *Telia Ghughu*, B.; *Kangskiri*, Bhagulpur; *Cobeya*, Cingh.; *Laybiouk*, Arracan. Inhabits India generally, Burmese and Malay countries.

T. orientalis (*Pl. Col.* 550); J. A. S. XIV. 875.

SYN. Columba orientalis, Latham.
C. meena. Sykes, P. Z. S. 1832, p. 149.
C. gelastis, Temminck.
C. agricola, Tickell, J. A. S. II, 581.
C. ferrago, Eversmann.
C. turtur, var., Raffles ?

Balam, or *Terkuku*, Sum., Raffles; *Kulla Fachtah*, H.; *Sam Ghughu*, Beng.; *H'hulga*, Mahratta; *Gyo-pein-doo-ma*, Arracan. Inhabits India generally; Burmah; E. Malasia; N. Asia in summer.

T. senegalensis (Temminck, *Pigeons t.* 45); J. A. S. XIV. 873.

SYN. Columba senegalensis, L.
C. cambaiensis, Gmelin.
C. maculicollis, Wagler.

Tortru Fachtah, H. Inhabits India generally (nec alluvium of L. Bengal), W. Asia; Turkey; N. Africa.

Genus CHALCOPHAPS, Gould.

Ch. indicus (Edwards, pl. 14); J. A. S. XIV. 859.

SYN. Columba indica, L.
C. pileata, Scopoli.
C. javanica (?), cyanocephala, et albicapilla, Gmelin.
C. cyanopileata, et griseocapilla, Bonnaterre.
C. superciliaris, Wagler.

Ram Ghughu and *Rhaj Ghughu*, Beng.; *Nil Cobaya* or *Nillo Cobaya* (*i. e.* 'blue dove') Cingh.; *Gyo-ngyo*, Arracan; *Takoat*, and *Poona Tanna*, Malay; *Limoo-an*, Sum.; *Delimu*, or *Glimukan*, Jav.

Inhabits India; Burmese and Malay countries.

Subfam. GOURINÆ.

Genus CALÆNAS, G. R. Gray.

C. nicobarica (Edwards, pl. 339; *Pl. Enl.* 491).

SYN. Columba nicobarica, L.
C. gallus, Wagler.

Inhabits Andaman and Nicobar Islands; Mergui Archipelago; Malayan peninsula.

Order RASORES.

Fam. MEGAPODIDÆ.

Genus MEGAPODIUS, Quoy and Gaymard.

M. nicobariensis, Blyth, J. A. S. XV. 52, 372. Inhabits Nicobar Islands.

Fam. PHASIANIDÆ.

Subfam. PAVONINÆ.

Genus PAVO, L.

P. *cristatus*, L. (*Pl. Enl.* 433, 434).

SYN. P. assamensis, McClelland, Ind. Rev. 1838, p. 513.

Mayura B.; *Maur*, H.; *Mra*, or *Marak*, Sum. (Raffles).

Inhabits India generally; Assam; Chittagong; Burmah? Sumatra.

P. muticus, L. Vieillot, (*Gal. des Ois. t.* 202).

SYN. P. spiciferus, Vieillot.
P. Aldrovandi, Wilson.
P. javanicus, Horsfield.
P. japonensis, Brisson.

Oo-doung, Arracan; *Pegu Mayura* B.; *Merak*, Jav. Inhabits Burmese and Malay countries; northward to Arracan.

Genus MELEAGRIS, L.

M. gallapavo, L. (Wilson's *Am. Orn.*, Bonap. *Cont.* p. 9).

SYN. M. sylvestris, Vieillot.
Gallopavo sylvestris, Catesby.

Peru, B., H. Inhabits N. America. *A.* Indian domestic variety, male.

Subfam. POLYPLECTRONINÆ.

Genus CERIORNIS, Swainson.

C. melanocephala (Gould's '*Century*,' pl. 63, 64, 65).

SYN. Satyra melanocephala et Phasianus nipalensis, Gray.
Tragopan Hastingsii, Vigors.

Jewar, *Jewari*, Simla. Inhabits N. W. Himalaya.

C. satyra (Gould's '*Century*,' pl. 62).

SYN. Meleagris satyra, L.
Satyra Lathami et Pennantii, Gray.
S. cornuta, G. R. Gray.

Dafia, Beng. (Bhotea?) Inhabits S. E. Himalya (Nipal, Sikim).

C. Temminckii (Hardwicke's *Ill. Ind. Zool.*)
SYN. Satyra Temminckii, Gray.

Inhabits China.

Genus ITHAGINIS, Wagler.

I. cruentus (Hardwicke's *Ill. Ind. Zool.* Tem. *Pl. Col.* 332).

SYN. Phasianus cruentus, Wagler.
Ph. Gardnerii, Hardwicke (female).

Inhabits Nepal.

Genus GALLOPERDIX, Blyth. (Spur-fowl of sportsmen).

G. zeylonensis (Pennant's *Ind. Zool.* pl. 7).

SYN. Tetrao zeylonensis, Gmelin.
T. bicalcaratus, Pennant.

Aban or *Saban Cuccula*, Cingh. Inhabits Ceylon.

G. lunulosa (Hardwicke's *Ill. Ind Zool.*; Delessert, *Voy. aux. Indes*, pl. 10; Jerdon, *Ill. Ind. Orn.*, pl. 42, the female).

SYN. Perdix lunulosa, Valenciennes.
P. et Plectrophorus Hardwickii, Gray.
Francolinus nivosus Delessert.

Jitta Kodi, Telugu. Inhabits Rajmahl; C. W.; and S. India.

G. spadiceus (Hardwicke's *Ill. Ind. Zool.*, the female).

SYN. Tetrao spadiceus, Gmelin.
T. madagascariensis, Scopoli.
Polyplectron Northiæ, Gray (the female).

Inhabits C. and S. India.

Genus POLYPLECTRON, Temminck.

P. *chinquis*, Temminck (*Pl. Col.* 539), apud G. R. Gray.

SYN. P. albo-ocellatum, Cuvier.
P. lineatum, Gray, the female.
Pavo tibetanus, L.
Peacock Pheasant from China (?), Edward's, pl. 67, 69.

Doung-kula, Arracan: *Mo-nuwur*, and *Day-o-da-huk*. Inhabits Assam, Sylhet, Arracan, Tenasserim.

P. bicalcaratum (Hardwicke's *Ill. Ind. Zool.*)

SYN. Pavo bicalcaratus, L.
P. malaccensis, Scopoli.
P. Hardwickii, Gray.

Kuaow Charman, Malay, Sum. Inhabits Malayan peninsula; Sumatra.

Genus ARGUS, Temminck.

A. giganteus, Temminck (Vieillot, *Gal. des Ois.*, *t.* 203; Jardine and Selby, *Ill. Orn.*, *n. s.*, pl. 6).

SYN. Phasianus argus, L.
A. pavoninus, Vieillot.
Malay Peacock, Latham.

Kuaow, Malay; Sum. Inhabits Malayan peninsula; Sumatra. (Nec Sylhet, as stated by Hardwicke, *MS.* in Brit. Mus.)

Subfam. PHASIANINÆ.

Genus GALLUS, L. (apud G. R. Gray). *Murgh*, female *Murghi*, H.: *Ayam*, Malay.

G. ferrugineus.

SYN. Tetrao ferrugineus, Gmelin.
G. bankiva, Temminck.
Phasianus gallus, L.,—Domestic varieties (among which are G. giganteus, morio, crispus, ecaudatus, pumilus, plumipes, cristatus, pentadactylus, pusillus, lanatus, &c.)
Hackled Partridge, Latham—the hen.

Ban Murgh, or *Jungli Murgh*, H.; *Ban Kokra*, of Santals; *Ayam utan*, Malay; *Breoga*, Sum.; *Bengkiwo*, or *Bekikko*, Java. Inhabits Jungly districts of all N. India, from valleys of sub-Himalayan region southward to the Vindhyian range and the N. Circars; Assam: Burmese and Malay countries: Turkestan? (Vide J. A. S. VIII, 1007). A. Indian race, with white ear-lappet in living specimens (vide *Ann. Mag. N. H.* XX, 389). B. Pale sub-Himalayan race (vide *Ann. M. N. H.*, *G. Stanleyi*, Gray, (Hardwicke's *Ill. Ind. Zool.*,—the hen).

SYN. G. Lafayettei, Lesson.
G. lineatus, Blyth, mentioned J. A. S. XVI. 387.

Welle Cuccula, Cingh. Inhabits Ceylon.

G. Sonneratii, Tem. (*Pl. Col.* 232, 233).

SYN. Phasianus gallus apud Sonnerat.
Ph. indicus, Leach.

Jungli Murgh, S. India. Inhabits peninsula of India.

Genus EUPLOCOMUS, Temminck.

Eu. ignitus (Macartney's *Emb. to China*, pl. 13).

SYN. Phasianus ignitus, Shaw.
Gallus Macartneyi, Temminck.
Ph. rufus, Raffles (the female).

Jugang, Sum. Inhabits Malayan peninsula; Sumatra.

Eu. nycthemerus (*Pl. Enl.* 123, 124).

SYN. Phasianus nycthemerus, L.
Nycthemerus argentatus, Swainson.

Inhabits China.

Eu. lineatus (Belanger, *Voy. Ind. Orient. Zool.*, *pl.* 8, 9).

SYN. Phasianus lineatus, Latham.
Ph. Rrynaudii, Lesson.
Ph. fasciatus, McClelland, Calc. Journ. N. H. II. 146.

Yeet, Arracan. Inhabits Burmese countries. (Arracan, Tenasserim. Pegu).

Eu. Horsfieldi (Gray's *Ill. Gen. Birds*, pl.).

SYN. Gallophasis Horsfieldi, G. R. Gray.

Mut'hura; Purple Pheasant of Europeans. Inhabits Assam; Sylhet.

Eu. melanotus, Blyth, (noticed J. A. S. XVII, 694). *Kalij Pheasant* of Darjiling. Inhabits Sikkim.

Eu. albocristatus, (Gould's '*Century*,' pl. 66, 67).

SYN. Phasianus albocristatus, Vigors.
Ph. Hamiltonii, Gray (Hardw. Ill. Ind. Zool.)

Kalij of Simla, Masuri, &c.; also *Murgh-Kalij*, and *Kukera*. Inhabits N. W. Himalaya.

Eu. erythropthalmos (Hardw. *Ill. Ind. Zool.*—the female).

SYN. Phasianus erythropthalmos, Raffles.
Ph. purpureus, Gray (the female).

Pagar, Malay; *Mira Mata*, Sum. Inhabits Malayan peninsula; Sumatra.

Genus PHASIANUS, L.

Subgenus PUCRASIA, G. R. Gray.

P. macrolopha (Gould's '*Century*,' pl. 69, 70).

SYN. Satyra macrolopha, Lesson.
Ph. pucrasia, Vigors, J. E. Gray.
Ph. pucrasse, Gray.
Tragopan Duvaucelei, Tomminck.

Plas, Pukras, Koklas. Inhabits N. W. Himalaya (rare in Nepal.)

Subgenus PHASIANUS, as restricted.

Ph Wallichi (Gould's '*Century*,' pl. 68.

SYN. Lophophorus Wallichii, Hardwicke.
Phasianus Stacei, Vigors.

Chir, or *Cheor*, *Banchil*, *Herril*. Inhabits N. W. Himalaya.

Ph. torquatus, Gmelin (Hardw. *Ill. Ind. Zool*).

SYN. Ph. albotorquatus, Bonnaterre.

Inhabits China.

Ph. colchicus, L. (*Pl. Enl.* 121; 122). *Kurg-kaol*, Pushtu. Inhabits W. Asia (Abundant—though somewhat different from the European bird e on the Elburz Chain, N. of Persia). Now, common in Europe.

Subgenus THAUMALEA, Wagler.

Th. Amherstiæ (G. R. Gray, *Ill. Gen. Birds*, pl. 125).

SYN. Phasianus Amherstiæ, Leadbeater.

Inhabits bordering regions of China and Tibet.

Genus LOPHOPHORUS, Temminck.

L. impeyanus (Gould's '*Century*,' pl. 60, 61).

SYN. Phasianus Impeyanus, Latham.
Ph. curvirostris, Shaw.
Lophophorus rufulgens, Temminck.

Monal, or *Ghur Monal*; *Murgh-i-zari* ('Golden Fowl'); *Murgh Muhshor*: male, *Ratkap*; female, *Monali*. Inhabits Himalaya generally: Kaffiristan (Burnes).

Subfam. TETRAONINÆ.

Genus TETRAOGALLUS, Gray.

T. himalayensis, G. R. Gray (Hardw. *Ill. Ind. Zool.*; Jardine and Selby, *Orn. Ill.* pl. 141, nec pl. 76, nec G. R. Gray, *Ill. Gen. Birds*). These have since been united by Mr. G. R. Gray; but of some dozens of specimens from Afghanistan eastward to Sikim, all were quite similar, and corresponded neither with the Persian species (*T. caucasica*, v. *Nigelli*), nor with the Altai species (*T. altaica*) as described, nor very decidedly with the figure published by Messrs. Mitchell and G. R. Gray, which should represent a fourth species.

SYN. T. Nigelli of Himalaya, Auctorum.

Inhabits Himalaya; Hindu Kosh; Afghanistan.

Genus LERVA, Hodgson.

L. nivicola, Hodgson.

SYN. Perdix lerva, Hodgson, P. Z. S. 1803, p. 107.

Quoir Monal. Snow Partridge of sportsmen. Inhabits Snow-region of Himalaya.

Subfam. PTEROCLINÆ.

Genus PTEROCLES, Temminck. (*Burtitur*, H. *Whistling Grouse*, or *Rock Pigeons* of sportsmen in India).

Pt. arenarius (*Pl. Col.* 52, 53).

SYN. Tetrao arenarius, Pallas.
Perdix aragonica, Latham.
Bonasa pyrenaica, Brisson.

Buklit, H.; *Khyrgut*, or *Sya-rim*; also *Tuturuk* (expressive of cry), and *Bovra Kurra* ('black breast'), Afghanistan. *Sand Grouse* of sportsmen. Inhabits desert regions of Asia, S. Europe, and N. Africa.

Pt. fasciatus (Jerdon's *Ill. Ind. Or*p, pl. 10, 36).

SYN. Tringa fasciata, Scopoli.
Tetrao indicus, Gmelin.
Perdix indica, Latham.
Œnas indicus et bicinctus, Vieillot.
Pterocles quadricinctus, Temminck.

Hundsgri, H.; *Polunkar*, Telugu; *Kelkudari* (Rock Partridge), Tamul. *Painted Grouse* of sportsmen. Inhabits Hindustan generally.

Pt. alchata (*Pl. Enl.* 105, 106).

SYN. Tetrao alchata, L.
T. caudacutus, Gmelin.
T. chata, Pallas.
Œnas cata, Vieillot.
Pt. caspius, Menetries.

Inhabits middle Asia; Afghanistan; Syria; Spain; N. Africa.

Pt. exustus, Temminck (*Pl. Col.* 354, 360).

SYN. Pt. senegalensis, Lichtenstein.

Bur Tetur and *Kumar Tetur*, H.; *Buttator*, Sindh; *Sassinia*, Afghanistan. Inhabits Hindustan; M. and W. Asia; S. Europe; N. Africa.

Subfam. PERDICINÆ.

Titr or *Tetur* (root of *Tetrao*), H.; *Kha* Arracan.

A. Guinea-fowl.

Genus NUMIDA, L.

N. meleagris, L.

SYN. N. galeata, Pallas.

Inhabits Africa. The domestic adults are typically coloured.

Genus FRANCOLINUS, Brisson. Stephens.

Div. 1. With stouter bills.

Fr. pintadeus.

SYN. Tetrao pintadeus, Scopoli.
T. madagascariensis, Gemelin, (nec Scopoli)

Pintado Partridge, Mauritius. Inhabits Mauritius.

Fr. sinensis.

SYN. Tetrao sinensis, Osbeck.
T. perlatus, Gmelin.
Perdix Phayrei, Blyth, mentioned J. A. S. XII. 1011.

Inhabits Indo-China; China.

Div. 2. With less robust bills.

Fr. vulgaris, Stephens (*Pl. Enl.* 147, 148).

SYN. Tetrao francolinus, I.

Kala Tetur, H. · *Mushki Tetur*, Urdu: *Durraz* (Burnes). *Black Partridge* of sportsmen. Inhabits N. India; Afghanistan; Persia; Syria; Cyprus; Sicily.

Fr. pictus, (Jardine and Selby, *Orn. Ill.* pl. 50).

SYN. Perdix picta, Jardine and Selby.
P. Hepburnii, Gray, Hardw. Ill. Ind. Zool.

Painted Partridge of sportsmen. Inhabits peninsula of India, where replacing Fr. vulgaris.

D. Rock Partridges.

Genus CACCABIS, Boie.

C. chukar (Gould's '*Century*,' pl. 71).

SYN. Perdix chukar, Gray.
Chacura pugnax, Hodgson, Madr. Journ. 1837, p. 305.

Chukor, H. (from voice; *Kulk*, or *Kirk*. Pushtu. Inhabits Himalaya; Afghanistan.

E. Ordinary Partridges.

Genus PERDIX, Brisson.

P. gularis, Tem. (Hardw. *Ill. Ind. Zool.*) *Jungli Titr*, H. *Wood Partridge*, and *Bengal Chikor* of sportsmen. Inhabits Banks of Ganges.

P. pondiceriana (*Pl. Col.* 213; Hardw. *Ill. Ind. Zool*).

SYN. Tetrao pondicerianus, Gmelin.
Perdix orientalis, Gray.

Gora Titur, H. *Grey*, *Common*, or *Scavenger Partridge* of sportsmen. Inhabits India generally; Ceylon, never on the E. side of the Bay of Bengal.

Genus RHIZOTHERA, G. R. Gray.

Rh. curvirostris (Hardw, *Ill. Ind. Zool.*—the female).

SYN. Tetrao curvirostris, Raffles.
Perdix longirostris, Temminck.

Janting, Sum. Inhabits Malayan Peninsula; Sumatra.

F. Wood Partridges.

Genus ARBORICOLA, Hodgson.

A. torqueola (*Pl. Col.* 462, 463 ; Hardw. *Ill. Ind. Zool.*—male.

Syn. Perdix torqueola, Valenciennes.
P. megapodia, Temminck.
P. olivacea, Gray.

Peura, *Ban Tetra*, N. W. Himalaya. *Green* or *Hill Partridge* of sportsmen. Inhabits Himalaya.

A. rufogularis, Blyth, J. A. S. XVIII, Inhabits Sikim at a lower altitude than the preceding race.

A. atrogularis, Blyth, J. A. S. XVIII, Inhabits Hill regions of Assam, Sylhet, and Arracan.

A. (?) *Charltoni.*

Syn. Perdix Charltoni, Eyton, Ann. Mag. N. H. XVI. 230.

Inhabits Penang.

Genus ROLLULUS, Bonnaterre.

R (?) *ocellatus* (Hardw. *Ill. Ind. Zoll.*)

Syn. Tetrao ocellatus, Raffles, Lin. Tr. XIII, 322.
Perdix oculea, Temminck.

Troong, Sum. Inhabits Tenasserim provinces ; Malayan Peninsula ; Sumatra.

R. cristatus (*Pl. Col.* 350, 351).

Syn. Columba cristata, Gmelin.
Phasianus roulroul, Scopoli.
Perdix coronata, Latham.
Tetrao porphyrio, Shaw.
T. viridis, Gmelin—female.

Soal, *Bestum*, Malay ; *Beniol*, Sum. Inhabits Tenasserim provinces ; Malayan peninsula ; Sumatra.

R. niger (Belanger's *Voyage*, *t.* 7, male,—Hardw. *Ill. Ind. Zool.*,—female.)

Syn. Cryptonyx niger, Vigors, Zool. Journ. IV. 349. } Male.
C. Dussumieri, Lesson. } Male.
C. Ferrugineus, Leadbeater, Lin. Tr. XVI. 349. } Female.
Perdix æruginosa, Eyton, P. Z. S. 1839, p. 106. } Female.

Hole, Malay. Inhabits Malayan peninsula ; Sumatra.

G. Dwarf Partridges.

Genus PERDICULA, Hodgson. *Bush Quails* of Sportsmen.

P. asiatica (*Trans. Zool. Soc.* II, pl. 3,—not good).

Syn. Coturnix pentah, Sykes.
Perdix asiatica et cambaiensis (?), Latham.

Lowa, H. *Common Bush Quail* of Sportsmen : *Rock Quail*, S. India. Inhabits India generally.

P. argoondah (*Trans. Zool. Soc.* II, pl. 2,—not good).

Syn. Coturnix argoondah, Sykes.
Perdix rubiginosa (?), Valenciennes.

Goerza, H. *Forest Quail.* Inhabits S. India.

I. Quails. *Buttair*, H.

Genus COTURNIX, Mœrrbing.

Sub-genus COTURNIX, Gould.

C. communis, Bonnaterre (*Pl. Enl.* 170.

Syn. Tetrao coturnix. L.
C. major, Brisson.
C. dactylisonans, Temminck.
C. europæus, Swainson.
C. vulgaris, Jardine.

Ghaghus, H. (Jerdon). *Common Quail* of sportsmen. Inhabits Europe, Asia, Africa : common in India (nec Malasia),

C. coromandelica (*Pl. Col.* 35.)

Syn. Tetrao coromandelicus, Gmelin.
C. textilis, Temminck.

Rain Quail of sportsmen. Inhabits India generally.

C. chinensis. (Gould's *B. A.* Vol. V. 92).

Syn. Tetrao chinensis, L.
T. manillensis, Gmelin.
Coturnix philippensis, Brisson.
C. excalfatoria, Temminck.
C. flavipes, Blyth, J. A. S. XI. 808.—the female.

Pikau, Malay ; *Chaun-chan*, China ; *Painted Quail* of sportsmen. Inhabits S. E Asia and its islands ; Australia. Common in the Malay countries ; less so in Bengal ; rare in S. India ; Ceylon.

C. (?). *erythrorhyncha*, Sykes, (*Zool. Trans.* Vol. II. pl. 1). *Kohui Lowa*, H. (Jerdon). *Red-billed* or *Black Quail* of Nilgiris. Inhabits Nilgiris ; Malabar.

Fam. TINAMIDÆ (?)

Subfam. TURNICINÆ.

Genus TURNIX, Bonnaterre. *Button Quails* of sportsmen.

T. ocellatus (Sonn. *Voy. t.* 23).

Syn. Oriolus ocellatus, Scopoli,
Tetrao luzoniensis, Gmelin.
Hemipodius thoracicus, Temminck.
H. atrogularis, Eyton, (the female), and H. taigoor apud Eyton (the female), P. Z. S. 1839, p. 107.
H. pugnax (?), Temminck (pl. Col. 60, 2), apud G. R. Gray, Brit. Mus. Catal. and Strickland, Ann. Mag. N. H. XX. 135.

Pochio, Malay ; *Puyu*. Sum. ; *Drigul*, male, *Gomma*, female, Java. Inhabits Himalaya (Almorah, Nepal, Sikim) ; Burmese and Malay countries ; Philippines. *N B.* Himalayan, Burmese and Malayan examples are perfectly similar.

Rufous variety from S. India and Ceylon (*Zool. Trans.* Vol. II. pl. 4).

SYN. Hemipodius taigoor, Sykes,—the male, and H. pugnax apud Sykes and Jerdon,—the female.

Small pale variety common in L. Bengal. (*T. bengalensis,* Blyth). *Salni gundru* Muttra.

T. Dussumieri (*Pl. Col.* 454, f. 2).

SYN. Hemipodius Dussumieri, Temminck.
H. maculosus (?). Temminck, apud G. R. Gray, Brit. Mus. Catal.
T. tanki, Buch. Hamilton, described J. A. S. XII. 181, (bis).

Bustard Quail of sportsmen. Inhabits India generally ; Arracan.

T. Sykesi, A. Smith, *Zool. Africa,* art. *T. lepurana.*

SYN. Ortygis Dussumieri apud Jerdon, Catal., and J. A. S. XI. 804.

Chimnaj ? H. (Muttra); *Tattu Buttera,* Sindh. Inhabits India generally : (L. Bengal ?) ; Sindh.

Order V. CURSORES.

Fam. CASUARIDÆ.

Genus CASUARIUS, L.

C. galeatus, Vieillot (*Pl. Enl.* 313 ; *Menagerie du Museum,* pl.).

SYN. Struthio casuarius, L.
C. emu, Latham.

Inhabits Moluccas.

Genus DROMAIUS, Vieillot.

Dr. Novæ Hollandiæ (Gould's B. A. Vol. VI. pl. 1).

SYN. Casuarius novæ hollandiæ, Latham.
Dr. ater, Vieillot.
Dromiceus australis, Swainson.
Dr. emu, Stephens.

Inhabits Australia.

Fam. STRUTHIONIDÆ.

Genus STRUTHIO, L.

Str. camelus, L. (*Pl. Enl.* 547 ; *Menagerie du Museum,* pl.). *Shutur-murgh* ('Camel-fowl), H. Inhabits Africa ; Arabia ?

Order VI. GRALLATORES.

Tribe PRESSIROSTRES.

Fam. OTIDÆ.

Genus OTIS, L.

Subgenus HOUBARA, Bonap.

H. Macqueenii (Hardwicke's *Ill. Ind. Zool.*) J. A. S. XVI. 786.

SYN. Otis Macqueenii, Gray.

Tilaor, H. ; *Dugdaur,* Pushtu, *Hurriana Floriken* of sportsmen. Inhabits C. and W. deserts of India ; Afghanistan.

Subgenus EUPODOTIS, Lesson.

Eu. Edwardii (Hardwicke's *Ill. Ind. Zool.* ; Gould's *Century,* pl. 72).

SYN. O. Edwardii, Gray.
O. nigriceps, Vigors.
O. luconiensis, Vieillot (apud G. N. Gray).

Tokdar, H. Inhabits Hindustan ; Luzon ?

Subgenus. SYPHEOTIDES, Lesson.

S. bengalensis (Gould's *Century,* pl. 73, 74, 75).

SYN. Otis bengalensis, Gmelin.
O. himalayana, Vigors.
O. deliciosa, Gray.

Charj, or *Ablak Charj,* H. *Floriken* of N. India. Inhabits Bengal, Assam, Nepal ; N. India generally.

S. auritus (Jardine and Selby, *Orn. Ill.* pl. 40, 92 ; Jerdon's *Ill. Ind. Orn.*, pl. 33).

SYN. Otis aurita, Latham.
O. fulva, Sykes, male in non-breeding dress.
O. atriceps, Gray.
O. indica, Shaw.

Charj, H. (S. India) ; *Tun-mor,* Mahr. ; *Kunnoul,* Can. *Floriken* of S. India : *Likh* of Bengal. Inhabits India generally.

INCERTÆ SEDIS,

Fam. GLAREOLIDÆ.

Genus GLAREOLA, Brisson.

Gl. orientalis, Leach (apud G. R. Gray, *Lin. Tr.* XIII, p. 132, pl. ; Gould's B. A. Vol. VI. pl. 23 ;—figures and descriptions bad, if the species be correctly assigned).

SYN. Gl. pratincola vel torquata of India, auctorum.

Inhabits India, Burmese and Malay countries.

Gl. lactea, Temminck (*Pl. Col.* 399 ; Griffiths' *Trans. An. Kingd.*, VIII. 543, pl.—very bad).

SYN. Gl. orientalis apud Jerdon, Madr. Journ. XII. 215.

Utteran, Sindh. Inhabits India generally (very abundant).

Fam. CHARADRIADÆ.

Subfam. CURSORIINÆ.

Genus CURSORIUS, Latham.

C. coromandelicus.

SYN. Charadrius coromandelicus, Gmelin.
Cursorius asiaticus, Latham.
C. frenatus, Illiger.
Tachydromus orientalis, Swainson.

Nukri, H. Inhabits India generally (nec Lower Bengal.)

Genus MACROTARSIUS, Blyth.

M. bitorquatus, Jerdon, Blyth, J. A. S. XVII. 254. Inhabits E. Ghâts of peninsular India.

Subfam. ESACINÆ.

Genus ESACUS, Lesson.

E. recurvirostris.

SYN. Œdicnemus recurvirostris, Cuvier.
Carvanica] grisea, Hodgson, J. A. S. V. 796.

Kawanak, H. ; *Tuloor*, Sindh. *Bastard Floriken* of sportsmen. Inhabits India generally ; Ceylon ; Sindh ; Arracan.

Genus ŒDICNEMUS, Cuvier.

Œd. crepitans (*Pl. Enl.* 919).

SYN. Charadrius œdicnemus, L.

Bursiri, or *Lámbi*, H. ; *Khurma*, Beng. ; *Gadang Kapala*, Sum. (Raffles). *Bastard Floriken* of some. Inhabits Europe, Asia, Africa. Very common in parts of India.

Subfam. VANELLINÆ.

Titi, Beng.

Genus HOPLOPTERUS, Bonaparte.

H. ventralis (Hardw. *Ill. Ind. Zool.*)

SYN. Charadrius ventralis, Wagler.
Ch. Duvaucelei, Lesson.

Nghet Taloing, Arracan. Inhabits India generally (on sand-flats). Common in Arracan.

Genus SARCIOPHORUS, Strickland.

S. bilobus (*Pl. Enl.* 880).

SYN. Charadrius bilobus, Gmelin.

Zirdi, H. Inhabits India generally on arable land.

Genus LOBIVANELLUS, Strickland.

L. göensis (Gould's *Century*, pl. 78).

SYN. Parra göensis, Gmelin.
Charadrius atrogularis, Wagler.

Tititui (expressive of cry), H. ; *Titori*, Sindh. *Kibullo*, Cingh. ; *Teeteedoo*, Arracan. Inhabits India generally and Malay countries (very abundant).

L. cinereus.

SYN. Pluvianus cinereus, Blyth, J. A. S. XI. 587.

Inhabits Bengal not uncommon in cold season.

L. leucurus (Denon's Egypt, *Zool.*, pl. 6, f. 2).

SYN. Charadrius leucurus, Lichtenstein.

Chizi, Kabul. Inhabits Middle Asia ; N. Africa. Very rare in India.

Genus VANELLUS, L.

V. cristatus, Meyer (*Pl. Enl.* 242).

SYN. Tringa vanelus, L.
V. gavia, Leach.

Alatye, or *Mekhdao*, Kabul. Inhabits Europe and Asia ; N. Africa (in winter) : Upper India ; never in S. India, or L. Bengal.

Subfam. CHARADRINÆ.

Genus SQUATAROLA, Cuvier.

Sq. helvetica, (*Pl. Enl.* 854, 858).

SYN. Tringa helvetica, Gmelin.
Tr. squatarola, L.
Charadrius hypomelas, Pallas.
Vanellus griseus, Brisson.
V. melanogaster, Bechstein.

Bara Batan, B. ; *Chibugan*, Java. This is of nearly general distribution. Europe, Asia, Africa, Australia, N. America. Not rare in L. Bengal.

Genus CHARADRIUS, L.

Ch. pluvialis, L. (*Pl. Enl.* 904). Inhabits Europe ; W. Asia ; N. Africa.

Ch. virginicus, Bechstein (Wilson's *Am. Orn.* pl. 59, f. 5).

SYN. Ch. pluvialis apud Wilson, also Horsfield and Jerdon, Catal.
Ch. pluvialis var., Raffles.
Ch. marmoratus, Temminck.
Ch. pectoralis, Vieillot.
Ch. xanthocheilus (?), Wagler (Gould's B. A. Vol. VI. pl. 13).

Chota Batan, B. ; *Berkay*, Malay ; *Cheruling*, Sum. ; *Trull*, Jav. Inhabits S. E. Asia and its islands ; Australia ? ; N. and S. America. Very common in India.

Sub-genus EUDROMIAS, Boie.

Eu. morinellus (*Pl. Enl.* 832).

SYN. Charadrius morinellus, L.

Inhabits Europe ; W. Asia.

Sub-genus HIATICULA, G. R. Gray.

H. Geoffroyi, vide J. A. S. XII. 180.

SYN. Charadrius Geoffroyi, Wagler.
H. rufinus, Blyth, Ann. Mag. N. H. 1843.

Inhabits India generally ; not common ; Java.

H. Leschenaultii (?), vide, J. A. S. XII. 181.

SYN. Charadrius Leschenaultii (?), Lesson.
Ch. cirripedesmos, Wagler, apud Sundevall.
Ch. rufinellus, Blyth, Ann. Mag. N. H. 1833.

Inhabits India generally ; extremely common in L. Bengal.

H. cantiana.

SYN. Charadrius cantianus, Latham.
Ch. Alexandrinus, Hasselquist.
Ch. littoralis, Bechstein.
Ch. albifrons, Meyer.

Inhabits Europe ; Asia ; N. Africa.

H. philippina (Sonnerat, *Voy. aux Indes*, pl. 46.)

SYN. Charadrius philippinus Scopoli.
Ch. dubius, Gmelin.
Ch. curonicus, Beseke.
Ch. minor Meyer.
Ch. fluviatilis, Bechst.
Ch. intermedius, Menetrics.
Ch. hiaticuloides, Franklin.
Ch. zonatus, Swainson.
Ch. hiaticula apud Pallas.
Ch. hiaticula, var. (?), Raffles.

Zirria, H. ; *Tilla Chusmuk*, Kabul ; *Bui*, Sum. Inhabits Asia ; Africa ; rare in N. W. Europe. Extremely common in India.

H. pusilla.

SYN. Charadrius pusillus, Horsfield.
Ch. minor ? Wagler apud Jerdon, Catal.

Inhabits India and Malay countries. Rare in India.

H. nigrifrons (Gould's *B. A.* Vol. VI. pl. 20).

SYN. Charadrius nigrifrons, Cuvier.
Ch. melanops, Vieillot.
Ch. russatus, Jerdon. Catal.

Inhabits Australia (between 28° and 37°, S. lat). Extremely rare in India.

Fam. CHIONIDÆ.

Genus HÆMATOPUS, L.

H. ostralegus, L. (*Pl. Enl.* 939). *Duriya Guzpoun* (i. e. 'Sea Longshanks' or *Himantopus)* ; H. ; *Tetawuk*, Kabul. Inhabits Europe ; Asia ; N. Africa. Adult, in summer dress (bill 4 in. long). From Arracan.

Fam. RECURVIROSTRIDÆ.

Genus HIMANTOPUS, Brisson. *Lal Theng* ('Red-shank'), Beng. ; *Guz-poun*, ('Yard-leg'), H. ; *Chaha Bara*, Muttra ; *Gusling*, Sindh : *Gagang-bayem*, Jav.

H. candidus, Bonnaterre (*Pl. Enl.* 878).

SYN. Charadrius himantopus, L.
Ch. autumnalis, Hasselquist.
H. vulgaris et H. rufipes, Bechstein.
H. albicollis, Vieillot.
H. atropterus, Meyer.
H. melanopterus, Temminck.
H. asiaticus Lesson.

Inhabits Europe, Asia Africa. Very common in India.

H. intermedius, Blyth, J. A. S. XVIII. p. . Inhabits India where much less common than H. candidus, and Malay countries.

Genus RECURVIROSTRA, L.

R. avocetta, L. (*Pl. Enl.* 353). Inhabits Europe, Asia, Africa. Not rare in Lower Bengal.

Fam. SCOLOPACIDÆ.

Kada-khoncha ('Clay-pecker'), B. ; *Kutra*, H. ; *Yeng-yan*, Arracan ; *Trinil*, Jav. ; *Chanchali*, Kabul.

Genus IBIDORHYNCHUS, Vigors.

I. Struthersii, Vigors (Gould's *Century*, pl. 79).

SYN. Erolia (red-billed) Hodgson. J. A. S. IV. 459.

Inhabits Himalaya.

Genus TOTANUS, Ray, Bechstein.

T. glottis (Gould's *Century*, pl. 75 ; *B. A.* Vol. VI. pl. 36 ;—winter plumage).

SYN. Scolopax glottis, L.
Sc. canescens, Gmelin.
Totanus chloropus, Meyer.
T. fistulans, Bechstein.
T. glottoides, Vigors.
Limosa grisea, Brisson.
L. totanus et L. glottis, Pallas.
Glottis natans, Koch.
Gl. Vigorsii, G. R. Gray.

Timtimma, H. ; *Benonchung*, Jav. Inhabits Old World generally ; Australia. Very common in India.

T. stagnatilis, Bechstein (Gould's *B. E.* pl. 314 ; *B. A.* Vol. VI. pl. 37 ; *Century*, pl. 76 ; —winter plumage).

SYN. Scolopax totanus, L.
T. Horsfieldi, Sykes.
T. Lathami, Gray (Hardw. Ill. Ind. Zool).
T. tenuirostris, Horsfield.

Chota Timtimma, H. ; *Kiyo*, Java ; *Kurrukh-i-abi*, Kabul. Inhabits Old World generally ; Australia. Very common in India.

T. fuscus (*Pl. Enl.* 875).

SYN. Scolopax fusca, L.
Sc. nigra et Tringa atra, Gmelin.
Sc. curonica, Beseke.
Limosa fusca, Brisson.
T. natans et T. maculatus, Bechstein.

Butan, H. Inhabits Europe and Asia. Common in India.

T. calidris (*Pl. Enl.* 845).

SYN. Scolopax calidris, L.
Tringa gambetta, Gmelin.
Tot. variegatus, Brunnich.
T. striatus et T. nævius, Brisson.

Chota Butan, H. Inhabits Europe and Asia. Very common in India.

Genus ACTITIS, Illiger.

Act. glareola.

SYN. Tringa glareola, Gmelin.
Totanus affinis, Horsfield.

Ola-Watua, Cingh. ; *Kodidi*, Malay. Inhabits Europe and Asia. Extremely common in India.

Act. ochropus (*Pl. Enl.* 843).

SYN. Tringa ochropus. L.
Tonatus leucurus, Gray (Hardw. Ill. Ind. Zool.)

Tita. Sindh. Inhabits Europe and Asia. Rare in N. Africa. Common in India.

Act. hipoleucos (*Pl. Enl.* 850).

SYN. Tringa hipoleuca, L.

Tiha, and *Musda*, Sindh.; *Trinil batu*, Java. Inhabits Europe and Asia. Extremely common in L. Bengal.

Genus TEREKIA, Bonaparte.

T. cinerea (Gould's B. E. pl. 807 ; B. A. Vol. VI. pl. 34).

SYN. Scolopax cinerea, Gmelin.
Sc. terek, Latham.
Sc. sumatrana, Raffles.
Limosa recurvirostra, Pallas.
Fedoa terekensis, Stephens.
Tonatus javanicus, Horsfield.
Xenus cinereus, Kaup.

Kuning kaki, Sum. ; *Bedaran*, or *Choweyau*, Jav. Inhabits Asia and its archipelago ; rare in Europe and in Australia. Common in India.

Genus LIMOSA, Brisson.

L. lapponica (*Pl. Enl.* 900).

SYN. Scolopax lapponica, L.
Sc. leucophæa, Latham.
L. rufa, Brisson.
L. ferruginea, Pallas.
Totanus gregarius, Bechstein.

Inhabits Europe ; Africa ; never (?) India.

L. ægocephala (Gould's B. A. Vol. VI. pl. 28).

SYN. Scolopax ægocephala et Sc. limosa, L.
Sc. belgica, Gmelin.
Sc. melanura, Leisler.
L. leucophæa, Jerdon.
L. melanuroides, Gould.

Chaha, and *Jangral*, H. ; *Susling*, Sindh; *Biru Lahut*, Jav. Inhabits Europe, Asia and its islands, and N. Australia. Very common in India.

N. B.—Individuals of the same flock of this species vary excessively in size, and are frequently small as the pair represented by Mr. Gould. The bill varies in length from 2¾ to 4¼ in.; and the closed wing from 7 to 8½ in.

Genus NUMENIUS, L.

N. arquata, L. (*Pl. Enl.* 818). *Sáda Kastuchura* ('*White* Curve-bill,' as opposed to Ps. crepitans, Beng. ; *Goar*, or *Goungh*, H. ; *Terok*, Sum. Inhabits Europe, Asia, Africa. Common in India.

N. phæopus L. (*Pl. Enl.* 842).

SYN. Phæopus vulgaris, Flemming.

Chota Goungh, H. ; *Gajahan*, Java. Inhabits Europe, Asia, Africa. Common on the sea-coasts of India, rare inland.

Genus TRINGA, L.

Tr. canutus, L. (*Pl. Enl.* 365, 366 ; Gould's B. E. pl. 324).

SYN. Tr. cinerea, Brunnich.
Tr. islandica, nævia, grisea, et australis, Gmelin.
Tr. glareola, Pallas.
Tr. ferruginea, Meyer.
Tr. rufa, Wilson (Am. Orn. pl. 57, f. 2,5.)

Inhabits Europe, Africa, N. Asia. Very rare in India.

Tr. subarquata, Gmelin (*Pl. Enl.* 851 ; Gould, *B. E.* pl. 328 ; *B. A.*, Vol. VI. pl. 32).

SYN. Tringa ferruginea, Brunnich.
Tr. islandica, Retzius.
Tr. falcinella, Pallas.
Tr. chinensis, Gray.
Scolopax africana et pygmæa, Gmelin.
Sc. caffra, Forster.
Numenius pymæus, Latham.
Erolia varia, Vieillot.
Falcinellus Cuvieri, Bonap.

Mayatan. Jav. Inhabits Europe, Asia, Africa, Australia. N. America. Very common in India.

Tr. cinclus, L. (*Pl. Enl.* 852 ; Gould, *B. E.* pl. 329).

SYN. Tringa alpina, L.
Tr. ruficollis et Scolopax pusilla, Gmelin.
Sc. salina, Pallas.
Numenius variabilis, Bechstein.

Inhabits northern hemisphere. Not common in L. Bengal, nor in S. India.

Tr. platyrhyncha (Gould's *B. E.* pl. 331).

SYN. Tr. eloroides, Vieillot.
Limicola pygmæa, Kaup.

Inhabits Asia ; rare in Europe : tolerably common in India.

Tr. minuta, Leisler (Gould, *B. E.* pl. 332).

SYN. Tr. pusilla, Meyer and Wolff.
Tr. cinclus Pallas, apud G. R. Gray.
Tr. damacensis, Horsfield.
Tr. pusilla ? apud Jerdon, Catal.

Chota Pun-loha, H. (Jerdon). Inhabits Europe and Asia. Very common in India.

Tr. Temminckii, Leisler (Gould. *B. E.* pl. 333).

SYN. Tr. pusilla, Bechstein.

Inhabits Europe and Asia. Common in India.

Genus EURINORHYNCHUS, Nilsson.

Eu. pygmœus (G. R. Gray, *Ill. Gen. Birds*, pl. 152, f. 1).

SYN. Platalea pygmæa, L.
Eu. griseus, Nilsson.
Eu. orientalis, Blyth, Ann. Mag. N. H. 1843.

Inhabits Europe and Asia. Extremely rare. Most numerous on the eastern coast of the Bay of Bengal, a few mingled in flocks of No. 1911—16).

Genus CALIDRIS, Illiger.

C. arenaria (Gould, *B. E.* pl. 335).

SYN. Charadrius calidris, L.
Ch. rubidus, Gmelin.
Arenaria grisea, Bechstein.
A. vulgaris, Leisler.
Tringa tridactyla, Pallas.
C. tringoides, Vieillot.

Inhabits Sea-coasts of Northern hemisphere. Very rare (?) in India.

Genus PHILOMACHUS, Mœrrhing.

Ph. pugnax (*Pl. Enl.* 300, 305, 306, 844; Gould *B. E.* pl. 328).

Syn. Tringa pugnax, L.
Tr. variegata, Brunnich.
Tr. equestris et grenovicensis, Latham.
Tr. rufescens, Bechstein.
Tr. littorea, Gmelin.
Limosa Hardwickii,—male } Hardw. Ill.
Totanus indicus,—female } Ind. Zool.

Gehwala, H.; *Chouchili*, Sindh. Inhabits Europe and Asia. Common in India in winter dress; constantly leaving L. Bengal before the ruff of the male is put forth; though specimens with growing ruffs have been obtained at Rajmahl.

Genus STREPSILAS, Illiger.

Str. interpres (*Pl. Enl.* 856; Gould's *B. A.* Vol. VI. pl. 39).

Syn. Tringa interpres, L.
Str. collaris, Temminck.

This is if universal distribution, on all sea-coasts; rare inland.

Genus PHALAROPUS, Brisson.

Ph. fulicarius (Edwards pl. 142).

Syn. Tringa fulicaria, L.
Ph. platyrhynchus, Temminck.
Ph. rufus, Bechstein.

Inhabits northern regions. Exceedingly rare in India.

Genus MACRORHAMPHUS, Leach.

M. semipalmatus, Jerdon, Blyth, J. A. S. XVII. 252. Inhabits India, rare (?), or more probably confined to sea-coasts.

Genus SCOLOPAX, L.

Sc. rusticola, L. (*Pl. Enl.* 885).

Syn. Sc. indicus, Hodgson, J. A. S. VI. 490.

Inhabits Europe and Asia. Common in the Himalaya, and Nilgiris during the cold season. Very rare in L. Bengal, and in Ceylon.

Genus GALLINAGO, Ray, Stephens.

G. nemoricola, Hodgson (Jerdon's *Ill. Ind. Orn.* pl. 9), J. A. S. VI. 490. *Wood-Snipe*, Himalaya: *Solitary Snipe*, Nilgiris. Inhabits Himalaya; C. India; Nilgiris.

G. solitaria, Hodgson, J. A. S. VI. 491.

Syn. Sc. nemoricola, var. ?

Inhabits Himalaya.

G. stenura.

Syn. Scolopax stenura, Temminck.
Sc. gallinago apud Raffles and Horsfield.
Sc. heterura et biclavus, Hodgson.

Kas Watua, Cingh.; *Boorkat Gadung*, Malay; *Sekadidi*, Sum.; *Burchet*, Jav. Inhabits India and Malay countries. Common in India.

G. scolopacinus, Bonaparte (*Pl. Enl.* 883).

Syn. Scolopax gallinago, L.
G. uniclavus, Hodgson, J. A. S. VI. 492.

Bharka, or *Bhuruk*, H. Inhabits Old World generally (nec Malay countries ?)

G. gallinula (*Pl. Enl.* 884).

Syn. Scolopax gallinula, L.
Sc. minima, Ray.

Inhabits Old World generally (nec Malay countries (?). Common in India.

Genus RHYNCHEA, Cuvier.

Rh. bengalensis (Hardw. *Ill. Ind. Zool.*)

Syn. Scolopax benghalensis L.
Sc. capensis, Gmelin, apud Raffles.
Rh. orientalis, Horsfield.
Rh. varia, Temminck.
Rh. capensis, apud Gray.

Raja Kas Watua, Cingh.; *Pengung*, Jav. Inhabits India and Malay countries. Common in India.

Fam. PALAMEDEIDÆ.

Subfam. PARRINÆ.

Piho, H.

Genus METOPIDIUS, Wagler.

M. indicus (*Vieillot, Gal. des. Ois.* pl. 264; Hardw. *Ill. Ind. Zool.*)

Syn. Parra indica, Latham.
P. cuprea, Vahl.
P. melanochloris, Vieillot.
P. ænea, Cuvier.
P. superciliosa, Horsfield.
P. atrata, Tickell, J. A. S. II. 582. } Young.
Gallinula viridis, Gmelin. }

Dal-pipi, Beng.; *Pichisan*, Java. Inhabits S. E. Asia and its Islands. Very common in India.

Genus HYDROPHASIANUS, Wagler.

H. chirurgus (Gould's *Century*, pl. 77, Hardw. *Ill. Ind. Zool.*)

Syn. Tringa chirurgus, Scopoli (Sonn. Voy. aux. Indes, pl. 45,—non-breeding plumage.
Parra sinensis et luzoniensis, Gmelin.

Dal-kukra, H.; *Bhepi*, or *Bhenpi*, Beng. Inhabits India; China; Philippines. Common.

Fam. GRUIDÆ.

Genus GRUS, Mœrrhing.

Gr. antigone (Edwards, pl. 45; *Pl. Enl.* 865).

Syn. Ardea antigone, L.
Grus torquatus, Vieillot.
Gr. orientalis (?), Pallas.

Saras, or *Surhuns*, H.; *Gyo-gya*, Arracan. Inhabits India generally, rare to the southward.

Gr. cinerea, Bechstein (*Pl. Enl.* 769; Gould's *B. E.* pl. 270).

SYN. Ardea grus, L.
Grus vulgaris, Pallas.

Kulung, H.; *Kunj*. Persian. Inhabits Europe; Asia; N. Africa. Common in India.

Sub-genus ANTHROPOIDES, Vigors.

Anthr. virgo (*Pl. Enl.* 241; Edwards, pl. 134.)

SYN. Ardea virgo, L.
Grus numidica, Brisson.

Karkarra, H.; also *Kurrounch* (Jerdon); *Kurkoncha*, Can.; *Shukdurruk*, Kabul. (All imitative of cry.) Inhabits Asia and Africa. Rare in S. Europe. Common in S. India.

Tribe CULTRIROSTRES.

Fam. ARDEADÆ.

Subfam. TANTADINÆ.

Genus FALCINELLUS. Ray, Bechstein.

F. igneus (Gould's *B. A.* Vol. VI. pl. 47).

SYN. Tantalus falcinellus, L.
T. igneus et viridis, Gmelin.
Ibis sacra, Temminck.

Kowari, H.; *Kala Kustechora*, B.; *Buzak*, Kabul. *Black Curlew* of sportsmen. Inhabits Old World generally; Australia. Common in India.

Genus GERONTICUS, Wagler.

G. papillosus (*Pl. Col.* 340).

SYN. Ibis papillosa, Temminck.

Buza or *Kala Buza*, H.; *Karunkul*, C. India *King Curlew* of sportsmen. Inhabits India generally (nec L. Bengal).

Genus THRESKIORNIS, G. R. Gray.

Thr. melanocephalus, (Jardine and Selby; *Orn. Ill.*, pl. 120).

SYN. Tantalus melanocephalus, L.,—the young.
Ibis Macei et I. leucon (apud G. R. Gray) Temminck.
I. bengala, Cuvier.
I. religiosa apud Sykes.

Munda, H.; *Safed Buza* of some: *Sada Kasechora* (*i. e.* 'White Curlew') of some, B.; *Kula-gouk*, Arracan. *White Curlew* of sportsmen. Inhabits India generally; scarce in Arracan.

Genus TANTALUS, L.

T. leucocephalus, Gmelin (Pennant's *Ind. Zool.* pl. 11).

SYN. T. gangeticus, Shaw.
T. indicus, Cuvier,

Dokh, H.; *Jaunghal*, in Hindustan (Jerdon), *Kat Sarunga*, H., B.; *Lamjang* and *Lumduk*, Sindh. Inhabits India generally; Ceylon; Assam; Arracan.

T. lacteus, Temminck (*Pl. Col.* 352).

SYN. T. ibis, var., and the young—
T. cinereus, Raffles, Lin. Tr. XIII. 327.

Inhabits Malay countries.

Genus PLATALEA, L.

Pl. leucorodia, L. (*Pl. Enl.* 405).

Chammach Buza (*i. e*, 'Spoon Ibis'), H. *Chimta*, B. Inhabits Europe and Asia. Common in India.

Genus ANASTOMUS, Bonnaterre.

A. oscitans, (*Pl. Enl.* 932; Sonnerat, *Voyaux Indes*, pl. 122).

SYN. Ardea oscitans, Boddaert.
A. ponticeriana et coromandelica, Gmelin.
An. typus, Temminck.
A. albus et cinereus, Vieillot.
Mycteria asiatica (?), Latham.

Gungla or *Gunglu*, H. (Jerdon); also *Ghongal*, H.; *Samuk-khol*, B.; *Tont'h Bhunga* (Tickell); *Kha-yoo-tsoot*, Arracan. Inhabits India generally. Common.

INCERTÆ SEDIS.

Genus DROMAS, Payk.

D. ardeola, Payk. (*Pl. Col.* 362; Salt, 'Travels in Abyssinia,' pl. 31).

SYN. Erodia amphilensis, Stanley.
Ammoptila charadroides? apud Jerdon, Catal.

Inhabits Sea-coast of S. India and Ceylon; also of E. Africa.

Subfam. CICONINÆ.

Genus MYCTERIA, L.

M. australis, Shaw (Gold's *B. A.* Vol. VI. pl. 51).

SYN. Ardea oscitans, Latham.
Siconia leucoptera, Wagler.

Bunarus, and *Lohajung*, H.; *Ram Salik*, B. Inhabits India generally, Malay countries, and Australia.

Genus CICONIA, L.

C. alba, Belon (*Pl. Enl.* 866).

SYN. Ardea ciconia, L.

Lag-lag, or *Ujli*; also *Haji Lag-lag*, H. (Jerdon); *Dhek*, Muttra. Inhabits Europe; Asia; N. Africa; India generally; very common in parts of Bengal, during the cold season.

C. nigra, L. (*Pl. Enl.* 399).

SYN. Ardea nigra, L.
A. chrysopelargus, Lichtenstein.
A. fusca, Brisson,—the young.
White-bellied Jabiru, Latham.

Surmai, H. (Jerdon). Inhabits Europe; Asia; N. Africa; common in N. India; very rare in L. Bengal.

C. leucocephala (*Pl. Enl.* 906).

SYN. Ardea leucocephala, Gmelin.
C. umbellata, Wagler

Manikjor, H., B.; *Khyee-kheng-tswop*, Arracan: *Sandang-lawe*, Java. Inhabits India generally; Burmese and Malay countries. Common.

Genus LEPTOPTILOS, Lesson.

L. argala (*Pl. Enl.* 300).

SYN. Ardea argala, L.
A. dubia, Gmelin.
Ciconia mirabou, Temminck.
C. nudifrons, Jerdon, Catal.,—young.
Argala migratoria, Hodgson, Ind. Rev. 1838, p. 563.

Hargila B.; *Dusta*, H. (Jerdon); *Chaniari Dhauk*, H. (Hodgson); *Garar*, Muttra. 'Adjutant' of Europeans. Inhabits N. Asia? Visiting India during the rains, when common in L. Bengal.

L. javanica (*Pl. Col.* 312).

SYN. Ciconia javanica, Horsfield.
C. capillata, Temminck.
C. calva, Jerdon, Catal.
C. nudifrons, and the young—C. cristata, McClelland, Ind. Rev. 1838, pl. 512.
Argala immigratoria, Hodgson, ibid, p. 563.
Ardea dubia of Sumatra, apud Raffles.

Madanchur, B.; *Chinjara*, H (Jerdon); *Tontsap* and *Nghet-gyee*, Arracan; *Bangou Sula*, *Burong Kambing*, and *Burong Gaja* of Malays (Raffles); *Bangu*, Java. Inhabits India and Malay countries; never frequenting towns, like L. argala.

Subfam ARDEINÆ.

Genus ARDEA, L. *Bog*, or *Bogla*, H.; *Barado*, Sindh; *Nga-heet*, and *Nghet-nga-nwa*, Arracan.

A. goliath, Ruppell (Atlas pl. , the adult).

SYN. A. typhon (?), Temminck (Pl. Col. 475)?
A nobilis, Blyth, Ann. Mag. N. H. XIII. 175,—young bird.

Inhabits Bengal (in cold season); Nepal: also Africa. Several specimens of this immense heron have been procured in the vicinity of Calcutta, but all hitherto in the plumage of the first year.

A. sumatrana, **Raffles Gould's B. A. Vol. VI. pl. 54,—the second plumage.**

SYN. A. fusca, Blyth, Ann. Mag. N. H. XIII. 176.
A. rectirostris, Gould.

San Barado, **Sindh. Inhabits Sindh; Sikkim (tarai?); Assam; Arracan; Sumatra; Australia.**

A. cinerea (*Pl. Enl.* 775, 787).

SYN. A. major, L.
A. brub (?), Jacquemont, Atlas, pl.

Kabud, H. (Jerdon). *Sada Kánk* and *Anjun*, B.; *Saa*, Sindh; *Changa Awu* Jav. Inhabits Europe; Asia: Africa. Common in India.

A. purpurea, L. (*Pl. Enl.* 783).

SYN. A. caspica, purpurata, rubiginosa (?), et botaurus aut rufa, Gmelin.
A. variegata, Scopoli.
A. monticola, LaPcy.

Nari, H. (Jerdon), *Lál Kank*, B.; *Khyonbyoing*. Arracan; *Changa-ulu*, Java. Inhabits Europe, Asia, Africa.

Sub-genus HERODIAS, Boie.

Koka, Cingh.; *Kantal*, Jav.; *Ooker*, and *Kumole*, Kabul; *Byoing Phyoo*, Arracan.

H. alba (*Pl. Enl* 886; Gould's B. A. Vol. VI. pl. 56).

SYN. Ardea alba, L.
A. egretta, Temminck.
A. nivea, Lesson.
A. modesta, Gray.
A. flavirostris et melanorhynchos, Wagler.
A. torra, Buchanan Hamilton and Franklin.
A. syrmatophorus, Gould.

Mallang Bagla, *Turra Bagla*, and *Patoka Bagla*, H. (Jerdon); *Dhar Bagla*, B.; *Bacho Barado*, Sindh. Inhabits S. E. Europe; Africa; Asia and its islands; Australia. Common in India.

H. intermedia (Gould's B. A. Vol. VI. pl. 57).

SYN. Ardea intermedia, Wagler, Isis, 1829.
A. egrettoides, Temminck.
A. flavirostris, Bonnaterre, nec Wagler.
A putea, Buchanan Hamilton.
A. nigrirostris, Gray.
H. plumifera, Gould.

Inhabits as last. The most abundant species of Egret in the Malay countries. Common also in India.

H. garzetta (*Pl. Enl.* 901).

SYN. Ardea garzetta, L.
A. xanthodactyla et A. nivea, Gmelin.
A. orientalis, Gray.
A. melanopus, Wagler, } Variety.
A. nigripes, Temminck, }
H. immaculata (?), Gould.

Kirchia (or *Kilchia*) *Bagla*, H. (Jerdon). Inhabits as last. Very common in India. Australia?

H. bubulcus (*Pl. Enl.* 910: Denon's Egypt, (*Zool.* t. 1, pl. 8, f. 1).

SYN. Ardea bubulcus, Savigny.
A. lucida, Raffinesque.
A. æquinoctialis, Montagu.
A. coromandelensis, Stephens.
A. bicolor and A. ruficapilla, Vieillot.
A. russata, Temminck.
A. affinis, Horsfield.
A. coromandelica, Lichtenstein.
A. Veranii, Roux.
A. leucocephala, Cuvier.
A. caboga, Franklin.
A. ibis, Hasselquist.

Durrea and *Surkhia Bogla* H.; *Gai Bagla, B. Sudu Koka*, Cingh.! *Kantal Chilik*, Jav. Inhabits as last, associating much with cattle. Nec Australia?

H. asha.

SYN. Ardea asha, Sykes.
Herodias, pannosa (?), Gould. (B. A. Vol. VI. pl. 59).

Kala Bugla, H. (Jerdon). Inhabits Peninsula of India; Sindh. Nec(?) L. Bengal. Australia?

H. jugularis (Gould's B. A. Vol. VI. pl. 60).

SYN. Ardea jugularis, Forster.
A. cærulea, var, Latham.
A. matook, Vieillot.
Demigretta concolor, Blyth, J. A. S. XV. 372.
H. Greyi,—Gray (Gould's B. A. Vol. VI. pl 61),—permanent white variety.

Inhabits Arracan; Nicobar Islands; N. Zealand; Africa (Senegal)?

Sub-genus BUTORIDES, Blyth.

B. javanica.

SYN. Ardea javanica, Horsfield.

Kancha Bagla, H.; *Kuno Bag*, B.; *Puchong*, Malay; *Upi upian*, Jav. Inhabits India and Malay countries. Common.

Sub-genus ARDEOLA, Boie.

A. leucoptera (Hardw. *Ill. Ind. Zool*).

SYN. A. leucoptera, Boddaert.
A. Grayi, Sykes—breeding dress
A. malaccensis, Gmelin—non-breeding dress.

Undki Bogli. H. (Jerdon); *Kuro Bog*, B.; *Kana koka*, Cingh. Inhabits India generally; Burmese countries; Malayan peninsula. Exceedingly common.

Sub-genus NYCTICORAX, Brisson, Stephens.

N. griseus (*Pl. Enl.* 758).

SYN. Ardea nycticorax et grisea, L.
N. europæus, Stephens.

Wok (from voice), and *Batchka*, Beng., H.; *Gadri*, Sindh; *Leng-wet*, Arracan; *Guwo*, Jav. Inhabits Europe; Asia; Africa. Common in India.

Sub-genus TIGRISOMA, Swainson.

T. melanolopha.

SYN. Ardea melanolopha, Raffles, Lin. Tr. XIII. 316.

Inhabits Ceylon; Arracan; Malayan peninsula; Sumatra.

Sub-genus BOTAURUS, Brisson, Stephens.

B. stellaris (*Pl. Enl.* 789).

SYN. Ardea stellaris, L.

Nir goung, H. Inhabits Europe; Asia; Africa. Common in Bengal.

Sub-genus ARDETTA, G. R. Gray.

A. flavicollis (Jerdon's *Ill. Ind. Orn.* pl. 16; Gould's *B. A.* Vol. VI. pl. 65,—not good, if the Australian be truly identical with the Indian species.

SYN. Ardea flavicollis, Latham.
A. nigra, Vieillot.
A. [illegible]ta, Raffles,—the young figured in Hardwicke's Ill. Ind. Zool.

Kata and *Nal Bogla*, B.; *Tototan* or *Tomtomman*, Jav. Inhabits India generally: not common, nor rare in L. Bengal; Ceylon; Tippera; Arracan; Tenasserim; Malayan peninsula; Sumatra; China; Australia.

A. cinnamomea, Hardw. *Ill. Ind. Zool*).

SYN. Ardea cinnamomea, Gmelin.

Lal Bogla, H.; *[illegible]ati, korawaku*, Cingh.; *Ayam-Ayaman*, Jav. Inhabits India and Malay countries. Common.

A. sinensis (young figured as No. 1651, Hardw. *Ill. Ind. Zool.*,—not good).

SYN. Ardea sinensis, Gmelin.
A. lepida et A. nebulosa, Horsfield.

Bambangan, Jav. Inhabits India generally; Ceylon; Arracan; Jav.; China. Generally observed on high reeds.

A. minuta *Pl. Enl.* 323).

SYN. Ardea minuta, L.
A. danubialis et soloniensis, Gmelin.

Inhabits Europe, Africa, C. Asia; Nepal.

Tribe MACRODACTYLI.

Fam. RALLIDÆ.

Genus PORPHYRIO, Brisson.

P. poliocephalus, Latham. *Kaim*, or *Kayem*, Beng.: *Keima*, H.; *Kogh*, Sindh. Inhabits India generally; Arracan; Tenasserim. Replaced in the Malayan peninsula and archipelago by P. *smaragdinus*, Temminck, v. *indicus*, Horsfield; *Tedone* of the Malays; *Pelung*, Jav.

Genus GALLICREX, Blyth.

G. cristatus.

SYN. Gallinula cristata, Latham.
G. plumbea, Vieillot.
G. lugubris (male), and G. gularis (female), Horsfield.
Rallus rufescens apud Jerdon, Madr. Journ. XII. 205 (female).
Fulica cinerea, Gmelin.

Kora, or *Kongra*, Beng.; *Bontod*, and *Bureng*, Jav. Inhabits India generally, and Malay countries. Common in Bengal.

Genus PORZANA, Vieillot.

P. phœnicura (*Pl. Enl.* 896; Horsfield, *Zool. Res. in Java*, pl.).

SYN. Rallus phœnicurus, Pennant.
Gallinula javanica, Horsfield.
G. erythrina, Bechstein.
Fulica chinensis, Boddaert.

Daouk, or *Dehuk*, Beng.; *Dawuk*, H. (Jerdon); *Korawaka*, Cingh.; *Burai*, Sindh; *Kaloo-gwet*, Arracan; *Roa-Roa*, Malay; *Sribomba*, Jav. Inhabits S. E. Asia and its archipelago. Extremely common.

P. akool.

SYN. Gallinula akool, Sykes (nec Jerdon).
G. modesta, Swainson 2¼ Cent., p. 348.

Inhabits India generally. Rare in L. Bengal.

P. maruetta (*Pl. Enl.* 751).

SYN. Rallus porzana, L.
R. maruetta, Brisson.

Khairi, Beng. (generic); *Teerteeruk*, Kabul. Inhabits Europe, Asia, and Africa. Common in India.

P. pygmæa (J. and S., *Ill. Orn.* pl. 15).

SYN. Crex pygmæa, Naumann.
Gallinula Baillonii, Vieillot.

Inhabits Europe, Asia, and N. Africa. Very common in India.

P. quadristrigata.

SYN. Rallus quadristrigatus, Horsfield.
Gallinula superciliosa, Temminck.
G. leucosoma, Swainson, 2¼ Cent., p. 348.

Inhabits Malay countries.

P. fusca (*Pl. Enl.* 773; *Pl. Col.* 387).

SYN. Rallus fuscus, L.
Gallinula rubiginosa, Tem.

Inhabits S. E. Asia and its islands. Common in India.

P. fasciata (*Pl. Col.* 417), J. A. S. XI. 797).

SYN. Rallus fasciatus, Raffles.
Gallinula euryzona, Tem.
Rallus ruficeps, Cuv.

Sintar, Malay (generic). Inhabits Malayan Peninsula and archipelago.

P. ceylonica (Brown's *Ill.*, pl. 37).

SYN. Rallus ceylonicus, Gmelin.

Inhabits peninsular India; Ceylon.

Genus ORTYGOMETRA, Ray.

O. crex (*Pl. Enl.* 750).

SYN. Gallinula crex, L.
Crex pratensis, Bechstein.

Inhabits Europe and W. Asia: common in Aghanistan.

R. striatus, L.

SYN. R. gularis, Horsfield.

Ayam-ayam, Sum.; *Tikussan*, Jav. Inhabits S. E. Asia and its islands. Common in India.

R. indicus, Blyth, J. A. S. XVII. p.

SYN. R. Aquaticus of India, auctorum.

Inhabits India generally. Common.

Genus GALLINULA, Brisson.

G. chloropus (*Pl. Enl.* 877).

SYN. Fulica chloropus et F. fusca, L.
G. parvifrons, Blyth.
G. akool apud Jerdon, Catal.

Pan Paira, *Dahuk Paira*, B.; *Kushkul* Cabul. Inhabits Europe, Asia, and N. Africa. Common in India.

Genus FULICA, L.

F. atra, L. (*Pl. Enl.* 197).

SYN. F. aterrima, L.
F. æthiops et F. leucoryx, Sparrman.
F. pullata et atrata, Pallas.

Dasri, or *Dasarni*, H.; *Kushkul*, Cabul; *Ari*, Sindh. Inhabits Europe, Asia, and N. Africa. Common in India.

Order VIII. NATATORES.

Tribe LONGIPENNES.

Fam. LARIDÆ.

Subfam. LARINÆ.

enus CATARRACTA, Brunnich.

C. cephus, Brunnich (Gould's *B. E.* pl. 442).

SYN. Lestris parasiticus, Swainson.
L. crepidetus, Temminck.
L. Buffonii, Boie.

Inhabits Northern seas.

Genus LARUS, L. *Gang Chil* (*i. e.* 'Ganges Kite,' B.); *Badkhor*, Cabul.

L. fuscus, L. (Gould, *B. E.*, pl. 431).

SYN. L. flavipes, Meyer.
L. argentatus apud Montagu.

Inhabits Atlantic; Mediterranean; Red Sea; Indian Ocean; C. G. Hope; N. Zealand. Cabul (Burnes).

L. icthyaetus, Pallas (Ruppell, *Atlas* pl. 17).

SYN. L. kroikocephalus, Jameson, J. A. S. VIII. 242.
Icthyaetus Pallasi, Kaup.

Inhabits Asia; Indian Ocean; common in Bay of Bengal.

L. ridibundus, L. (*Pl. Enl.* 960, 970; Gould, B. E. pl. 425).

SYN. L. cinerarius et L. erythropus, Gmelin.
L. atricilla et L. nævia, Pallas.
L. canescens, Bechstein.
L. capistratus, Temminck.
Sterna obscura, Latham.

Inhabits Europe; Asia; N. Africa: much less common in L. Bengal than L. fuscus.

L. brunnicephalus, Jerdon, *Madr. Journ.* XIII. 225.

SYN. L. ridibundus. var., Sundevall.

Inhabits India generally. Common.

Subfamily. STERNINÆ.

Gáng Chil, B.; *Tihári*, H.

Div. 1. Skimmers.

Genus RHYNCHOPS, L.

Rh. albicollis, Swainson (Gray's *Ill. Gen. Birds*, pl. 180). Inhabits India generally.

Div. 2. Marsh Terns.

Genus SYLOCHELIDON, Brehm.

S. caspius (Savigny, *Ois. d' Ægypt*, pl. 9, f. 1 ; Gould's B. A. Vol. VII. pl. 22).

SYN. Sterna caspia, Latham.
S. strenuus, Gould.
'Thalassites, Jerdon, Catal. No. 405.

Inhabits India generally (nec L. Bengal), and the warmer regions of the Old World ; Australia ; rare in N. W. Europe.

Genus GELOCHELIDON. Brehm.

G. anglicus (Wilson's *Am. Orn.* pl. 72, f. 6).

SYN. Sterna anglica, Montagu.
St. aranea, Wilson (apud Audubon, Selby, and de Kay).
St. resoria et St. meridionalis, Brehm.
St. nilotica, Gmelin.
St. affinis, Horsfield (nec Ruppell).

Inhabits warmer regions of the Old World, extending also to America. Common in India.

Genus HYDROCHELIDON, Boie.

H. indica.

SYN. Viralva indica, Stephens.
Sterna hybrida, Pallas.
St. leucopareia, Natterer.
St. grisea, Horsfield.
St. cantiaca (?) apud Raffles.
St. similis, Gray (Hardw. Ill. Ind. Zool.)

Samar Saut?, Sum. ; *Puter-lahut*, Jav. Inhabits Europe ; Asia ; Africa ; Malay countries : rare in N. W. Europe : very common in India. *N. B. H. fluviatilis*, (Gould's B. A. Vol. VII. pl. 31,) of Australia, would seem to differ only in having the entire throat white when in summer dress.

H. nigra Pl. Enl. 333).

SYN. Sterna nigra, nævia, et L. lariformis (?), L.
St. fissipes, Pallas.
St. leucoptera, Temminck.
} apud G. R. Gray.

Inhabits S. Europe ; Africa ; W. Asia. Rare in N. and C. Europe.

Genus THALASSEUS, Boie.

Th. bengalensis (Gould's B. A. Vol. VII. pl. 25).

SYN. Sterna bengalensis, Lesson.
St. media (?), Horsfield.
Th. Torressi, Gould.
Sterna, Jerdon's Catal., No. 402.

Toyang kacher (?), Java. Inhabits Indian and Malayan seas ; N. Australia.

Genus STERNA, L.

Subgenus SEENA, Blyth.

Seena aurantia (Hardw. *Ill. Ind. Zool.*

SYN. Sterna seena, Sykes.
St. aurantia, et St. brevirostris, Gray.

Inhabits India generally. Common along the rivers.

Subgenus STERNA.

St. paradisea, Brunnich (Vieillot, *Gal des Ois.*, pl. 290).

SYN. St. Dougalli, Montagu.

Inhabits Europe ; Asia ; Africa ; America : coasts of India.

St. hirundo, L (*Pl. Enl.* 987).

SYN. St. fluviatilis, Naumann.

Inhabits Europe ; Asia ; Africa ; Nilgiris ; Ceylon.

St. javanica, Horsfield (Hardw. *Ill. Ind. Zool*).

SYN. St. melanogaster, Temminck.
St. acuticauda, Gray.

Inhabits India and Malay countries. Common along the rivers.

Subgenus STERNULA, Boie.

St. minuta (*Pl. Enl.* 996 ; Wilson's *Am. Orn.* pl. 60, f. 2).

SYN. Sterna minuta, L.
St. sumatrana (?), Raffles.
St. sinensis (?), Gmelin,—young.

Toyang, Jav. Inhabits Northern hemisphere : represented in S. America and in Australia by closely allied species. Common on W. coast of India.

Div. 4. Oceanic Terns.

Genus ONYCHOPRION, Wagler.

On. melanauchen (Gould's B. A. Vol. VII. pl 28).

SYN. Sterna melanauchen, Temminck.
St. minuta, Horsfield (apud G. R. Gray).

Inhabits Indian Ocean ; Malayan seas : N. Australia. Breeds numerously on Nicobar Islands.

On. anasthætus (Sonnerat, *Voy. a la Nouv. Guinee*, pl, 84).

SYN. Sterna anasthætus, Scopoli.
St. panayana, Latham (nec apud Gould ? B. A. Vol. VII. pl. 33).
St. infuscata, Lichtenstein (from E. Indies).
St. antarctica, Mus de Paris, Lesson (Calcutta).

Inhabits Indian Ocean ; Bay of Bengal ; Malayan Seas.

Genus ANOUS, Leach.

A. stolidus (Gould's B. A. Vol. VII. pl. 34).

SYN. Sterna stolida, L.
A. niger, Stephens.
Gaira fusca, Brisson.
St. philippina (?), Latham.

Chamar, Malay (generic).
general distribution, over t
warmer parts of the ocear is of very
Indian seas. emperate and

A. tenuirostris (Gc Common in the
36).

SYN. Sterna tenuirostris, Vol. VII. pl.
A. leucocapillus, Goul.

Inhabits coasts of Afric
Australian seas.

Fam. PROCE Indian Ocean ;
RIDÆ.

Genus DIOMEDEA,

D. exulans, L. (Gould
38).

SYN. Plautus albatrus, B. A. Vol. VII. pl.

Inhabits S. Ocean.

D. melanophrys, T in.
Vol. VII. pl. 43). In

D. chlororhynchos, Inck (Gould's *B. A.*
Vol. VII. pl. 42). s S. Ocean.

SYN. D. chrysostoma, Fo am (Gould's *B. A.*

Inhabits S. Ocean.

D. fuliginosa, Gmelin
VII. pl. 44).

SYN. D. palpebrata, Forster.
D. antarctica, Banks.
D. fusca, Audubon.

Inhabits Southern Ocean.

Genus PROCELLARIA, L.

Pr. gigantea, Gmelin (Gould's *B. A.* Vol. VII. pl. 45). Inhabits Southern Ocean.

Pr. glacialoides, A. Smith (Gould's *B. A.* Vol. VII. pl. 48).

SYN. Pr. tenuirostris, Audubon.

Inhabits S. Ocean.

Pr. Cookii, G. R. Gray (Gould's *B. A.* Vol. VII, pl. 51).

SYN. Pr. velox, Solander, MS.
Pr. leucoptera, Gould.

Inhabits Southern Ocean.

Pr. turtur, Solander (Gould's *B. A.* Vol. VII. pl. 54). Inhabits S. Ocean.

Genus PRION, Lacepede.

Pr. vittatus (Gould's *B. A.* Vol. VII. pl. 55).

SYN. Procellaria vittata, Forste
Pr. Forsteri, Latham.

Inhabits Southern Ocean.

Genus PELICANOIDES, Lacepede.

P. urinatrix, (Gould's *B. A.* Vol. VII. pl. 60).

SYN. Procellaria urinatrix, Latham.
Pr. tridactyla, Forster.
Puffinaria Garnottii, Lesson.

Inhabits S. Ocean; Bay of Bengal (apud Sundevall).

Genus PUFFINUS, Brisson.

P. major, Faber (*Pl. Enl.* 962; A. Smith, *S. Afr. Zool.*, Aves, pl. 56).

SYN. Procellaria puffinus, L.
Pr. grisea, Gmelin.
P. fuliginosus, Strickland.
P. cinereus, A. Smith.

Inhabits Atlantic ; Mediterranean ; S. Ocean.

Genus THALASSIDROMA, Vigors.

Th. oceanica, Kuhl (Gould's *B. A.* Vol. VII, pl. 65).

SYN. Th. Wilsonii, Bonaparte.
Procellaria pelagica, apud Wilson.

Inhabits N. and S. Oceans.

Tribe TOTIPALMATI.

Fam. PELICANIDÆ.

Ph.
TON, L.

Ph. æthereus, L. (the young ; Gould's *B.*
Vol. VII. pl. 73).

SYN. Ph. phœnicurus, Gmelin (the adult).

Inhabits Bay of Bengal ; Indian Ocean ; S. Seas, &c.

Ph. candidus (*Pl. Enl.* 369 ; Edwards, pl. 149, f. 2).

SYN. Lepturus candidus, Brisson.
Ph. melanorhynchos, Gmelin (the young).

Inhabits Bay of Bengal ; Indian Ocean ; S. Seas, &c.

Genus SULA, Brisson.

S. fiber (Gould's *B. A.* Vol. VII. pl. 78).

SYN. Pelicanus fiber et P. sula, L.
S. australis, Stephens.
S. braziliensis, Spix.

Inhabits Tropical Seas. Common in Bay of Bengal.

S. piscator (Gould's *B. A.* Vol. VII. pl. 79).

SYN. Pelicanus piscator, L.
S. candida, Stephens.
S. erythrorhyncha, Brandt.
S. rubripes, Gould.

Inhabits Tropical Seas. Common in Bay of Bengal, &c.

Genus PELICANUS, L.

P. onocrotalus, L. (Edwards, pl. 93).

SYN. P. roseus, Eversmann, } G. R. Gray.
Onocrotalus phœnix, Lesson, }

Inhabits S. Europe ; W. Asia ; Africa. A. stuffed head and neck, copious pendent crest 5 in. long, and with the rest of the feathers very unlike those of either Indian Pelican.

P. javanicus, Horsfield (Stephens, in Shaw's Zoology, XIII. 109, pl. 12).

SYN. P. onocrotalus of India, auctorum (also of Pallas?).
P. crispus (?), Bruch.

Hawasil, and *Gaganbher*, H. ; *Gara Polo*, Beng. (generic) ; *Lampipi*, Malay ; *Bukhul*, Java. Inhabits S. E. Asia and its islands. Common in India.

P. philippensis, Gmelin (*Pl. Enl.* 965).

SYN. P. roseus et P. manillensis, Gmelin.

Won-bo, Arracan ; *Walang kadda*, Jav. Inhabits S. E. Asia and its islands. More common in L. Bengal than the preceding species.

Genus GRACULUS, L.

Gr. carbo, L. (*Pl. Enl.* 927).

SYN. Carbo cormoranus, Meyer.
C. albiventris, Tickell, J. A. S. XI. 463,—the young.

Gho-ghur, H. ; *Khambo*, Sindh. Inhabits Northern hemisphere. Not common in most parts of India and never in L. Bengal. Most numerous towards the Himalaya.

Gr. sinensis (*Atlas* to Macartney's Embassy to *China*, pl.).

SYN. Pelicanus sinensis, Shaw.
Phalacrocorax fuscicollis, Stephens.
Ph. leucotis, Blyth.
Carbo leucogaster, Meyer.
C. nudigula, Brandt.

Inhabits Asia, chiefly to the eastward. In India, commonest towards the Himalaya, rare in the peninsula, and never seen in L. Bengal.

Gr. Linnæi, G. R. Gray (*Pl. Col.* 322).

SYN. Pelicanus graculus, L., apud G. R. Gray (nec apud Temminck).
P. leucogaster, Vieillot.
Carbo cristatus, Temminck.

Inhabits Europe ; Africa to C. G. Hope.

Gr. pygmæus (Hardw. *Ill. Ind. Zool.*)

SYN. Pelicanus pygmæus, Pallas.
Carbo javanicus, Horsfield.
C. melanognathus, Brandt.
Phalacrocorax niger, Vieillot.
Halieus africanus apud Sundevall.

Jograbhi, *Pan-koul*, H. ; *Pan-Kowa* (i. e. 'Water Crow'), *Pan-Kowri*, and *Pan-kouti*, B. ; *Kaben*, Sindh ; *Tong gyee*, Arracan ; *Pechuch*, Jav. Inhabits Asia and its Archipelago. Extremely common throughout India.

Genus PLOTUS, L.

Pl. melanogaster, Gmelin.

SYN. Pl. Vaillantii of India, auctorum.

Banwa, and *Pan Dubbi*, H. ; *Goyar*, B. ; *Teng-gyee*, Arracan ; *Dandang Ayer*, Sum. Inhabits S. E. Asia and its archipelago. Common throughout India.

Tribe LAMELLIROSTRES.

Fam. ANATIDÆ.

Hans (root of *Anser*, &c.), H.

Subfam. PHŒNICOPTERINÆ.

Genus PHŒNICOPTERUS, L.

Ph. roseus, Pallas.

SYN. Ph. antiquus, Temminck.

Bog-hans ('Heron Goose'), H. ; *Kaan Thunti*, B. Inhabits warmer regions of the old continent. Common in parts of India. It is the smaller Indian Flamingo.

Subfam. ANSERINÆ.

Div. 1. Swans.

Genus CYGNUS, L.

C. olor (*Pl. Enl.* 913).

SYN. Anas olor, L.
C. sibilus, Pallas.
C. mansuetus, Ray.
C. gibbu, Bechstein.

Inhabits N. Asia and of E. Europe, chiefly.

C. atrata (Gould's *B. A.* Vol. VII. pl. 6).

SYN. Anas atrata, Latham.
A. plutonia, Shaw.
Anas novæ hollandiæ, Bonnaterre.

Inhabits Australia.

Div. 2. Ordinary Geese.

Raj Hans, H.

Genus ANSER, Brisson.

A. cygnoides (*Pl. Enl.* 347).

SYN. Anas cygnoides, L.

Inhabits China, where domesticated. Unknown in the wild state. The domestic Geese of India are a hybrid race between this and the next species.

A. cinereus, Meyer (Gould's *B.E.* pl. 347,—very bad ; Yarrell's *Br. Birds* III., 53).

SYN. Anas anser, L.
Anser ferus, Gesner.
A. vulgaris, Pallas.
A. palustris, Fleming.

Inhabits Northern hemisphere: Common in India; somewhat rare in W. Europe.

A. brachyrhynchus, Baillion (Yarrell's *Br. Birds*, III. 64).

SYN. A. phœnicopus, Bartlett.
A. brevirostris, Thienem.
A. rufesceus (?), Brehm.

Inhabits N. hemisphere. Punjab.

Sub-genus BERNICLA, Stephens.

B. indica (Gould's *Century*, pl. 80).

SYN. Anas Indica, Gmelin.
Anser undulatus, Brandt.

Inhabits India generally, common in the cold season.

Div. 3. Perching Geese.

Genus DENDROCYGNA, Swainson. *Silli* H.; *Saral*, B.

D. major, Jerdon (*Ill. Ind. Orn.*, pl. 23). Inhabits India generally; Not rare in L. Bengal.

D. arquata (Horsfield, *Zool. Res. in Java*, pl.).

SYN. Anas arcuata, Cuvier.
A. javanica, Horsfield.
Mareca awsuree, Sykes.

Butunth, Sindh; *Tseet-tsa-lee*, Arracan; *Bilibi*, Sum.; *Melivis*, Jav. Inhabits India and Malay countries. Extremely common. *N. B.* The Australian species referred to this by Mr. Gould (*B. A.* Vol. VII. pl. 14), is obviously distinct and new.

Genus SARCIDIORNIS, Eyton.

S. melanotus (*Pl. Enl.* 937; Pennant's *Ind. Zool.*, pl. 11).

SYN. Anser melanotus, Pennant.

Nukta, H.; *Tau-bai*, Arracan. Inhabits India and Burmah. Not common in L. Bengal.

S. (?) *leucopterus*, Blyth, J. A. S. XVIII. Inhabits Burmah; Tenasserim provinces.

Genus NETTAPUS, Brandt.

N. coromandelianus (*Pl. Enl.* 949, 950; Hardw. *Ill. Ind. Zool*).

SYN. Anas coromandeliana, Gmelin.
Bernicla girra, Gray.
Dendrocygna affinis, Jerdon—winter dress.

Girja and *Girri*, H.; *Ghangerel*, B.; *Karagat*, Arracan. Inhabits India and Malay countries. Extremely common.

Div. 4. Shieldrakes.

Genus CASARCA, Bonap.

C. rutila (Gould's B. E. pl. 358).

SYN. Anas rutila, Pallas.
A. casarca, L.
A. rubra, Gmelin.

Surkhab and *Chukwa*, male, *Chukwi*, female, H. Inhabits Asia generally; N. Africa: rare in Europe: common in India.

Genus TADORNA, Leach.

T. vulpanser, Fleming (*Pl. Enl.* 53; Gould's B. E. pl. 357).

SYN. Anas tadorna, L.
A. cornuta, Gmelin.
T. familiaris, Boie.
T. Bellonii, Stephens.

Mekez (male), *Alikaz* (female), Cabul; *Shah Murghabi*, *Ali-jur gub*, and *Niraji*. Sindh. Inhabits Europe; Asia; N. Africa, Not common in L. Bengal; more so on the Indus.

Subfam. ANATINÆ.

Hans, H.; *Bigri*, B.

Genus ANAS, L.

Subgenus SPATULA, Boie.

Sp. clypeata (*Pl. Enl.* 971, 972).

SYN. Anas clypeata, L.
A. rubens, Gmelin.
A mexicana, Latham.
A. platalea, Vieillot.

Tridari, H.: *Alipat*, and *Kachuk Mal*, Sindh. Inhabits Europe; Asia; Africa; N. America. Common in India.

Subgenus ANAS.

A. boschas, L. (*Pl. Enl.* 776, 777.)

SYN. A. fera, Brisson.
A. domestica et A. adunca, L.
. curvirostra, Pallas.
A. pupurco-viridis, Schinz. } Varieties.
A. Breweri, Audubon.

Subz-gurdan ('green-neck'), Persian; *Niroji*, Sindh. Inhabits N. Hemisphere: in India, confined to the Upper Provinces; never L. Bengal, nor S. India.

A. pœcilorhyncha, Pennant (*Ind. Zool.* pl. 13; Hardw. *Ill. Ind. Zool*). Inhabits India generally (not migratory); Burmah; not very common in L. Bengal.

A. (?) *caryophyllacea*, Latham (Jerdon's *Ill. Ind. Orn.*, pl 34; G. R. Gray, *Ill. Gen. Birds*, pl. ;—bill and feet coloured erroneously).

SYN. A. erythrocephala, Bonnaterre.

Inhabits India generally; Burmah. Not common in L. Bengal.

Subgenus DAFILA, Leach.

D. acuta Pl. Enl. 954; Gould's B. E. pl. 365).

SYN. Anas acuta, L.
A. caudacuta, Ray.
A longicauda, Brisson.
A. tsitzihoa, Vieillot.

Kokarali, Sindh; *Sink-dum*, (*i. e.* 'Pin-tail'), Cabul. Inhabits N. Hemisphere. Extremely common throughout India.

Subgenus CHAULELASMUS, G. R. Gray.

Ch. streperus Pl. Enl. 958).

SYN. Anas strepera, L.
A. platyrhynchus, Ray.
A. kekuschia, Gmelin.
Chauliodus capensis, Swainson.

Sya-dum, Cabul. Inhabits N. Hemisphere; S. Africa. Rather common in India.

Subgenus MARECA, Stephens.

M. penelope (*Pl. Enl.* 825; Gould's B. E. pl. 366).

SYN. Anas penelope, L.
A. fistularis, Brisson.

Cheoon, Nepal. Inhabits Europe; Asia; N. Africa. Moderately common in India.

Subgenus QUERQUERDULA, Stephens.

Qu. (?) glocitans.

SYN. Anas glocitans, Pallas (nec Gmelin).
A. picta, Steller.
A. torquata, Mess.
A. formosa, Georgi.
A. baikal, Bonnaterre.

Inhabits N. E. Asia. Extremely rare in L. Bengal.

Qu. crecca (*Pl. Enl.* 947).

SYN. Annas crecca, L.

Tulsia Bigri, B.; *Juruku*, or *Churuku*, Cabul. Inhabits Europe; Asia; N. Africa. Common in India.

Qu. circia (*Pl. Enl.* 946).

SYN. Annas querquerdula et A. circia, L.

Inhabits Europe; Asia N. Africa. Extremely common in India.

Subfam. FULIGULINÆ.

Ghotye, Kabul.

Genus FULIGULA, Stephens.

Subgenus BRANTA, Boie.

Br. rufina (*Pl. Enl.* 928).

SYN. Anas rufina, Pallas.
A. erythrocephala et A. cinerea, Gmelin—young.
Callichen ruficeps, Brehm.

Nul Gunar, Cabul. Inhabits Europe; and Asia; rare in W. Europe. Not rare in L. Bengal, in December and January.

Subgenus FULIGULA.

F. ferina (*Pl. Enl.* 803).

SYN. Anas ferina, L.
A. rufa, Gmelin.
A. ruficollis, Scopoli.

Lal Muriya, B. Inhabits N. Hemisphere. Moderately common in L. Bengal.

F. marila (*Pl. Enl.* 1002).

SYN. Anas marila, L.
A. frænata, Sparrman.
A. subterranea, Scopoli.

Inhabits N. Hemisphere; Nepal.

F. cristata, Ray (*Pl. Enl.* 1001, 1007).

SYN. Anas fuligula, L.
A. colymbis, Pallas.
A. scandiaca, Gmelin.
A. latirostris, Brunnich.
A. notata, Boddaert.

Duburi, B.; *Ablak*, Cabul. Inhabits N. Hemisphere. Moderately common in India.

F. nyroca (*Pl. Enl.* 1000).

SYN. Anas nyroca, Guldenstadt.
A. peregrina et A. Africana, Gmelin.
A. Gmelini, Latham.
A. glaucion, Pallas.

Lal Bigri, B. Inhabits Europe; Asia; N. Africa. Tolerably common in India: exceedingly so in some seasons.

Subfam. MERGINÆ.

Genus MERGUS, L.

M. castor, L. (*Pl. Enl.* 951).

SYN. M. merganser, L.
M. Raii, Stephens.
M. orientalis, Gould, P. Z. S. 1845, p. 2.

Khoruk, Cabul. Inhabits N. Hemisphere. Very rare in India, except towards the Himalaya.

Fam. PODICIPIDÆ.

Genus PODICEPS, L.

P. cristatus (*Pl. Enl.* 400, 941, 944).

SYN. Colymbus cristatus, L.
C. cornutus, Brisson.
C. urinator, Scopoli.

Inhabits Old and New continents; Australia?

P. philippensis, Gm. (*Pl. Enl.* 905, 945).

SYN. Colymbus minor, et C. hebridicus. Gmelin. C. fluviatilis, Brisson.

Durbari, B. ; *Puudub*, Bhagulpore. Inhabits Old continent. Very common in India.

APPENDIX, No. 1.

Genus PSITTACUS, subgenus CHRYSOTIS, p. 2.

Chr. leucocephalus, No. 8 (A).

Genus LORICULUS, p 9.

L. asiaticus, No. 46. (A).

Psittacus philippensis and Psittacula rubrifrons, refer to a nearly allied species.

Genus CORIPHILUS, p. 13.

C. notatus No. 90 (A).

Genus HALCYON, p. 46

H. amauropterus, *Pearson*, J. A. S X. 635. Inhabits L. Bengal (Sundarbans especially) ; Arrakan ; Tenasserim Provinces ; very abundant along the eastern coast of the Bay of Bengal, not yet observed on the western. Not rare in the vicinity of Calcutta.

Genus PICUS, p. 62.

P. atratus, *Blyth*, *J. A.* S. XVIII, p. Inhabits Tenasserim Provinces.

LEIOTHRICANÆ ? p. 99.

Genus. MUSCITREA, Blyth.

M. cinerea, *Blyth*, *J. A. S.* XVI, 122. Inhabits Arrakan.

BIRD EYE PEPPER, Eng. Capsicum baccatum.

BIRD FEATHERS from the cranes and king-fishers, form a considerable article of trade in Southern Asia. The feathers of a large, green king-fisher, are exported from Madras, one lac at a time, to Singapore, to be used by the Malays, Javanese and Chinese. They sell there at 200 per cent. profit. See Feathers.

BIRD ISLAND. Called by the Malays, Pulo Manok, lies midway between Ceram and the Serwatty group, in the Eastern Archipelago. It is a high solitary mountain resting on the bosom of the sea, w[illegible]n a truncated cone, uninhabited except by myriads of birds, but natives resort to [illegible] and to collect the eggs: sulphur als[illegible] [illegible]rs on the island.—*Horsburgh.* See Ke[illegible] [illegible]lands.

The substances known in Europe under this name are the viscid juices of several trees. One is prepared in Europe from the middle bark of the holly by boiling it seven or eight hours in water, then laid in heaps on the moist ground to ferment, with stones over it, to press it down till it passes into a mucilaginous state, then pounded, washed and kneaded till free from extraneous matter and kept for four days in pots to ferment and purify itself when it is fit for use. One of these, in Southern India, is obtained from the Palay, the Isonandra acuminata The best is prepared from the outer covering of the fruit and tender twigs and bark of the Jack tree, but several of the Arto-carpi yield it.—*Rohde. Tom.*

BIRD or SEA COW ISLAND, in lat. 3° 43' S. long 55° 16' E., the most northerly of the Seychelles, is a small low sandy isle.—*Horsburgh.*

The edible birds' nests of Southern and Eastern Asia, are perhaps obtained from more than one species of swallow, but the La-wit of the Javanese, is certainly one of them. It is a small dark coloured swallow of a greenish hue on the back, a bluish hue on the breast and no white mark. Another bird seems to be the Collocalia nidifica, C. brevirostris McClelland. It inhabits Java, and other Islands of the Eastern Archipelago; it is found in the Assam Hills, the Sikkim Himalaya, Neilgherries, Wynaud, Ceylon, and on the Western Coast of India at Pigeon Island S. of Honore, the Vingorla rocks, and at Sacrifice rock, 20 miles S. of Tellicherry. The nests are found in the caverns of the limestone cliffs, throughout the areas of simple upheaval but not elsewhere; so that this singular production, which from its value is well known to those engaged in the commerce of the Archipelago, furnishes one of the best tests for deciding the character of the regions in which it is found. In Java, they are sold at from £500 to £583 per picul of 133⅓ lbs. avoird. Dr. Jerdon says that the best nests are from the Collocalia linchi (C. fuciphaga) which builds in the Nicobar islands and along the East coast of the Bay of Bengal from Arracan southwards to Java, but several other species of Collocalia occur in the islands of the Eastern Archipelago, as far as New Guinea, one occurs in the Mauritius and one in the islands of the Pacific. The nests are therefore found all over the Malay and Philippine Archipelagos, on the Malabar Coast, and the Tenasserim Provinces, wherever there are caves to afford it shelter and protection, and these, as mentioned, are most frequent in the limestone formation. But Java and Borneo seem to be their chief resort. The celebrated caves of Karang-bolong (hollow-rocks) situated in the province of Baglen in Java, and on the shore of the southern sea, may be described in illustration. The entrance into these caves is at the sea level, and at the foot of limestone rocks several hundred feet in height, in one place it is 200 feet perpendicular, before coming to the first ledge. The mouths of the caves are about 18 feet broad and 30 high, while, within, they expand to breadths of from 60 to 114 feet, and to heights of from 420 to 480, the sea penetrating them to the extent of one-fourth of their length, and in rough weather rendering them inaccessible. The descent of the collectors to the caves is effected by narrow rattan ladders, usually about 74 feet in length, attached at top to a stout tree. Within the caves there are bamboo scaffoldings, in order to reach the nests, which are detached from the sides by the hand, and from the roof by hooks attached to long poles. There are three periods for making the collection; April, August, and December. The nest-gatherers are persons bred to their dangerous calling, and before the commencement of the first gathering, plays are acted in masks, and there is feasting on the flesh of buffaloes and goats to invoke the aid of the "lady queen of the south," (Nai ratu kidul), an imaginary being, without whose tutelary aid the work of robbing the nests would not, as they think, prosper. After the crop has been taken, the caves are hermetically sealed against human ingress. The whole annual gathering, which is effected at little cost, amounts to from 50 to 60 piculs yearly, or, on an average, to 7,370lbs. This, which is worth at Batavia about £18,000, forms a convenient and unobjectionable branch of the revenue of the Netherland Government, since it is paid by strangers in the indulgence of a harmless folly. Esculent swallows' nests are, however, by no means confined, as in the instance now given, to the sea coasts, for they are found in caves in the interior both of Java and Borneo, and no doubt they exist also in other islands. On the north-western side of Borneo, and not far from the banks of the river Baram, birds'-nest caves are found 140 miles from the sea by the course of the river. They consist of three chambers, one of which is reckoned to be no less than 200 fathoms in length. These are the property of the powerful tribe of the Kayan, and like those of Karang-bolong are carefully guarded.—(*Crawfurd, Dic. p. 54 and* 55.) The nests used by the Chinese, are brought principally from Java and Sumatra; though they are found on most of the rocky islets of the Indian Archipelago. The nests are composed of a mucilaginous substance, but as yet have never been analyzed with sufficient accuracy to show their constituents. It is supposed by some that the Gelidium corneum enters into their composition, but it is more probable that they are formed by mucus eliminated from the stomach of the swallow. Externally, they resemble ill concocted, fibrous isinglass, and are of a white color, inclining to red; their thickness is little more than that of a silver spoon, and their weight from a quarter to half an ounce. When dry, they are brittle and wrinkled; the size is little larger than a goose-egg. Those that are dry, white and clean, are the most valuable. They are packed in bundles, with split rattans run through them to preserve their shape. The quality of the nests varies according to the situation and extent of the caves, and the time at which they are taken. If procured before the young are fledged, the nests are of the best kind; if they contain eggs only, they are still valuable; but if the young are in the nests or have left them, the whole are then nearly worthless, being dark-coloured, streaked with blood, and intermixed with feathers and dirt. The nests are procurable twice every year; the best are found in deep, damp caves, which, if not injured, will continue to produce indefinitely. It was once thought that the caves near the sea-coast were the most productive; but some of the most profitable yet found, are situated fifty miles in the interior. This fact seems to be against the opinion that the nests are composed of the spawn of fish or of biche de mar. Everywhere, the method of procuring these nests somewhat resembles that of catching birds in the Orkney isles. Some of the caves are so precipitous, that no one but those accustomed to the employment from their youth, can obtain the nests, 'being only approachable,' says Crawfurd, 'by a perpendicular descent of many hundred feet, by ladders of bamboo and rattan, over a sea rolling violently against the rocks. When the mouth of the cave is attained, the perilous task of taking the nests must often be performed by torchlight, by penetrating into recesses of the rock, where the slightest slip would be instantly fatal to the adventurers, who see nothing below them but the turbulent surf making its way into the chasms of the rock. After they are obtained, they are separated from feathers and dirt, are carefully dried and packed, and are then ready for the consumer. The Chinese, who are the only people that purchase them for their own use, carry them in junks to the Chinese market, where they command extravagant prices; the best, or white kind, often being worth $1,800 per pecul, which is nearly twice their weight in silver. The middling kind is worth from $1,200 to $1,800; and the worst, or those procured after fledging

$150 or $200 per pecul: it is according to these three qualities, that the duty is now levied. Latterly nests of first quality fetch £3-2-8 the pound; those of the second quality 9s. 4½d. and the third sort only 3s. 1d. The most part of the best kind is sent to Peking for the use of the court. It appears, therefore, that this curious dish is only an article of expensive luxury among the Chinese; the Japanese do not use it at all, and how the former people acquired the habit of using it is only less singular than their persevering in it. They consider the birds' nests as a great stimulant and tonic, but its best quality, perhaps, is its being perfectly harmless or useful in so far as it resembles gelatine. Certainly other gelatinous substances used as food would be equally serviceable. The labor bestowed to render it fit for the table. is enormous; every feather, stick, or impurity of any kind is carefully removed; and then, after undergoing many washings and preparations, it is stewed into a soft, mucilaginous jelly.

The sale of birds' nests is a monopoly with all the governments in whose dominions it is found. It is estimated by Crawfurd that about 243,000 pounds, at value of $1,263,570; are annually sent away from the Archipelago, most of which is brought to China. Java alone sends about 27,000 lbs.; mostly of the first quality, estimated at $60,000.

The most of the trade heretofore has been in the hands of the Chinese and Portuguese, and foreign merchants have had but little to do with it; no account of the amount or value of the importation can therefore be obtained. This is the reason why the estimated importation is placed so low in the Tabular Statement, as it is perhaps not one half of the amount brought to China.—(*Morrison*, 143.)

A few birds' nests of the esculent swallow are to be got from a rocky island about 20 miles South of Tellicherry, named Sacrifice Rock. Small quantities are occasionally brought to Bombay from the Malabar Coast, which are re-exported to China. The only preparation the birds' nests undergo is that of simple drying without direct exposure to the sun; after which they are packed in small boxes. The Edible-nest swallows, or swiftlets, are so numerous in the limestone caves on the islets and islands on the Tavoy coast, that the Government revenue from the bird nest farm in 1847 was nearly eleven thousand rupees: but in 1849, it fell to less than seven thousand rupees. At Mergui they are not so numerous. The nests, which are taken before the bird lays its eggs, sell in China for about forty-five rupees the pound.

In relation to the identification of the species of swallows, Mr. Blyth says: "as regards the *Hirundo esculenta* of Linnæus, there is no reason to suppose that this, as described, with yellow irides and white-tipped tail, has any prototype in nature: the latter would be an anomaly throughout the Cypselidæ, but may refer perhaps to the white tail-markings of some real hirundo, erroneously supposed to be the constructor of the edible nests. Dr. Horsfield gives the species termed *lawet* by the Javanese as *Hirundo esculenta*, Osbeck, stating that the specimens which he examined in Java, and those which he took to England, differ from Latham's description in being uniformly of a blackish colour, without a white extremity to the rectrices. Another species, the *linchi* of the Javanese, he gives as *H. fuciphaga*, Thunberg stating that 'its nest is constructed of mosses and lichens, connected with the same gelatinous substance which composes the edible nest of the preceding species.' In the Journal of the Indian Archipelago, the same two species are distinguished by the names *lawet* and *lyntye*, and the nest of the latter is described to be without the least value. And, it is added: 'the residence of the swallows, or swiftlets, termed *lintye*, in the caves, contributes greatly to the injury of the others, for which reason they are destroyed as much as possible at each gathering. The nests which they make are constructed of grass-stalks. They are, however, of the same form, and are as artfully made as the others.' 'Heer Hooyman likewise states, that besides the *lawet*, other species resort to the same caverns, which are named *momo*, *boerong-itam*, *boerong-zoekoe*, and *lintje*. 'These,' he adds, 'are very similar to each other, excepting the second, which has the head larger; and the feathers of all are entirely black. The nests which they construct are black and friable, composed of a light down,' (agglutinated ?)—'An opinion prevails that the presence of these birds is injurious to the caverns, on which account they are driven away as much as possible.' Another writer in the same volume of the Bataviaasch Genootschap, mentions the *momo* or *boerong-itam* (thus bringing together M. Hooyman's first two species,) as a large kind with plumed tarsi, indicating thus a true cypselus, which is probably the constructor of the nests assigned by Dr. Horsfield and others to the *linchi*. Assuredly, however, the *Collocalia fuciphaga*, *Hirundo fuciphaga*, (Thunberg,) *linchi* or *lintye* of the Javanese, identical upon comparison with Javanese specimens, would appear to be the sole producer of the numerous nests gathered on the rocky coasts of the Bay of Bengal: and the often quoted notice by Sir G. Staunton, in his account of the Earl of Macartney's Embassy to China, must refer either to *C. fuciphaga*, or to an entirely new species, which is hardly to be supposed, in the locality, for, he remarks: 'the birds which build these nests are small grey swallows, *with bellies of a dirty white*. The white belly is characteristic of *C. fuciphaga*; and this particular species occurs abundantly on parts of the coast of the Malayan Peninsula, in the Nicobar Islands, and the Mergui Archipelago, and so high as on certain rocky islets off the southern portion of the coast of Arracan, where the nests are annually gathered and exported to China. From all this range of coast Mr. Blyth had seen no other species than fuciphaga, nor does it appear that any other has been observed; and he had examined a multitude both of the adults and of young taken from the nests, collected in the Nicobars and preserved in spirit, all of which were of the same species. Still, what appears to be *C. nidifica* inhabits the mountains far in the interior of India, though hitherto unobserved upon the coasts; and it is worthy of notice that *C. fuciphaga* does not appear to have been hitherto remarked inland in this country." It may however, says Dr. Mason, be here added that *C. fuciphaga* is constantly seen inland in the Tenasserim Provinces. The Karens in the valley of the Tenasserim in the latitude of Tavoy, are well acquainted with the bird, and they say it crosses the mountains to and from the interior every year. That it is the same species there can be no doubt, for the Karen name of the bird is "the white swallow," from its white belly.—*(Mason.)* Mr. Low, also, writing from Sarawak, tell us that the edible nests of the little swallows are all of the black kind, the beautiful white ones being only found in the rocky caves on the borders of the ocean: they are built by two different and quite dissimilar kinds of birds, though both are swallows. That which produces the white nest is larger and of more lively colours: its belly is white, but these birds are very rare in Sarawak. Skins of the smaller and darker bird, which inhabits the lime-stone mountains of the interior he had sent home. This kind is never found on the sea-coast, nor does the other bird ever frequent inland places. The nest produced by the small bird is of a much inferior kind, being, like the bird itself, of a dusky colour, and mixed with feathers: that of the coast is white and transparent, and resembles a net-work of isinglass. Feathers are not mixed with this, and it is free from all other impurities: it is this kind which sells for so high a price in China. The nests are found in deep and dark caves, in situations extremely difficult of access, sticking to the sides of the rock in considerable numbers. Stages and frames of bamboo are erected along the sides of the precipices leading to the caves, and on these fragile pathways the Dyaks advance to their mouths; in other situations they are let down by rattans from the heights above. Both means are highly dangerous, and accidents are said frequently to occur. The black kind are sold in Sarawak at four rupees per pound, but the price varies according to the demand and supply.—*(Low's Sarawak, p. 316.)*

In order to form a just idea of the dangerous work which must be performed by the collectors the following is an exact description of it. To enter the caves you descend one precipice of two hundred feet, nearly perpendicular, by means of one, two or three rattan ladders (according to the greater or less height) which are 5 inches broad and each 77 feet long. The lateral or principal ropes are composed of wild rattans twisted together to a thickness of two inches, and having wooden steps two inches thick and thirteen inches distant from each other. The upper end of the ladder is well fastened to a strong tree by black ropes and the lower end is placed on one of the rocks.

In order to reach one of the caves, they make use of two rattans each one hundred and eight feet long; but in some cliffs, bamboos are used 12 to 18 feet long which are placed one above the other—that they may steady themselves by holding the upper when walking along the under. The entrance of the caves is about 48 feet broad, more or less, and 30 high. The interior is from 60 to 114 feet broad and from 420 to 480 high. The bottom of most of the caves is washed for about one quarter of its length by the sea, three, four or more feet in depth. The whole of the interior appears to consist of limestone. In the caves are stages, made of bamboos which are bound fast with ropes to the walls of the rocks on which the collectors stand. It often happens, in consequence, that the cliffs on which the ropes of the stage are fastened become loosened and the whole stage is precipitated, which sometimes occasions a loss of life. Most of the nests are taken from the wall by the hand, and those which are on the roof, by an iron hook fastened to a long bamboo. The swallow named *lawet*, has a compressed head, which, however, with its thick and rounded feathers appears large in comparison with the body. The beak is broad and wide with a black awl-shaped small point bent downwards. The eyes are black and tolerably large, and the tongue arrow shaped. The throat is very short as well as the bones of the wings and feet. The feet consists of four toes of which three are in front and one behind. All the toes have black, curved, sharp, and tolerably long claws, so that the bird can every where lay fast hold of the rocks and cliffs. The tail is almost as long as the whole body. When the throat, the wings and the head are spread out, the bird has a circular appearance. The colour is greyish black inclining a little to green. On the back near the tail to the belly the blackish passes into mouse-colour. The breast is bluish.

Besides these, another species called lintye inhabits some caves. These are somewhat smaller, and have a white breast. In other respects they agree completely with the lawet. The nests which they make are constructed of grass stalks. They are, however, of the same form, and are as artfully made as the others, but are without the least value. The residence of the lintye swallows in the caves, contributes greatly to the injury of the caves, for which reason they are destroyed as much as possible at each gathering.

On the walls of the rocks, the birds build their nests in horizontal layers close to each other, at different heights from 50 to 300 feet, as they find room, and leave no space open, provided the walls are clean and dry; for when they prove damp they forsake their nests. When the sea attains a high level, which is usually accompanied by a strong surf beating against the cliffs, a percolation of water is caused which is in the highest degree prejudicial.

In the mornings at break of day the birds fly out with a great noise to seek their food, to the neighbouring places, in the east monsoon or dry season, but in the west monsoon or rainy season, they do not go far. They return to their caves about 4 o'clock in the afternoon. They feed upon different kinds of insects, hovering above the stagnant waters, for which their wide open beak is very useful. Their greatest enemies are the birds ulang and alap alap, who pull the young swallows out of the holes and seize many as they fly out of the caves. They form the nests, by returning the strongest and best fragments of the food which they have eaten. When the nests have been all plucked, the entrances are closed with bamboo fences, the doors are sealed, and the rattan ladders are brought back to the store-house. The nests in the store-house are, some days afterwards, weighed, and packed in hampers (geboks, each 25 catties), made very tight with cross ropes, and sealed with the stamp of the overseer. Pieces of paper are placed on each hamper, with the number and the nett weight of the nests written on it. All this having been done, the hampers are surrounded with cocoanut leaves, prepared in the manner of kadjang mats. Every two hampers are then made fast to a piece of bamboo (pikol an) provided with two props, in order that, when resting on the way, the hampers may not touch the ground. They are besides covered with pinang bark, so that when it rains the water can run off. Finally they are all sent to Surakarta in order that they may be there sorted. The evening before the birds' nests are sent off another feast is given, and on the following morning, all the coolies depart with their hampers for Surakarta amidst the playing of the gamelang and shouts of hurrah.—*Journal of the Indian Archipelago, No. III, September* 1847, *pages* 101 to 108.

BIRDS OF PARADISE.

Papua Birds...... ..	ENG.	Burong Mati	ARU.
Manuk devata........	JAV.	„ Papua......	TERN.
Ave de Pardiso...	PORT.	Soffu........	„
Burong devata...	MALAY.	Sioffu............	„

Birds of Paradise, named by the Indians, birds of Ternate; (*Valmont de Bomare, Histoire Naturelle, IV.* 296.) by the Ternatians birds of God; (*Valentyn Indian Archipelago, Vol. III. p.* 306-313.) by the Dutch, king's birds; (*Forrest's Voyage to New Guinea*, 142). and by the Spaniards, birds of the sun, (*Aldrovandus, Valmont de Bomare, Vol. IV. page* 297. The name Manuco-devata, or Bird of God, has been adopted in modifications by several naturalists. (Margrav Brasil, 207; Rai, Syn. Av. 21-27, Briss. 2, 130. See Buffon *Hist. Nat. des. Ois. III.* 207.) The Birds of Paradise (*Pritchard Researches*, I, 83.) the most beautiful of winged creatures, were fabled by the fancy of the Arabian poet, as visitants from heaven to earth; and among the islanders of the Archipelago it is believed that, when old, and feeling the approach of death, the Paradise Birds fly upward towards the sun; but having spent their strength in the inferior world, fail to reach again their celestial home, fall and die as they descend—a graceful fancy not forgotten by the moralist or the poet (*See Caomens, Lusiad, Book* X.) No representation can exaggerate their beauty, or excel the lustre of their plumage. They were supposed footless, and incapable of alighting, until it was discovered that the Indians cut of their feet before preserving them. They are caught in New Guinea, the Arru islands, Misol, Salwatti, Wagiou, (*Crawfurd, Journ. Ind. Arch. IV.* 182). In the nutmeg season also they come from their breeding grounds in the interior of N. Guinea and sail in flocks of thirty or forty over the eastern borders of the Archipelago. They form valuable articles of export. Europe is supplied chiefly from Batavia, China from the Molucca and Arru isles, while the natives of that remote group, with many of the Malays, adorn their casques at martial pageants with feathers plucked from their glittering wings. (*Valentyn, qu. Forrest Voyage to New Guinea*, 142.) In Linnæus genus Paradisea, many birds were included now transferred to other genera, but three species of Birds of Paradise are still included in that genus. These are P. apoda, *Linn*, with back of deep maronne brown, contrasting with the golden fulvous neck. It is the P. Major of Shaw. It has peculiar dense feathering on the breast. P. Papuana, *Beckstein* (P. Minor, *Forster*) back of a pale golden brown, shading with the golden fulvous of the neck which is continued all round the neck only in this species. P. Rubra *Cuvier*, (P. Sanguinea, *Shaw*,) is bright golden fulvous on the crown, neck and back its auxiliary plumes are gorgeous red. All have short velvetty feathers of a golden fulvous hue on the crown and nape, with the throat and forehead deep, dark, satiny green.

All those met with in commerce have small feet, head and wings, owing to the mode of preparing them. The living bird is a model of symmetry. The adult male birds have ornamental tufts of long airy plumes growing from under the wing like the purple honey sucker of India, and in two species the middle pair of tail feathers are long wiry barbless stems, and the red kind have a broad flat ribband of whale bone substance. The beautiful little creature popularly known as the king-bird of paradise; the Cincinnurus regius, has a deep emerald green disc on the middle tail-feathers; the Samalia magnifica has huge neck tufts. In the Parotea sex-setacea, the feathers of the flanks are a large floccose mass. The splendid Lophorina superba has its scapulary feathers enormously developed like an erectile mantle, and is peculiarly adorned on the breast. The entire group is peculiar to Papua or New Guinea, and the Arru islands. They are shot with sharp or blunt arrows. They are as omnivorous as the crow, fond of displaying their plumage, and like the Turkeys, argus pheasants and the dancing bird of America, Rupicola cayana, are fond of displaying their plumage. It is not however solely to the genus Paradisea that the term Birds of Paradise is given. Mr. Russel Wallace, applies it to the following:—

Paradisea apoda, the Great Paradise Bird in the Arru Islands.

Paradisea papuana, the Lesser Paradise Bird in New Guinea, Mysol and Jobie.

Paradisea rubra, the Red Paradise Bird, in Waigiou.

Cincinnurus regius, the King Paradise Bird, in New Guinea, Arru Islands; Mysol, Salwatty.

Diphyllodes speciosa, the Magnificent, in New Guinea, Mysol and Salwatty.

Diphyllodes Wilsoni, the Red Magnificent, in Waigiou.

Lophorina atra, the Superb, in New Guinea.

Parotia sexpennis, the Golden Paradise Bird, in New Guinea.

Semioptera Wallacei, the Standard Wing, in Batchian and Gillolo.

Epimachus magnus (*Upupa magna*, Gm., *U. supurba*. Lath.). Body generally black or brownish-black; tail graduated, thrice as long as the body (Lesson says three feet in length, French); feathers of the sides elongated, raised, curled, glittering on their edges with steel-blue, azure, and emerald green, like precious stones; the head and the belly lustrous also with steel-blue, &c. In truth, language fails to convey any just idea of the magnificence of the species. It inhabits the coasts of New Guina.

Seleucides alba, the Twelve Wired Paradise Bird, in New Guinea and Salwatty.

Ptiloris magnifica, the Scale Breasted Paradise Bird, New Guinea.

Ptiloris Alberti, Prince Albert's Paradise Bird, in North Australia.

Ptiloris Paradisea, the Rifle Bird, in East Australia.

Ptiloris Victoriæ, the Victoria Rifle Bird, in N. E. Australia,

Astrapia nigra, the Paradise Pie, in New Guinea.

Sericulus aureus, the Paradise Oriole, in New Guinea and Salwatty.—*Indian Field. Mr. Russel Wallace. Mr. Bikmore.*

BIRD PEPPER. Capsicum frutescens.

BIRKEJA, Hind. Galbanum.

BIRJUGAR. One of the 36 Royal races amongst the Rajputs, descendents of Rama through Lava, his second son. Their opponents, the Cuchwaha, also descend from Râma. The family state that they came from Rajore, the capital of Deoti in the Macherri country. They settled in Dor country, then slaughtered the Mewatti and Bheehar and are now dwelling from Rohilcund to Muttra, also in Shamsabad, Furruckabad Eyta of Mynpuri and Gorruckpoor, and a clan, now mahomedans, have settled in Muzaffarnuggar. All the doab clans long since became mahomedans, some in the time of Ala-ud-din, Khilji.—*Elliot.*

BIRHASPATI. The planet Jupiter. See Sani.

BIRHERIA. One of the Chamar tribes.—*Elliott.*

BIRI, Hind. Ærua Javanica.

BIRIJA, Hind. Turpentine of Pinus longifolia.

BIRJEE PASS. One of the passes from Kunawar to the outer Himalayas.

BIRJIA, Hind. One of the Ahir tribes.—*Ell.*

BIR KAIA, Tel. Cucumis acutangula.—*Roxb.*

BIRK, also VIRK, one of the most distinguished of the Jat tribes.

BIRKET-EL-HAGI, or the pilgrim's pool, is four leagues eastward from Cairo. It is a pretty considerable lake, which receives its water from the Nile.—*Niebuhr's Travels, Vol. I. p.* 65.

BIRKOONDA, in L. 77° 20' E. and L. 18° 18' N.

BIRKOOTY, in L. 87° 49' E. and L. 24° 23' N.

BIRM-BAT. See Bhat.

BIRME KI JAR, Duk. Root of Trichosanthes incisa,

BIRMI, Hind. Cratæva nurvala, Ham.—*C. Roxburghii*, also Taxus baccata, the Yew.

BIRMUPEA. A river in Maldah.

BIROHUR, in L. 76° 23′ E. and L. 27° 54′ N.

BIROTA, HIND. Zizyphus nummularia.

BIROZI, HIND. also Ganda biroza, and Sat biroza, Hind. Pinus longifolia,

BIRRE, HIND. Picea Webbiana, Picea pindrow, the silver fir.

BIRRI, HIND. Clematis Nepalensis.

BIRGO, HIND. Nima quassioides.

BIRGUS LATRO. The cocoanut crab, hermit crab, or robber crab, of the Keeling islands, is a kind of intermediate link between the short and long tailed crabs, and bears great resemblance to the paguri. Mr. Davidson observed their habits in the Keeling islands, and found that they live on the cocoanuts that fall from the trees. The story of their climbing these palms and detaching the heavy nuts is merely a story. Its front pair of legs are terminated by very strong and heavy pincers, the last pair by others narrow and weak. To extract the nourishment, it tears off the husk, fibre by fibre, from that end in which the three eyes are situated, and then hammers upon one of them with its heavy claws, until an opening is effected. It then, by its posterior pincers extracts the white albuminous substance. It inhabits deep burrows, where it accumulates surprising quantities of picked fibre of cocoanut husks, on which it rests as on a bed. Its habits are diurnal, but every night it is said to pay a visit to the sea, perhaps to moisten its brancheæ. It is very good to eat, and the great mass of fat accumulated under the tail of the larger ones, sometimes yields, when melted, as much as a quart of limped oil. They are esteemed great delicacies and are fattened for the table —*Bikmore,* 149. . *Mr. Davidson.*

BIRS NIMRUD is seven miles from Babylon. According to Bunsen the bilingual inscription found on the original spot by Rawlinson, on the walls of the temple, among the ruins of Birs Nimrud, teaches us that this building which forms the nucleus of that mound, was the sanctuary of Merdach (Mars) erected by Nabopalassar and Nabukodnossor. The term is Turkish and means the tower or Akron of Nimrod. The Jews style it Nebuchadnezzar's prison. It was considered by Niebuhr, Rich and others to be the ruins of the temple of Belus.—*Bunsen, Vol. IV. p.* 414.

BIRS. The Qamus gives Birs as the name of a town or district between Hillah and Kufah, which is still known; and is conjoined with Babel, in the Chaldaic Sidra Rabba of the Sabæans; under the name of Barsif; whence the Borosippo of Strabo, and other ancient authors, directly proceeds.—*Mignan's Travels pp.* 259 202. *Bunsen, Vol. IV. p.* 414. *Rich's Ruins of Babylon, p.* 34.

BIRT, H. ALSO BRITA AND BURT. A grant of land under stipulations. It also means proprietary right.—*Elliot.*

BIRTHWORT, ENG Aristolochia bracteata. Retz. Roxb. and A. longa, is the long-eared birth wort.

BIRTH, second (or twice born). These are terms frequently met with in works on the hindu people, and indicate that the person to whom it is applied has received the zonnaar or sacrificial cord. It is often used by Sudra hindus to imply conversion of heart. See Hindu. Poita. Zonnaar.

BIRUNI. The takhallus or nom-de plume of Abu Rihan, author of the Tarikh-i-Hind, or history of India, A. D. 1331. See Abu Rihan.

BIRUN-JASIF, PERS. Artemisia vulgaris.—*Linn.*

BIS, HIND. Myricaria Germanica, Salix alba, S. tetrasperma, "Kala bisa," Hind. Hippophae rhamnoides.

BISADÆ or Vesadæ or Besadæ, a race alluded to in the tract of Palladius de moribus Brachmanorum, written about A. D. 400 and the same name is applied by Ptolemy to a similar race inhabiting northern India.

BISAHAR. This range of mountains, an offshoot of the Western Himalaya, extends for almost sixty miles from the lofty cluster of Jumnotri peaks to the Sutlej below Shatul. The Bisahur peaks range in heights from 16,982 to 20,916 feet, the highest being the peaks of Jumnotri. Its passes are from 14,891, to 16,035 feet in height. The great mass of this range is granite. The people speak a Hindi dialect. See Ladak. Thoji-chanmo.

BISAM, GER. Musk.

BISAMGURRY, in L. 84° 42′ E. and L. 19° 23′ N.

BISATI, HIND. A pedlar, from "Bisat," Hind. stock.—*Ell.*

BISAWNETT, in L. 78° 39′ E. and L. 18° 48′ N.

BISAYA. A group of islands in the Eastern Archipelago. Ambergris is frequently gathered in considerable lumps in the vicinity of Samar and the other islands of the Bisaya group, as well as mother of pearl, tortoiseshell, and red and black coral, of the latter kind of which, shafts occur as thick as the finger and six or eight feet long.—*Walton's State, p.* 38-9. See India 318, 358.

BISCAYAN, a remnant, Celtic race or tribe in the south of France who preceded the Serians or Cantabrians in Europe. See India. p. 314.

BISCOITO, PORT. Biscoot, Anglo-Hind. Biscotto, also Galetta, IT. Biscuit.

BISCUITS.

Skibstvebak	DAN.	Biscotto	IT.
Scheepsbeschuit	DUT.	Galetta	,,
Biscuit	FR.	Biscoito	PORT.
Zweibach	GER.	Bort Ssucher	RUS.
Biscoot	HIND.	Bizcocho, Galletta	SP.

Biscuit, from the two Latin words "bis coctus," twice baked, is an unfermented bread, which, if properly prepared, can be kept a great length of time, and hence its use as a common form of bread at sea. The good quality of biscuits depends on the thorough kneading of the dough, and its subsequent division into portions of equal size and thickness. That supplied to the Royal Navy, from England, is now all made by machinery, but for mercantile ships, it is ordinarily made by hand.—*Toml. Faulk.*

BISEAY.—? Polypodium vulgare.

BISEN, H. A powerful tribe of rajputs in Cawnpore and the eastern parts of the N. W. P. the head of whom is the rajah of Salempur Majjhauli.—*Elliot, Wilson.*

BISERA, in L. 84° 55′ E. and L. 27° 28′ N.

BISFAIJ, HIND. Polipodium, species, also Adiantum.

BISH, HIND. Aconitum ferox ; any poison ; Aconitum ferox and other species. Pieces of the roots of the Aconitum ferox, "*bish* ;" *Ati Singeea bish*," or "*bishnak*" of the bazaars, may be used medicinally, but its highly poisonous effects on animal life, require its use to be had recourse to with the greatest precautions. —*Wall.*

BISHA, TAM. Bambusa baccifera.

BISH-BANS, BENG. Beesha . Rheedii, Kunth.

BISHEN GANGA, on its bank is built Badarinath, in L. 30° 46′ N. L. 79° 32′ E.

BISHENPOOR. A town in the Burdwan district of Bengal, in Long. 83° 33′ E. and Lat. 27° 13′ N.

BISHKHAPRA, HIND. Primula speciosa, also, Trianthemum pentandrum.

BISH-KOPRA, HIND. Iguana (Qu. Bish Kobra, or poison-cobra.) Discussions have occurred on the existence of a lizard found in Guzerat, and described as being venomous, "*Ghoor* the *Hindoo Patriot* calls them ; *Tuckhub* and *Tuckoo* in Bengal, the word "tuckoo" being in consonance with the call or song of the reptile. In Baraitch in Oude, it is called *Biskopra.* It is flat, about 1½ inch in breadth, and 15 inches in length, with a head very like a snake's in point of shape ; it possesses fangs and a small dark-greenish bag under the tongue, and in close proximity to the teeth, indicates the poison bag ; it is a venomous looking creature, and possesses to a remarkable degree the pugnacity of the venomous snake when assailed. This seems a popular error ; a venomous lizard is an anomaly unknown in creation.—*Z.*

BISH-KUCHOO, BENG. Arched Arum or Arum fornicatum ; poisonous Calla.

BISHMAN, BENG. Colocasia cucullata.

BISHNAK, NEP. Aconitum ferox.—*Wall.*

BISHNOWI. A hindu sect in Rohilcund and the Doab. The author of the volume Tanbi-ul-jahilin remarks that most of the teachers of the dissenting hindu sects, the Kabir Panthi, Par-nami, Daud panthi, Sadh, Sat nami, Kalal panthi, and Bishnavi, have been mahomedans. The Bishnavi are said to have been founded by Bishno a Tuga brahman, a pupil of a mahomedan fakir.—(*Ell.*) Professor Wilson says the sect is of growing importance in some parts of the N. W. P., combining hindu and mahomedan practices and belief, generally terming themselves sheikhs, but adding the title to a hindu name.

BISHOP OF BABYLON, is the title of the Romish prelate for the Pashalic of Baghdad.

BISHOP'S SEED. Seeds of Anethum sowa.

BISHOP'S WEED SEED, ENG. Fruit of Anethum sowa.—*Roxb.*

Omum	TAM.	Aujown	HIND.

Mr. Piddington found bismuth in one of the ores sent him from the antimony mines near Moulmein ; it is found in connection with silver in Burmah and has been obtained in small quantities in Kashmir from the Jammu territory.—*Mason.*—*Powell, Hand-book Econ. Prod. Punjab, page* 14.

BISRUMGUNJ. A ghat in Bundelcund.

BISMILLAH, means literally, in the name of God, and mahomedans never commence eating without saying it. It is often used by them, also, in commencing a book or used in rising or sitting down and by the pious on every occasion, however unimportant. It answers to the christian grace before meat. It is also used as a sacrificial prayer ; directing the victim's face towards the *Kaabah*, the person cuts its throat, ejaculating, " *Bismillah! Allahu Akbar!*" The camel is sacrificed by thrusting a pointed instrument into the interval between the sternum and the neck. This anomaly may be accounted for by the thickness and hardness of the muscles of the throat. Burckhardt makes the mahomedan say, when slaughtering or sacrificing, " In the name of the most merciful God !" Mr. Lane justly observes that the attribute of mercy is omitted on these occasions.—*Burton's Pilgrimage to Meccah, Vol. III. p.* 303.

BISMILLAH-UR-RAHMAN UR-RAHIM. In the name of the merciful and clement God, a frequent prayer of mahomedans. Zamakshari, in his commentary on the Koran, observes, *Rahman* denotes a more extensive idea than Raheem ; for this reason people say in speaking of God, " the Merciful (Ar Rahman) in this world and the next," and " the clement or compassionate, (Ar Raheem) in this world." The correct pronounciation to a European, are Bismillah irruhman nirruheem, the words are first taught to mahomedan children, at the age of four years, four months and four days, with certain ceremonies.—*Herk.*

BISON. Bibos cavifrons.—*Hodgson.*

Vana-go......	BENG.	Gouri Gai............	HIND.
Kar-kouah...	CAN.	Jungli Khulga......	„
Ban-gau......	BENG.	Peroo-maoo	GOND.
Bison....................	ENG.	Ban-parah...	MUNDLAH.
Gour Bison...	„	Gaoiya...	MAHR.
Gour......	HIND	Katu Yeni	TAM.

This is the Bison of sportsmen in India which inhabits all the large forests. It is not a true bison. It is the Bos Gour of Traill, the B. asseel of Horsfield. Bibos cavifrons Hodgson, and Bibos asseel, Horsfield, are, however, separated by some authors and the term bison is very indiscriminately given to bovine animals to whom it does not pertain. The genus *Bison* comprehends two living species, one of them European, now become very scarce and verging towards extinction ; the other American, and, notwithstanding the advances of man, still multitudinous.—*Engl. Cyc., page* 482. *Cat. Museum, India H.* See Bibos, Bos, Bovidæ, Bubalus, Mammalia.

BISRU, HIND. Cedrela toona, C. serrata.

BISSAHRI-PALA, HIND. Diospyros lotus : The fruit is sweet and pleasant.

BISTAN. See Kandahar.

BISTARUK, BENG. Lettsomia nervosa.

BISULPHURET OF ARSENIC. Realgar ; Mansil, Red-sulphuret of Arsenic. One kind " noushádar kání" from Lahore and Amritsar, might be confounded with sal ammoniac by its name, and lead to injurious results. Kani, means of the mines. See Arsenic.

BISWA. BISWAN, HIND. In the Central Doab, the twentieth part of a bhigah. Each estate or village is considered an integer of one bhigah, which is sub-divided into numerous biswa or biswansi, to show the right of any particular villager. The As of the Romans was similarly used, thus " heres ex semuncia," heir to 1-24th ; " heres ex dodrante," heir to $\frac{3}{4}$ths ; " heres ex asse" sole proprietors.—*Elliott.*

BITARTRATE OF POTASH, ENG. Potassæ bitartras.

BIT OR BITI, TAM. Dalbergia sissoides ; generic and used for all the species of Dalbergia.

BITIKH, ARAB. Musk melon.

BIT-LABAN, HIND.

Sunchul....	GUZ.	Sochul	HIND.
Kala-namak...	HIND.	Bit Noben.........	„

A medicinal salt prepared by melting together for about 6 or 7 hours, in an earthen pot, an impure muriate of soda, called *samur*, and emblic myrobolans (*Hind. Guz.* Aoonla, Anvelcutty), in the proportion of fifty-six ounces of the muriate, to twenty ounces of the dried myrobolans. It is met with in most Indian bazars, and is used by native practitioners as a tonic in dyspepsia and gout, as a stimulynt in chronic rheumatism, &c.—*Faulkner. Ainslie.*

BITLIS, a town near Kufra.

BIT-MIAKI, CAN. Bustard : Otis tarda.

BISHNUVE, the most common brahmin sect in the desert and in Sind. The doctrines of Menu with them go for as much as they are worth in the desert, where " they are a law into themselves." They wear the junnoo, or badge of their tribe, but it here ceases to be a mark of clerical distinction, as no drones are respected ; they cultivate, tend cattle, and barter their superfluous ghee for other necessaries.—*Tod's Rajasthan, Vol. II. p.* from 319 to 321.

BIT NOBEN. See Bit laban.

BITTER ALOES, ENG. Aloes.

BITTER GOURD. Trichosanthes cucumerina.

BITTER HERBS. Exod. xii. and 8 Numb. iv. ii.

Mururim. Heb.

The Jews were ordered to eat the passover with bitter herbs.

BITTERN, Eng. Isaiah xiv. 23, xxxiv. 11, and Zep. xi. 14 has been interpreted to be a bittern, an owl and an otter. The arabic version makes it al-Houbara.

BITTERS. In all parts of the world bitter substances appear to be regarded by people as febrifuges. The beautiful Menyanthes trifoliata and the Tormentil are as popular, in northern regions, as the Chiretta and its various substitutes in tropical countries of the East. Such remedies were in great repute in regular practice before the discovery of quinine. Although, however, they act as tonics and improvers of digestion, and are admirable adjuvants of the true antiperiodics, it is doubtful whether they possess any strictly antiperiodic virtues of themselves. In this respect, they bear very much the same relation to true febrifuges, as salicine does to quinine. Most of them will be found enumerated under their respective heads, and it is only necessary to mention here that, of the *Mucilaginous Bitters*, the chief is the Goluncha, and two others are the Baobab, and Cetraria. *Aromatic Bitters* were formerly in high repute, but have latterly fallen into disuse as febrifuges. India does not appear to be particularly rich in them, and it is a curious fact connected with them that the species of Galipia yielding Angustura bark, is more esteemed by the natives of the Cinchona countries than the true bark. Dr. Hancock gave very strong evidence in its favor. *Bitters containing Alkaloids or Tannin* are a class containing all the most important antiperiodics, and the most valuable of them all is quinine. No Indian tree comes so near the Cinchonas in its botanical affinities as the Hymenodictyon excelsum. As one of its chief habitats is the pestilential jungles of Goomsoor, this would be an exemplification, if its virtues were found to be really considerable, of a favourite notion with some, that along with the bane, nature always supplies the antidote. *Astringent Bitters* and substances containing much tannin, have long been used in Europe as febrifuges.—*Ind. Ann. Med. Sci. for April* 1856, p. 381.

BITTER SEVILLE ORANGE. Citrus vulgaris.

BITTI, Can. Dalbergia latifolia. Dalbergia sissoides.

BITTER ALMONDS, are poisonous to wild beasts:

BITUME DE JUDEE, Fr. Bitumen.

BITUMEN, Eng.

Jodenlym	Dut.	Bitumen Judaicum	Lat.
Asphalte	Eng.	Minak-tanah	Malay.
Petroleum	,,	Nift-i-rumi	Pers.
Bitume de judee	Fr.	Asphalto	Port.
Judenpech	Ger.	Asfalt	Rus.
Asphaltum	Lat.	Asfalto	Sp.

This name is applied to several combustible mineral substances of different consistence and character, such as mineral pitch, earth oil, petroleum, Naphtha Maltha and sea-wax; the properties of which greatly vary with regard to fluidity and colour. At Hit, the Is of Herodotus near Babylon, it is very abundant and ancient geographers suppose that the Babylonians obtained here their bitumen used as cement for fastening their bricks. Arrian says that the temple of Belus was of brick cemented with asphaltus. It is a product of the districts in the North West of Persia where, at the town of Ai, the Momai is produced.—*McCulloch; Skinner, Vol. II. p.* 113. *Mignan, p.* 166. *Faulkner, Eng. Caw purji	Hind.		

There are two varieties of this plant, (*a*) caribœa, with rose colored flowers, cultivated in the west Indies, and β. Indica, with white flowers cultivated in Indra The pulp of its seeds forms the arnotto of commerce used as a dye for cheese and cloths. The dye of the Indian variety is neither so abundant nor so good as that of the west. At the Madras Exhibition of 1855, several specimens of Anatto were exhibited. The plant is cultivated in Singapore, in Mysore and in the Northern parts of India. Dr. Roxburgh remarked that this plant appears to be a native of India, but in the immature plant, the flowers are white and the immature capsule, green; while in the plant from West Indian seed the flowers are rose coloured and the immature seed vessel red: and the Eastern plants do not furnish so much or of so good a color. Dr. McClelland mentions that *Bixa orellana, (Thee-dew)*, or *Arnotto*, is largely cultivated all over Pegu for the red and yellow dyeing properties of its capsule. It is found in all the bazaars, and in those of Bengal under the name of *Lat-kan.* It is a favorite dye with the Burmese, and might become a product of some importance. It is this species of Bixa which is now so largely grown for its dye. The dry hard paste is also found to be the best of all ingredients for imparting a golden tint to cheese and butter. The Spanish Americans mix it with their chocolate, to which it gives a beautiful rich hue. The dye is usually prepared by macerating the pods in boiling water for a week or longer. When they begin to ferment, the seeds ought to be strongly stirred and bruised with wooden pestles to promote the separation of the red skins. This process is repeated several times, till the seeds are left white. The liquor, passed through close cane sieves, pretty thick, of a deep red color, and a very bad smell, is received into coppers. In boiling, it throws up its coloring matter to the surface in the form of scum, which is taken off, saved in large pans, and afterwards boiled down to a due consistence, and then made up, when soft, into balls or cakes of two or three pounds weight. The imports into Great Britain of Arnotto for home consumption are from 200,000 to 300,000 lbs. per annum. The plant is grown in Dacca and other parts of India in the Malay Peninsula and the Eastern Archipelago. At the Hawaiian Islands, Tongataboo, Rio Janeiro, Peru and Zanzibar, the Arnotto is now an indigenous shrub which rises to the height of seven or eight feet, producing oblong heavy pods, somewhat resembling those of a chesnut. Within this there are generally thirty or forty irregularly formed seeds, which are enveloped in a pulp of a bright red color, and a fragrant smell.—*Simmond's Commercial Products, p.* 418. *Roxb. Vol. II. p.* 581. *Voigt. p.* 85 *Dr. McClelland.* See Anatto, Dyes.

BLACK, Ivory black ; Lamp black ; Smoke black.

Nek-Nek	BURM.	Karpa	TEL.
Kala	HIND.	Karpu	TAM.
Kajil	„	Kara	„

The subtances which are commonly so named, are Ivory black, lamp-black and smoke black. Smoke black is prepared by the combustion of different resinous bodies, especially of pitch. This substance is burned in large pans under a dome or chimney, within which cloths are suspended to which the soot becomes attached. It is employed only in the arts, in the manufacture of printer's ink, and of blacking for shoes, &c. Amongst mahomedan women, the Kajil is largely used for painting the eye-lashes. The Indian ink or China-ink is made from lamp black.—*O'Shaughnessy, page* 618.

This mineral is of a dark steel-grey colour, and a metallic lustre ; it is soft, has a greasy feel, and leaves a dark coloured line when drawn along paper. It is a carburet of iron and when pure, sells at 30 shillings the pound, is used in the manufacture of pencils, for making crucibles, in compositions for protecting iron from rusting, and for diminishing friction in machinery. The best plumbago was that procured near Borrowdale in Cumberland. It has also been largely worked in America. Ceylon largely produces it, also Travancore and Vizianagram. It occurs in veins, and in kidney shaped lumps, in gneiss, mica slate, and their subordinate rocks, but that at Borrowdale occurs in transition slate.—*Faulk. Toml. Statistics of Commerce.* See Carburet of Iron ; Graphite ; Plumbago ; Carbon.

Sisam............	......GUZ.	Irugudu chettu......	TEL.
Sisam......	...HIND.		

This is a commercial term for several dark coloured timbers. Every locality has a wood which is known by this name. The timber known in Britain as East Indian Blackwood is from the Dalbergia latifolia, called Blackwood tree by the English and Sit Sal by the natives of the Malabar Coast, where it grows to an immense size. The wood of the trunk and large branches is extensively used for making furniture; it is heavy, sinking in water, close-grained, of a greenish black colour, with lighter coloured veins running in various directions, and takes a fine polish.—The wood called, in Bombay, Seesum, however is probably the timber of two different species of *Dalbergia*, which grow in various parts of India. Bombay Blackwood is brought to Bombay from the Malabar Coast, and is largely used in the manufacture of household furniture. Dr. Cleghorn, in his reports, recognises under this name only the Dalbergia latifolia and it, with the D. sissoides, are likely the only trees from which the Bombay Black wood is obtained.—*Dr. Cleghorn, Dr. McClelland, Mr. Faulkner, Holtzappfel.* See Blackwood Furniture; Furniture, Rose-wood.

BLACKWOOD OR ROSEWOOD FURNITURE.—In the Bombay furniture manufacture, blackwood is the material almost always employed—it is brought from Cochin and other places lower down on the Malabar Coast. It sells for about the same price as teak—it is a brittle, opened-grained wood, not at all a favourite with cabinet-makers at home, where the highest prices ever realised for it in the state of log were about £10 per ton. The principal furniture dealers in Bombay, are Parsees, mostly from Guzerat. The pattern meant to be carved is first carefully drawn on paper—then on the wood. The tools used are the native adze, chisel, and drill—the centre-bit and other tools of English pattern, from which so much assistance might be obtained, are never resorted to. The general design of the various pieces of furniture is mostly excellent, the patterns elegant and tasteful: the finish for the most part is poor,—the joinery always execrable. Concealed joints never seem to be thought of—pins which might be kept out of view are made as conspicuous as possible, and great clumsy screw nails, which might, without trouble, be hid, are fully exposed to view. Considerable quantities of blackwood furniture are sent to England annually by residents in Bombay for their own after use, or for the service of friends: it is packed up without being jointed or polished, and is put together by English workmen, who it is believed, think but lightly of its merits. There were, in 1850, six principal furniture shops in Bombay. They keep from five to ten workmen each, and probably turned out Rs. 25,000 to Rs. 30,000 worth of furniture amongst them annually. The following were the prices of the principal articles manufactured:—

	Rs.
Round Table, from 3 to 8 feet in diameter	30 to 80
Round Teapoys, 2 feet ditto, per pair	16 to 25
Card Table do	50 to 60
Flower Stands do	50 to 100
Pier Tables do	100 to 150
Conversation Sofas do	100 to 150
Sofa Couches do	140 to 200
Music Book Cases do	30 to 140
Easy Chairs each	10 to 50
Low Chairs each	25 to 50
Drawing Room Chairs, with damask cushions	5 to 10
Dressing Tables,	8 to 75
Side Boards, each	35 to 70
Screens, each	20 to 75
Wardrobes, each	45 to 75
Clothes, Presses,	25 to 46
Bedsteads, each	50 to 200
Writing Tables, each	50 to 100
Bed Room Couches, per pair	40 to 60
Chiffoniers, each	60 to 80
Sofa Tables, per pair	60 to 90
Dining Table, in pieces	40 to 50
Chests of Drawers, each	25 to 50
Music Stands, per pair	30 to 50

BLANKET.

Kambli...GUZ. HIND. TAM.	Kămăl...........MALAY
Kaml chadr.......... „	Jamkhana ....TEL.

A soft loosely woven woollen stuff, used as a bed covering by night and cloak by day. Most of the blankets manufactured in India, are of a coarse description, and are only used by the poorer natives. English blankets being in general request, are largely imported. At the Madras Exhibition of 1851, blankets were shown, manufactured at Hoonsoor in Mysore, from half bred merino wool, half bred but wool, warp woof mundium wool, common country wool and mundium wool.

The white blankets made at Rampur in the Western Himalaya and known as the Rampur chadr are sold at £3 and upwards. The cumblies, made in the Ceded Districts are of a superior texture.

BLAR, Hind. in Multan, an old mound yielding saltpetre earth.

BLASSES-ROSE. Ger. See Rose.

BLATTA ORIENTALIS, Cockroach. This insect is very troublesome in many houses and in ships; lodging in cup boards, presses, and amongst books, and soiling by their exuvia whatever they approach.

BLATTI. Maleal. Sonneratia acida.—*Linn.*

BLAUHOLZ. Ger. Logwood.

BLEACHING.

Nikharna.........	Hind.	Salavy punnookiradoo.	Tam.
Khumbi karna	„	Nana padam.........	Tel.

In India, the substances present in goods which oppose the bleaching process are first removed by scouring in an alkaline lye; afterwards, natives usually have recourse to dunging the cloths which are to be bleached and steaming them over the mouth of an earthern pot set in a clay fire place, but little science enters into the process and generally the goods suffer much from the water in which they are scoured being over charged with lime. Mr. Rohde tells us that bleached cloth, particularly in tents, is far less durable than that which has merely had the dressing and filth thoroughly removed by washing, this is easily explained as cotton goods have a certain resinous substance in them that obstructs the absorption of moisture. Besides the removal of this, cloth sustains much damage from the abuse of the caustic lye bath; cloths should be scoured more than once at intervals during the process of bleaching, as many of the substances cannot be removed but after exposure to the light and air.

Wool also is protected by a peculiar varnish exceeding three per cent. of its weight, which must be removed by scouring, *warm* hot boiling water must be employed. Wool is further bleached by sulphuring either in close chambers in which sulphur is burnt, or by the sulphuric bath; in either case, it acquires a brittleness which must be removed by washing in soap and water.—*(Rohde M. S. S.)*

According to Dr. Royle some places which are also seats of the cotton manufacture, such as Dacca and Baroche, are famous for their bleaching, this has been ascribed to the excellency of the water in the neighbourhood of these places. At Dacca, fine muslins are merely steeped in water, other cloths are first washed. But all, of whatever texture they may be, are next immersed for some hours in an alkaline lye composed of soap. and of "sajæ mattee," that is, impure carbonate of soda. They are then spread over the grass, and occasionally sprinkled with water, and when half dried are removed to the boiling-house in order to be steamed. This is effected by twisting the cloths into the form of loose bundles and placing them upon a broad clay platform, which is on a level with, and surrounds, the neck of a boiler, sunk into the ground. They are then arranged in circular layers, one above the other, around a bamboo tube, which is kept upright by means of transverse supporters projecting from it, the whole forming a conical pile that rises to a height of five or six feet above the boiler. The fire is kindled in the excavation below, and as the ebullition of the water proceeds, the steam diffuses itself through the mass of the cloths above, swelling by its high temperature the threads of the latter. The operation of steaming is commenced in the evening, and continued all night till the following morning. The cloths are then removed from the boiler, steeped in alkaline lye, and spread on the grass as on the preceding day, and again steamed at night. These alternate processes of *bucking* and *crofting*, as they are technically called, during the day, and of steaming at night, are repeated for ten or twelve days, until the cloths are perfectly bleached. After the last steaming, they are steeped in clear filtered water acidulated with lime-juice, in the proportion, generally, of one large lime to each piece of cloth. Lime-juice has long been used in bleaching in all parts of India, and Tavernier describes Baroche as famous as a bleaching station, on account of its extensive meadows and the large quantity of lemons reared there. Mixed fabrics of cotton and Muga silk are steeped in water mixed with lime-juice and coarse sugar, which latter article is said to have the effect of brightening the natural colour of the silk.—*Royle, Arts, &c. of India, page* 481, *Rohde M. S. S.*

BLENDJU. In Java, is a substance, prepared as a paste, fried with oil, and eaten with coffee.

BLEPOTE. See Cheiroptera.

Cupania sapida,...	Camb.	Akee Tree...........	Eng.

The Akee tree, one of the Sapindaceæ, has been introduced from Guinea into India. It rises 30 to 40 feet. The fruit has the size and shape of a pear, of a red colour, and is much esteemed in Guinea and the West Indies. Wood said to be very hard and durable, but said also to be light and worthless. The genus was named after Captain William Bligh, R. N., Master of the Bounty in the celebrated mutiny.

BLIMBI, MALAY. Averrhoa bilimbi. The fruit of the plant known as the tree cucumber, has various terminations, Blimbing basi, Blimbing bulu, Blimbing teres, perhaps varieties.

BLIMBING-MANIS, MALAY. Averrhoa carambola.—*Linn.*

BLISTERING BEETLES OF INDIA, consist of several species of Mylabris. About 180 lbs. forwarded by Dr. Birdwood, to test the market value in England, were sold there at 5*s* 8*d.* per lb.—Several kinds of beetles when applied to the skin, cause great irritation, inflammation, and blistering. These consequences are occasioned by an acid principle called Cantharidin, contained in these insects. The ancients chiefly employed two species of Mylabris, one of which, the Mylabris chichorii, (vern. telini, HIND.) has been used for ages, and is so at present by the European and native physicians of India and China. The Cantharis vesicatoria, or Spanish blistering fly, is the species officinal in the British Pharmacopœiæ. Its colour is bright shining green or bluish, length about ¾ of an inch, breadth ¼th to ⅓rd of an inch. It occurs in the South of Europe generally, especially in Italy and Spain, and is found occasionally in England. The blistering flies of India are chiefly the Mylabris or Meloe chichorii the Cantharis gigas, and the Cantharis violacea The Meloe, or Mylabris chichorii (Telini, HIND) is common in the neighbourhood of Dacca, in the Hyderabad country, in Kurnool, and numerous other localities. The insect is about an inch long, and ⅓rd broad ; the elytra or wing coverts are marked with six cross stripes of deep blue and russet brown. The Buprestis of ancient writers is met with in the bazaars under the name of the golden fly (sonamuk-ki) The Cantharis violacea is often mixed with specimens of Meloe in the bazars. The Telini fly, if procured before the mites have commenced its destruction, yields on an average one-third more of cantharidin than the Spanish fly of the European shops. The blue fly is of uncertain strength ; the Buprestis, in all the specimens obtained, was quite inert.—A species of Meloe called the M. trianthema, from its being usually found on the plant named Trianthema decandra (biscopra, *Hind*) is described by Dr. Fleming. A tincture, acetous plaster, and ointment of the Meloe cichorii are given in the Bengal Pharmacopœia. Some prejudice exists against the article on account of its alleged excessive severity of action. This is solely owing to the presence of a greater quantity of cantharidin than that contained in the common fly. Diluting the tincture, and adding to the proportion of lard and wax in the plaster and ointment, perfectly assimilate the action of the indigenous and the imported insects. At the Madras Exhibition of 1855, specimens of Mylabris pustulata, and M. punctum were exhibited by M. Collas of Pondicherry. Both insects are found in large quantities at certain seasons all over Southern India.—*O'Shaughnessy, page* 684, quoting *Dr. Hunter, M.D. in the Transactions of the Asiatic Society, 5th Vol. p.* 216. *Madras Exhibition.* See Spanish Flies. Cantharides.

BLISTERING PLUMBAGO. See Lal Chitra. Chitra, Plumbago.

BLOCK, a mechanical implement, of iron or wood enclosing a pulley or sheave revolving on a pin. There are many kinds and all largely used in sailing ships.

BLOCK TIN or pure tin in slabs is exported from Batavia and Singapore.—*Statistics of Commerce.*

Blood for blood, the Vendetta of the Italians, is the law of most rude populations, but the settled races occupying the South and East of Asia, are dwelling under civil laws administered by officers of justice.

BLOOD-ROOTS. See Hæmodoraceæ.

BLOOD-SPOTTED CRAB. See Cancer.

BLOOD STONE. ENG.

Heliotrope	ENG.	Radawar	GUZ. HIND
Pierre Sanguine a Crayon	FR.	Sanguigna	IT.
Blutstein	GER.	Hæmatites	LAT.
		Piedra Sanguinaria	SP.

Blood-stone also called Heliotrope, and sometimes Oriental Jasper, is one of the quartzose minerals. It is of a deep leek green colour and has red spots scattered through it, caused by iron. Immense masses of it are obtained in the trap formation of the Dekhan. but it is brought to Bombay from different parts of the Guzerat, &c., and is re-exported largely to England. It is used for seals, rings and brooches. Its price has lately been very greatly reduced.—*Madras Museum Records.* See Heliotrope.

BLOOD SUCKER. A name applied to the reptiles Calotes viridis, Gray, C. opiomachus and C. versicolor, also to Sitana ponticheriana, Cuv. They are all unsightly creatures, with large heads and powerful jaws, so that even the bravest crow attacks them carefully. There are 11 species of Calotes and 2 of Sitana in India. Mahomedans dislike the blood-sucker, as the creature often raises and lowers its head, in the manner of those religionists when at prayer.—See Calotes; Reptiles; Sitana.

BLOOD WOOD OF PORT JACKSON. See Eucalyptus.

BLOW-PIPE, is in constant use in India, in the arts amongst goldsmiths, tinsmiths, bangle-makers and others. The cook room, of every house, also, has a bamboo blow-pipe. The Malay races also use the blow pipe, the Sumpitan, for projecting peas, small pellets and arrows. The accuracy of fire, with these is great; little birds can easily be destroyed, but even large birds like the crow can be brought down by the earthern pellet from a blow-pipe. See Sumpitan.

Blubber is the thick fat or adeps of the whale, or the porpoise. At the present day in Europe, it is boiled down into train oil, but the whale was eaten by the Saxons, and when men were lucky enough to get it, it appeared at table till late in the fifteenth century. In 1246 Henry III. directed the sheriffs of London to purchase one hundred pieces of whale for his table. Whales found on the British coast were the perquisites of royalty; they were cut up and sent to the king's kitchen in carts. Edward II. gave a reward of twenty shillings to three mariners who had caught a whale near London bridge. Those found on the bank of the Thames were claimed by the Lord Mayor, and added to the luxury of the civic feast. Pieces of whale were often purchased in the thirteenth century for the table of the Countess of Leicester. England was supplied with this choice dainty by the fishermen of Normandy, who made it an important article of commerce. The Normans had various ways of ooking it: sometimes it was roasted, and rought to table on the spit, but the usual way ras to boil it and serve it up with peas; epiures looked out for a slice from the tongue or he tail. The grampus, or sea-wolf, was also ighly esteemed; but of all the blubber dainties the porpoise was deemed the most savoury. The Saxons called it sea-swine, and the ecclesiastics of the middle ages, *porcq marino.* Porpoises were purchased for the table of Henry III. in 1246: and Bishop Swinfield, in the same century, dined off it whenever he had an opportunity: it was served up at a sumptuous entertainment given to Richard II. at Durham-house, and at the grand installation of Archbishop Neville in 1466; four porpoises were on the table. In 1491 the bailiffs of Yarmouth sent a fine porpoise as a present to Lord Oxford, whose favour they were anxious to propitiate, and accompanied it with the message, that if they had any other "deyntes to do him a pleasir," they would have sent them also. The worthy bailiffs could find no more savoury present in all the fish-markets of Yarmouth. At the marriage of Henry V., the guests were treated with a "rosted perpis," a dish fashionable in the fifteenth century. We find it again in the first course at the coronation of Henry VII. The king was probably fond of this dish, for it was served up at his table on the feast-day of St. George, and my Lord cardinal courted his majesty's favour by sending a fine porpoise to the palace. The cooks not only roasted and boiled it, but made it into pies and pasties; and a learned "Maister Coke" gives a receipt for a delicious "pudding of purpasse," whilst another tells us how to serve it up in fermenty; the wheat is to be seethed in milk, in which finely chopped almonds had been boiled to thicken it; the purpoise was to be dished up smothered in this delicate sauce, which was also coloured with saffron. A poet in 1452 gives directions how to carve "salt porpyesse and seele." In the "Boke of Kervyng" mustard is recommended as the best sauce for porpoise, which was to be carved after the manner of venison; and the proper term to employ in asking the carver to help the guests was to bid him "undertraunche that purpos." This coarse animal was esteemed as food until late in the sixteenth century; it was often on the table of Henry VIII; and Wolsey, Somerset, and other lords of the Star Chamber, having in 1509 a snug little official dinner together, feasted sumptuously of a porpoise, which cost eight shillings. Even Queen Elizabeth, who was rather choice in her appetite, had porpoise among her Friday diet; and it was sold as food in the market of Newcastle as late as the year 1575, from which time it appears to have fallen into disrepute.—*Our English Home: Its Early History and Progress. McCulloch's Commercial Dictionary*, p. 134.

This mineral salt is not known to occur in nature, but it is largely made in several parts of India, by boiling sheet copper or copper filings in sulphuric acid and evaporating the remainder, on which crystals form. It is also obtained from copper ore, by pulverising the ore which is then thrown into earthen vessels filled with water and after filtration the crystals form. The colour is a beautiful blue. It is largely used in surgery and in the arts.—*McCulloch.*

Conyza grandis.—*Wall.*

Pung-ma-theing. BURM.

One of the most abundant weeds throughout the Tenasserim Provinces, grows six or eight feet high with leaves like mullen, which, when bruised, emit a strong odour of camphor. Many years ago, the Tavoyers informed Dr. Mason that they were in the habit of making an impure camphor from the weed by a very simple process; but Mr. O'Riley of Amherst, was the first to make a good article from it, and to bring it to public notice. He made more than a hundred pounds, and the specimens which he sent to Calcutta were reported "in its refined form, to be identical in all its properties with Chinese camphor." The plant is so abundant, that these Provinces might supply half the world with camphor. Wherever the trees are cut down, this weed springs up, and often to the exclusion of almost every thing else; so that an old clearing looks like a field under cultivation. Mr. O'Riley sent flowering specimens of the plant to Dr. M'Clelland for identification, who forwarded them to Dr. Voigt of Serampore, and subsequently reported, "Dr. Voigt states that it belongs to DeCandolle's genus Blumea, and is, so far as he can see, a new species." It is without doubt the same plant as that which appeared in Wallich's Catalogue a quarter of a century ago, as Conyza grandis, and which De Candolle subsequently described as Blumea grandis.—*Mason.* See Camphor.

BLYTHIA RETICULATA, one of the Calamaridæ. See Reptilia.

BNE-EL. in Phœnician cosmogony, sons of of God. Bne-Elophim or Titans, supposed to be the Elim, see Gen. 6. i. iv, Elim, in Phœnicia, was a general name of God.—*Bunsen, IV.* 222.

BOA, or BOE, sometimes called Poam by the people of Malabar. This wood is much like the timber called in Ceylon Palari, or Palis, and Irambu, or, as known by the English term iron-wood. It is a strong, heavy wood, and is considered durable. It grows from twenty to thirty feet high, and from twelve to thirty inches in diameter.—*Edye. M. and C.*

BOA CONSTRICTOR, Linn. A genus of innocuous serpents of the family Pythonidæ, order Ophidia, Sub-order. innocuus. They are not uncommon in the tropical parts of South Eastern Asia, but some of them are of considerable size and kill large four-footed animals. A female python, 20 feet long was captured in Ceylon when in a torpid state. It was taken to the London Zoological Gardens, and before the end of six years it had grown to 29 feet in length, and was as thick round as a man's thigh. It was very vicious, at. all times, but at length destroyed itself by swallowing a blanket. Those on the western coast of India and in Ceylon are amongst the largest met with. The Boa is often called a Rock snake. See Reptilia.

BOALEE, Beng. The jaw-bone of this fish is used in carding cotton for the Dacca muslins, as a substitute for the heckle and handcards.—*Royle, p.* 225. See Cotton manufactures.

BOAR, WILD. Eng.

Baraha	Beng.	Babi-alas	Malay
Hazir	Heb.	Babi-utan	,,
Jangli Sur	Hind.	Varaha	Sans.
Sur	,,	Walura	Singh.
Dookar	Mahr.	Adavi Koku	Tel.

The boar is the male of the hog or swine. Of these, in Asia, are seven species, wild, viz. Sus scrofa, *Linn, var* S. Indicus; Bengalensis; Andamensis, Malayensis; Zeylanensis; babyrussa and Papuensis. When the wild boar of India, the Sus Indicus, has the run of cultivated lands, it eats daintily. But when stinted for food, it will revel on a dead camel, and in Cutch, when pressed by want, it prowls around the villages in search of refuse.

The wild boar of India is shot and hunted with dogs by natives, but the British sportsmen in India hunt it with the horse and spear; and, undoubtedly, of all the wild creatures in India, the wild boar exacts from its pursuers the greatest care. The Sus Indica of Pallas, the Sus scrofa of other naturalists, the common wild boar, is supposed to be the parent of one of the two groups into which pigs are arranged. The Sus scrofa group or breed is known as the Chinese breed and extends into Europe, N. Africa and Hindustan, but in the latter country, the boar of the N. W. provinces is not higher than 36 inches, though that of Bengal attains 44 inches. The parents of the other group is unknown.

Sus Indica is not known in a wild state, but its domesticated forms come near to S. vittatus of Java. The Roman or Neapolitan pig, the domesticated breeds of China, Cochin-China, Siam, the Andalusians, Hungarian, the swine of S. E. Europe and Turkey, and the Swiss, are all of the Sus Indica group, which, it is said, by a Chinese author, can be traced back for 4,900 years. The Japan masked pig is the Sus pliciceps of Gray, and has a deeply plicated or furrowed skin.

Porcula salvania, the pigmy hog of the Saul forest of N. India is called by the natives "Sano Banel" also "Chota Sur."—*Darwin.*

BOAR AVATAR in hinduism, one of the avatars of Vishnu. This incarnation is called Varaha.

In the mythology of the ancients, the wild boar was sacred to Typhon; in India, the rajputs, on the first day of spring, worship "Vasanthi," or spring, "basanth," personified; prince and vassal, then chase, slay and eat the wild boar. Personal danger is disregarded on that occasion, as want of success is deemed an omen that Oomia, the great mother, may refuse petitions during the year, The boar hunt in spring time, is a scythic custom; amongst the Scandinavian Asi, the grand festival to Freya was in spring, then boars were offered to her by the Scandinavians and boars made of paste were eaten by the people. The rajput festival is called Ahairea, and has a religious origin. The boar is the enemy of Gouri of the rajputs; it was so held of Isis by the Egyptians, of Ceres by the Greeks and of Freya by the north man, whose favourite food was the hog; and of such importance was it deemed by the Franks, that the second chapter of the Salic law is entirely penal with regard to the stealers of swine. The heroes of the Edda, even in Valhalla, feed on the fat of the wild boar Serimner, while "the illustrious father of armies fattens his wolves *Geri* and *Freki*, and takes no other nourishment himself than the uninterrupted quaffing of wine;" quite the picture of Hur, the rajpoot god of war, and of his sons the *Bhyru*, *Gora* and *Kala*, metaphorically called the "sons of slaughter." The cup of the Scandinavian god of war, like that of the Rajputs, is the human skull (*cupra*).--*Tod's Rajasthan, Vol. I. p.* 566. See Avatar; Inscriptions.

BOARD OF CONTROL. In 1784, the government of India was placed under a Board of Control composed of the king of Great Britain's ministers, who, in that capacity, bore the title of Commissioners for the Affairs of India, and this system continued until the year 1858, when British India was taken under the direct control of the Crown. In that interval, however, the Home Government of India, consisted of a Board of 18 members called the Directors of the East India Company, and the President of the Board of Control. The Directors had mostly all the patronage as to appointments, except the higher offices and commands which were made in communication with the ministry, who likewise originated all questions of peace and war, possessed the power of reversing the acts of the East India Company and of the Government of India, and also of sending out instructions on special matters to the Governor General without consulting the Directors.

BOARGAUM two towns in India, one in Long. 77° 0′. E. and Lat. 77° 0′. N. in Long. 77° 22′ E.

BOAT. The difference, as to size, between the boat and the ship, so marked in Europe, is less observable amongst the communities of eastern and southern Asia, and the Kishti of the people of India, the prahu and the kora kora of the Malay, the various kinds of Manche of Pambam, Mangalore and Panyani, and the patamar, range from a few tons to a few hundred tons. In India, the nao and the kishti; in Burmah "thethu" or "the" and "serpa," are all boats that might be described separately. In Britain, even, a boat, may be a large or small vessel, used for traffic and passage, rowing or sailing on seas or rivers, and receiving names according to the construction, form or purpose to which it is applied. The boats made in Britain are known as the

Wherry,
Punt,
Gig,
Pinnace,
Yawl,
Skiff,
Lugger,
Ferry boat,
Jolly boat,
Long boat,
Life boat, and
Canal boat,

and in size may range up to fifteen tons burthen. The sea going vessels are known as sloop, smack, cutter, clipper, schooner, brig, brigantine, barque and ship, and range from fifteen to three thousand tons.

The boats in use along the coasts of the peninsula of India, well illustrate the readiness with which sea-faring people adapt their materials to the requirements of their respective localities, and the rapid sailing boats of Bombay and the vicinity of Cannanore, and the catamaran and masulah boat of the Coromandel coast, are further illustrations of this adaptation.

The boat used for travellers on the Nile, is called a "*Ganja.*"

On the Euphrates and Tigris the "*Kelek*" or leathern raft is in use, and this peculiar mode of navigating that river is the same as was known to the ancients as the "Navigia Conacia." But the Kelek is not the only singular description of vessel, traceable to antiquity, that appears on these rivers of ancient celebrity. The circular bowl shaped basket boat or "*Kufa,*" (so named from the Arabic word, which means basket,) is also used as the common wherry-boat. Its fabric is of close willow-work, well coated and made water proof with the bituminous product of the country; it holds about three or four persons with room enough, though not in the most agreeable positions. It is moved across by paddles. Herodotus notices these different kinds of boats plying on the rivers of Babylon, mentioning them as composed of willows, and the skins of animals; and adds, that on their arrival at the great city, the owners sold all the material of the boats excepting the skins, and those they packed on the backs of asses, and carried whence they came. A raft is made of full grown sheep and goats' skins which are taken off with as few incisions as possible, and then blown up like a bladder and dried. A square framework, formed of popular beams, branches of trees and reeds, is constructed of the size of the intended raft, the inflated skins are tied to it by osier and other twigs, the whole being firmly bound together. The raft is then moved to the water and launched. Care is taken to place the skins with their mouths upward, that, in case any should burst, or require re-filling, they can be easily opened by the raftmen. Upon the framework of wood, are piled bales of goods and property belonging to merchants and travellers. When any person of rank or wealth descends the river in this fashion, small huts are constructed on the raft, by covering a common wooden takht or bedstead of the country, with a hood formed of reeds and lined with felt. In these huts the travellers live and sleep during the journey. The poorer passengers bury themselves, to seek shade or warmth, amongst the bales of goods and other merchandise, and sit patiently, almost in one position, until they reach their destination. They carry with them a small earthen mangal or chafing dish, containing a charcoal fire, which serves to light their pipes, and to cook their coffee and food. The only real danger to be apprehended on the river is from the Arabs: who, when the country is in a disturbed state, invariably attack and pillage the rafts. The raftmen guide their rude vessels by long oars,—straight poles,—at the end of which a few split canes are fastened by a piece of twine. —*Layard Nineveh, Vol. II. page* 97.

A curiously formed vessel, of a crescent-shape, carrying one mast and a large latteen-sail, trades between Bagdad and Bussorah: under a fair wind, it can reach the latter place in six or seven days.

On the Indus, five kinds of boats are used between Attock and the sea. On the Cabul river, and on the Upper Indus, it is still the custom to stuff skins with reeds or straw, as floats. General Ferrier descended the Cabul river from Jelalabad to Attock on a raft so constructed.—*(Ferrier's Journ. page 429.)* The boats best known, however, are the "*Zoruk*" of the upper Indus, the "*dunda*" which plies from Mithancote to the sea, and the "*dugga*" which from its strong build is specially suited to the navigation of the rapids between Attock and Kalabagh. The better kinds of wood used in their construction (sissa and large babul,) are procured with difficulty, and various species of timber are generally seen in one boat, such as sissu, babul, deodar, chir, bahn, and karil. Malabar teak is much prized in the lower Indus and fetches a large price. The ordinary ferry boats are constructed by the sides and bottom being prepared separately and brought together to be secured by knees or crooked pieces nailed to the bottom and sides. The bottom is made of sissu, the knees of mulberry or olive, and the side planks of deodar. The wedges and trenails are usually made of tut and kahu. Ropes for rafts and boats are prepared either from hemp (Cannabis Indica), sirki (saccharmn spontaneum), typha latifolia, "dib" or other reeds, common on the river bank. Munj (saccharum munja), is also largely employed by the native boatmen. The great boat building localities of the Punjab are Pind Dadun Khan, Wazirabad, and Jclum, but there is a marked increase of boat building, on the Indus, not only at Attock, but at Nowshera, Hashtnagar, Mokhud and Kalabagh.—*Postans.*

The following are the woods of which the Punjab Boats, ships, oars, &c. are made,

Acacia speciosa.
Capparis aphylla.
Cedrus deodara
Dalbergia sissoo.
Fraxinus floribunda.
Olea Europæa.
Pinus longifolia.
Populus Euphratica.
Salvadora oleoides.

The boat in common use for transport in Sindh and the lower part of the river is the Dunda or Dundi, it is flat bottomed, with a slight convex inclination, for the additional facility of getting off sand-banks. The Dundi consists of three distinct parts, the two sides and bottom, the latter being adjusted to the others by warping the end up to the slope required, and then strengthened with joints or ribs (as they are termed): the boat thus admits of being dismembered and transported, a fact corroborative of the accuracy of Alexander's historians. On the Sutlej, in the Indus and lower stream. the Zoruk is frequently seen. It differs from the Dundi in having no elevation at the stern, is square built, fore and aft, is of 40 to 50 tons burthen and carries no sail. The Zoruk is the common cargo boat at the upper, as the Dundi belongs to the lower Indus, it sails pretty fast, and sinks with prodigious facility. The Kotal is a broad-beamed boat, used as a ferry boat. The Jumpti, or state barges, used by the Ameers, were strong teak built, double-masted, decked, vessels, propelled by enormous sweeps, and having pavillions at either extremity. The Zoruk, the nawuk, and the dunda are nearly all flat-bottomed, and, though clumsily formed, are strong and safe. The nawuk and dunda are found principally upon the Chenab and the Sutlej; they have pointed bows and sterns.

The natives cross the rivers of the Punjab upon inflated buffalo and sheep-skins, the mouth of which is sewn up, and the legs made air-tight, below the knee and hock-joints, so that the figure of the animal is somewhat preserved, and they are thus easily carried. Burnes says, he has seen upon the Indus, "a man with his wife and children in the middle of the stream, the father on a skin, dragging his family, seated upon reeds, their clothes and chattels forming a bundle for the head." Much art is required to manage these air-bags; Lieutenant Wood nearly lost his life in attempting to bestride a mussak.

On the Ganges, boats are of various descriptions, the Bugerow, the Boleah, the Pansw[illegible], the Palwar, Bhur, Ulak, and Dengi. The bulky Oolâk, or baggage boat of Bengal, is sometimes as large as the Puteli and used for the same purposes. The Pulwar and Bhur are seagoing ships. All the common arts and manufactures of Bengal are carried on at Dacca, but in none of them do the Dacca workmen show more superior skill, than in that of boat building. For their work in this art, they have been celebrated since the reign of Jehangir, when the *Nowarrah* was established here for the protection of the lower districts of Bengal, against the incursions of the Mughs of Arrakan. Dacca, it may be mentioned, has also acquired a local name or reputation for a few minor manufactures, such as those of violins, paper, and shola hats:

The Teesta river in the Terai, at Leelpigoree is navigated by canoes, thirty to forty feet long, some being rudely cut out of a solid log of Sal, while others are built, the planks of which there are but few, being sewed together, or clamped with iron, and the seams caulked with the fibres of the root of the Dhak (*Butea frondosa*) and afterwards smeared with the gluten of *Diospyros embryopteris*. The bed of the river is here three-quarters of a mile across, of which the stream does not occupy one-third; its banks are sand-cliffs, fourteen feet in height. A few small fish and water-snakes swarm in the pools.

Two kinds of vessels, of entirely different structure, are used on the Irawaddy rivers, the larger of which may reach to 120 or 130 tons burthen. These larger boats are termed "Hnau," and are of the form of construction more commonly met with. The keel piece is a single tree hollowed out and stretched by the aid of fire when green, a complete canoe in fact. From this, ribs and planking are carried up. The bow is long with beautiful hollow lines, strongly resembling those of our modern steamers. The stern rises high above the water and below, the run is drawn out fine to an edge. A high bench or platform for the steersman, elaborately carved, is an indispensable appendage. The rudder is a large paddle lashed to the larboard quarter, and having a short pillar passing athwart the steersman's bench. The most peculiar part of the arrangement of these vessels is in the spars and rigging. The mast consists of two spars: it is in fact a pair of sheers, bolted and lashed to two posts rising out of the keel piece. So that it can be let down or unshipped altogether without any difficulty. Nearly the same kind of mast is used by the celebrated Illanon pirates of the Eastern Archipelago. When chased they are thus enabled to run into a creek and drop the mast instantaneously, so that it gives no guidance to their whereabouts. Above the mainyard the two pieces run into one, forming the topmast, wooden rounds run as ratlines from one spar of the mast to the other, forming a ladder for going aloft. The yard is a bamboo or a line of spliced bamboos of enormous length, and being perfectly flexible, suspended from the mast head by numerous guys or halyards, so as to curve upwards in an inverted bow. A rope runs along this from which the huge main sail is suspended, running on rings, like a curtain, both ways from the mast. There is a small topsail of similar arrangement. The sail cloth used is the common light cotton stuff for clothing. Of any heavier material, it would be impossible to carry the enormous spread of sail which distinguishes these boats. The main yard of one vessel was found to be 130 feet long, and the area of its mainsail would not be very much less than 4,000 square feet, or one-eleventh of an acre. From their rig, these boats can of course scarcely sail but before the wind. But in ascending the Irawadi, as on the Ganges during the rainy season, the wind is almost always favourable. A fleet of them speeding before the wind with the sunlight on their bellying sails, has a splendid though fantastic appearance. With their vast spreading wings and almost invisible hulls, they look like a flight of collossal butterflies, skimming the water. The *Pein-go* is another description of Burmese boat, and it is said to be the peculiar craft of the Ning-the or Kyendwen river. Though it traffics to all parts of the Irawadi it is extensively used at Ye-nan-gyoung, for the transport of petroleum. It is flat battomed or nearly so, having no canoe or keel piece like the "*Hnau*," but being entirely composed of planks which extend throughout the length of the vessel, wide in the middle and tapering to stem and stern like the staves of a cask. A wide gallery or sponson of bamboo, doubling the apparent beam of the boat, runs the whole circuit of the gunwale. These boats are generally propelled by oars or a pole, though occasionally carrying sails, but not of the same spread of cloth as the "*Hnau*" *Canoes*, of two different forms are likewise in use on the Iarawady, some of which are ridiculously small in proportion to the number of persons they carry. The prow of a Burmese Boat appears to be regarded by the Burmese boatmen with almost as much superstitious veneration as the quarterdeck of a frigate is by an English post captain.—*Yule's Embassy.*

The boats plying on the river at Rangoon are the *Pingomah*, a large flat bottomed boat bult up of planks fastened together with iron dogs. The buoyancy of the boat is increased by one or two large hollow bamboos, according to size, being lashed with rattans along the water line. When laden with cargo made up into bales, a ledge, about 3 or 4 feet broad, made of bamboos, with a rail, is thrown out the whole length of the sides, for increase of stowage. The cargo is protected by a thatch roof. The steersman sits at the stem on a high chair, elaborately carved, and having a little roof thatch—has a single mast and soil. When not favored by a breeze the boat is propelled by 6 or 8 rowers.

Loung-zayet. A round bottomed boat, with stem and stern high but rounded in or curved in—in other respects like the pingomah.

Loung go. Bottom made up by scooping out a very large log;—the depth of the boat is increased from two to three feet by having, nailed on, planks running from stem to stern. Six to eight feet of the stern end is covered in by a hood of bamboo matting, made water-proof with earth oil or earth air and dammer; here the crew and family live. The large boats of this description have a mast and sail; the smaller ones, when favoured with a breeze put up two bamboos ten or fourteen feet in length, joined at the top and spread out at the bottom and, for a sail, both men and womens' clothes are spread out. The crew are three or four and a steersman, generally the owner of the boat.

Ka-dôlay. A ferry boat, bottom made from a single log, sides planked, the whole length from 1 to 2 feet in breadth, about 5 or 6 feet of the stern end is covered with a rounded hood of thatch and bamboo. The steerman sits at the extreme stern end and steers with a paddle, while the boat is propelled by two rowers.

Sa-dho. A canoe, made up from one log, varying in length from 6 to 15 feet and 2 to 2½ feet in breadth.

Loung. A racing boat, bottom made up of one large long log, from 30 to 40 feet or more in length, with a side planking like the ka-dolay paddled by 25 or 40 men according to size.

Gandoo. This is the largest kind of native trading boat, it is built on a canoe of a single tree of the largest size, chiefly of Peengado, but Teak and Thengan canoes are also used for this purpose : these canoes are from 25 to 30 cubits long and 3 to 4 cubits wide, ribs are fastened inside the canoe and planks are then built on them up to the size required, the largest are 35 to 40 cubits long and 8 cubits deep with a breadth of 15 cubits. Burthen from 40 to 60,000 viss and have a crew from 40 to 50 men. They are built principally in the Henzadah district, they have two masts and are rigged with square sails on the foremast generally two of very large size. They trade to Arracan and Dacca chiefly, the cargo consisting principally of Cutch and Cotton, which they exchange for betel-nut and tobacco, and generally realize large profits.

Katoo, this form of trading boat is an improvement on the foregoing. It is built with a thick plank, from a keel, in the same way as ordinary vessels, and usually with the fore part in imitation of the Chinese junk. The largest kind carry about 20,000 viss and the rig is similar to the junk, two or three fore and aft sails which enable them to beat when the wind is adverse.

Sampan, a Chinese ferry boat shaped much like a spoon with just the handle cut out, leaving its shoulders projecting. The boat is flat bottomed, built of teak planks nailed to ribs set about 18 inches apart, over the ribs are planks loosely fitted on and forming a deck, the boat is propelled by a single Chinaman who stands in the bowl of the spoon with his face to the head of the boat, Sometimes a large square sail is used, when a large square rudder is shipped to guide the boat. A very unsafe boat under sail. It is painted like the junk in the forepart and stern. About two feet of the head of the boat is planked up and serves as a box. Cost of Sampan Rs. 50 to Rs. 60.

Regarding the sea going vessels of southern Asia, Mr. Eyde remarks that among all the numerous vessels of every class and description which traverse the ocean, there is a peculiarity of form and construction intended to meet the various localities of the ports or seas in which they are navigated : and perhaps in no part of the globe is this principle more fully displayed than in the Indian Seas, and on the coasts of the southern Peninsula of India, including the island of Ceylon, where the nature and change of the season, the monsoons, and the navigation of the seas and rivers, are singularly well provided for by the truly ingenious and efficient means adopted by the natives in the formation of their rude, but most useful vessels.

Catamarans of Ceylon and of Eastern and Western Coasts of India.—The Catamarans of the Island of Ceylon like those of Madras, and other parts of coasts of the Peninsula, are formed of three logs of timber, and are used by the natives for similar purposes ; the timber preferred for their construction is of the dup wood, or cherne marum (piney tree). Their length is from twenty to twenty-five feet, and breadth two and a half to three and a half feet secured together by means of three spreaders and cross-lashings, through small holes ; the centre log being much the largest, with a curved surface at the fore-end, which trends and finishes upwards to a point. The sidelogs are similar in form ; but smaller, having their sides straight, and fitted to the centre-log.

The *Catamaran* is generally navigated by two men ; sometimes by one only, but with great skill and dexterity; they think nothing of passing through the surf on the beach at Madras, and at other parts of the coast, where boats of the country could not live on the breakers ; and at sea, they are propelled through the water to ships on the coast, when boats of the best construction and form would swamp. In the monsoons, when a sail can be got on them, a small outrigger is placed at the end of two poles, as a balance, with a bamboo mat and yard, and a mat or cotton cloth sail, all three parts of which are connected ; and when the tack and sheet of the sail are let go, it all falls fore and aft alongside ; and being light, it is easily managed. In carrying a press of sail they are trimmed by the balance lever by going out on the poles, so as to keep the log on the surface of the water, and not impede its velocity, which, in a strong wind, is very great. They are frequently met in with ten or fifteen miles off the southern part of the Island of Ceylon, and will convey any letter or despatch to the shore with safety : but as to its dryness, the man who takes it has nothing but a pocket made from the leaf of the areca-tree (A. catechu, *Linn*), which is tied round his waist, and is the only article about him. These people may be considered almost amphibious, and are the persons who are employed in the pearl fishery. In an account of the Ceylon Pearl Fisheries, by Captain James Stuart, inserted in the Trans. R. A. S., Vol. III. Part 3, the author states, from personal observation, that the longest time which the divers can remain under water is from eighty-four to eighty-seven seconds. They certainly think nothing of going down to a depth of forty feet ; and will bring up a rupee, even, if thrown into the sea at that depth.

Canoes are largely used in India as ferry-boats, and have shapes and forms to suit the rivers and waters. Canoes at Calicut are hewn out of the trunk of the Jack fruit tree; Artocarpus integrifolia. Canoes of Point de Galle and the Malabar coast have weather-boards on an outrigger in the form of a smaller canoe; they are sharp at both ends, and beat to windward without tacking. The Jangar of the Malabar coast, for rivers, is a kind of canoe. The rivers of the Northern Circars are crossed by a double canoe, formed out of two pieces of a cocoanut or a palmyra tree hollowed, and kept apart by cross ties of wood. Canoes scooped out from single trees are in universal use in Burmah, the Malay Peninsula, and the Malay and Eastern Archipelago.

The Point de Galle Canoe, or Market Boat.—is a boat formed from a single stem of dup wood, or piney varnish-tree. They are from eighteen to thirty feet in length; from eighteen inches to two and a half feet in breadth; and from two or three feet deep; exclusive of the wash board, which is about ten inches broad, and sewed to the gunwale by coir-yarns, with loose coir-padding on the joints, in the same manner as the other boats used in India are sewed together, which will be more fully described below. These boats are fitted with a balance log at the end of the bamboo out-rigger having the mast yard and sail secured together; and, when sailing, are managed in a similar way to the Catamarans. Vessels passing the southern part of the Island of Ceylon are generally boarded by these boats even at the distance of twenty to twenty-five miles from shore. They will sail at the rate of ten miles an hour in strong winds, which are generally prevalent there; and, with a crew of five men, will carry a cargo of fruit, fish and vegetable, which are the greatest luxuries to passengers, on making the land after a long voyage from England, Bengal or Bombay. As the outrigger must always be kept to windward, and shifting it from side to side would be impossible, the canoe is so constructed as to proceed with either end foremost. This form of canoe is common wherever the Malays have extended themselves, throughout Polynesia and the coral islands of the Pacific, and to Madagascar and Comoros where a Malay colony settled. They venture 20 miles to sea and sail upwards of 10 miles an hour. The great canoes of Ceylon called "Ballam" or "Vallam" are usually made of the Artocarpus hirsuta, the Angely or Angelica tree.

A model of one of these curious boats is in the Museum of the Royal Asiatic Society, also a model of a boat having two outriggers, with balance logs, used by the natives of some of the islands in the Eastern Archipelago. The natives of New Holland appear to use a similar contrivance, but of a more simple construction, as exhibited in models in the Society's possession. The Rev. Richard Walter, in his account of Lord Anson's Voyage, gives a minute account, illustrated by an engraving of what he terms "a flying proa," used at the Ladrone Islands; which is the same, in most essential particulars, as the vessel described above by Mr. Edye. (Vide Walter's Account of Anson's Voyage round the World, 4to. London, 1748, p. 339.)

Canoe of the Malabar Coast.—From Cape Comorin to Calicut, on the western side of the Peninsula, the coast abounds with fish, which is generally taken with the hook and line by the natives of the fishing villages, in a small canoe; the best description of which is formed from the angeley-wood tree,—Artocarpus hirsuta (?). But the inferior sort is of cherne maram: they are cut out from the solid tree, and are from eight to twenty feet in length, and from one and a half to two feet in breadth; the depth being about one, or one foot and a half. They are managed with much dexterity by the natives, with a scull-paddle. On the backwater of Cochin, and on the river's mouth, they are employed in great numbers in taking the saire fish or country salmon, &c. The largest sort of boats are used for the conveyance of rice and merchandise on the numerous rivers which disembogue themselves into the back-water, to the extent of 150 miles, parallel to the sea-coast. At times these boats are converted into the

Jangar used on the rivers of the Malabar Coast.—It is made into a Double Platform Canoe, by placing a floor of boards across two boats, with a bamboo railing which extends from ten to twelve feet fore and aft, and sixteen feet long; and when these boats are thus formed into rafts, cattle and burthensome articles are conveyed across the rivers; as also the native regiments, with all their followers, horses, bullocks, baggage, bandies (carts), &c. It appears somewhat probable that the idea of the pontoons now in use at Chatham was taken from these vessels, as those constructed by the engineers there perfectly resemble such as are used by the natives in India.

Pamban Manche, or snake Boat of Cochin,—Is a canoe of great length: they are used by opulent natives and Europeans, as boats for the conveyance and despatch of persons on the numerous rivers and back-waters, particularly on that between Cochin, Allepey, and Quilon, which is about eighty miles southward; and on that which runs to Ralipact and Trichoir; the former place being about twenty, the latter about sixty miles to the northward. These boats are from thirty to sixty feet in length, without any regard to breadth or depth, as they are worked from the solid tree. The broadest do not exceed three feet. Those of the Raja and officers of state are very handsomely fitted up, and carved in the most fantastical manner; they are made very neat, and even splendid, with painting, gilding, &c. The largest boats are sculled by about twenty men, double banked; and when pressed, their velocity is surprising, as much as a mile in five minutes. Edye had himself been sculled, in one of them, a distance of forty-eight miles in six hours. These boats are peculiarly adapted to the rivers; for it frequently occurs, that in the dry season there are sand banks perfectly dry, nearly a hundred yards in breadth, over which they must be drawn by the strength of the few men who are in them; the smaller size having only six rowers and a coxwain. Those natives who can afford the expense, have the cabin neatly fitted up, with venetian blinds on the sides, but generally the cuscus, or grass-mat, is substituted. This boat is formed from the angeley-wood, which is very durable, if kept oiled.

Cochin Bandar-manche, or Canoe of Burthen.—These canoes are cut and formed from the largest and softest timber of the forest. They are from twenty to fifty feet in length; their breadth and depth being proportioned to the full size of the tree so as to reduce its dimensions as little as possible. They will carry about eighteen tons burthen, and are made from three to five inches thick at the bottom; but at the top of the side, or gunwale, about one and a half to two inches, with a proportionate increase of thickness at the extreme ends, to protect the end-grain of the wood, and withstand any shock that they may meet with. At the distance of about five feet on the inside there are ribs about six inches broad, projecting about two inches from the side of the boat, for the purpose of giving support and strength to the body of the canoe. These boats may be considered valuable for the service of the port at which they are used; and notwithstanding their heavy appearance, they are very buoyant, and go very fast through the water. In one of about thirty-five feet long, with six men and a tindal (coxwain), Edye passed the Minden's (the Admiral's ship) barge, which had twelve men on board; and in a distance of four miles to that ship's anchorage, he gained on them by time about twenty minutes, although there was a strong sea-breeze and swell against him.

At Cochin, these boats are used for the purpose of conveying various articles of burthen and water to the ships in the roads.

The *Madras Masula Manche*, is used all along the Eastern Coast of the Peninsula. It is formed with a flat bottom, for the purpose of taking the beach in the surf, when European boats cannot approach it. These boats are beached in the third surf; and taken most completely out of the water, on the immediate receding of the swell by natives.

The planks which form these boats are sewed together with coir yarns, crossing the seams over a wadding of coir, which presses on the joints, and prevents leakage. By this peculiar means of security, the vessel is rendered pliable, and yields to the shock which she receives on taking the ground; whilst boats with framed timbers and planks, nailed or trenail-fastened, would be broken to pieces from the heavy surf, that at times runs as high as from six to ten feet. The Catamaran can be kept in attendance, as a life-preserver, in the event of any accident to the masula boat, by upsetting or in case of any of the Europeans being washed out by the surf. The crews of the masulah boats are brave self-reliant men.

The masula-boats receive their cargoes and passengers from the ships outside the surf; and land them in perfect safety, provided the crew be treated with civility; if otherwise, they will not fail to moisten the offender, to such a degree as to show the passengers that they are in their power, and make them objects of derision to the men on the beach. These boats are rowed by twelve men, in double banks, with bamboo paddles; that is, a board about ten inches broad and fourteen inches long, fixed at the end of a bamboo. They are steered by two tindals (coxwains) and two men are constantly kept to bale out the water; from which employment they are promoted to the paddle, or bow-oar; after which they fall aft, in rotation, to be a tindal or steersman. The steersman gives time by a song, which is sung by all the boatmen; and according as its modulations are slow or quick, the oars are plied. These modulations are regulated by the waves, as they may be slow or rapid, in succession. On one occasion, a passenger of rank showed impatience at this noisy song, and the boatmen were desired to cease; but the steersman refused compliance with the order, saying that without his song he would not be answerable for the safety of the passenger. (Note by Sir J. Malcolm.) The dimensions of the masula-boat are from thirty to thirty-five feet in length, ten to eleven feet in breadth, and seven to eight feet in depth.

Mangalore Manche of the Western Coast of the Peninsula.—Is a flat bottomed boat of burthen, about twenty-five to thirty-five feet long, six to seven feet broad, and four to five feet deep. It is formed to meet the river, which is very shallow and flat; and to land the cargoes of the patamars, which are discharged and loaded at the mouth of the rivers. These boats are sewed together similar to the masula-boat and other native vessels: they are forced along by bamboo poles; as the water is not more than from six to ten feet deep, except in the south-west monsoon, when the rapids swell, and the whole of the river is considered impassable; and at this period all the vessels are taken to the shore and laid up.

Calicut Manche.—Is a boat very similar to that of Mangalore with the exception only of a raking stem, for the purpose of taking the beach; as the port of Calicut is open to the coast and there is no river. These boats are propelled by the paddle and sail and generally carry eight men: they are much employed in watering and completing the sea-stock of ships homeward-bound; also in loading ships with pepper, timber, &c., for Bombay; and in shipping the produce of the forests of Canara and Malabar, all of which is rafted off to vessels called dow, boatile, patamar, &c., hereafter described.

'*Panyani Manche.*—Is a coasting boat, of about fifty feet long, ten to twelve feet broad, and five to seven feet deep. It is framed with timbers and planks; which are sewed together, as before described. The timbers are about four feet asunder, and on them, inside, some few planks are placed as bands and clamps, which are nailed to the frame. These are very rudely put together; and not of much importance, either in form or construction. During the south-west monsoon, or from June to November, they are laid up at Baipur river for safety, and are only used in the fine-weather season. They carry the productions of the cocoanut tree, viz. coir, copra, cajan, the leaf of the Corypha umbraculifera which is used for coverings of houses, also for books, and various other purposes. Jageri, oil and arrack, to Cochin and Mangalore; and bring from these parts rice, cloth, salt, &c. These vessels keep along shore and take advantage of the sail in rowing. They have generally from eight to ten men, who are fishermen of the Mopila caste. A race of Musalmans, descendants of the first Arabian settlers on the shores of the peninsular; and who marrying the daughters of the country, obtained the name of Mapillai, or "sons-in-law," corrupted by Europeans into the above term.

The Patamar, are a class of vessels which may be considered the best in India; as they sail remarkably well, and stow a good cargo. They belong principally to Bombay merchants, and carry on the whole of the coasting-trade to that port. They are grab-built: that is, with a prow stem, which is the same length as the keel; and the dimensions of the large class are seventy-six feet six inches in length, twenty-one feet six inches in breadth, eleven feet nine inches in depth, and about two hundred tons burthen. They are planked with teak, upon jungle-wood frames; and are really very handsome vessels, being put together in the European manner, with nails, bolts, &c. and their bottoms are sheathed with inch-board, and a layer of chunam mixed with cocoa-nut oil and a portion of damar (country rosin): this is a very durable substance, and a great preservative to the plank against worms.

Some of the smaller class of these vessels, of about sixty tons burthen, are sewed together with coir, as other native boats are. The small class has one, and the large class two masts, with the lattan sail: the foremast raking forward, for the purpose of keeping the ponderous yard clear when it is raised or lowered. The yard is slung at one-third of its length, the tack of the sail is brought to the stern-head, through a fixed block; and the sheet hauled aft at the side, as usual. The haul yard is a pendent and treble block, from the mast head aft to midships; thus acting as a back stay for the mast's security, together with about two pairs of shrouds. These vessels generally export salt from Bombay to the coast, and take back coir, rice, cocoa-nut, copra, oil, timber, sandal-wood, pepper, and various articles, the production of the coast. They are navigated with much skill, by men of the Mopila caste and other Musalmans; and have a crew of ten or twelve men, and a tindal, who are good pilots and navigators off the coast from Bombay to Cape Comorin; generally speaking, honest and trustworthy; and very respectful to Europeans.

The Arab Dow, is employed in the trade between the Red Sea, the Arabian Coast, the Gulf of Persia and the coasts of India, in Cutch, Guzerat and Malabar. They were also used in the Persian Gulf, for the purpose of war and piracy. They are always manned by Arabs. The Arab Dow is of about one hundred and fifty to two hundred and fifty tons burthen, by measurement; grab-built, with ten or twelve ports; about eighty five-feet long, from stern to stern; twenty feet nine inches broad; and eleven feet six inches deep. Of late years, this description of vessel has been built at Cochin, on the coast of Malabar, most perfectly, in the European style. These vessels have a great rise of floor; are calculated for sailing with small cargoes; and are fully prepared, by internal equipment, for defence, with decks, hatchways, ports, poop-deck, &c., like a vessel of war; many of them are sheathed, on two-and-a-half-inch plank bottoms with one inch board, and the preparation of chunam and oil, as before described, which is called galgal, put between the planks and sheathing-board, causing the vessel to be very dry and durable; and preventing the worm from attacking the bottom. The worm is one of the greatest enemies in India.

to timber in the water, while the white ant is as much so out of it. On the outside of the sheathing board there is a coat of whitewash, made from the same articles as that between the sheathing and planks; which coat is renewed every season they put to sea. These vessels have generally one mast, and a latteen-sail: the yard is the length of the vessel aloft; and the mast raking forward, for the purpose of keeping this ponderous weight clear, in raising and lowering. The tack of the sail is brought to the stern-head, and sheets aft in the usual way; the haulyards lead to the taffrail, having a pendent and treble purchase-block, which becomes the backstay, to support the mast when the sail is set: this, with three pairs of shrouds completes the rigging; which is very simple, the whole being of coir-rope.

Several of these vessels have been fitted as brigs, after their arrival in Arabia; and armed by the Arabs for cruising in the Red Sea and Arabian Gulf, as piratical vessels: they are also the class of vessels of which Tippu Sultan's fleet at Onore consisted. When armed, they were too powerful for the Bombay marine brigs, but this never happened, but when in great numbers, and the brigs weak and unsupported.—(Note by Sir J. Malcolm. The large dow make generally one voyage in the season, to the southward of Arabia; taking advantage of the north-east monsoon to come down, and the south-west to return with an exchange cargo. They generally bring dates, fruit, preserves, Shiraz-wine, and horses; and take back rice, coir, canvas, cocoanuts, oil, timber, damar, &c., various articles of cloth of the country manufacture, and from Bombay, European articles of every description. The trade of this part of the country is very great in those vessels; extending from Allipey, the southernmost port on the coast of Malabar, up to Bombay: but all the trade to Bengal is carried on by ships which are called "Country Traders," from the Gulf of Persia and Arabia. The Arabs are a powerful, well grown, handsome people, and very acute and intelligent in trade. They usually navigate their ships to Bengal in perfect safety, and with great skill: This was well known to Captain Collier and his officers, of the Liverpool frigate, when they had the trial cruise with the Imam of Mascat's fine frigate, in 1820.)

The Baggala, or Budgerow.—This is an Arabic word the feminine of "baghl" a mule. The Buggala is engaged in the trade of Cutch, Guzerat and the Malabar Coast, to the gulph of Persia, the Coast of Arabia and the Red Sea. They are Indian vessels and manned with Indian seamen called lascars. It is one of the most ancient vessels to be met with in the Indian Seas. Their extreme length, from stern to taffrail, is about seventy-four feet, the breadth about twenty-five feet, and the depth in hold eleven feet six inches, with about one hundred and fifty tons burthen. The peculiarity of form and extraordinary equipment of these vessels is said to have been the same from the period of Alexander the Great: they are armed with two guns on the after part or right-aft of the stern for defence against pirates; and have their poop-decks with a round stern: their extreme sections about the centre or middle of the vessel: they are very broad in proportion to their length, with a sharp rising floor: the stern is straight, and rakes very little more than the stern-post.

These vessels are constructed with timbers and planks, which are nail and trenail fastened, in the most rude and unsafe manner possible, The topside above the deck is barricaded with mats on the outside of the timbers, which run up to about eight feet from the deck; and when they have no cargo on board, this barricade is removed.

They have only one mast; with a huge yard made from two spars, the small ends lashed together, and a latteen sail, the tack of which goes to the sternhead, as in the other vessels before described: they generally trade like the Dow; and are navigated by Arabs and the people of Cutch.

This singular and rude vessel, as well as the Arab Dow, is peculiarly adapted to the coasts of Arabia and the Red Sea, which are subject to periodical winds during which these vessels are navigated with much ease.

The Sambuk is a small coasting vessel from fifteen to fifty tons burthen, trading in the Red Sea.

The Doni of the Coromandel coast, is a huge vessel of the ark like form, about seventy feet long, twenty feet broad, and twelve feet deep; with a flat bottom or keel part, which at the broadest place is seven feet; and at the fore and after-parts of the vessel it breaks into ten inches, which is the siding of the stem and stern-post. The fore and after bodies are similar in form, from midships. Their light draught of water is about four feet; and when loaded, about nine feet. These rude unshapely vessels trade from Madras and the coast to the Island of Ceylon; and many of them to the Gulf of Manar, as the water is shoal between Ceylon and the southern part of the Continent. They have only one mast, with a long sail; and are navigated from land to land, and coastwise, in the fine season only.

It may not be uninteresting to know the means used, by the people who navigate these vessels, to find the rate of current in the Bay of Bengal, which is very great at the change of the season or monsoon, as much as sixty miles in twenty-four hours. When they are off a port, in a calm, they throw a handful of sand or shells and feathers, in the calm sea ; and by the drifting of the feathers on the surface, and sinking of the sand or shells, a calculation of the rate of current is formed, and they anchor off the coast accordingly.

The anchor is made in the most simple way imaginable, by lashing together three crooked branches of a tree, which are then loaded with heavy stones, and their cable is formed from coir-yarns. In fact, the whole equipment of these rude vessels, as well as their construction, is the most coarse and un-seaworthy that I have ever seen, and far behind those of any other part of India.

The Boatila Manche, of the Island of Ceylon, navigates the Gulf of Manar, and the southern part of the Peninsula of India. This boat, which is about fifty to sixty feet in length, sixteen to eighteen feet in breadth, and eight to ten feet in depth, has more of the European form than any of the Indian-built vessels that are met with. The after part shews the origin to be of Portuguese construction, as it is very similar to that of many of the boats still in use by the people of that country ; which are said to be of the same shape as the vessels in which Vasco De Gama sailed to India.

They have a deck fore and aft ; and are built with all sorts of jungle-wood, in a very rough manner, and fastened with nails and bolts. They are equipped with one mast, which inclines forward, and a square lug-sail ; also a small bowsprit, at about the angle of 45°, with a sort of jib fore-sail, one pair of shrouds, and a back-stay which completes the rigging. These vessels carry on the trade of the island across the Gulf. The exports are, rice, tobacco, &c. and the imports, cloth. This forms a great part of the inland revenue of the island, in the district of Jaffnapatam.

China, Malacca, Archipelago —The Boats of the Straits of Malacca are the Prahu, Sampan, Lorcha, Pukat and Tongkong or Ting-King. In the Eastern Archipelago, the generic name for a boat or vessel, large or small, is Prahu, a word almost naturalised in the European languages. It belongs equally to the Malay and Javanese languages, and from these has been very widely spread to others, extending as a synonym to the principal Philippine tongues. The usual name for a canoe or skiff, both in Malay and Javanese, is sampan. The large vessels which the natives of the Archipelago used in war and trade were called by them Jung, which is the word, corrupted junk, that Europeans apply to the large vessels of the Chinese, of which the proper name is wang-kang. For a square-rigged vessel or ship, the natives have borrowed the word Kapal from the Teling people. Names vary with the forms of vessels, and the uses to which they are put ; and these again differ with nations or tribes so as to be innumerable.

The most common pirate vessels made use of among the floating communities from the Straits to the South-Eastern groups, are the *penjajap* and *kakap*, with *paduakan*, and Malay boats of various size and construction.

The *penjajap* is a prahu of light build, straight, and very long, of various dimensions, and carrying usually two masts, with square kadjang sails. This boat is entirely open, except that aft is a kind of awning, under which the headman sits, and where the magazine of arms and ammunition is stowed away. In front it carries two guns of greater or less calibre, of which the muzzles peer through a wooden bulwark, always parallel to the line of the keel. Penjajap of large size generally carry, in addition to these, some swivel pieces, mounted along the timber parapet ; while boats of inferior tonnage are armed only with two lelah, elevated on a beam or upright. From twenty to thirty rowers, sitting on benches well covered with mats, communicate to the vessel with their short oars a steady and rapid motion, the more swift in proportion as the prahu is small. Large ones, therefore, are often left hidden in some creek, or little maze of islets, while the light skiffs, flying through the water, proceed on their marauding errand.

The Kakap prahu is a small light boat, provided with a rudder oar, but with no other oars or sculls. It carries only one mast, with a single quadrangular sail. Like the penjajap, it is built of very buoyant timber, planks being held together by wooden pins, and lashed with rattans. The pirate never goes to sea with a kakap alone, and the voyager may be sure whenever he descries a kakap, that a penjajap is not far behind, moving along, perhaps in the shadow of the high coast, or lurking behind some island, or lying within the seclusion of some woody creek. Eight or ten of the best fighters are usually chosen to man these light skiffs, which remind us of those flying proas of the Ladrones described by a French voyager (*Note to Sonnerat*, 139.) In calm weather the pirates row in these buoyant gallies along the shore, or mount the small rivers, confiding in their agility, and knowing well that if surprised they may fly into the woods, bear their little skiff with them, and launch it again at some spot unknown to their pursuers. (*Kolff Rapport*, 1831.)

The *Paduakan* are native vessels having a single mast in the form of a tripod, and carrying a large lateen sail of mat. They are from twenty to fifty tons burden, and of great beam, with lofty sides, and little hold in the water. They are steered by two long rudders, which are lifted up when the vessel is moored or passing through a shallow. (*Earl, Voyage of the Dourga, note,* 89.)

The ordinary prahu made use of by the Malay pirates, at the present day, are from eight or ten tons burden, very well manned and exceedingly fast. Usually they are armed on the bows, centre, and stern with swivel pieces, (*John's Indian Archipelago, Vol. II. page from* 182 *to* 184.)

A second class Lanun pirate prahu of Mindanao, carries a crew of about 60 men. It has a stage or platform suspended to the mast with grapling hooks attached to the end which is used as a bridge for bordering a prize. The first class Lanun pirate prahu of Mindanao carries a crew of 100 men or thereabout. In this description of vessel, the tripod mast, the two after feet of which work on hinges, is used as a bridge in boarding.

The trade with New Guinea and the Eastern Islands, (commonly called the Bugis Trade) and the Trepang fishery on the North Coast of Australia, is carried on chiefly in vessels called "Padduakkan." These leave Macassar and the other parts of Celebes, for the Eastern Islands during the westerly monsoon, returning with the south-east trade wind.

The "Sampan" boat is well known at Singapore and remarkable for its swiftness both with sails and oars. These boats when skilfully managed are exceedingly safe, and are sometimes employed on rather distant coasting voyages, from Singapore to Penang for example. The passenger Sampan is employed at Singapore chiefly in conveying passengers between the store and the shipping.

Kora-Kora is a boat of the Malay Archipelago, near Batchian, some of them of 4 or 5 tons burthen, they are open, have a bamboo outrigging five feet on each side which supports a bamboo platform, they are low in the water.

The "Dragon Boats" of China are long and narrow, capable of holding forty to eighty men. They are employed by the Chinese in their boat races and rowing matches, in the festival of the fifth day of the fifth month, usually falling in June, and seemingly relating to the summer solstice.—*Statistics of Commerce : Bunsen's Egypt, Vol. V. pp.* 233 *to* 264*; Mignan's Travels; page* 242*; Postan's Personal Observations page* 124-7*; Burton's Sind, Vol. II. page* 296*; Cunningham Hist. of the Punjab, Vol. I, page* 19*; Dr. Taylor; Hooker's Himalayan Journ., Vol. I, page* 302*; Powell's Handbook ; Econ. BODHE, in L. 87° 10' E. and L. 27° 3' N.

BODICE or Choli is used everywhere except in the south of the Peninsula. It is cut in square pieces which meet in front, and are tied by the ends in a strong knot under the breasts ; and the sleeve, which in some instances reaches below the elbow, and in others above it, is put into the hole left unsewn in the upper part of the square body piece. The construction of this article of dress is very simple, and some women make their own. In the south of India bodices are not worn by the women of some races. It is only, they say, courtesans, who are ashamed of them who hide their bosoms. A form of bodice, named 'angia,' is entirely closed in front, and is shaped out to fit the bosom. This garment is worn alike by mahommedan and by many hindu women. The dress of mahommedan women further consists of petticoats, generally very wide indeed, and falling in heavy folds. Some wear an underpetticoat of fine calico as a protection to the costly stuff of which the outer garment is composed, or to escape friction. The stuff—satin, silk, or cotton cloth, is gathered into a strong band of tape, which is tied over one hip, and the plaits or gathers are carefully made, so as to allow the cloth to fall in graceful folds. Over the cholee or angia-bodice is a light muslin shirt, which continues below the waist, called a koortni: and over all a scarf of white or coloured muslin of fine texture, dopatta, passed once round the waist, and thence across the bosom and over the left shoulder and head, like the saree, completes the costume. Where the langa or petticoat is not worn, paijama or trousers take their place. These are sometimes worn loose, as in Oude and Bengal; and elsewhere as tight as they can be made. The cutting out of these tight trousers is no easy matter for they have several gores on the inside of the thigh; and are contrived so that they are flexible, however tight, and do not hinder the wearer from sitting cross-legged. With the trousers, which are tied at the waist, are worn the angia or cholee bodice, the koortni or shirt, and the dopatta or scarf. In full dress a mahommedan lady wears the peshwaz or Persian robe, in which dancing-women usually perform. It has long tight sleeves, a tight body crossed in front, and a very voluminous muslin skirt, the most fashionable amplitude being about forty, or even sixty yards in circumference. This garment is often trimmed in a costly manner with gold or silver lace, and is only worn as a bridal dress or at domestic festivals. Any additions to the above consist only in variations of the component parts; cloth for bodices is made like sarees with coloured borders. In the cutting out of the bodice, it is contrived that each sleeve ends with the border, and that it runs round the bottom of the garment, if not entirely, at least to some extent. Bodices are also made of English white muslin, jaconet, or fine calico, and of chintz, provided the colour is fast, many are of silk and cotton mixed, others of silk or cotton only.

Silk sarees and 'pitambars,' or men's silk waist-cloths, are worn by hindus at entertainments and festivals, as also in religious worship, Sarees are nearly universal for hindu wear, and *soussee,* made into petticoats and trousers, is as universal for mahommedan women and men also, and it has this advantage over sarees, that the colours and patterns differ very little anywhere within the confines of India: whereas sarees, dhotees, and loongees must be made to suit particular localities, and the patterns of one locality would inevitably be rejected in another. A kind of soussee is produced in France, blue striped, closer in texture than the Indian, perhaps, but belonging to the same class or category; and another called "grivas," in particular near Vichy, both excellent and fast coloured fabrics, and both used for trousers and blouses. The Indian soussee are always striped or checked, woven in narrow patterns, with coloured yarns, blue and white, black and blue, red and blue, yellow, white, and blue, green and chocolate, as detailed in Dr Watson's list; and they are worn, fine and coarse, literally by millions of the people of the middle and lower classes. In Sindh, under the shift, but of cloth called kanjari, the choli, or gaj conceals the bosom. When it passes round the side like a bodice and is fastened behind, its name is puth. This article of dress is very often omitted in Sindh, a fact which may in some measure account for the pendent shape which the bosom assumes even in young women after a first or second child. —*Watson; Burton's Sindh, p.* 301.

BODIN, a town of Hyderabad in the Dekkan. See Koli.

BODO. This population extends from Bahar and Bengal on the west, to the Sikkim and Butan frontiers. They occupy the lower ranges of the Himalaya, on the northern parts of the valley of Assam. The western branch of this tribe belongs to Bahar and Bengal, and to the Sikkim and Butan frontiers, the eastern branch occupies Assam and Cooch. They build their huts of grass and bamboo and reside in villages of from ten to twenty huts. They do not use leather in their arts or trades, and do not use wool as clothing, the latter consists of cotton and silk materials. They use utensils of brass, ropes of grass and baskets of bamboo. Jo, barley, fermented rice, or millet, is used by them as a slightly intoxicating beverage, and resembles the Ajimana of the Newar of Nepal. They till the soil, but do not occupy a locality permanently, clearing and cropping and moving again to clear and crop another spot. The head of the village is called Gra. A Bodo and Dhimal will only touch flesh which has been offered to the gods by a priest. The bride-groom purchases his bride either by money or labour. Poligamy is rare. There are professed exorcists among them.

The eastern Bodo in Cachar are called Borro and are divided into the Cachars of the hill country and those of the plains. They are partly hindu and partly pagan. Those in the plains in Assam are called Hazai, Hojai or Hajong, are of the hindu creed, and speak a hindu dialect. The hill Cachar is stouter, hardier and more turbulent, and lives in villages of from 20 to 100 houses. Like the Naga, their young men of a certain age, leave their parents' dwellings and reside together in a large building. Chatgari, a frontier district between Desh During and the Butan hills, is the chief locality of the Borro of Cachar, their numbers there being about 30,000, or half the whole Borro population. Of the three separate people the Koch, the Bodo and the Dhimal, the faintly yet distinctly marked tpye of the Mongolian family is similar in all three, but best expressed in the Bodo features and form. When the mahomedan power was established in Bengal the Koch (Kocch or Kavach) kingdom extended from 88° to 93° E. L. and from 26° to 27° N. L. from the south eastern extremity of Nepaul along the southern extremity of Sikkim and Butan into Assam, with Kooch Bahar as its capital and the people consisted of the present Kooch, Dhimal and Bodo. They dwell in the Sal forests with impunity.—*Latham's Descrip. Ethn.*; *Hodgson.* See Aborigines, India, pp. 334, 7, 8, 9; Kocch; Sal; Rajmahal.

BODOANDA, a Jakun tribe, inhabiting Quedah. See Quedah.

BODOKA, Uria ? In Ganjam and Gumsur, a timber tree, extreme height 35 feet, circumference 3 feet, and height from the ground to the intersection of the first branch, 15 feet. A light, white wood, used for scabbards, bazar measures, boxes, bullock yokes, the poles of palanquins and tonjons and for toys. It is tolerably common.—*Captain Macdonald.*

BODON, Hind ? A tree of Chota Nagpore, with a hard, reddish grey timber.—*Cal. Cat. Ex.* 1862.

BODHISAT, also Bodhisatwa, a candidate for the superior budhaship in buddhism, an actual experimental religionist.—*Hardy's Eastern Monachism*, p. 434. See Lamo; Sakyamuni.

BODINGAN. Sumatran. Brinjal.

BOD-PA, a name of Tibet.

BODRA NAGRI, a place in Cutch with ancient ruins, described by Captain Postans. Qu. Budha-nagri ?

BODUR, in L. 76° 4′ E. and L. 20° 57′ N.

BODA MAMIDI. Tel. Ficus oppositifolia, *R.*

BODDAMA KAIA. Tel. Bryonia callosa. The bitter seeds are given in worm cases and yield also a fixed oil used in lamps ; it is the "Boddama Kaia Noona."—*O'Shaughnessy, p.* 348.

BODDA NAR. Tam. ? fibre of Ficus oppositifolia.

BODDA MAMIDI. Tel. Cupania canescens, Pers.—Molinœa can. *R.* ii. 243.

BODDA WOOD. Anglo-Tam. Ficus racemosa.

BODDI CHETTU, Tel. Macaranga Roxburghii, *R. W. Ic.*—Osyris peltata, *R.* iii. 755.

BODDI KURA, Tel. Rivea hypocrateriformis, *Ch.*—Lettsomia uniflora, *R.* i. 495. The leaves are used as a vegetable in the south as are those of *R. Bona-nox* in Bengal, *Voigt.* The Sans. Syns. *Avegi*, and *Junga*, are said to be *Argyreia argentea*, Ch. The buds of Calonyction and some sp. of Ipomœa, especially I. reptans, are also eaten as vegetables (*kura*).

BODDU KURA, Tel. Portulaca tuberosa, *R.* ii. 464.

BODDU MALLE, Tel. Jasminum sambac, *Ait. var.* plenum.—*R.* i. 88.

BODDU PAVILI KURA, or Ganga pavili kura. Tel. Portulaca oleracea, *L.*—*R.* ii. 463.

BODDU TUNGA, Tel. Hymenochæte grossa, *Nees.*—*W. contr.* 110.—Scirpus grossus and maximus *R.* i. 231.

BODHI, Burm. The Peepul tree under which Gautama attained the Buddha-hood. See Bo-Tree. Buddha.

BOECHEE, Hind ? A red colored wood, very hard and close-grained. The tree grows in the Santhal jungles from Raneebahal to Hasdiha or about forty miles, but scarce. Seemingly fit for any building purposes if it can be grown to any sufficient size, which it never has a chance of doing in its present condition in the jungles. Too heavy for use generally with reference to timber bridges.—*Cal. Engineers' Journal, July* 1860.

BOEHMERIA, a genus of plants, belonging to the Nat. Ord. Urticaceæ of which the following species occur in India,

B. Macrostachya, Garhwal, Simla.

B. Macrophylla, D. Don, Nepal.
B. Platyphylla, do. do.
B. Frutescens, Thunb. do.
B. Frondosa, D. Don. do.
B. Ternifolia, do. do.
B. Salicifolia, D. Don., Moluccas, Himalaya.
B. Interrupta, Willd. Bengal, Bombay.
B. Goglado. Garhwal and Simla.
B. Candicans.
B. Nivea.
B. Puya.
B. Utilis.

Many of these are stinging nettles; B. nivea, the Urtica tenacissima of Roxb. (Fl. Ind. iii. 590) yields the Rhea fibre of Assam. B salicifolia, an edible berry.—*Roxb. iii.* 590, *Voigt:* See Decaschistia crotonifolia.

BOEHMERIA CANDICANS. See China-grass; Rheea.

BOEHMERIA FRUTESCENS. *Thunb.*

Poosh of the Parbuttiah
Kienki, Lepcha.
Yenki, Limboo.
Poee of Gurhwal and Kemaon.

This plant grows wild, to a height of six or eight feet, in the valleys of the mountains in Eastern Nepal and Sikkim and in the hills near the Terai to elevations of 1,000 to 3,000 feet. Its fibre is used for twine, rope, fishing nets and game bags and could be woven into sail cloth.—*Royle.*

BOEHMERIA INTERRUPTA. *Willd.*

Urtica interrupta.—*Linn.*

Lal bichhutee.........Beng.
Kyet-bet-ya.......Burm.

Grows in the Bombay and Bengal Presidencies and in Burmah. Its hairs sting like those of the nettle.—*Voigt*, 281.

BOEHMERIA NIVEA. *Gaudi.*

Urtica nivea.—*Linn.*

Pan... . ... Shan.
Kalooee... ... ... Sumat.

This is found in the Sutlej valley between Rampur and Sungnam at an elevation of 4,000 to 6,000 feet. It grows also in Burmah and Assam and furnishes a textile fibre of great value which has attracted attention in Britain, and it is anticipated that fibres from this class of plants will eventually occupy a position second only in importance to those of cotton and flax. The fibre of the Rhea canAmi turned to account for the manufacture of a variety of fabrics of a very valuable and useful description, and its extended cultivation in India is worthy of every attention and encouragement. Some bales of Rhea fibre, lately put up for sale, realised at the rate of 80 £ per ton.

The great desideratum is an efficient machine for the separation of the fibre from its parent stem. See China Grass. Fibres, Grass cloth, Rheea.

BOEHMERIA GOGLADO, and B. Macrostachya, are common in Gurhwal and near Simla, and probably abound in fibre.—*Royle, p.* 372.

BOEHMERIA PUYA is botanically a different species from the B. nivea, though its fibre is almost identical with that furnished by B. nivea. It flourishes at Darjeeling, Dhera Dhoon and other places in the north of India. Its commercial value is the same as that of Rhea.

BOEHMERIA SALICIFOLIA; *D. Don.*

Urtica salicifolia, *Roxb.*

Siharu. Panjabi.

A plant of the Moluccas and Himalayas, as far as Debra Dhoon, found in Simla and in Gurhwal, and in the Sutlej valley between Rampur and Sungnam at an elevation of 6,000 feet. Used for making ropes. Its berries are edible.—*Royle. Voigt.* 280, *Cleghorn Punjab Report, p.* 68.

BOEHMERIA UTILIS.

Bon Rhea.
Bun „
Wild „
Jungle Rhea.
Leepeah of Nepal.

Grows in Nepaul, and Assam. Its fibre is well adapted for rope making, canvas, and lines; a five inch rope broke with nine tons —*Royle.*

Root said to be emetic, is deemed laxative, and given by the natives in powder, a tea spoonful twice daily.

BO-GAHA, Singh. Ficus religiosa.

BOGHAZ, the term for the narrow and shallow channels through the sand-banks that stretch across the mouth of the Nile, preventing passage of ships of burden.—*Robinson's Travels in Palestine and Syria, Vol. I, p.* 11.

BOGLE, George, in 1774, was deputed to Tibet by Warren Hastings as Ambassador.

BOGNIO or BOUNIGO, the name in Japan for the "Governor."—*Hodgson, Nagasaki, p.* 6.

BOGOO, Tel. also Bugu, Tel. Charcoal.

BOG RANDIA? (Qu. Bag or Bagh Randia) Randia uliginosa.

BOGSHA. A tribe occupying the low Terai adjoining Rohilcund.

BOGUE FORTS were captured on the 25th February 1841.

BOGUMVANLU. Tel. From sanscrit Bhogam, Common women. See Basava, Murli, Jogi

BOHIRA, Hind. also BEORA. Hind Bignonia undulata.

BOHNI, Hind. with shopkeepers and hucksters the first money received of the day, it is the Handsel of the British.—*Elliot.*

BOHI. Of this people, there are 2,494 in the Oomraoti district: they are perhaps the Bhooi.

BOHOL, see Negros or Buglas Islands.

BOHRA, money lenders in the N. W. Provinces: many have become mahomedan converts. The word is said to be derived from "Beohar" trade. Sir J. Malcolm also says that the name "Borah," is unknown to the original country of the mahomedans of this race and is derived from the hindu word Behoorah, signifying "traffic." It is seemingly of this class that Sir J. Malcolm speaks when he says that besides the mahomedan Borah there is a tribe of brahmins from Nath Devara in Mewar, who have likewise this appellation.—*Elliot. Malcolm's Central India, Vol. II, p.* 111.

BOHRA, a religious sect found in the Rajpoot states, who represent themselves to be the descendants of the followers of the Sheikh ul Jabl, or the celebrated old man of the mountain. They acknowledge an Archamandrite or religious chief: they principally follow mercantile pursuits. The mahomedan shopkeepers on all the western side of India and as far east as Secunderabad and Bellary are Bohra and they are also settled in many parts of Central India and in the North Western Provinces. They are fair, somewhat taller than the average Englishman, and acute, enterprising men. Wilson says that these appear to have originated in Guzerat, where they became converts to mahomedanism but they seem to have come from Sindh They are a very important mercantile race. Sir John Malcolm says there are many of them in the larger cities of Central India engaged in every species of commerce as wholesale merchants of the first class, as well as pedlars; and sometimes both characters are to be found in the same person. The Borah who came from the sea-coast of Guzerat into Central India, have imported the improvements of European settlements, even in the construction of their houses and furniture: they are the chief medium through which the trade in European articles is carried on; and in every town in which they settle, they form a distinct colony. The good understanding in which they live with each other strengthens their association: and though they have at times suffered from the violence of power, few of the industrious classes have escaped so well, during the worst of times, as the Bohras. They are united under the spiritual rule of their elected mullah, or priests, to whose orders, in conformity with the ancient precepts of the remarkable sect of mahomedans to which they belong, they render implicit obedience. They are of the tribe of Hassannee, once so dreaded in Egypt and Persia for the acts of murder and desperation which they perpetrated in blind obedience to the mandate of their spiritual lord, so famous in the crusade history under the name of The Old Man of the Mountain.

At Oojein, in Sir J. Malcolm's time, twelve hundred families lived in four mahal or wards connected with each other, but separated by strong gates from the other parts of the city. No one except a Borah could enter their precincts without leave. The chief Mullah, who resides at Oojein, is appointed by the high priest of this class at Surat: his authority extends over all his sect. His orders go to regulate their most minute actions; and he promulgates annually a table of rules for their guidance. He promised Sir John Malcolm a census of the Borah in his diocese or charge, whom he estimated, at nearly ten thousand families or about forty-five thousand souls. They seem to abstain wholly from political intrigue they are liberal-minded and open-handed, and, as good citizens, far excel the mahomedans either of Arab or Persian descent.—*Malcolm's Central India, Vol. p.* 112.

BOI, TEL., also pronounced Bhui on the Madras side of the peninsula, a palanquin bearer, employed, also, as a house servant, supposed to be the original of the serving "Boy" of Europeans in Madras.

BOIDU, TEL. According to Wilson a man of the cowherd or shepherd caste.

BOIS, FRENCH. Wood, hence, Eagle or Aloes wood.

Bois D'aigle, FR. Aquilaria agallocha.—*Roxb.*

Bois de Bresil, FR. Brazil wood.

Bois de Campeche, FR. Logwood.

Bois de Colophane, FR. Colophonia: Canarium commune.

Bois de Fer, FR. Iron wood.

Bois de Quassie, FR. Quassia.

Bois de Reglisse, Fr, Liquorice root.

Bois du Rose, FR. Rose wood.

Bois Immortel, FR. Cacao.

Bois Jaune de Bresil, Fr. Fustic.

BOJ, HIND. Acorus calamus, also Typha angustifolia.

BOJA, TEL. Inga xylocarpa.—*D'C.*

BOJAH, HIND. Eleusine coracana. Perhaps the boza, beer, made from this grain.

BOJAJA, JAV. Crocodile.

BOJIDAN. The root of a small plant brought from Delhi to Ajmere; esteemed as heating, and used to strengthen, and as an aphrodisiac; one seer costs two Rupees.—*Gen. Med. Top. p.* 130.

BOKA, HIND. A basket, pail or leather bag, for throwing water to a higher level. It is the source of the English word bucket.—*Ell.*

BOKADA, TEL. Clerodendron viscosum. —*Vent.*

BOKAT, HIND. Asphodelus fistulosus.

BOKHARA. An isolated kingdom in Turkestan, of small extent, surrounded by a desert. It lies between the parallels of 37° and 43' N. and L. 60° and 68° E. It is an open champaigne country of unequal fertility, and intersected by the Oxus on the southern border. Its rivers are the Amu or Oxus, Sir or Jaxartes, the Kohik or Zar-afshan and the river of Kurshi and Balkh. It is ruled over by an Amir, whose sway may be comprised between the 37° and 43° north lat. and between the 60° and 68° of east long. or a space of 172,800 geographical square miles, out of which only 5,000 or 6,000 miles are occupied by inhabitants in fixed abodes while nine-tenths of its territory are either utterly unfit for occupation, or at least untenanted. A considerable portion of the khanat consists of a clayey, saline soil, and sandy steppes, with a visible slope to the south-west, while it is barricaded to the north-east by huge ranges of mountains. The aborigines are the Tajik, whose origin and time of immigration to Bokhara are unknown; previous to the conclusion of the first century of the hijira, the followers of Mahomed penetrated into their peaceful abodes, and forced them at the point of the sword to embrace the new creed. At that period, Bokhara was governed by the race of the Samanides. In the tenth century, the weak rule of these princes was totally overthrown by the Uzbeks, whose power was not of long duration; for, in the twelfth century the Khanat of Bokhara was deluged by the overwhelming flood of the Moghul hordes of Chinghiz-khan and the Uzbeks were expelled by the Moghuls into the desert to the west of the Sir-i-Dariya. Bokhara has often changed its rulers and modified its inhabitants. At each successive influx, new tribes were added to the bulk of the population. This intermixture was more particularly felt whenever the Uzbeks re-entered the Khanat. Of the Tajik aboriginal inhabitants there is but a remnant left, which forms the chief population of the city of Bokhara; in other towns there are none, or very few indeed. Owing to their peaceful disposition, not to use the word cowardliness, they abstain from taking any part in warlike achievements. The most salient traits of their character are avarice, falsehood, and faithlessness. They are usually tall; have a white skin with black eyes and hair. Although in their dress they strictly adhere to the rules of the Kuran, there is still much greater affectation than is observable among the Uzbek. Their politeness in conversation often becomes disgusting, especially if they require the assistance of the person to whom they address their words. The number of the Arabs is somewhat greater than that of the Tajiks. They are chiefly dispersed over the northern parts of the Khanat, having their head quarters in the vicinity of Vardanzi and Samarkand. They have not relinquished the habits of their ancestors, and continue to lead a wandering life, with this difference, that the severity of the climate has induced them to exchange their tents for the *kibitki*. Such only as are compelled, by the nature of their occupation, live in fixed habitations. Their features betray their origin; their large eyes are black as well as their hair; and their skin, which is very susceptible of the effects of the sun's rays, often becomes nearly black from exposure. They speak Arabic amongst themselves. The Uzbek are undoubtedly the preponderating race in Bokhara, not so much from their number, as by the ties which bind them together. They are divided into stems and sections, like the Kirghiz, and have their elders, or beys, who enjoy a certain consideration among them : the Uzbek branches with some of their subdivisions, are enumerated as follow in the work called "Nassed Mameti Uzbekia."

1. Manghit.

97. Tatar.

Of these tribes twenty-eight are in the Khanat of Bokhara, viz:—

1. The Manghit, who encamp at different places, partly in the neighbourhood of Karshi, and partly near Bokhara itself. Many of them, especially the elder branches, have established themselves in both those towns.

2. The Khitay, who encamp between Bokhara and Kermine.

3. The Naimen, dwelling near Ziyan-ed-din, to the chief of which place, in litigious cases they apply in the first instance.

4. The Kipchak, wandering between Katta-Kurghan and Samarkand.

5. The Sarai, who encamp close to the road leading from Samarkand to Karshi.

6. The Kungrad, part of which tribe is settled in Karshi, whilst another part encamps between that city and the mountains of Shehr-i-Sebz.

7. The Turkmen, who encamp on the Amu-Dariya, while others dwell in villages on the banks of the same river.

8. The Arabet who encamp between Karshi and Bokhara.

9. The Buzachi, are found near Buzachi, on the road from Karshi to Bokhara.

10. The Durmen, who lead a settled life in Khijduane and its environs.

11. The Yabu, who partly lead a settled life in the southern portion of the Tamen of Bokhara, or partly a wandering, together with the tribes of Khitay Naimen, in Miyan-kale.

12. The Jid, and 13, the Juyut, which in part lead a settled life on the banks of the Amu-Dariya, and in part a wandering, or with the Turkmens.

14. The Byatash, who all lead a settled life in the Tumen of Bokhara.

15. The Byagrin, who encamp in Miyan-kale, mixed with other tribes.

16. Kir.
17. Ung.
18. Ungachit.
19. Kalmak.
20. Kataghan.
21. Galiachi.
22. Uzoi.
23. Chiljuyut.
24. Kireit.
25. Gurlyat.
26. Yuikhun.
27. Uighur.
28. Tatar.

The Chagatai, are disseminated among other tribes.

2. The Aimak, leading a sedentary life at Bokhara.

3. The Karlik, who live in like manner at Karsh.

4. The Kauchin, who encamp in the neighbourhood of Karshi. And lastly,

5. The Kureme, in the Khanat are not enumerated in the table of that race and it is probable, that these form sub-divisions of one of the sections of the abovementioned Uzbek stems.

The oldest branch of the Uzbeks in Bokhara is that of *Manghit*, and it is out of one of its branches—called *Tuk*, that the reigning dynasty proceeds. In their exterior, the Uzbek remind us strongly of the Moghul race, except that they have larger eyes, and are somewhat handsomer; they are generally middle-sized men; the colour of their beards varies between a shade of red and dark auburn, whilst few are found with black hair. Their dress is very plain, consisting chiefly of *khalatu*, or flowing dresses of *aledja.* According to their mode of living, the Uzbeks may be classed under three heads: 1, sedentary Uzbek; 2, such as are engaged in agriculture, although continuing to lead a camp life; and, 3, such as are essentially nomadic. The wandering Uzbek live like the Kirghiz in *kibitki*, Plural of *Kibitka*, which are, however, rather lower. The external felt is usually of a black, or dark grey colour, but the interior is more tastefully ornamented than the tents of the latter, for the Uzbeks hang small carpets of home manufacture, along the sides, and though the work be coarse, and the colours generally of a sombre hue, dark red or brick colour in particular, their presence sets off the tent to advantage, and gives it an appearance of cleanliness. Their meals are very monotonous, the staple article being constantly mutton. *Kumis* (fermented mares' milk) is only drunk by those who keep large herds of horses; in Mian-kale, for instance, the absence of such herds in the greater part of the Uzbek encampments was a matter of no small surprise. Their chief occupation consists in breeding flocks. Children all but naked are seen driving the sheep round the aul, while the chief sits listlessly in his kibitka, leaving all the household affairs to the care and management of the women, who do not differ in dress from the Kirghiz women. In the interior of the aul half naked children may be seen romping about and fighting with dogs.

Bokhara has a considerable number of Persians especially Persian captives, who are brought thither in small parties. The greater majority, however, of this people were transplanted from Merv, in the reign of Amir Seyid, when that city fell under his sway. With a view of weakening it, and thereby ensure his own safety, he ordered 40,000 families to be transported from Merv to the neighbourhood of Samarkand. It is from them the Persians of Bokhara chiefly descend.

The Persian population are easily distinguished by the regularity of their features, and their bushy black hair. They profess outwardly the Sunni faith, though in their hearts they remain Shiah, cordially hating, therefore, the Bokharians. The Jughi, Mezeng, and Liuli, are classed among mussulmans in Bokhara, but they seem to be similar to gypsies, their women go unveiled, and the men are careless in their religious duties. Numbers of them are established at Bokhara, and other towns, as medical men and telling fortunes and horse-dealings. Such as lead a wandering life, encamp in tents of a coarse cotton stuff called "bez." They have permission to halt near all the lakes and rivers of the Khanat, whenever those places are not previously occupied by Uzbeks; in consequence of which a great number of them are dispersed along the banks of the Zar-Afshan, near Samarkand, while others encamp in the neighbourhood of Karakul. Bokhara and Samarkand are the centres of mahomedan theology. There are no mahomedans so strict as the inhabitants of Bokhara, but it is the most shameless sink of iniquity in the East. Its houses are built of mud and wood. The rooms have no furniture and glass for windows is unknown, oiled paper being used in lieu. Broad cloth is little used, only cotton cloths, *alaja*, and stiff loose silken garments. Womens' clothes are of a dark colour often blue and fit tightly, with a horse hair veil. They have a monastery at Bokhara, dedicated to the famous dervesh Mulana Jalal-ud-din, who, centuries ago went from Bokhara to Iconium.

BOKHARA TOWN is in L. 39° 27' N. L. 80° 19' E. It is surrounded by desert, but is watered by the little river Wafkan, which flows between forests of fruit trees and gardens. It has eleven gates, and a circumference of fifteen English miles; three hundred and sixty mosques, twenty-two caravansaries, many baths and bazaars; and the old place called Ark, built by Arslan Khan one thousand years ago, and has about one hundred splendid colleges. The houses have neither roofs nor windows. The population amounts to one hundred and eighty thousand, composed of Tajik, Nogay, Affghan, Mervee, Usbeck, and ten thousand Jews, who are dyers and silk traders, and must wear a small cap, and girdle around their waist, to be distinguished from the mahomedans. There are several thousand slaves. There are about three hundred merchants from Sind and many dervishes. Whole streets contain nothing but shops and magazines for merchants from all the parts of Turkistan, Cashgar, Hindustan, and Russia. There are, all around, numbers of country houses, with gardens.

Bokhara was visited in the early part of the 19th Century, by Sir Alexander Burnes, Dr. Joseph Wolff and Colonel Stoddart and Captain Conolly the two last fell victims to the fanaticism of the people. It was taken by Russia in 1868. Bokhara and Turkistan send out raw silk of various kinds, called "chilla jaidar," "vardanzwi," "lab-i-abi," "churkhi," from Khokan; Balkh, Kunduz, Akcha, Shibarghan, &c, Bokhara gold coins, "budki" and "tila"—*Wolff's Bokhara, Vol. II. p. 3 to 4. Baron Clement de Bode Bokhara. Vigne, Personal Narrative; General Edward Ferrier's Journey; Max Muller; Mr. Powell's Hand-book.* See Jews. Kalmuck. Kara-kul. Kazzak. Khalif. Khiva, Khanat. Khulm, Kitabi. Tajik. Tartar.

BOKHARA CLOVER, Melilotus, a genus of plants of the Nat. Order. Fabaceæ, several species of which native and foreign grow in India, M. arvensis, Italica, leucanthus, officinalis, parviflora and sulcata. M. arborea, is the Bokhara clover and affords two or three cuttings in a season; most of them are grown as clover.

BOKHARA LITTLE, a name of Chinese Tartary or Eastern Toorkistan.

BOKHARI, Muslim, Abu Daud, Tirmidzi, Nasar, Ibn Maja or Ibn Khozeima are the six great collectors of the traditions of Mahomed.

BOKHARIAN HAKIM. See Gia i-Khatai.

BOKHDI. The third settlement of the journeying Arians was in Bokhdi. It (iv. v. 7,) is stated, that the *fourth* best land was the fortunate Bokhdi, with the lofty banner: here Ahriman created buzzing insects and poisonous plants. Bokhdi is certainly Bactria though Burnouf had doubts about it, the land of the Bactrians. The "tall plumes" indicate the imperial banner (mentioned also by Firdousi,) and refer, consequently, to the time when Bactria was the seat of empire. Up to this time nothing is said by the Aryans about Media, though she conquered Babylon in B. C. 2234. See Arians.

BOKHEE OR UTIMOOKTA, Duk. Hiptage madablota.

BOKKENA, Tel. Zapania nodiflora, *Lam.* —Lippia nod. *Rich.—Rheede*, x. 47.

BOKKADI, Tel. Ehretia, sp.

BOKKUDU. Tel. Hydrocotyle Asiatica, *R.* ii. 88,—*Rheede*, x. 46.

BOKLA, Hind. Antennaria contorta.

BOK-MAI-ZA, Burm. Kydia calycina.

BOKUR, Mar. Cordia Rothii.

BOL, Hind. also Bola, also Beola, Balsamodendron myrrha; Nees ab Esen. also myrrh; its gum resin.

BOLA, Beng. Paritium tiliaceum.—*St. Hil.* Hibiscus tiliaceus.

BOLAN PASS, on the borders of Saharawan, leads from the Dasht-i-be-dow-lutto-Dadur, and is the great route of communication between the Western Affghan provinces and the countries opening on the Indus. It is a continuous succession of ravines and gorges. The air in the lower part of the pass is in summer oppressively hot and unhealthy. It extends from 29° 30'; 67° 40'; to lat. 29° 52', long. 67° 4'=55 m.; is ½ m. wide at entrance. The entrance is 800 ft.; Ab-i goom, 2,540; crest, 5793 ft. Average ascent, 90 ft. per mile.

The Bolan with the Mulloh pass, far to the south, are the only level routes intersecting the great chain of mountains, defining, on the east, the low countries of Kach Gandava and the valley of the Indus; while westward, it supports the elevated regions of Kalat and Saharawan. There are many other passes over the chain, but all of them from the east have a steep and difficult ascent, and conduct to the brink of the plateau, or table-lands. Such are the passes of Takari and Naghow, between the Bolan and Mulloh routes, and there are others to the north of the Bolan. This pass is no less important, as occurring in the direct line of communication between Sind and the neighbouring countries with Kandahar and Khorasan. It also constitutes, in this direction, the boundary between the Sard Seir and garm Seir, or the cold and hot countries. The natives here affirm, that all below the pass is Hind, and that all above it is Khorasan. This distinction is in great measure warranted, not only because the pass separates very different races from each other, speaking various dialects, but that it marks the line of a complete change of climate, and natural productions.—*Masson's Journeys, Vol I. p.* 338. See Kabul; Kandahar; Kelat.

BOLAN RIVER is about 70 miles long in the Sir-i-Bolan Pass, lat 29° 51', lon. 67° 8' is 4,494 ft. above the sea. It is remarkably sinuous, but runs generally south-easterly; from a junction with the Nari River. It is liable to inundation; and as its bed, in some parts, occupies the whole breadth of the ravine, travellers are frequently overtaken by the torrent. Falls 3,751 ft. in 54 m. from source to Dadur.

BOLBOPHYLLUM. A genus of plants belonging to the Natural Order Orchiaceæ of which several species B. auricomum, Careyanum, flexuosum, fuscesceuss Jenkensonii, serpens, and sunipia, occur in Nepal, the Khassya Hills, Burmah and Tenasserim. Dr. Mason says perhaps the most highly valued of the orchid order among the Burmese and Karens, is the sweet scented bolbophyllum, which Karen youths wear in the lobes of the ear, and maidens in their hair. It abounds in almost every part of the jungles, throwing down delicate straw-coloured racemes over the rough grey bark of old lager strœmia trees emblems of childhood in the arms of age.—*Mason.*

BOLBOPHYLLUM CAREYANUM, a common orchid in the vicinity of Maulmain, easily recognized by a long leaf at the apex of a false bulb, and by its small purplish flower. —*Mason.*

BOLE ARMENIAN.

Gheru mitti........	„		

An earthy mineral of a fine red colour, one of the hydrous silicates of alumina. It occurs in masses in various parts of India. That found in the island of Lemnos is called Lemnian earth, Armenian Bole is much used as a tooth powder; is in use in India, amongst native practitioners, as an astringent, and as a pigment is used by the Javanese when they wish to become thin, largely employed by fraudulent dealers to colour articles of food, &c. to adulterate Anchovy Paste, Potted Shrimps, Potted Herrings, Yarmouth bloaters, Ham, Westphalian Ham; Potted beef, Hamburgh Beef, Tomato sauce, Essence of Lobsters, and Essence of Shrimps. It is employed in Native painting and gilding. In many countries, Bengal and South America especially, this and other unctuous earths are eaten freely by pregnant women to allay the craving for food so common in that state. In times of scarcity it has been used by both sexes as a mechanical substitute for proper food. It consists of alumina, silica, magnesia, and oxide of iron. It is brought from the Persian Gulf, but it also occurs of fine quality in the Rajmahl hills, where it is termed *Geru mittee* also from Mysore, Bellary and other localities. Reduced to very fine powder it is used as an absorbent application sprinkled over ulcers or other raw surfaces —*O'Shaughnessy, page* 693.

BOLEOPHTHALMUS BODDÆRTII. The leaping fish, of the seas of the E. Archipelago. These salamandrine looking creatures are scarcely distinguishable from the mud on which they lie, but make a series of leaps on being alarmed. They are 3 or 4 in. long, wedge-shaped, with flat pointed tails, head and prominent eyes. They are called, by sailors, jumping Johnnies. They leap by means of their ventral fins.—*Collingwood.*

BOLE DE ARMENIE, Fr. Bole Armenian.

BOLETUS DESTRUCTOR the fungus known as dry rot. B. igniarius, dried and sliced is the amadou or German tinder.—*Eng. Cyc.* See Fungi.

BOLINTRABOLUM, Tel. Myrrh.

BOL KA GOND, and Bija bol, are names given in Ajmere to a dark reddish yellow opaque gum resin like myrrh (appears to be true myrrh) imported via Bombay. The natives there believe that by eating it or even rubbing it in the teeth, they will become loose and fall out: it is considered a warm medicine, is given to children in enlarged abdomen, mixed with musabbur (aloes) as a deobstruent, and is also used in making native ink: one seer costs eleven annas.—*Gen. Med. Top. p.* 129.

BOLKOOKREE, Beng. Adolia castinacarpa.

BOLO CHAPTIS, (Buch.) Corvinus bola. (McClell.) A species of Indian whiting that furnishes isinglass and which Mr. O'Riley sent up to Calcutta from Amherst. Dr. M'Clelland wrote that "it belongs to the genus corvinus, closely allied to *C. niger*, but of monstrous dimensions compared with the European species." This is the fish, the jawbone of which is described as "Boalee.—*Mason.*

BOLLONG. See Karang Bollong.

BOLONG WATU TUMPANG. See Karang Bollang.

BOLOR MOUNTAINS,—the mountains of Balti extend for 300 miles, from the sources of the Gilgit and Yasan rivers, in 73° to the 77° E. L., the source of the Nubra river. Bolor produces much gold. The higher mountain range abounds in rock-crystal, which is consequently called the Bilor-stone or Rock crystal. See Badakshan; Himalaya; India; Kara-koram Mountains; Tibet.

BOLSARI-KA PHUL, Duk. Flower of Mimusops elengi.

BOLUNGEE and BANSO, Tel. ? Uria? Two bamboos of Ganjam and Gumsur, extreme height 25 feet, circumference ⅙ foot. They are not common.—*Captain Macdonald.*

BOL SIAH, Pers. Aloes; Aloe litoralis. *Kœnig.*

BOLWAN, amongst the Mahrattas, the ceremony of conducting a bride to her husband's house: also dismissal of the bridegroom's friends and attendants. Also, the ceremony of propitiating the Bhuta or spirits of deceased who have entered a village, inducing them to leave the village and conducting them across the borders with music and a procession.—*Wilson.*

BOMBACEÆ. A group of plants, of which several genera, the Adansonia, or baobab, the Bombax, Cullenia; Durio and Eriodendron grow in India. Bombax pentandrum, B. heterophyllum and Cochlospermum gossypium, all have a soft down, attached to the seeds, which is collected for stuffing pillows. At the Madras Exhibition of 1857, a very powerful bast was exhibited by Mr. Jaffrey, from the Eriodendron anfractuosum. Some authors regard this group as a section of the Sterculiaceæ.

BOMBARECK. A rock which British sailors so call. It is the *Koh-i-mubarak* also Ras mubarak, the fortunate or auspicious mountain or head land of the Arabs.

BOMBAX, *Species.* That-Pan, Burm. A tree of Moulmein. Wood not known.—*Cal. Cat. Ex.* 1862.

BOMBAX, *Species.*

Burrul Mara,	Can.	Kanta Saeer.	Mahr.

A tree in Canara and Sunda, most common below, grows to a great size. Hollowed for canoes: planks sought after for light boxes.—*Dr. Gibson.*

BOMBAX CEIBA.—*Linn.* A tree of Jamaica introduced into India: in South America and the West Indies, is used for canoes. It is common at Canton, and the fleshy petals of the flowers are sometimes prepared as food. It is said to be a large tree, of the Burmese in India

This large and stately tree grows in most parts of Southern India; it reaches a great size in the Bombay Presidency, where, both on the coast and inland, it is one of the most common trees, and there the planks are extensively used in making the light packing boxes used in the export of bulky goods from Bombay and other places; also for fishermen's floats when the Adansonia is not at hand. The Red Cotton tree is common throughout Southern India, is abundant in the plains of British Burmah, where its light and loose grained wood is used for coffins. A cubic foot weighs lbs. 28. When the trees grow large, the stem spreads out towards the base, at intervals, into buttress like projections. In spring, huge Magnolia shaped scarlet blosoms cover the trees, and in some places the young flower buds are cooked and eaten. The cotton is used for stuffing cushions and pillows. In a full grown tree on good soil the average length of the trunk to the first branch is 60 feet, and average girth measured at 6 feet from the ground is 15 feet. It yields the *Moochee-ras* resin, and its roots constitute the *Safed Moosli* of the bazaars, which, powdered, forms a thick mucilage with cold water, and anwsers admirably as a nutritious demulcent for convalescent persons.—*Drs. Wight, Brandis, Gibson, O'Shaughnessy. Capt. Beddome.*

BOMBAY, a town on a series of islands on the western side of the peninsula of India, in Lat. 18° 53′ 5″ N. Long. 72° 49′ East. It is the capital of the Bombay presidency, and in 1864 contained a population, in the island, of 816,562 in the following propotions :

Hindoos ...	491,540	Lingaet ...	1,596
Brahmin ...	30,604	Buddhist or Jain	8,021
Bhatia ...	21,771	Non Arians ...	32,434
Mahomedan	145,880	Jew	2,872
Negro-African	2,074	Parsee	49,201
European ...	8,415	Chinese	358
Indo European	1,891		
Native Christian	19,908	Total...	8,16,562

In the spacious harbour formed by the islands of Caranja, Colaba, Bombay, Salsette, and the continent, several smaller rocky islands are scattered, bearing different names. Of these are Bombay, Elephanta, and a little island close to the latter that the British call Butcher Island. Its hindu name is Depa-devi, or the Island of the gods, or holy Island : it is low, less than a mile, from Elephanta, in the direction of Salsette. Bombay harbour is very capacious, being from N. to S. 12 or 14 miles, with a general width of from 4 to 6 miles, its shores are irregularly indented by bays and inlets. Bombay island lies north of Old Woman Island to which it is joined. Bombay Island is about 8 miles long from N. to S. and about 3 miles broad. The flag-staff on the S. E. bastion of the fort, is in Lat. 18° 55′ 48″ N. and Long. 72° 57′ 40″ E. Bombay is commonly called an island, but it is built on a cluster of islands which are connected by causeways with one another and with the main land, and form a peninsula running north and south, and terminating in a narrow point of land at the extremity of Colaba. The Bombay Group, indeed consists of fifteen or twenty islands in all ; the island of Bassein, about thirty miles to the northward of that which gives the cluster its name ; Dravee ; and Versova, just off the shore of Salsette ; Salsette, by much the largest of them all ; Trombay, conspicuous for the mountain called Neat's Tongue, which attains the altitude of 1,000 feet ; Bombay itself, united on the northward to Trombay and Salsette, as these are united to each other by bridges and embankments, and, to the southward, Old Woman's Island ; Colaba ; and Henery and Kenery ; with little rocks, and islets of lesser note and name. Bombay island formed part of the dower given in 1662 to Charles II. of England with his queen, and Charles in 1661, sent, James Ley, Earl of Marlborough, a most experienced sailor with a strong fleet, to receive it from the Portuguese.—(*Tennants' Hindustan, Vol.* 1, *page* 91.)

The island has an area of 18·62 square miles and the land population are 42,104 to the square mile. With the exception of Malabar and Worlee Hills on the western, and Chinch-poogly hills on the Eastern, shore, the land in Bombay is very flat, and a very large area is still below the level of the sea at high water and is annually flooded during the rainy season. The sea breeze is felt through the island ; the harbour extends along the eastern face and is a very fine one, and it is along this face of the island that are the most densely crowded parts. Owing to the value of land in that quarter, much new land has been recovered from the sea by the Elphinstone land Company. The island of Bombay is composed of five or six bands of trap rock, chiefly greenstone and amygdaloid, separated by beds that have the appearance of being of sedimentary origin, though there is no actual proof of the fact. The Bhattya, the Parsee, the Mahomedan from Sindh and Persia and Arabia, and Europeans are all largely engaged in commerce, but some of the richest of the hindu merchants reside at Jeypore in Rajputanah, at Indore, in Malwa and at Hyderabad in the Dekhan. The chief articles of commerce are cottons, opium, cereals.—*Carter. Clarke. Ann. Ind. Ad.*

BOMBAY PRESIDENCY. India, South of the Vindhya range and of the Nerbudda, is termed the Peninsula, by the British, but the hindoos and mahomedans call it the Dekhan or South. At its broadest part, in the twenty-second degree of north latitude, it is twelve hundred miles across, but it tapers away towards the south and in latitude 7° 40′ north ends in the Promontory of Cape Comorin, the Indian Ocean washing its western and the Bay of Bengal its eastern shores. A range of mountains runs along each side of this Peninsula, parallel with the coast, leaving between them and the sea in their whole length from north to south, a belt of low level land from twenty to fifty miles in breadth. These two mountain ranges are termed the Eastern Ghauts, and the Syhadri mountains or Western Ghauts, and have an average elevation of 1,200 to 3,000 feet respectively, but solitary moun tains and spurs from the western range attai an elevation of 6,000 and 8,000 feet abov the level of sea. The Western Ghauts, on th side next the sea, are scarped and at place sink precipitously 2,000 feet to the level bel below. The Eastern Ghauts do not fall s abruptly, but both ranges are covered wi thick impenetrable forests through which a fe passes lead from the coast into the interior o the country which is upraised by the mountains into table lands from 1,200 to 3,000 feet above the sea, the general declivity of the land being from west to east. This portion of India is divided into the two presidencies of Bombay and Madras, their armies being distributed over the whole of the Dekhan, and branching out into some of the adjoining or recently conquered provinces : thus, the Bombay Presidency has its troops in Guzerat, Cutch and Sind on the north-west of the Peninsula, and the Madras troops hold British Burmah, Penang, Malacca, Singapore, Hong-Kong and sometimes Aden. The Bombay Presidency, with Sindh and Aden, and including Bombay island, may be reckoned to have 23 districts, with an area of 140,827¼ square miles and a population of 13,533,912. The population, however, varies greatly. In the Ahmednuggur Collectorate, there are 111 to the square mile, but in the Thur and Parkur district only nine. The territories occupied by the army of the Bombay Presidency, like other parts of India, are separated by its mountains, and deserts into natural divisions. The province in the delta along the line of the Indus forms one military command, that of Sind and Beloochistan ; the province of Guzerat, Cutch, and along the Runn of Cutch by the Thur desert are held by the northern division of the army, and the remainder of the presidency on the table land in the provinces of Aurungabad and Beejapore, is arranged into two portions termed the Poona and the Southern districts, the latter with its head quarters at Belgaum ; but to each of these two divisions there is likewise allotted the command of the immediately adjoining portions of the level-land in the Concan. The Belgaum Division of the army, in the province of Bejapore, is from 2,500 to 3,000 feet above the sea, level but has had soldiers on the sea shore, at Kolapoor, Sawuntwarie, Malwan, Vingorla and Rutnagherry. The Poona Division is similar to that of Belgaum in the distribution of its force ; of the soldiers in the command nearly the whole of them are in the province of Aurungabad from 1,700 to 2,300 feet above the level of the sea. In the table lands, about the ghauts, the climate is dry and the rains and temperature moderate, the range of the thermometer being from 55° to 92° and the troops, European and Native, in the Poona Division particularly, enjoy comparatively good health. The principal stations for the European troops of the Bombay Presidency have latterly been Bombay, Belgaum, Poona, Ahmednuggur, and Deesa. Kurachee in Sind having more lately been also added. The barracks in Bombay are only a few feet above the level of the sea ; the annual fall of rain averages seventy inches. The mean temperature is from 76° to 88°, and the rock is basalt and greenstone. The low land in the Concan and Guzerat is traversed by many rivers and smaller streams running to the sea, and is indented by numerous creeks and channels of the ocean. The cold weather is clear and bracing, but the hot season of April and May is succeeded by the deluging rains of the south-west monsoon, when 150 inches fall from June to September and render much of the already humid lands impassable swamps; the atmosphere is then very damp, and the sensation experienced is similar to that in Calcutta at the same period of the year. The northern division of the Bombay army, with its head quarters at Ahmedabad, holds Guzerat and Cutch and stretches its posts around the Runn or salt marsh, and over the Thur desert, north of the Runn, as far as latitude 24° north. The low land of Guzerat resembles that of the Concan, Canara, the Carnatic and Orissa, but the interior of that province is mountainous. The Runn of Cutch during the monsoon is a shallow brackish lake from four to sixty miles broad, but it dries up during the hot season and is then covered with grass. The climate of the outposts is arid and in the hot season stimulates to irritability. The thermometer rises to 100° in the shade. The other part of Cutch is an irregularly hilly tract completely isolated by the Runn and the sea. On the southern coast the country is a dead flat covered with rich soil, but the northern part has three distinct ranges of hills running from east to west. The central of these ranges consists of sandstone, beds of coal, limestone, and slate clay; the hills north of it consist of marine remains, and those on the south and all the face of the country near them, are covered with volcanic matter. Cutch is 165 miles long and from 15 to 52 miles broad and, not including Runn, has an area of 6,100 square miles. The river Indus, rising in Thibet at an elevation of 18,000 feet above the sea, about latitude 31° 20' and longitude 81° 15', at the north of the Kailas Mountain, which is estimated to have a height of 23,000 feet, runs in a westerly course on the north east of Cashmere and after receiving the Cabool river close above Attock, in latitude 34° north, it turns to the south and finally issues from the mountains below Karabagh in 32° 57' of north latitude; and, further south, a little below Mittenkote in 28° 55' of north latitude, when four hundred and seventy miles from the sea, it receives by the Punjnud river the whole of the waters of the Punjab. The country through which the Indus passes in the remainder of its course, from the confluence of that river to the ocean, receives the name of Sind, which has been attached to Bombay since 1838 and has had a force varying from 10,000 to 20,000 strong distributed through it, the principal stations being Kurrachee, Shikarpore, Hydrabad and Sukkur: When nearly 100 miles from the ocean, about six miles below Tatta. the Indus begins to throw off branches and in Latitude 23° north it disembogues into the ocean by eleven mouths and presents a sea face of 125 miles in extent. The Delta of the Indus is a rich soil overgrown with tamarisk bushes. The country on the west bank of the river is diversified by mountain and plain, but on the east bank there is a sandy desert, with a few bushes and sandy hillocks, that ultimately joins the desert tract of Rajpootanah. It receives the rains of the S. W. monsoon and, in this season, the Indus overflows its banks and inundates the adjacent low country. As it subsides in October, it leaves a quantity of slimy matter to which much of the unhealthiness of the country has been attributed; it may, as probably, however, be owing to the great vicissitudes experienced in this climate for the heat in the hot season is intense rising to 160° in the open air, the rains are abundant and the cold of winter is keen and biting, the thermometer sinking to 46°. The valley of the Indus in the middle of its course is composed of sandstone rocks. A great part of the Dekhan of the Bombay presidency consists of trap rocks but to the south, at Belgaum, shales and statified rocks occur. An earthquake occurred at Bombay on the 8th December 1857. Mount Aboo is subject to frequent shocks of earthquakes.

The Arabian promontory of Aden, is attached to the Bombay Presidency. Since it was purchased from the Arabs it has always had a considerable force cantoned near the crater of an extinct volcano at the base of a hill 1,800 feet high. It is merely a small volcanic promontory jutting out into the sea, and connected with the Arabian peninsula by a narrow neck of land, across which a low wall has been drawn from shore to shore of the two bays which nearly surround the promontory, the neck of land being only a mile in breadth. The climate is very hot; very little rain falls and hitherto both for Europeans and Natives it has been unhealthy. The force usually consists of 800 European and an equal number of Native soldiers, and the inhabitants and followers amount to 20,000.

There are several feudatory chiefs and princes at Guzerat, in Cutch, Kolapore, and a larger number of feudatories of lesser rank in the Southern Mahratta Country.

BOMBAY DUCK, Eng

Bummalo of Bengal.	Bombay Duck of India.
Bamiah of Bombay.	Saurus nehereus B. Ham.

The upper part of its head, back and sides light grey or dust-coloured, hemi-transparent like gelatine, with minute star-like black and brownish dots; anterior part of abdomen pale silvery bluish; rest whitish; cheeks and opercles pale silvery bluish, dotted like the body; fins transparent, coloured like the body but more closely dotted, so as to appear pale blackish. Inhabits Sea of Malayan Peninsula and Islands, Chusan, Woosung, Canton, Madura, Java, Sumatra, Tenasserim, Mouths of the Ganges, Vizagapatam, Bay of Bengal, Bombay, Malabar. Total length: 11 inch. The fish is of most voracious habits, gorging itself with its own species and other fishes of nearly its own size, and Crustacea (shrimps). It is frequently taken with the stomach and the jaws expanded with prey. is very short-lived, and the whole body becomes at certain seasons brilliantly phosphorescent. In the Straits of Malacca it is at all times very numerous, although less so than it is at the Sandheads or in the mouths of the Ganges. Although very rich, it is a great delicacy immediately after it is taken. Salted and dried it is also highly valued, and in this state it occurs in commerce under the denomination of "*Bombay Ducks*," and "*Bummaloh*' in Bengal, large quantities of which are annually exported from Bombay and the Malabar coast to all parts of India.

BOMBAY BLACKWOOD. Dalbergia sissoo.

BOMBAY BOXES are principally ladies' work-boxes. The outside is of ivory, of elegant workmanship and curiously inlaid; the internal part of sandal wood. See Bombay or Mooltan Work.

BOMBAY MARINE, afterwards designated the Bombay Navy and later the Indian Navy. Its proportions and equipment were second to none afloat in Eastern waters, their services mostly lay in the Red Sea, and Persian Gulf.—*Thurlow*. See Indian Navy.

BOMBAY, OR MOOLTAN, WORK. The inlaid work of ivory, white and dyed, of ebony or other coloured woods, for which Bombay has long been famous, is said to have been introduced from the Punjaub, and is still familiarly known as Mooltan work. It consists chiefly of paper-cutters, workboxes, writing-desks, and similar articles. The effect of a large mass of it is very poor—the pattern is too fine for being distinguishable, and it fills the eye with a general greyish tint: in articles which do not present more than a foot or two of surface, it is very pleasing. The ground of the inlaid pattern is generally scented cedar or sandalwood, the joinery exhibited in which is very indifferent. The inlaying material is prepared as follows: the wood or ivory is cut into slips of a lozenge or triangular section as may be required—by a long thin-bladed, fine-toothed saw. The tin is drawn through betwixt a pair of grooved rollers like those used for laminating or extending iron—they work together by teeth at the extremity ‹ one or two draws through extends the metal into the length desired. The wires and splints are nearly all either lozenge-shaped or triangular, the triangles being equilateral, the lozenges composed of two equilateral triangles. A pattern being fixed on, the splints are built up into pieces, about eighteen inches long, and from a quarter to two inches in thickness, firmly glued together. In the case of borders, or continuous pieces of work, the rods are glued together betwixt pieces of ivory, or wood and ivory, alternately, so as to form straight lines on each side of the pattern. When about to be used they are sawn across, the thickness of a sixpence, and arranged in a box divided into compartments, something like a printer's case. They are then picked up in succession, and applied with glue to the box or other article to be inlaid. The following is a list of the prices of some of the most common articles to be met with in the bazar:—

	Rs. Rs.		Rs. Rs.
Work Boxes...	8 to 80	Paper Cutters.	1 to 3
Writing Desks.	15 to 60	Baskets, open.	12 to 15
Portfolios ...	10 to 20	Table Trays...	10 to 15
Watch Stands.	8 to 10	Pin Cushions.	3 to 4
Do. Cases...	4 to 6	Ink Stands ...	10 to 15
Envelope Cases.	15 to 25	Jewel Boxes, of Sandal Wood.	20 to 50
Baskets... ...	6 to 25	Paper Stands, of Sandal Wood.	5 to 10
Cheroot Cases.	3 to 4		
Card Cases ...	2 to 5		
Paper Weights.	3 to 4		

BOMBAY BLACKWOOD or Rosewood Furniture. In the Bombay Furniture manufacture, blackwood is the material almost always employed—it is brought from Cochin and other places lower down on the Malabar Coast. It sells for about the same price as Teak—it is a brittle, open-grained wood not at all a favorite with English cabinet-makers, and the highest prices ever realised for it in the state of log were, we believe, about £10 per ton. The pattern meant to be carved is first carefully drawn on paper—then on the wood. The tools used are the native adze, chisel, and drill—the centre-bit and other tools of English pattern, from which so much assistance might be obtained, are never resorted to. The general design of the various pieces of furniture is mostly excellent, the patterns elegant and tasteful: the finish for the most part is poor,—the joinery always execrable. Concealed joints never seem to be thought of—pins which might be kept out of view are made as conspicuous as possible, and great clumsy screw nails, which might without trouble be hid, are fully exposed to view. Every house of the Europeans in Bombay is furnished with it; and considerable quantities of blackwood furniture are sent to England annually by residents in Bombay for their own after use, or as presents to friends: it is packed up without being jointed or polished, and is put together by English workmen, who think, we believe, but lightly of its merits. The principal furniture dealers in Bombay in 1850, were Parsees: he workmen they employ are mostly from Guzerat. There were then six principal furniture shops in Bombay. They keep from five to ten workmen each, and probably turn out Rs. 25,000 to Rs. 30,000 worth of furniture amongst them annually. The following are the prices of the principal articles manufactured :—

	Rs.		Rs.
Round Table, 3 to 8 feet broad ...	30 to 80	Each, Low Chairs	25 to 50
Pair of Round Tea-poys, 2 feet broad.	16 to 25	,, Drawing Room Chairs with damask cushions	5 to 10
Pair of Card Tables	50 to 60	,, Dressing Tables	8 to 75
,, Flower Stands	50 to 100	,, Side Boards ...	35 to 70
,, Pier Tables...	100 to 150	,, Screens... ...	20 to 75
,, Sofa Tables...	60 to 90	,, Wardrobes ..	45 to 75
,, Conversation Sofas...	100 to 150	,, Clothes, Presses	25 to 40
,, Sofa Couches	140 to 200	,, Bedsteads .	50 to 20
,, Bed Room Couches.. ...	40 to 60	,, Writing Tables,	50 to 100
,, Music Book Cases ...	80 to 140	,, Chiffoniers, ..	60 to 80
,, ,, Stands	30 to 50	,, Chests of Drawers	25 to 50
Each, Easy Chairs	10 to 50	,, Dining Table in pieces	40 to 50

BOMBAZINE. A fabric of worsted and silk, the warp being of silk and the weft or shoot of worsted.—*Tom.*

BOMBOLOES. See Camphor.

BOMBYCES, a tribe of Lepidopterous Insects, which, in their metamorphosis, construct a covering or case generally called a cocoon. Each tribe of the Bombyces produces a cocoon of a peculiar form. They are said to spin or weave their cocoon. In their scientific classification, the Bombyces are arranged into eight stirpes or types, according to the forms of their larvæ, and those known to occur in India, have been classed into 105 genera and 272 species. The most important of these, in a social point of view, are the silk producing moths, belonging to the genera bombyx; cricula; salassa; antheræa, actias, saturnia and attacus.

1. *Bombyx mori,*—LINN., the common, domestic, or chinese silk worm moth, the Sericaria mori of Blanchard and the "pat" of Bengal, is a native of China, but has been domesticated there and in Siam, India, Persia, France and Italy. The usual tradition in China is that this was discovered B. C. 2640, in the reign of the emperor Hwang-Te, by his queen. The culture now flourishes principally about Nankin in latitude 32° N. but in India, into which it was early introduced, none of the silk filatures extend beyond 26° N. They have been found in a wild state in Kent in England, on shrubs, but the mulberry tree leaves are its favourite food.

2. *Bombyx religiosa,* HELFER, Deo-mooga HIND, Joree HIND, is found in Assam and Cachar, but is supposed by Mr. Moore to be identical with B. Huttoni. This feeds on the Ficus Indica, and Ficus religiosa. Its cocoon shows the finest filament, has very much lustre, is exceedingly smooth to the touch and yields a silk, if not superior, yet certainly equal to that of B. mori. It has not been domesticated.

3. *Bombyx Huttoni,* WESTWOOD, is found in the Himalaya, about Mussoorie, where it occurs abundantly from the Doon up to at least 7,000 feet. It feeds on the leaves of the wild mulberry and breeds twice a year. It has not been domesticated, but feeds on the trees. It spins its cocoon, on the leaf, which is enclosed, the silk is very fine and of a very pale yellow tint. It is found in the Western Himalaya, in great profusion, at elevations of 3,000 to 8,000 feet, above the sea level. It occurs in the height of the rainy season, when the hills are enveloped in dense mists. Its eggs are deposited on the trees, and subjected to the influence of the frosts and snows of those mountain winters. It is supposed by Major Hutton, that it would suit the climate of Britain. A special committee of the Agri Horticultural Society of India, declared that silk of the very best description can be obtained from its cocoons by careful reeling. The silk is fine and tough, though perhaps somewhat less soft and silky to the touch than that of the Chinese worm, and was valued by the Delhi Shawl merchants at 25*s.* the pound. At Simla, nine species of Bombyx, Saturnia and Actias occur, nearly the whole of which might be turned to account in producing silk.— (*Major Hutton in No.* 8. *of Universal Review.*)

4. *Bombyx Horsfieldi,* MOORE, is found in Java.

5. *Bombyx sub-notata,* WALKER, is found in Singapore.

6. *Bombyx lugubris,* DRURY, found in Madras.

Bombyx Yama mai, the oak silk worm, a native of Japan, has been naturalised in England. In Japan it is the most precious for the produce, and is a monopoly of the Royal family. The cocoons are of a beautiful yellowish green colour. The silk is as fine, thin and light brown as that of the mulberry worm.

Bombyx Pernyi, a native of the north of China. It produces the gridelin cocoon and silk.

Bombyx mylitta, of India, produces a large cocoon. It feeds on the leaves of the Rhamnus ujuba, and furnishes a dark colored, or grey silk, coarse but durable, inferior to that of the B. Yama mai.

7. *Cricula trifenestratra,* HELFER, has been arranged under the genera saturnia, euphranor, antheræa, and phalæna. It occurs in N.E. and S. India, in Silhet, Assam, Burmah and Java; and feeds on the Protium Javanum, Canarium commune, Mangifera Indica, and Anacardium occidentale. Its cocoon is constructed like net work, through which the enclosed chrysalis is visible. It is of a beautiful yellow colour, and of a rich silky lustre.

8. *Salassa lola,* WESTWOOD, formerly in the genera saturnia and antheræa, occurs in Silhet.

9. *Antheræa paphia,* LINN.

Tesser............	RUMPH.	Koli-surrah...... ...	MAHR.
Tusseh......	HIND.	Munga......	MICHI.
Bughi... ...	BIRBHOOM,	Kontkuri Muga....	ASSAM,

This has been classed in the genera Phalæna, Saturnia, Bombyx and Attacus. It is known to occur in Ceylon S. India, N. W. and N. E. India, Bengal, Bahar, Assam, Sylhet and Java. It feeds on the Shorea robusta, Zizyphus jujuba, Terminalia alata, T. catappa, T. glabra, Bombax heptaphyllum, Tectona grandis, or teak, and the mulberry or Morus indica. The insect has not been domesticated, but is watched on the trees and, in parts of India, is found in such abundance that the people from time immemorial have been supplied with a very durable, coarse, dark colored silk, which is woven into the well known tasseh silk cloth. In the Bhagulpore district the cocoons are collected in cart loads and are much used, cut into thongs, as ligatures for binding the matchlock barrel to the stock. In the rainy season the perfect insect appears from the cocoon in about twenty days. But Tasseh moths are hatched twice in the year, in May and August. The caterpillar first draws a few leaves together, as if to screen itself from observation and then spins a strong cord, composed of many threads till about the thickness of a crow quill, at the end of which it weaves the cocoon. For the first 36 hours, the cocoon is so transparent that the larva can be seen working within: but it soon acquires consistence and is then rendered quite opaque by being covered with a glutinous substance. The moth generally deposits its eggs within a few yards of the cocoon. These the villagers collect and keep in their houses for about ten days until the young caterpillars come forth, when they are placed on the Asan trees in the jungles and in 8 or 10 days more they prepare for change to the chrysalis state. The owners tend them carefully to protect them from the birds by day, and from bats at night; and practise many superstitious ceremonies to aid them in their care.

10. *Antheræa Pernyi*, GUERIN. Syn. A. mylitta; Saturnia Pernyi; is a native of China.

11. *Antheræa Frithii*; MOORE, found at Darjelingnt.

12. *Antheræa Roylii*, MOORE, found at Darjeling.

13. *Antheræa Java*, CRAMER, Syn. Bombyx Java, found in Java.

14. *Antheræa Perottetti*, GUERIN, Syn. Bombyx Perottetti, found at Pondicherry.

15. *Antheræa, Simla*, WESTWOOD, occurs at Simla and Darjeling. Its expanse of wings is nearly six inches.

16. *Antheræa Helferi*, MOORE, neighbourhood of Darjeling.

17. *Antheræa Assama*, HELFER, Syn. Saturnia, Westwood, the Mooga or Moonga of the Assamese, is found in Ceylon, Assam and Silhet. It can be reared in houses but thrives best when fed on trees: and its favourite trees are the Addakoory tree, Champa (Michelia) Soom, Kontoolva, digluttee, and souhalloo, Tetranthera diglottica and macrophylla, and the pattee-shoonda or Laurus obtusifolia. There are generally five broods of Moonga worms in the year.

18. *Antheræa larissa* WESTWOOD, Syn. Saturnia, a beautiful species, found in Java.

19. *Antheræa* —— ? sp. This is a native of Mantchouria, in a climate as rigorous as that of Britain. It feeds on a species of the oak. Its silk is strong, with little lustre and resembles strong yellow linen. It has been introduced into France.

20. Genus *Loepa katinka*, WESTWOOD, Syn. Saturnia: Antheræa; a native of Assam, Silhet, Tibet and Java.

21. Genus *Actias selene*, Syn. Tropæa, Plectropteron, Phalæna; a native of India, at Missouri and Darjeeling from 5,000 to 7,000 feet. It feeds on the Coriaria nepalensis, or Munsuri *Hind*, the walnut, Andromeda ovalifolia and Carpinus. The eggs are laid for a few days after the visit of the male, they hatch in about 18 days, and the larva begins to form its cocoon when about 7 weeks old.

22. *Actias mænas*, DOUBLEDAY. Syn. Tropæa, a native of Silhet.

23. *Actias sinensis*. WALKER, Syn. Tropæa, a native of N. China.

24. Genus *Saturnia pyretorum*, BOISDUVAL, a native of China.

25. *Saturnia Grotei*, MOORE, a native of Darjeeling.

26. *Genus Attacus* atlas, LINN. *Syn.* Phalena, Bombyx, Saturnia.

This is the largest of all known lepidopterous insects. It is found in Ceylon, all over India, Burmah, China, and Java, and the Tusseh silk of the Chinese is said to be obtained from its cocoon.

27. *Attacus Edwardsi*, WHITE, a native of Darjeling, of an intensely dark colour.

28. *Attacus Cynthia*, DRURY, Syn. Phalæna, Bombyx, Samia, Saturnia.

This is the eri, eria, or arandi silk worm of Bengal and Assam, which occurs also in N. E. India, Tibet, China and Java. A. Cynthia feeds on the foliage of the Ricinus communis, the castor oil plant, hence its name the Arndi. It spins remarkably soft threads.

29. *Attacus ricini*, BOISDUVAL, Syn. Saturnia and Phalæna. This is found in Assam, Ceylon, and is the arindi or castor oil silk worm of Bengal, so called because it feeds solely on the common castor oil plant with which also, they are fed, when domesticated. This is reared over a great part of India, but particularly at Dinajpur and Raujpur. The cocoons are remarkably soft and white, but the filament is very delicate, the silk cannot be wound off, and it is therefore spun like cotton. The yarn, thus manufactured, is woven into a

coarse kind of white cloth, of a seemingly loose texture, but of incredible durability, a person rarely can wear out a garment made of it, in his life time.

30. *Attacus Guerini*, MOORE, is smaller than A. Cynthia and A. ricini. It is found in Bengal. —*Dr. T. Horsfield and Mr. F. Moore's Catalogue of the Lepidopterous Insects, in the Museum at the East India House, London* 1858-9. *Mr. Frederick Moore's Synopsis of the known Asiatic-species of Silk producing Moths. Proceedings of the Zoological Society of London, June 28th*, 1859. See *Lepidoptera.*

BOMBYX. A genus of insects of the family Bombycidæ and order Lepidoptera. The Bombyces are usually styled Silk moths. The valuable product of the silk moth is the cocoon and races have been produced differing much in their cocoons, but hardly at all, in their adult states. Several distinct species exist in China and India some of which can be crossed with the ordinary moth, Bombyx mori. This is believed to have been domesticated in China B. C. 2700. It was brought to Constantinople in the sixth century, whence it was carried into Italy and in 1494 to France, and has, since, been transported to many countries where food and selection have produced many varieties. It is only in some districts of each country that eggs come to perfection. Captain Hutton is of opinion that at least six species have been domesticated. Bombyx Mori is a very important silk worm. B. Mylitta lives on the leaves of Rhamnus jujuba and yields a dark coloured coarse but durable silk, B. Cynthia feeds on the castor oil plant and spins very soft threads. Eastward of the City of Canton on a range of hills called Lofau shan, there are butterflies of large size and night moths of immense size and brilliant coloring, which are captured for transmission to the Chinese court and for sale. One of these, the Bombyx atlas, measures about nine inches across, the ground colour is a rich and varied orange brown, and in the centre of each wing there is a triangular transparent spot, resembling a piece of mica.—*William's Middle Kingdom, page* 273. *Darwin.*

BOMKAR, MAR ? a class of weavers in Kandesh.

BOMLEMARA, CAN. ? Dr. Gibson describes this tree as occuring below and near the ghats only in Canara and Sunda. Its wood is very serviceable for planks, and seems to be so used.—*Dr. Gibson.*

BOMMA JEMUDU, TEL. Euphorbia antiquorum *L.*—*R.* ii. 468.

BOMMA KACHCHIKA, TEL. Costus speciosus, *Sm.*—*R.* i. 58.

BOMMA MEDI, TEL. Ficus oppositifolia. —R.

BOMMA PAPATA, TEL. Stylocoryne Webera, A. *Rich.*

BOMMA SARI, TEL. Polycarpæa corymbosa, *Lam.*—*W. and A.*

BOMMIDAPU CHETTU, Indigofera glandulosa,—*Willd.*

BOMNI AMLI, DUK. Adansonia digidata.

BOMULD, DAN. Cotton.

BOMULL, SW. Cotton.

BO-MUSA OR BOO MOUSEH, an uninhabited island, in lat. 25° 54′ N. long. 55° 8′ E. on the north side of the Persian Gulf.—*Horsburgh.*

BOMPOKA, one of the Nicobar Islands.

BOMRAZ, a polygar chief N. W. of Madras mentioned in the history of the peninsula, of the eighteenth century.

BOM-ZU OR BUNZU, called also Bondu, a tribe of the Rakhoing, who dwell north of the Koladyn river. They have, on their north, the Lungkta, Kungye or Kuki in the highlands of Tipperah. The Bomzu and the Kuki seem to belong to the Burman race.

BON. A religion in Eastern Thibet.

BONANG. A musical instrument of Java.

BONAI. A tributary state S. E. of Colehan.

BONAYA. A genus of plants. of the order Scrophulariaceæ, several species of which occur in the south and East of Asia.—*Voigt.*

BONCA OPPOSITIFOLIA, MEISNER. Mayan, BURM.

BONDARA. MAR. ALSO NANNA. MAR. Lagerstrœmia reginæ. Benteak.

BONDODORA RIVER, rises in the Tableland of Orissa, Lat. 19° 39' Lon. 83° 27.' S., debouches into the Bay of Bengal. Length, 130 miles.

BONDUC NUT. ENG.

The Oil.

Calichi kai yennai, TAM.

The seeds of Guilandina bonducella, irregularly round, grey ; the almond is white, very hard and intensely bitter ; gets a blood red colour from nitric acid.

The oil is mentioned by Ainslie, as being considered useful in convulsions and palsy. The seeds themselves are believed to possess tonic virtues and are used solely as a medicine,—*Med. Top. Ajmir. Ainslie.* See Cæsalpinia bonducella ; Guilandina bonducella.

BONE BAYAGA, BURM. Excœcaria agallocha.

BONEN SIMA, or ARZO-BISHO ISLANDS. Several groups in the Archipelago, extending from L. 27° 44¼′ N. to 26° 30′ N. and to the most northerly of which has been given the name of Parry Group.—*Horsb.*

BONES.

Haddi,	Guz. Hind.	Asthi	Sans.
Tulang	Malay.	Yellumbúgall	Tam.
Istakhan,	Pers.	Yemukálu	Tel.

The bones of cattle and other animals are extensively used in the arts, in forming handles for knives, walking sticks, inlaying small boxes, lanterns, paper knives, buttons, and many small articles of dress, are made in China from horn and bones. Subjected to destructive distillation, in large retorts, amongst the other products which pass over is a peculiar oil, which is collected and afterwards employed to feed lamps burning in small close chambers, the sides of which thus become covered with Lamp Black. The mass remaining in the retorts is called ivory black, bone black, and animal charcoal. This substance has a remarkable attraction for organic colouring matter, and is largely used for removing the colouring matter from syrup, in the refining of sugar, and in the purification of many other organic liquors. By exposing ivory black to an open fire, the carbon is driven off, and the bones are nearly blanched. These are reduced to powder, which is used for making the cupels of the assayer, also as a polishing powder for plate and other articles, and also by the manufacturers of phosphorus for making lucifer matches.—*Morrison, page* 197. *Toml.*

BONGA, Hind. Aconitum heterophyllum.

BONGAS JAMPACA. Malay. Michelia champacá.

BONGKO. Jav. Hernandia sonora.

BONG LONG THA, Burm. A timber tree of Amherst, Tavoy, and the Mergui Archipelago, of maximum girth 3 cubits, maximum length 22 feet, and said to be abundant. Found all over the provinces, has not been easily obtained in Moulmein. When seasoned, floats in water. It is a durable yet light wood with a very straight grain; used for every purpose by the Burmese, and much recommended for helves.—*Captain Dance.*

BONGS. Tagala and Bisaya. Areca catechu.

BONGU VEDURU. Tel. Bambusa arundinacea, *Willd.—R.* ii. 191; *Bongu* means "hollow.".

BONGZU. See Bomzu.

BONI, an island in the Gillolo passage, with a harbour on its east side in Lat. 0° 1½' S.; Long 131° 3' E—*Horsburgh.*

BONIA. Tel. Mullet Fish.

BONI GULF, a gulf in Celebes. See Celebes.—*Horsburgh.*

BONIN, Hindi of Kashmir, Platanus orientalis, the Oriental plane. See Buna.

BONIN ISLANDS, to the east and S. E. of the Japan chain, explored by Captain Beechey in 1827.—*Horsburgh.*

BONIN SIMA or ARZOBISHO ISLANDS, consist of several groups, extending from lat. 27° 44½' to 26° 30' N. and to the most northerly of which is given the name of Parry group.—*Horsburgh.*

BONITO, the Scomber pelamys, *Linn.*, one of the mackerel tribe. It inhabits the southern seas, and is often caught by hook and line. Its flesh resembles raw beef and when cooked is not inviting.—*Bennett, p.* 22.

BON KI JAR, Hind. Root of Caryota urens.

BONNET IPOMÆA. Eng. Ipomæa pileata.

BONNET-MACAQUE, Macacus sinicus. See Simiadæ.

BONO KONIAREE, Tel.? Uria? A tree of Ganjam extreme height 50 feet. Circumference 3 feet. Height from ground to the intersection of the first branch, 10 feet. Used for planks, boxes, and walking sticks. It is scarce.—*Captain Macdonald.*

BON SONE, Burm.? A tree of Moulmein. Wood used for house building purposes.—*Cal. Cat. Ex.* 1861.

BON RHEEA. See Bœhmeria; China Grass; Rheea.

BON SURAT, the commercial name given to the fibres of the Urtica crenulata, Orchor Putta, which see.—*Royle, page* 366.

BONTA. Tel. Mullet Fish.

BONTA ARITI CHETTU, Tel. Musa paradisiaca, *L.*

BONTA CHEMUDU, Tel. Euphorbia antiquorum *L.* and Bonta chemmadu palu. Tel. Milky juice of Euphorbium.

BONTA VEMPALI. Tel. Tephrosia purpurea, *Pers.— W. & A.* 663.

BONTIA GERMINANS, Linn. Syn, of Avicennia tomentosa.—*Linn. Roxb.*

BONZE, a corruption of the Japanese, *busso*, a pious man. The name of bonze was given by the Portuguese to the priests of Japan, and has since been applied to the priests of China, Cochin-China, and the neighbouring countries. In China, the bonze are the priests of Fuh, or sect of Fuh, and they are distinguished from the laity by their dress. In Japan they are gentlemen of families.

BOOAH. A river near Balgoozer in Monghyr.

BOOA-ANGOOR. Malay. Vitis vinifera: Grapes.

BOO ALLI. An island in lat. 27° 17½' N. long. 49° 41' E on the west side of the Persian Gulf.—*Horsburgh.*

BOOA LONTAR, Mal. Borassus flabelliformis.

BOOA-MINYAK, Mal. Olives.

BOO-AMBILLA-GASS, Singh. Antidesma paniculata.—*Roxb.*

BOOA NANKA, Malay. The fruit of Artocarpus integrifolia.—*Linn.*

BOOA-PALA, Malay. Myristica moschata.

BOOAROOCUM, Sumatran. Carissa spinarum.

BOODAMA PUNDOO, Tel. Bryonia.

BOODDA-KANKA-RAKOO, Tel. Cardiospermum halicacabum.

BOOCHO, in long. 75° 3' E. and lat. 30° 11' N.

BOODHA, Sans. The sages of this name. See Buddha.

BOODDHA-SATWA, Sans. From Boodhi, the understanding, and satwa, the quality leading to truth.

BOODH-ASHTAMI, Sans. From Boodha, Mercury, and ashtami the eighth lunar day.

BOODHA, also BURHA, Hind. Old, hence the names of many towns, rivers, &c., as Bud'ha Gya, Bud'ha Ganga.

BOODIDA, Tel. Ashes.

BOODTHEE KEERAY, Tam. Rivea fragrans.

BOOGTI. A Beluch tribe, subjects of the khan of Kelat. The Boogti do not now give the British any cause of offence. Some of them are serving in the Punjab cavalry and many are in the Sindh service. They are subjects of the khan of Kelat. The Boogti and Murri, occupy the mountain district which extends eastward to the South of Sind and Kutchee. See Bugti; Kelat, p. 487. Khyber, p. 516.

BOOI CHAMPA, Beng. Kaempferia rotunda.

BOOIN AONLAH, Duk. Phyllanthus niruri.

BOOKET QUAILY. A hill on Sumatra. See Rigas Islands.

A general term applied to blank, printed, lithographed, or manuscript books.

The ordinary material of which books are now made, is paper, manufactured from various vegetable substances. But, the people of the south of India still use, largely, the prepared leaf of the palmyra palm-tree, on which they write with an iron style. Also, a thick paper board, blackened, is largely used by many as a book on which they write with a soapstone pencil. It answers to the horn book of Europe. To the man who has no knowledge of any books except such as are in use now-a-days, the idea of *eating* one must seem, even as a metaphor, very fantastic. It occurs in John's description of the apocalyptic vision, Rev. x. 10, where he says, "And I took the little book out of the angel's hand and ate it up. Of course, this intended to describe symbolically the careful perusal and inward digestion of what the book contained; but the symbol must seem unhappy to one who thinks a little book must mean a duodecimo or pocket edition. When he is told, however, that the papyrus which in ancient times was used for writing upon was also used by the common people as an article of diet, the Apostles' symbol becomes, at once, natural and appropriate. In like manner, when he learns from Egyptian history that the lotus, or water-lily of the Nile, was much prized as an article of food, we see the sense of the passage in the Canticles (ii. 16.) "My love feedeth among the lilies." And those who have seen that beautiful and majestic flower, the scarlet *Martagon* lily, (which is the one referred to in the New Testament,) will feel the full force of Christ's remark, that "even Solomon in all his glory was not arrayed like one of these."

BOOK ATTENE, Anglo. Singh. Alsastonia scholaris. R. Br.—*Don.*

BOOK THA, Burm. A tree of Amherst, Tavoy and Mergui, of maximum girth 1½ to 2 cubits, and maximum length 11 feet. Scarce but found on the sea coast from Amherst to Mergui. When seasoned it floats in water. It is used by the Burmese for helves, but rots quickly, and therefore is not recommended.—*Captain Dance.*

BOOLOO, Sing. Myrobalan.

BOOLANDUH, in 75° 38' E. and L. 29° 56' N.

BOOLUN, Hind. Gold thread used in making gold lace and brocades.

BOOM, (1 Vol.), a Thibetan work in 12 volumes containing tracts of the Eloopka Section; 11 Volumes were sent to the India Museum.

BOOM, Singhpo. A river.

BOOMI KOOMARA. Trichosanthes cordata.

BOOMI TYLUM, Tel. Naphtha; Petroleum.

BOOMWOL, also Katoen, Dut. Cotton.

BOON, Hind. Unground coffee; the Coffee berry.

BOON, Reed or Shove, the wood-like part of the flax plant. It is surrounded by the tough fibres called bast or harl and covered by cuticle, all cemented together by gummy and azotized compounds.—*Royle, p.* 199, 315.

BOONDALA? An agricultural race in the Maiker district.

BOONDEE, a town in Lat 75°. 40' E. and Long. 25° 26' N.

BOONDEE, the ruling family of Boondee belong according to Aitcheson to the Hara tribe of rajpoots. They have been elsewhere noticed as Chouhone or Pramara rajputs. The first rajah with whom the British Government had any intercourse was Omeda, who gave most efficient assistance to Colonel Monson's army in its retreat before Holkar: he died, in 1804, after a rule of upwards of fifty years, and was succeeded by his infant son, Bishen Sing. During the Mahratta supremacy this state suffered much at the hands of Sindia and Holkar, who virtually assumed the management of the revenues. The territory of Boondee was so situated as to be of great importance during the war in 1817 in cutting off the flight of the Pindaiee. Maha Rao Bishen Sing early accepted the British alliance, and a treaty was concluded with him on 10th February 1818. By this, the tribute paid to Holkar and the lands in Boondee held by Holkar were relinquished to the rajah, who engaged to pay to the British Government the share of tribute he had hitherto paid to Sindia. In its earlier fortunes, this little state became so connected with the imperial court of Delhi that, like Jeipoor, the princes adopted several of court customs. The Purthan, or premier, was entitled *Dewan* and *Moosahib*; and he had the entire management of the territory and finances The *Foujdar* or *Killedar* is the governor of the castle, the *Maire de Palais*, who, at Boondi, is never a rajpoot, but some *Dhabhae* or foster-brother, identified with the family, who likewise heads the feudal quotas or the mercenaries, and has lands assigned for their support. The *Buckshee* controls generally all accounts; the *Rassala* those of the household expenditure. Boondee has a beautiful palace.—*Tod's Rajasthan, Vol. II. p.* 504. *Treaties, Engagements and Sunnuds, Vol. IV. p.* 63.

BOONDOO MALLI, Tel. Jasminum sambac.—*Ait.*

BOONEE. A muslin made at Dacca. See Cotton Manufactures.

BOONERE OR BUNOOR. Beyond the Judoon country on the North West, is Booneer or Bunoor. It is a rugged country, extending from the lower range of the Hindoo Coosh downwards to hills which command the Chumla valley and the central plain of Eusufzye. On its Western Frontier, again, lies the Swat territory. The Boonere people are strong; they could muster a force of some thousands; they appear to be on good terms with their neighbours, the Swatee. In 1849 they aided some British subjects, at Loondkhor in Eusufzye, who refused to pay revenue; but they have generally abstained from molesting British subjects, and the British had no concern with them. Near them are the Swat, Raneezye and Lower Osmankheyl tribes, the two latter being subordinate to the former.

BOORA, Boori, Boorha, Budda, Hind., old.

BOORA-BOLONG, a river near Huldee pudda in Balasore.

BOORAGA, Tel., the name of the gum and wood obtained from Bombax malabaricum. It is a pure gum. See Salmalia malabarica.

BOORAUMPOOR in Long. 73° 40' E. and Lat. 23° 0' N.

BOORASOO, a pass to Changsoo from Kunawur.

BOOR-COLE. Grows, in India, to great perfection; the leaves are curled. The tops should be cut off when two feet high; the sprouts are the only part fit for use.

BOOREE, Beng. Symplocos spicata.

BOOREE. The pollen of the plant called Typha elephantina (*putera*), a native of Sinde: it is inflammable like that of Lycopodium, and used as a substitute for it in Europe. It is collected in Sinde.—*Royle, p.* 35.

BOOREE BARAK, a river in Lalla Bazar, in Silhet.

BOOREE DEWAH and RANDAREE, three nuddies near Chickulwar, and Malligaum.

BOOREE KOSSEE, a river in Purneah.

BOOR-GANDUK or LAL BUCKIAH, a river near Shekur gunj.

BOOROOD, a race in Berar. There are 955 of this people in the Oomraoti district.

BOORHAMPORE.

BOORIGOPAN, Beng. Dipteracanthus dejectus.

BOORJ, Ar. Hind. Pers., a Bastion, a Fort, Boorooj, the plural, is applied to the signs of the Zodiac, in order, as Masudi says, to mark the position of the stars with reference to these fixed objects. The word burj is widely diffused In Gothic Bairgan, and Saxon, Beorgan to fortify; Celtic Brig; this however is doubtful, as Brig frequently seems to apply to towns near bridges. Thracian Bria, a city (Strabo, VII.) German Bürg, a city; and English Borough, Burgh, and Bury so frequently the affix of the name of the towns. All places in Britain that in the old time had the name of Bourroughs, were places one way or other fenced or fortified. ("Restitution of decayed Intelligence," Ch. VII.) The Greek Purg-os is evidently the same word, signifying a Tower and hence applied also to a Dice Box—Mitteret in pyrgum talos. (Hor: Sat: II., 7, 17.) It enters commonly into the name of fortified towns. One in Mysia; (Anabasis VII. 8, 8.) In Thrace; (Herod: VII. 112.)—*Elliot Supplemental Glossary.*

BOOROOCH GAHA. Sing. Swietenia chloroxylon.

BOOROOGA WOOD. Anglo-Tel. Bombax malabaricum.

BOOROONDI. Sans. Celosia albida.

BOORUNK KALA—Ocymum basilicum; Sweet Basil.

BOORYA. Pers. Mats.

BOOSI. Tel. Vitex arborea.

BOO-SO-PAW. Burm. The cork tree is indigenous in the lower provinces of Burmah, and it is believed, in the upper also. Unlike the proper cork, the bark is thin and worthless. The wood itself is soft, tough, and fine and makes a good cork. It seems to be the Bignonia suberosa.—*Malcolm, Vol. I. p.* 191.

BOOT, Beng. Cicer arietinum.

BOOTA, Guz. Hind. Maize, the head of the Zea mays, which is grown at the commencement of the rains and sown in garden beds or in the fields; the ground should be well manured before the seed is sown, it requires little care; the heads are either boiled or roasted before being eaten.

BOOTALLA-POTAKA, also Amshunaty-divain-diva. Sans. Senna.

BOOTALLI MARAM. Tam. Givotia Rottleriformis.

BOOTAN, an independent Kingdom on the N. E frontier of British India. According to Atkinson, the temporal supremacy in Bootan is vested in an officer called the Deb Rajah, and the spiritual supremacy in another officer called the Dharm Rajah. The first intercourse of the British government with Bootan commenced with the expedition sent in 1772 for the relief of the rajah of Cooch Behar. The Booteah being driven out of Cooch Behar, and pursued into the hills, threw themselves on the protection of Thibet. The Teshoo, or Tesoo Lama, then regent of Thibet, and guardian of the grand Lama of Lassa, addressed the Government of India on their behalf. The application was favourably received, and a treaty of peace was concluded on 25th April 1774. From that year, with the exception of two unsuccessful commercial missions in 1774 and 1783, there was little intercourse with Bootan, until the British occupation of Assam, which connected the British and Bootan frontiers. From that time, there had been a continued series of aggressions by the Booteah on British territory, followed by reprisals on the part of the British government, and the occupation of the Dooars or passes which lie at the foot of the Booteah hills. Between the Teesta, which forms the eastern boundary of Sikkim and the Monas, there are eleven Dooar, some bordering on British territory and some on the state of Cooch Behar. Their names are,—

Dalimkote,
Zamerkote,
Cheemurchee,
Lukhee,
Buxa,
Bulka,
Bara,
Gooma,
Reepoo,
Cheerungoor Sidlee,
Bagh or Bijnee.

Little is known regarding the first six of these. They are governed by Soubahs appointed by the sunnud of the Deb Rajah. Bijnee and Sidlee are governed by Rajahs, who pay tribute to Bootan, and the Bijnee Rajah holds two Pergunnahs in British territory for which he pays revenue to Government.

On the northern frontier of Kamroop there are five Dooar, and on the north of Durrung two. Their names are,—

Ghurkolah.
Baksha or Banska.
Chappagooree.
Chapakhamar.
Bijnee,
Booree Gooma,
Kulling.

Under the Assam government, the Kamroop Dooar had entirely fallen under the Bootan authorities, and the Bootan supremacy continued after the acquisition of Assam by the British Government. But the Durrung Dooar were held alternately four months by the British Government, and eight months by the Booteahs each year. In 1841, in consequence of aggressions, the whole of these Dooars were annexed to British territories, and Rs. 10,000 a year paid as compensation to the Chiefs of Kamroop and similarly with the Booteahs of Durrung Towang Rs. 5,000 a year paid for the Koreapara dooar. To the east of the Towang country are the independent clans of the Rooprye and Shirgaiah Booteahs, whose custom it was to enter the Char Dooar and Now Dooar, which have been held by the British government since the occupation of Assam and to levy black mail. But the black mail was eventually commuted to an annual payment of money. The Rooprye and Shirgaiah Booteahs receive under agreement Rs. 2,526-7 a year. Similar payments are made to the Thebengiah Booteahs, but they do not appear to have subscribed any engagement.

Further to the east are the wild tribes of Aka, with whom similar agreements have been made. The Duffla, Meri and Bor Abor also receive money payments in lieu of black mail, but no engagements appear to have been taken from them.—*Aitchison's Treaties, Vol. I, p.* 142-3.

BOOTAN KOOSHUM. Sans. Anisomeles malabarica.

BOO-TA-YAT, Burm. Ægiceras fragrans. —*Kon.*

BOOTIA, the people of Bootan. See Bootan; India.

BOOTIRSACHA. Malay, Glass beads.

BOOT KHANA, Pers. Lit-idol-house, by some supposed to be the origin of the English word Pagoda.

BOOT-KULAY, Beng. Cicer arietinum.

BOOTUNTI, a name given to the Tartars by the people of Lower Kunawar. They also call the Tartars Zhad, also Bhotiah, and their country is called Bhot and Bootunt. These

Tartars differ greatly in appearance from the people of Lower Kunawer. See Kunawer.

BO-PHALLI, HIND., species of Corchorus, viz. C. olitorius, C. depressus, C. acutangula, and other species.

BOPP; F., A sanscrit scholar who, since 1816, has been printing works on Sanscrit Grammar and Comparative Philology.

BOPPAYI, TEL. Carica papaya. L.

BOR, HIND. Ficus indica.

BORA. See Inscriptions, p. 391.

BORA, HIND. A rice sack.

BORA, HIND. Dolichos catjan.

BOR-ABOR. A race dwelling on the north of the Abor, occupying the mountains on the north of the Brahmaputra River in Lat. 28° N. and Long. 95° E. to the West of the Dihong river. The British government make money payments to the Bor Abor, Dophla, Meri and Aka to abstain from levying black mail in Assam.—*Aitcheson.* See Abor, India, p. 317-338.

BORACHA. PORT. Caoutchouc. ENG.

BORA-CHUNG, or "ground-fish" of Bhootan. Inhabits the jheels and slow running streams near the hills, but lives principally in the banks, into which they penetrate from one to five or six feet and are found generally two in each chamber, coiled concentrically like snakes. The entrance to these retreats leading from the river into the bank is generally a few inches below the surface, so that the fish can return to the water at pleasure. The mode of catching them is by introducing the hand into these holes. It is not believed that they bore their own burrows, but that they take possession of those made by land-crabs. Dr. Campbell says they are not more capable than other fish of moving on dry ground. The bora-chung would appear to be an Ophiocephalus, probably the O. barka described by Buchanan, as inhabiting holes in the banks of rivers tributary to the Ganges.—*Tennent's Sketches of Nat. Hist. of Ceylon*, p. 367-8.

BORACHA. PORT. Cáoutchouc.

BORAEE.—Borago officinalis.

BORAEE, a river near Rhylee in Dumoh.

BORAGE, COUNTRY. ENG. Syn. of Coleus amboinicus, *Lour.*

BORAGINACEÆ. See Ehretiaceæ, Echium grandiflorum, Cordia, Nonea, Conoglossum.

BORAGO OFFICINALIS, *Linn*, a plant of Europe, grown in India as a pot herb; the young shoots and leaves as salad requires treatment similar to Angelica, it is suitable for the flower garden.

BORAGO INDICA. See Ch'hota Kulpa.

BORAGO ZEYLANICA.

Balatti Kulpa	BENG.	Valaiti kulpa	HIND.

Its fruit is the

Tar phal	DUK.	Tata	SANS.
Palmyra fruit	ENG.	Pannam pallam	TAM.
Bua Lontar	MALAY.	Tati paudu	TEL.

To Eastern nations, the Palmyra tree is only inferior in usefulness to the date tree and the cocoanut palm. It grows straight to a height of 70 feet with a circumference of 5½ feet at bottom and 2½ at top. A tamil poem, of Ceylon, the Tala Vilásam, enumerates 801 purposes to which the Palmyra may be applied. The trees have to attain a considerable age before they become fit for timber, as their wood becomes harder and blacker by age, and the harder and blacker it is the better. The wood, near the circumference of old trees, is very hard, black, heavy, and durable. A cubic foot weighs 65 lbs. and it is calculated to last 80 years. In some parts of the Ceylon and Madras coasts, this tree is very abundant, especially in sandy tracts near the sea, though it is to be seen in most parts of India, and occasionally so far north as 30°. It is used chiefly for rafters, joists and reepers. When of good age, the timber is very valuable for this purpose, the trunk is split into 4 for rafters, into 8 for reepers; these are dressed with an adze. Those of the Jaffna Palmyras are famous, and were, in former times, largely exported. From the structure of the wood it splits easily in the direction of its length, yet supports a greater cross strain than any other wood. Old black Palmyra wood, was, next to the Casuarina, the strongest wood that Dr. Wight tried, one specimen bore upwards of 700 lbs., and five of them gave an average of 648 lbs., though he found some very bad. Mr. Rohde also remarks that it is the strongest wood he tried, retaining for a length of time the position it assumed when loaded, without increase of deflexion: iron nails soon rust in this wood. He procured it of excellent quality in the Circars. The thickness of rafters when trimmed up rarely exceeds two inches four feet from the ground and one inch at twenty or twenty-four feet from it. The fruit and the fusiform roots of the young trees are used as an article of food by the poorer classes. Very neat baskets of Palmyra leaf are made in Tinnevelly. Some clean but brittle fibres were exhibited at the Madras Exhibition of 1855, by the Tinnevelly, Madura and Travancore local committees; and well twisted rope accompanied most of the samples, but the material was said to be stiff, brittle, and liable to rot when wet. This substance did not appear to have undergone any preparation, and it contained so much woody fibre that it is questionable whether it would ever be suited for manufacturing purposes. Its chief uses are for securing thatch, tying bamboos, and in building native huts. The dried leaves of this plant are used for writing upon with an iron style, also in thatching, making fans, and light baskets for irrigation. Next to *Caryota urens*, it is the largest palm on the coast of the Peninsula and it seems to thrive equally well in all soils and situations. The seeds when young are eaten by the natives, being jelly-like and palatable. The leaves are universally used for writing upon, with an iron style. They are also employed for thatching houses, for making small baskets, mats, &c., and some are also formed into large fans, called vissaries in Tamul. The fibres of the petioles of the leaves (*Palmyra nar*) are employed on the Madras side for making twine and small rope. They are about two feet in length are strong and used for wood. The large carpenter beetle "Xylocopa" delights in boring this hard wood, though the *Cumboo* is still more attractive to it. Small canoes are formed of this tree, two of which lashed to a couple of spars form the usual mode of crossing lakes and rivers in the Circars—the root forms the head of the canoe, the smaller end is either elevated out of water by the form, or some six inches of the pith is left at that end. As this decays, a lump of clay supplies its place. Formerly sea-going vessels were planked with this wood, but the iron fastenings were soon destroyed. Boats planked with it were, till lately, common on the Godavery, being built probably where sawyers are not procurable. The peculiar structure of the wood of the palms deserves attention, it appears formed of a series of hard stiff longitudinal fibres not interlaced or twisted but crossed at considerable intervals at various angles by similar fibres which proceed from the soft heart of the tree, to the outer part, probably to the leaf stem—a radial section of palmyra rafter shows this, the interstices are filled up with pith, the proportion of which increases with the distance from the outer part. The wood is used in England for veneers and inlaying. It is exported in large quantities from Ceylon, where it is used for rafters, pillars, and posts of native houses. In the sandy parts of Jaffna in Ceylon, a hollow palmyra is inserted to form a well. The dark outside wood of very old trees, is used to some extent in Europe for umbrella handles, walking canes, paper rulers, fancy boxes, wafer stamps and other articles The timber of the female tree is the hardest and best, and that of the male tree is never used, unless the tree be very old. It is too heavy to make ships of. At certain seasons of the year, thousands are employed in felling and dressing it. Each tree has from twenty-five to forty fresh green leaves upon it at a time, of which the natives cut off twelve or fifteen annually to be employed as thatch, fences, manure, mats, and mat baskets, bags, irrigation baskets, winnows, hats. caps, fans, umbrellas, &c; books and olay, tatakoo or puttay, for writing on. In the Bombay side it is common only on the Northern Konkan where it is in some parts so abundant, that it might be termed a forest. It is a rare tree in the southern jungles of the Bombay Presidency. The wood, when protected from moisture, is very durable, and may be used with advantage for terraces, &c. when the upper covering is complete. It is also used for canoes. Its leaves, prepared, furnish the leaf ("Ola" Tamil) on which the Tamuls write. Its palm wine is largely used, or converted into arrack or sugar. Its fruit, of the size of an ostrich egg, grows in clusters. But the trees from which the toddy or Palm wine are drawn, cannot bear fruit. When the spathes of the fruit bearing trees appear, the toddy drawer climbing to the top of the tree, binds the spathes tightly with things to prevent their further expansion and thoroughly bruises the embryo flowers within to facilitate this exit of the juice. For several succeeding mornings, this operation of crushing is repeated, and each day a thin slice is taken off the end of the racemes to faclitate the exit of the sap and prevent it bursting the spathe. About the morning of the eighth day, the sap begins to exude, when the toddy drawer again trims this truncated spathe and inserts its extremity into an earthen pot to collect the juice. These vessels are emptied morning and evening and the palmyra will continue for four or five months to pour forth its sap at the rate of three or four quarts a day but once in every three years, the operations is omitted and the fruit is permitted to form, without which the natives assert that the tree would pine and die. The tree, during the first part of the season, yields a pretty large quantity of toddy or palm wine. This is either drank fresh drawn from the tree, or boiled down into a coarse kind of syrup called jaggery, or it is fermented for distillation. The date tree, in S. India, also furnishes toddy, and the amount of daily drunkenness exceeds all that is ever witnessed in Europe. A farina, called "Ila-Pananki jangu mavu," is obtained from the root by treating it the same as in manufacturing manioc. It is very nourishing. The germinating seeds (Ponatoo, *Singh,*) are boiled and eaten in Ceylon as a vegetable.—*Seeman, Simmonds. Drs. Wight, Cleghorn, Gibson, Mr. Rohde. Hartwig, p.* 139, *quoting Sir J. E. Tennent, Vol. II. p.* 523. See Fruits ; Palmyra ; Porcupine wood.

BORAX, ENG. GER. LAT. PORT.

Buruq...........	..AR.	Sohaga..............	...HIND.

Tunkun-khar.... ...	GUZ.	Tsale......	TIB.

The greater part of the borax met with in commerce, as crude borax or tincal, was formerly obtained from lakes in Thibet, the waters of which yield a yellowish white mass, containing from 30 to 50 per cent. of real borax. That was refined chiefly at Venice and Amsterdam. Recently, a lake with waters similarly impregnated has been discovered in California. But, for a long time past, the borax of commerce has been obtained by treating with carbonate of Sodium, the boric acid obtained from the volcanic district of Tuscany, where jets of vapour, issue from the ground. The natural borax of South Eastern Asia is obtained in large quantities in the valley of Puga, in Ladakh, from Lake Jigatzi in Thibet, 20 miles in circumference, also in the course of the Sanpu river and from the Chaba Lake beyond the Kylas Hills. Its other localities are said to be Persia, China and South America. It is collected on the borders of the Tibetan lakes as the water dries up, then smeared with fat to prevent loss by evaporation, and transported across the Himalaya on the backs of sheep and goats, then refined at Umritsur and Lahore by washing with lime water It is employed by the natives of India as a tonic for loss of appetite ; also as a deobstruent and diuretic in ascites : and also to promote labour. It is used in the arts to clean metals before soldering, to form a glaze on earthenware, and in the preparation of varnishes. It is employed as a chemical flux and in experiments with the blowpipe. It is in composition a biborate of soda. Borax is imported into Bombay from Calcutta and is brought to the Bengal bazaars from Thibet, via Assam ; in India it is employed, in the moist way, as a solvent for gum lac. It is much used by the Tamool goldsmith, tinkers (Cannar, Tam.) and tinmen (Tagara-velecarer, Tam.), to facilitate the fusion of their metals. With it and lime juice, the Vaishnava hindoos prepare their red Tiroochoornum, with which they mark their foreheads perpendicularly. Borax is readily purified by simple solution and crystallization. Borax is sometimes adulterated with alum and common salt ; but ammonia gives a white precipitate (alumina), if the former, and nitrate of silver, a white precipitate, if the latter, be present. Price of raw borax, 4*d.* per lb. ; of refined borax, 6*d.* per lb.—*Beng. Phar. p.* 364. *Ains Mat. Med. p.* 144, *Cal. Cat. Ex.* 1862.

BORE OR TIDAL WAVE. ENG.

The dee lon	BURM.	Bana..........	MALAY.
Eagre.....	CHIN.		

The bore in India, those of the Bay of Fundy, and the Amazon are the most celebrated, but they occur in Southern Asia on several rivers, in the Gulf of Cambay, the Ganges, the Irawaddy, the Sitang and on some China rivers. The bore is a tremulous tidal-wave, which, at stated periods, comes rolling in from the sea, threatening to overwhelm and ingulf every thing that moves on the beach.

In the Hooghly, this is called Bora or Bore. In China, it is known as Eagre ; in the mouth of the united Tigris and Euphrates, it is called Bar. In the Dordogne, in France, it is called Mascaret. In the Maranon, it bears the name of the Rollers ; but by the Indians it is called Pororca.

This phenomenon is only common to certain rivers, and though evidently connected with the tides, as it always occurs at the springs, it has not yet been satisfactorily explained. Colonel Emy attributes it to a ground well. Another view describes the great tidal wave as taking its origin in the Southern Ocean, rushing with impetuosity up the Bay of Bengal, breaking in an angry surf all along the Coromandel Coast, and at times cutting off all communication between the shipping and the shore. This wave, when aided by the south-west monsoon and by the full and change of the moon, rushes with great impetuosity up the rivers of the Gangetic Delta, where it is opposed by the freshes that descend from the up-country during the prevalence of the South west monsoon. When the South-west monsoon has set in bringing with it the dangerous tidal bore, this, for three or four days at the full and change of the moon may be seen racing up the Hooghly river at the rate of twenty miles an hour, dashing from side to side of the river according as the bends, or reaches deflect it in its course. Upon the approach of this wave a distant murmur is heard which soon turns into the cry ban! ban! ban! from the mouths of thousands of people, boatmen, sailors, and others who are on the look out for this much dreaded wave. This cry is the signal for all sorts of craft to push out into the centre of the river, the only spot where the wave does not curl over and break. Should any boat or small craft be caught in that portion of the wave that breaks, instant destruction is inevitable. Numerous boats from the up-country provinces are lost every year from the crew being ignorant either of the existence of the bore, or from not knowing the correct position to take up so as to meet it. Ships at anchor in Calcutta though not exposed to the breaking portion of the wave frequently part their cables when struck with the wave. If standing on the shore during the rapid rushing passage of the bore, it is a curious sight to see the lower portion of the river or that nearest to the sea, six or eight feet higher that the upper portion of the river, the tide rising that number of feet in an instant. The height of the bore in the Hoogly varies from five to twelve feet, it is exceedingly dangerous in some parts of the river, but more moderate in others; it never breaks on both sides of the river at the same time. Deep water engulfs its force, but shallow water, or a sand bank, brings out all its power and fury." Dr. Hooker mentions, that at the mouth of the Megna river, "the great object in the navigation is to keep afloat and to make progress towards the top of the tide and during its flood, and to ground during the ebb in creeks where the bore (tidal wave) is not violent; for where the channels are broad and open, the height and force of this wave rolls the largest coasting craft over and swamps them." The bore, in 1782, flowed as far as Nuddea in the Hoogly but at the present day it falls short of that place by many miles, not ascending much beyond Sooksagor. It reaches Dacca on the Buree Gunga and Castee on the Horinghatta branch. Amongst the calamities that have overtaken the Soonderbuns we must not omit to mention the great inundations caused by cyclones or hurricanes. About 1584, the tract lying between the Horinghatta and the Ganges, known as the Backergunge or Burrisal District, was swept by an inundation, succeeded immediately afterwards by an incursion of Portuguese and Mugh pirates. In June 1822 this same tract was again inundated, 10,000 inhabitants perishing and many houses and property destroyed. In A. D. 1737 happened the great Calcutta storm. In 1736 A. D. the river Megna rose six feet above its usual level at Lukhipoor. In A. D. 1833 Saugor Island was submerged 10 feet; the whole of the population, between 3,000 and 4,000 souls, together with some of the European superintendents perished; at Kedgeree a building, 18 feet high was completely submerged. The "Duke of York," East Indiaman was thrown high and dry in the rice fields near Fultah in the Hoogly and in 1848 A. D. the Island of Sundeep was submerged.—*(Calcutta Review.)*

The bore in the Irawady river is often severe, but in the Sitang river its fury is great and occasions much loss of life. It is 7 feet, but Burmans name 30 feet as the height to which it occasionally rises and this may perhaps be the case in the bends of the river, where the rush has attained its full speed, before being reflected to the next bend. Even in the Hoogly near the bend at Chandpal ghat, the pointed curling wave may be seen several feet high. The "*Bore*" of the Tsien-tang river, is famous in Chinese history. According to a Chinese proverb, it is one of the three wonders of the world, the other two being the demons at Tang-chan and the thunder at Lung-chan. As in other countries, it appears generally on the 2nd or 3rd day after the full or change of the moon or at what are called spring tides, and particularly in spring and autumn, about the time the sun is crossing the line. Should it so happen that strong easterly gales blow at these times the Eagre rolls along in all its grandeur and carries everything before it. Dr. Macgowan, gave an account of it at Hang-chow-foo. Mr. Fortune from a terrace in front of the Tri-wave temple saw, on a sudden, all traffic in the thronged mart suspended; porters cleared the front street of every description of merchandise; boatmen ceased lading and unlading their vessels and put out into the middle of the stream, so that a few minutes sufficed to give a deserted appearance to the busiest part of one of the busiest cities in Asia: the centre of the river teemed with craft from small boats to large barges, including the gay flower-boats, loud shouting from the fleet announced the appearance of the flood which seemed like a glistening white cable stretched athwart the river at its mouth as far down as the eye could reach. Its noise, compared by Chinese poets to that of thunder, speedily drowned that of the boatmen, and as it advanced at the rate of 25 miles an hour it assumed the appearance of an alabaster wall or rather of a cataract four or five miles across, and about thirty feet high, moving bodily onward. Soon it reached the advanced guard of the immense assemblage of vessels awaiting its approach, all intently occupied in keeping their prows towards the wave which threatened to submerge everything afloat: but their boats all vaulted, as it were, to the summit with perfect safety and, when the Eagre had passed about half-way among the craft, on one side they were quietly reposing on the surface of the unruffled stream, while those on the nether portion were pitching and heaving in tumultuous confusion on the flood, others were scaling with the agility of salmon the formidable cascade. This grand and exciting scene was but of a moments duration; The wave passed up the river in an instant, but from this point with gradually diminishing force, size and velocity, until it ceased to be perceptible, which Chinese accounts represent to be eighty miles distant from the city. A slight flood continued after the passage of the wave, but it soon began to ebb. The Chinese say that the rise and fall of the tide is sometimes forty feet at Hang chow. The maximum rise and fall at spring tides is probably at the mouth of the river, or upper part of the bay, where the Eagre is hardly discoverable. In the Bay of Fundy, where the tides rush in with amazing velocity, there is at one place a rise of seventy feet, but there the magnificent phenomenon in question does not appear to be known at all. It is not, therefore, where tides attain their greatest rapidity, or maximum rise and fall, that the wave is met with, but where a river and its estuary both present a peculiar configuration.—*Fortune A. Res. among the Chi. p.* 317. *Calcutta Review.*

BOREÆ. See Capreæ.

BORECOLE. Brassica oleracea, *var.* Scotch Kale. The winter greens of England and Scotland.

BOREE. Several towns of this name; one in L. 66° 40′ E. and L. 32° 21′ N., others in L, 72°. 53′ E. and L. 20°. 6′ N. in L. 74° 50′ E. and L. 21°. 32′ N, in L. 78° 59′ E. and L. 20° 48′ N. in L. 78° 35′ E. and L. 19° 55′ N. in L. 79° 30 E. and L. 24° 20′ N. and in L. 80° 8′ E. and L. 19° 38′ N. The word means old.

BOREGAUM, towns in L. 76°. 29′ E. and L. 21°. 38′ N. in L. 76° 43′ E. and L. 19° 20′ N. L 78° 18′ E. and L. 20° 44′ N. in L. 79° 32′ E. and L. 21° 10′ N. in L. 74° 13′ E. and L. 17° 36 N., L. 75° 53′ E. and L, 18° 25′ N.

BURENDA PASS or Bruang pass, in the Himalaya, in L. 31° 22′ N. and L. 78° 6′ E. in Gărhwăl-Kanáwar, leads from the Pábar river to the Báspa valley. The top of the pass is 15,296 f. according to Herb. and Hodgs. but 15,095 ft. according to Gerrard.

The source of the Pábar is 12,914 ft. Herb. and Hodgs. but 13,839 ft. Ger. It leads from the Baspa valley to the upper part of the Pabar or Tons river. *Thomson's Travels in Western Himalaya and Tibet, page* 75. *Schlagentweit.*

BORER, Eng. A name given to the larva of Coleopterous beetles, which injure coffee trees. There are two, the white and red borer and the chief of these is the Xylotrechus quadripes of Chevrolat. The large and rapid introduction of coffee growing into Ceylon and India has shown that the plant is liable to be attacked by many enemies and ignorance of that has been the cause of much loss. Coffee trees in Coorg have also been injured by the rot, a disease resulting from improper pruning. The rot attacks and decays the centre of the stem. In Coorg, when the tree is attacked by the borer the leaves become yellow and droop. The insects are generally about the diameter of a small quill, are always confined to the wood and never enter the bark until the larva has done its work, passed through the pupa stage and is about to escape in the form of a beetle. The eggs are deposited by the females near the root of the tree and the pupa borers tunnel up the heart of the plant.—*Dr. Bidie on Coffee planting.* See Bug.

BORGITE, a class of the Mameluk, of Circassian origin.

BORGONG, a river near the Cossya hills.

BORI, Mal. Croton seed.

BORI. A sweatmeat of Dera Ghazi Khan, a curious substance in yellow lumps, consisting of the pollen of the dib grass (*Typha elephantina*) and of T. augustifolia collected and kneaded together, perhaps with the aid of a little treacle or sugar.

BOR JUREE, a river near Jyrong, a Garrow village.

BORNA COTI, in hinduism, an imaginary city, supposed to lie under the equator at 90° from Lanca.

BOR NEIGURA, Bor Sorri and Hoorhoori, rivers near Mopea in Cherra punjee.

BORNELLA DIGITATA. *Adams.* A nudibranch or marine slug, which occurs in the tropical seas in the south of Asia at Aden and in the Straits of Sunda, and on the Madras coast. It has brilliant colours, with vermilion streaks and is delicately marbled and has waving elegant tufts. It swims by a lateral movement of the body.—*Dr. Cuthbert Collingwood, M. A., M. B., Rambles of a Naturalist, London,* 1868.

BORNEO, is the principal island of the Sunda group. It is divided by the equator into two unequal and extended parts, of which the southern is the larger. It is the greatest island on the globe after new Holland. If we comprise the numerous archipelagoes by which the great land is environed, this group may be said to occupy more than eleven degrees of longitude and about ten of latitude. The geographical position of the principal island is between 7°. N. L. and 4° 20' S. L., and between 106° 40' and 116° 45 E. Lon. Its length from north to south will be about 300 leagues, and its breadth varying from 250 to 150 leagues. Its superficies has been calculated by Mr. Melvill de Carnbee and published in Le Moniteur des Indes and it gives Borneo a surface of 12,741 square leagues or 6,992 myriametres; which makes it 2,589 myriametres greater than Sumatra, and 5,723 myriametres greater than Java.

Old documents make known to us that the Portuguese, Lorenzo de Gomez, was the first of the European navigators who approached the northern part of this island; he arrived in 1518 in the ship St. Sebastien on his route to China. We presume that he gave to the country the name of Brune, but he says that the natives term it Brannai or Brauni. The travellers who have recently penetrated into different parts of the interior, the Dutch Major, Muller, Colonel Henrici, the members of our scientific commission, Diard, S. Muller and Korthals, as well as the Rajah Brooke, assure us that the Dayaks, who form the aboriginal population of Borneo, do not use, and cannot even have any idea of a specific name appropriated to the whole extent of a country of which the sea board is even most often unknown to the savage and wandering tribes who are separated by great distances from each other, and who are dispersed in hordes of small numbers over the vast extent of one of the largest islands in the world. These different tribes are designated amongst themselves by the names which they give to the rivers on the borders of which they have established their abode; it is thus that all the Dayaks of the great river Dusen (the Banger of our maps) call themselves Orang Duson (men of Duson) and those of the river Sampit, Orang Sampit; the manuscript memoirs of Major Muller and of Colonel de Henrici make mention of a great number of tribes designated by the names of rivers which have their mouths on the western coast; in the north of Borneo, Mr. Brooke makes mention of Dayak tribes under the names of Sarebu, Sakarran, Lundu, Sibnuw, &c. established on the rivers which bear those names.—(*Journ. of the Indian Archipelago, No.* VI, *June* 1848, *page* 365.)

The interior is still, however, almost unknown. The existence of lofty ranges of mountains in the centre is undoubted; and in the north-west, as far as the country was penetrated by Mr. Spencer St. John, in 1858, the whole was found to be mountainous, each range becoming more lofty as he approached the interior, but presenting one uniform aspect of jungle covering hill and valley. From the summit of the great mountain Kina Balu, in the north-east of Borneo, 13,000 feet high, and when looking towards the interior in a southerly direction, Mr. St. John obtained a distant view of a mountain peak which he supposes to be very considerably higher than the one on which he stood, and to be situated very nearly in the centre of the island. The land on all sides gradually slopes towards the coast. Borneo may be said to bear the same relation to Eastern India that the continent of America has borne to Europe, being a region in which tribes inhabiting the remoter East have occasionally found a refuge from religious persecution and from the pressure of a superabundant population. Brazen images, ruins of temples, and other remains of hindoo civilization, are still to be seen on the southern coast. The shores are inhabited by nations totally unconnected with each other. The west is occupied by Malays and Chinese, the north-west by the half-caste descendants of the mahomedans of Western India, the north by the Cochin-Chinese, the north-east by the Sulu, and the east and south coasts by the Bugis tribes of Celebes. There are besides numerous tribes who live in prahus among the islands near the coast. The Dutch claims a territory exceeding 200,000 square miles; but all beyond a mere fringe of the coast was, until the recent exploration of a portion of the interior, absolutely unknown.

Its inhabitants are generally recognized as Malay and Kyan, and the Millanowe Dyak. The Malay are settlers from Sumatra, Java and Malacca along the coast of Borneo: the Dyak are a prior race and are divided into land and sea Dyak, the latter being richer and more powerful, those of the interior being broken up into innumerable clans, some of them being tributary to the Sultan of Brunai, some of them under the Dutch in the south and west of the island and some under the Sarawak Government. The Millanowe are on the north east of the Sarawak territory. They are of a fair complexion and are occupied with agriculture, trade and peaceful pursuits. The Kyan are a powerful tribe of about 100,000 souls, and occupy the country from the south of the kingdom of Brunai right away into the interior, they strongly resemble the Dyak.

The Dyak are generally well made, with a muscular well knit frame and are rather under than over the middle height. Their features are regular. Their colour is a deep brown, occasionally varying to a lighter shade. The Dyak dwell in very long houses occasionally large enough to contain a community. That portion of their creed which obtained the greatest influence over their mode of life, arose from a supposition which they entertain that the owner of every human head which they can procure will serve them in the next world. The system of human sacrifice was, upon this account, carried to so great an extent, that it totally surpasses that which was practised by the Batta of Sumatra, or, it is believed, by any people yet known. A man cannot marry until he has procured a human head, and he who is in possession of several may be distinguished by his proud and lofty bearing: for the greater number of heads which a man has obtained, the greater will be his rank in the next world. The chiefs sometimes make excursions of considerable duration for the sole purpose of acquiring heads, in order that they may be assured of having a numerous body of attendants in the next world. If they are at peace with their neighbours, they proceed in their canoes to the more distant parts of the country to which the numerous ramifications of the rivers afford them easy access. Upon their arrival near a village, if the party be small, they take up their position in the bushes close to some pathway, and attack a passer by unawares. If the party be large they are bolder in their operations, and an attempt will perhaps be made to surprise a whole village. For this purpose they will remain concealed in the jungle on the banks of the river during the day, and at night will surround the village so completely as to prevent the escape of the intended victims; and an hour or two before daybreak, when the inhabitants are supposed to sleep the soundest, the attack will be commenced by setting fire to the houses, and their victims are destroyed as they endeavour to escape. Apparently the practice is only general among those tribes inhabiting the banks of the large rivers, on which distant voyages can be made with facility, the Dyak race in the northern parts of the island being content with an occasional human sacrifice on the death of a chief. They had a craving for skulls; the sacrifice of a cock is sacred as with the Karen and Chinese and they believe that the Divine Being eats the spirit or essence of the offerings made to him. They have a tradition about a deluge, from which the Chinese, Malay, and Dyak escaped. The minor spirits, called "Antu" are largely worshipped. The name for the Almighty Good Spirit is Yaoah or Jowah, almost the same as the Hebrew form of Jehovah, He is also called Toppa and in his worship, women are the celebrants.

Head hunting is now scarcely heard of: they are brave, hospitable, simple, and truthful, loyal, grateful and are willing to receive instruction. Chastity before marriage is not insisted on and they marry when grown up. The men wear a narrow loin cloth passed between the thighs. The women have a still narrower stripe of cloth allowed to fall from the hips half way down the thighs and affords little concealment. The clans have different languages and they have no written character.

A writer in the Journal of the Archipelago, describes a race called Idaan occupying the northern part of Borneo, who suspended human skulls in their houses. St. John, in his Indian Archipelago, says that the dominant Malay and the colonists of China are an active and industrious but turbulent and intractable part of the population (*Reveu de deux Mondes*, II.) The Dyak, who in their physical and social characteristics resemble the Tarajah of Celebes (*Pritchard*, *Researches into the Physical History of Mankind*), the people in the interior of Sumatra, and the Arafura tribes of Papua, may be regarded as the aborigines of the Archipelago. But, though the name may be applied to all the wild tribes of the island, it is not so used by themselves. There are other natives in distinct localities with characteristics of their own. The Dusun, or the villagers of the north, an agricultural people, the Murut in the inland parts of Brune, the Kadians of the same country, an industrious peaceful nation, valuable for those qualities; and the Kayan, more numerous, more powerful, and more warlike than any other in Borneo. They are an inland race inhabiting a district extending from about sixty miles up the interior from Tanjong Barram to within a similar distance on the eastern shore. Fierce, reckless of life and hot-blooded in their nature, they are nevertheless represented to be hospitable, kind and faithful to their word, and honest in their dealings. Next to them are the Millanowe southward and westward, living on rivers near the sea—an industrious intelligent people, who occasionally take heads, but have not the ferocity of the Kayan. The Tatar, Balanian, and Kanowit have dialects of their own, and are wild and savage in their manners.

Another writer says that there are eleven tribes located between the Malay of the coast, and the Káyán, namely the Kanawit, Bakatan, Lugat, Tan-yong, Tatau, Balinian, Punan, Sakapan, Kajaman, Bintulu and Tilian the majority of whom are tributary to the Káyán. The six first mentioned are all more or less tatooed, both male and female, and certainly have all sprung from the one called Kanawit, who, in habits, closely assimilate to the Dyak of all Saribus whose neighbours they are. The tribes Punan, Sakapan and Kajaman are the chief collectors of camphor and bird's nests. The trees which are abundant, and produce excellent timber, amount to upwards of sixty species, many of the other kinds not useful as timber trees, are, or might be valuable for making charcoal, pot-ash, pearlash, &c. Several kinds of oaks are found in the forests, but being of quick growth and soft wood, their timber is not esteemed.—(*Low's Sarawak, p.* 59 *to* 61.) Ebony is abundant in many parts of the island, particularly on the west coast, but it is said to be inferior to that from the Mauritius, although it has been found a very profitable export to China. In the neighbourhood of the Lundu river, in the Sarawak territory, are large forests of it.

At the mouths of most of the rivers on the east coast of Borneo, and also on the north and north east coasts, are found the Orang Baju, a kind of sea gipsies. They dwell in boats of eight or ten tons burthen, which are covered, when in harbour, with a roof of matting. Each boat contains about fifteen inhabitants, men, women, and children, who employ themselves chiefly in catching and curing fish and trepang, and in making salt from sea-weed. The latter they dispose of to the Dyaks. The women are equally skilful with the men, both in fishing and in the management of the boats. During the south-east monsoon, when the weather is fine in the southern parts of the island, they cruize about Passir and Pulo Laut; but when the monsoon changes, and the weather becomes tempestuous, they sail on the northern parts of the island, which at this season are distinguished for their freedom from storms or other annoyances.

The interior of the island is occupied by tribes of the brown race, whose warlike habits, and skill in the use of missiles, will account for the disappearance of a less civilized race from the southern and western parts of the island. The island of Borneo bears the same relation to Eastern India, that the continent of America bears to Europe, being a country in which the various tribes inhabiting the further east may find a refuge from religious persecution, or escape the disadvantages of over-population in the mother-country. Thus we find the coasts of the island to be inhabited by several nations, totally unconnected with each other, governed by their own laws, and adopting their own peculiar manners and customs. The west coast is occupied by Malays and Chinese, the north-west coast by the half-caste descendants of the Moors of Western India; the north part by the Cochin Chinese; the north-east coast by the Sulu; and the east and south coasts by the Bugis tribes of Celebes. In addition to these, there are no fewer than three distinct tribes, living in prahus, and wandering about the shores of the island: the Lanun from Magindano; and the Orang Baju and Orang-Tidong, source unknown. Except on a few spots on the north-west coast, where the Dyaks are to be met with near the sea, the prior tribes have all retired into the interior. The Dyak, who are the Orang-Benua, or aboriginal inhabitants of Borneo, constitute by far the most interesting portion of its population. They are scattered in small tribes over the face of the island, those inhabiting the banks of the large rivers being generally under the dominion of one more powerful than the rest; but the tribes which reside in the depths of the forests, where the communication between them is more difficult, are generally perfectly distinct from each other, and these people would scarcely know that other human beings existed beside themselves, were not individuals of their little communities sometimes cut off by the roving warriors of a distant, and more powerful tribe. The various tribes are said to differ considerably from each other, but Mr. Earl saw individuals belonging to several distinct tribes, who, with the exception of a difference of dialect, might be recognized as the same people, those who lived entirely on the water being much darker than the rest. It is said by the Dyak themselves, that some parts of the interior are inhabited by a woolly haired people; but as they also assert that men with tails like monkeys, and living in trees, are also discoverable, the accuracy of their accounts may be doubted. He met with no Dyak who had seen either, but as a woolly-haired people is to be found scattered over the interior of the Malay Peninsula, their existence in Borneo seems by no means improbable. The Dyak are of the middle size, and, with the exception of those who are continually cramped up in their little canoes, are invariably straight-limbed, and well formed. Their limbs are well rounded, and they appear to be muscular, but where physical strength is to be exerted in carrying a burthen, they are far inferior to the more spare bodied Chinese settlers. Their feet are short and broad, and their toes turn a little inwards, so that in walking they do not require a very wide path. The native paths are found very inconvenient by a European traveller. The paths used by the Dyaks and Chinese being generally worn down several inches below the surface of the soil, and, as they are very little wider than the foot, pedestrain exercise proves both painful and fatiguing.. The Chinese guides told him that he should soon become accustomed to these by-ways, from which he judged that the settlers had adopted the native mode of walking with one foot before the other, since their arrival in the country. Their foreheads are broad and flat, and their eyes, which are placed further apart than those of Europeans, appear longer than they really are, from an indolent habit of keeping the eye half closed. The outer corners are generally higher up the forehead than those nearer to the nose, so that were a straight line drawn perpendicularly down the face, the eyes would be found to diverge a little from right angles with it. Their cheek-bones are prominent, but their faces are generally plump, and their features altogether bear a greater resemblance to those of the Cochin Chinese than of any other of the demi-civilized nations in Eastern India. The Laos tribes inhabiting the inland parts of Cochin China and Cambodia are undoubtedly the same race as the Dyak, speaking a dialect of the same language; and, as the Cochin Chinese are probably descendants of these people, civilized by communication with the Chinese, the resemblance may be easily accounted for. The Cochin Chinese, however, are physically superior to the Dyak, the natural results of a different mode of life. The hair is strait and black, and is kept cut rather short by both sexes, but if permitted, would grow to great length. Some of the Dyak women who are married to Chinese adopt the fashion of wearing tails. He never saw a nearer approach to a beard among the men, than a few straggling hairs scattered over the chin and the upper lip. The Dyak countenance is highly prepossessing, more than that of any people he had yet encountered. The countenances of the Dyak women, if not exactly beautiful, are generally extremely interesting, which is, perhaps in a great measure owing to the soft expression given by their long eyelashes, and by their habit of keeping the eyes half closed. In form they are unexceptionable, and the Dyak wife of a Chinese, whom he met with at Sinkawan, was, in point of personal attractions, superior to any eastern beauty who had yet come under his observation, with the single exception of one of the same race, from the north-west coast of Celebes. This one he met with at Sourabaya soon after her arrival from Celebes, she was, for a native, extremely fair, and her portrait would not have disgraced the "Book of Beauty." In complexion, the Dyak are much fairer than the Malay from whom they also differ greatly in disposition and general appearance, although not so much as to lead to the conclusion that they could not have sprung from the same source, giving rather the idea that the cause of the dissimilarity has proceeded from the long disconnection of the Malay from the original stock, in addition to their admixture and intercourse with foreign nations. The Dyak are a much superior people to the Malay, although the latter affect to consider them as beings little removed from the orang-outan. The most numerous of the aboriginal tribes are found congregated in villages on the banks of the rivers and the large inland lakes; but they also possess several towns of considerable size. The capital of the most powerful tribe on the west coast is Sigao, a town about forty days journey up the Pontiana river, which has a population of several thousands. The Dyak inhabit thatched bamboo houses, erected upon piles, those belonging to each family or petty tribe being joined together by means of a stage or verandah running along the front. Many of the small villages are defended by stockades, and the ladders by which they ascend into their dwellings are always pulled up when they retire to rest at night. Under these dwellings the pigs are kept; for, although some of the tribes in the vicinity of the Malay have adopted the mahomedan religion, they are not sufficiently rigid in their observance of its tenets to abstain from the use of pork. The Dyak cultivate rice in large quantities, as it forms their principal vegetable food, their animal sustenance being pork, fish and the flesh of deer and other animals which are procured by the chase. Some of the tribes possess bows and arrows, but the sumpit or blow pipe, a wooden tube about five feet long, through which small bamboo arrows are shot with great precision, is in more general use. The arrows are steeped in the most subtle poison, which destroys birds and smaller animals, when struck with them, almost instantaneously, a slight wound from an arrow on which the poison is strong, being said to occasion inevitable death, even to man. The effects of weapons of this description are always exaggerated by those who use them; the poison therefore, is not, in all probability, so destructive to the human species as it is represented; and although the Dyaks assert that no antidote is known, yet the preparation of the poison being similar to that practised by the aboriginal inhabitants of Celebes, for which a remedy has been discovered, the people of Borneo are probably acquainted with it. They show no hesitation in eating animals which have been killed by their arrows, taking the precaution, however, of removing the flesh immediately adjacent to the wounded part. The poison, which is called ippo throughout the island, consists of the juice of a tree, and its mode of preparation appears to be perfectly similar to that practised in Java, and other islands where it is employed.

Borneo, as a mineral country, is perhaps the richest in the East ; producing gold, coal, antimony, and iron, while caoutchouc and gutta percha, are amongst its vegetable products.

The coal and iron fields of the Balawi or Rajang are more extensive than any yet discovered on the island. From the river Baram, coal is traced to the upper parts of the Bintulu, and thence southward to the Rajang river, on the left bank of which, at Tujol Nang, there is a seam exposed upwards of thirteen feet in thickness. At different other parts of the river and also in several of its branches, coal is found in abundance. From Tujol Nang the strike of the coal is southward across Dragon's plain. It is again found in the river Lang-Tha (a distance from the former place of about fifty miles) where it is extensively exposed on the surface, and has been in a state of ignition for several years. Iron ore of a quality yielding from sixty to eighty per cent. of iron abounds in the Baluwi or Rajang district, from about forty miles from the coast to the source of the river, or over a district comprising nearly one-half of the extreme breadth of the island. The iron manufactured from the ore of the above district is much preferred to that of Europe by the Malays and other natives of Borneo as being superior, doubtless owing to the charcoal being the melting material used, as in Sweden.

The varieties of animal life are great, some species of Actinia, of enormous size occur in the China seas, and on the coast of Borneo and fish live within them. Of 29 species of birds in Borneo and 21 in Sumatra, 20 are common to both islands. Of 29 in Borneo and 27 in Java, 20 are common to both islands. Of 21 of Sumatra and 27 of Java, 11 are common to both islands.

The Malay of Borneo, firmly believe in ghosts. If a man die or be killed, they are afraid to pass the place.—*Wallace* I, 161. *Journal of the Indian Archipelago, No.* 2, *February* 1849, *p.* 141. *Vol.* III. *John's Indian Archipelago, Vol.* II. *p* 265. *Quarterly Review, No.* 222, *p.* 497. *Marryat's Indian Archipelago, p.* 10. *Earl's Indian Archipelago, p.* 270. BORNEO CAMPHOR, See Miniak Kruing Camphor ; Kruing.

BORO-BODOR. A great buddhist temple in Java, with figures similar to those in the buddhist temple at Gyah.

BORODHA, URIA. Bauhinia variegata.—*Linn.*

BORO-JUAN, BENG. Ptychotus ajwan.—*D. C.*

BORO-KOLEE, TEL. URIA. This tree, supposed to be a species of Zizyphus, has an extreme height of 30 feet, circumference 3 feet, height from ground to the intersection of the first branch 8 feet. Planks, doors, boxes, matchlock stocks, and palanquins are made of its wood. The leaves pounded and mixed with turmeric are supposed to be efficacious in curing rheumatism. The seeds are also used medicinally in diseases of infants. The tree yields a lac. The large trees are scarce but young trees very common.—*Captain Macdonald.*

BORRERA ASHNEII.—*Royle.*

Chulchilhera. HIND.

A lichen of the Himalaya : with ammonia it gives a reddish brown colouring matter, and is used accordingly as a dye stuff. Dr. J. D. Hooker found only this Borrera, on the Donkia pass of the Himalaya, at an elevation of 22,000 feet ; it migrates over the lofty slopes and ridges, blown about by the violent winds.—*Royle ; Hook. BOS. A genus of Bovine animals, the Bovinæ, of which also are the musk ox, the Bisontines or bisons, the Taurines or Oxen, and Bubalines or buffaloes. These inhabit cold, temperate and hot climates, the Taurines of tropical countries, however, obtain a cooler atmosphere on the mountains, though the humped cattle seem proper to the hottest regions of the old world : The Bisontines subdivide into the bisons proper and the yak.

The Indian Gour, *Bos gaurus*, the Gyal of Orissa, Indian sportsmen persist in calling a bison.

All Bisontines have cylindrical horns, very slight naked muzzle, long, shaggy hair, especially on the head, chin, and fore-quarters and the tail is short, the Bisontines subdivide into bisons proper and the Yak.

The Caucasian bison (B. Caucasicus) is still found on mount Caucasus from the river Kuban to the sources of the Pish. The traveller Bell mentions a kind of bison, under the term Urus or Uhr-ox, in the country of the Tzulimm Tartars, and the Yak seems to occur there both wild and tame.

The Yak, *Bos poephagus* or *B. grunniens*, or *Poephagus grunniens*, in form, approaches the Taurines. There is less inequality of the fore and hind quarters, still 14 pairs of ribs, long hair on the fore-quarters, and pendant from the flanks, but the most striking feature is the Choury tail, the horns are longer than in the modern typical Bisons, and their tips curve considerably backwards —instead of the rigid semicircular flexure in, at least, the bulls of the Bisons proper. All appear to have the same grunting voice. The general aspect of the Yak, it may be added, is distinctly *Bisontine*, and it carries its head low, like the rest of the sub-group. The Yak is indigenous to High Tibet, and especially to Eastern Tibet, where they are still tolerably numerous in the wild state. It is extensively domesticated, and is the ordinary tame cattle of that elevated portion of the globe. The wild animal is known as the *Dong* or *Ban Chour*.

The Banting, or Sumatran ox, the Bos banting, *Raffles*; B. leucoprymnus, *Quoy* and *Gaimard*, B. Sondaicus, *Muller*, is a native of the Malay peninsula, Martaban, Java, Borneo and Bali but is not in Sumatra, Celebes, or any of the Philippine Islands.

Another wild Ox, called Saladang by the Malay, seems to occur along with it.

The Buffalo, Bos bubalus, of *Brisson*, is found wild, and the tame one is all over S. E. Asia, and is distinguished by its large flat horns some curved and some long (spirocerus and macrocerus.) Its ribs are large, flat and white. It is the buffalo, buffle and Büffel of the English French and Germans, and B. Arna, *(Hodgson)* is one variety and the Manilla buffalo is another. It is the Bhains, Mhains, HIND. of India, Karbo, Malay. The domesticated buffalo is largely used for burthen and draft.

The Gayal or Bos frontalis, *Lambert*.

Bos Gayeus, *Colebrooke*.

Gobay goru	BENG.	Shial	KOCH-HI.
Gavai	HIND.	J'hong-nua	ARRAKAN.
Gayal	„	Nunec	BURM,
Gau-jangli	PERS.	Gau-vera	SINGH,
Methana	KOCH-HI.		

It is found wild in the forest from Silhet to Arracan, and is also domesticated and breeds with the common cattle. It is nearly of the size and shape of the English bull, has short horns, a short tail, a large dew lap, no mane or hump.

The Gour or Gaur, *Bos gaurus*.

Bos gour.—*Trail.* | Bos aculeatus, *Cuvier*.

Occurs in the mountainous parts of India, it has limbs more like a deer. Indian sportsmen call it the bison.

The Zebu or Bos Indicus of Linnœus, is the B. domesticus, B. Indicus, B. Zebu, and B. Taurus Zebu of authors and has many English synonyms, but that of Brahminy Bull is the most usual. They occur domesticated throughout India, all Southern Asia and the Archipelago, and are largely used for draught.

Naturalists have generally made two divisions of cattle, the humped kinds of tropical countries, the Zebu or Bos Indicus of India, and the common unhumped cattle, the Bos Taurus. As with dogs and pigs, the domestic cattle are certainly from more than one stock. Humped cattle were domesticated in Egypt as early as the 12th dynasty, that is B. C. 2100, and they have greater osteological differences from common cattle than the fossil species of Europe B. primigeneus, longifrons and frontosus, have from each other, and their habits also differ. The Zebu of India seldom seeks the shade and never goes to stand knee deep in the water like the cattle of Europe. They run wild in parts of Oudh and Rohilcund and can maintain themselves in a region infested by tigers. They have given rise to many races. The European breeds of humpless cattle are extremely numerous perhaps fifty in number. The genus Bos readily yields to domestication. The three fossil-species are the parents of those of Europe, and the B. Indicus, the Yak, the Gayal, the Arni and the Bubalus have all been domesticated.—*Darwin Eng. Cyc.* See Bibos ; Bovidæ ; Bubalus ; Gavæus ; Mammalia ; Poephagus.

BOSCA TRINERVA, *Roxb.*, a large tree of the Circar mountains : the wood is not known, nor if it be used in the arts.—*Rohde MS. S.*

BOSCAWEN, a British admiral who, in 1749, sailed for India with a great armament. On his arrival at Fort St. David, he took command of all the land and sea forces, and marched against Pondicherry, to which he laid siege on 23rd June 1748, but raised the siege in November. In 1749 he took part in the war against Tanjore. In August he received Madras from the French, and in October returned to England.

BOSTAN AFROZ, HIND., Celosia cristata.

BOSWELLIA. A genus of plants, of which the B. glabra and B. serrata, syn. of B. thurifera occur in India, they yield a fragrant gum resin called Luban, *Arab*, also Kundur *Arab*, supposed to be the Λιβανος of Theophrastus, and the Thurea virgo of the Romans. It seems to be the olibanum and identical with the frankincense that was used by the ancients in their religious ceremonies. Dr. Carter described, and figured the frankincense tree of Arabia, and Captains Cruttenden, Vaughan and Kempthorne have noted the presence of frankincense trees in the Somali country. Dr. Birdwood described three of these trees with figures, and is of opinion that the Frankincense, or Olibanum of commerce, is obtained from the Somali country, and from Hadramaut in Arabia, being partly re-exported from India to Europe. He described five plants under this genus, and named the three new ones—Boswellia Carterii (Mohr Madow of the Somali); Boswellia Bhau Dajiana (Mohr Add of the Somali), and Boswellia Frereana (Yegar of the Somali.)

The frankincense of India is the produce of a species of Boswellia. Olibanum is yielded by Boswellia serrata or B. thurifera. B. glabra yields a resin, also used as incense and as pitch, and resins analogous to olibanum are obtained from species of Croton, Bailleria, Amyris, Icica, and Lœtia, of America.

BOSWELLIA GLABRA.—*Roxb.*

Its gum resin.

Salaee	HIND.	Moraeda	TAM.
Koonthareekum	MAL.	Googola	TEL.
Koondricum	TAM.	Googoolapoo chettoo	TEL.

A small tree; leaves pinnate, deciduous: flowers terminal, small, white with a red nectary, anthers yellow; yields the gum salai, a resin, which is used as incense and for pitch in some parts of India. It is a native of the mountainous districts of Coromandel. This tree is very rare to the west of the Jumna. It yields the odoriferous gum resin called "gúgal."—*Powell, Hand-book. Econ. Prod. Punjab. Roxb. Rohde MS. S.* See Olibanum.

BOSWELLIA SERRATA.—*Stach.*

B. thurifera Coleb.—*Roxb. II.* 283.

Salai	BENG.	Luban	BENG.

This tree grows in the Coromandel mountains, in the south Concan, in the jungles above Rajoor, in the hill of Shendoor in Belgaum. It produces the gum resin olibanum, (Koondurroo, Hind.) which is chiefly used as a grateful incense, but given internally is stimulant, astringent and diaphoretic, *Voigt*—148. *Roxb. II*, 383.

BOSWELLIA THURIFERA.—*Roxb.*

Boswellia serrata.—*Stach.*

Luban.	DUK. HIND. PERS.	Parangi Sambrani	TAM.
Awul kandur	HIND.	Kunduru	TEL.
Dup-salai	HIND.		

A tall tree with pinnate leaves, which yields the olibanum, it grows on the hills of the Deccan; in the Koncan jungles, above Rajoor, in the hill of Shendoor, in the Belgaum collectorate, in Bundlekund, it is a native of the mountainous tracts of Central India, and very common in the Shahabad country. Dr. Hooker remarks of this plant, that, in ascending from Belcuppee in Behar to the height of 1,360 feet, he came upon a small forest of the Indian Olibanum *Boswellia thurifera*, conspicuous from its pale bark and spreading curved branches, leafy at their tips; its general appearance being a good deal like that of the mountain ash. The gum, celebrated throughout the East, was flowing abundantly from the trunk, very fragrant and transparent. The *Salai* or *Salar* tree, *Boswellia thurifera*, remarks Dr. Irvine, is plentiful in the Ajmeer hills: the gunda birosa is prepared from the gum resin of this tree, and is similar in appearance and qualities to Venice turpentine. It is brought from Mewar, Haraotee and the Shekhawattee hills: and is considered stimulating: an oil is distilled from it, said to cure gonorrhœa. It is used also in ointments: much used in painting and by the lakheri, one maund costing twelve rupees from the Shahabad country, Dr. O'Shaughnessy obtained fine specimens of the resinous products there called *sale gond or sale lassa.* At Chandalgur it is termed *gunda biroza*, and in the dry state *sukha biroza.* Dr. Hamilton, however, thought the English olibanum to be the produce of an Amyris, partly because he could not find that the "sale" resin was used as incense by the hindoos. The tree, also, grows at Chota Nagpore where its wood is soft and white. The B. glabra and B. thurifera both furnish the male frankincense of Dioscorides. The resin olibanum occurs in reddish or pale yellow tears, oval, oblong, and obtuse, sometimes, in dense, opaque brittle masses. The gunda barosa of the bazars is soft, ductile, opaque, greenish and white. The odour is balsamic and resinous, especially while the resin is burning; the flavour balsamic, and rather bitter. The powder, is citron yellow. It is frequently adulterated by dammer, sandarach, and other cheaper resins; when chewed the hard variety softens, and dissolves partially in the saliva, which it renders white and emulsive.—*O'Shaughnessy, Hooker Him. Jour. p.* 29. *Med. Top. of Ajmeer. Cal. Cat. Ex.* 1862. *Mr. Rohde, MS. S.* See Gums and Resins.

BOT, also written Bhot, the race occupying Tibet, Bhutan, Ladakh and Balti. Their language is the oldest of the Turanian formations. See Bhot.

BOTA KADIMI; also, Botta kadapa chettu, TEL. Nauclea parvifolia, *R.* I. 513; the Telugu is from the resemblance of the capsule to the stamp used for impressing the *bottu* or sectarial marks of the *Madhwa-charya* bramins.

BOTANY. There has not been any branch of Natural Science, in its relation to India and the East, so devotedly followed out as Botany. Whether we regard the personal labour undertaken or the vast sums expended by its cultivators, or the important advantages which Eastern countries have derived from them, their names ought ever to be kept in remembrance. During the past three hundred years, amongst others, are Governor Henry van Rheede, George Everhard Rumphius, Leonard Plukenet, John Gerard Koenig, Dr. John, Klein, Rottler, Sonnerat, Thunberg, the elder John Burmann and the younger Nicholas Laur, Burmann, Hermann. Father Loureiro; Dr. William Jack, Drs. Jones, Fleming, Hunter, Anderson, Berry, Heyne, Buchanan Hamilton, Russell, Noton, Shuter, Govan, Finlayson, Dr. William Roxburgh, Dr. Wallich, Dr. John Forbes Royle, Blume, Horsfield, Moon, Voigt, Jacquemont, Graham, Mr. Bentham, Dr. William Griffiths, Dr. Wight, Dr. J. D. Hooker, Dr. Thomas Thomson, Dr. J. D. Stewart, Dr. Hugh Cleghorn and Major Beddome, all of whose names are familiar to the scientific world of Europe and notices of them will be found in this work, under their respective headings.

Agricultural Societies and their gardens have been formed at Calcutta, Saharunpore, Dapoolie in Bombay, Madras, Bangalore, and Ootacamund, whose specially adopted province it is to attend to the introduction of new plants into India and to the useful application of the natural products of the country. Dr. Royle, writing many years ago on the practical benefits of the Calcutta Botanic garden, mentions amongst them, the diffusion of the teak, mahogany, logwood, and casuarina, though the teak is of slow growth, requiring from sixty to eighty years to attain the proper size and maturity for ship-building.

Among the plants which appeared to him worthy of introduction from America into India, the different kinds of Ipecacuanha as Cephælia Ipecacuanha affording the best, and Psychotria emetica and P. herbacea, Richardsonia brasiliensis, rosea, and scabra, which give inferior kinds; Sarsaparilla, Jalap, Quassia, Guaiacum, Cusparia, Cascarilla, Copaifera, yielding Balsam of Copaiba; Balsams of Tolu and Peru Trees; Polygala senega, Krameria triandra; Coutarea speciosa, a substitute for Peruvian Bark, and Baccharis genistelloides is another; Dipterix odorata yielding the Tonquin Bean; Brazil Wood, Cæsalpinia braziliensis; Rosewood, Jacaranda ovalifolia; Hevea guianensis yielding caoutchouc, as well as the Lobelia yielding the same substance; Schinus molle; Gum elemi tree; Bertholletia excelsa, or Brazil nut tree, as all worthy of introduction as well as others—as the Cabbage Palm; Araucaria imbricata; Orchideæ, among them the Vanilla; Passion Flowers and Fuchsias, as ornamental plants; Ilex Paraguensis, affording the Mate Tea, might also be introduced, and from the East of Africa the Calumba plant and Telfairia volubilis. Many of the Cruciferæ are cultivated as oil seeds; it is worthy of experiment whether those cultivated in Europe for the same purpose, as Brassica napus and campestris, are more productive than the Indian species. Black and white mustard might, without doubt, be successfully cultivated, if introduced. Vines of a superior kind would be a great acquisition in northern India. The Carob tree is particularly desirable. The Olive, there is great probability, would succeed, as also the Cork-tree, with the Ilex, Kermes, Dyer's and Barbary oaks. The Laurel and Sweet Bay, Manna, Ash, Pistachio, Mastich, and Venice Turpentine-trees; the species of Cistus yielding ladanum; Styrax officinalis yielding Storax; the species of Astragalus affording tragacanth. Sumach, Savine, Scammony, and Colocynth, might all be grown, as well as some of the drugs of colder climates, as Foxglove, Belladonna, Hemlock, and many others. With these also some African plants,, as Zizyphus lotus; Dragon's Blood Tree; Acacia vera, nilotica and Seyal; and from Persia, Gum Ammoniac and galbanum with a myrrh from Arabia.

The total estimated number of Indian species likely to be included in Hooker and Thomson's Flora Indica are 12,000 to 15,000. The climate of India is generally tropical, and even on mountains of 4,000 to 5,000 feet, the vegetation is temperate. The perennially humid forests are uniformly characterized by the prevalence of ferns and at elevations below 5,000 to 7,000 feet, by the immense number of epiphytal Orchidaceæ, Orontiaceæ and Scitamineæ. They contain a far greater amount of species than the deer forest of N. India, and are further characterized by Zingiberaceæ, Xyrideæ, palms, Pandaneæ, Dracæna, Piper, Chloranthus, Artocarpeæ and Fici; the Urticaceæ, Araliaceæ, Apocyneæ, shrubby Rubiaceæ, Aurantiaceæ, Garciniaceæ, Anonaceæ, Nutmegs and Dipterocarpeæ.

In the Himalaya, the truly temperate vegetation supersedes the subtropical above 4,000 to 6,000 feet, an elevation at which there generally is an annual fall of snow.

Several species of Australian genera, Myrtaceæ, the Leptospermum, Bæckia and Metrosideros, are found in the Malay peninsula. The Malayan Archipelago type forms the bulk of the flora of all the perennially humid regions of India, the Khassya mountains, the upper Assam valley, the forests of the base of the Himalaya from the Brahmaputra to Nepal, the Malabar Coast, Ceylon, and the whole of the Malayan peninsula, many of the plants being identical with Javanese mountain species. Gualtheria nummularia ranges from the N. W Himalaya to Java, and the more conspicuous of the trees common to Java and India are the Sedgwickia cerasifolia, *Griff*, which is undoubtedly the Liquidamber altingia, *Blume*, Marlea extending from China to Kashmir. The curious Cardiopteris lobata of Java, is also a native of Assam, and several oaks and chesnuts, Antidesmæ, a willow, and Myrica, are common to Khassya and Java.

The Chinese type is abundant in the temperate regions of the Himalaya, extending westward to Garhwal and Kumaon, but is most fully developed in Sihkim, Bhotan and the Khassia, and, as examples, are species of Aucuba, Helwingia, Stachyurus, Enkianthus, Abelia, Skimmia, Bucklandia, Adamia, Benthamia, and Corylopsis, all of them genera that have been regarded almost exclusively Japanese and Chinese; also Microptelea parviflora, Hammamelis Chinensis, Nymphæa pygmæa, Vaccinium bracteatum, Quercus serrata, Illicium, Thea, Magnolia, the Schizandreæ, Lardizabaleæ, Camellia, Deutzia, Hydrangia, Viburnum, Corneæ; Houttuynia, Bowringia, Wikstræmia, Daphneæ, Henslovia, Scepa, Antidesma, Benthamia, Goughia: Euryale ferox which is wild in the Gangetic delta, and is found as far westward as Kashmir, is abundant in China, and Nepenthes phyllamphora, a native of the Khassya mountains, is also found at Macao and eastward to the Louisiade Archipelago.

European plants abound in India: 222 British plants extend into India and a multitude of mountain plants and many of the most conspicuous ones of Europe range from the coasts of the Levant and the Black sea to the Himalaya, as Corylus colurna, Quercus ilex, Ulmus campestris, Celtis Australis C. Orientalis. Few European species, comparatively extend into Nepal and still fewer occur in Sikkim.

Egypt, Southern Arabia, the warmer parts of Persia, Beluchistan, Sind and the Punjab, have a remarkable similarity of climate. Many north African or Arabian forms extend throughout all the drier parts of India, others are restricted to northern and western India, and though tropical Asia and Africa are separated by a vast expanse of ocean, there is a great similarity in the families of the trees and shrubs and an affinity can be traced between the mountain vegetation of western tropical Africa and that of the peninsular chain.—*Royle on the productive resources of India. Wight's Prodromus Floræ Indicæ. Hooker et Thomson's Flora Indica.*

BOTANG, Hind. Dolichos uniflorus; also Juglans regia.

BOTAURUS STELLARIS. 'Common Bittern' of Europe, Asia, all Africa: common in India.

BOTEL TOBAGO XIMA, great and little, extend from lat. 21° 58' N. to long. 121° 36' E. the former 7½, and the latter 3½ miles long.

BOTER. Dut. Butter.

BOTLA BENDA, Tel. Abutilon Indicum, *W. & A.*—Sida Asiatica, *R. iii.* 179.

BOTOENS, Port. Buttons.

BOTONES, Sp. Buttons.

BOT-PA, a race occupying Ladak, or little Tibet. They speak the Tibetan language, and are buddhists, with a hierarchy of monks called Lama. See Bhot. Bot.

BO-TREE, Anglo-Singh. Ficus religiosa, one of these is to be found within the precincts of every buddhist temple in Ceylon, and it is frequently met with in deserted localities, or near the sites of ancient villages; but the occurrence of a solitary Bo tree, with its circular buttress of stonework round the stem, indicates the existence, at some former period, of a buddhist temple in the vicinity. The planting of the Bo tree in Ceylon, a ceremony coeval with, and typical of, the introduction there of buddhism is one of the most striking passages in the Mahawanso; and a tree of unusual dimensions, which occupies the centre of a sacred enclosure at Anarajapoora, is still reverenced as the identical one which the sacred books record to have been planted by Mehindu, 306 years before the Christian era consequently in the year 1900, it will be 2207 years old. So sedulously is it preserved, that the removal of a single twig is prohibited, and even the fallen leaves, as they are scattered by the wind, are collected with reverence as relics of the holy place. On the altars, at the foot of these sacred trees, the Buddhists place offerings of flowers, and perform their accustomed devotions. At Anarajapoora, another account says, it was planted in the 18th year of the reign of king Devenipiatissa or B. C. 288. According to tradition it was beneath a Bo tree that Goama became a Buddha.—*Tennent's. Ceylon. Christianity in Ceylon, p.* 335. *Hardy's Eastern Monachism, p.* 434. See Inscriptions, p. 384.

BOTRYCHIUM VIRGINICUM. This large succulent fern grows plentifully in the Raklang Pass in the Sikkim Himalayas; it is boiled and eaten, both there and in New Zealand. Indeed ferns are more commonly used for food than is generally supposed. In Calcutta, the Hindoos boil the young tops of a Polypodium with their shrimp curries; and both in Sikkim and Nepal the watery tubers of an Aspidium are abundantly eaten. So also the pulp of one tree-fern affords food, but only in times of scarcity, as does that of another species in New Zealand (Cyathea medullaris): the pith of all is composed of a coarse sago, that is to say, of cellular tissue with starch granules.—*Hooker. Him. Jour. p.* 292. See Ferns.

BOTRYTIS BASSIANA. See Dry Rot.

BOTTA. A native of France who along with Mr. Layard made large researches at Nineveh. During the entire period of his excavations, M. Botta sent to Mr. Layard not only his descriptions, but copies of the inscriptions.—*Layard's Nineveh. Vol. I, p.* 13-14.

BOTTEGHE in Syria, their proprietors are generally Greeks with some Italians.—*Skinner's Overland Journey, Vol. I, p.* 23.

BOTTELLAS. Sp. Bottles.

BOTTIGLIE, also FIASCHI. It. Bottles.

These glass or stone-ware vessels for holding liquids are of various shapes and sizes. A bottle manufactory was once established in the vicinity of Madras, but it has long been discontinued and bottles of every kind are now imported from Europe into India. The leather bottle, "budla," in which the people of India carry ghee and oil, is manufactured in many places by stretching skins over a clay model which is afterwards broken and shaken out.

BOTTONI. It. Buttons.

BOUEES. Fr. Buoys.

BOUEIA BURMANNICA, *Meisner.*

Cambessedia, *W. & A.*
Mangifera oppositifolia, *Roxb.*
Manga sylvestris, *Rumph.*

Mariam	Burm.	Mai-een	Burm.

Commonly cultivated by the Burmese. It is a small tree ; drupe the size of a hen's egg.

BOUEIA MACROPHYLLA.

Roomaniya Baitool. Malay.

This inhabits Malacca.

BOUEIA MICROPHYLLA.

Roomaniya Paigo. Malay.

The habit of these two species is different from that of the Burmese one, the leaves more coriaceous, and the secondary veins more distinct. The fruit of both is eaten by the Malays. They have the characteristic acidity, but make excellent pickles. *Cantor.—Ben. As. Soc. Jour.* 1854.

BOUGAINVILLÆA SPECTABILIS.—*Juss.*

Showy Bougainvillæa. Eng.

Has been largely introduced into India.

BOUGHTON, Mr. Gabriel Boughton, Surgeon of the E. I. Company's Ship Hopewell, in 1639 or in 1644 was summoned to the Deccan from Surat to attend on a daughter of Shah Jehan who had been severely burned. He asked, as his reward, liberty for the E. I. Company to trade in Bengal free of duties.—*Broome List of the Bengal Army, London,* 1850.

BOULAC, a suburb of Cairo.

BOULMALA STONE, procured from the hill state of Dhenkanal, in Orissa : is used to make small mortars and the little tripods on which sandalwood is ground by natives.—*Cal. Cat. Ex.* 62.

BOURBON CHAMELEON. Chamæleo nasutus.

BOURBON, also called REUNION and MASCARHENAS, is an island of a round form above 42 miles from N. W. to S. E. A volcano near its S. E. part, is in Lat. 21° 9' S. It is larger than the Mauritius but it is only a great mountain cleft in three places, and clothed with wood, though portions below are cultivated. It was discovered by the Portuguese, who called it Mascarhenas. The French took possession of it in 1675. It was captured 10th July 1810 by the British, but restored at the general peace.—*Horsburgh.*

BOURBON TACAMAHACA. Calophyllum inophyllum.

BOURDONNAIS LA, sailed for India when only 14 years of age. He became the governor of Mauritius and Bourbon in 1734. He returned to France, but in 1746 he revisited India, had an encounter with the British fleet, and on the 10th September, he captured Madras, which capitulated but was ransomed on the 10th October. He returned to France but was captured on his way. He was shortly after released, in consideration of his lenient treatment of Madras, but on arriving in France, he was thrown into the prison of the Bastile where he lingered for three years and then died. Dupleix was jealous of him and caused his imprisonment. He introduced cotton and indigo into the Mauritius.

BOURIAT MONGOL, a nomade people, living in the province of Irkoulsk, to the south of lake Baikal.—*Timkouski, Journey to Peking, Vol. I, p.* 380. See Kirghis.

BOURO ISLAND, one of the Moluccas, Fort Defence, being in Lat. 3° 22¾' S. Long. 127° 4' E. in Lat. 3° 6' S. Long. 125° 57' E. The island is high and has a semi-circular mountain on its N. W. part. The island has two races, the larger number are Malays of the Celebes type, often exactly similar to the Tomore people of East Celebes, who are settled in Batchian, but the other race resemble the Alfura of Ceram. Amongst its birds are the two king fishers Tanysiptera acis and Ceyx cajeli. A beautiful sun bird Nectarinea proserpina, and a black and white flycatcher Monarcha loricata.—*Wall.*—76, 79.

BOUTON ISLAND on the east side of the Gulf of Boni, is of middling height and hilly.

BOUTONS. Fr. Buttons.

BOUTTEILLEN. Ger. Bottles.

BOVIDÆ, a family of mammals, of the order Ungulata. The Bovidæ embrace the antelopes, goats and cattle, and those occurring in in S. Eastern Asia, may be thus enumerated.

Fam. Bovidæ, Antelopes, goats and cattle.

Sub-fam. Antelopinæ, of 7 genera and 10 species, viz :

7 Genera of Tragilophinæ or Bush Antelopes.

1 Portax :
1 Antelope :
1 Kemas ;
1 Tetraceros :
3 Gazella ;
2 Procapra and
1 Saiga.

Sub-fam. Caprinæ, goats and sheep, viz :

1st. Capricorns or Antelope goats, or Mountain antelopes : which includes three species of the genus.

2nd. True goats with the genera Hemitragus, two species ; Capra, three species, and eight species of Ovis.

Sub-fam. Bovinæ, of which, in India, there are two species of the genus Gavæus, and one species of Bubalus.

The *Bisontines* sub-divide into the Bisons proper, and the Yak. All have cylindrical horns, very slight naked muzzle, (most developed in the European *Zubr*), and are clad with long shaggy hair, especially on the head, chin, and fore-quarters. The tail is short, not reaching below the hocks.

The Caucasian Bison (*B. caucasicus?*) is an animal little known. It is supposed to be distinct from the Lithuanian *Zubr* ; has a black dorsal stripe, which is not seen in the latter, and differently shaped hoofs. There is also a slight difference in the horns. According to Professor Nordman, who was employed in 1836 on a scientific mission in the Caucasus, "this animal, though no longer occurring near the high road from Tamar to Teflis, &c., is not very scarce in the interior of Caucasia. Herds are still found in a few districts by the river Kuban ; and the animal is met with on Mount Caucasus from the Kuban to the sources of the Psih, a distance of about 115 English geographical miles. Near the Kuban it is met with, in swampy places, all the year round. In the country of the Abazechians (Abchasians?) it repairs to the mountains in summer, and is then frequently killed by the Psoeh and other Caucasian tribes. Late in autumn it descends from the mountains to visit the pastures in valleys. It is particularly numerous in the district of Zaadan. Lieut. Lissowski, who studied at Wilna, and possesses a thorough knowledge of the *Zubr* of Lithuania, assured him at Bombari, that the latter animal was *not very different* from that of Caucasia."—(*Vide* Weissemborn, in *Ann. Mag. Nat. Hist., Vol, II, pp.* 254 *and* 291.)

A kind of Bison or *Zubr* (more probably the great *Taurine* 'Urus,' or some animal akin to it,) is mentioned in the *Travels in Tartary* of the old traveller Bell, as existing in his time in the country of the Tzulimm Tartars.—(*Vide Journey from Tomsky to Elimsky, Vol. I., ch. iii., p.* 224.) "On the hills, and in the woods near this place," he "remarks, are many sorts of wild beasts, particularly the Urus, or Uhr-Ox, one of the fiercest animals the world produces. Their force is such, that neither the wolf, bear, nor tiger dare to engage with them. In the same woods is found another species of oxen, called *Bubul* by the Tartars. It is not so large as the Urus ; its body and limbs are very handsome ; it has a high shoulder and flowing tail, with long hair growing from the rump to its extremity, like that of a horse. Those which I saw were tame, and as tractable as other cattle." Here there is a distinct notice of the Yak (both wild and tame) in a part of Asia where it would appear to be now quite unknown! The name *Bubul* applied to it has probably its connexion with *Bubalus*. Remains of extinct bisons have been found in Siberia, and of three or four species in North America, as figured by Cuvier and by Harlan and others; and there is really some difficulty to imagine that our modern European Bison could, under any circumstances, have developed horns, the *bony cores* of which measure 2¼ feet " from base to point upon the outer curve, 17 inches in vertical diameter, [circumference?--surely not bow-string diameter, which gives an amount of curvature quite unintelligible in the particular race or species,] and 4 inches from front to back at their base ;" as in a specimen of *Bison priscus* from Clacton, in Essex, noticed in the *Ann. Mag. Nat. Hist., 2nd series, Vol. XX., p.* 393. The largest horns of the existing Lithuanian *Zubr* do not exceed 18 inches round the outer curvature, and this with their investing corneous sheath! The only known indigenous Bovines of America are its peculiar living bison, the Musk Ox of the Arctic 'Barren grounds,' and the fossil Bisontine species referred to. Of one of the latter Z. possessed drawings of a most peculiar frontlet, with narrow yet Bisontine forehead and thick horn-cores, stated to be from the celebrated deposit of 'Big-bone Lick' in Kentucky, of a dwarf species, which seems to be undescribed to this day.

Z. had not seen the skull of a Yak of pure blood, but suspected that it has not the protrusile tubular orbits of the true Bisons. The general form appears to be a step nearer to the Taurines, and there is no less inequality of the fore and hind-quarters: still 14 pairs of ribs: long hair on the fore-quarters and pendent from the flanks but the most striking peculiarity is the 'chowry' tail.' Z. in Indian Field.

BOVRA KORRO. PERS. Lit. Black-breast: a large desert partridge in northern Persia. Ptereocles exusta.

BOW. Throughout South Eastern Asia, the bow has almost disappeared, the only people using it constantly in war and for the hunt, being the Andamaners—but at the annual "langar" of the nizam of Hyderabad, there are still to be seen a few soldiers in the procession, armed with bows. Recently too in the beginning of 1870, I met a small body of men, seemingly on some predatory excursion, one of whom was armed with the bow and a quiver full of arrows. In April 1863, a few days before I arrived at the Andamans, a British sailor was killed by the arrow of an Andamaner who was captured.

BOWANI, or Kali, the consort or sacta of the hindu god Siva, a terrible goddess, delighting in blood and blood sacrifices. This goddess is supposed to have inspired Sivajee to murder Afzul Khan, the general of the emperor of Delhi. At a conference, Sivaji struck Afzul Khan with a wag-nak and finally dispatched him with the beautiful Genoese blade called Bowani which he always wore. That sword, down to the time of the British supremacy had a little temple for itself, in the palace of Sivaji's descendents, and it was annually worshipped by them and their household, not as a mere act of veneration for their ancestors trusty sword, but because it was the chosen instrument of a great sacrifice and the attendant who watched it used to say that no doubt some of the spirit of Bhawani must still remain in. Many towns and rivers are named after her. See Chamunda, Devi, Kali.

BOWANIGUNGE, two towns one in L. 88° 54′ E. and L. 26° 31′ N., another in L. 89° 32′ E. and L. 26° 31′ N. Bowanghaut, in L. 89° 28′ E and L. 24° 56′ N., Bowanipoor, three towns, one in L. 89° 30′ E. and L. 24° 34′ N., another in Long. 86° 6′ E. and Lat. 20° 15′ N., a third in L. 87° 17′ E. and L. 25° 38′ N., Bowannee, in L. 73° 0′ E. and L. 31° 28′ N.

BOWANY, a river that rises at the eastern foot of the Neilgherry hills and joins the Cauvery river in Coimbatore, at the town of Bowany.

BOWCHEE, in Ahmedabad, a cereal,—not identified: but in Bombay, fruit of Flacourtia sapida.

BOWENPILLAY, a small hamlet 7 miles N. W. of Hyderabad.

BOWNEE GANGA, a river near Samote in Ajmir.

BOWNG JWE. A tribe in Burmah.

BOWRING, Sir John, K. C. B, Governor of Hongkong, but best known as an author by his political and literary writings. He was born at Exeter in 1792, and became, in early life, the political pupil of Jeremy Bentham, maintaining his master's principles for some years in the "Westminister Review," of which he was the editor. He also distinguished himself by an extraordinary knowledge of European Literature, and gave the public a number of pleasant versions of poems, songs and other productions, from the Russian, Servian, Polish, Magyar, Danish, Swedish, Frisian, Dutch, Esthonian, Spanish, Portuguese, and Icelandic. The University of Groningen in Holland, conferred on him the degree of LL.D. He early made the economies and literature of trade and commerce an especial study, and at various times was commercial commissioner from Britain to France, the States of the German custom union, and the

Levant; under Earl Grey's government he was a commissioner for investigating the Public Accounts. In 1849 he was appointed British Consul at Hongkong and superintendent of trade in China and subsequently acted as plenipotentiary in that country. He returned to England in 1853, and in the following year received the honor of Knighthood and the Governorship of Hongkong, which he held with the chief military and naval power. He sat in Parliament from 1835 to 1837, and again from 1841 to 1849. He wrote Bowring's Siam and a work on the Phillippine islands.

BOWRINGIA, a very curious and interesting genus of fern, found at Pomrang in the Khasia Hills, but it is only known to occur elsewhere at Hongkong in China.—*Hooker Him. Jour. Vol. II. page* 313. See Hamamelis Chinensis.

BOWSA, HIND.? A tree of Chota Nagpore. Soft, white timber.—*Cal. Cat. Ex.* 1862.

BOWSTRING HEMP. Fibre of Sanseviera zeylanica.

BOX WOOD.

Palm-hout	DUT.
Buis	FR.
Buchsbaum	GER.
Teashur	HEBREW.
Busso. Bosso. Bussolo	IT.

This is a valuable wood of a yellowish colour, close grained, very hard, and heavy, it cuts better than any other wood, and is susceptible of a very fine polish. This wood was highly valued by the ancients as a material for musical instruments, *buxus*, the name by which it was known, often standing for a "flute;" and, in Britain, it is said by Evelyn to have been "of special use for the turner, engraver, mathematical-instrument maker, comb, and pipe-maker, and that the roots furnished the inlayer and cabinet-maker with pieces rarely undulated, and full of variety. Also of box are made wheels or shivers and pins for blocks and pulleys; pegs for musical instruments: nut crackers, weavers' shuttles, hollar-sticks, bump-sticks, and dressers for the shoe-maker, rulers, rolling-pins, pestles, mall-balls, beetles, tops, chess-men, screws, bobbins for bone-lace, spoons and axle-trees." One species grows in the south of Europe and West of Asia. But a species of Box-wood has been introduced into Britain from the Himalaya; it is the Buxus emarginatus of Dr. Wallich. This is found of considerable size and thickness, and outwardly the wood appears as good and compact as that of the Box-wood in use in Europe. On actual comparison the Himalayan Box-wood is found to be softer than the common kinds, but is like them in other respects, and wood-cuts have been engraved upon it.

The Agricultural and Horticultural Society of India awarded a prize to Captain W. Hay for bringing to notice the box tree of the Nepaul valley, where it is large and more abundant than in other parts of the Himalaya. (*Jour. A. H. Soc., XI.* 413. 1859). Logs are available six feet long and twenty-two inches in girth. It is however found in the valleys of the Sutlej, Parbati, and near Dharmsalla, and in the Salt Range; sometimes attains a girth of 20 inches or more. The Himalayan box appears to be identical with the tree common all over South Europe from Gibraltar to Constantinople, and extending into Persia. It is found chiefly in valleys, at an elevation of from 3 to 6,000 feet. Dr. Stewart met with it from Mount Tira near Jhilam to Wangtu bridge on the Sutlej. It is variable in size, being generally 7 to 8 feet high and the stem only a few inches thick, but attaining sometimes a height of 15 to 17 feet, as at Manikarn in Kulu, and a girth of 22 inches as a maximum. The wood of the smaller trees is often the best for the turner and wood engraver. It is made into little boxes by the villagers for holding ghee, honey, snuff and tinder. It is in demand for plugs for Minie rifle balls, and at the Medical Stores at Sealkote it is turned into pill boxes; it is useful for trenails and wedges. It is carved into neat boxes for holding ghee, snuff, tinder, &c. The wood is liable to split in the hot weather, and should be seasoned, and stored under cover. Thunberg says that *Buxus virens* was not uncommon in Japan, in a wild and cultivated state. Of its fine and close wood, combs were made, which, when lacquered with red varnish, were used by the ladies to stick in their hair by way of ornament. The annual consumption in Great Britain exceeds 2,000 tons, half of which is of foreign growth. The imports in 1847 were 889 tons; in 1848, 1306 tons; and in 1849, 1124 tons. Price £ 4 to £10 per ton. The Karens sometimes furnished Mr Mason with specimens of a wood that can scarcely be distinguished from the box-wood of Europe. He had never seen the tree, but named it a Murraya. Wallich found *Nauclea cordifolia* on the banks of the Irrawaddy, which has "wood coloured like that of the box tree, but much lighter, and at the same time very close grained." It may possibly be the same tree, although the Tenasserim wood is not light; or it may be a Tavoy tree, which he says has "a strong tough wood, in grain like box."—Dr. Hunter highly praises the wood of the Euonymus dichotomus of the Pulney hills.—*Cleghorn. Punjab Report, p.* 105. *Statistics of Commerce, p.* 36. *Thunberg's Travels. Vol. III. pp.* 83, 227. *Dr. Mason. Dr. J. L. Stewart, Powell's Handbook. Dr. Hunter in Newspapers. Faulkner. Royle. Illust. Himal. Bot. p.* 327. *John's Forest trees of Britain No. II, p.* 166. See Buxus.

BOX WOOD. Syn. of wood of Sarcococca trinerva.

pieces, and these are rivetted and cemented to form the bracelets, some of which are elaborately carved, and inlaid with a composition of lac and a red pigment. A pair of bracelets of this description frequently costs as high as 80 Rupees. Of the thick pieces of the shells, beads are made to form the necklaces, which the Bengal sepoys wear.

Some Marwari women and the Binjara women have the entire forearm from the wrist to the elbow covered with heavy massive bracelets and the lower part of the legs equally covered with anklets. The armlets of the Binjara women are deer horn. Amongst the Rajputs, the women adopt a brother by the gift of a bracelet. The intrinsic value of such pledge is never looked to, nor is it requisite it should be costly, though it varies with the means and rank of the donor, and may be of flock silk and spangles, or gold chains and gems. The acceptance of the pledge and its return is by the Katchli, or corset, of simple silk or satin, or gold, brocade and pearls. Colonel Tod was the *Rakhi bund Bhae*, of the three queens of Oodipoor, Boondi, and Kotah, besides Chund-Bae, the maiden sister of the Rana; as well as of many ladies of the chieftains of rank. Though the bracelet may be sent by maidens, it is only on occasions of urgent necessity or danger. The festival of the bracelet (Rakhi) is in spring. The adopted brother may hazard his life in his adopted sister's cause, and yet never receive a mite in reward, for he cannot even see the fair object who, as brother of her adoption, has constituted him her defender.—*Tods' Travels in Rajasthan.* See Phyllactery; Talsam; Tawiz.

BRAHEMAN, in L. 67° 44′ E. and L. 30° 6′ N.

BRAHM, OR PARA BRAHM, the Supreme being, is a name that first appears, in hindu religious books, in some of the best upanishads, or appendages to the Vedas, of later date than the first three and introducing a different and superior theology. It seems to have been a first effort towards the recognition of a creator, and hindus of the present day recognise that the Almighty, infinite, the eternal, incomprehensible, self-existent being; he who sees every thing, though never seen; he who is not to be compassed by description, and who is beyond the limits of human conception; he from whom the universal world proceeds; who is the lord of the universe, and whose work is the universe; he who is the light of all lights, whose name is too sacred to be pronounced, and whose power is too infinite to be imagined, is Brahm! the one unknown, true being, the creator, the preserver, and destroyer of the universe, from whom all souls come and to him again return. Under such, and innumerable other definitions, is the Deity acknowledged in the Vedas, or sacred writings of the hindus; but, as has been judiciously observed," while the learned Brahmans thus acknowledge and adore one God, without form or quality, eternal, unchangeable, and occupying all space, they have carefully confined their doctrines to their own schools, and have tacitly assented to, or even taught in public, a religion, in which, in supposed compliance with the infirmities and passions of human nature, the Deity has been brought more to a level with our own prejupieces, and these are rivetted and cemented to form the bracelets, some of which are elaborately carved, and inlaid with a composition of lac and a red pigment. A pair of bracelets of this description frequently costs as high as 80 Rupees. Of the thick pieces of the shells, beads are made to form the necklaces, which the Bengal sepoys wear.

Some Marwari women and the Binjara women have the entire forearm from the wrist to the elbow covered with heavy massive bracelets and the lower part of the legs equally covered with anklets. The armlets of the Binjara women are deer horn. Amongst the Rajputs, the women adopt a brother by the gift of a bracelet. The intrinsic value of such pledge is never looked to, nor is it requisite it should be costly, though it varies with the means and rank of the donor, and may be of flock silk and spangles, or gold chains and gems. The acceptance of the pledge and its return is by the Katchli, or corset, of simple silk or satin, or gold, brocade and pearls. Colonel Tod was the *Rakhi bund Bhae*, of the three queens of Oodipoor, Boondi, and Kotah, besides Chund-Bae, the maiden sister of the Rana; as well as of many ladies of the chieftains of rank. Though the bracelet may be sent by maidens, it is only on occasions of urgent necessity or danger. The festival of the bracelet (Rakhi) is in spring. The adopted brother may hazard his life in his adopted sister's cause, and yet never receive a mite in reward, for he cannot even see the fair object who, as brother of her adoption, has constituted him her defender.—*Tods' Travels in Rajasthan.* See Phyllactery; Talsam; Tawiz.

BRAHEMAN, in L. 67° 44′ E. and L. 30° 6′ N.

BRAHM, or **PARA BRAHM**, the Supreme being, is a name that first appears, in hindu religious books, in some of the best upanishads, or appendages to the Vedas, of later date than the first three and introducing a different and superior theology. It seems to have been a first effort towards the recognition of a creator, and hindus of the present day recognise that the Almighty, infinite, the eternal, incomprehensible, self-existent being; he who sees every thing, though never seen; he who is not to be compassed by description, and who is beyond the limits of human conception; he from whom the universal world proceeds; who is the lord of the universe, and whose work is the universe; he who is the light of all lights, whose name is too sacred to be pronounced, and whose power is too infinite to be imagined, is Brahm! the one unknown, true being, the creator, the preserver, and destroyer of the universe, from whom all souls come and to him again return. Under such, and innumerable other definitions, is the Deity acknowledged in the Vedas, or sacred writings of the hindus; but, as has been judiciously observed," while the learned Brahmans thus acknowledge and adore one God, without form or quality, eternal, unchangeable, and occupying all space, they have carefully confined their doctrines to their own schools, and have tacitly assented to, or even taught in public, a religion, in which, in supposed compliance with the infirmities and passions of human nature, the Deity has been brought more to a level with our own prejudices and wants; and the incomprehensible attributes assigned to him, invested with sensible and even human forms." Upon this foundation the most discordant fictions have been erected, from which priestcraft and superstition have woven a mythology of the most extensive character. Mr. Ward describes the hindus as possessing three hundred and thirty millions of gods, or forms under which they are worshipped. Certain it is, that the human form in its natural state, or possessing the heads or limbs of various animals; the elements, the planets, rivers, fountains, stones, trees, &c., &c., have been deified, and become objects of religious adoration. The brahmans allege, " that it is easier to impress the minds of the rude and ignorant by intelligible symbols, than by means which are incomprehensible." Acting upon this principle, the supreme and omnipotent God, whom the hindu has been taught to consider as too mighty for him to attempt to approach, or even to name, has been lost sight of in the multiplicity of false deities, whose graven images have been worshipped in his place. To these deities the many splendid temples of the hindus have been erected, while, throughout the whole of India, not one has been devoted to Brahm, whom they designate as the sole divine author of the universe.—*(Coleman on the Mythology of the Hindus, p. 1.)* Strictly speaking, however, the religion of the hindus is a monotheism. They worship God in unity, and express their conceptions of the Divine Being, and his attributes, in the most awful and sublime terms. God thus adored is called Brahm, the One Eternal Mind, the self-existing, incomprehensible Spirit. But the will of God, that the world should exist and continue, is also personified by them, and his creative and preservative powers are made to appear as Brahma and Vishnu, while Siva is the emblem of the destructive energy; not however of absolute annihilation but rather of reproduction in another form. In the hindu religion, therefore, this triad of persons represent the Almighty powers of creation, preservation and destruction. In their metaphysics, Brahma is matter, Vishnu spirit, Siva time; or in natural philosophy, earth, water and fire. These three persons have wives, the executors of the divine will and the energies of their respective lords. And in the unbounded rage amongst hindus for personification, the sun, moon, and all the heavenly host; fire, earth and all natural phenomena, all nature, indeed,—the passions and emotions of human beings, their vices and virtues, are transformed into persons, and act appropriate parts in the turbulent history of man. The preservative and representative powers, being in constant action, are, as have been also their wives and children, fabled to have descended on earth innumerable times in divers places, for the instruction and benefit, including the profitable punishment of mankind. And these endless incarnations have been worked up by the poets with a wonderful fertility of genius and the pomp of language into a variety of sublime descriptions, interspersed with theological and moral texts, that at length they were received as inspired productions and became the hindu standard of truth. Brahma, the creative power, is not specially adored in temples, dedicated exclusively to him. His creative duties over, his portion of the divine activity ceased to operate on the hopes and fears of mankind. In their mythology, however, the hindus narrate fabulous persecutions and warfare which overthrew Brahma, his temples and worship; and the sects of Vaishnava and Saiva, now comprise all the individuals of the races in India, distinguished by the appellation of hindus. A philosophic few excepted, they are worshippers of a superstitious and idolatrous polytheism, and the hindu erects no altars to **Brahm**, the infinite, incomprehensible, self-existing spirit, " which illumines all, delights all, whence all proceed; that by which they live when born; and that to which all must return."—*(Hindu Pantheon, p. 4.)* The Narayana of the present hindus is rather the Spirit of God, moving on the water, and can be regarded but as the spirit of Brahm, (Ins. of Menu, ch. 1, v. 10,) though the two hindu sects claim for their Vishnu and Siva, the title of Narayana, and Brahma himself is sometimes called Narayana. At present, there will not be found two hindu families whose belief is identical, though almost all the educated of the people recognise one God under one name or another. God thus adored is **Brahm**; the One Eternal mind, the self-existing incomprehensible Spirit. From time to time great reformers rise condemning the prevailing hindu idolatry and so anxious are they to know the truth that every new teacher immediately gathers round him a number of disciples. But it is the work of man, without the basis of a revealed religion, and the zeal of the pupils soon calms down: in the meantime the bulk of the hindu people are engaged in spirit worship and hero worship; in the worship of the manes of ancestors; in the worship of men and animals; of the inanimate objects of nature and of natural phenomena, of forms of men and women and of shapeless blocks of stone and wood; some forms of hindu belief, are systems of rationalism, others are systems of philosophy, and others are physiological doctrines, with emblems to illustrate views entertained as to cosmogony and production which take the place of religion.—*Taylor; Moor; Coleman; Wilson.* See Upanishad.

BRAHMA, a word of doubtful origin, supposed by some to be from the Sanskrit "vrih" to increase. The word Brahma occurs in a hymn of the Rig-Veda, as a name of Sudra, and, according to Dr. Haug this word originally meant the strewing of the sacrificial grass on the spot appointed for the immolation.

Though the root of the word is supposed to be Brih or Vrih, signifying to increase one of the earliest meanings of the word "brahma," as used in the Veda, was "food" also riches. In the Rig-Veda, a more frequent meaning is sacrificial food. But, in the same work, the word Brahma is repeatedly used to express the song of the Soma singers, a magic spell; and is applied to ceremonies having a song of praise as their characteristic. In the language of the Zendavesta 'baresman,' an absolutely identical word, is found, which the Parsees interpret to mean a bundle of twigs, tied together with grass used in the Fire-worship like the bundle of Kusa grass used by the brahmans in the Soma sacrifices. In both worships the bundle is a symbol of 'growing increase' or 'prosperity,' and the name of the symbol was transferred to the texts, hymns, sacrifices and ceremonies used in the rites. "As sacrifice among the Vedic Indians was the chief means of obtaining all earthly and spiritual blessings, but was useless without the *brahma*, *i. e.* success, the latter was at last regarded as the original causes of all being."

BRAHMA, the son or creature of Brahma, with Siva and Vishnu, Brahma forms the Triad of hindu deities. According to the Reverend William Taylor, the name designates the creative power of deity operating on Maya matter. In two respects Brahma corresponds with the first man of the Jewish cosmogony. His colour is tawney or ruddy, the colour of earth, and in so far agreeing with the name of Adam; and Brahma as Swayambhuva, a son of the self-existant, corresponds with Adam. His origin is obscure. According to one account the egg of *Brahma* is the world, the orphic or mundane egg which floated amidst the water before creation, and from which Brahma, the first-born, according to some legends emerged; but which, according to others, merely resolved itself into the upper and lower spheres.—(*Hind. Theat. Vol. II. p. 58.*)

There is nothing extant to show either that Brahma ever had much consideration shown him, or that his worship was overwhelmed by the intrusion of the Vaishnava and Saiva religions. Sonnerat mentions (Voyage, p. 5) that in the translation which Mr. deMeffain ordered to be made, of the mysteries of the temple of Sri Rangam, (during the time he commanded in that pagoda, which the French had turned into a fort) that Brahma, in former time, had temples the same as Siva and Vishnu, and was worshipped separately, but the followers of the two last entirely destroyed the temples and worship of Brahma, in order to consign him to oblivion. There are, however, too few facts known to admit of other than speculation on this point. Of one thing, there is no doubt that he is the least important, at the present day, of the Hindu Triad, though termed the creator, or the ancestor of gods and men Under this denomination he has been imagined to correspond with the Saturn of the Greeks and Latins. Brahma is usually represented as a red or golden-coloured figure, with four heads. He is said (by the Saiva) to have once possessed five; but, as he would not acknowledge the superiority of Siva, as Vishnu had done, that deity cut off one of them. He has also four arms, in one of which he holds a spoon, in another a string of beads, in the third a water-jug (articles used in worship), and in the fourth the Veda or sacred writings of the hindus. He is frequently attended by his vahan or vehicle, the hansa or goose, or (as some allege) a swan.—(*Coleman, Mythology of the Hindus, p. 5.*) Brahma seems especially to be spoken of in the hymn, on the sacrificial ceremony of Purushamed'ha, which is stated by Mr. Colebroke to "be a type of the allegorical immolation of Narayana, or Brahma in that character." Brahma and Narayana are in this instance identified; and from the circumstances of having Lakshmi as his wife, and bearing the attributes of Vishnu, as above described, Narayana is also unequivocally identified with the preserving power. Krishna indeed, calls himself Narayana; at least, is made to do so by Jayadeva, the spirited author of the Gita Govinda but, perhaps, at the present day, every hindu holds that the god whom he worships is Narayana. In one of Krishna's tender songs, addressed to his delightful mistress, the following is the burden,—"Give short raptures, sweet Radah! to Narayana, thy adorer."—*As. Res. Art.* 8. The names of Brahma are not so numerous as those of Vishnu and Siva, who are said to have a thousand each. Hiranya Garbha is one of his names. He is sometimes called Kamala yoni, from kamal the lotus and yoni the female organ, (a type of Brahma, or the creative power), the mystical matrix, into which is inserted the equally mystical linga of Siva. Brahma, according to the doctrine of the Vaishnavas sprung on a kamala, or lotus, from the navel of Vishnu. But the lotus, considered the prime of aquatic vegetables, is a more immediate attribute of Vishnu, the personification of water. His consort, Lakshmi, in one character, sprang from the sea, and the lotus, being also the emblem of female beauty, is peculiarly sacred to her, and she is called Kamala or lotus-like. The sacti are the wives of the hindu gods. To all the principal and several of the secondary deities or incarnations of the principals, wives have been assigned. Except in sex, the wives exactly represent the respective lords, being their energy or active power,—the executors of their divine will. The Sacti of Brahma is Saraswati, the goddess of Harmony and the Arts. Many deities have vehicles or Vahans, and that of Brahma and of his Sacti, is the swan or goose called *hanasa*—(*Moor*). Exclusive adorers of this deity and temples dedicated to him do not now occur perhaps in any part of India; at the same time it is an error to suppose that public homage is never paid to him. He is particularly reverenced at Pakher in Ajmer, also at Bithur in the Doab: where, at the Brahmavarta ghat, he is said to have offered an Aswamheda on completing the act of creation. The pin of his slipper is still worshipped there. On the full of the moon Agrahayana (Nov. and Dec.) a *mela* or meeting, that mixes piety with profit, is annually held at that place—(*Wilson*). But although this hindu personification of the creative power has no temples or exclusive rites dedicated to him, his images are occasionally placed in the temples of other gods and along with their rites he is reverently propitiated by offerings and invocations. According to the hindu theology, destruction is only reproduction in another form: and thus Brahma and Siva are sometimes found almost identified with each other: oftener, however, in direct opposition and hostility. Brahma creates; Siva destroys: but to destroy is to create in another form: Siva and Brahma hence coalesce. In hindu mythology, therefore, Brahma is the first of the three great personified attributes of Brahm or the Supreme being. He is called the first of the gods, framer of the universe, guardian of the world, under the latter character agreeing with Vishnu. In physics, he is the representative of matter generally, from him all things proceeded and in him pre-existed the universe, comprehending all material forms which he at once called into creation or arranged existence, as they are now seen, although perpetually changing their existence by the operation of the reproductive powers. From his mouth, arm, thigh and foot, proceeded severally the priest, the warrior, the trader and the laborer, and these by successive reproduction peopled the earth. The sun sprung from his eyes, and the moon from his mind. Red is the colour supposed to be peculiar to the creative power and pictures of Brahma are seen of that colour. Brahma is usually represented with four faces, said to represent the four quarters of his own work; and sometimes said to refer to a supposed number of elements, of which he composed it: as also to the Vedas, one of which issued from his mouth. There are legends of his having formerly had five heads, one having been cut off by Siva, who is himself five-headed. Each hindu sect worships some individual deity or two or more conjoined; and the object of the worship is gifted by its votary, with all the attributes of the Most High and is made the source whence all other gods emanate. The sacti, Saraswati, the spouse of Brahma, is described as all-productive, all-powerful, and all-wise. Considering the learning, subtilty of mind and their great powers of thought, the confusion into which the brahmans have allowed their religion to fall, is most discreditable. Brahma, is generally believed to dwell in Sutya Lok, surrounded by Rishi and minor gods, and to be employed in creating men, and in recording human destiny.—*Revd. W. Taylor, Hindoo Theatre, Vol. II. Sonnerat's Voyages, p. 5. Coleman Mythology. Moor Pantheon.*

BRAHMA ACHARYA: Brahma Gupta; These are supposed by some to be one and the same astronomer, and the inventor of the system disclosed in the Surya Siddhanta by others to be two distinct commentators of that Shastra. —*Capt E. Warren Kala Sankita.*

BRAHMADICA supposed by hindus to be the first created beings; but in their cosmogonies, their origin and names are variously explained. It is said, in the Ins. of Menu, (Chap. I. v. 32.) that the Almighty Power, having divided his own substance, became male and female; and from that female produced Viraj. Viraj produced the first Menu, named Swayambhuva: he, the ten Brahmadica or Prajapati, whom he calls ten Lords of Created Beings also the sons of Brahma. They produced seven other Menu, whose names were Swayambhuva, Swaroshesha, Uttama, Tamasa, Rivata, Chacshusha, and Satyavrata. These Menu are, by some authorities, said to have produced the seven Rishi; but others state the seven Rishi to have sprang immediately from Brahma: their names are Kasyapa, Atri, Vasishta, Viswamitra, Gautama, Jamadagni, and Bharadwaja. (*Wilford. As. Res. Vol. V. p.* 246.) The Brahmadica are however, according to Coleman, named Marichi, Atri, Vasishta, Palastia, Angiras, Pulastia, and Critu. Colonel Wilford, in the Asiatic Researches has considered the Brahmadica, the Menu, and the Rishi, to be seven individuals only. The names of some of the Brahmadica correspond with those of some of the Rishi.—*Cole. Myth. Hind. p.* 8. An account of Viraj, translated by Mr. Colebroke, from the white Yajur Veda, is accompanied by his judicious observations. "He," (the primeval being) felt no delight; therefore man delights not when alone. He wished the existence of another; and instantly he became such as is man and woman in mutual embrace. He caused this, his own self, to fall in twain; and thus became a husband and wife: therefore was this body so separated, as it were an imperfect moiety of himself. This blank, therefore, is completed by woman: he approached her, and thence were human beings produced. "She reflected, doubtingly, 'how can he, having produced me from himself, incestuously approach me? I will now assume a disguise.' She became a cow, and the other became a bull, and approached her, and the issue were kine. She was changed into a mare, and he into a stag-lion; one was turned into a female ass, and the other into a male one: in this manner did he create every pair whatsoever, even the ants and minutest insect." Another account makes Rudra, assist in the theogony. Brahma said, "Rise up, O'Rudra! and form man to govern the world." Rudra immediately obeyed; he began the work; but the men he made were fiercer than tigers, having nothing but the destructive quality in their composition: and they soon destroyed one another; for anger was their only passion. Brahma, Vishnu, and Rudra, then joined their different powers, and created ten men, whose names were Nareda, Daksha, Vasishta, Bhrigu, Critu, Puluha, Pulastya, Angira, Atri, and Marichi; (that is, Reason, Ingenuity, Emulation, Humility, Piety, Pride, Patience, Charity, Deceit, Morality): the general name of whom is the Muni; Brahma then produced Dherma, Justice, from the breast; Adherma, Injustice, from his back; Labha, Appetite or Passion, from his lips; and Kama, Love or Desire, from his heart. The last was a beautiful female, and Brahma looked upon her with amorous emotions; but the Muni telling him she was his own daughter he shrunk back, and Ladja, Shame, a blushing virgin, sprung from him. Brahma, deeming his body defiled by its emotions towards Kama, purified himself by partially changing it into ten females, who were respectively espoused by the ten Muni.—*Moor, Hindu Pantheon, p.* 91. *Colebrook. Wilford As. Research, Vol. V p.* 246. *Coleman Mythology of the Hindoos, p.* 8. See Lords of Created beings.

BRAHMÆA. A genus of insects of the tribe Bombyces. See Insecta.

BRAHMA KHAND. A pool 70 feet by 30, twelve days' journey up the Lohit, into which several minor streams break over a precipice. It is considered by hindus a spot as sacred as Gangotri.

BRAHMA-LOKAM, in the buddhism of Ceylon, the highest of the celestial worlds, sixteen in number.—*Hardy's Eastern Monachism, p.* 434.

BRAHMAN. This is written brahmana, but the final a is dropped in conversation. A brahman is of the priestly tribe of the hindus, but all brahmans are not priests. "The prescribed duties of the brahmans are peace, self-restraint, zeal, purity, patience, rectitude, wisdom, learning, and theology." *(Gita, p.* 130.*).* An ancient name was Sarman, the Sarmanæ of the Greeks. The ordinary application of the word brahman means a theologist, or divine, and is derived from Brahm, the Divinity. The term Pundit, is a learned brahman, a philosopher, from Panditya, philosophy. Ward in his work on the 'Literature and Mythology of the Hindoos,' mentions the confession of faith of a brahmin,' which he gave him, "God is invisible, ever living, glorious, uncorrupt, wise, the ever blessed, the Almighty, his perfections are inconsiderable and past finding out. He rules over all, destroys all, and remains after the destruction."—*(Chow Chow,) p.* 44. The Purushasakta hymn of the Rig-Veda is regarded by Sanscrit scholars as of late introduction. But in it occurs the passage descriptive of the origin of brahmans from Brahma; the brahman was his mouth; the rajanya was made his arms, the being (called) the Vaisya, he was his thighs; the sudra sprang from his feet. According to Bunsen, brahmans have systematically adulterated and adjusted the early history of India, iii. 513.) Brahmans were acquainted with the Talmud, and Sir W. Jones thought that Genesis ii. 21-23, is referred to in the form of Siva and Parvati known as Art'hanesvari, of which the right hand half is Siva and on the left hand Parvati.—*(Taylor.)*

There are ten great divisions of Brahmans, viz., five Gour brahmans, the Kanya-Kubhya, Saraswat, Gour, Maithala, Utkala: and five Dravidian brahmans, viz., Dravida, Telinga, Karnata, Maharashtra, and Gurjara. But there are various orders of brahmans, the chief of which in Northern India are the *Kulena.*

The great bulk of the brahmans of India, are confessedly of Arian origin, tall, fair, robust men, and light yellow in colour. In southern India, the Brahmans are all undoubtedly descended from one and the same stock, and sanscrit is their proper ancestral tongue, though now only regarded as an accomplishment or a professional acquirement: and some of the priestly brahmans can converse in sanscrit, although they use the vernacular language of the district in which they reside, and are styled Dravida, Kerala and Karnatica &c, Brahmans with reference to the language of their adopted district. The various brahminical tribes are as much separated as are the several castes; some of them may eat together, but they do not intermarry, and the first approach at union is seemingly to be with the Mahratta and Guzerat brahmans, amongst whom the influence of European knowledge has had more effect than upon any of all the other races in India. Good seed has fallen there on a good soil, and from a body of mendicants, these brahmans have become active, powerful and useful men.

Various ceremonies are attendant upon hindu boys between infancy and the age of eight years. After that age, and before a brahmin boy is fifteen, it is imperative upon him to receive the *poita, zonnaar, janavi* or *jhandiam*, the sacred thread, which the Brahmins, in their secret ceremonies, call Yadnupavita. The investiture, after a variety of preliminary ceremonies is thus performed. The priest first offers a burnt sacrifice, and worships the salagrama, repeating a number of prayers. The boy's white garments are then taken off, and he is dressed in yellow or red, and a cloth is brought over his head, that no Sudra may see his face: after which he takes in his right hand a branch of the vilva, Ægle marmelos, and a piece of cloth in the form of a pocket, and places the branch on his shoulder. A poita of three threads, made of the fibres of the suru, to which a piece of deer's skin is fastened, is suspended from the boy's left shoulder, falling under his right arm, during the reading of the incantations or invocations. The father of the boy then repeats certain formulas, and in a low voice, pronounces three times, the Gaitri O'm! Bhurbhuvă ssuvãhā, O'm! Tatsa vit'hru varennyâm, B'hargo devâsyã dhimahi dhiyo yonaha pracho dayath. O'm! Earth, air and heaven, O'm! "Let us meditate on the adorable light of the divine Sun, (ruler) (*Savitri*) may it guide our intellects." After this the *suru poita* is taken off, and the real *poita*, or sacred thread, put on. During this ceremony the father repeats certain formulas; the *suru poita* is fastened to the *vilva* staff, shoes are put on the boy's feet, and an umbrella in his hand. The receiving of the *poita* is considered as the second birth of a hindu, who is from that time denominated "dwija" or twice-born. A brahman boy cannot be married till he has received the poita. The sacred thread must be made by a religious brahman. It consists of three strings, each ninety-six "hath" (forty-eight yards), which are twisted together: it is then folded into three, and again twisted; these a second time folded into the same number, and tied at each end in knots. It is worn over the left shoulder (next the skin, extending half way down the right thigh) by the Brahmans, Ketries, and Vaisya castes. The first are usually invested with it at eight years of age, the second at eleven, and the Vaisya at twelve. The period may, from especial causes, be deferred; but it is indispensable that it should be received or the parties resisting it become outcastes.—(*Cole. Myth. Hind. pp.* 154 and 155.) It is regarded by the Brahmans as of highly mysterious and sacred import; and they do not consider an individual as fully a member of his class until he have assumed this holy emblem. Of these zonars, a brahman wears four; the other privileged tribes but three. Some writers call this the brahmanical, or priestly or sacerdotal thread; but not, it would appear, in strict correctness, it not being confined even to the priestly tribe, but worn by three out of the four tribes of hindus and by all the five sections of the artizan class, the goldsmith, brazier, blacksmith, stone-cutter and carpenter: the number of three threads, each measuring ninety-six hands, for the sacrificial string, may have some mystical allusion to the ninety-six fixed annual sacrifices. The number three is mystical with almost all nations; and, with the Hindus, may refer to the same source as the three sacred fires, the three legs of *Agni*, the triad of divine powers, &c., ninety-six does not arise from any ordinary process of three, and seven, and two; the distinguishing numbers of Agni's legs, arms, and faces.—(*Moor, page* 379.)

A Kulin brahman can marry as many wives as he likes; but there are certain brahmans in Bengal, who find the greatest difficulty in getting married to even one wife, and who generally spend their life in single wretchedness. These are Bangshaja brahmans of the Shrotriya class. While a Kulin brahman gets for every wife that he marries a handsome bribe, a Bangshaja Shrotriya brahman has to pay down a large sum of money to the father of the girl, whose hand he seeks to obtain. The consequence is that, owing to their poverty, numbers of Bangshaja Shrotriya brahmans never get married at all. To remedy this evil, in Eastern Bengal when, in any village the number of unmarried Shrotriya becomes inconveniently large, one of the ghatak of the place—those underservants of Bidhata who take a prominent part in all marriages—goes to Shribatta in Sylhet. There, with the assistance of his agents in the district, and by means whether fair or foul, he procures a number of girls, to whom he holds out the prospect of a pleasant settlement in life. The girls may not all be brahman girls—some of them may be of the Chandal caste, and others may be young widows;—but whatever may be their caste, character and antecedents they are huddled together in a boat, often 15 or 16 in number, and taken to the ghaut of the Shrotriya village. The faces of the old Shrotriya bachelors become lighted up with joy, when they hear of the arrival of the hymeneal boat. The sensation which these highly-favoured boats create in Eastern Bengal, is infinitely greater than that produced in Calcutta by the orange-boats of Sylhet, or the mango boats of Malda. The Bangshaja bachelors besiege the boat in numbers. Each one selects a girl according to his taste; a bargain is struck with the ghattak; and the celebration of the rites of marriage, according to the forms prescribed in the Shastras, soon follows. The plain-looking girl, for whom no Shrotriya may have a fancy, is employed as a maid-servant either of the ghattak himself, or of any other who may stand in need of her services.

Under every dynasty and Government in India, brahmans have held the highest executive offices alike in the civil executive and in the political administration of the country, for, until the middle of the nineteenth century all learning and science centred in them. The introduction into India, by the British, of the western forms of education, and the system of grants-in-aid to schools; however, permitted, particularly in the south of India, all the Sudra, and Vesya races to compete with the brahmans who have been largely displaced from their former exclusive position, though they are still a great power in the state. There is no being more aristocratic in his ideas than the secular brahmin or priest, who deems the bare name a passport to respect. The Kulin brahman of Bengal piques himself upon this title of nobility granted by the last Hindu king of Canouj (whence they migrated to Bengal), and in virtue of which his alliance in matrimony is courted. But, although Menu has imposed obligations towards the brahmin little short of adoration, these are limited to the "learned in the Vedas:" he classes an unlearned brahman with "an elephant made of wood, or an antelope of leather;" nullities, save in name.—(*Tod's Rajasthan, Vol. I. p.* 512.)

Brahmans were held in great disesteem by the Khatryas of the Vedic age: but, since many hundred years, and in the present day learned brahmans are always much respected by hindu men of wealth. At festivals, weddings, and feasts for the dead, they are invited to the houses of the wealthy are feasted, treated with honor, and on their departure receive gifts of value. These presents vary with the branch of science in which they excel, with their reputation for learning, the public esteem in which they are held, the number of their scholars, and the fame of their school. The presents include dresses, gold and silver vessels, ornaments of numerous kinds, food, and also money. A man of learning often takes one or more of his scholars to such assemblies, both to enhance his own reputation; and to accustom them to respectable society: and the students also obtain a share of the presents. From gifts of this kind the larger number both of teachers and students in the hindu schools of learning are supported, their food procured, and their house accommodation provided. Tolas, or native colleges, of this kind, are scattered all over the province of Bengal; and one or more may be found in all the great villages. The zillah of Burdwan, for example, though not particularly celebrated for learning, contained, a few years ago, 190 Sanskrit schools and 1350 students. Some places are more celebrated as seats of learning than others. In North India, for instance, Nuddea, Santipur, Tirhoot, and above all Benares, contain a large number of "colleges" in South India, they are chiefly found in the provinces of Tanjore and Madura.

These schools are divided into three classes: those wherein general literature is studied; the schools of law; and those of philosophy. In the first the subject matter of study embraces grammar, lexicology, poetical works, and rhetoric.—*Mullen's Hindu Philosophy, p.* 10-11.

Adisur, the founder of the Sen dynasty, brought from Kanouj five Sagnic brahmans of the tribes or gotra Sanhila, Kashyapa, Vatsa, Saverna and Bharudwaja. Several Sudra families, Ghose Bhose, Dutt, Guha, Mittra, &c. accompanied them and these take the position of Kulin Kaists. In the reign of Bullal Sen, about 284 years before the mahomedan invasion, all these Kulin brahmans and Kulin sudras had greatly increased, and though degenerated in learning they arrogated to themselves a position above all the Sapta-sali or aboriginal brahmans and Bullal Sen enobled these brahmans by giving to them the title of Kulin. The Kulin brahmin subsequently consented to marry the daughters of the aboriginal brahman, who eagerly seek alliances with the Kulin, and the Kulin have taken advantage of this and have established a scale of fees for condescending to accept a daughter of an inferior. They marry gold. Of the Kayaits who came from Kanouj Bhose Ghose and Mittra were enobled by Bullal Sing, into Kulin Kayats, Dass, Day, Dutt, Guha, Kar, Paulit, Sen and Sing hold a second rank.

Kulin brahmin women are married with difficulty and generally to aged men. In 1868, there were 11 Kulin men in Hooghly and 1 in Burdwan, each of whom had contracted 50 to 80 marriages;—24 in Hooghly and 12 in Burdwan, who had contracted from 20 to 50 marriages and 48 in Hooghly and 20 in Burdwan, who had contracted between 10 and 20 marriages. Kulinism is thus a great polygamic institution, and a few Kulin women have become prostitutes. In 1867, the abolition of this polygamy was contemplated and will doubtless soon be carried out.—*Cal. Rev., May* 1868.

Agnihotra brahmans, are the remnant of the worshippers of Agni, who still preserve the family fire, but in other respects conform to some mode of popular hindu devotion. According to prescribed rule, where a perpetual flame is maintained, it is used to light the fire round which the bride and bridegroom step at the marriage ceremony, and the funeral pile of either ; but the household fire is preserved only by this particular sect, the Agnihotra, and the great body of the people have nothing of the kind. In this case they distinguish between the sources whence they obtain the kindling flame according to the purposes of its application and the fire of the marriage rite is taken from the hearth of a respectable person, or from a fire lighted on some auspicious occasion, whilst for the funeral pile " any unpolluted fire may be used. It is only necessary to avoid taking it from another pile, or from the abode of an out-cast, of a man belonging to the tribe of executioners, of a woman who has lately borne a child, or of any person who is unclean.

Agnikula, is a supposed Scythic race whom the brahmans, in order to oppose the buddhists, formed into a religious confederacy. Aradhya is a class of brahmans who profess the Jangam creed but adhere to their caste views. In other sects of hindus, the brahman uniformly takes precedence of other castes. But among the Jangam or Vira Saiva, he is degraded beneath all others. Hence, there is a perpetual feud between the Aradhya Brahman and the Jangams who (unless at funerals where all are bound to assist), treat these brahmins with contempt. (*Brown on the Creed and Customs and Literature of the Jangams, p.* 8.) The inviolability of a brahman and the sin attached to causing the death of one, in any way, is inseparable, and to this, according to Sir William Jones, may be traced " the practice called dharna, which was formerly familiar at Benares, and may be translated *caption* or *arrest*." It is used by the brahmans to gain a point which cannot be accomplished by any other means ; and the process is as follows :— The brahman who adopts this expedient for the purpose mentioned, proceeds to the door or house of the person against whom it is directed, or wherever he may most conveniently intercept him. He there sits down in dharna, with poison or a poignard, or some other instrument of suicide in his hand, and threatening to use it if his adversary should attempt to molest or pass him, he thus completely arrests him. In this situation the brahman fasts ; and by the rigor of the etiquette, which is rarely infringed, the unfortunate object of his arrest ought also to fast, and thus they both remain until the institutor of the dharna obtains satisfaction. In this, as he seldom makes the attempt without resolution to persevere, he rarely fails ; for if the party thus arrested were to suffer the brahman sitting in *dherna* to perish by hunger, the sin would for ever be upon his head. This practice has become almost unheard of in late years, but formerly the interference of British courts have often proved insufficient to check it, as it had been deemed in general most prudent to avoid for this purpose the use of coercion, from an apprehension that the first appearance of it might drive the sitter in dherna to suicide. The discredit of the act would not only fall upon the officers of justice, but upon the government itself. The practice of sitting in dherna was not confined to brahman men only, which the following instance will exemplify. It was adopted by Benoo Bhai, the widow of a man of the brahminical tribe, who had a litigation with her brother-in-law, Bal-Kishen, which was tried by arbitration, and the trial and sentence were revised by the court of justice at Benares, and again in appeal. The suit of Benoo involved a claim of property and a consideration of caste, which her antagonist declared she had forfeited. (*Cole. Myth. Hind. p.* 148.) Another practice of a very singular and cruel nature, now unknown; was called erecting a "koor." This term is explained to mean a circular pile of wood which is prepared ready for conflagration. Upon this, sometimes a cow, and sometimes an old woman was placed by the constructors of pile, and the whole was consumed together. The object of this practice was to intimidate the officers of Government, or others, from importunate demands, as the effect of the sacrifice is supposed to involve in great sin the person whose conduct forces the constructor of the koor to this expedient. (*Cole. Myth. Hind. p.* 148.) The majority of brahmans may, and do, eat animal food : priests, while officiating as such, perhaps do not, For although all priests are brahmans, all brahmans are not priests : as amongst the Jews, the tribe of Levi furnished the priesthood, so among hindus, it is furnished from that of brahmans, *p.* 350. 145, 148. *Coleman.* —All Brahmans burn all their dead, above one year of age ; women are burned with clothes on.—*Brown on the Jungums, Bunsen Egypt, iii,* 513. *Chow Chow, p.* 44. *Mullen's Hindu Philosophy, p.* 10 & 11 ; *Coleman's Mythology* ; *Calcutta Review. Tod's Rajasthan, Vol.* 1, *p.* 512. See Chepang ; Chetang ; Kalusa ; Kandeh Rao ; Hindoo ; Kummaler ; India ; Inscriptions, p. 389. BRAHMANA. Sanscrit prose works, of later date than the Veds, the oldest is the

Athareya, which has much historical information. The several Brahmana are chiefly liturgical and legendary, and in the various Upan shad, passing into the rationalized state, an becoming metaphysical and mystical. It woul be difficult to find two sets of opinions more absolutely irreconcileable than Vedic hymns and Vedantic philosophy. The sutra (aphorisms) or Brahmasutra, the chief authorities o the pantheistic Vedanta school, though much later than the rest, are still neumonics, as also is the Vaiseshka or atomic school of Kanada This supplementary mass of Vedic literature including philosophy, commentaries, aphorisms, &c., might furnish occupation for a long and laborious life. The Rig-Veda Sanhita is the oldest book known to the hindoos and certainly one of the oldest books in the world. Each hymn is called a *Sukta*, of which there are about a thousand, arranged into eight *Ashtaka* or *Khanda*, of unequal extent. Another division is into ten *Mandala*, sub-divided into a hundred Anuvaka. Each hymn has a Rishi or inspired writer for its author. Portions of the Rig-Veda have been translated by the late F. Rosen, the late M. Langlois, and by Professor Wilson, whose labours have given us four *Ashkata*, containing 502 hymns. And Dr. Muller is producing a complete one at the expense of the Indian Government. The 3,000 pages of large quarto which had already appeared, embraced little more than half the Sanhita with Sayana's Commentary. The language of the Veda is not Sanscrit in the strictest sense of the term, but there is not sufficient difference between it and classical Sanscrit, to authorise its being called a separate language. The difference is not so great as between Anglo-Saxon and modern English, but it is greater than between the Greek of Homer and Demosthenes. The names of the *Rishi* or composers are not always given in the body of the hymns, and there is nothing to guide the historian or chronologist as to their dates. Nevertheless, good scholars are of opinion that Vedic hymns were composed mostly about fifteen centuries before Christ, but not committed to writing, and therefore not collected until the eighth century, B. C.

BRAHMANABAD. The capital of lower Sind in the time of the dynasties that preceded the Arabs, and supposed to be the modern Hyderabad: but it seems to have intermediately borne the name of Mansura, after the Arab conquest.—*Elliot.*

BRAHMANDA, the mundane egg, created by Brahma; also the visible sky, which is supposed to be the shell of this egg. See Brahma: Veda.

BRAHMANDA PURANA. See Meru.

BRAHMANY DUCK OR GOOSE, Casarca rutila.

BRAHMANY KITE. In the Peninsula of India, the name given to the Haliœtus Ponticerianus or Haliastur Indus. It receives its name from Europeans because brahmans and religious hindus worship it, and regard it as the type or vahan of Vishnu. It is often fed by hindus on whose call of " Hari! Hari! the birds assemble and animal food is tossed to them. The birds are expert fishers. See Birds; Garuda; Serpent; Vahan.

BRAHMANISM. Early writers on the religions of India who drew their information exclusively from Sanscrit and Brahmanical sources, amongst whom was Klaproth, incline to favour the pretensions of brahmanism as more ancient than buddhism, but in later times the translations of the Pali records and other sacred volumes of buddhism in western India, Ceylon, and Nepal, have inclined the preponderance of opinion, in favour of the superior antiquity of buddhism, at latest, a contemporaneous development, with the doctrines of the brahmans. A summary of the arguments in favour of the superior antiquity of buddhism will be found in the " notes" &c., by Colonel Sykes, in the 12th Volume of the Asiatic Journal, and in the 'Essai sur l'origine des Princi-paux Peuples Anciens', par F. L. M. Maupied, Chap. VIII. The arguments on the side of those who look on Brahmanism as the original, are given by Mountstuart Elphinstone in his History, of India,' Vol. I. b. II. c. 4. " Admitting the common origin of the two systems, which the similarity of their fundamental tenets would seem to prove, the weight of argument," he says, " appears to lean to the side of the brahmins; and an additional reason may perhaps be drawn from the improbability that the Baudha system could ever have been an original one." But, he continues, " the hindu religion presents a more natural course: it rose from the worship of nature to theism; and then declined into scepticism with the learned, and man-worship with the vulgar. The doctrines of the Sankya school of philosophers seem reflected in the Atheism of Baudha; while the hero-worship of the common hindus, and their extravagant veneration for religious ascetics, are much akin to the deification of saints among the Baudhas. (*History of India, Vol. I., b. II., c. 4.*) The Rev. Mr. Gogerly, says the sacred buddhist books in Ceylon expressly demonstrate that its doctrines had been preached by the twenty-four Buddhists who had lived in succession prior to Gotama or Sakya, in periods incredibly remote, but that they had entirely disappeared at the time of Gotama's birth, so that he re-discovered the whole, and revived an extinguished or nearly extinct school of philosophy. (Notes on Buddhism by the Rev. D. J. Gogerly, Appendix to Lee's translation of Ribeyro, p. 265. quoted in *Tennent's Christianity of Ceylon*, *p.* 197. Fa Hian, the Chinese priest of Buddha, who travelled through Tartary to India and Ceylon in the fourth and fifth centuries declares that in the whole of that vast route, including Affghanistan and Bokhara, he found a Buddhist people and dynasty, with traditions of its endurance for the preceding thousand years. "As to Hindostan itself, he says, from the time of leaving the deserts (of Jayselmeer and Bekaneer) and the river (Jumna) to the west, *all the kings of the different kingdoms in India are firmly attached to the law of Buddhu*, and when they do honour to the ecclesiastics they take off their diadems.—(*See also Maupied, Essai sur l'Origine des Principaux Peuples Anciens, Chap. IX. p.* 209.) Brahmanism is, at present, synonimous with hinduism, and the brahmanical religionists are of three classes, the worshippers of Vishnu, of Siva and the Sakta or those who worship the female energies of gods. But it seems to have been gradually brought to its present condition and is in some places a nature-worship, in others an idolatry, in others a hero-worship, in others a physiology or a philosophy, perhaps, in all, a spirit worship. Bunsen says (iii. 516.) this worship by the Arian immigrants and the institution of castes seems to have commenced after they crossed the Sutlej river, and the original seat of this worship extended from the Indus to the Ganges and to Bengal (Behar). He adds that brahmans, after crossing the Sutlej, introduced Siva and other deities and threw those of the Vedic period into the shade. According to Bunsen, it was about the year 3000 B. C. that the schism took place amongst the Arians, when all India East of the Sutlej adopted brahminism and the religious views, forms and habits of Bactria were for ever abandoned. According to Manu (the first book of which was composed but little antecedent to the Christian era) the world had passed through four yogas, when brahmanism was introduced; and the brahmanism of the Sanscrit books is the mythico-pantheistic form of Vedic naturalism. Brahmanism is usually understood to be the later development and corruption of the ancient Vedic faith. Bunsen, however, is of opinion that the region of the Indus still retains the nature-worship of Vedism, while southern India and the banks of the Ganges have long fallen into Brahmanism. Brahmanism is accommodating to any thing that partakes of idol-worship; similarly as a Roman would worship Isis and Osiris, so a hindu makes offerings to apotheosized mahomedans, such as Shaikh Sadu, Ghazi Mian and Shaik Madar in northern India.

Brahminism is at present divided into several branches, each, of which has many sub-divisions. The following are the three principal branches; *1st, Vedantism*, so named after the Vedanta of Vyasa. It has few adherents, consisting of some philosophical brahmins. Of the thousands of temples in India consecrated to various deities, only one is consecrated to this doctrine, in which Brahma is worshipped alone.

2nd, Vishnuism.—This doctrine raises the second person of the Hindu Traid (Vishnu) to the highest place, and adores his different avatars, together with a multitude of other deities, powers of nature, and mythical persons. Its professors are styled Vaishnava.

3rd, Sivaism.—This doctrine places the third person of the Hindu Triad (Siva) highest in the rank of the gods. The professors of this doctrine call themselves Saiva and their number amounts to many millions more than the professors of Vishnuism. Although Siva is the God of destruction, he is also the God of Production, considered with respect to the idea, which ever pervades the doctrine of Brahma, namely, that death is but the re-commencement of a new life.

Sankhya system of Philosophy.—The Hindu system of Philosophy termed Sankhya, was apparently the earliest of all the systems that preceded the really Philosophic age of the Hindu Schools. Its author is said to have been Kapila who is asserted to have been a son of Brahma, and an incarnation of Vishnu; he is numbered among the seven great saints, and many marvels are ascribed to him. While using Vedic notions, he, in the main, departed from Vedic theories, and in all important particulars comes to conclusions diametrically opposed to what the Vedas teach.

The Sankhya system contains two grand divisions, which differ on the vital question of the existence of a God; one is termed the Seswara Sankhya that which owns a God; the other is called Niriswara Sankhya or that which denies the very existence of a God; the latter was Kapila's system; a system at that time entirely new, it taught that there were two primary agencies 'nature' or 'matter' and 'souls'; but that there was no Supreme Being.' He asserts as follows; 'souls' have existed in multitudes from eternity, by their side 'stands nature or matter;' for eternal ages the two remained separate; at length they became united, and the universe in all 'its forms was developed from their union.'

The object of the Sankhya, as well as of the other branches of hindu philosophy, is the removal of human pain by the final and complete liberation of the individual soul. The Sankhya system has twenty-five principles to which the soul must apply itself as objects of knowledge, and in respect to which true wisdom is to be acquired. They are;

1st.—Nature, termed 'Pradhan' or chief, from being the universal material cause, the prime cause of all things.

2nd.—Intelligence, the first product of nature, increate, prolific, itself productive of others.

3rd.—Self-consciousness, its peculiar function is the recognition of the soul in its various states, it is the product of intelligence, and itself produces.

4th.—8th. Five principles, subtle particles or atoms of things. These are imperceptible to the gross senses of human beings, but may be known by superior intelligence; then follow.

9th—19th. The organs of sense and action; of which ten are external and one is internal. The organs of sense are five; the organs of action are five. The mind serves both for sense and action.

20th—24th are five elements produced from the five subtle particles.

1st.—Ether; this has the property of audibleness, being the instrument of sound.

2nd.—Air: which has two properties; it is audible, and it can also be touched.

3rd.—Fire; this has three properties, audibility, tangibility, and colour.

4th.—Water; possessed of four properties, audibility, tangibility, colour and taste.

5th.—Earth; possessed of five properties, audibility, tangibility, colour, taste and smell.

25th.—The last principle is soul: like nature it is not produced but is eternal, but unlike nature it produces nothing from itself; it is multitudinous, individual, sensitive, eternal, immaterial.

The great error then that lies at the root of this Sankhya system is, that the products of matter and mind are blended and confounded together.

Nyaya Philosophy.—The next system is that attributed to Gautama, namely, the Nyaya system, which considers by means of subtle and logical argument, the true mode of inquiring after truth; and has surveyed the whole field of this argument more exactly and completely than any other of the hindu systems.

The first inquiry of this system is what is the way to attain perfect beatitude? and the answer given is 'that deliverance is only to be secured by a knowledge of the truth.

It then proceeds to examine what instruments are best adapted for the acquisition of that deliverance, and comes to the conclusion that they are four in number, namely, perception, inference, comparison and testimony.

It then minutely examines the various objects of knowledge, which are required to be proved and known; which objects are twelve in number: soul, body, sense, object, knowledge, the mind, activity, fault, transmigration, fruit, pain and beatitude.

Vedanta system of philosophy.—We now come to the Vedantic system, which makes its appearance in three stages of development. The germs of this philosophy and even its principal doctrines are contained in the Brahmana books of the Vedas; then it is seen in a more complete form in the Sutras of Vyasa; and lastly, this philosophy is recorded in the great commentaries which eminent scholars have written upon the original authorities.

The voice of hindu antiquity ascribes the origin of the Vedantic system to the sage Badarayan, otherwise named Veda-Vyasa. The manner of his birth is thus described in one of the works attributed to him,

'of birth and death, a multiplicity of souls is to be inferred.'

'*Transmigration of souls*;' the fact of transmigration none of the systems dispute, it is allowed by all; as a man casts off his old garments, and puts on new ones, so that soul having left its old 'mortal frame, enters into another which is now.'—*Elphinstone's History of India. Bunsen's Egypts place. Tod's Rajasthan, Vol. I. p. 26. Tennant's Christianity in Ceylon, p. 199.*

BRAHMANY, a former kingdom of the Dekhan. It had several sovereigns, Hussain Gangavi, Brahmani, ascended the throne A. D. 1347 and died A. D. 1358. His son Mahomed attacked Telingana and Vijianagar and died in 1375

Hussain Gangavi Brahmani	1347-1358
Mahomed „ „	1358-1375
Majahid Shah „ „	1375—1379

The last king was Mahomed Shah who ascended the throne A. D. 1482, and reigned 37 years, in which period, the kingdom broke up into five independant states, viz. Bejapore, under Ali Adal Shah; Ahmednuggur by Ahmed Nizam-Shah; Berar, by Amadul-mulk; Golconda by Kuli Kutub Shah, and Bed by Ahmed Barid. These states continued for 150 years incessantly at war with each other, from which the country was so destroyed that portions of it long lay waste, and even yet, are, perhaps, the most sparsely peopled parts of the peninsula.

BRAHMINY, a river of Orissa rises in the Palamow table-land, lat. 23° 25' lon. 84° 18' runs S. E, into. the Bay of Bengal, near Pt. Palmyras. Length, 410 miles.

BRAHMAPURI. A town on the Bhima river. See India, p. 324.

BRAHMAPUTRA, a river of the N. E. of India, flowing into the Bay of Bengal.

The sources of the Brahmaputra proper may be assigned to Lat. N. 33°, 32½°, and Long.

E. Gr. 97° 30'. The first snow covered mountains occur in Lat. N. 28¾°. The Brahmaputra is called by the Tibetants Zayŏ-chu, after the province Zayö, through which it flows, the Mishmi and Singpho give it the name of Talu Ka. Its direction as far as Lat. N. 27° 55′ is nearly due south, from the entrance of the Galum river to the Du river north-west, and from this point to Sádia south-west.

The Brahmaputra rises among gigantic glaciers to the S. E. of lake Mansarowar, runs nearly east for 600 miles, and at some places, is a broad stream used for traffic. It receives seven great tributaries each equal to the Ganges discharging about 40,000 cubic feet of water per second. This mighty river then runs through the N. E. of India: from Brahmakund to Goalpara is a mean length, exclusive of its numerous small curves, of more than 400 miles.

The entire surface of Assam presents a gentle uniform slope, with a few isolated granite hills, sometimes of no considerable mean elevation. The Brahmaputra nowhere presents any remarkable contraction of its bed, and the only rapid of importance is situated fifteen miles below its confluence with the Dihong. The level of the Brahmaputra at Sadia is 210 feet. A little to the south of the entrance of the Tista begins that part of the river where the stream branches off in the shape of a delta, and shortly joins that of the Ganges. The ebb and flood of the tide extend in the season when the river is low, upwards beyond Dacca; the fall from Sadia to the delta consequently amounting to half a foot per mile. Sadia is situated near the spot where the most considerable of its affluents join the Brahmaputra, viz., the Dihong (a river identical with the Tibetan Zambu into which, before its confluence with the Brahmaputra, flows the Dihong.) The Brahmakund is a very deep basin-shaped enlargement of the river, just before it emerges from the mountains to descend into the plains of Assam. The velocity of the current, which both above and below the Brahmakund is very great, suffers a great diminution at this point. In this S. W. course, along the whole length of the left shore of the Brahmaputra, and nearly parallel to the broad valley through which it runs, we meet with a longitudinal range of secondary hills, inhabited by the various scattered tribes of the Naga, Khassia, Jaintia, and Garro in the Patkoi, Khossya and Garro hills. These latter hills run south-east, skirting the rice fields of Mymensingh, Comillah and Noa Colly, and forming the greater part of Chittagong and Arracan, down to the Irrawaddy. It disembogues into the Bay of Bengal, through three mouths, after a length, in the plains of 933 m. It receives in its long course the Sanpoo, 1000; Dihong, 140; Noh-Dihong, 100; Boree Dehing, 150; Soobu-Sheeree, 180; Monas, 189; Bagnee, 150; Guddala, 160; Durlah, 148; Teesta, 313; Barak, 200; Goomtee, 140 m. The branches of the Brahmaputra, together with those of the Ganges, intersect Lower Bengal in such a variety of directions as to form a complete system of inland navigation. The Brahmaputra begins to rise in April owing to the melting of the snow at its alpine sources. About the 1st July it is at full flood, and all the level country is submerged, herds of buffaloes deer and hogs then swim for refuge to the hills. The Brahmaputra drains Assam in every direction. It is known in Assam by the name Hiranyo or golden. In the rainy season it rises 30 or 40 feet above its lowest level, overflows its banks and inundates the country like an inland sea. In the dry season it is a labyrinth of half filled channels, rendering the navigation intricate and fit only for steamers of light draught. It is not navigable higher than Dibrughar. As seen from Ogri hill near Tezpur, the river is sweeping along in a bed of from ten to twelve miles in breadth, with numerous islands, covered with canes and shrubs. The chief towns on the banks of the river are Bishnath, Durrung, Gowhatty, Goalpara, Nusseerabád. It is navigated from the Bay of Bengal to Dibroogurh near the head of the Assam valley within 500 miles of Pengshaw, the point reached by Captain Blakeston on the Yangtsekiang river. Of these 500 miles 300 are known. Colonel Briggs has gone to Sádia, 50 miles to the east of Dibrogurh by steamer, and if this route can be opened, the rich province of the Yangtsekiang will be opened to India.—*Schlagintweit's General Hypsomentry of India, Vol. II, p.* 98. See Assam.

BRAHMA-RANDHRA. Pineal Gland: See Yug-byasa.

BRAHMAHARSHEE, SANS. From Brămhā̆, and rishee, a sage.

BRAHMA SAMPRADAYI OR Mad'havachari, a small Vaishnava sect of hindus in Southern India founded by Madhavacharya, a brahmin, son of Madhige Bhatta, born A. D. 1199 in Tuluva. At Udipi, Madhyatala, Subrahmanya, and other places, he established temples, and eight maths in Tuluva, below the ghats. The Superiors or Gurus of the Madhwa sect, are brahmins and Sanyasis or profess cœnobitic observances: the disciples who are domesticated in the several maths, profess also perpetual celibacy: lay aside the brahmanical cord, carry a staff and a water pot, go bareheaded and wear a single wrapper stained of an orange color with an ochry clay. They are usually adopted into the order from their boyhood and acknowledge no social affinities nor interests. They regard Vishnu as the

Supreme Spirit, as the pre-existent cause of the universe, from whose substance the world was made.—*Wilson.*

BRAHMA SIDDHANTA. The second of the authentic Sastra.

BRAHMA SAVARNI. One of the 14 patriarchs who are supposed to preside successively over the 14 Manwantara of the Calpa.—*Warren, Kala Sanhita.*

BRAMHASTRA, SANS. From Bramha, and Astra, a weapon.

BRAHMASUTRA. See Arian, Brahma, Sutra, Veda.

BRAHMA VAIVARTTA PURANA. See Sacta.

BRAHMESWARA in Cuttack, not far from Bhubaneswara, where a slab now in the Museum of the Asiatic Society of Bengal, was found with an inscription in Sanscrit verse. It commemorates the temple of Brahmeswara being erected to Siva by Kolavati, the mother of Udyotaka. The era Samvat 18 is used. The temple was no doubt erected after that to Siva at Bhubanesar, which Mr. Stirling says was completed A. D. 657, and that at Kanarak A. D. 1241. If the Samvat era 18 be that of Gaur of the dynasty that subverted the Bhupala, it corresponds to A. D. 1141.—Vide *J. A. S. B., Vol.* V, *p.* 660. *Vol.* VII, *p.* 557.

BRAHMI. SANS. Argemone Mexicana.—*Linn.*

BRAHMINI. A name of Saraswati as goddess of learning. Also any Brahman woman.

BRAHMINICAL CAVES. Of this class of rock-cut temples, the finest specimens are at Ellora and Elephanta, though some good ones exist also on the island of Salsette, and at Mahabalipur. In form, many of them are copies of and a good deal resemble the buddhist vihara. But they have not been appropriated from the buddhists, as the arrangement of the pillars and position of the sanctuary are different. They are never surrounded by cells as all Vihara are, and their walls are invariably covered or meant to be covered with sculpture, while the Vihara are almost as invariably decorated by painting, except the sanctuary. The subjects of the sculpture of course always set the question at rest. To the class of brahminical structures which consist of rock cut models of structural and brahminical temples, belong the far-famed Kylas at Ellora, the Saivite temple at Doomnar, and the Ruth at Mahabalipur. This last is cut out of isolated blocks of granite, but the rest stand in pits.

The Indra Subha group at Ellora are a separate class, but whether they are brahminical or Jaina is undecided. The Kylas at Ellora is a wonderful work of art—is one piece of rock—in fact a small hill cut into a temple. The Ellora caves are excavated in a porphyritic green stone.

BRAHMINICIDE. This is the sin of killing a brahman. The Datya, according to the hindu mythology, were brahmans, and were slain by the gods: but were resuscitated by Sukra, their guru, and attacked the gods in Swerga, from which the latter fled in various disguises; Indra as a peacock, Yamuna as a crow, Kuvera a lizard, Agni a pigeon, Nairat a parrot, Varuna a partridge, Vayu a dove, &c. Indra thus lost his heaven: but he afterwards slew Vitra, the Datya, and committed the crime of brahminicide, on which account he withdrew from heaven and performed penance. This myth seems to be either an account of one of the ancient wars between the Arian brahmins and a race with whom they came in contact, or a relation of the suppression of the vedic naturalism.—*Cole. Myth Hind. p.* 376.

BRAHMINY GOOSE. Casarca rutila.

BRAHMANY KITE. Haliastur Indicus. In Bengal, the Kites and braminy Kites breed chiefly in January and February, and disappear during the rains.

BRAHMO-SAMAJH. A very small religious reforming sect in Bengal, composed of highly intellectual men. They regard it as a truly pure theism which recognises the absolute unity and spirituality of god, the abolition of caste and the elevation and instruction of woman. During a very few years, Brahmoism ran through three different stages: in the first it had for its foundation Vedic testimony tempered by reason, in the second edition, Reason and Philosophy; and about 1870 it was supposed to stand on Intuition guided by Reason. The progressive Brahmo followers have, indeed, gone through all these changes, but quite one-fourth of the total number of Brahmo rest on Vedic testimony and nearly one-third look up to reason alone. And though the Intuitive Brahmo have done away with Srads, Anoprashans, &c., their brethren of the first stage perform those hindoo ceremonies in all their moods and tenses. The Brahmo of the second stage hold a middle place. On its decline, another theistical body arose, the Dharma Sabaa.

BRAHMYA, in hindu astronomy, the Yoga Star of the 25th Lunar mansion, "a" Pegasi. —*Warren.*

BRAHUI. A race occupying part of Beluchistan on the S. W. of India, who speak a Dravidian tongue. Pottinger says it is so dissimilar in its sound and formation that he did not recollect to have marked in it a single expression in any way approaching to the idiom of the Persian, and he adds that it contains a portion of ancient hindu words. Dr. Cook supposes that the Brahui race were Tartar mountaineers who gained a footing in Beluchistan, and supplanted the previous occupants whom he supposes to have been of hindu origin. The Brahui, with the Rind and Lumri comprise the Beluch tribes proper. The Brahui are divided into an indefinite number of tribes and Khel, and are an unsettled and wandering race, always residing in one part of the country in summer and emigrating to another for the winter season and are constantly shifting, for pasturage. The Baluchi has a tall figure, long visage, and raised features. The Brahui have short thick bones, with round faces and flat lineaments and numbers of them have brown hair and beards. Their name is said to be from an affix " boan" and " roh" a hill, and the name of a Baluch race, the Nharui, is said to mean " not mountaineers." The Brahui have no religious men whether syed, pir, mullah, or fakir. They are sunni mahomedans and their political chief is the Khan of Kelat.—*Dr. Cook. Pottinger's Travels.* See Baluch ; Dravidian ; Kelat ; Kirman ; Khozdar ; Kappar ; India, Sind.

BRAHU MARICHA, Sans. Capsicum frutescens, Cayenne Pepper.

BRAJ, a district in the neighbourhood of Mathura and Brindaban, Braj-bhasha is a term applied to the hindu tongue of that district.

BRAIN CORAL, or Meandrina. See Coral.

BRALLAH. The Malayala name of a tree that grows on the Malabar coast to about eight inches in diameter, and sixteen feet high. It is used by the natives on the coast for boats and for timbers and knees in larger vessels : it is considered strong and durable.—*Edye, M. and C.*

BRAMA DANDA PURANA. A religious book of the hindus, the object of which, is similar to that of the Skanda Siva Purana and Linga purana, viz. to inculcate the worship of the Lingum. See Lingum.

BRAMATSA, Hind. Astragalus multiceps.

BRAMHACHARYA, Sans. The profession of a Bramhachari. In hinduism, the conditions of a religious student, leading a life of continency and self-denial. Mr. Ward derives it from Bramha, and char to move.—*Wilson.* See Hindu ; Sanyasi.

BRAMBANG, Malay. A sour fruit used for chatnies and in curries, perhaps the " Bilimbi," Averrhoa bilimbi. It is also said to mean the onion, Allium cepa.

BRAMHADANDI Sans. Tel. Argemone Mexicana. It was originally introduced from Mexico in ballast, but now flourishes luxuriantly in all parts of India A pale yellow, limpid oil, may be obtained in large quantities from the round corrugated seeds, it is sometimes expressed by the natives and used in lamps, but is doubtless adapted to other and more important uses. In North Arcot it costs from Rs. 1-14-0 to Rs. 2-1-0 per maund.—*Madras Exhibition of* 1855. See Argemone mexicana.

BRAMHA-DATTHA, Sans. From Brahma, and dăttu, given.

BRAMHA-GNANEE, Sans. From Brămha, and Gnanee, the wise.

BRAMHO. A name given by Mr. Hodgson to the Kusunda, a Bhot tribe occupying the dense forests of the central region of Nepaul.

BRAMHANA, Sans. He who knows Bramha, from bramha.

BRAMHA-VOIVARATTA, Sans. From bramha, and voivarta, manifestation.

BRAMHOTTARA, Sans. From bramha, and utara, belonging to.

BRAMI, Hind. Anemone *sp.* also Taxus baccata ;—Beng. Sarcostemma brevistigma.—*Wight.*

BRAMIA INDICA. Syn. of Herpestes monniera.—*H. B. Kunth.*

BRAMINHULLY, in L. 77° 9′ E. and L. 14° 40′ N.

BRAMINNYPUT-PETTAH, in L. 79° 34′ E. and L. 13° 35′ N.

BRAMUPPULLY. A town in L 79°. 55′ E. and L. 15° 0′ N.

BRAN, Hind, Quercus annulata, also Ulmus erosa.

BRAN.

A spirit largely imported into India from France and England, obtained by distilling wine. Its qualities vary with the kind of wine employed. It is manufactured in the south of Europe, from white or pale red wines and the skins of grapes—cognac is made from the palest,—Eau de vie, is from dark red wines ; British brandy is a compound of rectified spirits ; upwards of a million gallons are re-exported from Britain.

Brandy began to be distilled in France about the year 1343, but only as a medicine, and was considered as possessing such marvellous strengthening powers that the physicians termed it Eau de vie, "the water of life." Raymond Lully, a disciple of Arnold de Villa Nova, considered this admirable essence of wine to be an emanation from the Divinity, and that it was intended to re animate and prolong the life of man. He even thought that the discovery indicated that the time had arrived for the consummation of all things—the end of the world. —*Statistics of Commerce, Quebec paper.*

BRONG-H-BRI. The female yak.

BRANKUL, HIND. Ulmus campestris.

BRANNU, HIND. Ulmus erosa.

Brass is an alloy of copper and zinc, generally the yellow alloy with about an equal weight of zinc and copper, called *yellow brass*: copper alloyed with about one-ninth its weight of tin is the metal of brass ordnance or gun metal. Similar alloys used for the *brasses* or bearings of machinery are called *hard* brass, and when employed for statues or medals they are called bronze. Brass is extensively used in India for cooking and other domestic utensils, and is in greater request than copper among the natives. Generally, mahomedans use copper and hindus brass utensils. It is imported into Bombay from England (*Faulk.*) but is largely manufactured in many parts of the country. An excellent specimen of *casting in brass* and bronzing was exhibited at the Madras Exhibition of 1855. Brass is manufactured in the more important cities of the Panjab; for smaller work they prepare the alloy in their own "kuthâli" or crucibles; for making the larger sizes, however, the gagara, shamadan, &c., they prefer the fine sheet metals imported from Europe. Besides yellow brass, a metal giving a beautiful sonorous ring when struck, and called "Phûl" or "Khâni," is made in the Panjab: "Roin," a genuine Bell metal, is also manufactured; also an alloy called "barth," and an inferior one called "kuth." The brass used in India for pots by the natives generally is of a very inferior description, the workman finding it profitable to employ an undue proportion of the cheaper metal; good malleable brass is found occasionally in old pots, probably from the number of times it has been melted and worked up causing the metals to combine more perfectly and the excess of zinc to be expelled by frequent heatings.

Good brass may be made by fusing two parts of copper and one of zinc; but various proportions should be used according to the purpose required. The Telugu names of substances used in alloying are

Copper, Zinc, Tin, Lead, Antimony	ENG.	Ragi, Sattu, Tagarum, Sheshaw, Soorma	TEL. and HIND.

These metals are used in various proportions by native braziers to form brass, Gun metal, *lokam*, pewter *satki*, bell metal, *kansu*, and Biddery ware. Occasionally, silver is added to form gongs and bells. In general, however, the proportions used are regulated by reducing the proportions of the more expensive and increasing those of the cheaper metal as far as may be practicable. Repeated meltings by drawing off the excess of zinc leave a good malleable brass, and for this reason old brass is much sought after by smiths when they desire it for any work requiring it to be particularly malleable. Guns taken at Kurnool were little better than spelter.—*Tomlinson: M. E. Mr. Rohde.*

BRASS CAMPHIRE.

Brass-capur	GUZ.	Karpuram	TAM.
Bruss-capur	HIND.	Do.	TEL.

This commercial name is a corruption of Barus camphor also called Borneo Camphor, Camphor of Baras, and Malay Camphor. It is the product of the *Dryobalanops camphora* of Sumatra, Borneo, and the Malayan Peninsula. It is found only in small quantities, in concrete masses, in the fissures of the wood. It is more fragrant, and less biting and pungent than the common camphor, and is held in much higher repute. It is imported into Bombay from China.—*Faulkner.* See Camphor; Dryobalanops.

BRASS-FOUNDER. The brass-founder or brazier trade in India, is almost exclusively in hindu hands; and he forms one of the five artizan classes, the other four being the goldsmith, black-smith, stone-cutter and carpenter. These castes all wear the Zonar or sacred string. They do not allow any brahmanical interference with them, have their own priests and ritual, and they bury their dead, in a sitting posture.

BRASSAK. A sub-division of the district of Pangkal-pinang in the island of Banka producing much tin. See Tin.

BRASSICA.—*Linn.* A genus of cruciferous plants, containing several very important alimentary species, the Brassica oleracea, cabbage, and the red-leaved variety of that species; also the B. campestris and rapa (rape), B. napus, turnip, and the variety oleifera, cultivated for its oil, consumed to an immense amount in France for illuminations.—*O'Shaughnessy, page* 188.

BRASSICA CAMPESTRIS,—*Linn.* Swedish Turnip, ENG.

BRASSICA CHINENSIS. In Shanghae oil is obtained from this.

BRASSICA ERUCA.—*Linn.* Garden Rocket or striped flower rocket.

BRASSICA ERUCASTRUM, L. of France, Italy, Switzerland, &c. is largely cultivated in the Punjab for its seed and oil, the cost of Teorah oil is from 3 to 10 seers per Rupee. It is used for burning.

BRASSICA NAPUS, L. *Rape ; Wild Cabbage ;* Colza, *Cole Seed* or Sursul of Guzerat. Native country unknown, much cultivated in Europe. Fl. small yellow, Feb. and March ; *fr.* March.

A wood is employed by cabinet makers in Europe, but its principal use is in dyeing red. It is a commercial term for woods procured in many parts of the Western Hemisphere, from one or two species of Cæsalpinia, West Indian and South American trees, but, within the last fifteen years, from the *Cam Wood* imported from Africa. The true Brazil wood is supposed to be the Bahia nitida, which yields a finer and more permanent colour than any other.—*Toml. Faulkner ; McCulloch.* See Cæsalpinia, Dyes.

BRE, HIND. Quercus Ilex, Eremurus spectabilis.

BRE, also pre. Tib. $\frac{1}{20}$th of a bushel.

BREAD, may be leavened, or unleavened or unfermented : in the latter, flour, water, with perhaps the addition of salt, are alone employed. In the former the substances employed are yeast in Europe, and the palm wines or toddies of Eastern and Southern Asia. And the substitutes for these are Sesqui carbonate of ammonia ; carbonate of soda and hydrochloric acid; or carbonate of soda and tartaric acid. The bread stuffs of commerce consist of the nutritious cereal grains, the tuberous rooted plants and the farinæ yielded by trees; also wheat, barley, oats, rice, maize, millet, Guinea corn,—the sago of palms, the plantain and banana; the bread fruit tree; the edible root crops and starch producing plants, which are a somewhat extensive class, the chief of which, however, are the common potato, yams, cocos or eddoes, sweet potatoes, the bitter and sweet cassava or manioc, the arrowroot and other plants yielding starch in more or less purity.

Wheat and wheat flour, maize, and rice, form very important articles of commerce, and enter largely into cultivation in various countries for home consumption and export, a portion being consumed in the arts—as starch for stiffening linens, &c., and for other purposes not coming under the term of food. The kind of bread in common use in a country depends partly on the taste of the inhabitants, but more in the sort of grain suitable for its soil. The Chinese use little bread and that little is generally of wheat-flour. Cakes of wheat-flour, prepared on the girdle, is a common article of diet amongst the races of northern and central India. Further south, on the table lands of the Peninsula, the natives of India use unleavened cakes made of the flour of the Indian corn, the Zea mays rather less nutritious than that made from wheat, but more fattening, in consequence of the greater quantity of oil contained in it. Amongst the millets, bread is made of the great millet, Sorghum vulgare; the spiked millet, Pencilloria spicata; and the very poor of the people use the hard Raggy, Eleusine corocana, in the form of cakes or porridge. Barley is occasionally used to the westward. Along the seaboard, of all Southern Asia, and eastward into China however boiled rice is the great article of diet, and it is often cooked, with unfermented palm wine, into the cakes, familiarly known in India, as "hoppers."

Rice flour is scarcely ever made into fermented bread, although it is said to be occasionally mixed with wheat flour, for that purpose. The superiority of wheat to all other farinaceous plants, in the manufacture of bread, is very great. Its essential constituents are starch, also called farina or fecula, gluten, and a little sugar and albumen. It is occasionally adulterated with alum, which is added to whiten the flour, and to enable it to retain a larger quantity of water. Salt is also employed in the adulteration of wheaten bread, to whiten the flour and enable it to hold more water, and carbonate of magnesia is improperly used to obtain the same result. In Eastern and Southern Asia, the ordinary wood bread, the well known Sago, is made from the starch granules contained in the pith of several species of palms. It is largely used as an article of diet, alike for the robust labourer as for the invalid, and is extensively exported for the use of the sick, and the nursery. Amongst the Arabs burgoul is wheat boiled with leaven, and then dried in the sun. The dried wheat is preserved for a year, and boiled with butter and oil. Leavened bread is called Khubz.—*Robinson's Travels, Vol. II. p. 132. Tomlinson. Hassell,* (*Statistique des Cereales de la France par Moreau de Jonnes*) quoted by *Simmonds, p.* 217.

BREAD-FRUIT TREE, Eng. Artocarpus incisa, *Willde;* when cultivated, its seeds are abortive. It belongs to the natural family Artocarpeæ in which are the bread-fruit, fig, and mulberry, many of them of great utility to mankind. See Artocarpus; Ficus; Morus.

BRECHNUSS SCHWARZE, Ger. Jatropha curcas.

BREJ or brege pam, is an article which occasionally comes to the Panjab from Siberia (Sebere, Seetha or Seeth, by the natives of the N. W. Himalaya and Punjab, Scythia? It is seen usually as a lining to postins, caps, stockings, gloves, neckties, &c., from its nature it cannot be spun into thread; it is of a white color, with a certain gloss, and is supposed to be a species of eider down—it is fancy priced.—*Powell's Handbook, p.* 181.

BREMABDASUM, in L. 77° 31' E. and L. 8° 26' N.

BREWERS' STRAITS or Salat Panjang, is formed between the mainland of Sumatra and Pulo Bulicasse, Pulo Padang, Pulo Rauto and Pulo Paniore.—*Horsburgh.*

BRI, Hind of Kúlù, according to Cleghorn, Desmodium *sp.*—.

BRIALI, Hind. Colebrookia oppositifolia.

BRIAR of Micah vii, 4, a species of Solanum.

BRICK.

Int	Guz. Hind.	Shengal, Shengkallu	Tam.
Bata	Malay.	Itika-rai	Tel.

A building material formed of clay, hardened either by the sun's rays or the heat of a furnace, the former being called sun-dried bricks and the latter burnt bricks. The various argillaceous earths are for the most part unfit to be used alone for brick making. Some are almost pure clay or alumina, and are strong and exceedingly plastic, but cannot be dri without splitting; others, being light and sandy clays or loams, are too loose to be made into bricks without the admixture of lime as a flux, to bind the materials. Others again, are natural compounds of alumina and silica, and, if free from lime, magnesia or metallic oxides, these are exceedingly valuable clays being from their infusible nature well adapted for making fire clays, for lining furnaces, for making crucibles, glass-house pots, &c. Fire clay is found in many places in India, and Dr. Hunter and the Madras Mint make firebricks equal to any imported and at less than half the cost. Bricks are still made in India by hand moulds, but in Britain they are now almost all made by machinery. Bricks, burned almost to vitrifaction, are much employed as a road material on all alluvial lands of India.

No authentic information is extant regarding the early history of brickmaking in India. It is known that sun dried unburnt bricks of a very large size were formerly employed in building and they may still be seen in the basements of some of the old ruined Jain temples at Heera Toombal in the Ceded Districts, Anagherry in the Southern Maharatta country and in the walls of the mud forts at Gudduk, Dummul and other localities. The bricks appear to have been usually 2½ feet in length by 15 inches in breadth and 7 or 8 inches in thickness. The seams are apparent from the effect of the weather, but the bricks cannot be separated without breaking. The basement and a good deal of the interior of the solid muntapums or pyramidal towers of these jain temples were built with unburnt bricks and the masonry and carved slabs, ornaments and pillars were erected over this foundation of earth work. This accounts for the dilapidated condition of parts of these temples. In some of the old forts in Southern India the lower part of the walls is made of unburnt bricks and the upper part of hewn stones. The more modern forts are chiefly constructed of mud embankments cased in large blocks of stone, very accurately fitted but not cemented with lime or mortar. In the ancient buildings of India, brick work does not appear to have been extensively employed; although in some of the temples we find the upper stories made of brick, while the lower ones are of stone. Bricks of superior quality, and many times the present ordinary size, are often discovered in Southern India, and in the Northern Circars, South Arcot and other Districts excellent specimens have been found, which indicate that formerly they were made of a much larger size, and that great attention was paid to their manipulation and burning. The bricks made in Madras 30 or 40 years ago, were also larger and of better quality than those now manufactured. The material used in Babylon was unburnt brick. Many of the ancient ruined cities of Persia are built of unburnt bricks beaten up with straw or rush, to make the ingredient adhere, and then baked in the sun. In the days of the Egyptian bondage, Pharaoh commanded the taskmasters of the people, and their officers, saying, "ye shall no more give the people straw to make brick, as heretofore; let them go and gather straw for themselves." (*Ex. V.* 7. "And they had brick for stone, and slime had they for mortar. (*Gen. I.* 4.) Assyria abounds with asphaltus, or bitumen. Herodotus, and many ancient authors affirm, that the walls of Babylon were cemented with it and Arrian says "The temple of Belus, in the midst of the city of Babylon, was made of brick, cemented with asphaltus."—*Mignan's Travels, p.* 166. *Dr. Hunter in M. E. J. R.*

BRICK TEA, is tea compressed into a solid form. This article and the Khata, or "scarf of felicity," are the great articles of trade between China and Thibet. A prodigious quantity of these goods is exported annually from the provinces of *Kan-Sou* and *Sse-tchouen.* The Tibetans might live in freedom and independence in the midst of their mountains, and care nothing about the Chinese, if they could only make up their minds to go without brick tea and scarfs of felicity.—*Huc. Chinese Empire, Vol. I. p.* 15.

BRIDE AND BRIDEGROOM. In the patriarchal history of Scripture, and in the early accounts of the manners of ancient nations, the daughter was always considered the property of the parent, the wife as the purchase of the husband, and the marriage contract as the deed of transfer. This is still the foundation of the hindu marriage ceremony and the mahomedan bridegroom by the dower purchases his wife of herself.—*Raffle's History of Java, Vol. I. p.* 325.

BRIDGE. A bridge has been metaphorically in use with many nations, to indicate the means of passage of the soul of the dead. The Parsi has the bridge Chinvat that leads to heaven and the mahomedan has the Pul-i-Sirat across which the good walk easily, but it is as sharp as a razor for the wicked whom it cuts in two. There is a bridge for the dead in Java, and in N. and S. America. In Polynesia a canoe is the object typified, as with the Greeks and Romans, with whom a boat was the supposed means of transport. The bridges in the S. E. of Asia are usually built of stone, brick, wood iron, bamboos, canes or twigs. The Arian hindu and mahomedan rulers in India, built but few bridges. The Bhot, Mongol and Tartar races of the Himalaya and Burmah had numbers of them. In Burmah, bridges are seldom wanting near villages where nullahs or inundated fields obstruct the communication near towns. They are sometimes of extraordinary length. The construction never varies. Large teak posts are driven in pairs or triplets, with bays between, not exceeding twelve or thirteen feet. Mortice holes are cut through those parts in which cross bearers are laid with beams and solid planking over those and a railing is added.

Turner tells us of a simple bridge, for the accommodation of single passengers, constructed between two opposite mountains, which consisted of two large ropes made of twisted creepers, stretched parallel to each other, and encircled with a hoop. (*Turner's Embassy, p.* 54.) This is the original of the Jhula or rope bridges of the Himalaya. Those above Serahan, opposite Miru, and at Poaree, whether swinging or suspension bridges, are, says Dr. Cleghorn, unsuited for the passage of sheep and mules. The elevation of the rope bridge (Jhula) at Tuni on the Tonse river is nearly 3,000 feet above the sea. In the bridges of the N. W. Himalaya the timbers of the following trees are used for ordinary wooden bridges. Alnus species; Bombax heptaphyllum, Cedrela toona; C. serrata; Phœnix dactylifera; P. sylvestris, and Salix alba. For swing bridges Andropogon involuta; Betula bhojputra; Cotoneaster obtusa; Indigofera heterantha Olea Europæa; Parrotia Jacquemontia and Salix alba.—*Turner. Drs. Cleghorn, Stewart* and *Mason.*

BRIEDELIA, *Species.*

Undooroo Wood.	ANG-TEL.	Undooroo Karra	TEL.

A timber tree of the Northern Circars.

BRIEDELIA LANCÆFOLIA, *Roxb.* A tree of considerable size, native of Bengal.

BRIEDELIA MONTANA.

Goonjun Mara	CAN.	Asanna	MAHR.

Found in Canara, common in Dandelee where it reaches a great size. Hardly inferior to teak and stands water equally well. It seems well worthy a trial for naval purposes. In Cuttack sells at 6 annas per cubic foot. It is a light brown coloured wood and strong. Plentiful in the Santhal jungles from Raneebahal to Hasdiha used for beams, planks and building purposes generally. The silk worm from which Tassa cloth is made feeds chiefly upon this tree.—*Cal. Engineer's Journal, July* 1860. *Dr. Gibson.*

BRIEDELIA MOONII, *Thw.*

Cluytia retusa, Moon's Cat. p. 71 (non Linn)—c. p. 3475.

Pat-kaa-la-gass. SINGH.

Common in Ceylon up to an elevation of 2,000 feet. The Singhalese consider this quite distinct from B. retusa which it, however, very closely resembles, differing in its somewhat larger leaves, axillary, not spiked inflorescence, and ovoid fruit. They are probably mere varieties of one species. The timber of both is useful for building purposes.—*Thw. En. Pl. Zeyl. p.* 279.

BRIEDELIA RETUSA, *Spr.*

B. spinosa, *Willd.*

This large tree is a native of several parts of Southern India. It is not uncommon in the alpine jungles of Coimbatore where it attains a considerable size. It is found in the Godavery forests, where its wood is esteemed as very strong and good. It is rather a common tree in the Bombay forests, both coast and inland. The wood is strong and tough and stands the action of water well: hence it is often used for the frames of wells, whereon the superstructure of masonry is erected. It is also used as beams for houses. This wood deserves, in Dr. Gibson's opinion, to be more extensively known than it is: cattle eat the leaves voraciously. They are said to destroy worms in their bowels.—*Drs Roxb., O'Shaughnessg, Gibson, Wight, and Cleghorn. Captain Beddome. Flor. Andh.*

BRIGGS, General, an Officer of the Madras Army, author of Letters on India.—Translation of Ferishta. Lond. 1829, 4 vols. A short account of the Sheilly family.—Lond. As. Trans. vol. vi. 77. Description of a Persian painting.—Ibid, vol. v. 314. On the land-tax of India.—Editor of the Persian Tarikh-i-Ferishta. He was assistant resident at Poonah, under Mr. Elphinstone as resident, and was there when the last Baji Rao moved out of Poonah and burned down the residency and with it his manuscript of the translation of Ferishta. When peace was restored he retranslated and printed it.—*Dr. Buist's Catalogue.*

BRIGGS, H. G., author of cities of Gujarashtra.—Bombay, 1849, 4 to. On the Parsees.—Bombay, 1852, 1 vol. 8vo. *Dr. Buist's Catalogue.*

BRIGU, in Hindu mythology, is a son of Brahma, and his name is frequently found in the hindu writings. It is related of him, that once on being asked, in an assembly of the gods, which was the greatest, Brahma, Vishnu, or Siva, he undertook the task of ascertaining the point by a somewhat hazardous experiment. —*Cole. Myth. Hind. p.* 7.

BRIHADRATHA, of the line of Pandu, father of Jarasandha, one of the Barhadratha dynasty of Indian kings. According to Bunsen, he ruled B. C. 866 to B. C. 847.—*Bunsen, III.* 547.

For culinary purposes, the vegetable egg, or brinjal, is one of the best vegetables in India. Several varieties are extensively cultivated and eaten by all classes. It is a large round-shaped fruit, both purple and white; another is white, thin and long; a smaller species again is pear-shaped, red and purple striped; and there is one seldom exceeding the size of an egg. They are all dressed alike and used both in curries and other native dishes, and are much on the tables of Europeans. Their propagation is by seed, at the commencement of the rains. The young plants are placed at about eighteen inches apart and require watering every third or fourth day.

BRITAIN, or Great Britain, a kingdom in the extreme west of Europe which now sways the destinies of British India. It is ruled over, in Britain, by a sovereign, with responsible ministers, and two houses of parliament, viz., the House of Commons and the House of Lords. And for India, there is, in Britain, a minister with a council of twelve, composed of men acquainted with India, and it sends to British India for administration a Viceroy and Governor General with a Governor for Bombay and one for Madras, with six Judges for the High Court, of Calcutta, Madras and Bombay. For the command of the three British Indian armies, Great Britain sends three Commanders-in-Chief, with several Generals of Division. Great Britain has many colonies, and its entire dominions are usually designated the British Empire, over which it rules by means of Viceroys, Governors General with councils, Governors with councils, Parliaments and commissioners. The area and population are as under:—

	Sq. M.	Population.
British N. America, Great Britain and British India	5,438,000	188,514,000
British Feudatory India	596,700	47,909,109
Colonies of Great Britain.	4,562,000	161,486,900

BRITASTAN, mentioned in the Brahmanda Purana, as the place of religious duty, is supposed by some, to be the Island of Great Britain. It is also called Swita dwip, or the *White Island*, and Suvarna dwip, or the Golden *Island*, is conjectured also to be Ireland. The British Islands are (it is said by some), sometimes called Chundra dwip, and likewise Tricalasa, or the Island with three Peaks, viz., Rajatakuta, Ayacuta and Suvarnacuta.—*Warren Kala Sankalita*.

BRITISH INDIA. When first the British set foot in India the foundations of the old Moghul empire were thoroughly broken up, waves of conquest had, passed over it and robber chiefs had long been making invasions of their peaceful neighbours, the normal practice of their rule. But, with the formation of factories and the hiring of troops to defend them, was laid, the foundation of a central power which gradually grew in strength sufficient to control the various chieftains and extend its efforts from Cape Comorin to the Indus. The British administration in India has been purely that of a military government, and the entire policy has necessarily conformed to military necessities, and it is only since the middle of the nineteenth century that the state of the country has permitted its rulers to throw the energy of the Government into the path of peaceful development of its resources.

The first occasion of the natives of Britain coming in contact with a force of natives of India, was in 1664, when Sivaji attacked and plundered Surat, on which occasion Sir George Oxenden won the applause of Aurungzeb, by an uncommon display of valour. Since then, wars have been incessant and many a name become illustrious.

Since the conquest of the Punjab by Lord Dalhousie in 1849, and of Pegu in 1852, the boundaries of the British empire of India, excluding Aden and the Straits Settlements, have been the Suliman range, the Karakorum, the water-shed of the Himalaya, Nepaul and Bhootan on the north; the sea on the west and south; and a line marked by no natural features stretching from the Yoma range irregularly in a southeast direction through Burmah to the tenth parallel of latitude. Roughly, British India may be said to be included within L. 8° and 37° N. and L. 66° 44′ and 99° 30′ E. involving 11,260 miles of external boundary. From Tenasserim by the Himalaya to Cape Monze in Sindh the *land* frontier is 4,680 miles, while the *coast* line from the Straits Settlements to Kurrachee is 6,580. The length of India from the Indus to Cape Comorin, on the meridian of 75°, is 1,900 miles: The extreme breadth is 1,800 miles, on the parallel of 28°. The whole peninsula contains an area of about 1,557,000 square miles and a population of 204,000,000 or 123 to the mile, all are governed by Great Britain with the exception of small territories held by Portugal and France; which stand thus:

Name.	Locality.	Square Miles.	Population.

British India, is administered, chiefly directly, by British officials under a viceroy and Governor General, but to some extent indirectly through feudatory Native Chiefs, guided by British officers. No census of the Feudatory States has been taken save in isolated cases, and the surveys of them are not yet complete. But the following may be accepted as representing the portions of India governed directly by British officials, and those administered indirectly through Native Chiefs with subsidiary sovereign powers.

	Square miles.	*Population.*
Non-Feudatory...	960,210	156,000,000
Feudatory ...	596,790	48,000,000

British India as it stood in the middle of the nineteenth century was won by the East India Company which had been established in 1599. In 1636 Mr. Boughton, a ship's surgeon, obtained the privilege of planting factories in Bengal. The Presidency of Madras was constituted in 1639; that of Bombay in 1662 and that of Bengal in 1682. In 1773 the Governor of Bengal was made Governor General of India with certain powers, chiefly political and financial, over the other two. In 1784 a Board of Control was created in Britain composed of the king of Great Britain's ministers, who, in that capacity, bore the title of Commissioners for the Affairs of India, and this system continued until the year 1858, when British India was taken under the direct control of the Crown. In that interval, however, the Home Government of India had consisted of a Board of 18 members, called the Directors of the East India Company, and the President of the Board of Control. The Directors had mostly all the patronage as to appointments, except the higher offices and commands which were made in communication with the ministry, who likewise originated all questions of peace and war, possessed the power of reversing the acts of the East India Company and the Government of India, and also of sending out instructions on special matters to the Governor-General without consulting the Directors. Between the first formation of an English East India Company and A. D. 1858 the following were the chief changes :

1664. French E. I. Company formed and their capital built in 1674 at Pondicherry.

24th Jany. 1667-8. The first notice of tea in the company's records ; in a despatch to their agent at Bantam of that date, he is ordered to send home 100 lbs. of tea the best he can get.

1667. Charter renewed afresh and authority to establish a mint at Bombay.

1681. Sir Josiah Child published a treatise in which it appears that the Company then had 556 partners, 36 ships of from 100 to 775 tons, that the customs duties on the Trade amounted to £60,000 or 70,000 a year.

1686. An attempt projected by Sir J. Child to acquire territorial empire in India, failed.

1693. A fresh Charter. } in 1702 united
1698. A new Company. } under the title of the United Company of Merchants of England trading to the East Indias.

1692. Company's agency transferred from Hooghly to Calcutta.

1698. Company acquired a grant, from a grandson of Aurungzeb, of Calcutta, and two adjoining villages with leave to exercise judiciary powers over the inhabitants and erect fortifications. These were given the name of Fort William.

1715. An embassy went to Furhkhsere and obtained in 1717, by which they got the island of Diu, 37 townships in Bengal which gave them the command of the river for 10 miles S. of Calcutta and had the villages restored to them near Madras, which had been formerly given by the government of Arcot and resumed.

1724. Average of 10 years ending with 1724, the total value of British products annually exported was £92,410,12-6 and of bullion £518,102-11-0, total 617,513-8-10.

1741. Average of the 8 years ending in 1741 the annual value of British goods exported was £157,944-4-7.

1748. 7 years ending with 1748 they amounted to £188,176-16-4.

1732. Company reduced their dividend from 8 to 7 per cent.

1743. Renewed Charter.

1757. Plassey fought by Clive, with 700 European Troops 1,400 sepoys and 570 sailors and threw Bengal, Behar and Orissa into British hands.

1773. Bengal Presidency given a superiority over the others. Value of British goods exported was £489,803
1780. £401,166.
1772. Net revenues of Bengal, Behar and Orissa £2,126,766
1785 „ „ „ „ £2,072,963
1797 „ „ India £8,059,000
1805 „ „ „ „ £15,403,000

Company Exports.
1807. £952,416
1808. 919,544
1809. 866,153
1810. 1,010,815
1811. 1,033,816
} For private individuals during the 5 years ending with 1807-8, there was annually exported £305,496.

1813. Charter renewed, but merchants allowed to trade with Bombay, Madras, Calcutta, and Penang.
1814. Merchandise exported in value £870,177
1819. do. do. £3,050,741

1833. Company as traders abolished ; to govern India in a political manner till 30th April 1854.

22nd April 1854 all real and personal property of Honorable East India Company vested in the Crown, (who becomes liable for all claims, debts, contracts, &c.) since 1793 but is managed by the Company. Dividend is 10½ per cent. and may be redeemed any time after April 1784. Company stock is £6,000,000.

Law of Residence, and right to employment, &c.—3. and 4. W. IV., C. 85 SS. 87. No native of the said territories, nor any natural-born subject of His Majesty resident therein, shall by reason only of his religion, place of birth, descent, colour or any of them be disabled from holding any place, office, or employment under the said Company.

In their career of conquest, the British East India Company had been almost continuously successful. A severe reverse was sustained in Affghanistan in 1841, in which many thousand soldiers perished in retreat. But their most severe trial occurred in 1857 and 1858, in which years the native army revolted and many of the races both hindu and mahomedan rebelled. In 1857, the number of British soldiers had fallen very low and it was supposed that the disaffected soldiery of the Bengal Army took that opportunity to revolt. Much has been put forward as to the cause of that disaffection, but a general impression is that it had its suggestion in the Affghanistan disasters, though doubtless a great change had been effected in the temper of a naturally arrogant oriental race who respect, almost worship, might, by introducing amongst them rules and regulations suitable only for an army drawn from nations advanced in civilization. The contest for supremacy was severe and long continued :

In May 1857, there were in India

European soldiers	45,000
Native „	244,000
Semi Military Police ...	80,000
Total...	365,000

About 2,50,000 Native Soldiery were arrayed against the British power in 1857. Of the British forces were 45,000 Europeans and about 60,000 reliable native soldiery. These last were, before the end of 1857, increased to about 150,000 native soldiers, by the addition of the Sikh army from the Punjab, and before July 1858, there were over 80,000 British Soldiers in India. After that revolt, the Native Army began to be reduced, and by November 1866, it fell to 135,000 men with only 12 guns, against 150 in 1857.

The successive features of the revolt and re-establishment of authority were as under :—

Revolt of the Bengal native army was commenced at Berhampoor by the 19th Ben. N. I, on the 26th February 1857.

Revolt continued by the out-break of the native cavalry at Meerut, on the 10th May 1857.

Dehli massacre occurred on the 11th May 1857.

Ghazi-ud-din-Nugger—the mutineers were defeated on the 30th May 1857.

The Shah-Jehanapore massacre occurred on the 31st May 1857.

5th June 1857, the mutiny occurred at Jhansi and on the 8th the massacre occurred.

The massacre at Cawnpore of the Futtehghur fugitives occurred on the 12th June 1857.

The massacre at Gwalior occurred on the 14th June 1857.

A massacre occurred of the British at Cawnpore by Nana Rao on the 27th June 1857.

Massacre at Cawnpore on the 15th July 1857 by Nana Rao, of British women and children.

On the 20th August 1857 Dehli was captured.

Lucknow was entered on the 25th August 1857 by generals Havelock and Outram.

Delhi was assaulted on the 14th September 1857.

Lucknow was relieved by general Havelock on the 25th September 1857.

The second relief of Lucknow was affected by sir Colin Campbell on the 17th November 1857.

Cawnpore was relieved by sir Colin Campbell on the 28th November 1857, and the Gwalior contingent routed.

The battle of Nawabjgang in Oudh, occurred on the 14th June 1858.

Gwalior was re-captured by Sir Hugh Rose on the 28th June 1858.

The Government of the East Indies transferred to the Crown on the 1st September 1858.

On the 1st November 1858, it was proclaimed throughout India, that its government had been transferred from the East India Company to the British sovereign.

Bengal Native Army was reorganized on the 9th September 1859.

On the 20th August 1860 the Indian and British armies were amalgamated.

The Governor General was raised to the rank of Viceroy.

The Supreme Courts of Calcutta, Madras and Bombay were amalgamated with the Courts of Sadr Adalut of the three Presidencies, and the united body designated the High Court of Judicature. The Native Soldiers were reduced in numbers as the organization of the semi-military policy progressed.

The European and Native Forces in India were as under in the years:

	European.	*Natives.*
1839-40	35,604	199,839
42- 3	46,726	220,947
1856- 7	45,522	232,224
8- 9	106,290	196,248
1864- 5	71,880	118,315

In 1857, there were 6,944 European and 8,963 Native artillery : 3,136 European and 30,473 Native cavalry. In that year the revolt of the native army occurred and the policy since then has been to augment the European arm, remove all natives from the scientific corps and reduce their numbers. The composition of the Indian army in 1857 and 1865 was as under :

Europeans.

	1857.	1865.
Artillery	6,944	13,672
Cavalry	3,136	6,274
Infantry	33,254	48,945
Staff H. & C.		1,406
Engineer Sappers		438
Invalids, Veterans warrant ...		1,145
Total...	43,334	72,330

Natives.

	1857.	1865.
Artillery	8,963	1,465
Cavalry	30,473	14,674
Infantry	185,047	99,353
Engineer Sappers		2,853
Total ...	224,483	118,315

In 1858 the East India Company ceased to rule, and a Secretary of State with a Council of

15 members took its places: in 1861 the Indian Councils' Act was passed.

Northern India.—With the exception of the transfer of North Canara from Madras to Bombay and the addition of Sindh to Bombay on the conquest of that province, these Presidencies have retained very nearly their original limits, including the provinces conquered from the Peishwa and Guikwar between 1800 and 1818. But the succession of conquests in Northern and Central India and Burmah, gradually led to the formation of separate jurisdictions under Lieutenant Governors and Chief Commissioners.

Administration.—In 1853 the Governor General ceased to exercise any more direct supervision over Lower Bengal than over the rest of India.

Its Civil Government in Calcutta is carried on by a Governor General in Council, through five great departments, the Foreign, Home, Military, Finance and Public Works. There is, besides, a Governor and Council in Madras and the same in Bombay; a Lieut. Governor of Bengal; another for the Panjab, Commissioners of Oudh, the N. W. Provinces, Central India, the Berars, Mysore and British Burmah.

For the military control, there is one Commander-in Chief of all India who specially attends to the Bengal Army and European Corps, with Commanders-in-Chief of the Madras and Bombay presidencies, all of whom have seats in Council.

Every order issued from any of the five departments of the Supreme Government runs in the name of The Governor General in Council. Up to Lord Canning's administration, all matters were in truth so disposed of; but Lord Canning remodelled it into the semblance of a Cabinet with himself as president, and each member of the Government now holds a separate portfolio and despatches the ordinary business connected with it, on his own responsibility, only reserving matters of exceptional importance for the opinion of a colleague or the decision of the assembled Council. The particular branch of administration which Lord Canning, Lord Elgin and Sir John Lawrence all successively reserved for their own special charge, is the Foreign Office of India, the duties of which relate to all dependant chiefs and princes in India and all neighbouring foreign princes, beyond the limits. With such nations as Persia and China, where there is a diplomatic representative of the British Government, the Governor General acts in concert with the British Government.

Each Province is sub-divided into Zillahs, or Districts, under Collector-Magistrates or Deputy Commissioners with Joint, Deputy, Assistant and Extra-Assistants. In the Bengal Presidency these Districts are in most cases grouped into Divisions, each under a Commissioner supervised by a Revenue Board or Financial Commissioner. English Counties average 1,000 square miles in extent. In India they are much larger. In Bombay, for instance, Collectorates average about 6,000 square miles and Khandeish is supposed to be 15,000 square miles. There is no Revenue Board in Bombay. There are two Revenue Commissioners, between whom the Collectorates are divided. The Revenue Commissioner there corresponds immediately with Government and is also Police Commissioner of his Division. Each District has a treasury and a jail. In Lower Bengal, Districts are broken up into Sub-divisions under Joint, Assistant or Deputy Magistrates. Under the new constabulary system, introduced by Act V. of 1861, each District has a Superintendent of Police, and the Districts are grouped for police purposes into circles under Deputy Inspectors General, while the whole Police force of each Province is under an Inspector General. The constabulary, except on the North-Eastern and Trans-Indus frontiers, is a purely civil force organized on the Irish system, and subject in all respects, except internal discipline, to the civil authorities, that is, to Commissioners of Divisions and Deputy Commissioners, or Collector-Magistrates, of Districts.

The Provinces are administered by a covenanted civil service, an uncovenanted civil service and military officers of the Staff Corps.

The Madras Presidency consists of 20 Districts, including the city. The area is estimated at 140,726 square miles, and the total population at 26,539,052. By the quinquennial census taken on the 1st March 1867, the population of the Madras Presidency, exclusive of the city of Madras, was found to be 26,089,052 thus classified :—

Hindoos	24,172,822	Christians	414,096
Mahomedans	1,502,134		

The population of the city of Madras is supposed to be about 450,000, thus classified :—

		Death Rate per 1000. 1866.	1867.
Europeans and East Indians ...	17,219	38·1	28·8
Hindoos ...	365,576	30·6	27·2
Mahomedans ...	67,205	29·9	26·5

The approximate area and population of the Madras Districts including the city are as under :—

Districts.	Square miles.	Population.
Madras city......	27	450,000
Ganjam...	4,457	1,235,790
Vizagapatam	18,935	1,934,558
Godavery.........	7,535	1,427,472
Kistna.........	7,227	1,296,652

South Canara...	4,206	839,688
Malabar......	6,259	1,856,378
	140,726	26,539,052

The water supply of the several districts is somewhat varied. The average annual rainfall during a period of five years ranged from 17·57 inches in Bellary to 146·31 inches in South Canara. The total area of the Presidency may be estimated as 130,000 square miles, being thus more extensive than Great Britain and Ireland and about the same size as the present kingdom of Prussia.

Ryotwary lands ... 16 million acres (actual.)
Inam lands......... 4¼ million acres (actual.)
Zemindary lands... 5½ million acres (estimated)
Malabar and Canara 2¼ million acres (estimated.)

The proportion of the irrigated land applied to the production of any crop, but rice is very limited.

The Madras Districts range from 2,000 to 19,000 square miles in extent. The Districts of Ganjam, Vizagapatam, Godavery and Kistna are on the north-east coast, to the east of the Central Provinces and Hyderabad. The other east coast districts are Nellore, Madras, Chingleput, South Arcot, Tanjore, Madura and Tinnevelly, the last named being situated in the extreme south of the peninsula. To the west of Madura and Tinnevelly, and on the west coast of the peninsula, are the Travancore and Cochin territories governed by feudatory rajahs. North of these states, on the same coast, are the Madras districts of Malabar and South Canara. The central districts of the presidency are those of Coimbatore, Trichinopoly and Salem, between Malabar and Madras, and those of Bellary, Kurnool, Cuddapah and North Arcot between Hyderabad and the Mysore country, which intervenes between Canara and Bellary and Nellore.

Several distinct races dwell in the Madras Presidency, Mahomedans, Aryan-hindus, and many non-Aryan tribes, but the bulk of the soil is possessed by the Tiling, Arava and Canarese peoples, three great nations of Tamulian origin.

The Madras Presidency may be described as of three parts—the Telugu country of the North, extending northwards from, and including, Nellore; the Tamil country of the South, and the Canarese and Malayalum districts of the Western or Malabar parts of the peninsula.

In the Southern division, where, the mahomedan influence had been very weak, the land was held by cultivating village communities who paid rent direct to the old hindoo sovereigns.

In the third or Western division, the village or communal gives place to the individual right to land free of all rent to the State, known as *Janm* or birthright. Malabar was prosperous, owned chiefly by wealthy capitalists but Canara had been over-assessed, prior to British occupation. The extent of land under cultivation in those portions of the Madras Presidency held on ryotwary tenure, has risen from about ten million acres in 1855, to sixteen million acres in 1865. In 1868-69 the area under cultivation increased by 202,696 acres.

Mr. Dalyell, Secretary to the Madras Government, estimated that there is produced an annual supply of 129 million cwt. of grain for the support of the population, or more than 5 cwt. for each person, being more than 1½ lbs. per diem, whereas a family of five can subsist upon 7 lbs. per day, without difficulty and three acres of superior land, supposing one acre to be irrigated, or four acres of unirrigated land would support such a family for a year.

Bombay and Sindh consist of 18 districts besides Bombay Island. The area is 131,298 square miles and the estimated population 13,038,609.

In the 13 Bombay districts the population was thus classified several years ago :—

Hindoos...	5,652,109	Mahomedans including Africans	779,264
Wild Tribes	913,976		
Low Castes	782,003	Jews ...	3,608
Jains ...	128,798	Parsees ...	132,563
Lingayets	565,447	Christians	57,766

In the five Sindh districts the population was thus classified :—

Mahomedans	1,354,781	Other religions	50,551
Hindoos	363,295		

The census of Bombay Island, taken on the night of 1st February 1864, shows the following results:—

Caste or Race.	Number.	Ratio.	Caste or Race.	Number.	Ratio.
Budhist or Jain ...	8,021	·98	Parsee... ...	49,201	6·03
Brahmin	30,604	3·75	Jew	2,872	·35
Lingayet	1,598	·19	Native Christian .	19,903	2·44
Bhatia	21,771	2·67	Indo-European ...	1,891	·23
Hindoo of other Caste	491,540	60·20	European ...	8,415	1·03
Hindoo Out-Caste ...	32,434	3·97	Chinese... ...	358	·04
Mussulman ...	145,880	17·87			
Negro-African ...	2,074	·25	All Races ...	8,16,562	100·

The surface of Bombay Island is about 18·62 square miles, or a square mile to every 42,104 of the land population. The inhabited houses were 24,206 in number; of these, 6,676 were thatched huts.

An average Bombay Collectorate contains twelve *taluqs* or divisions, each of which contains about one hundred Government villages, that is to say, villages that are not alienated and the total revenues of which belong to the State. Each village has its regular complement of officers, who are usually hereditary. The officers on whose services Government is mainly dependent consist of the *patel*, who is the head of the village for both revenue and police purposes; the *tullatee* or *koolkurnee*, who is the clerk and accountant; the *mhar* who is a kind of beadle; and the watchman. The patel and koolkurnee either hold a certain quantity of rent-free land, or are remunerated by a cash payment equivalent to a certain percentage on the collections. The mhar and watchman, in common with the other village servants, also hold land on more or less favourable terms as regards assessment, and receive, besides, grain and other payments in kind from the villagers. A village is, for Government or social purposes, complete in itself; and is, so to speak, independent of the outer world. The revenue accounts of a village are simple but complete. The survey-register is the basis of them. Every occupant is given a separate receipt-book, in which the total amount of his holdings is entered, and the patel and koolkurnee are bound under heavy penalties to record in it the sums he has paid. Each year, what is termed the *Jama-bandi* of the village is made, at which time the total amount of revenue due from the village is made out. In point of practice this is now, so far as Government interests are concerned, a very simple business, as there is little or no unoccupied land; and the *Jama-bandi* as nearly as possible represents the sum entered in the register.

There are two Revenue and Police Commissioners for the entire Presidency. These officers are constantly on the move in their respective Divisions during the fair season. They entertain appeals from the Collectors' decisions, and are the channels of communication between them and the Government. From June to October they both reside at Poona, which is also at that season the head-quarters of the Government.

Thurr and Parkur, in Sindh, is a sandy desert. The desert talookas of Omerkote consist of a narrow strip of sand hills and waste lying north of the Runn of Kutch, and stretching about 130 miles from District Mahomed Khan's Tanda on the west, to the Jodhpore frontier on the east. The principal town is Omerkote, situated between the desert and the plains. It has long been the acknowledged capital of this part of the country, and with its mud fort was considered the key to the desert, commanding the high road between Marwar and Sindh.

Aden is under the jurisdiction of Bombay. Almost the most southerly point on the Arabian coast, it is situated in latitude 12° 47′ North, and longitude 45° 10′ East. It is a peninsula of about fifteen miles in circumference, of an irregular oval form, five miles in its greater and three in its lesser diameter, connected with the continent by a low narrow neck of land 1,350 yards in breadth, but which is in one place nearly covered by the sea at high spring tides.

Bengal.—One of the most important divisions of India, is the province of Bengal, which is ruled by a Lieutenant Governor. Bengal contains 11 Divisions including 56 Districts with Calcutta. The territory under the Lieutenant Governor of Bengal comprises Bengal proper, Behar, Orissa including the Tributary Mehals, Assam, Chota Nagpore, and the native states of Hill Tipperah and Cooch Behar. It extends from the meridian 82°

to 97° east of Greenwich, and lies within the parallels of 19° 40′ and 28° 10′ north latitude. From the Chumparun District as far eastward as the recently annexed Bootan Dooars, the Himalaya range, running through the independent states of Nepal, Sikkim, Tibet and Bootan, forms the northern boundary of the Province. Further east, along the northern frontier boundary of Assam, lies a tract inhabited by the Akha, Dufla, Meerie, Mishmee and other wild tribes; along the eastern frontier lies a part of the independent kingdom of Burma; below that the Munipore State; still lower are various hill tribes, such as the Naga, Looshai, Khyen, Meekir, &c.; and at the extreme south-east is British Burma. On the south of Chittagong, which is the south-eastern district of Bengal, is the Akyab District of Arakan. In the south-west, is Orissa bounded on the south by the Madras Presidency; and on the west by certain Tributary Estates, and by the Sumbulpore and Belaspore Districts of the Central Provinces. Further north, abutting on the western frontier of the Lieutenant-Governorship, are the native state of Rewah in the Indore Agency, and the districts of Mirzapore, Ghazeepore and Goruckpore of the North-Western Provinces.

The Bengal Lt. Governor's territory consists of Regulation and Non-Regulation provinces. The Regulation Provinces are divided into eight commissionerships, and the Non-Regulation Provinces into three. The monthly salary of a Commissioner in the Regulation Provinces is Rs. 2,919-10-8, and in the Non-Regulation Provinces Rs. 2,500, in addition in both cases, to a travelling allowance of Rs. 250.

Chittagong Hill Tracts.

The state of *Cooch Behar*, is bounded on the north and west by the new district of Julpigoree; on the south by Rungpore; and on the east by the unsurveyed portion of the district as far as the Juldoka and Toorsa rivers. The extreme length east and west is forty miles, and the extreme breadth north and south is thirty-six miles, and the area is 386,123·40 acres, or 603·31 square miles. The forests described by Dr. Buchanan in 1800, have been entirely cleared and cultivated. The principal rivers are the Teesta Juldoka, and Toorsa.

The population of Bengal is probably near 60 millions.

The males comprise 51 per cent of the population, thus confirming the results of other Indian censuses as opposed to the experience of Europeans statistics. In Burdwan and Rajshahye the females actually exceed the males while in Cooch-Behar and Assam, there are only 77 and 81 females respectively to 100 males.

A special inquiry into the mortality caused by a famine in Orissa in 1866 was made by Deputy Collectors, with the aid of corrected returns made by the zemindars. The total population in 1865 was 3,015,826; of these 814,469 perished, and 115,028 either emigrated or disappeared, making a total loss of 929,497 and leaving 2,086,329 surviving. The per-centage of deaths to population is 27, which, added to 3·81, the percentage of emigrants or missing, gives a general percentage of 30·81 as loss of population during the famine.

The total population of the Municipal portion of Calcutta is 430,000. The floating population is assumed at about 50,000. The population of all Calcutta, including the densely inhabited suburbs, may fairly be taken to be half a million:—

North-Western Provinces.—These provinces are between L. 30° 7′ and 23° 51′ N. and L. 77° 4′ and 84° 40′ E. They are bounded on the north by the snowy range of the Kumaon, Himalaya, Oudh and the Nepalese Terai; on the south by the Saugor District of the Central Provinces, and the Native States of Bundlekund and Rewah; on the west by the river Tonse, until its junction with the Jumna, thence the Jumna till the 28th degree of Latitude; on the south-west by the Native States of Gwalior, Dholpore and Bhurtpore; and on the east and south-east by the Sarun, Shahabad, Behar and Palamow Districts of Lower Bengal. The North-Western Provinces contain 36 districts of which 35 are grouped in to 7 Commissionerships. The "non-regulation" portions are Kumaon and Gurhwal to the extreme north, Jhansie to the south-west, and Ajmere, which is separated from the western boundary by several intervening Native States. This last Division from its isolated position, requires distinct demarcation. It lies to the west, extending between L. 22° 16′, and 27° 45′ N. L. 71° 45′, and 77° 22′ E. It is bounded on the east by the Rajpoot States of Kishengurh and Jeypoor, on the north and west by Jodhpore, and on the south by the territory of Odeypoor. The Ajmere Division comprises Ajmere proper and Mairwarra. The Mairwarra tract belongs in unequal portions to the British Government, to Meywar or Odeypoor, and to Marwar or Jodhpore. The Meywar possessions consisting of three Pergunnahs, and the Marwar of two, were made over to the direct management of the British in 1822-23.

Benares is the most thickly peopled district. The density stands at 797—or, including the Military and Railway, 803—per square mile.

Looking at the 30 millions of people according to *creed* nearly 26 millions are hindoos and 4¼ mahomedans. Mahomedans form less than a seventh of the whole population, there being only 100 to every 609 hindoos. They are most numerous in Meerut and Rohilkund, where they comprise nearly a fifth of the population; more than half of the entire number of the mahomedans in the N. W. provinces—viz., 2,197,202 out of 4,243,207—reside in those northern districts.

The aborigines are returned as 313,215, and seem to be mixed up with the other sects.

The intense desire of all the hindus of India, on religious grounds, is for a son. The boy is reared with a care not shown to the girl. The girl is exposed to chances productive of greater female mortality, being married the moment she attains the age of puberty, bearing children at 11 and 12, subject to a sedentary and listless life in the zenana or one of hardship in the fields, and treated oppressively as a widow.

The Punjab contains 32 districts in 10 divisions. The feudatory states are estimated to contain five millions of people and an area of 197,339 square miles. The 32 non-feudatory districts have a population of 17,611,498 covering an area of 101,829 square miles, or 173 to the mile. Of the people 9,403,810 are agriculturists and 8,190,127 are not directly connected with the land. Leaving out Delhi and Hissar it may be said roughly that the population has increased, in thirteen years, nearly two millions, and in density 27 to the mile. The density of population is very slightly less than that of France. It is higher than the average of all non-feudatory India, which is 159, and falls below that of the North-West, Bengal and Madras alone. In the division of Jullundhur, with its good rainfall, there are 596 to the mile, omitting hilly Kangra. In the well-watered division of Umritsur the proportion stands at 513, in Umballa at 412, in Delhi at 342 and in Lahore at 210. In the Derajat frontier it falls to 77 and in desert Mooltan to 73. The country between the Beas and the Sutlej, the home of the Sikhs is thus the most populous. The rate of population follows the rainfall, and the number of mouths waits on the facilities for cultivation, which re-act on each other. There are 65 millions of acres in the Punjab. Delhi has now supplanted Umritsur as the most populous city. The population of the Panjab is as under:—

The Chumar race, who are included in Hindoos and Sikhs, numbered 634,406. Fifty-five per cent. of the whole population of the Punjab are connected with agriculture.

As the old masters of the country, the Sikhs assert their claim to proprietorship to an extent unknown among the other classes.

In certain Sikh villages of the Lahore district there were only 31 girls to 100 boys. The general result shown is, that among the leading Sikh clans of that district the proportion of females to males below the age of 12 is as 72·5 to 100·, while among the total Sikh population under the age of 12 it is as 77·7 to 100· and among the total population of all classes under that age as 85·9 to 100. That there should be only 47 females to 100 male children among the Sikhs of Soobraon, 15 to 100 in Bhusseen 55 to 100 in Sood Singh, or even 68 to 100 in Loodianee, must be the result of other than natural causes. The cause assigned for wishing to get rid of female children is the old one —the heavy expenses attending the marriage of daughters. That this presses very heavily upon respectable Sikhs of limited means there can be no doubt. A respectable Sikh, too proud to receive pecuniary consideration for his daughter's hand, is entangled in debt for life if he has three or four daughters to dispose of in marriage. As one after another is born he despairs of ever being able to bear the heavy burthen, and he hopes that the infants may die. Very moderate ill-treatment is sufficient to secure him his wish.

The British frontier line commences from the top of the Kaghan glen (a dependency of Huzara) near Chelas on the north-west corner of the maharajah of Jummoo's territory, and then passes round the north-west boundary of Huzara, on the east side the Indus to Torbeila ; then crossing that river, it winds round the north and north-west boundary of the Peshawur Valley to the Khyber Pass, then round the Afreedee Hills to Kohat ; then round the western boundary of the Kohat District, along the Meeranzye Valley and touching the confines of the Cabul dominions ; then round the Wuzeeree Hills to Bunnoo line and to the head of the Sulimani range ; and then, lastly, right down the base of the Sulimani range to its terminate on the upper confines of Sind and of the Khelat kingdom. The extent of this frontier is very vast, its length being full 800 miles. It is also as arduous in its nature as it is extensive. Along the outer side of this frontier line, and therefore beyond British jurisdiction, there dwell a series of independent tribes. On the inner side of this frontier, up to the right bank of the Indus, there also dwell various tribes, in many respects resembling the first-named tribes, but who are British subjects. These latter will be adverted to, though with less prominency than the former. The topographical position of each tribe, both without and within the frontier, may be enumerated in their local order as follows :—

Independent Tribes dwelling along the outer face of the north-west Punjab frontier and inhabiting hills, adjoining frontier of Huzara District.—Hussunzye.

Adjoining frontier of Peshawur district.—Judoon, Bunoorwall, Swatee, Raneezye, Osmankheylee, Upper Momund.

Adjoining frontier of Peshawur and Kohat districts.—Afreedi.

Adjoining frontier of Kohat district.—Buzotee, Sepah, Orukzye Zymoosht Affghans, Tooree.

Adjoining frontier of Kohat and Dehra Ishmal Khan districts.—Wuzeeree.

Adjoining frontier of Dehra Ishmael Khan district.—Sheoranee, Oshteranee, Kusranee, Bozdar.

Adjoining frontier of Dehra Ghazee Khan district.—Khutran, Kosah, Lugharee, Goorchan, Murree.—Boogtee.

British Tribes,—within the frontier, and British subjects, inhabiting partly hills and partly plains.

Huzara district.—Turnoulee, Gukkar, Doond and Suttee, Kaghan, Syud and other tribes of Huzara.

Peshawur district.—Eusufzye, Khaleel, Momund of the plains.

Peshawur and Kohat districts.—Khuttuk.

Kohat district.—Bungush.

Dehra Ishmael Khan district.—Bunnoochee, Murwutee, Butanee, Chiefs of Tank, Chiefs of Kolachee, Chiefs of Dehra Ishmael Khan, Nootkanee, Loond.

Dehra Ghazee Khan district.—Dreshuk, Muzaree.

Oudh lies between Nepal and the North-Western Provinces. It contains no mountains. In the Gondah district the boundary is on the ridge of the first range of low but abrupt hills; elsewhere it is in the plains. The Province consists of 12 districts in 4 divisions with an area of 24,060 square miles and a population of 11,232,368.

Plains.—The Oudh province is a part of the alluvial valley of the Ganges and some of its tributaries. The rivers descend from the hills first in a southerly direction and then turn eastwards. The belts of forest come down between them, and are situated on the higher land between the streams. The *Turrai* stretches all along the frontier of the province immediately below the forest, and is low and moist. It is more or less settled and cultivated, but the crops are poor and the country is unhealthy, at the first, and there are great difficulties in the way of bringing the soil under cultivation. Throughout this district there are large grassy plains where numerous herds of cattle are kept, and it is interspersed with old water-courses, the former beds of the river, now forming jheels and swarming with crocodiles.

In the Baraich and Kheree districts, where the *turrai* fades into the drier land, are two tracts, known as Dhowrera and Naupara, which have an excellent breed of draught cattle.

In the centre of this tract there are a few jheels, especially in the lower part of Seetapoor, in Lucknow, and Barabunkee, where the soil is more clayey and the crops more irrigated and finer, but its general character is as described.

Forests.—The Oudh forests are in three divisions. The 1st, or Khairigarh Division, lies between the rivers Soheli and Mohana.

The trees which are reserved in the Oudh forests are Shorea robusta. Dalbergia sissoo. Cedrela toona. Ebony, Diospyros melanoxylon. Conocarpus latifolia. Terminalia tomentosa, Acacia catechu. Nauclea cordifolia. Of these shorea, cedrela, ebony, conocarpus and terminalia are found in the higher forest, called Bhabar or, locally, Domar. The other trees are found on the lower ground or *turrai*. There is a very small tract under *sissu* reserved for the use of the gun carriage agency at Futtehgurh.

Rivers.—The principal rivers of Oudh are the Rapti, the Babai, the Girwa, the Kauriali, the Mohana, the Soheli, the Sarda, the Ul, the Katna, the Gumti, the Sai and the Ganges. Of these all, except the Ul,' Katna, Gumti and Sai, are hill streams descending from the Himalaya, and subject to the sudden freshes which characterize the hill streams. The *Rapti* is a rapid river navigable for boats up to Bhinga. It is used for rafting timber in the rains. It is a second class river, and swarms with crocodiles. The *Babai* is rapid and shallow in its upper course, and useless for navigation and for rafting. The *Girwa* where it enters British territory, is a mountain stream with a great fall, rushing in rapids and pools over a stony and sandy bed. It is useless for navigation. It is a branch of the Kauriali, from which it issues by percolation, and to which it is united lower down. The *Kauriali*, is the largest of the affluents of the Ganges. Its discharge is 13,082 cubic feet per second. It is is more than twice the size of the Ganges where it leaves the hills, and is navigable for boats throughout the year within British territory. This is the river which is called Karnali in the hills: Kauriali, after it enters the plains to its confluence with the Sarju a little below Bhartapur; Gogra thence to Fyzabad; Sarju, about Adjudia; and Dewa or Gogra again below this down to its confluence with the Ganges at Revelganj near Chupra. The *Mohana* is the boundary of the British territory from Gwari Ghat to its confluence with the Kauriali, rather more than half its course in the plains. It is a shallow and rapid stream, not navigable, but timber is floated down it in the rains to the Kauriali. This river swarms with crocodiles, both the magar or broad-nosed, and the gurial or long-nosed species.

The *Sarda* is a river about the size of the Ganges where it leaves the hills; nine miles below, its discharge is 6,416 cubic feet per second. It is the boundary between British territory and Nepal out of Oudh. It has lost the character of a hill stream and flows in a sandy bed.

The *Gumti* is a river rising in some rice fields, from which its head waters appear to trickle. Its water is sweet and its banks are cultivated throughout the province. It is navigable throughout the greater part of its course in Oudh; but it is extremely tortuous, and the navigation is impeded at Sultanpoor by rocks.

Jheels and Marshes. There are no lakes, though some of the *Jheels* are very extensive sheets of water. The country between the Gumti and the Ganges is well supplied with them. They lie in two parallel elevated hollows, on either side of the Sai, and about midway between that river and the Gumti and Ganges respectively. They are drained by lateral *nale*, which fall mainly into the Sai, and which cause the occasional floods in that river after heavy rain. They are a striking feature of the country, stretching in a continuous series, on both sides of the Sai, from the Shahjehanpoor boundary to that of Jounpoor and Allahabad, and often connected when the rain has been heavy. The Oudh jheels are covered with all kinds of wild fowl and some of them are fairly stocked with snipe. In the *turrai* marshes are numerous. They are covered with long grasses and are the favourite lair of tigers after the hot weather has set in.

In density of population Oudh stands at the head of all the provinces of India. It contains 474 to the square mile, or 514 if the more barren part of its area be left out. The proportion of mahomedans to hindoos is 10·7 per cent. to 89·3. The mahomedans are the most numerous and powerful in the central districts of Lucknow and Barabunkee. Their settlements there were mostly effected in the 13th, 14th and 15th centuries, and they have generally continued to hold the lands they first acquired. Of the 55 talukdars of these two districts, 34 are mahomedans; 23 belong to Barabunkee and 11 to Lucknow. The first mahomedan invasion of this province took place above 800 years ago, when Sayad Salar Masa'ud, a relative of the great Mahmud of Ghuzni, fought his way into Oudh at the head of a large army. The history of his invasion, his first success and his final defeat and death at Bariach are told in the *Mirat-Masa'udi.* Of the whole native population of 11,198,095, so many as 6,542,870, or 58·4 per cent., are agricultural and 4,655,225, or 41·6 per cent., non-agricultural.

Native christians and Eurasians seem generally to have returned themselves as Europeans. The higher castes of mahomedans are thus classified :—

Sayed	51,679	Pathan, Khandhan, Rohilla	191 880
Shaikh, Milki, Malik, Kuraishi	166,561	Mogul	26,672

The following are mahomedan converts from higher hindoo castes :—

Bhalesultan	1,699	Rajpoot	6,775
Khanzada	2,093	Mewatee	2,140

The higher castes of hindoos are thus given :—

Brahmin	1,397,808	Kashmiri	219
Bengali	128	Marwari	74
Jat	10,845	Punjabi	93
Jain	56	Sikh	4,752
Kshatriya	662,946	Saraok	4
Kyath	148,923	Vaishya	241,460
Khatri	13,374		

Of the lower hindoo castes the most numerous are these :—

Aheer	1,167,499	Kahar	288,263
Bhunya	143,862	Koree	360,178
Bhat	63,203	Kurmee	764,422
Barheire	134,844	Lohar	122,573
Chumar	1,030,467	Lodha	350,907
Dhobee	161,004	Mulee	107,732
Parsee	649,741	Murao	406,868
Telee	213,999	Nao	220,759

Eleven aboriginal castes are entered varying from 14,925 Dome and 13,093 Nat to 30 Paharee. Thirty orders of religious mendicants are given. Of these the most numerous are the Goshain 40,999; Jogi 8,642; Bairagi 6,230 and Sadhu 9,923.

Kheree is the extreme district of Oudh at the foot of the hills on the Nepaul border. The Tharoo or inhabitants of the forests are a wild, uncultivated, and extremely superstitious race, and assign to themselves a mythological beginning. Their villages are divided into certain circuits, marked off by the Bhurra of Bheonhar, a self-created superior, whom these people believe to be inspired by Bhowanee, and to whom they submit in every occurrence of their domestic lives. A Bhurra is indispensable at every birth, marriage and death, directs all religious ceremonies, and has supreme influence in the circuit to which he belongs. He has, however, to prove his inspiration before the assembled villagers by one of two methods, either by drawing seven times the flame from a lighted to an unlighted wick without bringing the two in contact, or by calling upon Bhowanee, who is supposed to descend upon him, when the Bhurra begins to dance and jump about violently, and convinces the assembled crowds of his superhuman powers by his movements and gesticulations. The bodies of those that die in advanced years are burned, but those of the young are buried; their widows are allowed to re-remarry, but a man may not marry the widow of his younger brother.

The Central Provinces, under a Chief Commissioner, extend from the 18th to the 24th degree of North Latitude, and from the 76th to the 86th parallel of East Longitude. They are bounded on the north by the Independent States of Bundelkund, of which the principal are Tehree and Punnah; on the west and north-west by the British district of Chundeyree, Lullutpore (belonging to the North-Western Provinces), by the Bhopal State, by Sindia's dominions, by Berar and by the Nizam's dominions; on the south and south-east by the Nizam's dominions, and by the Madras district of Rajahmundry; on the east by the Jeypore State under Madras jurisdiction, by those portions of Bengal known as the Tributary Mahals, by the North-West Frontier Agency and by the Rewa State. The survey of the entire tract thus bounded has not been completed.

The provinces contain 18 districts in 4 divisions; and a population of 9,104,511.

Hindoos....	6,864,770	Gond and other hill or aboriginal tribes	1,995,663
Mahomedans	237,962		

Besides the above, there were 6,026 Europeans and Eurasians and 90 Parsees in the whole of the Central Provinces.

Rajpoots, numbering	2,41,748	Chumar numbering	5,18,389
Koonbee „	6,76,270	Koree „	1,39,776
Teylee „	4,90,606	Power „	91,586
Lodhee „	2,34,767	Ooriya „	2,145

British Burmah.—This Province, under a Chief Commissioner, has an area of 93,879 square miles and a population of 2,395,988 in three Divisions containing 13 districts. It extends along the eastern shore of the Bay of Bengal from the Chittagong Division of Bengal to the kingdom of Siam in 10° N. Lat. British Burmah is geographically divided into four portions: (*a.*) Arakan stretching from the Naf-Estuary, which separates the Province from Chittagong, to Cape Negrais, and consisting of a comparatively narrow strip of country between the sea and a high mountain chain: (*b.*) the valley of the Irawady which, divided from the Sittoung valley by the Pegu Yoma range, unites with it in its southern portion; to the eastward is the chain of hills which forms the watershed between the Sittoung and the Salween rivers, and on the west the Anoukpek-toung-myeng, literally "the high western range of mountains," sometimes called the Arakan Yoma range: (*c.*) the Valley of the Salween: and (*d.*) Tenasserim, a narrow strip, like Arakan, reaching down to the Pakchan stream in 10° N. Lat. and separated from Siam by a lofty chain of hills running from north to south nearly parallel to the coast, at a distance of from 30 to 40 miles inland, but approaching nearer to the sea at its southern extremity.

Arakan, originally a powerful kingdom conquered by the Burmese, was taken from them by the British after the first Burmese war in 1825. It has an area of 18,529 square miles, and lies between the Nâf Estuary and Cape Negrais. It is bounded on the south and west by the Sea, and on the north and east by the high chain of mountains which, forming the eastern boundary of Bengal, trends from the south-eastern extremity of Sylhet and Cachar in a south-westerly direction as far as the Fenny River, and from about the 23rd parallel of North Latitude turns south-east for 360 geographical miles, when turning again to the westward of south it gradually diminishes both in breadth and elevation till it ends 15 or 16 miles south-east of the rocky promontory of Cape Negrais at Pagoda point, called by the Burmese *Hmau-deng.* This chain, though of considerable height to the north, (the Blue Mountain is supposed to be 8,000 feet above the sea level) diminishes in altitude as it reaches Arakan, and none of the passes across it in that portion of its length is more than 4,000 feet above the sea; the Aeng pass into the valley of the Irawady is much less. From Combermere Bay, 25 miles south of Akyab, the coast is rugged and rocky, offering few harbours for ships. Kyouk-phyoo harbour inside the island of Ramree is safe and easy of approach, and at the mouth of the Gwa river further south there is a fairly sheltered roadstead and an inner harbour easy of access through a channel with two fathoms of water at low tide. The rise and fall of the tide is 7 feet only. The coast is studded with fertile islands the largest of which are Cheduba and Ramree. Owing to the nearness of the range which bounds Arakan, there are no large rivers: the principal ones are the Nâf estuary on the extreme west; the Mroo River, an arm of the sea about 40 miles to the eastward and from 3 to 4 miles broad at its mouth and extending more than 50 miles inland; and the Koladan or Arakan River rising somewhere near the Blue Mountain in about 23° N. and which is navigable for 50 odd miles by vessels of 300 or 400 tons burden. On the right bank close to its mouth, is situated Akyab, the head quarter Town of the Akyab District and of the Arakan Division, the approach to which, however is dangerous and difficult. The whole of the rivers in the Akyab and Ramree districts anastomose by channels which, though dry in some instances during ebb tides, are all navigable for boats during the flood; the whole coast line is, in fact, a labyrinth of creeks and tidal nullahs which rise at the foot of the hills and receive the contribution of numerous small streams.

Ramree.—Many wells of petroleum or earth-oil are met with. They are generally situated near the bases of low hills, and are of various depths. The deepest is said to be about fifty feet, having about six feet diameter at the mouth. The sides of this well have been ingeniously boarded by the natives, having diagonal cross bars, which not only secure the structure but serve as a ladder. There is no sort of machinery used to get up the oil. A young lad is first sent down, a man on the cross bars lets down to him earthen pots in succession, into which the contents of the well are filled, and then the pot is drawn up. The whole of the contents of the pot, as drawn up, is not oil, which is of a light bluish colour and floats upon water, there is sediment that might have been scooped up from the bottom. This takes place twice a day, and the yield is from four to six gallons per day. The oil sells in the bazaar at a Rupee per gallon. The deepest of the wells is the island of Ramree is situated in the Laytoung Circle, and is said to have been productive for a great number of years. Natives have been known to dig wells of short depths for temporary purposes, after which the wells are abandoned and soon choke up from the falling in of the earth. There is a fish found in these waters called "Luckwa," the oil extracted from the liver of which is said to have the same properties as cod liver oil. The island lying about two and half miles to the westward of old Kyouk-phyoo, is called on old marine charts "Saddle Island" from its shape. When Kyouk-pyoo was a military station, some of the officers (it is said) let looee thereon a pair of goats; these have increased to such an extent that the island now abounds with wild goats and hence it is now called by the natives "Chy-Kysor," or Goat Island.

The *Valley of the Irrawaddy* at its lower end unites with the valley of the Sitang to form an extensive plain stretching from Cape Negrais on the west to Martaban on the east. The water-shed between these two streams is the Pegu Yoma range which, running north and south, terminates in low hills at Rangoon.

The Irawady Valley is about 80 miles broad at the frontier line, counting from chain to chain. The main rivers are the Irawady, the Hlaing or Rangoon, the Pegu, the Sitang and the Beeling. The *Irrawaddy*, rising in about latitude 28° N. and longitude 97° 30′ E., flows for 660 miles before reaching the British possessions, and thence its waters roll on for 240 miles to the sea in a S. S. W. direction. As it nears the coast it divides, converting the lower portion of the valley into a network of tidal creeks. A little above Henzadah, about 90 miles inland, it sends off its first branch to the westward which, flowing past Bassein, receives the waters of the Pammawaddee and of the Penglaygalay, and, bifurcating, enters the Bay of Bengal by two main mouths, the Bassein and the Thekkay-thoung Rivers. The waters of the Irrawaddy commence to rise in March and continue to rise till September when, or in October, they commence to fall again, having risen from 3[illegible] to 40 feet. Just below Rangoon it is joined by the Pegu and Poozoondoung rivers flowing from the east and north-east. The *Pegu* and the *Poozoondoung Rivers* rise close together in the Yoma range about 58 miles above the town of Pegu, the capital of the ancient Taline kingdom conquered by the Burmese under Alom-pra and which gives its name to all this portion of the country. The *Sitang River* rises far north of British territory which it enters just above Toungoo. Here it is narrow and navigable with difficulty for large boats during the dry season. Below Shwe-gyeen, where it receives the waters of the Shwé-gyeen River from the east, it gradually and slowly widens till at Sittoung it is half a mile broad. Thence it curves backward and at last flows into the Gulf of Martaban through a funnel-shaped channel widening so rapidly that it is impossible to tell where the river ends and the gulf begins. Owing to the meeting in this Gulf of the great tidal wave of the Indian ocean, arriving from the south-west, and of other portions which come along the Tenasserim coast from the south-east, a bore with a curling crest nine feet high sweeps up the Sittoung River, its effect, hough broken by the serpentine curve below Sittoung, being felt at Shwé-gyeen.

The Thoo lake is in the Myanoung district on the west bank of the Irrawaddy between that river and the Arakan Hills, which is 8 or 9 miles round and 2½ across; the Labagyin is in a large low tract of gronnd on the opposite bank of the Irrawaddy; the Kandaugyee, or "large Royal lake" near Rangoon, about 3 miles round; and the Lake of clear water in he Bassein district, is about 5 miles in circumference with a pretty uniform breadth of 280 300 yards and a depth of from 20 to 45 in the centre.

The *Valley of the Salween* is British territory only in its lower portion. The right bank of that river is a wilderness of mountains drained by various streams the most important of which is the Yonzaleen; but lower down, nd especially below the Thoungyen River on he east bank, there are large alluvial plains hich are drained by the Gyne and the Attaran Rivers. The Salween though a large river is ot navigable owing to its rapids. The *Gyne*, which flows in a somewhat similar direction passes through a more open country, and there re numerous villages on its banks: it is navigable for 180 miles for small boats.

Tenasserim is that tract of country lying between 17° and 18° N. latitude along the Eastern side of the Bay of Bengal, and between it and a high chain of Hills about 40 miles inland, and includes the Mergui Archipelago, that is the chain of islands along the coast 15 or 20 miles distant from it. The surface of the country is mountainous, thinly populated and much intersected by streams. Between the sea and the boundary range is another lower one, separated from the higher by the River Tenasserim. The grand range is in some places 5,000 feet high: its breadth at Martaban has never been ascertained, but further south, in the latitude of Tavoy, it appears to be 40 miles across whence it gradually narrows to 10 miles, near Mergui. The whole range is covered with pathless jungle, and may be said without exaggeration to be without a human habitation of any kind. The coast is very irregular, and low for some miles inland consisting of uncultivated mangrove islands. The *Tenasserim*, which rises in about 16° N. latitude, flows through a valley scarcely broader than its bed to the southward, the easiest navigable for large ships; although in 1825 the cruiser "Thetis" sailed up the southern entrance as far as old Tenasserim. The river is navigable for boats for 100 miles.

Of the total area of the Province or 93,879 square miles, 18,528 are in Arakan, 36,454 in Pegu which includes the valley of the Irrawaddy and the whole of the valley of the Sitang on the right bank of that river; and 38,897 in the Tenasserim Division which includes the left bank of the Sittoung, the southern portion of the left bank of the Salween, *i. e.*, the country to the eastward drained by the Gyne and the Attaran, and the Eastern Coast of the Bay of Bengal.

The soil throughout Arakan is alluvial, mixed in places with sand, the islands are of volcanic formation and though rocky are fertile iron and limestone, are found in small quantities—the former in the island of Ramree. The soil of the Northern portion of Tenasserim is alluvial, but not much cultivated except near the Gyne. Coal "well adapted for steamers," has been discovered in five localities. Excellent tin is found and copper ores, gold in small quantities, and ores of manganese and iron in abundance.

The rainfall varies considerably from 253·15 inches at Sandoway to 48·50 inches at Prome.

Berar, or the Hyderabad Assigned Districts, is permanently assigned by the Nizam to the Government of India to meet treaty obligations, subject to the condition that the surplus revenue shall be paid to Hyderabad. The province is administered by two Commissioners under the Resident of Hyderabad. As rearranged in 1868 it contains 6 districts in 2 divisions of which the following are the statistics for 1868-9 :—

The census returned the population at 2,231,565 dwelling in 495,760 houses comprising 5,694 towns and villages.

Of the towns, Ellichpoor is the largest, having a population of 27,782 souls; Oomrawuttee comes next, having 23,410, then Akolah having 14,606, and Akote (in the Akolah district) having 14,006. The proportion between the sexes in all ages was 48·3 females to 51·7 males.

The principal divisions of the people as to creed and caste were:

Christians ...	903	Sudra	1,441,271
Jews...	16	Out-castes ...	301,379
Parsees... ...	75	Aborigines ...	163,059
Mahomedans. ..	154,951	Hindoo Sects ...	55,219
Brahmins ...	49,843		
Kshatriya ...	36,831	Total...	2,231,565
Vaishya... ...	28,018		

The out-castes are thus detailed :—

Mhâr.	
Somavanshi, Adhucy Telung, Madrasi, Ladoom, Baider, Awdhatan, Hohar, Bhilung, Perdeshi, Bhat, Hajam, Vatie, Loadey, Malvi, Gopal, Lawyaney, Mhar, Labai, Dongra	227,824
Dhor..	2,948
Khakrob (Bungee)	543

All the Bheels, who live along the skirts of the Sautpooras, appear to have embraced mahomedism, though they do not intermarry with the purer mahomedans, and the list shows that there are 127 converts who were not born in that faith.

The *Kshatriya* class contains mostly a set of very dubious pretenders to the honor of Rajpoot descent. Mahrattas of no particular family usually call themselves Thakoors—even a Koonbee will occasionally try to elevate himself thereby, while the Purbho, Kayuth and other castes of mixed origin and good social status are constantly invading the Kshatriya military order. The distinction is also claimed by the rajas of the Sautpoora hills, who assert that they are rajpoots depressed by the necessities of mountain life, whereas they are Gond or Korkoo elevated by generations of highland chieftainship.

Under the heading Vaisya are placed all the commercial classes of hindus, the north-country Marwaree and Augurwalla, with those who are known by the general term Bunya and a few castes like the *Komtee* from the south, or the *Lar*, who do not seem to be well known out of Berar.

The Sudras in Berar as in Mysore, all eat together, although they do not intermarry. The *Koonbee* and *Malee* eat flesh, drink liquor moderately, and their widows may always remarry if they choose, excepting the widows of Desmookhs, who ape high-caste prejudices. The *Koshtee* are weaving castes. The

Bunjara are comparatively numerous in Berar, their occupation as carriers and travelling commissariat is rapidly going, and during their transitional stage they give a good deal of trouble to the Police. The *Dhungur* are sheep farmers, and *Hutker* is the name of one of their clans, which still holds much land on the border of the Nizam's territory, and was not long ago notorious for pugnacity and rebellion. The *Bhoee* has recently been supposed to belong to a widely spread primitive tribe ; the *Garpugaree*, live by the profession, of conjuring away hailstorms. Any one who has watched the medicine man at work has witnessed a relic of pure Fetichism, possibly handed down from the præ-Aryan races and their earliest liturgies. The *Vidoor* and *Krishnapukshee* are the same ; they are decendants of brahmins by women of inferior caste, and *Krishnapukshee* is only an astronomical metaphor for describing a half-breed, the term meaning literally "dark fortnight" and referring to the half darkened orb of the moon.

All the Sudras of this part of India are of Turanian origin. The *Mhar* have been taken to be the same with the *Dher*, a very useful and active tribe. The *Mang* appear to be the lowest in the social scale of all. The paucity of the *Khakrob* or *Bhangee*, who are so numerous in Northern India, is a serious sanitary difficulty. The *Kaikaree* are a tribe formerly well known for their thieving habits.

Of the *aborigines* the *Gond*, *Korkoo*, and Bheel are the only completely preserved specimens of tribes. The two first retain their languages, while the Bheel tongue seems to have become extinct very recently, in Berar, its disuse being probably expedited by their general conversion to mahomedanism. The *Ramosee* is said by Grant Duff to be of a different tribe from the Bheel. The original *Purdhan* among the Gond answered to the *Bhat* among the hindus, but many seem to have settled in the plains as a separate class of Gond.

Mysore is to be administered by a Chief Commissioner and British officers until the maharajah, is declared fit to superintend the administration and the revenues are spent upon the province. Mysore is situated between L. 11° 36′ and 15° 0′ N., and L. 74° 42′ and 78° 37′ E. Its extreme breadth from E. to W. is 230 miles, and length from N. to S. is 190 miles. Its area is 28,449 sq. m. and its population 4,006,340, of whom 3,793,973 are hindoos. It is bounded on the north by the Bombay district of Dharwar and the Madras District of Bellary, on the south by the Madras districts of Salem and Coimbatore, on the east by those of Cuddapah, and North Arcot, also of Madras ; on the west by Coorg and the Western Ghats, which shut out Mysore from Malabar and Canara on the west coast. The Eastern Ghats form the frontier by which it is separated from the Carnatic. They constitute the exterior of the east ranges of hills, which run along the whole length of the Peninsula from Cape Comorin, stretching up to the continent of Asia. In many parts the ascent into Mysore is high and difficult, while in others it is more gentle. The country rises gradually from these ghats towards Bangalore, which is 3,031 feet above the sea. The descent from Bangalore on all sides is perceptible though not rapid. On the north-west, after passing the Chituldroog range of hills, there is a gradual fall through the broad valley which leads to the river Tumbudra, near which is the station of Hurryhur, probably the lowest point in Mysore, its altitude above the sea being only 1,800 feet. To the south-west and west, by Seringapatam and Hassan, there is perhaps a more marked descent, until it is abruptly terminated by the Western Ghats, comprising in this direction the Nilgiri and Coorg hills, and further north, the Manjarabad and Nagar ranges. A marked feature of the country is the number of isolated hills called Droog, on the most inaccessible of which the former poligars or petty chiefs built forts, afterwards in many instances strengthened and improved by Hyder and Tipu, and still in good preservation, but now without guns. The principal forests are found clothing the sides of the western mountains. They abound in teak, blackwood and other valuable kinds of timber. There are no forests in the Eastern Ghats. Sandalwood grows in the country bordering the hills.

The *Tunga* and *Bhudra* rivers rise in the north-west of Mysore, and uniting, form the Tumbudra, which flows northwards and eastwards till it joins the Kristna below Kurnool. The banks of the Tumbudra are too high for irrigation purposes. The *Kavari* rises in Coorg and passes through and out of Mysore in a south-easterly direction, after receiving the Hemawati, the Lokani, the Shimsha, and the Arkavati from the north, and the Lachmantirth and the Kabbani from the south. The Kavari and its tributaries supply numerous irrigation channels and tanks. The *Pennar*, the *Palar* and *Penar* rise in the eastern part of Mysore, in their short course through which, their waters are detained and converted into chains of tanks. None of these rivers are suitable for navigation. There are no natural lakes in Mysore ; but there are nearly 20,000 artificial reservoirs, some of which are of considerable magnitude, and others of greater size are planned.

The prevailing rock, is a kind of sienite, composed of quartz, felspar, hornblende and mica. Chlorite slate is found near Sera, and drawing slate in the neighbourhood of Chituldroog. Of minerals there are Clay Ironstone, School in Quartz, Mica Slate, Magnetic Ironstone, Potstone, Actinolite, Ligniform Asbestos, Brown Spar, Common Salt, Carbonate of Soda. Gold is occasionally found near Betmangala, by washing the alluvial soil; but in too small quantities to repay labour.

The chief products are:—Paddy and ragi—the principal food of the people; bullar—a kind of small bean; gram; wheat; millet; oil seeds; sugar-cane; cotton; hemp; tobacco; mulberry; coffee; cocoanuts; betelnuts and potatoes for export.

The brahmins in Mysore are of the three great classes, sri vaishnava, vaishnava, and smartha. The first named are, as a class, ambitious, and exhibit considerable force of character. The mahomedans are of the shaik and syed tribes. With but few exceptions they show little aptitude for the more responsible posts under Government, although every encouragement has been offered to them. The Lingayets are strict Shevaits, and carry the linga tied to their necks. They are numerous, and are chiefly grain merchants, very thrifty, industrious and abstemious. The Mysore ryots or cultivators are sudras. They are also called "Wakligar," and "Kunab." They are careful farmers, contented, peaceable and healthy. The other castes are Komati; Bedar, the followers of the old Poligars, fond of hunting and athletics; Lambani; Wadder and Kurumbar. The wandering tribes are addicted to the commission of dacoities, robberies and other lawless acts. The Lambani are grain carriers.

Coorg.—Coorg (Kodagu) is a British district administered by a Superintendent under the Chief Commissioner of Mysore. It is situated in L. 12° 26′ 21″, and L 74° 30′ 46″. It is bounded on the north by the Hemavati river; on the south by the Tambacheri pass; on the west by South Canara and North Malabar; and on the east by the Mysore country. Coorg was surveyed by Lieutenant Connor of the Royal Engineers in 1817, who has written a very interesting memoir of the survey. The coffee estates are now being surveyed. Of 2,400 square miles 547 are cultivated, 1,705 culturable and 148 unculturable. There are 168 miles of road. The rainfall varied in 1868-69 from 68·09 inches at Kembu Kolli in the south east to 95·25 at Mercara, the capital. The maximum temperature at 3 P M. in May was 83° and the mean 72°. The minimum in December was 53 at 6 P. M. and the mean 65. The aspect of Coorg, presents an entire forest, the long and narrow cultivated valleys enclosed within it serve but to render those vast woods more striking The whole of the eastern boundary presents a remarkable line of demarcation exhibiting an almost uninterrupted and impervious wood from the Burmagerry Hills, till reaching the Cavery; this space is wholly uninhabited. Advancing westward the woods decrease in density as the country improves in cultivation, and become gradually thinner till reaching the Western Ghauts, the immediate summits of which, partially bare of wood, are clothed with a luxuriant herbage. The Mallimbi Peak lying on the confines of Yelusavira and Yeddavanad is an exact cone, Coorg Proper gives birth to the *Cavery* and two principal streams tributaries to it, the *Soornawutty* on the north and *Latchmunteerth* on the south. The chief products of both the upper and lower country are cardamums, coffee and rice; these are the principal exports. Coorg, with an area of 2,400 square miles and a population of 115,357, has 35 judicial and revenue sub-divisions, and 507 villages. There are 23 magistrates of all sorts. The total cost of local officials and police of all kinds was Rs. 1,14,578 in 1868-69. In that year the land revenue was Rs. 1,68,108 and the gross revenue Rs. 5,08,143. The chief towns and their population are these:—

Mahadeopete	3,825	Fraserpete	1,109
Virajapete	2,889	Sanivarsante	498
Somavarpete	905	Kodlipete	690

The prevailing languages are Coorg, Canarese, Malayalum, Tamil, Tulu, Hindustani and English. The population is 115,357.

British India.—In the ten Provinces of non-feudatory India, with feudatory India, the latest returns, show a total area of 1,577,698 square miles and a population of 212½ millions if the Parliamentary returns for the 153 Feudatory States be assumed to be correct.

* Chiefly in Towns.

General Administration.—British India, since 1860, has been divided into ten local administrations supervised by a Viceroy and Governor General in Council, though the Presidencies of Madras and Bombay have retained their old dignity, being in direct correspondence with the Secretary of State as well as under the Governor General, and each having a Governor, Commander-in-Chief and Council composed of these officials and two civilians. Berar is administered for the Nizam of the Dekhan, Mysore also is under a special administration, but Coorg is directly a British province. The remainder of them are more directly under the supervision of the Governor General in Council. Madras, Bombay and Calcutta have each a Legislative Council as well as a High Court. These councils, as well as the Legislative Council of the Governor General consist of executive members of Government, of two representatives of the British mercantile community and two or three representatives of the Natives, as extraordinary members. The North-Western Provinces have a High Court and the Punjab a Chief Court. The Governor General's Council for making laws, legislates for all India in general and for the Provinces which have no legislatures of their own in detail, these Provinces being represented by officials. The Governor General must sanction every Act of the three subordinate Councils before it can become law, and the Secretary of State for India may advise Her Majesty to veto any Act of the Governor General's Council.

Foreign political relations.—When the mutiny of 1857-1858 and 1859 swept away the last relics of the emperor of Delhi, and with them the East India Company's rule, the princes of India found themselves brought face to face with their sovereign Queen Victoria. Neither they nor the British at first realised all that the change involved. Dimly groping after a definition of his new position, the late maharajah of Putiala sought for the recognition of himself and his house as an Indian noble of the British Empire. Above all rewards for his great services to the empire in those days he demanded perpetuity for his house and honors. Sir John Lawrence, just then made Lieutenant Governor of the Punjab, worked out the chief's idea into a recognition of the right of adoption on the failure of natural heirs. Lord Canning seized the idea thus conceived by Putiala, and after a reference to Her Majesty's Government, it took complete form as a law of the new empire. Lord Canning wrote that famous despatch, dated the 30th April 1860, in which he decreed—what hindoo law had never absolutely ordained—that adoption to a state should always be recognized by the paramount power, subject to the two conditions of loyalty to the crown and fidelity to all engagements with the British Government. In that despatch he thus wrote—" The last vestiges of the Royal House of Delhi, from which, for our own convenience, we had long been content to accept a vicarious authority, have been swept away. The Peishwa has disappeared. The Crown of England stands forth the unquestioned ruler and paramount power in all India, and is for the first time brought face to face with its feudatories. There is a reality in the suzerainty of the sovereign of England which has never existed before, and which is not only felt but eagerly acknowledged by the chiefs." The following was the sunnud or patent of nobility.

" Her Majesty being desirous that the governments of the several princes and chiefs of India, who now govern their own territories, should be perpetuated, and that the representation and dignity of their houses should be continued; in fulfilment of this desire, this sunnud is given to you to convey to you the assurance that, on failure of natural heirs, the British Government will recognize and confirm any adoption of a successor made by yourself or by any future chief of your state, that may be in accordance with hindoo law and the customs of your race. Be assured that nothing shall disturb the engagement thus made to you so long as your house is loyal to the crown and faithful to the conditions of the treaties, grants, or engagements which record its obligations to the British Governments,

11th March 1862. (Signed) CANNING.

A similar patent was given to mahomedan princes. All who hold that patent are nobles of the British Indian Empire. They constitute its patriciate. Since Lord Canning's time, the maharajah of Mysore has been added to the roll. In the following list of the Indian chiefs the mahomedans are printed in italics; the rest may all be taken as hindoos. The maharajah Dhuleep Singh, has exchanged for his Indian rights and privileges the position of a noble in the Queen's own court.

These feudatories are 153 in number and are as follows, arranged alphabetically :—

Feudatory.	*Place.*
Ajeygurh, Rajah	Bundlecund.
Akulkote, Rajah	S. Mahratta Country.
Alipoora, Jagheerdar	Bundlecund.
Bansda, Chief	Kolapore.
Banswarra, Chief	Rajpootana.
Baonee, Nawab.	
Beejah, Chief	Punjab.
Behree, Jagheerdar	Bundlecund.
Behut, Jagheerdar	Bundlecund.
Belaspore, Chief	Punjab.
Benares, Rajah	Benares.
Beronda, Rajah	Bundlecund.

Bhopal, Begum.	
Bhownuggur, Chief	Sholapore.
Bhughat, Chief	Punjab.
Bhujjee, Chief	Punjab.
Bhurtpore, Maharajah	Rajpootana.
Bikaneer, Maharajah	Rajpootana.
Bijawur, Rajah	Bundlecund.
Bijna, Chief	Bundlecund.
Boondee, Rajah	Rajpootana.
Bulsun, Chief	Punjab.
Bunganpully, Jagheerdar	Ceded Districts.
Bussahir, Chief	Punjab.
Bustar, Rajah	Central Provinces.
Eight Callinjer Chobeys	Bundlecund.
Cambay, Nawab.	
Cashmere, Maharajah	Punjab.
Chumba, Chief	Punjab.
Chutterpore, Rajah	Bundlecund.
Cochin, Rajah	Cochin.
Cooch Behar, Rajah	Cooch Behar.
16 Chiefs Tributary Mehals	Orissa.
Dewas, Chief	Central India.
Dhar, Chief	Central India.
Dhamee, Chief	Punjab.
Dholepore, Rana	Rajpootana.
Dhoorwye, Chief	Bundlecund.
Doojana Nawab.	
Durkote, Chief	Punjab.
Dhurmpore, Chief	Kolapore.
Doongurpore, Chief	Rajpootana.
Dufflay, Jagheerdar	Satara.
Duttia, Rajah	Bundlecund.
Edur, Chief	Kolhapore.
Furreedkote, Rajah	Punjab.
Gerowlee, Jagheerdar	Bundlecund.
Ghurwal, Rajah.	N. W. Provinces.
Gourihar, Jagheerdar	Bundlecund.
Guickwar	Baroda.
Holkar	Central India.
5 Husht Bhya Jagheerdars	Bundlecund.
Hyderabad, Nizam.	
Jeypore, Maharajah	Rajpootana.
Jheend, Rajah	Punjab.

Jhallawer, Rana	Satara.
Jignee, Jagheerdar	Bundlecund.
Joobul, Chief	Punjab.
Joudhpore, Chief	Rajpootana.
Jusso, Jagheerdar	Bundlecund.
Jessulmere, Chief	Rajpootana.
Karonde, Rajah	Central Provinces.
Keonthul, Chief	Punjab.
Kerowlee, Chief	Rajpootana.
Kishengurh, Chief	Rajpootana.

Turoch, Chief	Punjab.
Ulwur, Chief	Rajpootana.

These 153 nobles alone constitute the patriciate of India; they govern a population and area larger than those of France and Belgium. The latest Parliamentary Return, published in 1868, estimates the area of India under their administration at 596,790 square miles, and the population at 47,909,199, or nearly a third of the whole area of 1,577,000 square miles and nearly a fourth of the population of 204,000,000. Their troops far outnumber the British European and Sepoy army; their ordnance, even that part of it which is serviceable, is equal in number to the British. Their wealth is enormous and their revenues are personal, these 153 Chiefs, from 43¼ millions of people, covering 562,318 square miles, draw an annual revenue of 11½ millions sterling irrespective of the very large incomes of the nobles who in their turn are feudatory to them. The wealthiest of them are as under

	Square miles.	Population	Annual Income.
			£
1. Nizam of Hyderabad ...	95,337	10,666,080	1,650,000

These twelve princes have an annual revenue of nearly six and a half millions sterling.

Revenues. During all ages, the rulers of India have regarded the land as the property of the State, and the bulk of the public revenues has ever been obtained from it. In 1856, it furnished more than one half of the total revenues of the E. I. Company, and even up to 1864-65, during which other taxes were levied, out of a total of £45,652,897, the large revenue of £ 20,087,728 was, in that year, obtained from the land. The late James Mill, writing on this part of the revenue, remarked "as far as this source goes the people of the country remain untaxed. The wants of Government are supplied without any drain either upon the produce of any man's labor or the produce of any man's capital." The assessment on the rent has varied in amount in every district, and was either in money or in kind according to local custom. Under native rulers, a fixed proportion of the gross produce was taken: but the British Indian government deals with the surplus or net produce which the estate may yield after deducting the expenses of cultivation, and the directions to the Revenue Settlement officers provide that at least one-third of this net produce shall always be left to the cultivator as his profit.

In Bengal, in 1793, Lord Cornwallis, made a permanent settlement with zemindars, a class of middlemen whom he found collecting land revenues, by which these pay direct to Government a sum equal to a little more than one-half what they receive as rent. By that measure, Government ceased to have any direct participation in the agricultural improvement of that part of the country. Eminent statesmen have deemed making this arrangement a grave error.

About 1839, a thirty years' lease was made in the N. W. Provinces; and this has been followed in the Punjab. It is estimated that, in this case, the assessment was about two-thirds of the surplus after deducting the expenses of cultivation profits of stock and wages of labor, and in the revised settlements now in progress it is reduced to one-half the yearly value.

In the Madras presidency, the zemindary tenure exists in a few districts, but, princpally, in the Northern Circars, since the settlement of 1802. Another system, that of village-renters is in operation, in which the villagers stand in the place of the zemindar. In the ryotwar system, the government, as the landlord, treats direct with the holder who is recognized as the proprietor so long as he pays the regulated assessment. He can sub-let, sell, transfer or mortgage it. The assessment is fixed in money and does not vary from year to year unless when water is obtained from a Government source of irrigation. An annual settlement is made, not to re-assess the land but to determine upon how much of his holding the ryot shall pay.

In Bombay, the ryotwar system prevails, but the assessment is open to revision every thirty years.

It has been proposed further to capitalize the income which the state derives from the land; but, to do so would deprive the State in future years of a source of revenue on which it can, in all circumstances, confidently rely and than which none is more easily collected or more willingly paid, and the most recent orders permit a redemption only for the land needed for dwelling houses, factories, gardens, plantations and similar purposes, and a permanent settlement in all parts of India where no considerable increase can be expected in the land revenue, and where its equable apportionment has been or may hereafter be satisfactorily ascertained and in which the cultivation exceeds 80 per cent of the cultivable area.

Nothing in the history of commercial progress is more healthy than the course of the trade of India, both foreign and coasting, since the mutiny of 1857. The foreign commerce, and it partly feeds the coasting trade, has more than doubled in value since 1855-56. The figures include both merchandize and treasure:—

Years.		Imports.	Exports.	Total.
		£	£	£
1855-56	...	25,244,782	23,640,444	48,885,226
1856-57	...	28,608,284	26,591,879	55,200,163
1857-58	...	31,093,065	28,278,474	59,371,539
1858-59	...	34,545,659	30,532,298	65,077,948
Annual Average	..	26,452,542	25,847,471	52,790,013
1859-60	...	40,622,103	28,889,210	69,511,318
1860-61	...	34,170,793	34,090,154	68,260,947
1861-62	...	37,272,417	37,000,397	74,272,814
1862-63	..	43,141,351	48,970,785	92,112,136
1863-64	...	50,108,171	66,895,884	117,004,055
Annual Average	...	41,062,967	43,169,286	84,232,253
1864-65	...	49,514,275	69,471,791	118,986,066
1865 66	...	56,156,529	67,656,476	123,813,004
1866 67	...	45,237,332	50,202,777	95,440,169
1867-68	...	49,560,528	51,478,093	101,038,621
1868-69	...	51,146,096	54,457,745	105,603,841
Annual Average	...	50,322,952	58,653,376	108,976,328
1869-70	...	46,883,327	53,513,728	100,395,055

The trade has been thus divided among the five great groups of ports in the last two years:—

Ports.		1868-69.	1869-70.
		£	£
Bengal ...	...	42,591,823	40,467,202
Bombay ...	..	47,374,964	45,358,763
Madras ...	..	10,218,675	10,158,854
British Burmah ...		3,841,844	2,846,824
Sindh ...	...	1,576,432	1,568,093

The article of merchandize which India imports most largely in return for its raw produce, is cloth of every variety, especially cotton:—

	1868-69.	1869-70.
	£	£
Cotton Manufactures...	18,858,112	16,271,216
Wool " ...	859,629	594,142
Silk " ...	488,042	466,593
Apparel ...	497,891	451,230
Regulation Uniforms...	16,344	15,233

The growth of the staples of export, in the ten years since the mutiny ceased to influence India, will be seen from the following instructive figures:—

		1859-60.	1864-65.	1868-69	1869-70.
		£	£	£	£

The increase of territory has been so continuous, that any comparing of the revenue, expenditure and debt of former, with those of recent, years, is uninstructive. Since 1792-3, the Carnatic, the Ceded Districts, the greater part of the North West Provinces, all the Punjab and Sindh, the Central Provinces, Burmah, Assam, Orissa, Oudh, Sattarah and other parts have been added to British Indian territory and even since 1849 since the close of the Punjab war, the following territories have been annexed to the British dominions by the Governor General of India.

	Date of annexation.	Reasons.	Area Square miles.	Population.	Gross Revenue.
					Rs.
Jeitpur (Bundelcund.)	1849	Failure of heirs.	165	16,000	64,130
Sumbulpur, South West frontier of Bengal	1850	do.	4,693	2,74 000	73,000
Bughat (Cis-Sutlej Hill States) ...	„	do.	30	3,420	700
Part of Sikkim N. E. India. ...	1852	Insult to British representative.	1.670	61,766	32,037
Oodeypur S. W. Frontier of Bengal...	„	Failure of heirs.	2,306	1,33,000	16 480
Pegu...	„	Conqueredin war.	20,000	1,000,000	Not known.
Resumed from Mir Ali Murad a Sind Amir		Forgery	5,412	Not known.	4,83,658
Country of Tularam Sonapati in Northern Cachar	1853	Mis-conduct.	2,160	5,015	1.208
Nagpore	1854	Failure of heirs.	80,000	4,000,000	4,000.000
Jhansi (Bundelcund)	„	do.	2,532	200,000	2,00 000
Boodawal (Khandish)	1865	do.	...	910	2,727

It may however be interesting to contrast the conditions of 1792-3 and 1868-9.

Year.	Gross Revenue.	Gross Charges.	Surplus.
	£	£	£
1792-3	8,225,628	6,940,833	1,284,795
			Deficit.
1868-9	51,657,658	54,431,688	2,774,038

and the following have been the amounts of revenues—the charges, and debt since 1858-9.

Year.	Total Revenues and Receipts.	Total Charges in India and England.	Debt.
	£	£	£
1858-9	35,965,018	50,194,690	71,557,369
1859-60	39,602,850	50,372,711	88,104,266
1860-61	42,728,601	46,749,986	93,036,688
1861-2	43,487,934	43,538,562	96,652,053
1862-3	44,801,686	42,974,304	96,401,870
1863-4	44,279,467	44,201,120	90,520,618
1864-5	45,395,384	45,588,905	90,301,165
1865-6	48,514,749	45,748,681	90,082,216
1866-7	41,590,736	44,108,227	92,152,973
11 months. 1867-8	48,053,178	49,663,375	94,055,358
1868-9	48,531,763	52,676,406	93,583,155

Latterly the debt has been increasing somewhat faster than the revenue. Up till the years of the mutiny, the public debt was usually about eighteen or twenty months of the amount of the gross revenue. Since the mutiny, the debt has been equal to twenty five or twenty-six months revenue:

Year.	Gross Revenue.	Debt.
	£	£
1812-3	16,336,290	30,313,312
1820-1	21,352,241	33,010,651
1830-1	22,019,310	36,830,147
1840-1	20,851,073	31,233,496
1850-1	27,625,360	49,349,347
1860-1	42,728,601	93,036,688
1867-8	48,053,178	94,055,358
1868-9	48,531,763	93,583,155

Of the entire gross revenue for 1868-9 which at pages 250-251 of the Annals of Indian Administration, Vol. XIV, is given at £49,186,289, six-sevenths were derived from the six following items, viz:—

Land Revenue	£19,926,171	Opium ...	8,453,365
Excise ...	2,283,736	Stamps ...	2,306,971
Customs...	2,692,755	Total	41,251,238
Salt ...	5,588,240		

The land tax has ever been the source on which the various hindu, mahomedan and christian rulers in India have depended for their revenues and, except the British, under the administrations of Lord Cornwallis and Lord

Canning, during whose governments were introduced systems of permanent settlements of portions of the country and a right to purchase free holdings, every dynasty has kept that source of revenue intact. Grants of the royalties of the lands, in the form of jaghire, were usual; but the proprietorship in the soil has remained in the hands of the communities and descendants of the individuals, who cleared it a thousand years ago; although mahomedan dynasties have been ruling large portions of India for a thousand years, mahomedans have no lands. The salt tax, which now yields a tenth part of the entire revenue was first introduced by the British. The stamp tax is of recent introduction.—*Ann. Ind. Adm., Vol XI,* 321, *&c.* 322 *&c.* 323.

BRITTANT-PATR. Hind. The record of a decision given by a panchayat.—*Elliot.*

BROCADE. Eng. Fr.

Brokade	Dut.	Intalas ; Kimxa ; Sandus	Malay.
Brokal	Ger.		
Luppa	Guz. Hind.	Parstcha	Rus.
Khimkhab	„	Brocado	Sp.
Broccalo	It.		

A fabric composed of satin, striped or purpled, with gold or silver, manufactured at Surat, Benares and Ahmedabad, and used by rich natives. The manufacture of gold and silver brocade in Benares, is well worth seeing. The looms, which are very simple in their construction are situated at a short distance from the city. The gold and silver pass through many hands before they are formed into thread. Indeed, Benares has ever been a great place of trade and is so at this day. Brocades (Kamkhab), gold woven scarves (dopatta), and silks are consigned from this city together with a kind of yellow silk dhoti, called "pitambar," and a dark-blue silk, with white spots, called "bund," also the silk sari or scarves, exclusively for women's wear, forming both a skirt and a scarf. —*Faulkner. McCulloch. Dr. Taylor.*

BROCCOLI. See Brassica ; Cauliflower.

BRODERIPIA. See Turbinidæ.

BRODLEA plants with lilac, blue and white flowers.

BRODKUMMEL, Ger. Caraway seed.

BROMELIA, a genus of West Indian plants, some species of which have been introduced into India.—*Voigt.*

BROMELIA ANANAS, Linn. Ananas sativus. Pine Apple. See Ananas.

BROMELIACEÆ, the Pine-apple tribe, the Bromel worts, a natural order of dry herbaceous plants, remarkable for the hardness and dryness of their foliage. The Pine-apple, Ananas sativus, belongs to this.

BROMUS. A genus of plants belonging to the Panicaceæ, several species of which B. mollis, purgans, and catharticus, are cultivated in India.

BRONCHOCELA JUBATA. A genus of reptiles of the family Agamidæ, Order Sauria. This one is found near Pondicherry.

an alloy of copper and tin much employed in the arts.

BRONZE LEATHER Kimsana, Hind.

BRONZO, It. Bronze.

BROOKE, Sir James, Rajah of Sarawak, was born on the 29th of April, 1803, at Coombe Grove, near Bath. He was the second son of Mr. Thomas Brooke, who had been long employed in the civil service of the East India Company. Sir James Brooke entered the Bengal Army and served in the first war against Burmah where he was severely wounded by a gun shot wound in the chest at the storming of a stockade. This rendered his return home on furlough indispensable after which he lost his appointment by overstaying his leave and in 1830 he sailed from Calcutta to China and saw for the first time the islands of the Asiatic Archipelago To carry to the Malay races the blessings of civilization, to suppress piracy and extirpate the slave trade, became his humane and generous desire. On the death of his father, he succeeded to a handsome patrimony, and on the 27th of October, 1838, the Royalist quitted England for Sarawak. He found its ruler, Muda Hassain, engaged in the suppression of a rebellion and was applied to Mr. Brooke for his co-operation. A few volleys from the European guns settled the fate of the day, and the insurgents surrendered at discretion. Mr. Brooke was duly installed in the rank previously promised to him. The newly-acquired territory was swampy, and ill cultivated by the native Dyaks, who varied their occupations as tillers of the land by head-hunting excursions among neighbouring village. He declared head-hunting a crime punishable by death to the offender, and he acted with such vigour, as to suppress it and piracy. On revisiting Britain the British Government recognised his position; ordered a man-of-war to take him to the seat of his new settlement, gave him the title of Governor of Labuan with a salary of £1,500 a year, with an extra £500 a year as a consular agent, and afforded him the services of a deputy Governor, also on a good salary; the hope being, that the result of all this would be the opening of a new emporium for British trade. He proved a benefactor to the uncivilised race over which he presided. He compiled a code of laws, declared trade to be free, all roads to be open, all property inviolable, instituted a current coinage. Antimony ore he reserved to himself, but compelled none to work the mines against their will; he showed that he could be merciful where mercy would not outrage justice, while he rigorously suppressed head-hunting and marauding expeditions which gradually became extinct in the province.—*Men of the Time.*

BROOME, Colonel Arthur, an Officer of the Bengal Artillery, author of History of the Rise and Progress of the Bengal Artillery.

BROSSES, FR., Brushes.

BROTHER.

Bhai	HIND.	Bradr	PERS.
Frere	FR.	Tambi	TAM.
Frater	LAT.		

In Eastern countries, this term is applied to relatives not so designated in Europe, as to cousins, also to persons of the same faith or town, or country. These last are supplemented by a class of friends, styled munh-bola-bhai " so called brothers," common throughout India. This Eastern use of the word brother has caused difficulties to readers of the christian Bible. Jude in connexion with James, though called (*Matt. xiii.* 55,) the " brethren of Jesus," were really the cousins of the Messiah, it being common with the Jews, to call the first cousins brethren. They were the sons of Mary, the sister of the mother of Jesus the wife of Cleophas. In Brittany, at the present day, if two cousins german be married, the son of one of these cousins will address the other as " ma tante" my aunt, he is her neveu a-la-mode de Bretagne.—(*Milner's Seven Churches of Asia, p.* 47.) The late Mr. Burns, thus related the ceremony of brother making amongst the Kyans. Singuding sent on board to request me to become his brother, according to Kyan fashion. The ceremony is called by the Kyans " berbiang," by the Borneons " bersabibah." I landed with our nakodah, and after some preliminary talk, to allow the crowd to assemble, the affair commenced, we sat in the verandah of a long house, surrounded by some hundreds of men, women and children, all looking eagerly at the white stranger who was about to enter their tribe. Stripping my left arm, Kum Lia took a small piece of wood, shaped like a knife blade, and slightly piercing the skin brought blood to the surface, which he carefully scraped off; then nakodah Gadore drew blood in the same way from Singuding's right arm, the one next me, and a small cigarette being produced, the blood on the wooden blades was spread on the tobacco, scarcely spread for the quantity was as small as could be imagined. A chief then rose, and walking to a sort of window, looked full upon the river, and invoked the spirits of good and evil to be witness of this tie of brotherhood; the cigarette was then lighted, and each of us took several puffs, and the ceremony was over. Amongst the rajput races of India the women adopt a brother by the gift of a bracelet. The intrinsic value of such pledge is never looked to, nor is it necessary that it should be costly, though it varies with the means and rank of the donor and may be of flock silk and spangles or of gold chains and gems. The acceptance of the pledge is by the "Katchli" or corset, of simple silk or satin or gold brocade and pearls. Colonel Tod was the Rakhi-bund-bhai of the three queens of Oodipur, Bundi and Kotah, as also of Chund-Bai the maiden sister of the Rana, and of many ladies of the chieftains of rank. Though the bracelet may be sent by maidens it is only on occasions of urgent necessity and danger. The adopted brother may hazard his life in his adopted sister's cause and yet never receive a mite in reward for, he cannot even see the fair object who, as brother of her adoption, has constituted him her defender.—*Tod's Travels, Journal Indian Archipelago, Vol. V. No.* 12.

BROUSSONETIA PAPYRIFERA.—*Vent.*

Morus papyrifera, *Linn.*
Papyrius Japonica, *Lam.*

Mahlaing	BURM.	Paper Mulberry	ENG.
Killia of Celebes tree		Gluga	JAV.

Is a shrub or small tree with soft brittle woolly branches, and large hairy rough leaves either heart-shaped and undivided, or cut into deep irregular lobes. The tree has long been famous for its fibrous bark, as this is made into a kind of cloth as well as into paper. It is a native of the isles of the Southern ocean, as well as of China and of Japan, but has been introduced into the Madras Gardens. In Taiti, or Otaheite, and other islands, they make cloth of its bark; and it is said that the finest and whitest cloth and mantles worn by the principal people at Otaheite and in the Sandwich Islands were made of the bark of this shrub, and this when dyed red takes a good colour. It is from the inner bark of this plant that the Japanese and the Chinese manufacture a kind of paper. Its bark is reduced to a pulp, which is spread into sheets and made into paper.—*Voigt.* 284.

BROUGHTON, lord, formerly John Cam Hobhouse, born June 27, 1786, died June 3, 1869. He was the friend of Lord Byron, was a Radical Reformer and was sent to Newgate as a political prisoner. Was long President of the Board of Control.

BROWALLIA, blue and white flowering plants, easily cultivated from seed in any good soil.—*Riddell.*

BROWN COAL See Coal.

BROWN HEMP. The commercial name given in Bombay to the fibres of the Hibiscus cannabinus. It is the Ambaree or Mestapat of Bengal and the Palungoo of Madras, and is also known as Indian Hemp and "hemp." See Ambaree; Crotalaria juncea; Calotropis; Hemp

BROWN JAWAREE, ANGLO-HIND. Sorghum vulgare.

BROZAS, also Cepillos, also Escobillas Sp. Brooms.

B'R PUKHTUN. The language of the Afghan people who dwell about Kabul, Kandahar, Shorawak and Pishin. See Afghan; India; L'r Pukhtun.

BRABIRA. See Ravana.

BRAB TREE, ENG. Borassus flabelliformis, Palmyra.

BRUCEA ANTIDYSENTERICA, is considered by the Wooginoos of Abyssinia a most valuable remedy in dysentery and severe cases of diarrhœa. The false angustura bark was long supposed to be the produce of this Brucea, and its active principle was accordingly named Brucine. It is now, however, established that the false augustura bark is that of the Strychnos nux-vomica, the Kuchila tree of Bengal.—*O'Shaughnessy, page* 626.

BRUCEA SUMATRANA, *Roxb.* Fl. Ind. i. 449.

Gonus amarissimus.—*Lour.*

A plant of Assam, Cochin China, Sumatra and Moluccas; green parts intensely bitter. It has been successfully grown in the Botanic Garden of Calcutta. In one year the plants grew to about four feet high.—*Voigt.* 185. *O'Shaughnessy, page* 226.

BRUCK, Captain, Indian Navy. His report on the Persian Gulf, enumerates as articles of trade,—silk, dried fruits, gums, dates, horses, pearls, and spices, to the amount of 60 or 80 lakhs annually.

BRUGH, HIND. Echinops nivea.

BRUGMANSIA. A genus of ornamental flowering plants.

BRUGUERA. One of the mangrove tribe, the Rhizophoraceæ. B. Rheedii, all round the coasts, has hard durable yellowish wood, and B. parviflora of Mergui and the Soonderbuns has small green and scented flowers. The Burmese apply the names Pyu and Soung to B. Rheedii, B. eriopetala and B. parviflora.—*Voigt* 41.

BUCEPHALIA of Alexander, is supposed to have been on the site now occupied by the town of Jhelum.

BUCEROS. A genus of birds of the order Insessores or Perchers, sub order Picæ, and sub-family, Bucerotidæ, Nineteen species of the Buceros or hornbill are known in S. East Asia. The duty of incubation of the hornbills is restricted to the hen bird. The nest is formed in the hollow of a tall tree, into which the hen enters and the male plasters up the mouth of the hole, leaving only a small slit, through which he feeds his mate, who makes the nest with her own feathers, hatches the eggs and remains with the young till they are fledged. Captain Tickell saw the male of the Buceros cavatus build the female in by covering the hole in the tree where she incubates, with mud, leaving only room for her bill to protrude and receive food from his, &c.

The hornbill is frugivorous, and the natives assert that when endeavouring to detach a fruit, if the stem be too tough to be severed by its mandibles, the bird flings itself off the branch so as to add the weight of its body to the pressure of its beak. A hornbill, supposed to be B. pica, *Scopoli*, B. malabaricus *Jerdon*, abounds in Cuttack, and bears there the name of "Kuchila-Kai," or Kuchila-eater, from its partiality for the pulp of the fruit of the Strychnos nux vomica.

Captain Tickell met with a hornbill in Amherst which Mr. Blyth called B. Tickelli. He met with the birds from the plains up to an elevation of 3,500 or 4,000 ft. above the sea, but not beyond; and they appeared commonest on the easterly skirts of the range, keeping together in pairs or small parties of five and six, incessantly calling to each other in loud plaintive screams "whe-wheo, whe-wheyo," and when feeding, keeping up a low murmuring cackle like parrots. Their flight is smooth and regular like that of "Buceros pusaran," not in alternate flaps and sails like "B. cavatus, or albirostris," or "birostris," and it is performed at great elevations especially when they cross from top to top of the mountains. Keeping ever thus at immense heights, and being withal as quick-sighted and wary as the rest of the genus, it may be pronounced one of the most difficult birds in the world to be procured with a gun. It is, therefore, no matter of wonder, that, although large collections of birds have been made in the Tenasserim provinces, this hornbill has never hitherto formed part of them. Amongst the individuals he could see, but not shoot, some were apparently entirely black, and these may be the adult males. The wild Karens who lived nearest to those uninhabited forests knew nothing of the bird.

BUCEROS cassidex is the great hornbill of Celebes.—*Wallace. Journal Asiatic Society of Bengal, No. CCXLIX, No.* IV.—1855. *Description of a new species of Hornbill by Capt.* S. R. TICKELL, *Principal Asst. Commr., Tenasserim Provinces. Bl. As. Soc. Tr. p.* 274. *Tennent's Sketches of the Natural History of Ceylon, p.* 242-243.

Dhan	,,		

This straight-growing handsome forest tree with fragrant flowers, is common for some distance west of the Jumna, in the lower hills. It grows in Ajmeer. In the Bombay Presidency, is found more inland than in the coast jungles. In Canara and Sunda, it is most frequent above the ghats, particularly north of Dandellee, and Dr. Gibson describes the wood as rather strong and tough, but seldom found squaring above four inches, or of thickness more than sufficient for posts. The tree abounds in Mysore and Cuddapah, and occurs in Cuttack where its useful wood is worked up generally into furniture, house doors and windows, presses, tables

&c. It requires to be polished, otherwise it stains, of a burnt sienna colour, any cloth brought into contact with it. In Ganjam and Gumsur it has an extreme height of 36 feet and a circumference of 3 feet, and the height from the ground to the intersection of the first branch is 15 feet. There, bullock yokes are sometimes made of the wood, though it is chiefly used for firewood. From these accounts, it would seem to be, in peninsular India, a rather hard, tough, strong and durable wood; but Dr. Brandis tells us that in Burmah it is a soft, light wood and not used: that a cubic foot weighs lbs. 36, that in a full grown tree on good soil the average length of the trunk is 20 feet and average girth measured at 6 feet from the ground is 6 feet and that it sells at 4 annas per cubic foot. Sp. Gr. 0·875.

It bears a fruit about the size of a small cherry, in long bunches, colour of a darkish purple: the kernels, or seeds, which are covered with a double shell, after being prepared by the natives, are sold in the bazaars of India, four or five pounds for a rupee; they possess the flavor of almonds, and are used as such by the native confectioners, the fruit is agreeable, and the seed, called Chironji, *Hind.* Charapuppoo, *Tam.*, has a very pleasant rich flavour. the fruit when ripe in May is gathered by the Bheels then soaked in water to soften the outer pulp, when it is washed and rubbed off by the hands: the little nut is then dried in the sun, and afterwards broken between a common chuckee or stone hand-mill, such as is used for grinding wheat: the kernels are then sifted and winnowed. This kernel of the Buchanania latifolia is much used in native confectionary. The oily kernel is roasted and eaten by the brahmins with milk, and is considered a great delicacy. The kernels of this tree are eaten by the natives, to promote fatness, they abound in a straw-colored, sweet tasted and limpid oil which is seldom extracted though a very fine oil might be expressed from the seed. Its bark is used by tanners. In hindu poetry, its handsome white flower furnishes a simile for pretty eyes, and is held to be sacred to Vishnu.—*Madras Exhibition, Dr. Irvine, Eng. Cyc., Drs. Gibson, Brandis, and Mason, Cal. Cat. of* 1862, *Voigt. Useful Plants, Flor. Andh. Powell, Handbook. Econ. Prod. Punjab, page* 570.

BUCHANANIA VARIEGATA ?

Kachnar, HIND.

A tree of Chota Nagpore, with hard, whitish yellow timber.—*Cal. Cat. Ex.* 1862.

BUCHAPATA, in Long. 83° 50′ E. and Lat. 18° 18′ N.

BUCHARIA, also called Little Bucharia, also Eastern Turkestan, bounded on the North by Mongolia, on the East by the Shami or Kobi desert, on the West by Kokan and Badakhshan, and on the South by the Tsung Lung or Kora Koram range of hills, which separates Little Bucharia from Little Tibet. Perhaps the term Eastern Turkestan should be alone retained. The inhabitants of the country, known in Europe by the name of little Bucharia, call themselves Turks. They speak the Turkish language, and profess the mahomedan religion. As to the other people of Asia, who inhabit the countries which extend northwards to the Russian frontiers, westwards to the Caspian Sea, and Southwards to Afghanistan,—the greater part are descendants of Turks and it would be more proper to give to all these countries, the general name of Turkestan dividing it in the following manner:—1st, Northern or Russian Turkestan, comprehending in it the three hordes of the Kirghis nation; 2ndly, Southern Turkestan, inhabited by the Khivan, Turkoman and Karakalpack and including also great Bucharia, Kokand, and Tashkend; 3rdly, Eastern Turkestan, comprising Little Bucharia, which is subject to China. At present the Chinese and Mantchoos call by the name of "hoei hoei," all the mahometan tribes who live under their dominion. This word, therefore, has ceased to designate a nation. As the Ouigour Hoei hou, called simply Hoei hoei under the Mongol dynasty of Yuan, were mahometans, this name is applied by the Chinese to all those of the same religion, in the same manner as the Russians are often called Greeks, because they are of the Greek church. The inhabitants of the towns of Little Bucharia are in part descendants of the ancient Ouigour or Hoei hou, and consequently Turks; in part Sarti, or Bucharians, who are scattered as merchants all over central Asia, and who are Persians. There are many of them at Peking, Hang tcheou fou, Canton, and other commercial cities of China. Their mother tongue is Persian, but they also speak the Oriental Turki, which is the general language of Turkistan, and the most diffused in little Bucharia. The Ouigour writing character was the original source of those still used by the Mongol, and Manchu, and was itself almost certainly derived from the old Syriac character through the Nestorians. The modern Tartar characters are written (and, it is presumed, read) in vertical lines from top to bottom of the page, the lines succeeding each other from left to right. What Ouigour meant with Mongol authors is doubtful, but the people and language so called by the Western Asiatics were Turkish. Captain Valikhanoff speaks of the language now in use at Kashgar as being Uigur, but it is not clear whether he means that this term is known to the natives.—*Russians in Cent. Asia, p.* 67. *Yule Cathay, I. p*

206. *Timkowski's Journey to Peking, Vol, I. pp.* 6,378-79.

BUCHARIAN RHUBARB. See Rhubarb.

BUCHGOTI, a rajput tribe in Jonpur and Gorukpur. They were formerly notorious for turbulence, part of them became mahomedans prior to Sekundar Lodi's rule. The Bilk-huria, the Rajwar, the Rajkumar are offshoots from the Buchgoti.—*Elliot.*

BUCHNAG, Hind. The root of Gloriosa superba: also, in Bombay, as Vutsunab, of Lagenandra toxcaria.

BUCKLALL, Hing ? A close straight-grained wood, light, tough and strong; grows in the Santhal jungles from Raneebahal to Hasdiha or about forty miles, but not very plentiful. Is suitable for timber bridges.—*Cal. Engineer's Journal,* 1860.

BUCKLANDIA, *Species.* A magnificent tree of the Sikkim Himalaya, and one of the most beautiful evergreens of Sikkim. One seen by Dr. Hooker had a trunk twenty-one feet, seven inches in girth, at five feet from the ground, and was unbranched for forty feet. Ferns and the beautiful air-plant *Cœlogyne Wallichii* grew on its branches, with other orchids, while *Clematis* and *Stauntonia* climbed the trunk. This superb tree is a great desideratum in English gardens; Dr. Hooker believes it would thrive in the warm west of England. Its wood is brown, and not valuable as timber, but the thick, bright, glossy, evergreen foliage is particularly handsome, and so is the form of the crown. It is also interesting in a physiological point of view, from the woody fibre being studded with those curious microscopic discs so characteristic of pines, and which when occurring on fossil wood are considered conclusive as to the natural family to which such woods belong. Geologists should bear in mind that not only does the whole natural order to which *Bucklandia* belongs, possess this character, but also various species of *Magnoliaceœ* found in India, Australia, Borneo, and South America.—*Hooker Him. Jour. Vol.* II. *page* 185.

BUCKLANDIA POPULNEA, *R. Brown. Griff.* A large tree of the Khassia mountains from Cherra Poonjee to Saruream. Flowers small and greenish.—*Voigt.* 53.

The grain of Fagopyrum emarginatum *Meisn,* and F. esculentum, Mœnch, are both known as buck wheat, and are cultivated abundantly in Central Asia and the Himalaya, at about six thousand feet on the Jhelum, five to ten thousand on the Chenab and on the Ravi, eight to nine thousand. Dr. Thomson saw it 13,000 feet in Zanskar, Drs. Stewart and Cayley at 13,000 and 14,000 feet in Ladak. Bears are more fond of this when growing than of any other food, the leaves are much used in Lahul as a potherb, in the hills, the buck wheat grain is considered inferior to millet, but much is taken to the plains, where it used by the hindus on their "bart" or fast days, it being then "phalahar", or lawful. It is believed to be a native of Central Asia, and it is supposed to have been first brought to Europe in the early part of the twelfth century, at the time of the crusades for the recovery of Syria from the dominion of the Saracens. The cultivation of buck-wheat, in Europe in one or other of its species, is principally confined to Great Britain, France, Switzerland, Italy, Netherlands, Germany, Sweden, Russia, China, Tartary, Japan, Algeria, Canada, and the middle and northern portions of the United States. In America from 30 to 45 bushels per acre may be considered as an average yield in favourable seasons and situations, but 60 or more bushels are not unfrequently produced. In Britain the produce varies from 2 to 4 quarters per acre. The quantity of seeds sown is 5 to 8 pecks the acre. According to the census returns of 1840, the annual quantity raised in the United States was 7,291,743 bushels, of 1850, 8,950,916 bushels. The average annual imports of buck-wheat into Britain have not exceeded 1,000 quarters, until 1852, when they reached 8,085 quarters. A small quantity of the meal is also annually imported.—*Simmonds, p.* 259. *Dr. J. L Stewart. McCulloch.*

BUDADANEDI, TEL. Careya arborea, *R.*

BUDADI GUMADI, TEL. Benincasa cerifera.

BUDAGA, the most numerous tribe on the Neilgherry hills. They state that about 400 years ago, their ancestors came from the Malusal hills sixty miles South East of the town of Mysore. Their name is supposed to be a modification of the Canarese word, Vuddaca, or North, and they undoubtedly speak an ancient but organized dialect of the Canarese, but whether famine or persecution drove them from their own country is not known. They are of fair complexion and handsome.

In 1825, the men were 1,665, women 1,696, boys 1,151, girls 632=5,147, inhabited villages 35, houses 1,651.

In 1847, the population of the Badagas was 6,569, distributed over 227 villages.

In 1867, it is said to comprise 17,778 souls, distributed over 4,071 houses.

They have the usual elongated head of the peninsular hindu races. The average of 25, men, of 33·8 years of age, was 66·7 inches, and their weight lbs. 110·76.

The average of 25 women, of 27·68 years, were of height 58·51 inches, and weight lbs. 92. They have the usual asiatic features with a feminine caste. They are agricultural, and when they arrived they acknowledged the proprietorship of the Toda as prior occupant races to whom they promised a landtax of one-sixth of the produce which they still continue to pay, though with occasional demurring. The Toda race call them "Mav" or father-in-law. Both men and women work in the fields, but of late years, a large number of men find employment as labourers and artizans. The other hill tribes on the hills live in isolated communities but the Budaga dwell in villages on a rising ground, in streets running in parallel lines, in thatched houses built of stone and mud, and divided into separate compartments with a double tier of lofts and with a wide terrace in front as a drying, threshing and winnowing floor. The door way, 43 inches high and 26½ broad is their only opening. The cattle are penned in an adjoining cow house or shed. One writer says they arrange themselves as Aravar, Lingaet, Odykary and Torayen, Dr. Short says they have eighteen sects or castes, of whom he names the Woodearu and Haruvaru as priestly castes, the Hattara, Anearu, Mari, Kasturi, Dumah, Gonaja and Manika as ryots and labourers ; the Vellaler, a race from the plains, the Kumbararu or pot-maker ; Kongaru and Lingadhari who are of the Lingaet sect ; the Adikari ; the Kanakaru or accountant ; the Chittre outcastes from the Woodearu Belli, descendants of silversmiths ; Koonde dwelling amongst the Koonda hills, and the Torea, the lowest of all the 18 castes. The arrangements on betrothal are made by the parents, but the marriage only takes place when grown up, Polyandry does not prevail but divorce is easily obtained. The men dress like the people of the plains. The women look like mummies. They wrap a cloth round their bodies from below their arms to their hips, and fasten it with a cord below their arms and around their hips, the arms and shoulders and their legs below the knees are bare. A scarf goes round the head and is let fall behind. The women are of domestic habits, and kind and affectionate mothers. They are simple, modest and retiring. They seem now to be following three forms of the hindu religions the Saiva, the Vira Saiva and the Vaishnava. But the increased intercourse with the plains may have taught them this, as formerly they claimed as their deity, "Hettee-du," an old man, and "Hereardu, who, they said, conducted them to the mountains. But they have numerous deities. A chief deity is in Rungasawmy peak, where men of the Irular tribe officiate as priests and offerings of ghi and fruits are made ; another deity is on a droog near the village of Hollikul where a Badaga priest, officiates and there are other male and female gods. Many are comparatively wealthy. They can neither read nor write—they are timid and superstitious haunted with a dread of evil spirits and are deceitful, ungrateful and false. They are in perpetual fear of the Korumbar, to whose sorcery and witchcraft they attribute all accidents and ailments which befal themselves, their cattle and crops and in their delusions they have killed Korumbars and suffered from it : Nevertheless they get the Korumbar to officiate as priests at all social ceremonial occasions. They both burn and bury their dead.—*Drs. Baikie, Latham, Short.*

BUDDAH MANJI, also called Manjiharam, a village deity of the Sonthal, a stone buried in the centre of the village in an open shed. The shed is called Buddhathan. See Ho ; India, p. 328 ; Sonthal.

BUDH in the hindu astronomy, the planet mercury, and it is deemed fortunate to be born under this planet. Budh presides over Wednesday, Budhwar, dies Mercurii : in one of the Zodiacs, he is seated on a carpet, holding in his hands a sceptre and a lotus ; in another, he is shown riding on an eagle, and elsewhere he is described as sitting in a car drawn by lions ; and by Ward as sitting on a lion.

BUDH. An ancestor of a branch of the great hindu people of a time prior to authentic history. He is traced up to Brahma from whom he descends through Atri, Samudra, Chandra or Soma, and Vrishpati. Budh is said to have married Ila, daughter of Ikshwaku, and the descendants of this union were, in succession, Pururava; Ayu or Yaou ; Nohas or Nohus, and Yayat. Ayu or Yaou is claimed by the Tartar and Chinese genealogists as their great progenitor, and from Yayat sprung three great lines, the Yadu, Puru and Oora or Oorvasa, from each of whom came many dynasties ruling on the Indus, in Hindustan, Assam, Ava and China. The great Hya was a branch of the Yadu and five members of it formed Panchalika or Panchaldesa and the seed of Bajeswa occupied all the countries on the Indus. Of the three lines, the Yadu, Puru and Oora, the Yadu became the most illustrious. The descendants of Budh and Ila were known as the Chandravansa, Somavansa, and Induvansa, all of these meaning the Lunar race, but the fame of the Yadu eclipsed the prior designations, and throughout India the Lunar race came to be styled Yaduvansa. The Yadu held territories in Hindustan, about Allahabad, but, seemingly, in small republican States, some of which were staked and lost at play. The relatives then fought for dominion, for eighteen days, on the field of Kuru Khet. There was no battle of armies, but a series of single combats with treacherous, cruel, surprises during which nearly all of the Yadu fell, and, at the close, of those remaining several, amongst whom Kristna was one, emigrated. The story is told in the Mahabharata. After the combats, the Yadu seem to have left the Ganges, and to have been expelled from Dwarica, to have crossed the Indus, passed Zabulisthan and founded Gajni and Samarcand, but to have swept back on the Indus into Guzerat and the Indian desert from which they expelled the Langaha, Johya, Mohila, &c. and founded successfully Tannote, Derrawul and Jeysulmir. They are now known as the Bhatti of Jeysulmir, the Jharijah of Cutch Bhooj, the tribes occupying Kerouli and Subbulghur on the Chumbul and the Sumaitcha on the Chumbul. The great Tuar tribe are also said to have been of Yadu origin. The Hya also was a branch of the Yadu, some of whom formed Panchaldesa or Panchalika, and the seed of Bajeswa at one time occupied all the countries on the Indus. The Bhatti and Jharijah trace their descent from Budh and Krishna, and they may be said to occupy the Indian desert from the Sutlej to the ocean. In the above view, Budh was a descendant of the first man, Bramha, and Budh seems to have been the first emigrant from Saca-dwipa or Scythia, into Hindustan, viz. about B. C. 2,400, to have been a contemporary of Ikshwaku and to have married his daughter Ila. Between Budh and Krishna was a period of 1,200 years. But his descendants deified Budh and in hindu mythology he is described as of Lunar origin, the son of Soma or Chandra or Indu, the moon, by Rohini. The date of the apotheosis of Budh is not known ; there seem to have been 56 clans of the Indu who were distinguished by names of animals, takshac, the serpent; aswa, the horse; sassu, the hare; lomri or nomri the fox, &c. &c, and the emblem of Budh was the serpent. Prior to the deification of Krishna, Budh was worshipped by all the Yadu as the great ancestor (Pitriswara) of the lunar race. The principal shrine of Budh was at Dwarica, where he still receives adoration as Budha Trivikrama. But by the deification of Krishna whose emblem was the eagle, Krishna's mysteries superseded the simpler worship of Budh. The worship of Bal, or the sun, as Bal-nath, and of the moon, as that of Budh, seem to have co-existed, and an amalgamation had occurred, as the serpent was made to twine round the lingam as at the shrine of Eklinga. Colonel Tod is of opinion that the original worship of Budh was monotheistic, and that prior to the rise of Vishnuism the three idolatrous classes of Hindustan were the adorers of Surya and the descendants of Budh who preserved the serpent sign of their race, and Krishna's followers who adopted the eagle.—*Tod's Rajasthan, Vol.* I. *p.* 533-536.

BUDDHA. This title is usually employed to designate an eminent religious teacher from whose doctrines have sprung up the various forms of the buddhist religion which are found prevailing in Ceylon, in Nepal, in Tibet, Tartary, Mongolia, in Burmah, Siam, Anam, Cambodia and to a considerable extent in China, Japan, Formosa and Corea, amongst 222,000,000 of people. Its votaries far outnumber those of all other creeds, except the christian, and they form one fourth of the whole human race. The christians number about 270 millions; the Buddhists about 222 millions; who are distributed as follows:—China, 170 millions Japan, 25; Anam 14; Siam, 3; Ava, 8; Nepal, 1; and Ceylon, 1; total, 222 millions.

The Reverend Mr. Hardy quotes a German estimate of the buddhists of our day at 369 millions. Major Cunningham however has 222 millions, and is probably nearly right. But he has omitted Tibet and Mongolia, or has included them in his estimate for China, which is 170 millions.

Buddha, in Sanscrit means wisdom, supreme intelligence, and the words Buddha, Booda, Butta, and others of nearly similar sound, are mere varieties, in different parts of India, in orthography and pronunciation; and so, perhaps, is the Bud, or Wud, of the ancient pagan Arabs; Pout, in Siam; Pott, or Poti, in Tibet; and But, in Cochin China. The Chinese having no B, or D, in their alphabet, and their language being monosyllabic, they have further softened this term into Fo, Fo-e, or Fo-Hi; they also call him Xa-ka, a variation perhaps of the Indian Sakya.

Taking the term in the simple sense of a religious teacher, it is generally admitted that there had been many a Buddha prior to the advent of Sakya-Sinha to whom the term is now restricted by the people of Europe. Sakya Sinha declares he was the twenty-fifth Buddha and says, of another, "Bhagava Metteyo is yet to come." Colonel Tod is of opinion (Vol. I p. 90.) that there had been four distinguished Buddhas or wise men, teachers in India, of a monotheism which they brought from Central Asia, with their science and the arrow or nail-headed written character. The first Boodha he considers was Budh the parent of the Lunar race, B. C. 2,250. The second (twenty-second of the Jains), Naimnath, B. C. 1120. The third (twenty-third of the Jains), Parswanath, B. C. 650. The fourth (twenty-fourth of the Jains), Mahavira, B. C. 533.

The term is now usually confined to Sakya Sinha, a Kshatrya, son of Suddho-dana, king of Magadha. He is said to have been born B. C. 598, at Kapala vasta, the chief town of a kingdom of the same name, lying to the north of the present Oudh, at the foot of the mountains of Nepaul. His mother was Maya-Devi, daughter of king Suppra-Buddha, also a Sakia, and her son had the name of Sakya from that of his clain. He married Gopa, also of the Sakya race, and they had one son. Sakya Sinha was also called Gautama, from the name of his clan or "Got," and he afterwards had many attributive appellations given to him. One of these is Bagawa or Bhagawat, a sanscrit word meaning most meritorious or saintly: also, Sakya Muni, the atoner of the house of Sakya or the hermit Sakya; also, Tathagata, thus gone; and Maha Sramana the great priest: also, Saudho-Dani. From his father Suddhodana; Arka-Bàndhu or Kinsman of the sun; Maya devi Suta or child of Maya; he is also called Buddha Kapala from his native town: also Gautama Buddha or Buddha Gautama, the sage Gautama; and he called himself Sakya Gautama; his secular name was Siddharta; or he by whom the end is accomplished, but Bud-d'ha, a superior intelligence or teacher, is the ordinary name in use.

He is the But of the mahomedans; Buddas and Sarmanes, of the Greeks; Mercurius Mayæ filius, of Horace; Bud or Wud of the Pagan Arabs; Woden of the Scandinavians; Toth, of the Egyptians; Fo, Foe; or Fo-hi or Fo-to and Sa-ka of the Chinese; Pout and Sommono-kodam, of Siam; Godama of Ava; Kshaka or Xa-Ka of Japan. Chakahout of Tonquin China. Chom-dan-das and Sangs-gyas of Tibet.

It has never been clearly explained why he, the son of a king, abandoned his home and adopted an ascetic life. But it is supposed that he may have been incited thereto by the Sakya having been involved in war and sustained great losses. At the age of 29, however, he sought retirement from the world, and he began to preach when 35 years of age. It is not believed that his doctrines were wholly new, but that he merely improved on beliefs already existing. As the champion of religious liberty and social equality, Sakya Muni attacked the brahmans in their weakest and most vulnerable points; in their impious assumption of all mediation between man and his Maker, and in their arrogant claims to hereditary priesthood. And his boldness was successful; for before the end of his career he had seen his principles zealously and successfully promulgated by his brahman disciples Sariputra, Mangalyana, Ananda, and Kasyapa, as well as by the vaisya Katyayana and the sudra Upali. At his death in B. C. 543, his doctrines had been firmly established, and the divinity of his mission was fully recognized by the eager claims preferred by kings and rulers for relics of their teacher. His ashes were distributed amongst eight cities, and the charcoal from the funeral pile was given to a ninth, but the spread of his influence is more clearly shown by the mention of the numerous cities where he lived and preached. Amongst these are Champa and Rajagriha on the east, Sravasti and Kausambi on the west. In the short space of twenty-five years, this wonderful man succeeded in establishing his doctrines over the fairest districts of the Ganges, from the neighbourhood of Agra and Cawnpore to the delta. This success was perhaps as much due to the early corrupt state of brahmanism, as to the greater purity and more practical wisdom of his own system. His success was also partly due to the politic admission of women, who, even in the east, have always possessed much secret, though not apparent, influence over mankind. To most of them the words of Buddha preached comfort in this life, and hope in the next. To the young widow, the neglected wife, and the cast off mistress, the Buddhist teachers offered an honourable career as nuns. Instead of the daily indignities to which they were subjected by grasping relatives, treacherous husbands, and faithless lords, the most miserable of the sex could now share, although still in an humble way, with the general respect accorded to all who had taken the vows. The Bhikshuni were indebted to Ananda's intercession with Sakya for their admission into the ranks of the Buddha community, and (See Csoma's Analysis of the Dulva, Res. As. Soc. Bengal, vol. xx. p. 90; also *Fo-kwe-ki*, chap xvi. p. 101) in token of their gratitude the *Pi-khieu-ni*, or Bhikashuni, at Mathura, paid their devotions chiefly to the stupa of Anan (Ananda), because he had besought Buddha that he would grant to women the liberty of embracing ascetic life. The observances required from the nuns may be found in note 23, chap. xvi. of the *Fo-kwe ki*.

Though thus enrolled, their position was still humble. The female ascetic even of a hundred years of age was bound to respect a monk even in the first year of his ordination.

Buddhism made a great start in the time of king Asoka and religious buddhist counsellors assembled at Pataliputra with Asoka. After nine months consultation they sent out nine teachers, viz., one to Cashmir and Peshawar, a second to the country of the Nerbuddah: a third to Mewar and Bundi. A fourth to northern Sind. A fifth, to the Mahratta country. A sixth to the Greek Province of Kabul, Arachosia. A seventh to the country of the Himalaya; the eighth to Ava or Siam, that is the "golden land," the aurea regio or the aurea cherşonesus, and the ninth to Lanka or Ceylon.

Some circumstances of which we are uninformed must have prepared these regions for the reception of the ascetic doctrines of Sakya muni. It is known that buddhism was introduced at the Court of Ming-ti, Emperor of China, in A. D. 65; into Java in A. D. 24 to 57: into Kaoli, (Corea) in A. D. 372; into Pe-tsi, in Corea in A. D. 384; into Tibet, under Hla-ta To-ri in A. D. 407; into Sin lo or Sinra (in Corea) A. D. 528. in 552 into Japan: and, in 632, under Srong dbzam gampo, Buddhism was introduced into Tibet generally.

Buddhism has been examined by Hodgson, Cunningham, Yule and Czoma Korosi in India; by Pallas, Schmidt, Burnouf, Muller, Bunsen and Wassiljew of Europe, by Turnour, Gogerly and Spence Hardy of Ceylon; by Phayre, Mason, Lowe, Bigandet and Bastian of Burmah, and by Legge of China and there has been much discussion as to the nature of the doctrines which Sakya preached. There is no doubt that he was an ascetic for he left his wife and family and preached and inculcated asceticism; and, however greatly his followers may now vary in their belief, it is a fundamental doctrine with all of them that existence is an evil, for birth originates sorrow, pain, decay, and death. Whether he believed in a Supreme Being has been questioned. Mr. Hodgson describes his belief as "Monastic asceticism in morals and philosophical scepticism in religion." Bunsen considers that Sakya the hermit, of all founders of religions at once stands the nearest to, and the farthest from, Jesus of Nazareth, the Christ. The farthest, inasmuch as he renounces in despair the actual world which Jesus purposes to raise to Godlike purity; but the nearest, by virtue of the width and humanity of his conceptions of God, and the wide diffusion which they have obtained. This view was not held by the men of his own day., who styled him An-Iswara, the lordless one, meaning that he taught an absolutely atheistic nihilism, and Burnouf considered the doctrine of Buddha to be atheistic and materialistic, in his teaching that existence is a burthen and that annihilation is the highest happiness which the soul can strive after. The great truth of the father-hood of God is lacking in Buddhas teaching. According to Bunsen his creed introduced or revived civilization and softened manners amongst millions. (*God in Hist. Vol. p.* 345.) Bunsen further adds (*Ibid, p.* 327) that when buddhism arose, the brahman priesthood entered on a sanguinary persecution of its adherents, issuing in a war of extermination, for neither the Vedanta nor Sankhya philosophy had interfered with the absolute authority and exclusive privileges of the priesthood but had left the observances and sacred things intact; but Buddha had attacked all of these ; impugned the Brahmanic system and authority and did away with their external religious worship. He opposed the practice of animal sacrifices and, instead, held to penance and a variety of severe observances.

Buddhism triumphed throughout India from the time of Asoca B. C. 255 up till the 5th century of the present era, trampling upon the whole ceremonial of brahmanism, with all its sacrifices, penances and castes, and asserting the paramount necessity for purity of mind and body and a more elevated moral rule. Sacrifices of all kinds were especially excluded from the buddhist ritual, the offerings of flowers to Buddhas being alone permitted. About the year A. D. 800, there arose a great brahminical revival, which has continued up to the present day, but buddhism has left its influence ; the great sacrifices of antiquity have never been revived, the Homa and Payasa or ghi and food sacrifices are exclusively offered by the vaishnava sectarians, even by most of the saivava, and the sacrificing of buffaloes, goats and fowls is chiefly practised amongst the uneducated sudra and non-Aryan races, to Durga, Kali, or the Earth under the form of the various local deities. The vaishnava who look for the coming of a ninth avatar, were inclined to regard Sakya as the prophesied incarnation but when buddhism was seated on the throne of Magadha, and the old vaishnava sect was persecuted, they fell away from buddhism and have ever since been apart —even more tender of animal life than any buddhist, but in other doctrines dissimilar. Even before the decease of Sakya,—Sinha, however, schisms had arisen amongst his followers in India. Ananda had been with him from the first, and to him Buddha had referred his disciples as the depository of what he himself had said. Nevertheless, so rapidly had the views of Buddha been departed from that Ananda was excluded from the deliberations of the first buddhist councils as an unbeliever, and only re-admitted when he had submitted to their views.—(*Bunsen, God in Hist. Vol. I. p.* 341-2.)

Eighteen heresies are deplored in the Mahawanso, within two centuries of Sakya's death and four distinct sects, each rejoicing in the name of buddhists, are still to be traced amongst the remnants of his worshippers in Hindustan. In its migrations to other countries since its violent dispersion by the brahmans about the eighth century, buddhism has assumed and exhibited itself in a variety of shapes. At the present day, its doctrines as cherished among the Jainas of Guzerat and Rajputana, differ widely from its mysteries, as administered by the Lama of Thibet, and both are equally distinct from the metaphysical abstractions propounded by the monks of Nepal. Its observances in Jepan have undergone a still more striking alteration from their vicinity to the Sintoo sect, and, in China, they have been similarly modified in their contact with the rationalism of Lao-tsen and the social demonology of the Confucians. But in each and all, the distinction is rather in degree that in essence and the general concurrence is unbroken in all the grand essentials of the system. (*Ten. Ceyl. Vol. p.* 527) Sakya Muni discountenanced the philosophic views of the brahmans, but did not deny the authority of the Vedas. Neverthless, three marches from Jeypore, on the road to Delhi, the town of Babra has one of the edicts of Asoka on a block of stone or rock on a hill, in old Pali and of date B. C. 309. It is in the oldest Lat character. It differs somewhat in style and language from the pillar and rock edicts. The subject is the buddhist commandment, forbidding the sacrifice of fourfooted animals. The Vedas are alluded to, but though not named, are condemned as, " mean, and false in their doctrine, and not to be obeyed." The scriptures of the Muni (which must be the Vedas) are spoken of as directing blood-offerings and the sacrifice of animals. Priest and priestesses, religious men and religious women, amongst the buddhists, are commanded to obey the edict, and bear it in their hearts.—(*Vol.* IX., *p.* 617.)

The valley of the Ganges was the cradle of buddhism ; which, from its rise in the sixth century before Christ, gradually spread over the whole of India. It was extended by Asoka to Kashmir and Kabul shortly after Alexander's invasion. The fourth buddhist council was held under Kanishka, prince of Kashmir B. C. 150; it extended into Kabul, into Bamian in ancient Bactria a district of Persia under Darius; traces of it appear through Mongolia and Tibet; and it was introduced into China by five hundred Kashmirian missionaries, in A. D. 65 : through India it extended into the peninsula and Ceylon, into Nepal, Burmah, Assam, Siam, the islands of Formosa and Japan ; and, except in India where it arose, in Kabul, Bactria, Bamian and Cashmir, it still flourishes in these countries.

Buddha died B. C. 543, and buddhism was in India only a struggling lingering sect, till the time of Asoka whose edicts B. C. 255 remain engraved on rocks. In the inscriptions of Asoka, buddhism appears as a system of pure abstract morality, no trace being exhibited of the worship of Buddha himself, or of the serpent or tree. About the beginning of the christian era, a Naga or Turanian revelation seems to have become incorporated with it. It had, at this time, fallen into a state of decadence and was represented by no fewer than eighteen different sects. The buddhist school of this time was known as the Hinayana. At this time Nag-arjuna appeared. The sayings of Sakya Muni had been, during his life-time, recorded by the Nagas, from whom Nag-arjuna obtained the documents and he proclaimed them. This modification of buddhism must however have progressed slowly, as will be now shown.

The gate ways of the Sanchi Tope belong to the first half of the first century of the christian era, and though subsequent to the Naga revelation the sculpture scarcely indicates its existence. Buddha does not appear on the Sanchi sculptures as an object of worship. The serpent is there, but rare. The dagoba or depository of the relics of saints is there, as also are the tree, the wheel and other emblems, and, on the whole, the sculptures on the Sanchi tope may illustrate the Hinayana school of buddhism, at the period when other doctrines were about to be introduced. The Amravati sculptures again belong to a period 300 years later than that of Sanchi, and in them the new school ofMahayana buddhism may be studied. In these, Buddha is an object of worship, but the serpent is his co-equal. The dagoba, tree and wheel are reverenced and the sculptures contain all the legends of the later books, though in a purer form. Hindoos, Dasyas and other men, women, and animals, especially monkeys, appear in the sculptures worshipping the serpent and other gods. The serpents are all divine, five and seven headed, and representations are numerous of the Naga angelic orders; the female Naga, with one serpent only springing from the back, the male Naga with three.

The Amravati sculptures, again, belong to a period three hundred years later than those of Sanchi, and the topes illustrate the faith as at their dates. In the Amravati sculptures are tonsured priests and other signs of a clerical order segregated from the laity and of an established ritual. Sanchi is illustrative of the Hinayana buddhist philosophy, 500 years before the oldest buddhist book, and Amravati illustrates the Mahayana philosophy 600 years after its promulgation.

Buddha Ghosa lived about A. D. 410 nearly 1,000 years after Sakya Muni (A. D. 543 B. C.) and the frescoes of the caves of Adjunta illustrate a period 300 years later than the Amravati tope, and belonging to the time immediately preceding the decline of buddhism in India. The Lalita Vistara or life of Buddha in its present form was compiled 1,400 years after he died.

In A. D. 400, when Fa Hian visited India, buddhism was still the dominant religion, but the Vaishnava sect were already rising into consequence. In the middle of the seventh century, although the pilgrim Hwán Thsang found numerous temples of the Saiva sect whose doctrines had been embraced by Skanda Gupta and the latter princes of Patalipura, yet buddhism was still the prevailing religion of the people. But the faith of Sakya was evidently on the decline, and though it lingered about the holy cites of Benares and Gaya for two or three centuries later it was no longer the honoured religion of kings and princes, protected by the strong arm of power, but the persecuted heresy of a weaker party, who were forced to hide their images under ground, and were ultimately expelled from their monasteries by fire. In 1835, Major Cunningham excavated numerous buddhist images at Sarnáth, near Benares, all of which had evidently been purposely hidden under ground. He found quantities of ashes also and there could be no doubt that the buildings had been destroyed by fire, and Major Kittoe, who subsequently made further excavations was of the same opinion.

Amongst the Singhalese buddhists, the term buddha is understood to indicate beings who appear in the world at intervals, and are able to teach men the way to attain nirvana (Hardy) and they recognise Anomadassa as a Buddha prior to Gotama (*Hardy*, *p.* 433.) Their literature is in Pali, and the Dipavansa contains a history of buddhism in that island which breaks off with the death of Mahasena A. D. 302. The Mahawansa was compiled by Mahawana who lived about A. D. 500; it was brought down to the eighteenth century by successive writers and was translated by the Hon'ble G. Turnour of the Ceylon Civil Service.

The sacred canon of the buddhists now extant is called the Tri-pitaka, *i. e.* the three baskets. The first basket contains all that has reference to Vinaya or morality, or discipline. The second contains the Sutra or discourses of Buddha: the third includes all works treating of dogmatic philosophy or metaphysics. The first and second each contain five separate works. The second is generally known by the name of Dharma or law; and it has become usual to apply to the third basket, which contains seven separate works, the term Abhidharma or bye-law. The Sutra are ascribed to Sakya Muni: they consist of ethical and philosophical dialogues by Sakya and they make mention of the gods Narayan, Jonardhan, Shib, Brahma, Petomah, Borun (Vorun) and Songkar. Other names of Shib, Kubir, Sokr or Vasob, and Vissoo Kormo. (*Cal. Rev.*) Mahinda, son of Asoka is supposed to have brought the Attha-katta, ancient commentaries in Pali, to Ceylon, and to have translated them into Singhalese which Buddha ghosa, about A. D. 430 retranslated into Pali. According to another account, the doctrines were first reduced to writing by the Ceylon priests, during the reign of King Vartagamani 88-76 B. C. and by a synod assembled 10-40 A. D. by the Turushka king Kamshka. For the former the language used was the vernacular, from which in the 5th century it was translated into Pali; for the latter, Sanscrit. Hardy in his Eastern monachism has discussed the views held of Buddha in Ceylon. The changes made must have been very early, for eighteen heresies are deplored in the Mahawanso within two centuries from his death. In Ceylon, this faith has not been subjected to much persecution. In the 16th century, the Tamul invaders made every effort to destroy the buddhist books, but the priests, subsequently, sent a mission to Siam, and properly ordained priests were imported from Burmah. By the 18th century, buddhism had regained its ascendancy. The priests latterly have been actively diffusing a knowledge of their creed. They have printing presses from which tracts, pamphlets and serials issue in great numbers. They present some new arguments and inferences but the defiant and blasphemous expressions which they contain against the sacred name of Jehovah, are probably the most awful ever framed in human language.

In Ceylon is a foot mark on Adam's peak which has been the object of pilgrimage for ages, which buddhists ascribe to Buddha, but mahomedans to Adam. There are models of feet in different parts of the island. This is the Adam's foot of the mahomedans.—*(Yule II.* 359, 368.*)*

The tooth of Buddha, the Dalada, *Singh.* Dhata Dhata, *Hind*, is greatly reverenced. There are, in Ceylon, statues of Buddha of great height. One of Buddha near Mehintala. is 70 feet high, and one of Gotama rajah at Carculla is 38 feet. At Anarajpoora, in Ceylon, are several buddhist Dehgopas or Dagobas, the heights of which vary. They were built at from B. C. 307 to A. D. 276.

There was a pepal tree at Buddha Gaya, a shoot from which, shown as the Bo-tree, has been cherished at Anarajapura for twenty centuries and in the court yard of every vihara and temple of Ceylon, trees are preserved as objects of veneration. A system of caste was introduced by king Vijaio amongst the Ceylon buddhists, which still prevails there, though directly opposed to buddhist doctrines and not existing in any similar form in other buddhist countries.

Sakhya Sinha, according to Thibetan books, died near the town of Kusha in Kamrup beneath the shade of two sal trees on the southern bank of the Brahmaputra river, then called Heranyo.

In Tibet the Buddhist practical creed is thus briefly stated by Csoma de Koros:—*1st.* To take refuge only with Boodh. *2nd.* To form in the mind the resolution to aim at the highest degree of perfection, and so to be united with the Supreme Intelligence. *3rd.* To humble oneself before Boodh, and to adore him. *4th.* To make offerings of things pleasing to the six senses. *5th.* To glorify Boodh by music, and by hymns, and by praise of his person, doctrine, and love of mankind, of his perfections or attributes, and of his acts for the benefit of animated beings. *6th.* To confess one's sins with a contrite heart, to ask forgiveness of them, and to repent truly, with a resolution not to commit such afterwards. *7th.* To rejoice in the moral merit and perfection of animated beings, and to wish that they may obtain beatitude. *8th.* To pray and exhort existing holy men to turn the wheel of religion, that the world may long benefit by their teaching.—(*Prinsep's Tibet, Tartary and Mongolia, p.* 167.)

In this Tibetan creed, the doctrine of transmigration is shown, and final absorption into Buddha as the reward of a virtuous life. It, therefore, follows that Buddha, with the Tibetans, is the divine being, who created all and to whom all return, and that, for the good, there is no separate existence, in a future world. There has been some misapprehension regarding the Buddhas and Budhisatwas of the Tibetans, the regeneration of the Grand Lama being considered as an exceptional case of a Buddha returning amongst mankind. Mr. Hodgson, (pp. 137, 138,) truly calls the "divine Lamas" of Tibet, *Arhantas*, but he believes "that a very gross superstition has wrested the just notion of the character to its own use," and so created the "immortal-mortals, or present palpable divinities of Tibet." In the Nouv. Jour. Asiat. t. xiv. p. 408. ii, Fra Orazio says that "Lama sempre sara coll' istessa anima del medesime *Ciang-c'iub*, oppure in altri corpi." Remusat was not aware of this fact when he stated "Les Lamos du Tibet se considerent euxmemes comme autant de divinites (Bouddhas) incarnees pour le salut des hommes." But the explanation which Major Cunningham received in Ladak, which is the same as that obtained by Fra Orazio in Lhasa, is simple and convincing. The grand Lama is only a regenerated Budhisatwa, who refrains from accepting Buddhahood, that he may continue to be born again and again for the benefit of mankind. For a Buddha cannot possibly be regenerated, and hence the famous epithets of SATHAGATHA, "thus gone," and SUGATA, "well gone," or gone for ever.—(*The Bhilsa Topes by Major Cunningham, pages* 1 *to* 67.) One of the established points in Tibetan buddhism is the belief in metempsychosis, or the migration of the souls of animated beings, and the Tibetans believe in six forms in which a living being may be reborn, viz. Lha *Tib* Deva, *Sansk.* spirits or gods; Mi or men: Lha mayin, or evil spirits; Dudo or Johsong, brute beasts; Yidaga, imaginary monsters, and inmates of Nyalba or Naraka or hell.

The Buddhist religious works of Tibet brought to notice by Alexander Csoma de Koros, are the Tanjur, which consists in its different editions of 100, 102 and 108 folio volumes and comprises 1083 distinct works. The Tanjur consists of 225 volumes folio each weighing from 4 to 5 pounds, in the edition of Peking, but editions have also been published at Lhassa, and other places. Of these de Koros, gave an analysis in the 20th Volume of the Asiatic Researches and died soon after. In Turkestan, buddhism was still prevailing in A. D. 1419, in the cities of Turfan and Kamil, when Shah Rukh's ambassadors passed through and Toghlaq Timur was the first mahomedan sovereign of Kashgar of the lineage of Chengaz. There are now many buddhist priests at the capital of Khotan, but mahomedanism had been extensively prevalent in East Turkestan for centuries prior to its conquest by the Chinese in A. D. 1757, and the buddhist priests and temples may have been since introduced.

Nearly all Ladak is of the buddhist faith. The valley of Le or Ladak proper, Zanskar, Hembaks or Dras; Suru and Purik, Spiti, Nubra, Janskee, Rong are all buddhist. Of Rupshu, and Hanle, information is needed.

In the buddhism of the Burmese, they utterly, in theory at least, deny an intelligent and eternal Creator, and yet they distinctly recognise and apprehend future punishment of sin, or rather of the violation of the Buddha's commandments. This punishment, they argue, is worked out by the powers of nature in necessary sequence of pro-gression, just as you eat some fruit and a bowel complaint ensues. Mind, they say, produces action. The motive is chief. If any one speak or act from a corrupt mind, suffering will follow the action, as the wheel follows the lifted foot of the ox. And, again, mind produces action. The motive is chief. Actions proceed from mind. If any one speak or act with a pure intention, enjoyment will follow the action; as the shadow attends the substance.—(*Yule's Embassy, p.* 23.)

Dr. Mason, writing of buddhism in Burmah, says that the philosophy of buddhism is the religion of buddhism. To be a buddhist is to believe in the philosophy of being. The buddhists propound as an axiom that all things are unreal, and on it all their philosophy is based. Some buddhists recognise idols, a few wholly reject the worship of idols, but these are equally buddhists, who believe that true happiness is not found in any state of body or mind; that existence is a calamity, and that the only desirable object is the extinction of being, or Nirban, where there is deliverance from ideas and consciousness. To be a pious buddhist is to remain unaffected by surrounding objects, to deny ones-self of every thing beyond the bare necessaries of life and to cry out, day and night, all things are transitory, productive of unhappiness and unreal. A change of heart and implicit faith are essentials of salvation. The Burmese buddhists believe in good and evil spirits and in the scheme of transmigration and, for the good, final absorption, and the Burmese buddhist prays that he may, in his transmigrations, meet with a Buddha to convert him. Woman takes a humble position in Burmese buddhism and she longs to become a man in her next transmigration. Their views as to the desirableness for release from this life are evinced in modes painful to European feelings. The Revd. Mr. Marks, when in Moulmein, had a sick pupil whom he went to see. On entering the house, and inquiring for the lad, the mother in a glad manner repeated he was well, and jauntily led to another room, where he was pained to find the young boy lying dead, and still more pained by the mother continuing to repeat that he was well. In Burmah, in some temples, four past terrestrial Buddhas occupy the four sides of some temples.—(*Yule Cathay, i,* 242.

In Burmah, there is a great belief in spirits both good and bad, amongst others the nat, and the beloo. An attempt to reform buddhism was made, in 1863, by some of the chief phoongyees of Kemmendine. Like the protestants of christianity and the bramhists of hindooism, the reformers seem to go back to their oldest books, or *Bedagat,* the three series of which minutely describe the duties of priests and laity and define the objects of faith. They condemned the lax practices of this degenerate age—such as priests wearing sandals, carrying umbrellas, and visiting religious theatrical shows. The new sect seemed to be puritans. At the bottom of their reforms, ludicrous as they appear, there was doubtless much puritan earnestness. They called themselves "Soolay Gandee," Soolay meaning the great spirit to whom the pagoda in the centre of Rangoon is dedicated. In hindooism some new and earnest sect, like the religious orders of Romanism, is always rising.

But it is a new thing to see a development of earnestness within so apathetic a creed as modern buddhism.

Between the buddhists of Siam and Ceylon, there has been much intercourse, and it is probable that almost identical doctrines are held in the two countries. During the efforts made by the buddhist monks of Ceylon, in the defence of their religion and in their attacks on christianity and on Jehovah, the king of Siam and one of the native chiefs of Kandy contributed largely towards the publication of the numerous tracts, pamphlets, and serials that were sent forth from the buddhist printing presses of Ceylon. When Siam was visited by Sir John Bowring, he found a king reigning, who, in early life, when a late king had usurped the throne, had withdrawn from political squabbles to the safety and sanctity of the religious profession and was residing in a buddhist temple, from whence he was brought forth to occupy the throne, after the seclusion of a quarter of a century. It is stated by a writer in the Journal of the Indian Archipelago (No. XI, Nov. 1852, p. 606) that, in Cambodia, Buddha is styled Samonacudom. He is not regarded by the Cambojians as the first cause, the creator of all things, but there prevails amongst them a pantheism, in which all nature is deified, but above all they place Buddha and worship him daily. The Satra Trayphum and the Satra Papithom are mentioned as two of their books.

In China, buddhism has never taken a high place amongst the philosophies and religions of the country, though recognised as a state religion from A. D. 65, under the Emperor Ming-ti. But buddhist missionaries had entered China in the third century before Christ. A missionary is mentioned in the Chinese Annals in the year 217 B. C.; and about the year 120 B. C., a Chinese general, after defeating the barbarous tribes north of the desert of Gobi, brought back as a a trophy a golden statue of Buddha.—(*Muller's Lectures, p.* 139.)

There was much intercourse between the buddhists of India and China for some centuries, after the introduction of buddhism into China, but in the tenth century, after A. D. 975 the religious visitors to China became greatly more numerous. Also, Chinese pilgrims passed years in India studying their religion and they wrote narratives of their travels. Of these, there have been published the travels of Fa Hian, A. D. 399-414 ; of Hi-wen Thsang, A. D. 628-645 ; and of Hoei Singh who set out, A. D. 518. A later traveller, Khi-Nie, who journeyed A. D. 964-976, was sent by the emperor of China at the head of 300 monks to seek relics of Buddha and to collect palm books.

Such pilgrimages continue, and Colonel Yule had met men at Hardwar, who had crossed the Himalaya from Mah-Chin to visit the holy flame at Jawala-mukhi in the Punjab —(*Yule. XXI, II.* 411.)

The Chinese buddhist invocation is Oh me to Fo ! Oh me to Fo !

In China and Mongolia according to M. M. Huc and Gabet, theistic buddhists acknowledge an Adi-Buddha or eternal Buddha, whom they consider to be god over all. In Ceylon and Indo Chinese countries, there is no such belief. (*Yule, I.* 242.) Much of the costume of buddhist priests and of the ritual, has a similarity to those of christians of the Romish and Greek forms, and De Guignes, De Gama, Clavijo, Anthony Jenkinson, all notice statements regarding the Geeek Church, the Chinese, and Burmans, indicative of a belief in the identity of the form of worship. When Dr. Richardson and Captain Macleod, in their exploration of the countries east of Burmah, fell in with Chinese traders—these generally claimed them as of their own religion. In the Chinese temples are a number of images not unlike the christian representations of Mary and of some of the saints ; lamps and wax lights are on the buddhist altar ; the buddhist priests are robed in the sacred vestments called Pluvials in christian ritual books, processions of suppliants occur as with christians and chaunting is in a style almost exactly like the Gregorian chaunts of christian churches. Early christian missionaries to China believed these to have been introduced among them by the devil, clumsily imitating holy things and grasping at the honors due to God.—(*Yule II.* 551.)

A prominent feature amongst the Japanese is the variety of their religious beliefs, one of which is that of Buddha, but the Sin-tu religion prevails to as great an extent. The priests of the buddhist religion use the Chinese language in their worship, except in their poetry which is in the Japanese tongue. There is a paper in *Notes and Queries on China and Japan*, in which an endeavour is made to identify the curious symbol so often found on buddhist images, which buddhists themselves regard as the emblem of the seal of Buddha's heart—the "Svastika" of Sanscrit scholars—with the "Hammer of Thor" of Scandinavian mythology. It is conjectured that this symbol must have been brought to China, Japan, and Mongolia by buddhist priests, and its origin is therefore to be looked for in India. It appears there on the most ancient buddhist coins, and has been noticed on the walls of all the rock-cut temples of Western India. Even the Ramayana mentions domestic utensils as marked with the very same figure. The Svastika appears in ancient Teutonic and Scandinavian mythology, under the name of Thor's hammer, as the sceptre of Thor, the god of thunder. It has also been discovered on many ancient coins of

Indo-Germanic nations. From all this it is concluded that the Svastika was the common symbol and chief magic charm of the Aryan races before they separated. To the present day this "hammer of Thor" is used among the German peasantry, and in Ireland as a magical sign to dispel thunder. Moreover, as in the middle ages, bells used to be rung to drive away thunder, the Svastika of the East used to be engraved on church-bells, and to the present day many bells in England bear the symbol.

The buddhism of the Lieu-Cheu Islands is less perfect than that of the Japanese.

The Korean buddhists and buddhism were made known to Mexico by Chinese priests, in the fifth century A. D and had followers in that country until the thirteenth century, when the conquering Azteks put an end to it.

Buddhism is eminently a religion of negation. In carrying out the ascetic views of Sakya Muni, pious buddhists of all these countries, both men and women, have, from the first enunciation of his doctrines, been accustomed to withdraw from public life into monasteries and convents. We have distinct evidence of the existence of institutions of this kind established at dates long antecedent to the Christian era. They were in the form of Vihara, or cells and caves, or buildings, erected for the convenience of those who sought so to spiritualise themselves by separation from the world. Only the ruins of such buildings exist in India, but in Tibet and Tartary they still are like those left by the Indian Sramanas, or Lamas, ten and twenty centuries anterior to the present, and varying very little from what is reported of the monasteries of the earlier Christians; there are also, according to M. Huc, both at Koon-boom and in Tibet, the types of the devotees who practised penances, and sat as pillars, like Simeon Stilites.

Pythagorean institutions are described as very monastic in their character, in that respect resembling closely, the vihara of the buddhists of India. The doctrines of Pythagoras were widely spread over Greece, over Italy, and Asia Minor for centuries after his decease, and under the name of Mithraic, the faith of Boodh had also a wide extension.—(*Prinsep's Tibet, Tartary and Mongolia*, *p.* 140, 161.)

To a buddhist ascetic, continence is essential to purity, but even contact is unlawful. Nevertheless convents for women are very characteristically buddhist institutions, they existed in the Burman empire till of late years, and are still to be met with in Nepal and Tibet.—(*Toy Cart*, *p.* 142.)

Alms and alms-giving have ever taken an important place in the religious systems of the world. So early as the time of Moses, the Hebrews were commanded to give freely, and to throw their bread upon the waters with an assurance that after many days it would return to them again. In the buddhist, hindu and mahomedan religions, as also amongst the Romish christians, it is not only deemed good to give alms, but the giving bestows a merit on the individual and they are generally bestowed with much openness. In such case differing from the injunction in Matthew vi. 2 "When thou doest thine alms, do not sound a trumpet before thee." Hindu and mahomedan sovereigns bestow much to the shrines of their respective faiths, and annually, on the maharram, the mahomedan kings entertain many Syeds on permanent pay. Some mendicants, alike hindus and buddhists, are not allowed to solicit or demand alms, but have to go with a quickstep, and, with or without a bell, through the streets, and without comment, accept whatever is thrown into their wallet. And to describe a child as of an unknown father a speaker will say, who can say, who threw the morsel into the beggar's wallet. Others solicit humbly as I. Samuel c. xxv. v. 8, 'Give, I pray thee, whatsoever cometh to thine hand, to thy servants, and to thy son David,' a mode of address not unfrequent among the hindus with whom a poor man often says to a rich man, 'Oh! father, fill the belly of thy son: he is in distress.' But the hindu pilgrims to sacred shrines are often exacting, even insolent and, though rarely so to Europeans, will sit down at a door and refuse to stir until their day's food be given and the mahomedan fakirs of whom there are several sects, often continue to demand till alms be given. The buddhist mendicants are the least clamorous, and so completely is the act of offering to their shrines, the final individual merit, that costly gifts can be immediately removed and outside the great temples at Rangoon and Prome such vast quantities of food offerings are daily thrown, as to be disgusting. All these classes have distinguishing costumes, the buddhist with his yellow robe; the hindu sanyasi or viragi smeared in ashes, and the mahomedan fakir may have a loin cloth. Amongst them all, are many true ascetics, and recently in 1867 a hindu devotee was to be seen, who had, at that time sat for five years in one of the Ellora caves; but there are amongst them also many impostors.—*Professor Max Muller's Lectures*, *p.* 140. *Professor Max Muller's Chips from a German Workshop*; *Bunsen's God in History*, *Vol. I.* 341, 211. *Wheeler's Hist. of India*, *p.* 159; *Tennent's Ceylon*, *Vol. I. p.* 343, 527; *ii.* 614; *Tennant's Christianity in Ceylon*, *p.* 206, 207 264; *Hardy's Eastern Monachism*; *Calcutta Review*; *Frazer's Magazine*, *June* 1868, *Rangoon Times*; *Saturday Review*; *Bengal As. BUDDHA-BASARA, Sans. Cardiospermum halicacabum. *Linn*; popular superstition asserts that by eating its seeds, the understanding is enlightened, and the memory rendered miraculously retentive.—*Ell. Fl. And.*

BUDDHA DAS. Father of Upatisso who built hospitals for cripples, for pregnant women, for the blind and diseased. See Mahomedanism.

BUDDHA GAYA. A city erected near the spot where Gotama became a Buddha, many buddhists' architectural remains have been discovered there.—*Hyder's Eastern Monachism, page* 434.

BUDDHA GHOSA, author of a commentary on the sacred writings of the buddhists.—*Hardy's Eastern Monachism.*

BUDDHA GUPTA, a king who governed the country between the Jumna and the Nerbudda, about the eighth century.

BUDDHA KAKARA, Tel, Cardiospermum halicacabum, *Linn.* See Buddha basara.

BUDDHATHAN, the shed in which is placed the Sonthal deity Manjiharam.

BUDDHA TRIVICRAMA, a name of Buddha.

BUDDHIST ARCHITECTURAL REMAINS are the only vestiges of the prevalence in British India of the doctrines taught by Sakya Sinha and his disciples, but they afford valuable illustrations of the alterations introduced into that great teacher's doctrines. It is known that the final disappearance of buddhism from continental and peninsular India was violent, their priests were slain and their temples burned, and there can be no doubt that the brahminical priesthood were the immediate actors in the scenes; but whether these were of the Vaishnava or Saiva sect there is no information. The buddhist remains now existing may be divided into four distinct classes ; 1st, Cave Temples, containing Topes, Sculptures, Paintings, and numerous inscriptions. 2nd, Vihara, or Monasteries, 3rd, Inscriptions on Rocks and Pillars. 4th, Tope, or religious edifices. Major Gill, of the Madras Army, was long employed at Ajunta in copying paintings ; but the volumes of inscriptions in the caves of Nasik, Junir, Kanari, and Karli, still remain to be copied. In Dr. Bird's learned "Historical Researches on the Origin and Principles of the Buddha and Jaina Religions," there are several plates of inscriptions from the caves of Kanari, Karli, Ajunta, Ellora, Nasik, &c.

The Vihara or Monasteries, are of two kinds :—1st, Cave Viharas, of which several magnificent specimens have been published by Mr. Fergusson ; and 2nd, Structural Viharas, of which some specimens still remain at Sanchi, but in a very ruinous condition.

(*a.*) The Vihara or Monastery caves, are the first class, and consist of (1) natural caverns or caves slightly improved by art. These are the most ancient, and are found appropriated to religious purposes in Behar and Cuttack : next (2) a verandah opening behind into cells for the abode of priests, as in Cuttack and in the oldest vihara at Ajunta ; the third (3) has an enlarged hall supported on pillars. The most splendid of these are those of Ajunta ; though the Dherwara at Ellore is also fine, and there are some good specimens at Salsette and Juner.

(*b*) Buddhist Chetya caves form the second class. These are the temples or churches of the series and one or more of them is attached to every set of caves in western India, though none exist on the eastern side. Unlike the Viharas, all these caves have the same plan and arrangement. The Karli cave is the most perfect in India. All these consist of an external porch or music gallery, an internal gallery over the entrance, a central aisle which may be called a naive, roofed by a plain waggon vault, and a semi-dome terminating the naive, under the centre of which always stands a Dahgopa or Chaitya. In the oldest temples, the Dahgopa consists of a plain central drum, surmounted by a hemispherical dome crowned by a Tee which supported the umbrella of state of wood or stone. These two classes comprehend all the buddhist caves in India. The third class of religious architectural remains in India, consists of brahminical caves, properly so called. The finest specimens are at Ellora and Elephanta though some good ones exist also on the island of Salsette and at Mahabalipur. In form many of them are copies of and a good deal resemble the buddhist vihara. But they have not been appropriated from the buddhists as the arrangement of the pillars and position of the sanctuary are different. They are never surrounded by cells as all viharas are, and their walls are invariably covered or meant to be covered with sculpture, while the viharas are almost as invariably decorated by paintings except the sanctuary. The subjects of the sculpture of course always set the question at rest.

The fourth class consists of rock cut models of structural brahminical temples. To this class belong the far famed Kylas at Ellora ; the

Sivite temple at Doomnar, and the Ruths at Mahabalipur. This last is cut out of isolated blocks of granite but the rest stand in pits.

The Indra Subba group at Ellora should perhaps form a fifth, but whether they are Brahminical or Jaina is undecided.

The fifth or true Jaina caves occur at Khandagiri in Cuttack and in the southern parts of India, but are few and insignificant. In the rock of Gwalior fort, there are cut in the rock a number of rude colossal figures some 30 to 40 feet high, of some of the Thurtankar; some sitting, some standing.

The Behar caves are in the neighbourhood of Rajagriha: the milkmaid's cave and brahman girl's cave have inscriptions in the Lath character. They are about 200 B. C. and are the most ancient caves of India. The Nagarjuni cave and Haft Khaneh or Satghar group are situated in the southern arm of the hill at some little distance from the brahman girl and milk maid's cave. Another group is the neighbouring Karna Chapara and Lomas Rishi caves.

The caves of Udyagiri and Khandagiri hills about 20 miles from Cuttack and five from Boban Eswara are next in antiquity to those of Behar. They are built on the hills of Udyagiri and Kandagiri, the former are Buddhist and the older, the latter probably Jaina. Many of the inscriptions are in the Lath character, and this gives their age as anterior to the Christian era. The frieze sculpture in the Ganesgompha is superior to any in India and resembles that of the Sanchi tope at Bhilsa. In it there are no gods, no figures of different sizes nor any extravagance. In the Buddhist caves here, there are no figures of Buddha, nor any images. In a Jaina cave near, on Khandagiri, the 24 Thirtankara with their female energies are sculptured.

The Ajunta, are the most complete series of buddhist caves in India without any mixture of brahmanism and contain types of all the rest. They are in a ravine or narrow valley in the ghat south of the Taptee.

At Baug in a ravine or small valley in the ghat on the north side of the valley of the Taptee, are three ancient Buddhist caves.

The Karli caves are close to the high road from Poonah to Bombay, about half way down, on the right hand side of the valley as you proceed towards the sea. They are not so extensive as those of Ajunta but they are purely buddhist. The largest and most splendid Chaitya cave temple in India which could be selected for reproduction by art is the principal excavation at Karli, and it is also interesting as the oldest Indian work of the kind known to exist.

Karli has numerous inscriptions in the caves, in the Pali language, of date B. C. 543, *(Dr. Wilson)* but if the Salivahana era be intended, then the date is A. D. 176, *(Dr. Stevenson).* The character used in those inscriptions is slightly modified Lat. The religion, or divinities or sages mentioned are buddhist, the invocation is to the Triad; no doubt meaning Buddha, Dhurma, Sanga. Of the kings or princes mentioned, Dr. Wilson says, Vijara; Dr. Stevenson, Arodhana, lord of India, Garga, ruler of the Shaka. Of the numerous buddhist inscriptions in the cave temple at Karli, Drs. Wilson and Stevenson are not quite agreed about the reading. But, Garga, the " ruler of the Shaka" (Sakya, Buddha's tribe), is mentioned. Dr. Stevenson mistook the language for Sanskrit, which Mr Prinsep from copies sent by Col. Sykes proved to be Pali. The excavation of the temples, and gifts by individuals in aid, are mentioned.—*iii, p.* 499.

The Salsette or Kenneri caves, in the Island of Salsette, are purely buddhist, but inferior to those of Ajunta or Karli. They are excavated in a hill in the midst of an immense tract of forest country and Mr. Fergusson supposes their date to be about the 9th or 10th century of the Christian era.

Dhumnar, about 40 miles S. E. from Nemuch, but close to Chundivassa, contains buddhist caves with a brahminical rock temple behind. Those of Dhumnar, like the caves of Ellora, contain a strong admixture of brahmanism.

The Ellora caves are excavated in a porphyritic greenstone amygdaloid and are largely brahminical. They are in the face of the mountain overlooking the valley of the Godavery close to Roza, the burial place of Dowlatabad and where Aurungzeb is interred.

Those of Elephanta are entirely brahmanical, though perhaps of the same age as those of Ellora. The caves of Elephanta overlook the harbour of Bombay. They are cut in a harder rock than those at Ellora. These caves are in the island of Gharipuri, called by Europeans Elephanta, an island in Bombay harbour. Among the hundreds of figures, there sculptured, every principal deity is found. Buddha is, evidently, from his size and situation, a principal personage there; Mahabalipuram or Seven Pagodas between Covelong and Sadras, south of Madras, have been described by Dr. Babington in Vol. II. Trans. R. A. S. p. 258; and by Messrs. Chambers and Goldingham in A. R. Vol. I. p. 145 and V. p. 69 and by Mr. Charles Gubbins in Bengal *As. Soc. Journal.*

The Mahabalipore caves are entirely brahmanical and have been excavated after all the other series were formed.—*(Fergusson's Rock cut temples of India.)*

The inscriptions on the pillars at Delhi and Allahabad, and on the Tirhut pillars at Mathya and Radhiya, have long ago been deciphered and translated by the remarkable ingenuity of the late James Prinsep. The inscriptions on the rocks at Junagiri in Gujrat, and at Dhauli in Kuttack, were also interpreted by him. A supposed third version of the rock inscriptions (but in the Ariano-Pali character), which was found at Kapurdigiri, near Peshawur, has been carefully collated with the others by Professor Wilson. Many short inscriptions from Gaya, Sanchi, and Birat, as well as from the Cave temples of Southern India, have also been published at different times, but, with the single exception of the edicts in the Rock Inscriptions, which contain the names of Antiochus, Ptolemy, Antigonus, and Magas, the inscriptions in the able work of Major Cunningham are of greater interest, and of much higher importance, than all that had before been published. The numerous Topes which still exist in India are chiefly confined to a few localities. The Topes of Kabul and Jellalabad were opened by Messrs. Honigberger and Masson in 1835, and those between the Indus and the Jhelum by Generals Ventura and Court in 1833 and 1834. The Topes near Benares were opened by Major Cunningham in 1835, and those at Sanchi and other places around Bhilsa, were also opened by him and Lieut. Maisey in January and February of 1857. The Topes of Tirhut and Bahar still remain to be examined. Of the Bhilsa Topes none have yet been described excepting the largest of the Sanchi group near Bhilsa. An accurate plan and section of this building, with a short account of the various subjects represented in the sculptured bas-reliefs of the gateways, was published by Captain J. D. Cunningham, in the Journal of the Asiatic Society of Bengal. In the Topes dedicated to the celestial Buddha, the invisible being who pervaded all space, no deposit was made, but the Divine Spirit, who is "Light," was supposed to occupy the interior, and was typified on the outside by a pair of eyes, placed on each of the four sides either of the base, or of the crown of the edifice. Such is the great Chaitya or Tope near Kathmandu, in Nepal, dedicated to Swayambhunath the "Self-existent" in which the eyes are placed on the upper portion of the building. A specimen of the regular Chaitya is represented in the 3rd compartment (inner face) of the left-hand pillar of the eastern gate at Sanchi, in which the two eyes are placed one above the other. Such also are the numerous Chhod-ten in Tibet, which are dedicated to the celestial Buddha, in contradistinction to the Dung-tens, which are built in honor of the mortal Buddhas, and which ought to contain some portion of their relics either real or supposed. The first, Chod ten, means simply an "offering" to the Deity, the latter, Dung-ten, is emphatically a "bone," or relic-receptacle. The same distinction is preserved in the Sanskrit terms, Chaitya and Dhatugarbha or Dhagoba. The former is properly a religious edifice, dedicated to Adi-Buddha, while the latter is only a "relic-shrine," or repository of ashes. The word Chaitya, however, means any sacred object—as a tree, an altar, a temple—as well as any monument raised on the site of a funeral pile, as a mound or a pillar. Chaitya may, therefore, perhaps, be only a general term for both kinds of mound; while Dhatugarbha or Dhagoba is particularly restricted to the "relic" shrine. The word Tope is derived from Afghanistan, where it is used to designate all the solid mounds of masonry which were opened by Messrs. Honigberger and Masson. The same term also is applied to the massive tower of Manikyala in the Punjab, as well as to all the smaller towers in its neighbourhood. There can be no doubt therefore that the term Tope is the same as the Pali "Sthupo," and the Sanskrit "Stupa," a "mound" or "tumulus," both of which terms are of constant use in the Buddhist books. Stupa, or Tope, is therefore a name common to each kind of tumulus; whether it be the solid temple dedicated to the Supreme Being, or the massive mound erected over the relics of Sakya, or of one of his more eminent followers. From several passages in the Pali buddhistical annals, it would appear that Topes were in existence prior to Sakya's advent, and that they were objects of much reverence to the people. Sakya himself especially inculcated the maintenance of these ancient Chaityas, and the continuance of the accustomed offerings and worship. In the sixth of his precepts, to the people of Vaisali, he enjoins them to maintain, respect, reverence, and make offerings to the Chaityas; and to keep up the ancient offerings without diminution. But this was, doubtless, only a politic accommodation of his own doctrines to the existing belief of the people, adopted for the purpose of ensuring a more ready assent to his own views. Like as Mahomed recognised the prophetic missions of Moses and Elias, and the divinity of our Saviour Christ, so did Sakya Muni acknowledge the holy munis Karkutsanda, or Krakuchanda, Kanaka, and Kasyapa, as his immediate predecessors. They were probably, heroes or saints, who had obtained the respect of their fellow-countrymen during life, and their reverence after death. Stupas had been erected over the relics in the neighbourhood of Kapila and of Benares, and their worship was too firmly established to be attacked with any chance of success. Sakya therefore carefully engrafted them on his own system as the buddhas of a former age. It appears also that stupas had been erected over supreme monarchs prior to Sakya's advent, for Sakya particularly informs his disciple Ananda that, over the remains of a chakravarti raja, they build the sthupo at a spot where four principal roads meet." It is clear, therefore, that the Tope, or "tumulus," was the common form of tombs at that period. In fact, the Tope, as its name implies, is nothing more than a regularly-built cairn or pile of stones, which was undoubtedly the oldest form of funeral memento. The Topes were, therefore, of three distinct kinds: 1st, the Dedicatory, which were consecrated to the Supreme Buddha; 2nd, the strictly Funereal, which contained the ashes of the dead; and 3rd, the Memorial, which were built upon celebrated spots. Of the Dedicatory Topes, as it is improbable that any deposit would have been placed in them, we may plausibly conclude that the larger Topes, such as those of Sanchi, Satdhara, and Bhojpur, were consecrated to the Supreme Invisible Adi-Buddha. Of the Memorial Topes, little is at present known. It seems nearly certain, however, that the great Manikyala Tope was of this kind, for the inscription extracted from it, which begins with Gomangasa, "of the abandoned body," undoubtedly refers to Sakya's abandonment of his body to a hungry lion. This tope, therefore, dates earlier than the period of Fa Hian's Indian pilgrimage in A. D. 400. The Funeral Topes were of course the most numerous, as they were built of all sizes and kinds of material, according to the rank of the deceased and the means of his fraternity. At Bhojpur, the Topes occupy four distinct stages or platforms of the hill. The largest Topes, six in number, occupy the uppermost stage, and were, it is believed, dedicated to Buddha; that is, either to the celestial Buddha, Adinath, or to the relics of the mortal Buddha, Sakya. This view is borne out by the fact that the largest Tope contained no deposit, and that the second and third sized Topes yielded crystal boxes, one of which, shaped like a Tope, contained only a minute portion of human bone smallar than a pea.—*Cunningham, Bhilsa Topes; Fergusson, Rock-cut Temples, Masson.*

BUDDHIST TRIAD, consists of Buddha, Dharma and Sangha.

BUDDHIST WHEEL, is a prominent object in the buddhist sculptures of India. It is supposed to be as an emblem of the perpetual succession and eternity of matter; and it served likewise another purpose in the corruptions of buddhism. *Prayers* were pasted on it by the priests, who then put the wheel into rapid revolution. Each turn had the efficacy of an oral repetition; and the faster it revolved the more rapidly was the devotee approaching the ultimate bliss of Nirwana.—*Tennent's Christianity in Ceylon, p.* 244.

BUDHA, HIND. Old.

BUDHA GANGA, the old bed of the Ganges, from which the stream has shifted. It is traceable below Hastinapoor and also below Soron and Kumpil. The change of bed seems to have occurred since the time of Akbar.—*Elliot.*

BUDHIL RIVER. A tributary of the Ravi, rises in the Lahul range, issues in part from a lake at Mani-Mahes, a mountain much frequented by hindu pilgrims. At the junction, the stream is about half the volume of the Ravi.—*Cleghorn Punjab Report, p.* 110.

BUDDLEA LINDLEYANA. Syn of Edgworthia chrysantha.

BUDDLEGUNGE, in L. 89° 8′ E. and L. 25° 41′ N.

BUDLLEIA CRISPA.

Cheta buta.........	HIND.	Dhuru.........	OF CHAMBA.
Speravana	PASHTU.	Chitta buti	HIND.

A plant of the Panjab.

BUDGEROW. A boat in use on the Ganges. See Bajra. Boat.

BUDGEROW or Baggala; The latter name is an Arabic word, the feminine of "băghl" a mule. The Baggala is engaged in the trade of Cutch, Guzerat and the Malabar coast, to the gulph of Persia, the coast of Arabia and the Red Sea. They are Indian vessels and manned with Indian seamen called lascars. It is one of the most ancient vessels to be met with in the Indian seas. Their extreme length, from stern to taffrail, is about seventy-four feet, the breadth about twenty-five feet, and the depth in hold eleven feet six inches, with about one hundred and fifty tons burthen. The peculiarity of form and extraordinary equipment of these vessels is said to have been the same from the period of Alexander the Great: they are armed with two guns on the after part or right-aft of the stern for defence against pirates; and have their poop decks with a round stern: their extreme sections about the centre or middle of the vessel: they are very broad in proportion to their length, with a sharp rising floor: the stern is straight, and rakes very little more than the stern post. These vessels are constructed with timbers and planks, which are nail and trenail fastened, in the most rude and unsafe manner possible. The topside above the deck is barricaded with mats on the outside of the timbers, which run up to about eight feet from the deck; and when they have no cargo on board, this barricade is removed.

They have only one mast; with a huge yard made from two spars, the small ends lashed together, and a latteen sail, the tack of which goes to the sternhead, they generally trade like the Doms; and are navigated by Arabs and the people of Cutch.

This singular and rude vessel, as well as the Arab Dow, is peculiarly adapted to the coasts of Arabia and the Red Sea, which are subject to periodical winds during which these vessels are navigated with much ease.

The Sambuk is a small coasting vessel from fifteen to fifty tons burthen, trading in the Red Sea.

BUDHWAR, Wednesday, sacred to Budha, and named after him. Amongst hindoos it is a day propitious to any new undertaking.

BUDI, HIND. Amongst hindus, the period of the month from full to new moon, called the dark half of the month.—*Elliot.*

BUDI-BUDAKI, CAN. A class of religious mendicants in Mysore.

BUDIDE, TEL. Ashes.

BUDIDE CHATTA, also, Hamsapadi, TEL. Heliotropium Coromandelianum.—*Retz.*

BUDIDE GUMMADI, TEL. Benincasa cerifera, *Savi.*—Cucurbita Pepo.—*R. iii.* 718.—Budide means "ashes", referring to the white powder covering the fruit.

BUDII of Herodotus were Hebrews and first receivers and teachers of Buddhism.

BUDIL, HIND. Picea Webbiana also, P pindrow, the Silver fir.

BUDKHES, HIND. Cordalis govaniana.

BUDLEYOON, GREEK. The mooql of the Arabians, and Googal of India, names of Bdellium, also of the Commiphora madagascarensis tree.

BUDRANJA BOYA. A species of Melissa, a small plant found about Ajmeer, where it is considered heating, and is used to cleanse the blood: one seer sells for two Rupees.—*Gen. Med. Top, p.* 130.

BUDDRINATH. A celebrated temple within the Himalaya, 10,294 feet above the sea: Kedarnath is 11,753 feet. See Badrinath.

BUDRUNGU, BENG. Fagara budrunga; Tooth-ache tree.

BUDSHUR, HIND. Ephedra Gerardiana.

BUDU, HIND. Viscum attenuatum.

BUDUKHSHAN. See Badakhshan, Kush or Cush.

BUDUMURU, TEL. Sponia orientalis.—*Planch.*

BUDUREE, BENG. Zizyphus jujuba.

BUDYTES, a genus of birds, of the Family Motacillidæ and order III. Insessores or Perchers. B. beema vel neglecta; B. flava; B. melanocephala and B. viridis are known in India. See Birds.

BUENA HEXANDRA. China Bark.

BUFF, ENG.

Peau passées en buffles	FR.	Buffelhaute … …	GER.
Peau de buffle… ……	„	Bufalo Cuojo di	
Buffle … … …………	„	Bufalo… … ……	IT.
Büffel……… …… …	GER.		

A kind of leather prepared from the skins of thick hided animals, buffaloes, oxen and the deer tribe—*McCulloch, Faulkner.*

BUFFALO, the Bos bubalus of naturalists, is found wild in Ceylon, on the continent of India, and through the eastern Archipelago. Some naturalists are inclined to the opinion that there are two species. They are large ungainly looking animals with great horns, but a domesticated breed, to the west of Nirmul are of enormous size, almost like small elephants, and give a great quantity of milk. They are kept as milch kine, but are also employed as beasts of burthen, to carry sacks on their backs, to plough with, to drag carts. They have little or no hair, and their hides look like polished leather. They require to be in a moist climate or to be immersed in water daily. They love to wallow in water or slimy mud, and as they have little or no hair, often roll themselves in mud to get a coating of it. A large male bufalo is more than a match for a tiger.

In the Hambangtotte country, in Ceylon, the villagers are much annoyed by the wild ones, that mingle with the tame when sent out to the woods to pasture, and it constantly happens that a savage stranger, placing himself at the head of the tame herd, resists the attempts of the owners to drive them homewards at sunset. Being an animal to which water birds are accustomed, the Singhalese train the buffalo to the sport, and, concealed behind, the animal browsing listlessly along, they guide it by ropes attached to its horns and thus creep undiscovered within shot of the flock. In the northern parts of India, they are similarly trained to assist the sportsman in approaching deer. One of these "sporting buffaloes" sells for a considerable sum. Between 1851 and 1855, Liverpool imported from India, annually, about 30,000 of its hides and 600 tons of horns.—*Bickmore Travels. Stat. of Commerce. Tennents' Sketches of the Natural History of Ceylon, p.* 55. See Bos; Bubalus; Mammalia.

BUFFALO THORN, ENG. Acacia latronum.—*Willd. D. C. W. & A.*

BUFFEL, GER. Buff.

BUFFLE, FR. Buff.

BUFF LEATHER. See Hides.

BUFO. See Bufonia.

BUFONIA, a Section of the 2nd Sub-Class of Reptiles, Batrachia, and Order B. salientia.

The section Bufonia, includes the families Rhinodermatidæ and Bufonidæ, as under :

Section Bufonia.
    Fam. Rhinodermatidæ.
Gen. *Diplopelma*, viz.
D. Ornatum *D. et Bib.* of Goalpara.
D. pulchrum *Gunth.* of Arakan.
Gen. Engystoma, viz,
E. Berdmorei, *Blyth* of Pegu.
E. interlineatum, *Blyth* of Pegu,
    Fam Bufonidæ.
Gen Bufo, viz.
B. melanostictus *Schn* of Ceylon and Mergui.
B. Kelaarti, *Gunth.* of Arakan.
B. asper, *Schl.* of Mergui.
Gen Scutiger, viz
S. Sikkimensis, *Blyth* of Sikkim.

Dr. Hooker mentions that the Bufo scabra, the common Bengal and Java toad, abounded in the marshes, in the Lachen valley, adjoining Thibet. This is a remarkable instance of wide geographical distribution for a batrachian, which is common at the level of the sea under the tropics.—*Hooker Him. Jour., Vol. II. page* 96.

BUFO MELANOSTICTUS. Syn of Engystoma interlineatum.

BUGGY. In Southern India, a light conveyance, drawn by one horse, with a hood, resembling a gig.

BUGHRA, Pers. Macaroni.

BUGIO. In Japan, a Civil Officer, of the rank of two swords, who exercises controlling powers over Collectors, interpreters and other inferior officers. See Japan.

BUGHTI. See Bugti.

BUGIS. A bold, self-reliant, maritime, people of Celebes, of which they occupy the northern part, and they are known, in consequence, as the men of Macassar. The Bugis, originally from the same stock as the Malay, are superior to all other natives of the Archipelago, in their spirit of adventure. They are a brave, active, haughty, fierce, and vigorous race. They love justice, and are faithful to their bonds, but seldom forgive injuries. Under the name of Macassars they form the flower of the colonial troops in the Dutch service; they are bold hunters, and mounted on their brisk little horses, drive the deer through the woods, and capture it with a lasso. The Alfoera described in old accounts as a tall, comely race, of brown colour, much given to piracy, form perhaps the most amiable, if not the most civilised part of the population of Celebes. They possess all the courage, and few of the vices prevailing among the Bugis and Malays. They are however boastful and bullies. The Bugis have been the greatest colonists as well as the principal traders of the Archipelago. The ingenuity of the savage and the amenity of the civilised man, appear united in them. They have received the Koran, but not abjured the practices of their ancient faith —the dark old idolatory once universal in the Archipelago. Stones and trees, painted red, still share their devotions with the invisible god of Islam. Women are treated honorably among them—a distinction in their manners not yet effaced by the mahommedan social law. They determine many disputes by single combat but never avenge themselves by personal assassination. The Sulu race on the contrary, have no idea of putting themselves on a footing with their antagonist but always attack him in the dark, or offguard. Both the Malayan and Bugis nations are maritime and commercial, devoted to speculations of gain, animated by a spirit of adventure, and accustomed to distant and hazardous enterprizes; while the Javans, on the contrary, are an agricultural race, attached to the soil, of quiet habits and contented dispositions, almost entirely unacquainted with navigation and foreign trade, and little inclined to engage in either. This difference of character may perhaps be accounted for, by the great superiority of the soil of Java to that of the other two islands.

Amongst the Bugis traders to the east Kilwara is their metropolis. It is a mere sand bank, lying between Ceram Laut and Kissa and offers good anchorage in both monsoons. Horses are bought at Gorontoto in Celebes.

The natural wealth of Celebes is diversified and abundant. Besides timber trees, palms of various species, ebony, odoriferous sandal, dyewoods, areca, banyan, and bamboos, often forty feet high and three in diameter, are found. —*Bikmore*, 379. *Wallace, Vol. II. p.* 6364. *John's Indian Archipelago, Vol. I. p.* 353. *Raffles, History of Java, Vol. I. p.* 57. "*Memoirs I. p.* 67,263,264. *Journal of the Indian Archipelago, No. IV, September* 1849, *p.* 558. *Temminck, Coup d' Œil sur les Possessions Neerlandaises, III*, 85,86,87. *John's Indian Archipelago, Vol. I. p.* 352. *Pritchard's Physical Hist. Mankind, I.* 452. (4, *Brooke, Journals Borneo and Celebes. Mundy I.* 43.) *Hogendorp, Coup d' Œil sur Java.) Brooke, Journal, Borneo and Celebes. Mundy, I.* 82.) *but* Heylyn, *Cosmography*, 919.

BUGLAR TREE, of Chota Nagpore. Its bark, powdered, is used for uniting wood, as a substitute for glue.

BUGLI, Hind. Spiræa Lindleyana.

BUGLAS ISLAND, from Lat. 9° 4' to 9° 50' N. one of the Philippine Islands, the central group of which consists of the islands Pahang, Buglas, Leyte, Samar, Masbate, Bohal, and Zebu. Buglas contains a considerable number of the Negrito race, scattered troops of them occupying almost exclusively the crest of the mountain range which extends throughout the length of the island, a distance of one hundred and twenty miles; from them this island is also called Negros. It is supposed that some of the same race occupy part of Pahang. They are described as polytheists, but are without temple or ritual, though they invoke a deity named Kamburan and have a god of the harvest, of the fisherman and hunter, and worship the spirits of ancestors. They have a grotesque figure of a god, a remnant of fetichism. They worship the moon and stars and adore the rainbow after a storm.

BUGOODYAR. A river near Rilkote in Almorah.

BUGRA. A town near Hindola in Bhopal.

BUGRA, Hind. Gynandropsis pentaphylla.

BUGRI, Hind. Cleome ruta.

BUGS belong to the family Hemiptera, several genera of which occur in India. Amongst others, are Cantuo ocellatus, Leptoscelis marginalis, Callidea Stockerius, &c., &c. Of the aquatic species, the gigantic Belostoma Indicum attains a size of nearly three inches. Some of them are most attractive in color; a green one is often seen on leaves. They are quite inoffensive, if unmolested, but if irritated exhale an offensive odour.—*Tennent's Ceylon.*

BUGS, insects known as coffee bugs have, in recent years, attracted much attention from the anxiety and losses they have occasioned to the coffee planting interests, and from which planters are subjected to great losses, against which seemingly at present they have no means of protecting themselves. We allude here to the ravages of various animals, the most destructive of which are the several Coffee bugs, and Mr. Nietner of Ceylon recently examined which. He tells us that coffee was brought to Ceylon by the Dutch about 200 years ago, and the first regularly worked estate was opened in 1825, but the bug does not seem to have appeared in large quantities till 1845, when, however, it began to spread with such rapidity that in 1847, a very general alarm was taken by the planters, about the same time that the potato, wine and olive diseases began to create alarm in Europe. The Coffee bug seems however to be indigenous in Ceylon, for the white bug has been found in orange, guava and other trees as also on beet root and other vegetables, and the brown bug attacks the guava, hibiscus, Ixora, Justicia and orange trees, indeed every plant and tree and even the weeds on a Coffee estate, particularly such as are in gardens.

When a coffee tree is attacked by the bug, it is deprived of its sap and its nourishment, whilst the fungus which never fails to attend on the bug prevents restoration by closing the stomates through which the tree breathes and respires. Bug, he tells us, exists on the estates to an incalculable extent,—none are believed by Mr. Nietner to be quite free from it. Whole estates are seen black with bugs, *i. e.* with the fungus: and, he asks, "am I wrong in saying that if there was no bug in Ceylon, it would at a rough guess produce 50,000 cwts. of coffee more than it actually does." The value of this quantity on the spot being about £125,000, this sum represents the aggregate of the annual loss by bug sustained by the Ceylon planters.

Mr. Nietner's observations have been more particularly confined to the group of districts around Peacock hill, but his list of the enemies of the Coffee tree holds good in general for the entire Coffee region of Ceylon. He tells us, however, that the brown and white bug and the black and white grub, are the only universal and important enemies of the Coffee tree, and that the destruction caused by *Arhines*, *Limacodes*, Zenzera, Phycidea, Strachia and the Coffee rat, appear to be of a more local and occasional nature and are therefore of less importance. There are three pests which are chief the white bug, the brown bug and the black bug.

The appearance and disappearance of the Coffee bug he tells us is most capricious. It comes and goes—now rapidly spreading over a whole estate, now confining itself to a single tree amongst thousands;—here, leaving an estate in the course of a twelve-month, there, remaining permanently. Sometimes spreading over a whole estate, sometimes attacking a single field, then leaving it for another and another. But the white bug prefers dry, and the brown damp, localities, the latter being found more plentiful in close ravines and amongst heavy rotting timbers than on open hill sides, and it is probably to this predilection, that the shifting of the insect is attributable. The bug, of course, seeks out the softest and most sheltered parts of the tree,—the young shoots, the undersides of the leaves and the clusters of berries.

The injury done by the white bug seems more severe than that from the brown, but not being so plentiful as the latter, it is of less general importance The white bug is especially fond of congregating amongst the clusters of berries, which drop off from the injury they receive, and trees often lose their entire crop in this manner. The injury produced by the brown bug is the weakening of the tree and is thus more general, but the crop does not drop off altogether nor so suddenly. With white bugs on an estate the crop can hardly be estimated; with brown bugs it can.

The White or Mealy Bug, is the Pseudococcus adonidum. The male insect is of a dirty brownish color and slightly hairy. It is very minute (very much smaller than the females; only about half a line long) and resembles certain small Ephemeridæ or May flies. The female is oval, brownish-purple, covered with a white mealy powder which forms a stiff fringe at the margin and at the extremity of the abdomen two setæ. The larvæ and pupæ are active and move about. The insects in all stages of development, are found in Ceylon, all the year round, chiefly in dry and hot localities, on the branches of trees and on the roots to one foot under ground. Mr. Nietner says it is identical with the species naturalized in the Conservatories of Europe. It is preyed upon by the "Scymnus rotundatus, a minute beetle of the Lady bird tribe, of the size of pin's head, black and pubescent. Also, thee yellow colored and common Encyrtus Neitneri and the black colored scarce Chartococcus musciformis, two minute Hymenoptera (wasps), only ½‴ long and the minute whitish mite Acarus translucens. Of the members of this family of insects, the Coccidæ, some, as the cochineal and lac-insects, are of great economical importance; but others as the sugar-cane blight of the Mauritius, the Aspidiotus, and the Coffee bug, are excessively baneful to the gardener and agriculturist.

The male of the brown or scaly bug, Lecanium coffeæ, is of a clear light pinkish brown colour, slightly hairy and very pretty. It is more delicate than the male Pseudococcus. The females when young are yellowish, marked with grey or light brown; and old individuals are light brown with a dark margin. It affects cold, damp, and close localities 3,000 feet in height and the propagation as in the white bug is continuous. The brown bug is much infected with parasites, amongst which the most common are eight minute Hymenoptera (wasps) with brilliant colours, but a mite, the Acarus translucens, and the larva of the Chilocorus circumdatus, a kind of Lady bird, also feed on the bug. In the larva state, the male and female brown bug are not distinguishable. The number of eggs produced by a female brown bug, is about 700. Those of the white bug are not so numerous: but their propagation in Ceylon is continuous, throughout the year, and this explains their great abundance compared with cold countries where the produce is one generation of young annually. The brown bug, particularly the full grown female, is dreadfully infested with parasites, which thus greatly help the planter. Indeed, it is a question whether coffee planting could be carried on without their aid in the destruction of the bug.

The black bug, is Lecanium nigrum, but the female only is known. In color it is from yellowish grey to deep brown and almost black in age, and of a shield-like shape. It occurs alone but also intermixed with the brown bug— but it is much less abundant and therefore not demanding the planter's attention. Its occupation of a coffee or any other tree, gives rise to the appearance of a glutinous saccharine substance which has received the name of Honey-dew. This is either a secretion of the bug or the extravasated sap which flows from the wounded tree or probably a combination of both. A fungus or two fungi, the Syncladium Nietneri and Triposporium Gardneri seem to depend on this for vegetation as the Honey-dew and the fungus disappear with the bug.

Another bug, the Strachia geometrica, of a yellowish colour, but marked with grey and orange on the upper side, was found at Badulla. It feeds upon the juice of the young berries, three per cent. or more of which were said to have suffered from it. It is allied to the green or fœtid bug, but though it may occasionally cause destruction, there is no fear of it ever becoming a serious nuisance.

One of the Aphidæ, *Aphis coffeæ*, the Coffee louse, is found in small communities on the young shoots and on the underside of the leaves of the coconnut tree, but the injuries it occasions are insignificant.

Several caterpillars, the *Aloa lactinea*, the *Orgyia Ceylanica*, *Euproctis virguncula*, the *Trichia exigua*, *Narosa conspersa*, the *Limacodes graciosa* and a species of *Drepana* are found on the coffee trees, but they do not cause much injury. Another caterpillar, however, though fortunately not abundant, the *Zeuzera coffeæ*, destroys many trees, both young and old by eating out the heart. It resembles the caterpillar of the goatmoth of England and is as thick as a goose quill. It generally enters the tree 6″ or 12″ from the ground, ascending upwards. The sickly drooping of the tree marks its presence.

Black grub. The larva of the moth called *Agrostis segetum*, is the very destructive "black grub." This pest is about an inch long and is most abundant from August to October. The caterpillar lives in the ground but comes out at night to feed, and is very common and injurious. They attack not only Coffee trees, but all sorts of vegetables and flowers and are very destructive to gardens and in the field, as they eat every thing that is artificially raised, despising grass and weeds. They generally appear only on certain fields and will not go over an estate. The insect is not confined to Ceylon; its ravages are well known in India, at the Cape of Good Hope, and in Europe, where it injures the grain and beet root crops. In Ceylon it only attacks young Coffee trees, gnawing off the bark round the stem just above the ground Where the trees are very small, they are bitten right off and the tops sometimes partially dragged under the ground.

where the grubs may easily be discovered and dislodged. The damage which they inflict on plantations may be estimated when it is mentioned that Mr. Nietner lost through them in one season, in certain fields, as many as twenty five per cent. of the young trees he had put down.

The larva of a little moth, the Galleriomorpha lichenoides, and three caterpillars of the Boarmia leucostigmaria, B. Ceylanica and Empithecia coffearia, are found on coffee trees and other plants, from September to December.

The larva of the Gracillaria coffeifoliella mines the coffee leaves, it is very common but of no importance to the planter.

The ravages of the large, well known, beautiful locust, the Phymatea punctata, with its scarlet abdomen and yellow and bronze above, are not continuous in the coffee tree, but are occasionally very annoying. A swarm settled on a field of one year old coffee and gnawed the bark off the stems, causing them to throw out many shoots and permanently disfigured five per cent. of the trees. They do not touch the Illuk grass, Saccharum Konigii, *Retz.* but seem only to attack cultivated plants and trees. At Tangalle they destroyed tobacco plantations, and at Matillee in Kandy the native grain crops were injured by these locusts. The larvæ and pupæ are as destructive as the perfect insects, but this seems, fortunately, the only species of locust that does any real injury in Ceylon, and this injury is in importance not to be compared with that done by other species in other countries.

White grub.—Under this name are included the larvæ of various Melolonthidæ, the Cockchafers of Ceylon, which do much harm to coffee plantations, young and old, by eating the roots of the trees. Mr. J. L. Gordon of Rambodde considers the white grub to be by far the greatest enemy of the coffee trees which the planter has to contend with, as he never knew a single tree recover after their attack and he adds that they had destroyed, at Rambodde, in two years, between eight and ten thousand fine old coffee trees. Mr. Gordon used to dig up the soil at the foot of the trees and take out such grubs as he could find.

Weevils.—The family of the weevils is one of the most extensive amongst the beetles and in Ceylon, as in Europe, many of its members, do much injury to agricultural produce. Mr. Nietner had seen nearly the whole sweet potato (Batatas edulis) crop of the Negombo district destroyed by one of them, the Cylas sturcipennis. The common rice weevil *Sitophilus oryzæ*, is another instance, and one of the cocoanut tree destroyers of the Ceylon low country, the Sphænophorus planipennis belongs also to this family. The Arhines? destructor, a beautiful green weevil, Mr. Nietner had not found do any injury to coffee trees, but Mr. J. Rose of Matturattee writing to him says the mischief they do is plentiful and if they were as plentiful as the bug they would be the planters worst enemies. "Five or six acres were completely covered with them and they consumed almost every leaf. Year after year they appeared upon the same place. One year they appeared upon a neighbouring estate in great force and ran over at least forty acres. The same thing occurred on three other estates."

The Acarus coffeæ or coffee mite, is so small as to be hardly perceptible to the naked eye. It is closely allied to the "red-spider" of the hot houses of Europe. Nearly all the year round, but chiefly from November to April, it feeds on the upper side of the coffee leaves giving them a brownish sun burnt appearance. Individual trees suffer from its attacks, but the aggregate damage from it is not great.

The Coffee Rat of Ceylon, the Golunda Elliotti, occasionally commits much damage, seemingly to get the bark, for they do not seem to eat the berries. With their long sharp incisors they bite off with great smoothness the smaller and younger branches generally an inch from the stem, and should the plants be quite young, just taken from the nursery, they bite them right off a few inches from the ground, and carry them to their nests in hollow trees. They appear irregularly, at intervals, from the jungles and there is hardly an estate that does not now and then receive a visit from them. The Natives of Ceylon say that their food in the jungles is a species of Strobilanthus, called Nilu in Singalese, and that the rats only issue from their forest residence and attack the coffee estates when their forest food fails.

The injuries from other animals are not serious. A squirrel, the Sciurus Layardi, which eats the coffee berries, is common on estates, the pulp alone is digestible, and the coffee beans are dropped on logs of wood and on the ground. Jackals and monkeys occasionally do the same: this is called parchment coffee. A deer will now and then come from the forest and nibble the tops of the young trees.

Mantis tricolor, *Neitner,* the Mantis of the coffee tree, is green, lower wings reddish, with large blackish spot at the posterior margin. The female is 1 inch long with 1⅜ inch of an expanse of wings. The male is considerably smaller. The eggs are deposited upon coffee leaves, in cocoon like masses, of ⅝ of an inch in length but drawn out further at each end. As to the remedies to all these plagues, Mr. Nietner tells us that several means of checking the extension of the bug have been proposed and tried. Amongst these, the introduction of the red ant: but their bites are so fierce and painful that the coolies refused to go amongst the trees while the ants were there. Rubbing off the bug by hand has been tried, but it can only be attempted upon young trees without crop, and Mr. Nietner, although allowing that an immense quantity of bug is thus destroyed, is nevertheless of opinion that the effect is but trifling. He thinks that the application of tar to the roots is a good suggestion, although he is obliged to admit that hitherto no important results have been achieved by it. He adds that high cultivation seems to have the effect of throwing it off. But as the bug seems to depend on locality, Mr. Nietner does not look for any beneficial result, so long as the physical aspect is unchanged. He thinks that if the open, warm airy pattenas were cultivated, which the experiments on a large scale, tried at Passelawa, show that they can be, the brown bug, which is the great destroyer, would not find the conditions favorable to its existence or, perhaps, if estates as a rule were made smaller than they generally are, if the reduction in acreage were counterbalanced by a higher system of cultivation, universally carried out, the bug would not be so numerous as it now is. (*Mr. Nietner.*) In the peninsula of India, Borer is a name given to the larva of certain coleopterous beetles, which injure coffee trees. There are two, the white and red borer and the chief of these is the Xylotrechus quadripes of Chevrolat. The large and rapid introduction of coffee growing into Ceylon and India has shown that the plant is liable to be attacked by many enemies and ignorance of that has been the cause of much loss. Coffee trees in Coorg, have also been injured by the rot, a disease resulting from improper pruning. The rot attacks and decays the centre of the stem. In Coorg when the tree is attacked by the borer the leaves become yellow and droop. The insects are generally about the diameter of a small quill, are always confined to the wood and never enter the bark until the larva has done its work, passed through the pupa stage and is about to escape in the form of a beetle. The eggs are deposited by the females near the root of the tree and the pupa borers tunnel up the heart of the plant.—*Nietner on Dr. Bidie on Coffee Planting.* See Coffee.

BUGSURIA. A rajput clan in Muradabad.

BUGTEA, Hind. A bindoo devotee.

BUGTI. A wild Baluch tribe on the western bank of the Indus near Shikarpore in the hills east of Lehrat. They are one of the great Rhind tribes, the number of whose branches are forty-four. Though reckoned Balooch they are not of the Brahui stock, and their traditions allege that they imigrated ages ago from Demascus and Aleppo. Their language is the Jetki, in common with that of the other inhabitants of Cutch Gandava and mard-i-Rhind, means a brave man. The Rhind of Cutch Gandava are of the Utanzye divisions. The other Rhind tribes reside as under,

Utanzye, at Suran.
Dumbki, „ Lehri.
Jakrani, „ „
Doda Marri, Kahan.
Mandarari, at Rodbar.
Bugti, hills east of Lehrat.
Sing-Saloh and Terikiat.
Homorari, at Tambu.
Push, „ Johan.
Jamali, „ Rojan.
Kallui, „ Lup.
Kuchik, „ Kirta.
Pugh, „ Kajuri.

Of these Rhind tribes, the Dumbki, Jakrani, Bugti and Doda Murri, have always been distinguished by their rebellious and predatory habits. The Marri tribe is considerable and inhabit the eastern portion of Kutch Gundava, and a peaceful and obedient portion of the tribe are in the hills west of the province below Jell. A large portion are at Adam-Marri, on the S. E. Frontier of Sindh. The Marri of Kutch Gandava are notorious for their lawless habits. They and the Maghazzi seem to have emigrated from Mekran to Kutch Gandava, at different periods and to have become incorporated with the Jut cultivators. The Magazzi are probably of the same race as the Rhind, though the two are deadly enemies. See Kelat.

BUI—? Seemingly from Bhoom, Hind, and Boom, Persian, land, uncultivated land, or the earth or ground.

BUI, in northern India, is (1) the Crotalaria Burhia; (2) Agathotes, *Sp.*, (3) Francœuria crispa; (4) Ballota limbata; (5) Plectranthus rugosus; (6) Ærua bovii; (7) Panderia pilosa.

BUI-CHOTI, Hind. (1) Anabasis multiflora, also (2) Panderia pilosa which, however, as also (3) Ærua bovii are also called Bui-kalan.

BUI-MUNG, Hind. and Bui-Singh, Hind. Arachis hypogea, Linn. Ground nut.

BUI MADARAN, Hind. Achillea millifolium, Artemisia Indica.

BUHADUR, Hind. Pers. In India, a mahomedan title, as Sir Salar Jung Bahadur, G. C. S. I. it is the second titular honor coming after Jung.

BUHADOOR-KHEYL, A town in the district of Kohat, which has salt mines near it.

BUHI, Hind. A day-book a ledger, a register.

BUHI-KHATA, Hind. A merchant's day book.—Buhi-putwari, a village accountant's register.

BUHIRA, Beng. Terminalia rubrica.

BUHOOARI, Beng. Cordia myxa; C. latifolia.

BUHOW. A tribe lying south of Kashmir, they are little re-claimed from barbarism, either by hindu or mahomedan conquerors.

BUHRSTONE, A quartzose rock containing cellules, used for grinding wheat.

BUHRUPIA, Hind. Lit Many faced from Bhao, many; rupa, countenance; they are mimics and singers in northern India, many are mahomedans.

BUHU, Hind. A bride; Bridal fees given to a zemindar by a ryot on the marriage of the ryot's daughter.

BUHURA, Beng. Terminalia Moluccana.

BUILDING STONES. In the south of India, and in the peninsula of India generally, nearly all the most ancient buildings remaining, are built of stone, while the edifices of the past five hundred years, comprising some of the most stupendous piles, are of brick. The great religious institutions of Sri Sailam in Cuddapah, at Conjeveram, Chellambram, Srirangam, the temples at Tanjore, Gangondaram and Tribhuwanam, the ruins at Bijanagar, Bijapore, Gogi, and Gulburgah, the pagoda at Leepichi in the Bellary and that at Tarpatri in the Cuddapah district, are monuments of ancient hindoo and mahomedan art. Those connected with architecture, sculpture and painting, called into being by the exigencies of religion, always the best stimulus to works of design, have suffered more from sectarian zeal than the ravages of time, but they are widely scattered over the length and breadth of the land. Sculptured stones, fortifications, temples and works of irrigation, are found in every direction, and not only impart a knowledge of the state of science and civilization at various periods, but throw a valuable light on this and other subjects of inquiry.

At a period geologically recent the present peninsula of India was a triangular island bounded on each side by the eastern and western ghats, converging to Cape Comorin, while the base of the triangle was formed by the Vyndhya mountain range from which an irregular spur, forming the Aravalli mountains, extends northwards, while between the northern shore of this island and a hilly-country which is now the Himalaya mountains, ran a narrow ocean strait. The bed of this strait became covered with debris from the adjacent Himalaya on its northern shore and with this debris became entombed many and various animal remains. All that ocean strait has since been upheaved, and forms now the plains of India, with the long, nearly level, valleys in which flow the Ganges and the Indus, and has brought to view the many sedimentary rocks, sandstones and limestones which had been forming from prior ages. Another sea had existed near Nagpore westwards towards Ellichpore and easterly towards the affluents of the Godavery, where sandstones and fossils and coal occur. That part of the centre of the ancient Island now forming the province of Aurungabad is a great volcanic out-burst of trap-rock in many places flowing over and covering sedimentary rocks: and the part to its east, in the province of Hyderabad is a vast plutonic out-burst of granite. On the south of this granite and volcanic rock, had been another estuary, extending in latitude from North of Madras to the Kistnah, and in longitude from the Bay of Bengal up the Kistna and Peunar to the sources of the Gutpurbah and Malpurbah, and it is now filled with distorted, broken, upraised limestone, blue slate and sandstones, from near Curcumbarry, Tarputtry, Cuddapah, Kurnool to Kaludghee and Belgaum. To the South of that narrow gulf is the great granite tract of Bellary and Mysore succeeded further south about Trichinopoly and Madura with other limestone beds, both fossiliferous and non-fossiliferous and it is from these volcanic plutonic and aqueous rocks that building stones are drawn.

Laterite rock, a clay iron ore, seems peculiar to India. It covers the western coast almost continuously, and for the most part up to the very foot of the ghauts, from near Bombay to Ceylon. It is found in detached beds along the Coromandel coast, near Madras and Nellore, Rajahmundry and Samulcottah, extending into Cuttack. It caps the loftiest summits of the eastern and western ghauts, and some of the isolated peaks in the table land in the interior, and it covers all the country around Beder. It occurs in the Southern Mahratta Country, Mysore, Salem, Coimbatore, South Arcot, the Carnatic, and Tanjore: it is found in Berar, near Oomraoti, in Malwa, and in many parts of Bengal and Ceylon. It fringes the shores of Burmah, Malacca, and Siam, and appears on the coast of Singapore and Sumatra. It is found in boulders and rolled masses all along the Malabar Coast from Bombay north to Gogo in the Gulf of Cambay, beyond the region of the formation itself Pieces of it have been met with three hundred feet under the surface, in the blue clay beds at Calcutta, as also in similar beds of lesser thickness in Bombay, and close by Cambay and Kurrachee: so that the formation at one time was probably much more extensive than at present. Its colour is of a red irony or brickdust hue, sometimes deepened into dark red. It is marked with whitish stains, and is occasionally cellular or perforated with tubiform holes. It rarely if ever contains either crystals or organic remains, is never stratified or columnar, and generally spreads out in vast sheets on the surface of the plutonic or volcanic rocks. When the upper surface is cleared away, the rock below is found soft and easily cut into blocks of any form. It quickly hardens and darkens in hue by exposure to the air, and is not at all liable to decomposition or injury from the weather. The Arcade Inquisition at Goa is built of it, St. Mary's Church, Madras, and also the old fortress of Malacca.—*Newbold. Asiatic Transactions.*

Trap-Tuffa.—A curious variety of trap-tuffa sometimes white, sometimes greenish or purple, found in Bombay and many other parts of India, resembles laterite in the quality of being easily cut when raised, afterwards hardening on exposure to the air. It is used as a building-stone, and suits well for basins, troughs, and aqueducts: it is not very extensively employed.

Littoral-concrete is a variety of rock which has not hitherto found a specific place in geological catalogues: the name has been conferred on it from its being invariably found close by the sea-shore, and from its resemblance to the artificial stone formed by the cementation of sand, gravel, or other coarse material, by lime-water or mortar. It is composed of the material prevailing on the shores—of shells, sand, gravel, and pebbles, and varies in its character, with the rocks in the neighbourhood,—being micaceous towards Cochin and Tellicherry, from the quantity of sand and other nodules from the granite and gneiss; gravelly to the north of Bombay, and around it, composed almost entirely of fragments of shells. Sir Erskine Perry states that this strange variety of rock is to be found all along the Himalayas, and prevails extensively in Southern India. We have not observed it mentioned by any geologist, but have no doubt of the correctness of Sir Erskine Perry's statement. It is to be met with only in the regions where rains abound. Along the shores of Sind, Arabia, and the Red Sea, though the material composing it is abundant in a position similar to that in which it exists on the Malabar Coast, it is nowhere cemented into stone. Even here, indeed, the cementation is far from invariable: in one part of the esplanade we have loose sand on the surface, and concrete beneath: at another, sand or concrete, as the case may be, form the surface throughout to the rock: and in a recent excavation, concrete was found for the first twenty feet, resting on a bed of fine sand perfectly loose. It is frequently found to rest—as, for example, at Sewree and Mahim—on a bed of blue clay filled with kunkur and mangrove roots, offering evidence of a depression from the time the mangroves grew at high-water mark, so as to permit the gravel deposit to accumulate. The whole must then have been raised by a second upheaval to its present level. The principal quarries of these are at Versova, about twenty miles to the north of Bombay, where the shore is sheltered by a vast dyke of basalt formerly submerged. The sand, which seldom extends more than a few inches down, is first removed, and the rock is smoothed on the surface. A space about twelve feet each way is next divided into slabs one foot square,—the grooves between them being cut with a light flat-pointed single bladed pick. These are raised successively by a tool something between an adze and a mattock, a single stroke of which is in general sufficient for the detachment of each from its bed. The blocks thus cut out and raised being thrown aside, the bed is once more smoothed, and the operation resumed till the pit reaches the depth of six or eight feet, when, it being no longer convenient to remove the stones by hand or basket, a new pit is cut. This variety of building material is brought in vast quantities to Bombay where a large portion of the native house are built of it. It is not very strong, but with the admirable cement employed with such lavish hand, it makes a good and economical wall.

Trap.—In the Deccan the most massive structures are raised and carved from trap, with a delicacy and correctness quite astonishing. The favourite material for the over ground tombstone, is basalt, and, after many hundred years, the Arabic letters, carved in relief, are as sharp as on the day they were first cut. The vaults and domes of tombs and temples are commonly bolted with iron from top to bottom, and in many cases, instead of scaffolding, the structure is surrounded with a rough wall, ten or twenty feet off, the interval between being filled up with earth: a long inclined plane serves for raising the stones. A magnificent structure of this sort, the tomb of one of the Gwalior princes, has stood half finished near Poona since the early part of this century, and here native architecture may be seen in perfection in all stages of advancement. The only building materials at the Bombay presidency, beside that already described, consist of greenstone, trap, and a fine grained variety of nummulite like Bathoolite,—called, from the name of the place whence it comes, Porebunder stone.

Bricks are largely used, all over India, laterite, clay and in the Mauritius stone and slabs of coral rock. In many parts of Bengal, wattle-work is in use.

Since the Indian railroads were commenced, with their great spanning bridges, the rocks of all their neighbourhoods have been largely utilized and buildings formed of the greenstones, granites, lime-stones and sandstones are now everywhere to be seen. Throughout the great volcanic district of the Deccan, the various kinds of greenstone are largely used. On the blue slate formation, along the vallies of the Kistnah and Tumbudra, and on the compact limestone formation on each side of these rivers, houses have ever been formed from these materials, but the favourite rock for ornamental purposes in the buddhist and hindu temples of peninsular India is the dark basaltic greenstone, often, from its high polish, called black marble. In an ancient underground temple at Bejapore this basalt is alone employed. The brahminical and buddhist caves of Ellora and Adjunta and the smaller caves at Mominabad are excavated out of the greenstone and greenstone amygdaloid. At Ellora they are about twenty in number, in the face of the mountain, almost scarped as it falls into the valley of the Godavery; a similar number are at Adjunta in a ravine near the scarped ghats overlooking Khandesh. Those on the right bank of the Irawady near Prome look on the river. Large quantities of the whitish yellow Poreebunder stone are now brought into Bombay. In Madras and Calcutta, and in India generally, brick is the ordinary building material. In the whole of Burmah and the Tenasserim provinces, the houses are built of wooden planks with shingled roofs.

Of the rocks of aqueous origin, the sandstones, slates and limestones, the whole of the valley of the Kistnah and great parts of the valleys of its affluents the Gutpurbah, Malpurba, Bheema, Tunga, Bhoodra and Tumbudra, and much of the valley of the Godavery and of the valleys of its northern affluents, have limestone, clay slate and sandstone rocks, and the houses and more extensive buildings are all built of these. The limestone of Kurnool, westward to the Bheemah is an excellent building material,

The whole of the Kymore range in Shahabad is described as of mountain limestone which also shows itself in the valley of the river Sone as far at least as Mungeysur peak in Mirzapur, and it crops up at Rhotas forming a sloping base to the precipitous sandstone rock. Below the mountain limestone is one of a plush grey colour mixed with occasional crystals of calc spar; this, like the Kurnool stone, is admirably suited for lithography. Below the latter, in Kymore is a limestone of a hard tenacious almost indestructible composition admirably suited for building,

M. R. Bingham adds the following remarks on the sand-stones of the Kymore range, which have a high commercial value at Chunar and Mirzapore being used as flagstones, and for ornamental purposes. The stones at those places owe their advantages to the proximity of the Ganges, which affords an easy river carriage; otherwise they are the worst and most destructible description of stone in the range. The millstones of Chynepore, Sasseram, and Tilowthoo (perhaps also Ackbarpore), are famous, but must always be dear in a distant market for want of river carriage. The Soane causeway and the Koylwan-railway bridge are built of the dense sandstone of Sasseram, little quantities are found in the higher portions of the range towards Rohtas. The best stone, while easily workable, is almost as hard as granite, and may be had of any colour, white, crystalline, blue, grey, and all shades to a dark red.

Flexible sandstone, is found at Ulwar, Jhend and Jubbulpore.

At the Panjab exhibition held at Lahore there was a good collection of building materials from Sahi Balabgarh, in the Delhi district, including the red, the spotted, and the light colored sandstone, so much used in the large buildings of Upper Hindustan; and from the same place were polished blocks of white marble, and of a pretty dappled gray marble called Narnaul marble, which last was exhibited from the Hissar district.

From the Kangra district there were grey limestone, sandstone of two sorts, both good for building, and granite. Some nice workable sandstone sent from Madhopore, must come from the hills, above that place. From Kashmir there was some black marble and some polished slabs of serpentine, which is found at Tashgam in little Thibet. The Salt range Jhilam and Shahpur districts possess good building stones, sandstone and calcareous sandstone; from Jhilam were specimens of marble which might become useful for building, with gypsum or alabaster of the same hills.

BUIN, HIND. of Kashmir, Platanus orientalis. See Bonin,

BUIS, FR. Box wood.

BUIST, Dr. George, L. L. D., a voluminous writer on general and scientific subjects. He belonged to a family well known in Fifeshire and long intimately connected with the University of St. Andrews. The son of a Parish minister, there he studied. He was licensed as a preacher of the Scotch Church, though he did not exercise his gifts in that respect more than once or twice. At College he distinguished himself by his attainments in the mathematical and natural sciences, and successfully pursued the then rising study of geology. He gained the Highland Society's prize of fifty guineas for his survey of Perthshire, and thereafter devoted himself to literature and science. In 1832 he successively conducted four provincial newspapers, and as editor of the *Fifeshire Journal* obtained a high local reputation. In 1840 he was selected as editor of the *Bombay Times*, succeeding Dr. Brennan whose career was cut short by cholera in 1839, a year after the establishment of the paper. From 1840 to 1857, Dr. Buist continued to edit the journal, with the exception of two intervals of absence to Europe, when his own University conferred on him the well deserved degree of Doctor of Laws. The ability with which he conducted it secured for the *Bombay Times* not only a large circulation but great weight in England. He published an Overland Summary by every mail which reached a circulation of 3,000. As Editor of a Bombay paper, during the stormy periods of the Affghan, Sind and Sikh wars, as a vigorous and forcible writer who hated dishonesty and rushed to a contest with what he believed to be error sometimes too vigorously, Dr. Buist was engaged in many bitter controversies in his day. In 1858 he was appointed one of the Municipal Commissioners of Bombay, and in 1859, went to Allahabad to succeed the late Mr. Longden as Superintendent of the Government Press. It was as a scientific man that Dr. Buist most desired to be known. To all the scientific journals of India he was a voluminous contributor. In the reports of the British Association, and in the transactions of many of the Edinburgh and London Societies, his papers are to be frequently found. As a meteorologist, and in his knowledge of Physical Geography generally, he was equalled by none in India, surpassed by few in Britain. His whole career in Bombay was distinguished by benevolence, sometimes profuse. The Industrial School there was his creation. He died at Calcutta on the 1st October 18'—? The following were his separate contributions to scientific literature, Author of Manual of Physical Research: Report of Meteorological Observations at Bombay in 1842 & 1844, 1 Vol.—On the saltness of the Red Sea, *Bom. Geo. Trans.* Vol. IX. p. 39.—Catalogue of remarkable hailstorms in India, *Ibid*, p. 184, *Rep. Brit. Ass*, 1850.—Notice of remarkable meteors in India. *Bom. Geo. Trans.* Vol. IX, p. 197, *Rep. Brit. Ass.* 1849 & 1852.—Outline of the operations of the British troops in Sind and Affghanistan, *Bombay.* 1843, 1 Vol. 8vo—Annals of India, for 1848-49. *Bombay*, 1849, 1 Vol. 8 vo.—On floods in India, in 1849, *Edin. Phil. Jl.* (Jameson's) 1851, Vol. II. p. 52.—On the incrustrations of steam pipes and boilers in marine engines—occasional deposits of electrotype copper, *Bl. As Trans.* 1850—On the evidence of the general upheaval and depression around the sea shores of India and Northern Europe, *Ibid*, 1851, *Edin. Ph. Jl.* 1851, *Bom. Geo. Trans.* Reports, 1850-51; *Rep. Bri. As.* 1851; Geology of Perthshire, Prize Essay of the Highland Society, 1838; (See Lyell's Principles of Geology, 4th and subsequent editions; Reports of the Fifeshire Literary Society and London Naturalist 1839. On the aneroid as a survey instrument in India, *Lon. Geo. Trans.* 1851.—On the visible appearance of the seasons in western India, without reference to instrumental observation, *Rep. Bril. Ass.* 1851. Desultory remarks on the Oriental Sculptures on the Runic stones of Scotland, *Bom. Ass. Trans.* Vol. II. p. 48; *Bl. As. Trans.* 1851.—On gates, and wire fences for gardens and compounds in India, *Bom. Agri. Jl. of Med. Sc.* 1845, p. 725. —on the various forms of windmills in use in Europe and Egypt, with water-raising machines made use of in the East, with numerous illustrations, *Bombay*, 1848, folio.—On the connection betwixt Oriental and Scandinavian antiquities, *Bl As. Trans.* 1852.—On the volcanoes, volcanic phenomena, hot springs, &c. betwixt the line and 32° N., *Bom. Geo. Trans.* 1852, Vol. X.—On the geology of Bombay and the adjoining islands.—*Ibid, Dr. Buist's Catalogue.*

BUITENZORG, near Batavia, is forty English miles inland, five hundred feet above the sea with high hills around, here thunder-storms occur between 4 P. M. and 8 P. M.—*Maury's Physical Geography, p.* 142.

BUIT-SAGUNTANG-GUNTANG, also written Bukit-Saguntang-G[illegible]ang a mountain in Palembang, now known by the name Bukit-Se-Buntang, from its site, the Malay race emigrated.

BUJ, Guz. Hind. Cork.

BUJ, Hind. Acorus calamus.

BUJAN, a river near Dooblana in Kotah.

BUJI BABBAR, Hind. Eriophorum comosum.

BUJLO, Hind. Oreoseris lanuginosa.

BUJRA, Hind. Cleome ruta.

BUJJERBHANG? Also Tutun? Arab. Tobacco.

BUJOOR, Beng. Corypha elata.

BUJRA, Beng. Penicillaria spicata, Bullrush or Spiked Millet.

BUJURAYI, Tel. A kind of fern, found at Masulipatam.

BUJRA, is a large and commodious, but generally cumbrous and sluggish, boat, having more pretensions to comfort than speed, and is used for journeys up the Ganges. See Budgerow.

BUK, Beng. Agati grandiflora.

BUK, Hind. Land recovered by the recession of a river.

BUKA, Beng Sans. Agati grandiflora syn. of Coronilla grandiflora.

BU KALAMUN, Arab. Chameleon.

BUKAMPADARUKA, Sans. Cordia myxa.

BUKAN, Hind. Eclipta erecta, also Lippia nodiflora.

BUKAYARI JIYADHA, Beng. Aquila nævia.—*Gmel.*

BUKBUR, Ar. Cathartocarpus fistula.

BUKAYUN, also Bukain, PERS. HIND. Melia sempervirens.

BUKBUR, ARAB. Fruit of Cassia fistula.

BUKCHI, HIND. Conyza anthelmintica.—*Willd.*

BUKHT-UN-NASR, ARAB. Nabonassar.

BUKHO, the Karen priest and physician, he has considerable influence. See Karen.

BUKHTIYARI. See Bakhtyari; Kurdistan.

BUKHUR, ARAB. Incense or fumigation.

BUKI, HIND. Equisetum debile.

BUKIT GADONG, a locality in the Malacca district occupied by the Jakun race. See Jakun.

BUKIT-SAGUNTANG-GUNTANG. See Buit Saguntang Guntang. Johore.

BUKKAPU CHETTU, TEL. or Bakamu chakka. Cæsalpinia sappan, *L.*

BUKKUM, BENG. HIND. Sapan-wood Bukkum wood. See Cæsalpinia. Dyes.

BUKKUN, MAR. Melia bukain.

BUKKUR. A fortified island in the Indus river. It is in the centre of the stream, nearly opposite the town of Rori and on the western bank is Sukkur, now called Victoria on the Indus. Near these places is the site of Arore, or Alore, the capital of Sinde in remote antiquity: but a bridge over the stream which branched from the Indus, near Dura, is almost the sole vestige of this capital of the Sogdi of Alexander. On its site, the shepherds of the desert have established an extensive hamlet; it is placed on a ridge of siliceous rock, seven miles east of the insular Bukkur and free from the inundations of the Indus. The Soda tribe, a powerful branch of the Pramara race, has ruled in these countries from remote antiquity, and, to a very late period, they were lords of Omrasoomra in which division was Arore. According to Burton, however, the site of Arore is four miles East of the Indus at Sukkur and Rori. Sehl and his capital were known to Abul Fazil, though he was ignorant of its position, which he transferred to Debeil, or Dewul, the modern Tatta. This indefatigable historian thus describes it, "In ancient times there lived a raja named Sehris (Sehl), whose capital was Alore, and his dominions extended north to Cashmere and south to the "ocean." Sehl, or Sehr, became a titular appellation of the country, its princes, and its inhabitants, the Sehrai.

Alore appears to have been the capital of the kingdom of Sigertis, conquered by Menander of Bactria. Ibn Haukul, the Arabian geographer, mentions it: but a superfluous point in writing has changed Arore into Azore, or Azour, as translated by Sir W. Ouseley. D'Anville mentions it, but, in ignorance of its position, quoting Abulfeda, says, in grandeur "Azour est presque comparable a Meoltan.—*Tod's Rajasthan, Vol. I. p.* 42. *Burton's Scinde, Vol. I. p.* 166. *Postan's Pers. Observ., p.* 30.

BUKOLI, HIND. A green caterpillar, destructive of rice crops.—*Ell.*

BUKSHI, HIND. PERS. From Bukhshidan PERS. to pay; a commander of a division of troops. A paymaster with the duty of inspection and audit. See Bakhsh.

BUKUL, BENG. MAR. Mimusops elengi.

BUL. SANSC. force, strength, pronounced in Hind: Bal, also Bil.—*Ell.* See Bal.

BULAHUR, HIND. also buladhur, from bullana, to call; a village servant in Allahabad district, serving as a guide or messenger.—*Ell.*

BULAK, the Latopolis of the ancient Greeks, is at present, a very considerable town, and the port of Cairo.—*Niebuhr's Travels, Vol. I. p.* 63.

BULARATI, a name of Indra as the destroyer of the giants.

BULAT, BENG. Phaseolus mungo.—*Linn.*

BULBASSI, a Kurd race, composed of the following tribes:—

Kabaiz, the reigning family, consisting of about two hundred persons; 2. Manzoor; 3. Mamash; 4. Piran; 5. Rummook; 6. Siun and Taafah, who together make one tribe. The chiefs of tribes are called Muzzin. Each chief has a certain number of thieves, who rob for him; and his tribe makes him voluntary gifts of provisions. These are his only revenues. The price of blood among the Bubassi is twenty-two oxen, but it may be made up in other effects, to which often a nominal value is attached, more than twice the real amount, when the affair is to be compounded amicably. Their only laws are the usages of the tribe, and these are administered by the chief, assisted by the council of elders. No crimes are punished with death but adultery, seduction, and such like. The Balbassi will not bestow a girl in marriage on a person of another tribe or people. They have courtship among them, and carrying off a girl by the lover is common. When a chief dies, he is succeeded by the best or bravest of his family, with the common consent of his tribe. If his eldest son is incapable, the best of the brothers succeeds. When a chief is once nominated he cannot be deposed, and his authority is so well defined, that there are no instances of a chief ever having attempted to exceed them. In their own country the Bulbassi do not willingly acknowledge any superior, either Turkish or Persian; but when they descend into the regions of Karatchook they pay a tribute of sheep to the Bey. They are very fond of armour; and most of the principal people among them possess a complete suit of mail. The Bulbassi Koords have a most curious way of curing wounds. They sew the wounded man in the skin of a bullock fresh stripped off the animal, leaving only his head out ; and they leave him in it till the skin begins to putrefy. They say this never fails to cure the most desperate spear or sabre wound.—*Rich. Residence in Koordistan, Vol. I. p.* 133.

BUL-BHOG, HIND. Taking forcible possession of property; from Bul, force, and Bhog, wealth.—*Ell.*

BULBINE ASIATICA. Syn of Crinum Asiaticum.—*Willd.*

BULBS imported into India, for flowering plants, do not succeed well in general; this is owing in a great degree to their being disturbed ; the best plan with them is to prepare a good piece of ground somewhat raised, to throw off the heavy rains, and to plant each variety by itself in rows, keeping them clear of weeds. Every season, when they begin to grow, stir up the soil and add a little well decayed horse manure in India, the more nursing this species of plants receive the weaker they become, they seem to relish neglect, under which they flourish in the greatest beauty. If wanted to be grown in pots, the soil should be three parts sand and one vegetable mould and decayed manure. When the bloom appears, a watering of liquid manure once or twice a week will aid them greatly. After the leaves are decayed, put them in a dry situation till another season ; when they begin to show signs of growth ; let a slight watering for some time be given to enable them to form new roots, then take out one inch of soil, and put in the same quantity of decayed horse manure mixed with little sand, after which water freely, till the flowers are past when they should be *gradually dried.*—*Riddell.*

BULBUL, PERS. A term employed among the various mahomedan nations of Southern Asia, to designate birds belonging to very numerous species and many generic divisions of a natural family. The Persian bulbul is a species of true nightingale, it is the Luscinia major (or *Sylvia philomela* of Temminck) and is known as the Bulbul-i-bostan in India, where it is frequently imported as a cage bird. In Persia it is often called the Bulbul-i-hazar dastan, the bulbul of a thousand notes, and its genus, Luscinia, is very closely allied to the small thrushes of America. The Persians delight to speak of this favorite song-bird, which Moore has made widely known, telling us that

There's a bower of roses by Bendemeer's stream,
And the nightingale sings round it all the day
long,
In the time of my childhood 'twas like a sweet
dream
To sit in the roses and hear the birds song.
That bower and its roses I never forget,
But oft when alone in the bloom of the year,
I think, is the nightingale singing there yet ?
Are the roses still bright by the calm Bendemeer?

It is migratory, making its appearance with the roses in April and disappearing with the rose, at the end of summer. According to Zakary bin Mahomed-al-Kaswini, the Persians say the bulbul has a passion for the rose, and laments and cries when he sees it pulled. The English nightingale, Luscinia philomela (*Philomela luscinia*) is migratory through Europe, N. Africa, and Asia Minor, but is not known in India or Persia.

There is no true nightingale, wild, in British India; but the 'Shama' Cercotrichas macrourus, undoubtedly the finest song-bird of this part of the world, is not unfrequently designated the Indian Nightingale, a misnomer which only leads to confusion. It is common to India and the Malay countries ; and there is a second species (*C. luzoniensis*) in the Philippines, and a third (*C. erythropterus*) in Africa. The esteemed Indian songster is le Merle tricolor de longue queue of Levaillant. (*Oiseaux d' Afrique pl.* 114.) We may remark that the Orocetes cinclochyncha is also termed Shama in the Madras Presidency. The Bulbul of Southern India is not even a song bird but the term is applied to the Bulbul-i-gul-dum, Hœmatornis cafer, which is a common cage bird and, like quails and cocks, trained to fight, and when pitted against an antagonist, it will sink from exhaustion rather than release its hold. The Hussaini bulbul, also called the Shah-bulbul, is of another sub-family, the Myagrinæ, and is known as the Paradise-flycatcher. It is of a chesnut colour for many months, but becomes white in the breeding season. It is a very graceful bird with very long tail feathers and it is a pretty sight to see it flitting from tree to tree: how the birds prevent the long tail feathers from becoming entangled in the thorny trees, is very curious. In Ceylon the chesnut bird is called the Fire thief and the white bird the Cotton thief. Its colouring is chaste and its movements graceful. Mr. Layard has often watched them, when seeking their insect prey, turn suddenly on their perch and whisk their long tails with a jerk over the bough, as if to protect them from injury.

Dr. Jerdon arranges the Brachypodidæ into four sub-families, the Pycnonotinæ or true Bulbuls, the Phyllornithinæ or green Bulbuls, the Ireninæ or Blue-birds, and the Oriolinæ or Orioles, and ; of the true bulbuls, he names

Hypsipetes psaroides, *Vigors*, the Himalayan black bulbul.
„ Neilgherriensis, *Jerdon*, the Neilgherry do. do
„ Ganeesa, *Sykes*, the Ghat do do
„ McLellandi, *Horsf.* The rufous bellied bulbul.

Hemixos flavala, *Hodgson*. The brown eared bulbul.
Alcurus striatus *Blyth*. The striated green do.
Criniger ictericus, *Strickland*. The yellow browed bulbul.
,, flaveolus, *Gould*. The white throated do.
Ixos luteolus *Less*. The white browed bush do.
,, xantholæmus, *Jerd*. The yellow throated bush do.
Kelaartia pencillata, *Blyth*. The yellow eared bulbul.
Rubigula gularis, *Gould*. The ruby throated do.
,, flaviventris, *Tickell*. The black crested yellow do.
Brachypodius poiocephalus *Jerdon*. The Grey headed do.
Otocompsa leucogenys, *Gray*. The white cheeked crested do.
,, leucotis *Gould*. do do eared do.
,, jocosa, *Linn*. The red whiskered do.
Pycnonotus pygœus, *Hodgson*. The common Bengal do.
,, do hæmorhous, *Gmelin*. do Madras do.
Phyllornis, Jerdoni, *Blyth*. The common green bulbul.
,, Malabaricus *Lthm*. The Malabar do do.
,, aurifrons. *Temm*. The gold fronted do.
,, Hardwickii *Jard and Selb*. The blue winged.
Jora Zeylonica *Gmelin*. The black headed do.
,, typhia *Linn*. The white winged green do.
,, scapularis, of the Archipelago.
,, Lafresnayii of Arakan.

—*Jerdon, Birds of India, Layard's Nat. Hist. of Ceylon. Cal. Rev.* See Birds.

BULBUL-I-BOSTAN, also Bulbul-i-hazardastan Pers. Luscinia.

BULBUL-I-GUL-DUM, HIND. the Hæmatornis cafer.

BULCHA, a pass in Kamaon, in L. 30° 28' and Long 80° 14' over a high ridge, extending E. and W.

BULD, HIND. Horned cattle, Buldea a cowherd.—*Ell.*

BUL-DAN, amongst the ancient hindus, the sacrifice of a bull to Balnath, the lord Bal, the sun. Balnath was the deity worshipped by the Saura races in Guzerat and was identical with the Syrian Bal.

In this ancient sacrifice, which has long ceased, four altars were erected, for offering the flesh to the four gods, Lacshmi-Narayana, Umia-Maheswar, Brimha, and Anunta. The nine planets, and Prithu, or the earth, with her ten guardian deities, were worshipped. Five—*Vilwa*, five *Khudiru*, five *Pulashu*, and five *Udumburu* posts had to be erected, and a bull tied to each post. Clarified butter was burnt on the altar, and pieces of the flesh of the slaughtered animals placed thereon. Another description says that a covered altar had to be prepared; sixteen posts had then to be erected of various woods; a golden image of a man, and an iron one of a goat, with golden images of Vishnu and Lacshmi, a silver one of Siva, with a golden bull, and a silver one of Garuda 'the eagle' were placed upon the altar. Animals, as goats, sheep, &c., were tied to the posts, and to one of them, made of the wood of the mimosa, was to be tied the human victim. Fire was to be kindled by means of a burning glass. The sacrificing priest, 'hota,' strewed the grass called d'hub or immortal, round the sacred fire. Then followed the burnt sacrifice to the ten guardian deities of the earth—to the nine planets, and the hindu triad, to each of whom clarified butter was poured on the sacred fire one thousand times. Another burnt-sacrifice, to the sixty-four inferior gods, followed, which was succeeded by the sacrifice and offering of all the other animals tied to the posts. The human sacrifice concluded and the sacrificing priest offered pieces of the flesh of the victim to each god as he circumambulated the altar.

At the present day the bull is often devoted by hindus to the gods, on the 11th day of mourning for a near relative. In this a marriage ceremony is performed, called "brik-hotsurg," or abandoning of a bull, brik means a bull and also the zodiacal sign, Taurus. The brikhotsurg marriage ceremony is performed in the name of the bull after which the animal is set free to roam, and in some hindu towns of India, these devoted cattle infest the streets and roads, are very numerous and very troublesome. In several Mahratta towns they were often let loose. In Benares, they are still in numbers, and whatever they may do or wherever they may lie down, they may be patted, spoken to, or even shouted at, but never struck. They are called Bijar, Saur, Brahmani bull. A similar marriage ceremony is performed with a well and orchard.—*Ward on the Religion of the Hindus, Vol. II. p.* 263. *Elliot,* 260. See Bunotsurg; Julotsurg.

BULDEO, in Vrij is a shrine of Baldeo who is supposed to be the Hercules of the East and West. His club, a ploughshare, and his covering a lion's skin. See Baldeva.

BUL-DHOON, the valley of Sookeyt Mundi in the Kohistan of Jhullundhur. It is also called Sookeyt Mundi, also Kangra Bhawan, also Pallam Pattiar. The natives of the Buldhoon and Kulu have sallow complexions and seem of the same race as the natives of Bushair. The men are tall and strong, but few of them are handsome. Many of the young women are pretty but at the age of 20 or 25, they become coarse and stout. When Mr. Masson passed near there, it was the practice for the women, gaily dressed, to assemble and greet a stranger with songs, as he entered each village, for which honor he was expected to give a rupee to each knot. The men and women dress almost similarly. See Jhullundhur, Kohistan.

BULEA JOREE, a river near Chandura, in Comillah.

BULESUR, a sub-division of the Gujur race —*Ell.*

BULGARIAN. The wild people who dwelt or wandered in the plains of Russia, Lithuania, and Poland, might be reduced in the age of Justinian, under the two great families of the Bulgarian and Sclavonian. Those of the former nation, who touched the Euxine Sea and the Mæotis, derived from the Huns their name or descent. The evidence of language attests the descent of the Bulgarian from the original stock of the Sclavonian, or more properly Slavonian race: and the kindred bands of Servian, Bosnian, Rascian, Croatian, Wallachian, &c. followed the standard or example of the leading tribe. The first king of Bulgaria, in its present extent, was in A. D. 640, and their empire continued until 1017, when they were ruled by a lieutenant of the Greek Empire.—*Chatfield's Hindoostan, p.* 289.

BULGAR, JUNGLI, HIND. Boletus igniarius.

BULGHAR, a town in Russia, where Russia leather is made; also Russia leather, corrupted into Bulkhal. In Persia a kind of bottle, to hold nearly three quarts, is made of bulghar, to be used by horsemen travelling. It has a wooden stopper and hangs from the saddle or girth, and swings under the horse. It is called "matahrah" or "Matarah."—*Ouseley's Travels, Vol. I. p.* 247.

BHULKHAL, PERS. Russia-leather. Fraser believes that this word is a corruption from Bulghar, the place in Russia, from whence this leather reaches Persia.—*Fraser's Journey into Khorasan, p.* 69.

BULKOKRA, BENG. Adelia castanicarpa.—*Roxb.*

BULKUT, HIND. rent taken in advance.

BULI, BENG. HIND. Syn. of Sterculia urens.—*Roxb.*

BULJI-WANLU, TEL. In Southern India, a body of sudras.

BULL,

Al-Taur	AR.	Nandi	HIND.
Taur	CHALDEE.	Nar-gao	PERS.
Shur	HEB.	Mar	TAM.
Taurus	LAT.	Eddu	TEL.
Bail	HIND.	Basava	„

The bull has always held a prominent place in the religious systems of Asia. The sacred bull of the Assyrians, the Apis of the Egyptians, and the bull Nandi of the hindus are evidently identical types. The golden calf of the Israelites will not be forgotten, and for the use of the figure of the bull as a sacred ornament by the Jews, the brazen sea in the temple of Solomon may be cited. (1 *Kings, VII.* 25.; 2 *Chron. IV.* 4, 5, *and Jeremiah, iii.* 20.)That, in Assyria, Baal, or the Supreme Deity, was worshipped under the form of a bull or heifer may be inferred from Tobit, i, v. 5, "Now all the tribes which together revolted, and the house of my father Naphthali sacrificed into the heifer Baal," but the reading is doubtful.—(*Layard, Nineveh, Vol. II. p.* 474-5.)

In the English Scripture the word "Bull" is the translation of several Hebrew words, *shor*; a cow, "theo," a wild bull; abbire, "tor." A calf was in Hebrew, "Ogel," in Arabic "Adjel," Jeremiah xxxiv; 18 and 19, tells of a sacrificial rite of splitting a calf in two and men passing between the parts and Bull worship is noted in 1st Kings XII and 28, 29, 30, the images being of gold. In ancient Western Asia, Bal and the brazen calf were specially worshipped on the fifteenth of the month, (see 1 King. XII. 32) and, at present, in India, the sacred day of Bal-Eswar, with his Vahan bull Nandi, is the "amavasa," the moonless fifteenth day of the month. The bull was offered to Mithras by the Persians; and, opposed as it now appears to hindu faith, he formerly bled on the altars of the sun-god, on which not only the Buld-dan, *offering of the bull,*' was made, but human sacrifices. We do not learn that the Egyptian priesthood presented the kindred of Apis to Osiris, but as they were not prohibited from eating beef, they may have done so.—(*Tod's Rajasthan, Vol. I. p.* 514-15.) Apis, the sacred bull of Egypt was chosen by the priests of Memphis, for its black and white spots, and Mnevis, the sacred bull of Heliopolis, had nearly the same marks; but the Jews, in preparing their water of purification, were ordered (in Numbers, ch. XIX. 2) to kill a red heifer without a spot Amongst the Egyptians, the solemnities at the burial of Apis were entirely Bacchic. The priests did not wear the *nebris* or deer skin, but they wore the panther skin, and carried Thyrsus staves. The brazen calf, mentioned in Scripture as an object of worship by the Hebrews is still worshipped by hindus in India, often of brass, but oftener of stone. In India some of the images of the bull, are of colossal size. One, supposed to be the largest in the south of India, is to be seen at the Charmandi Hill in Mysore. It is carved out of a solid rock at the side of the hill and is approached by ascending 660 stone steps. Siva under the name of Mahadeva, or Iswara, is the tutelary divinity of the Rajpoots in Mewar, and from the early annals of the dynasty he appears to have been, with his consort Isani, the sole object of the *Gehlote* rajputs adoration. Iswara is there adored under the epithet of Eklinga, and is either worshipped in his monolithic symbol, or as Iswara Chao-mûkhi, the quadriform divinity, represented by a bust with four faces. The sacred bull Nanda, has his altar attached to all the shrines of Iswara, in India, as was that of Mneves or Apis to those of the Egyptian Osiris. Nanda has occasionally his separate shrines, and there is one in the valley of Oodipoor which has the reputation of being oracular as regards the seasons. The bull was the steed of Iswara, and carried him in battle; he is often represented upon it, with his consort Isa, at full

Colonel Tod tells us that the infant Bappa, son of Nagadit, when only three years old, was conveyed to the fortress of Bhandere, where he was protected by a Bhil of Yadu descent, Thence he was removed for greater security to the wilds of Parassur. Within its impervious recesses rose the three peaked (tri-cuta) mountain, at whose base was the town of Nagindra, the abode of brahmins, who performed the rites of the 'great god.' In this retreat passed the early years of Bappa, wandering through these alpine vallies, amidst the groves of Bal, and the shrines of the brazen calf. The most antique temples are to be seen in these spots—within the dark gorge of the mountain, or on its rugged summit,—in the depths of the forest, and at the sources of streams, where sites of seclusion, beauty, and sublimity alternately exalt the mind's devotion. In these regions the image of creative power appears to have been the earliest, and at one time the sole object of adoration, whose symbols, the serpent wreathed phallus (lingum), and its companion, the bull, were held sacred even by the 'children of the forest.' In these silent retreats Mahadeva long continued to rule triumphant, and the most brilliant festivities of Oodipoor were those where his rites are celebrated in the nine days sacred to him, when the Jain and Vaishnava mix with the most zealous of his votaries: but the strange gods from the plains of the Yamuna and Ganges have withdrawn a portion of the zeal of the Gehlote from their patron divinity Eklinga, whose dewan, or vicegerent, is the Rana. The temple of Eklinga, situated in one of the narrow defiles leading to the capital, is an immense structure, though more sumptuous than elegant. It is built entirely of white marble, most elaborately carved and embellished; but lying in the route of a bigotted foe, it has undergone many dilapidations. The brazen bull, placed under his own dome, facing the sanctuary of the phallus, is nearly of the natural size, in a recumbent posture. It is cast (hollow) of good shape, highly polished and without flaw, except where the hammer of the Tatar had opened a passage in the hollow flank in search of treasure. Amongst the many temples where the brazen calf forms part of the establishment of Bal-Cesar, there is one sacred to Nanda alone, at Naen in the valley. This lordly bull has his shrine attended as devoutly as was that of Apis at Memphis, nor will Eklinga yield to his brother Serapis. The changes of position of the Apis at Naen are received as indications of the fruitfulness of the seasons, though it is not apparent how such are contrived. The physiological worship of the god Eshwara, with this emblem the lingum, priapus or phallus, and his vahan, the bull Nandi or Basava, seems to have entered India on its western border. But it is now very general and Nandi, in stone or in brass, is to be seen everywhere, perhaps half a million of them are in India, generally seated, looking to the lingum. In Ceylon, to evrey herd of cattle there is a sacred bull who is supposed to exert an influence over the prosperity of the flocks; his horns are ornamented with tufts of feathers, and frequently with small bells, and he invariably leads the great herd to pasture. On starting in the early morning from the cattle kraal the natives address the bull, telling him "to watch over the herd; to keep the cows from straying, and to lead them to the sweetest pastures, so that they shall give abundance of milk," &c.—*Bunsen, Vol. I. p.* 432. *Tod's Rajasthan, Vol. I. p.* 222.

BULLA, Duk. Terminalia bellerica, Sans. Pavonia odorata.

BULLAN. A river near near Dulsing Serai in Muzzfferpore district.

BULLAR, Duk. and Hind. Dolichos catiany and D. cultratus. See Dolichos spicatus.

BULLEAH. A river near Bumouree in Almorah.

BULL FROG, of Malabar. Rana Malabarica.

BULL-HIDE. See Leather.

BULLI or BULLY TREE, Eng. Achras sapota. Diospyros sapota.—*Willd.*

BULL NANDA. See Bull: Belanus Nandi.

BULLOA. The Southern part of the district of Tipperah.

BULOOKUNBOON? Ferns.

BULOOSITOON ROOMANI; YUNANI. Punica granatum.

BULPAM, Tam. Bulpamu, Tel Soapstone.

BULRUSHES (*Typhaceæ*).

Goma	Heb.	Booree	Sindee.
Pun	Sindee.	Putera, riri	„

Bulrushes, so conspicuous in the marshes of Europe, extend also to similar situations in most parts of India. The leaves are in some parts of Europe employed in making mats and winter coverings for plants, as well as for stuffing chairs, putting between the staves of barrels. The leaves of "putera" and "reree" (*Typha elephantina* and *T. angustifolia*) are employed in making mats in North-West India. In Sindh the former is called pun, and its leaves employed for making mats and baskets. The pollen, like that of Lycopodium, is inflammable, and used as a substitute for it as in Europe. It is also collected in Sindh, and there called "booree." Elephants are fond of T. elephantina. It is a valuable sand binding plant and it is tied into bundles as a swimming float.—*Royle Fib. Pl. p.* 35. See Kellek.

BULTI. A name of Ladak. See Bhot, India, p. 316, 337. Ladak, Maryul, Tibet.

BULTISTAN, Tibet proper, the land of the Bult or Bhot. Bultistan is partly mahomedan of the Shiah sectarians. See Tibet. Bhot.

BUL TUL or SHUR-JI-LA a pass leading to Cashmere in L. 34° 10′ L. 70° 15′. The crest is 10,500 feet.

BULUH, Malay. A bamboo.

BULUH PERINDU, Malay. The plaintive bamboo, also called Bulu-ribat, the storm-bamboo, in the forests of the Malay peninsula, Sumatra and Java, the natives make holes in the forest bamboos and plaintive sounds issue, when the wind blows. It is a sort of Æolian pipe. See Bamboo.

BULUN, Sindi, the water hog, a porpoise? in the river Indus.

BULUNG, Jav. Plocaria candida, Nees. Eucheuma spinosa; Agar-agar.

BULUT TAGH, according to Captain H. Strachey, is that part of the Kouenlun chain, which is east of Samarcand and South of Khokand. Bulut-Tagh means the cloud mountain, but the Kouen-lun chain is also called the Belur Tagh which, according to Cunningham, is synonymous with Balti Mountain: other names for the chain are Mustagh; Karakoram; Hindu-kush; and Tsung-lung or Onion Mountains from the prevalence on it of a species of Allium. Its continuation forms the Pamir range, west of Yarkand. The Kouenlun chain is not less elevated than the Himalaya and is covered throughout a great part of its length with perpetual snow. Its axis has not been crossed by any traveller, but has been reached by Dr. Thomson who visited the Karakoram pass elevated 18,300 feet. In Western Tibet, the axis of the chain is in general distant about 150 miles from the Himalaya and the country between the two consists of a complication of ranges of lofty and rugged mountains separated from one another by stony valleys, which at the higher parts of the courses of the rivers expand at intervals into alluvial plains.—*H. F. et. Th.*

BUMASEA, Rus. Fustian.

BUMBA. A race inhabiting the hills westward from Kashmir to the Indus.

BUMBA, Hind. Spout of a fountain, also a snake hole, also a cask.—*Ell.*

BUMBOO? Tam. A Palghat wood, of a yellow colour, from a large tree. It is used for building and for furniture.—*Col. Frith.*

BUMBUL, Hind. Rubus biflorus.

BUMEETHA, Hind. In Lower Doab, and hills, same as Bambhi in N. W. and Bithak in Oudh.—*Ell.*

BUMMALO. A small fish, salted and dried, also called Bombay Ducks, but found on all the coasts of Southern Asia. See Bombay; Fishes.

BUMTELE. Name of a rajput tribe on the Eastern parts of the Central Doab.—*Ell.*

BUN, Arab. (Boon) Coffee. Coffee berries.

BUN, Beng. Hind, Bŭn uncultivated, hence.—*Willd.*

" Bun Ada, Zingiber cassummunar, wild ginger.
" Burbuti, Phaseolus rostratus.
" Chalita, Leea crispa.
" Chandur 681, Flagellaria Indica.
" Charal, Desmodium gyrans.
" Chichinga, Tricosanthes lobata.
" Churi H. called also Bura, a high jungle grass of which elephants are very fond.—*Ell.*
" Gab, Diospyros cordifolia.
" Gooa, Areca triandra.
" Gu, Beng. Solanum melongena.
" Gumuk, Cucumis pubescens.
" Gundhina, Beng. Allium tuberosum.
" Huldee, Curcuma aromatica.
" Joeen, Clerodendon inerme.
" Jam Ardisia humilis.
" Joan Cnidium diffusum.
" Kaoa, Coffea bengalensis.
" Kapas, Hibiscus vitifolius.
" Kuchao, colocasia antiquorum.
" Kulay, Glycine labialis.
" Kulmee, Ipomœa striata.
" Lubunga, Ludwigia parviflora.
" Meethee Melilotus parviflora.
" Mether, Beng. Trifolium Indicum.
" Nurukalee, Beng. Ardisia glandulosa.
" Mullika Jasminum sambac.
" Naranga Gelonium fasciculatum.
" Narangie Biophytum sensitivum.
" Neel Tephrosia purpurea.
" Nutit Amarantus fasciatus.
" Okra, Urena lobata; Triumfetta angulata; Xanthium orientale.
" Palung, Sonchus orixensis also Rumex Wallichianus.
" Pat, Beng. Corchorus olitorius.
" Piring Melilotus lucantha.
" Putol, Tricosanthes cucumerina, Tr. dioica.
" Rai, Sinapis divaricata.
" Raj, Beng. Syn of Bauhinia racemosa.
" Sufed pooin, Basella alba.
" Shim, Lablab dumetorum; also L. vulgaris.
" Sulfa Fumaria parviflora.
" Sun. Beng. and Hind. Crotalaria verrucosa.—*Linn*
" Tepurija Physalis minima.
" Tulsee Ocimum adscendens.
" Turooi, Beng. Clubbed Luffa, Luffa clavata.
" Uch, Morinda exserta.

BUNA, Hind. Edwardsia mollis; Platanus orientalis.

BUNAFUR, a tribe of Yadu bansi rajputs in Oudh, Allahabad and Benares, Gurra mundla and Bundelcund.—*Ell.*

BUNAIR, the elder branch of the Eusufzye Affghan. The Eusufzye are democratic and agricultural, lying in warm sheltered fertile valleys, touching the Indus on one side and Panjkhora on the other, extending on the south to Kabul, occupying the northern part of the plain of Peshawar, Bunir, Swat, Panjkhora and the Eusufzye part of the valley. About the year 1865, they opposed the British army in an attempt to move up the Umbeylah pass towards the Mahaban, but they suffered severely and afterwards lent their aid against Mulkah, situated on one of the spurs of the Mahabun, mountain where fanatics from Hindustani had assembled.

BUNA, of Kaghan, Albizzia odoratissima.

BUNAS or ANAS. See Hindu.

BUNBASARA. The first of the paracidal Bhattya kings. See Bhattiya.

BUN-BHANTA, H. Wild egg plant, Solanum melongena —*Ell.*

BUNBHOOAY or BAMBHOOAI, Bur. Careya arborea.—*Roxb. Rheede.*

BUNCHONG BULU WOOD. A red dye wood of the Celebes. See Dyes.

BUND, Hind. Pers. (bănd) a slip of an account: Bund-behri, also Bund-phantah, a statement of a village account an embankment, a dam.—*Ell.*

BUND or BOOND, a dark blue silk with many spots largely made at Benares.

BUNDA. Pers. (băndă) Anything fastened; hence probably the English word bundle.

BUNDAH, Hind. (băndăh) A slave, a servant.

BUNDAH, the last Sikh guru, he was put to death by Aurungzeb in A. D. 1708.

BUNDAR, Hind. Pers. (băndăr) A harbour; hence Shah bundar, a harbour master, a port-master; perhaps also a Bunder-boat.

BUNDARI. A section of the second class or Bara-jati of the Khutri. See Khatri.

BUNDER ABBAS, formerly called Gambroon, in lat. 27° 10' N. at the entrance of the Persian Gulf is 5 miles north of Kishm island. It is in the south of the province of Kirman and is about eighteen days march from the town of Kirman.—*Horsburgh.*

BUNDERDEVA, its chief in the time of Bapha was Esupgol, who gave his daughter to Bapna.

BUNDELCUND. In Central India, is divided into four states, with which British India has treaties, viz. Rewah, Tehree or Oorcha, Duttia and Sumpthur, with 32 minor states viz. Sohawul, Jignee Ajeygurh, Baonee, Beronda, Bijawur, Chirkari, Chutterpore, Kotee, Myhere, Nagode, Oorcha, and Punna. Other Bundelcund states, viz. Jaloun, Jhansi, Jeitpore, Chirgaon, Shahgurh, Banpor, Purwa, Bijirago-gurh, Tiroha, and two of the Kalingar Chobey jaghires have been confiscated by the British Government. The name of Bundelcund is taken from a spurious rajput tribe descended from the Gurhwar of Kantit and Khyraghur who settled there in the 13th and 14th centuries, but they say that the devotion of their ancestors to Binda (Vindhya) Basni gave rise to the name. The name has also been derived from Banda a slave. In British Bundelcund, there are few of the Boondela race, except in the pergunnah of Punwari.

The Bindiyachal mountains in Bundelcund commence near Seundah, L. 26° 14,' L. 76° 50'; proceeds S. W. to Narwar 25° 39, 77° 52'; S. E. to 24° 12'; N. E. to Ajegarh, 24° 53', 80° 20'; and Kulleenjar, in the same vicinity, and E. to Barghar, 25° 10' 81° 36'. None are more than 2,000ft., the average between the Tura and Kuttra Passes, about 520 ft. The Tons falls over the brow by a cascade of 200 ft.; Bilohi, 398 ft.; and Bonti, 400 ft.

The lower parts are primary, rocks overlaid by sandstone. In many places are trap, or other formations of volcanic origin. The plateau, which surmounts the range, is from 10 to 12 miles wide.

Bundelcund has, in the past three centuries, been fifteen times desolated by famine and it is proposed to utilize the waters of the Betwa river to secure its irrigation.—*Elliot. Aitchison.*

BUNDI, Hind. A kind of sweetmeat, in grains.

BUNDI, a state of Rajputana.

BUNER. A district of Afghanistan North West from Peshawar. See Bunair.

BUNDESH, a religious book of the Parsee Zoroastrians.

BUNG, Pers. Hemp.

BUNG. See Kunawer.

BUNGA, Hind. A stock of straw.

BUNGA-BUA-PALA, Malay. Mace.

BUNGA-CHANKE, Malay. Caryophyllus aromaticus.—*Linn.*

BUNGA-LAWANG, Mahr. Caryophyllus aromaticus.—*Linn.*

BUNGA PALA. Bali. Mace.

BUNGA PUKUL AMPAT, Malay. Mirabilis jalapa. See Macassar.

BUNGARI KI LAKRI, Hind. Vangueria pinosa.

BUNGAROO, Tel. Gold.

BUNGA SURSON, Hind. Sinapis juncea.

BUNGARUS, a genus of reptiles. B. cæruleus, B. tropidonotus, B. Ceylonicus, are three poisonous serpents of Burmah and Ceylon, of the family Elapidæ, B. cæruleus occurs in most parts of India and in Burmah, B. fasciatus, common in Burmah is rare on the eastern coast of the Peninsula, B. semifasciata occurs in China. These snakes are from 4 to 6 feet long.

BUNGGA CHAPPA, Malay. Blumea balsamifera.

BUND-I-KAISER. A dyke or bund near the town of Shuster in Southern Persia, thrown across the river Kuren. Sir Henry Rawlinson says that it was constructed by Ardeshir Babigan or his son Shahpur, and the canal constructed is called Nahr-i-Dariyan, which waters the fields to the south in the Miandab. —*De Bode.*

BUNDR, Pers. (bănd'r) A port or harbour. A common post-fix and prefix as Bunder Abbas; Muchli Bundr, and the English Bundr boat. See Bunder. Bundar; Bandar.

BUN-GHI, Hind. Corchorus olitorius.

BUNGKA, Hind. also called Kutooa, an aquatic beetle which eats rice plants. It is said to make a leaf boat, which it paddles from plant to plant.—*Ell.*

BUNGLA, Hind. commonly, Bungalow, a one storied house.

BUNGUSH. In the Kohat district, the principal tribe are the Bungush Pathans. They can muster 15,000 fighting men, and are fairly good soldiers. They highly appreciated the British light money assessments, after what had been long termed the " robber rule" of sooltan Mahomed Barukzye. Up to 1848, he held Kohat as a fief from the Cabul government. It was then taken possession of by the British on account of hostility evinced during the second Sikh-war. The khan of Hungoo in the Bungush country, was in the British service as Revenue Collector, when he was murdered by one of his own relatives. The khanship descended to his son. The Bungush tribe have suffered much from the raids of their hill neighbours, Wuzeeree, Orukzye, Tooree, and Cabul-kheyl.

The inhabitants of the Meeranzye valley are also Bungush. This valley belonged to the fief of sooltan Mahomed, but being an outlying locality was overlooked when Kohat was taken possession of. The Cabul government then lost no time in arranging for the occupation of Meeranzye, which appeared to have been vacated; so sirdar Azim Khan, the governor of the Koorum province, in 1851, summoned the Meeranzye to surrender; but they petitioned the British to include them in Kohat. Under the circumstances this request was acceded to. They were in their hearts hostile to the British government, as indeed they were to any government whatever. They offered to guard the Kothul, and asserted that they had an hereditary claim, stronger than that of the Afreedee, to occupy the ridge. The Kothul was then made over to them, and as the Afreedee refused to open the Pass, it was resolved to establish a blockade and the Afreedee were debarred from entering the Kohat and Peshawur valleys. While these arrangements were progressing, the Gullee Afreedee suddenly attacked the Bungush people on the Kothul, and seized that post. Several Bungush chiefs were killed in the encounter, and Major Coke who was present, was slightly wounded. Upon this check, the Bungush people obtained the alliance of two small, though warlike, tribes, named Buzootee and Sepah. These were independent and dwelt in the hills near the pass. The Southern section of the Jewakee Afreedee also joined the league. See Affghan; Khyber 508, 517.

BUNHAN, a river of Jeypore.

BUNHO. A Penang wood, from a large tree; occasionally used for building.—*Col. Frith.*

BUNJ, Hind.? Hyosciamus hyoscyamifolia.

BUNJARA, Hind. also, Banjara. The name is supposed by Elliot to be derived from the Sanscrit Bunij, a merchant. Shakspeare derives it from the Persian birinjar, a rice carrier. In the Dasa Kumara Cheritra, a work written by Dandi, mention is made of a cock fight in a bunjara camp. But the bunjara are even indicated by Arrian as one of the classes of Indian society. They are chiefly wandering grain merchants and salt merchants, but many have settled down in the tract under the northern hills lying between Goruckpoor and Hurdwar. Some are mahomedans and say they came from Multan. Those of western India are usually Charuns, and their sacred character is a great protection to them.

The Turki Bunjara who are mostly carriers, have 36 tribes or got.

The Beid Bunjara have 11 "got," they came from Bhutnir and are now in Pilibit and Kant, and many are weavers and medical men.

The Lubana Banjara have 11 "got" are mostly agricultural. They claim to be descendants of Gour brahmins and to have left Runthumbor in Aurungzeb's time.

The Mookeri Banjara claim to have come from Mecca, and to reside in Jhujjur. They have 16 "got."

The Buhrup Bunjara are mostly hindu and lead a more wandering life. They are divided into the five tribes, Rathor, Chouhon or Koorri, Powar, Towur and Burtea, who are again subdivided into tribes or got. They claim to have come from Chittoor. They intermarry, but not with members of the same got. They have a close relation with those of the Dekhan, each community has a chief at its head styled Naik, to whom they yield implicit obedience.—*Elliot*, 128-131. See Bunjara.

BUNJAR, Hind. Waste land: land lying fallow, also indifferent soil.

BUNJIN, Hind. A weed which grows in the Kharif crops much sought after by fakirs who practice alchemy.—*Elliot.*

BUNKA THADA.

Bunka thadah... ...Tel. | Babtra ....Hind.

A wood which was sent to the Great Exhibition.

BUNNAS RIVER, rises in a cluster of summits in the Aravalli range, Lat. 24° 47' Lon. 73° 28' S. W. into Run of Kutch, by several small channels. Length, 180 m. About 17,000 sq. m. drained.

BUNNI, Hind. Payment in kind, hence Bunnihar a ploughman paid in kind.

BUNNOO valley is held by mixed races, who dwell in walled villages. They are undersized and sallow skinned. They are quiet, orderly and regular in revenue matters, but immoral, capable of reckless perjury and deliberate assassination. Bunnoo is intersected by the Koorum River which renders it rich and fertile and they cultivate with some industry. They are well affected to the British Government. Iron is imported in quantities from the Wuzeeree hills, and is worked up, at Kalabagh, into agricultural implements, cauldrons, cooking utensils, grates and fire irons, ladles, pegs, locks, horse shoes and chains. The Wuzeerees bring it down on bullocks and mules chiefly through the Koorum pass to the Bunnoo fair where it is bought up by carriers from Kalabagh who convey it back to that great emporium of the iron trade, where they sell it to the manufacturers. The spade in use in Bunnoo, called in Pushtoo "erm," is very peculiar. Tobacco is imported in large quantities from the Wuzeeree hills chiefly through the Koorum-walee and Dworukka. Much cattle is brought to the Bunnoo fair from Dour and the Wuzeeree hills; also numbers of goats and sheep. The Doomba is much prized, and is reared in the district as well as beyond the border.—*Latham.*

BUNNOOCHEE. The race occupying Bunnoo.

BUNNOOR. An Affghan tribe adjoining the Peshawur district. They are called Bunoorwal.

BUN-OTSURG, HIND., also, written Banotsarg, from ban a forest, "ootsarg" abandoning, a hindoo marriage ceremony performed in honor of a newly planted orchard, without which it is not proper to partake of its fruit. A man holding a Saligramma personates the bridegroom. Another holding the sacred tulsi, personates the bride. After a homa or fire sacrifice, the officiating brahmin puts the usual questions to the couple. The bride then makes three circuits of a spot in the orchard, moving from the south to the west followed by the bridegroom holding an end of the personating bride's garment. The bridegroom then takes precedence and circumambulates similarly.—*Elliot.*

BUNSEN, Karl Christian, born 1791 at Corbach in Waldeck. He was the son of a soldier, was long employed in Italy and England, as Ambassador and was the author of Egypts place in Universal history: description of Rome, Hyppolytus and his times: Signs of the times: Church of the Future; God in History, died 18—?—*Fraser's Magazine, June* 1868.

BUNT, Smut Balls or Pepper Brand.

Uredo caries	DEC.	Uredo fœtida	BAUER.

The fungus which occasions this disease, has hitherto been met with only in the grains of wheat, when its presence is readily recognised by the peculiarly disgusting odour of the infected ear. When this disease prevails, it greatly deteriorates the value of the sample; and from imparting its disgusting odour to the flour, makes it less fit for bread.—*Russell.*

BUNT, HIND., unripe pulse of Cicer arietinum.

BUNTA-JAMUDU, TEL. Euphorbia antiquorum.—*Linn.*

BUNTAKI, HIND. Solanum melongena.

BUNTURIA. A class of wood rangers in the northern parts of Goruckpur. They are now cultivators.—*Ell.*

BUNUN, HIND. Fragaria vesca.

BUN-ZU, written also Bom-zu and Bom-du, a tribe of the Ra-Khoing, who dwell north of the Koladan river inhabiting chiefly the eastern basin of the Kurnfuli or eastern branch of the Chittagong river. To their north are the closely allied tribes, the Lungta, Kungye or Kuki, inhabiting the highlands of Tipperah and extending South East towards the head of the Koladan, both the Bunzu and Kuki appear like the Kumi to belong to the Burmah family.

BUOYS, ENG.

Bouis	FR.	Apung timbulkan	MALAY.
Ankerboyen	GER.	Boyas	SP.
Gavitelli	IT.	Langaru Gurutu	TEL.
Ampung, Lampung	MALAY.		

A floating body employed to point out the situation of anything under water, as a ship's anchor, a shoal, a sand-bank or the course a ship should take entering a harbour: they receive various names.—*Faulkner.*

BUPHUS COROMANDUS, one of the crane tribe. These with Ardea cinerea, A prasinosceles and Herodias garzetta are common in India.—*Collingwood.*

BUPARITA. RHEED. Thespesia populneus.

BUPHTHALMUM RAMTILLA, BUCK. Guizotia oleifera. *D. C.*

BUPLEURUM MARGINATUM.—*Wall.*

Kali Zewar	HIND.	Zira	HIND.
Sipal	„		

This and allied species are abundant in many parts of the Punjab Himalaya, from 2,500 to 11,500 feet. In Kanawar the root is stated to be eaten raw, and the seeds to be exported as Zira.—(See Carum).—*J. L. Stewart, M. D.*

BUPRESTIS. See Beetles; Coleoptera.

BUPSA, a river of the Sabathoo circle.

BUQ, PERS. A goat's horn, buq-i-Hamam, the horn summoning to the bath.

BUQR-EED, or Eed oos Zoha, held on the 9th day of the twelfth month Buq-reed. On this occasion, mahomedans proceed to the Eed-gah in great state, when the khootbah is read in the name of the ruling sovereign.

BURJA, TEL. Hymenodyction excelsum.—*Wall.*

BURI MAE, HIND. Tamarix indica.

BURJ, a bastion. See Boorj.

BURJ, HIND. Also Burjri, Betula bhojputra, B. Jacquemontii, *Spach, Birch.*

BURKA, in lat. 23° 43°′ N. long. 57° 54′ E. a town 40 miles west of Muskat and the summer residence of the Imam.—*Horsburgh.*

BUR KA JHAR, Hind. Ficus Indica.

BURKOOK, Khubani, Mishmish, Bakur-Khanee, Hind. Pers. Armeniaca vulgaris, The apricot.

BURKUNDU, Hind. Caragana tragacanthoides.

BURMAH, an independant kingdom bordering on British India, to the East, and lying between British India and China.

In the Burmese Chronological table, translated in Crawfurd's Embassy, are the following events:

B. C.		
691	Sacred Epoch.	The grand epoch established by An-ja-na the grandfather 7 Guatama.
628		Gautama born.
608		„ began to reign.
589		Gautama obtained deification (became a Buddha).
544		Gautama died and obtained Nib'han (annihilation.)
543	1	The sacred epoch established by king Ajatasat.
94	450	The communications of Gautama reduced to writing inCeylon.
A. D		
76	P. E. 1	The Prome epoch established by king Sumundri.
639	V. E. 1	The Vulgar epoch established by Puppa-Chan-ra-han.
1364	726	Uch-cha-na-praung, in Chit Kaing. But this year Sa-to-mang-bya, founded Angwa (Ava), and began to reign: and Chitkaing and Panya were destroyed.
1752	1114	Alaung b'hura (Alompra) began to reign at Mut-cho-bo (Monchabo.)
1781	1143	His cousin, Paing-ka-cha commonly called Maung-mang, son of U-pa-ra-ja at Ava, succeeded the same year by his uncle Padem-mang, or Man-ta-ri-kri son of Alaung-b'hura, and founder of Ama-ra-pura.
1822	1184	Ava re-built and made the capital.—*Prinsep's Antiquities, p. 294.*

The Burmese seem to have been an intruding race conquering from north to south, and the boundaries of their kingdom have greatly varied. At present the population of the territories, subject to the king of Burmah, including the tributary Shan states, probably does not exceed three and a half millions of souls. The area of the whole country is about 192,000 square miles.

A treaty is said to have been entered into in 1795 between the Indian and Burmese Governments, and in 1795, Captain Michael Symes was sent as envoy to Ava, but from 1797, disputes regarding Arakan began and the fugitives into Chittagong were, in 1798, demanded from the British.

Colonel Symes returned to Rangoon, where he was not treated with ordinary civility by the Governor, and he left for Bengal in January 1803. After this, Captain Canning was sent on two occasions, the latter in 1809, on the first he was treated discourteously, but on the latter with civility. In 1811 the Arakanese again rebelled and invaded Burmese territory and in 1811 Captain Canning was again sent to mediate. Subsequently to that year the Burmese officers in Arakan more than once made demands for the surrender of Arakanese refugees and even made pretensions to the sovereignty of Bengal, as far as the city of Moorshedabad, as territory pertaining to the kingdom of Arakan. In 1819 they interfered in Assam, and in 1824 they invaded Cachar. War was declared against Burmah, on the 5th March 1824, and after two campaigns under Sir A. Campbell a treaty of peace was declared at Yandaboo, on the 24th February 1826. Subsequently, in 1851, in consequence of the Burmese refusing redress to a British shipowner whom they had injured at Rangoon, war was again declared and was conducted successfully by General Godwin.

Rangoon fell to a combined Naval and Military Force on the 14th April 1852 and when peace was declared all Pegu and Arakan were retained by the British. Burmah is ruled by a king and by the Atwen-woon, Burmese Privy Councillors, of whom there are four. They are inferior in rank to the Woon-gyi, but between them and the Woon-dook precedence is disputed.—*Yule's Embassy, p. 72.*

The Burmans proper occupy the valley of the Irawaddy, mixed with Karens, from L. 18° N. to the delta. They are budd'hists. Their language, the Burmese, is spoken in Arakan, in the valleys of the Irawaddy and Sitang, and in Tenasserim to the south of Tavoy. The Arakanese and Burmese are called Myamma and are of the same race. There are numerous Shan states far to the north-east, but they generally owe fealty to the Burmese Monarch.

The Burmans, are lively, inquisitive, active, irascible and impatient.

The Burmese tattoo themselves and, after certain Turks, are perhaps the most civilized men and women who do so. The Burman woman's lower garment is a narrow cloth of various colors, of a pleasing contrast, which descends generally from the waist or from below the arm to the feet. It is made to overlap and in front is tucked in, but it is so narrow that as the wearer walks, the thigh is more or less shown at each step.

From Prome to Ava the country is characterized by unevenness and general elevation. Northerly, it is decidedly mountainous. Mountains 4 m. N. of Ava, 4,000 ft. Zyngait Mts., forming a kind of elevated doab between the Salwen and Sitang rivers. Gold, silver, iron, tin, lead, antimony, and other metals, are met with. Quarries of marble are worked near Amerapoora. There are many fossiloferous rocks and coal has been discovered on the Irawaddy.—*Aitchison's Treaties, &c. Pages* 202 & 203. *Prinsep.*

BURMAN BOX-WOOD. Murraya, *species*

BURMANN, author of the Thesaurus Zeylanicus, published in Holland, which he wrote from the collections made in Ceylon, by Dr. Paul Hermann, a medical man in Ceylon. The same collection served Linnæus to write his Flora Zeylanica and it is now in the British museum. Subsequent to this, in the year 1768, Professor Nicholas Laur, Burmann of Amsterdam, son of the author of the Flora Zeylanica, published his Flora Indica, with 67 plates, containing figures of 178 plants tolerably executed, but much inferior to those in the Flora Zeylanica.—*Wight's Prodromus Floræ, Vol. I. p.* 10, quoted in *Hook. et. Th.*

BURMANNIA, a genus of plants of which three species are known in India, B. disticha of Ceylon Concan and New Holland. B. cœlestis of Nepal, and B. triflora of Penang.—*Voigt,* 594.

BURMAR, HIND. Artemisia parviflora.

BURNA, a river running near Chobeepoor, in Benares district.

BURNAK, HIND. Artemisia sacrorum.

BURNEE, a river near Shahpoor in the Northern Concan.

BURNES. Three brothers of this name served together in India. The eldest, James Burnes, K.H., L.L.D.; wrote a History of Cutch and visit to the Court of Sind: Sir Alexander Burnes, Kt. who wrote his travels in Persia and History of Cabul, at which place, along with their youngest brother Charles, he fell on the 2nd November 1841. They were natives of Montrose in Scotland, sons of James Burnes, provost of the town, and relatives of the poet Burns.

BURNES, SIR A., a distinguished officer of the Bombay Army, who entered the service in 1822, and was killed at Cabool in 1841. He was very conspicuous for his zeal and ability as a linguist, statist, and general observer. Travelled alone from Bombay through Sind, the Punjab, and Bokhara to the Caspian Sea, returning by the Persian Gulf, betwixt 1831 and 1833. Was despatched on a mission to Cabool in 1837; Assistant to the Envoy from 1838 to 1842: Author of Notice of hospital for animals at Surat, *Jl.* Vol. I. p. 96.—On the Colossal images in Bameean, *Bl. As. Trans.* 1833, Vol. II. p. 563.—Travels into Bokhara, *Lond.* 1834, 3 Vols.—On Female Infanticide in Cutch, *Lond. As. Trans.* 1834, Vol. I. p. 193.—Cabool 1837 and 1838, *Lond.* 1842, 1 Vol.—Notice of Sind, *Lond. Geo. Trans.* 1837, Vol. VIII, p. 2.—Observations on the maritime communications of India, as carried on by the Natives, *Ibid,* 1836, Vol. VI. p. 2. —On the ruins of Puttun Somnath, *Lon. As. Trans.* Vol. V. p. 104. A Memoir of his life appeared in the *Bombay Times, December* 1841 *As. Jl.* 1842.—Dr. Buist's Narrative of Affghanistan, *Bombay* 1843, *Dr. Buist's Catalogue.*

BURNES, DR. JAMES, [illegible] Bombay Medical Service, but retire[illegible]ian General 1850, having formerly held[illegible]es of Assistant Resident, Cutch; and Secr[illegible] Medical Board, Author of Visit to the Court of Scinde, with sketch of the history of Cutch, 1839, I Vol. 12mo. *Memoir of, Calcutta,* 1840, *and London,* 1851.—See *Dr. Buist's Catalogue.*

BURNING OF WIDOWS, existed in early times amongst Thracians, Getæ, and Scythians.

In the island of Lombok, wives may suffer themselves to be burned or krised after the death of their husbands. They are not compelled to do so. Such an event very seldom occurs, and during one traveller's stay there was only a single widow who allowed herself to be krised. They have the choice of allowing themselves to be burned or krised. The former is the more rare. The wives of the Rajas, however, must suffer themselves to be burned. When a Raja dies some women are always burned, even should they be but slaves. The wives of the priests never kill themselves. An eye witness thus relates how one was conducted: The gusti who died at Ampanan left three wives. One of them resolved to let herself be krised in honor of him, and that against the will of all on both sides of her family. The woman was still young and beautiful; she had no children. They told me that a woman who under such circumstances, suffered herself to be killed had indeed loved her husband. She intended to accompany him on his long journey to the gods, and she hoped to be his favorite in the other world. The day after the death of the gusti, his wife took many baths; she was clothed in the richest manner; she passed the day with relatives and friends, drinking, chewing sirih and praying. About the middle of the space before the house they had erected two scaffoldings or platforms of bambu of the length of a man, and three feet above the ground. Under these they had dug a small pit to receive the water and the blood that should flow. In a small house at one side and opposite these frame works were two others entirely similar. This house was immediately behind the *bali-bali*. At four o'clock in the afternoon men brought out the body of the gusti wrapped in fine linen, and placed it on the left of the two central platforms. A priest of Mataram removed the cloth from the body while young persons hastened to cover the private parts of the dead with their hands. They threw much water over the corpse, washed it, combed the hair, and covered the whole body with chámpáká and Káuángá flowers. They then brought a white net. The priest took a silver cup filled with holy water (called chor) on which he strewed flowers. He first sprinkled the deceased with this water, and then poured it through the net on the body, which he blessed praying, singing, and making various mystical and symbolical motions. He afterwards powdered the body with flour of coloured rice and chopped flowers, and placed it on dry mats. Women brought out the wife of the gusti on their crossed arms. She was clothed with a piece of white linen only. Her hair was crowned with flowers of the Chrysanthemum Indicum. She was quiet, and betrayed neither fear nor regret. She placed herself standing before the body of her husband, raised her arms on high, and made a prayer in silence. Women approached her and presented to her small bouquets of kembang spatu, and other flowers. She took them one by one and placed them between the fingers of her hands raised above her head. On this the women took them away and dried them. On receiving and giving back each bouquet the wife of the gusti turned a little to the right, so that when she had received the whole she had turned quite round. She prayed anew in silence, went to the corpse of her husband, kissed it on the head, the breast, below the navel, the knees, the feet, and returned to her place. They took off her rings. She crossed her arms on her breast. Two women took her by the arms. Her brother (this time a brother by adoption) placed himself before her, and asked her with a soft voice if she was determined to die, and when she gave a sign of assent with her head, he asked her forgiveness for being obliged to kill her. At once he seized his kris and stabbed her on the left side of the breast, but not very deeply so that she remained standing. He then threw his kris down and ran off. A man of consideration approached her, and buried his kris to the hilt in the breast of the unfortunate woman, who sunk down at once without a cry. The women placed her on a mat, and sought, by rolling and pressure, to cause the blood to flow as quickly as possible. The victim being not yet dead, she was stabbed again with a kris between the shoulders. They then laid her on the second platform near her husband. The same ceremonies that had taken place for him now began for the wife. When all was ended, both bodies were covered with resin and cosmetic stuffs, enveloped in white linen, and placed in the small side house on the platforms. There they remained until the time arrived for their being burned together.

It is always a near relation who gives the first wound with the kris, but never father or son. Sometimes dreadful spectacles occur; such was one at which Mr. K. was present. The woman had received eight kris stabs, and was yet quite sensible. At last she screamed out, impelled by the dreadful pain, "Cruel wretches, are you not able to give me a stab that will kill me!" A gusti who stood behind her, on this pierced her through and through with his kris.

The native spectators, whom, he adds, I had around me, saw in this slaughter which took place before our eyes, nothing shocking. They laughed and talked as if it was nothing. The man who had given the three last stabs wiped his kris, and restored it to its place, in as cold blooded a manner as a butcher would have done after slaughtering an animal.

Only the wives of the more considerable personages of the land allow themselves to be burned, because this is attended with much more expense than krising. They then make a very high platform of bambu. The woman ascends after many ceremonies, and when the fire is at its greatest heat. She then springs from above into the middle of the flames. Mr. K. thinks that they do not suffer much because during the leap they are stifled; and at all events the fire, strengthened by fragrant resins, is so fierce that death must speedily ensue.

The Balinese dress in Lombok in the same manner as in Bali, and the Sassaks nearly in the same way. For example, although mahomedans, they have uncovered heads. The Sassak-women, differ a little in their dress from the Balinese. In the first place they do not bind up their hair with a piece of white cloth, like the Balinese, but go bare headed like the men. Some wear a short *baju* like the women of Sambawa and Makassar, others have the bosom naked, or covered with a *slendang* of a coarse stuff, striped red and black in the length. The *sarong* is almost always of blue or black cloth.

The food of the people of Lombok differs in nothing from that of the people of Java. The Balinese, who may not eat beef, substitute for it pork. Both races eat buffalo flesh, goat's flesh, fish and poultry.

The people of Lombok are neither more nor less superstitious, than all the other people of the Archipelago. It is the Rinjani especially which makes an impression on the people, on account of the bad spirits which reside upon it. My travelling companions for example, he adds, told me not to shout upon the mountain because the bad spirits would become irritated, and not to take any stones from the ground, because they would resent it and play us some bad trick. Whoever wishes to approach the Segara Anak must be blessed, fasting, and have said his prayers and be clothed in white. As they approach it they must notice what appearance it presents to them. The more lengthened it appears to them, the longer time will they live. If it looms broad they will quickly die. All these ideas are found however over all the Archipelago, round the volcanoes, and in spite of all modifications which they have undergone, through time or local circumstances, they are all based upon the belief of a supernatural and malevolent power which causes and regulates, the working of the subterranean fire. No religion, not even the christian, will root out these fixed ideas from this people. Impressive phenomena, like volcanic, sound louder than all reasonings in the ears of uncivilized and timid men.—*Journ. Ind. Arch. No.* IX. *Vol.* V. 537.

BURNING the dead, is the usual mode by which the Arian hindus all over India, dispose of the remains of those who die. It was formerly a practice in China but has been discontinued there since the middle of the 18th century.

BURNOUF, Eugene, a learned Frenchman, who devoted much of his life to oriental investigations. He was a sanscrit scholar, in 1840-1847, edited and translated part of the Bhagavata Purana. He published in 1844 his introduction a l'Histoire du Buddhisme. He died in 1851.

BURO-BET, Beng. Calamus fasciculatus. —*Roxb.*

BURO KUPUR CHITTU, Beng.? Tetranthera monopetala.—*Roxb.*

BURO LUNIYA, Beng. Portulaca oleracea.—*Linn.*

BURONG-BERROM, Malay. A large white and blue pigeon of Banda.

BURONI CHETTU, Ficus rubescens, *Vahl.* —F. heterophylla, R. iii. 532.

BUROON, Beng. Caper tree, Capparis trifoliata.

BURODA, the chief town of Guzerat and capital of the Gaekwar; Chandanavati, was an ancient name of Baroda having been founded by Chandun, chief of the Dor Rajputs, but Chandanavati means the "city of Sandalwood." This name was changed to Viravati, the "abode of warriors;" and subsequently to Burpotra or "Leaf of the Bur" perhaps from some fanciful resemblance of the circumvallation to a banyan tree leaf. This has been softened into Baroda.

BUROONGI, Hind. Quercus flexuosa, of the Mehra forest, near Abbottabad. An evergreen oak, bearing acorns; leaves of the young plant are like those of the holly.—*Cal. Cat. Ex.* 1862.

BURO-PHUTIKA, Beng. Melastoma malabathricum.—*Linn.*

BURO REETA, Beng. Sapindus emarginatus.—*Vahl.*

BURO-RUKTO-KUMBAL, Beng. Nymphæa rubra.—*Roxb.*

BURO SHIAL KANTA, Beng. Argemone Mexicana.

BURR. Wherever Arabs are met with in tents, they denominate their place of encampment "Burr," or wilderness; the term Zahara, or desert, being more particularly applied to the wilderness of Africa.—*MS. of Mr. Rassam* quoted in *Euphrates and Tigris, Col. Chesney, p.* 574.

BURRA-ELACHEE, Hind. Elettaria cardamomum medium.

BURRA-FLAWAN, Hind. Caryota urens.

BURRA-GHOKRU, Hind. Duk. Pedalium murex.

BURRA JAMUN, Hind. Eugenia jambolana.

BURRA LASOORA, Hind. Cordia latifolia.

BURRA MANGA, Hind. Canthium parviflorum.

BURRAR, Hind. In Rajputanah, is an indefinite term for taxation, and is connected with the thing taxed: as ghaneem *burrar*, 'war tax;' *gurh ginti-burrar*, 'house tax;' '*hal-burrar*,' 'plough-tax;' *neauta-burrar*, 'marriage-tax' and others, both of old and new standing.—*Tod's Rajasthan, Vol. I, p.* 143.

BURRASHEE. A river near Jeynuggur in Jessore.

BURRA WAFAT. Ar. The great death. In the ritual of the mahomedans, the death of Mahomed, it occurred on the twelfth day of the third month Rubbee-ool-awul.—*Herk.*

BURRAY KAROONDAY, Duk. Carissa carandas.

BURRAY BENGAN, Duk. Brinjal. Egg-plant.

BURRI, H. Dibbling grain, Gurri, Gulli and Si are all similarly applied.

BURRI TOOVAR. Dhal; dhal; Tour, Cajanus Indicus; Cytisus cajan; Pigeon pea, Large Dhal.

BURRO, It. BUTTER.

BURRO, also, Kulm, Guz. Hind. and Pers. Reed Pens.

BURROW. See Barrow : Burial : Cairns.

BURSAWUL of the Yerkli. Aquila fulvescens.—*Gray.*

BURSE, Hind. Eurotia ceratoides.

BURSENAPUTI, the chief of the Muttuk branch of the Singhpo group. He is a vassal of the rajah of Assam, and the people are called Muttuk Moamerria or Mowameria. Their country is a short distance from where the Brahmaputra river enters the Assam valley, and they dwell close to the banks, and principally on the southern side.

BURSERACEÆ. A natural order of plants nearly all natives of tropical climates. About twenty-four species have been found in the south and East of Asia, of the genera Balsamodendron, Boswellia, Canarium, Garuga, Icica and Protium. They have all an abundance of fragrant resinous juice. Boswellia serrata yields olibanum. Canarium Bengalense, of this tribe, according to Dr. Roxburgh, exudes an excellent clear amber-coloured resin, not unlike copal. In America, as in India, several valuable resins as Elemi, Carana, Chibow, and two or three kinds of Tacamahaca are afforded by plants of this tribe.—*Royle's Ill. Him. Bot., p.* 177. *Voigt. p.* 149.

BURSERA SERRATA, Wall. Syn of Icica Indica.—*W. and A.*

BURSINOPETALUM ARBOREUM, Wight Var. *macrophyllum, c. p.* 637, 2440. A large tree of the forests of the Central Provinces of Ceylon, growing at an elevation of 4,000 to 7,000 feet.—*Thw. En. Pl. Zeylan,* 42.

BURSINOPETALUM TETRANDRUM, Wight, a large tree of Ceylon.—*Thw. Enum. Pl. Zeyl. I. p.* 42.

BURSTEN, Ger. Brushes.

BURSUNGA. Hind. The leaves of Bergera Konigii, used medicinally.

BURTON, R. F., of the Bombay Army, in which he rose to the rank of captain. Author of Goa and the Blue Mountains. Description of Sind, or the unhappy valley, Lond. 1851, 2 vols. Scind and the races that inhabit the valley of the Indus. Lond. 1851, 1 vol. Journey to Mecca. Travels in the Somali country. Contributions to Blackwood's Magazine. The city of the the Salt Lake.—*Dr. Buist's Catalogue.*

BURU, a large island in the Eastern Archipelago, being about two hundred miles in circumference. The bulk of the inhabitants are a comparatively fair people, very closely resembling the natives of Amboyna ; and the only tribe that is likely to be Papuan, is a small community which resides in the neighbourhood of a mountain lake near the centre of the island. This lake, which seems to have excited curiosity at Amboyna, was visited by parties from the garrison in 1668, and again in 1710, and their observations are recorded at some length by Valentyn, in his "Beschryvinge Van Oost India."—*Mr. Earl, p.* 185. See Papuans.

BURU, Beng. Large, hence.

Buru-bel, Beng. Jasminum plenum.

Buru-bet, Beng. Calamus fasiculatus.

Buru-buhooyari, Beng. Cordia latifolia.

BUSHAN, Hind. Of upper Chenab, Salix alba, white willow.

BUSHAIR, the natives of Bushair, Sookeytmundee and Kooloo in the Kohistan of Jhullundhur have all sallow complexions and seem all of the same race. See Kohistan.

BUSHIA. A town with horses, yaks, sheep, provisions, &c. The people, half nomadic Tartars, appear very honest; the prices they asked were certainly moderate. They inhabit caves fitted up like houses, in the cold season, and tents during the rest of the year. The height of Bushia is 9,200.—*Rep. Proceed. Mag. Surv. India, p.* 3.

BUSHIR, also known, as Abu-Shahr and Bu-Shahr, a town in the Persian Gulf in Lat. 29° and Long. 50° 50' which was captured by the Indian naval and military forces on the 10th December 1856. Out of the plain near *Bushehr* many vases have been taken, formed of ill-baked clay, and filled with seeds of the plant tulah or mallows which soon decay when affected by the fresh air. Earthen urns, containing the remains of human bodies, are said to abound on the plain of *Bushehr*; and persons reside there who, with very little trouble, can indicate the spot where they lie, although buried in sand.—*Ouseley's Travels, Vol. I. p.* 216.

BUSH-KURD. The district of Bush-Kurd is looked upon by the natives as a part of the Kohistan, and the Koords, who inhabit it, are never spoken of by the term Mukranees a people of Mukran: but it is south of the Kohistan, and unquestionably in Mukran. It is one uninterrupted and rugged mass of mountains, that afford pasturage for the cattle of the Koord Belooches, who depend on the lower countries for grain and other supplies. These people are a tribe of Koords that have advanced out of Laristan.—*Pottinger's Travels, Beloochistan & Sinde, p.* 305-6.

BUSH QUAIL, Lowa, Hind. See Birds. Quail.

BUSI or *Nevaladuga manu*, Tel. Vitex arborea —*R.*

BUSKRUID, Dut. Gunpowder.

BUSSAHIR is in Kunawar in the upper course of the Sutlej river. In Bussahir, the inhabitants suffer from goitre, but not so much as in the valleys of the Pabur and Tonse; the general impression is that the disease arises from drinking snow water, but this seems erroneous, as the people in the higher valleys do not suffer so much as those in low situations.

In times of scarcity, the people of Kunawar eat Himalayan chestnuts, Pavia Indica, and apricot kernels; they soak them to remove the bitterness and grind the whole into flour with the inferior millets, forming large chupatties (bannocks.) The fleshy and stone fruits of Kunawar are the grape, apricot, peach, apple, walnut, and mulberry. Sungnam is famous for its apples; Akpa for grapes; and Pangi for walnuts. From Kanam to Miru ridge, in upper Kanawar, are to be found,—Cedrus deodara, Pinus gerardiana, P. excelsa, Abies smithiana, Picea webbiana, Juniperus excelsa, J. squamosa, Populus alba, Juglans regia, Corylus lacera, Armeniaca vulgaris. Pyrus malus, Cerasus puddum, Quercus ilex; and Salix alba —*Cleghorn Panj. Report, p.* 58.

BUSSALA, It. Compass.

BUSSEL, Arab. Onion.

BUSSAWUL, in Long. 75° 49' E. and Lat. 21° 9' N.

BUSSI KHEIL, a tribe on the borders of British India. The Afridi lie between Peshawar and Kohat, they are fierce, factious and strong, and with the Bungush the Jewaki, Bari, Bussikheil and Busti kheil, as also the Sipah and Bizotu, are more or less independent.

BUSSO, BOSSO, BOSSOLO, It. Box.

BUSSORAH. See Bassorah.

BUSSUNT'H, spring time, the *bussunth* or spring songs and the *megh* or cloud songs of the monsoon, are full of melody, a spring festival is observed at Lucknow.

BUSSUNT-GAH, is at the foot of the southern range of hills running parallel to Mount Aboo.

BUSSY. An eminent commander of the French in India, from A. D. 1751. He threw all his influence in support of the Nizam of the Dekhan, was present at the battle of Amboor which the French gained and Anwar-ud Din fell, and he attacked Gingee successfully. He was attached to Muzuffar Jung, but after the demise of the latter he appointed Salabut Jung to be subadar of the Dekhan and accompanied him to Aurungabad. He subsequently defeated the Peshwa, and was able to obtain for Dupleix the title of Nawab of the Carnatic. He subsequently obtained the cession of four provinces near Aurungabad, then of the four Circars. He was afterwards dismissed the Hyderabad service but made a bold stand. He then returned to the Dekhan and joined Lally at Arcot, and was taken prisoner at the battle of Wandewash.—*Malleson, French in India.*

This noble bird is 4½ to 5 feet long, and extent 8 feet. It weighs lbs. 26 to 28. It is not known in Bengal, Behar or the Malabar coast, but seeks the open grassy plains of India. It is becoming very scarce in the cultivated country. In the Mysore country, in 1837, I once raised three or four in one morning's ride, to the east of Bangalore, but since 1845, I have never seen one, though I have since travelled over many thousand miles of the Peninsula. They are said to be, still, abundant in Rajputana, their usual food are insects, but they eat reptiles and fruits. They are polygamous and at the breeding season, the male struts about on some eminence puffing out the feathers of the neck and throat.

Otis lucionensis of China it is supposed may be a distinct species. Other species are E. nubra, *Ruppel*, E. ludwigi *Rupp.* E. Caffra *Licht.* E. Denhami, *Children.* E. Arabs, *L.* and E. Kori *Burchell*; A species very closely allied to E. Edwardsii, is the Otis Australis, *Gray*, the wild. Turkey of Australia.

Houbara Macqueenii, Gray.

Indian Houbara Bustard...............ENG.
Hurriana Florikin ,,
Tilaor...... ....HIND.
Otiss marmorata, GRAY.
Dugdoor of Affghanistan.
Obarra W. Punjab.

This bird has a beautifully crested head, is 25 to 30 inches long, and extended is 4 feet. It weighs 3¼ to 3½ lbs. It is supposed that both the male and the female assume the ruff in the breeding season. It is found throughout the plains of the Punjab, and upper Sind, where it is much hawked with the Charragh falcon, the Falco sacer, it also occurs from Delhi to Afghanistan, in Mesopotamia, in Europe and England. It occasionally baffles the hawk by ejecting on it a horribly stinking fluid which besmears and soils the hawks plumage. *Houbara undulata* occurs in N. Africa and Arabia and visits Spain.

Sypheotides bengalensis.—Gmelin.

Otis deliciosa......GRAY.

The Bengal florikin, is about 24 to 27 inches long, and 44 to 47 inches extended. In the breeding dress of the male, the whole head, which is crested, also the neck, breast and lower parts with the thigh coverts are deep glossy black. It is found from lower Bengal to all along the foot of the Himalaya. The sexes live apart, at no great distance from each other. They eat insects and sprouts of plants. It is shy and wary.

Sypheotides auritus.—Latham.

The Canarese, Mahratta and Telugu names mean "ground peafowl."

In breeding plumage, the male, in head, neck, ear-tufts, medial wing covers, and the whole lower plumage is deep black, the chin alone is white. It is 18 or 19 inches long and weighs 16 or 18 oz. Dr. Jerdon considers the black and common gray florikin to be identical, but in the plumage of different seasons; it is found throughout India from the Himalaya to the south. It eats insects and beetles. It is hawked by the "baz," the "luggur," the Shahin" and "Wokhab."

Otis tetrax L. the Tetrax campestris, is the small bustard of Europe, is said to have been found in the Peshawar valley and occurs in central and western Asia and North Africa.

The following are bustards of Africa, some of which spread into Arabia, viz. O. Rhaad, *Shaw*: O. Cærulescens, *Viell.* O. Scolopacea *Temm*: O. Afra *L.* O. Afroides. S. O Senegalensis, *Viell*: O. Melanogaster, Rupp. *Ainslie Mat. Med., p.* 396. *Eng. Cyc.* 697,701. *Jerdon Bird's, iii*, 606. See Aves: Birds.

BUST. A town of the Garmsir district in Sejistan. It is situated on the west of the river Helmand, and is noted for its great heat.

BUSTAN-AFROZ, HIND. Amarantus cruentus, properly, Bostan-afroz.

BUSTAR a native state west of Ganjam.

BUSTAR, two towns in India, one in L. 87° 5' E. and L. 21° 45' N. the other in L. 82° 26' E. and L. 19° 33' N.

BUR, HIND. Ficus India, also, Tamarix orientalis, Oreosersis lanuginosa, Cymbopogon iwarancusa.

BURA, HIND. Chopped straw.

BURA-AL, HIND. Morinda citrifolia.

BURABUR CAVES. The hills called Burabur are isolated rocks of sienitic granite rising abruptly from the plain about 15 miles north of the city of Gyah, by the left bank of the Phulgo or Mahanudda; the cluster is remarkable for its picturesque appearance, and for the noble masses of rock piled, as it were, one above another, with hardly any soil, consequently little vegetation, and rising to various heights, from 100 to 300 or 400 feet. Although Burabur is that by which the cluster is commonly known, each hill has a name of its own. The highest being called "*Burabur*," also "*Sidheswur*," from a temple to Mahadeva that once crowned its heights. The next in height is the "*Kowa Dol*," which is detached from the rest by near a mile to the south-west. A third is called "*Nagarjuni*," and is the easternmost of the great cluster. A fourth, and the smallest, called "*Durhaunt*," is at the northern extremity; others also, have names, but the above alone contain objects of notice. The *Kowa Dol* is an almost entirely bare rock having nearly a perpendicular scarp on its northern face, and sloping at an angle of 45°, more or less, on the opposite or southern side: east and west, it is disjointed and inaccessible; huge stratified masses are piled one over the other, decreasing in length at each end, the whole is surmounted by single blocks like pillars; the centre one of which towers above the rest and is conical. It is said that formerly there was a huge block balanced on the top of this cone, which from its being moved by birds alighting on it obtained the name of "Kowa Dol" or crow-moved, or the crow swing; about a century or less back, this rocking stone fell down to where it may still be seen. This hill seems to have been surrounded by a large town; there is an artificial mound continuous round the north and east faces, filled with broken pottery, bricks and blocks of hewn stone; there are two names given, "Saruin" and "Summunpoor;" on the portion called by the latter name there is an extensive mahomedan cemetry; there are none but paltry monuments with fragments of some ancient Budhist temples built into them. The caves of Barabur differ from all other works of the kind known to us. These caves or chambers are, with one exception, entirely devoid of sculpture or ornament of any kind. They are, in all, seven in number; four in one hill, three in another, but the name "Satgurba," commonly understood to mean "seven chambers," is applied to two only.

In the hollow or recess on the east side are the remains of a once splendid buddhist temple, of which many pillars are still standing; also a gigantic idol of Buddha, seated, with no other inscription than the usual pious sentence of the buddhists. The dimensions of this figure, which is beautifully executed, are as follows:—

	Ft.	In.		Ft.	In.
From seat to crown of the head	8	8	Lengthof upper arm	2	9
Across the shoulders	4	0	Do. lower do...	2	0
From knee to knee	6	0	Round the arm......	2	8
Round the wrist...	5	6	Do. the wrist......	1	6
Do. the neck......	3	8	Depth of head	2	6
Do. head..........	5	8	Do. of face	1	6
Across the forehead	1	4	Length of hand ...	1	4
Length of thigh. ...	3	6	Do. of foot........	1	6
Do. of shin..... ...	3	6	Breadth of do... ...	8	0
			Do. of do..............	8½	

The Sinhasun or throne, is very handsome; there are the usual supporters, the Sinha or lions rampant, trampling on elephants couchant, and ridden by amazons armed with shields and swords. The stone is the grey chlorite or potstone; of which almost all the idols in this district as well as of Orissa are made; from the style of the carving, and the alphabet of the inscription no very remote date can be assigned to these works; not more than 8 or 900 years, if so much. Leaving this buddhist relic we find some 60 or 80 figures of brahminical idols rudely cut in the huge detached masses of rock at the foot of the hill. Of these Durga slaying "Mahesh-Asur," is the principal, and most often repeated; the next is the Lingam, and again the Gouri Sunkur, or Mahadeva caressing Parbutti, who is seated on his knee, with the bull, "Nandi" at his feet, and the "Sinha" or lion at her's. There is one block hewn into the shape of a small temple, with niches and images on the four sides. It has formed part of a small Dehgopa to the memory of some departed devotee of a heretical sect; the great Budd'ha temple is likewise a funeral monument. The sculptures on the detached blocks are in a very rude style, but this may be attributable in some measure to the extreme coarseness and hardness of the material, as well as inequality in the grain. First niche, from proper right, male figure erect with a spear; 2nd, female figure "Pudmavati" or Maya devi"; 3rd, Budha seated; 4th, Mahadeva and Parbutti, commonly called "Gouri Sunkur," Parbutti seated on Mahadeva's knee with the bull Nandi at his feet, and the Sinha or lion at her's; 5th, male figure erect with four arms; No. 6, male figure riding on the shoulders of another; 7th, the Lingum and Yoni; 8th, male half figure "Aruna"? 9th, Mahadeva and Parbutti repeated; 10th, male figure erect holding a lotus in each hand, probably "Surya;" 11th, Gunesha; 12th, female figure with four arms, attended by Nandi and Sinha, perhaps meant for "Durga;" 13th, male figure standing on a prostrate figure. After these, nine niches have, what appears to be, Durga slaying Mahesh-Asur, with her trident; she has one foot on the buffalo's neck and holds it by the hind leg. This subject is repeated on many detached rocks. The Linga is of as frequent occurrence. There is one very large four-faced Linga called the Choumurti Mahadeva, such as may be seen in the caves of Ellora; it is of common occurrence in this district.

The inscriptions are in Pali, in the old Pali character, of No. 1 Lat., but they have been very imperfectly deciphered. The religion is buddhist.—*Notes on the Caves of Burabur, by Capt. Kittoe, 6th N. I. Beng. As. Soc. Journ. No. CLXXVIII, May*, 1847.

BURA-CHOOLI, Hind. Menyanthes indica.

BURAD, Hind. filings; raspings, chips. viz:

Burad-i-abnus, chips of Diospyros tomentosa.
Burad-i-ahan, iron filings.
Burad-i-bhuss, chopped bran.
Burad-i-Chini
Burad-i-jarob, chopped Anatherum muricatum.
Burad-i-shisham, raspings of Dalbergia sisso.
Burad-i-tamba, copper filings.

BARAGADDI, Tel. Ambrosinia unilocularis, R. iii. 493

BURA GUL KHAIRA. See Khatmi.

BURAK AND SURMU rivers which run in valleys of the Assam chain. The Naga, Mikir, Kachari Garo and Kasia, are the five races in whose possession chiefly are the broad highlands of that chain extending from the N. E. near the head of the Kynduayn and Namrup, on one side along the valley of the Brahmaputra to its southern bend round the western extremity of the chain, and on the other side S. westerly along the valley of the Burak and Surmu.

BURA KANUR, Hind. Crinum toxicarium.

BURANJASIF KOWHEI? Pers? Wormwood.

BURAQ. Mahomeds steed on which he rode to the seven heavens.

BURASGAON was occupied on the 5th February 1857.

BURATY, a Mongol nomade tribe, near the Baikal lake. The pronunciation of their name is also Pulate.

BURBULI, in Sind, the bulbul.

BURBUTI, Beng. Dolichos Sinensis.—*Linn.*

BURKCHARDT, John Lewis, a native of Denmark, who travelled in Egypt and Arabia, author of Notes on the Bedouins and Wahabies, also of Travels in Arabia.—he is buried near Cairo in the large cemetry outside the Bab-el-Nasr.—*Playfair. Burton's Pilgrimage to Meccah, Vol. I. p.* 168.

BURDA HILLS, in Kattiyawar. They end, in the South, in the Alich range and in the Oshum.

BURDA, one of the five northern districts of Kattyawar.

BUR DEWALI, a lofty tower in Jaganath about 180 feet in height and about 28 ft. square inside, in which the idol and his brother and sister Subahdra are lodged. See Jagannath.

BURDI. A wild Baluch tribe on the western banks of the Indus near Shikarpur.

BURDMAR, a river near Kaderabad in Suheswan.

BURDUR—? A tree of Cuttack, an excellent wood for carriage poles, shafts, and wheels, and in all coach builders' work, Sp. Gr. 1·000.—*Cal. Cat. Ex.* 1862.

BURDWAN, (1) the designation of a Civil Division of Bengal, controlled by a Commissioner; also (2) of a district in that division, the other districts being Beerbhoom, Bancorah, Hooghly, Howrah and Midnapore with an area of 14,195 sq. m. and a population of 5,339,307. It is also (3) the name of a town built on the banks of the Damoodah river. The district of Burdwan to the westward of the Bhagirutty river is a principality belonging to a rajah, and is considered the richest of all India. Including the sub-divisions of Cutwa, Culna, and Boodbood, the district has an area of 2693 sq. m. and a population of 1,088,813, coal has been found, in plenty, in the district.

BURDWAN COAL. See Coal.

BUREE, a district of the Uthbaree, of Kunawur.

BURENDA, also written Borenda, and Boorenda, a pass in the Himalaya, in Lat. 31° 23,' Long. 78° 12,' the length of the crest is 50 paces, and the crest is 15,171 ft. above the level of the sea. The most elevated part is a narrow glen, very steep. The pass leads from Kunawur through the outer Himalaya and is the easiest and most frequented in the neighbourhood. It leads from Jangleeg to Rasgramee and is open for seven or eight months, during the rainy season almost all the snow dissolves.

BURERWA, a stream near Gurrawarra.

BURETHI, Beng. Panicum paludosum.

BUREETHI, Beng. Cyperus verticillatus.

BURG, Pers. A leaf of a tree, hence,

-i-amrit-phal, leaf of Citrus limonum.
-i-anab, leaf of Zizyphus jujuba.
-i-bart, leaf of Calamus draco or Pterocarpus draco.
-i-hanna, leaf of Lawsonia alba.
-i-gul, also, Gul-barg, rose leaf.
-i-murad, leaf of Myrtus communis.
-i-tambul, Pers. Betel leaf.

BURGEE, a hindu race in the Woon district.

BURGHAT, a river of Rewah.

BURGHER, in Ceylon, is a term applicable only to white persons of pure Dutch descent, of whom there are now but very few in Ceylon; but the name has, by courtesy, been given to all those who in India are styled Indo-Britons, Eurasians, Anglo-Indians, or more commonly "half castes," namely, the descendants of Europeans by native women.

BURGHER, a name given by Europeans to the Badaga or Marves race of the Neilgherry hills often called Buddacar and Vaddacar. They have 300 villages and are 15,000 souls. They are scattered all over the hills and their lands occupy two-thirds of its area. They are much darker than the Todawar race. The tribe, a few generations ago, emigrated to the hills. They are a timid race deeply imbued with superstition; by the general term Burgher is understood the whole of the people who, since a certain period, have emigrated to these mountains. They divide themselves into no less than eight different, but little dissimilar, classes, and are all Saiva hindus. They are the principal cultivators, of the hills. Their language is principally the Carnatica, having but a small intermixture of the Toda. The Toda race call them all Marves, —their term for a laborer. But the Marves are called by the natives generally, and more correctly, Badacar, or Vadacar, from Badaga, or Vadacu, north, these people having come to the hills from that quarter. Captain Harkness computed their number about 10,000 souls. They are divided into two branches, or what may be considered two grand families. One called Peiki, or Teralli, and who are competent to hold all sacred offices, the other Kuta, or Tarda, who are competent only to hold minor ones within their own particular families, and who may be considered as the lay class. The Burgher is less in stature than the Toda, of a more slender form, and though straight and well-made, is under-sized in limb. In complexion, both male and female are some shades lighter than the Toda; but their features are quite of another caste. Both Toda and Badaka puncture the skin about the neck and arms and men and women wear much the same kind of ornaments, such as rings for the ears and fingers, necklaces, armlets, and girdles. The difference, however, is still so great, as immediately to strike the eye. The Burgher possesses much of the manner and appearance of the hindu cultivator of Mysore, and his wife, who seldom or never stirs from home, seems rather a domestic slave than the mistress of a family. The fidelity, of their women appears of but little estimation among them. Although the Burgher, generally, may be considered much more cleanly, both in their houses and persons, than any of the other tribes, they are still, in this respect, far behind the natives of the plains.—*Harkness Neilgherry Hills, p.* 117.

BURGU, Hind. Phytolacca decandra.

BURGUNDY PITCH., is a product probably of the Abies excelsa; it is of light yellow color, often adulterated with dammer or gunda barosa. See Frankincense.

BURH, Hind. Ficus Roxburghii.

BURHAL—? A light yellowish colored wood, not strong. Plentiful in the Santhal jungles from Sooree to Hasdiha; or about sixty miles. Used for doors, venetians, furniture, &c. by the natives.—*Cal. Engineer's Journal*, 1860.

BURHAMPOOR a town in India, in L. 88° 20' E and L. 24° 5' N.

BURHANPORE, taken by General Wellesley on the 13th October 1803.

BURHOLIA, a branch of the Bhrigubansi Rajputs settled at Burhoul near Benares.—*Ell.*

BURI OR BULI. The name of a Philippine palm, probably the Corypha gebanga of botanists, and the Gabang of the Malays and Javanese. The Philippine islanders make much use of the several parts of this palm.

From the leaves they make mats, from the sap both sugar and a distilled spirit, from the pith a sago, and from the seeds rosaries, while the spines boiled in water yield a thread from which a coarse cloth is woven, called Sagoron. —*Crawfurd, Dic. p.* 77.

BURI, HIND. Vitis Indica.

BURIAL CUSTOMS; amongst the various races occupying the south and east of Asia, these are almost as varied as are the races, themselves. It is often remarked that the mode of disposing of the dead, has, from the earliest times, been symbolomatic of the opinions as to the worth of the deceased while he was amongst them or indicative of their views as to the future condition of the departed. In general, there has been little display over the remains of women, but, whether with men or women, the prevailing habit has been to convey the remains to some quiet resting place with a decorous solemnity and there erect some lasting memorial over them. With some races, however, even to the present day, the departure of a friend or relative is regarded joyfully, and the procession to the place of final disposal is mirthful; while other races even cast out their dead and allow the remains to be treated with indignity. But the anxiety of the generality of nations in all countries, has been to perpetuate the memory of the departed, and everywhere are to be seen sepulchral monuments, raised with that object. Many of these exist from prehistoric times, and in most cases, form the sole remaining history of the races who erected them.

At the present day, monuments erected with brick or stone, and in the form of pillars or upright or horizontal slabs of stone, or cupolas or domes or sarcophagi, beneath which the remains are laid, are the usual modes of marking the deceased's resting place. But in more primitive times, the cairn or heap of stones, the monolith; the cromlech; the circle; the heaped up barrow of the Celtic tribes, the tumulus, as the Romans called it, were usually resorted to.

The cairn was formed of stones gathered from the vicinity and set round about the resting place of the dead and piled over them. The monolith or single stone was usually placed perpendicularly near the spot: The cromlech, consisting of two, three or more upright stones, with a flat stone placed over them, formed a sepulchral chamber and was the earliest approach to the cupola or dome. The circle, or enclosure of upright stones, set singly at varying spaces apart, are found surrounding the cromlech, or cairn. Of all these the barrow, or tumulus, often raised to a considerable height and covering a large area, is the most noble, and has been the most enduring, and with them the bodies of the departed were not interred in graves sunk below the surface, but were placed on the surface of the ground and then the earth was heaped up. The barrow, many of which have been opened, are found sometimes to contain skeletons; in other cases urns only: while, occasionally, both urns and skeletons or urns and ashes appear together: the urns are often found to contain burnt bones, and relics, but in the earliest barrows, are war weapons, such as stone hatchets and hammers, celts of the same material, both arrow heads and spear heads of flint, with beads of various substances, and torques or collars, and armlets of gold or bronze. Somewhat later, the celts and weapons are of bronze, and the sword is found to have been broken, indicative that the warriors race had been run. The ornaments remain the same and coins are found.

The methods adopted for the disposal of the dead from the most ancient times have been interment, burning, embalming and exposure. Of all these, the first seems to have been the most general and primitive. Cremation is undoubtedly very ancient, for, king Saul was burnt and his bones afterwards buried and Asa was burnt in the bed which he made for himself filled with sweet odours and various kinds of spices. In Egypt the practice of embalming obtained from their earliest history, but the practice was confined to that country and arose from its people holding it unlawful to expose the remains to fire or to animals or to permit them to become a prey to worms. The vast catacombs still remaining on the banks of the Nile were the common receptacle for the general population who could not afford a separate tomb —(*Boutell's Manual of British Archæology, London*, 1858, *p.* 100 *et sequent*)

In British India and in all the South and East of Asia, interment, cremation, and exposure are all practiced by one or other of the races occupying it. Java, in the Archipelago seems to have been peopled from the continent of Asia, and its people have the three modes of disposing of the body of a deceased person: by fire, termed "*Obong*;" by water, termed "*larung*;" or by exposing it upright against a tree in a forest, where it is left to decay, termed "*setra*." When the body of a chief or person of consequence is burnt, it is usual to preserve the ashes, and to deposit them in a "*chandi*" or tomb.—(*Raffles' History of Java, Vol. I. p.* 337.

The Ninevites, in all their various monuments, have left us no trace of their ideas concerning the dead, while their neighbours, the Babylonians, attached that care to the rites of sepulture which betokens strong belief in another life. The sepulchral urns obtained in Babylonia, contain the remains of the dead, with jars and utensils for food and water made of baked clay, and with remains of date stones, the head of the dead reverently laid on a sun dried brick as a pillow. Their ancient tombs, rare in Assyria and upper Babylonia, are chiefly in Chaldea proper, and the Rev. G. Rawlinson (i, 107) suggests that the dead may have been conveyed to the sacred land of Chaldea, similarly as the Persians even now send their dead to Karbila and Meshid Ali, and as the Hindus from remote India, send the bones or the entire bodies to the Ganges at Benares. Chagda or Chaekrada, near Sooksagur is an abyss said to have been made by the chariot wheel of Bhagiruth. The legend points to an antiquity which is not borne out by any old vestiges or ancient population. But the place is a great Golgotha where the dead and dying are brought from a great way off to be burnt and consigned to the Ganges. The deceased is seldom conveyed by any of his relations, unless from a short distance. Poor people generally send forward their dead for incremation in charge of bearers who never betray the trust reposed in them.—(*Tr. of H. Vol. I. p.* 18.)

The Romans generally burned, but they sometimes buried, their dead, and children who died in infancy were interred in the immediate neighbourhood of their former homes. Their sepulchral urns with the ashes of the dead were commonly buried about two feet below the surface, and their memorial stones were often inscribed. They used the Sarcophagus or massive stone coffin and also the tumulus or barrow.

The Romans bore their dead with much lamentation to the funeral pile, on which, after being lighted, they cast the robes and arms of the deceased, as well as the slaughtered bodies of his favourite animals.—(*Ed. Jour. July* 1867, quoting *Madden's Sepulchres, Vol. I. p.* 363, 457. *Picard.*)

The ancient Greeks, in laying out their dead, always placed an obolus or Greek coin in the mouth to pay Charon's fare across the rivers Styx and Acheron, and a cake made of flour and honey to appease Cerberus. Amongst them men cut off their hair, when they obtained the age of puberty and dedicated it to some deity. Theseus is said to have repaired to Delphi to perform this ceremony and to have consecrated his shorn locks to Apollo. After this, it was again allowed to grow long and only cut off as a sign of mourning. Thus, at the funeral of Patroclus (*Iliad XXIII*) the friends of Achilles cut off their hair and "on the corse their scattered locks they throw." In some parts of Greece, however, it was customary to wear the hair short and to allow it (*Cassandr* 973) to [illegible]

Neglected hair shall now luxurious grow,
And by its length their bitter passion show:

In Luristan, the female relatives, on the death of their male relatives, cut off their hair, and hang the locks around the tomb. The practice of the young women and young men of the Island of Delos, was something similar; they cut off a lock of hair before marriage and placed it near the tomb of the virgins from the Hyperboreans.—(*DeBode, ii.* 218,19.)

The hair of hindoo women, and often that of men, is frequently made a votive offering to their gods. Crowds of hindu pilgrims are to be seen moving towards Triputty and other holy places, but the women return with heads shaven.—(*Eng. Dom. Mag. No.* 49.)

The most enduring monument to the memory of the dead, however, have been the barrows or mounds of earth, so largely used by the nations of Central Asia, from the Mediterranean to the Pacific ocean, both in ancient times and now. The king of Ai slain by Joshua (*Joshua VII.* 26, *VIII.* 29) was placed at th[illegible]nce of the city, and over his body was ra[illegible]reat heap of stones. Herodotus mentio[illegible]hat the barrow of Alyattes king of Lydia was 1,300 ft. broad and nearly a mile in circumference, and it has been identified by modern travellers.

Barrows were the favourite memorial of the Teutonic race, some of them very large, but the Saxons used also cists or stone coffins.

The custom of raising tumuli over the remains of the mighty dead seems to have been prevalent in the Central Asiatic region from the most ancient times and been taken into Scandinavia. Ezekiel in the 32nd Chapter and 27 verse describes the practice of slaying persons and interring them with their dead chief, and Herodotus describes the barrow burial of the Scythians; and to the present day, in the region of the Kar Karella and in many other parts of the steppe occupied by the Kirghis are numerous tumuli of great size. Herodotus tells us that when a king died, his corpse, embalmed and covered with wax, was conveyed in a chariot in solemn state to the place of sepulture: a large quadrangular pit was dug; in this they placed the royal corpse on a mattress of straw; on each side of this they planted spears, and covered it with wood, and roofed it over with hurdles of willow. In the remaining part of the pit they interred one of the late king's women, strangled for the purpose, together with his cupbearer, his cook, his groom, his minister, his courier, his horses, as well as some articles of every kind—including several goblets of gold—that he might be supposed to need in his journey to the other world. This done, the people eagerly contended with each other in the work of heaping over the whole a mound of earth as vast as possible.

The proceedings did not here terminate, for, the year following, fifty of the late king's confidential attendants and fifty of his horses were slain, and placed, the men on the horses, around his sepulchre.—(*Melp.*, 71-2.) When Changiz Khan died his remains were covered with a lofty mound and extensive forests were planted to exclude the footsteps of man. Colonel Tod tells us that the tumulus, the cairn, or the pillar, are still raised over the Rajpoot who falls in battle ; and throughout Rajwarra these sacrificial monuments are found, where are seen, carved in relief, the warrior on his steed, armed at all points ; his faithful wife (Sati) beside him denoting a sacrifice, and the sun and moon on either side, emblematic of never-dying fame — *Tod's Rajasthan, Vol. I, p.* 74) In Saurashtra, amidst the Catti, Comani, Balla, and others of Scythic descent numbers of Palia, or Joojar (sacrificial pillars), are conspicuous under the walls of every town, in lines, irregular groups, and circles. On each is displayed in rude relief the warrior, with the manner of his death, lance in hand, generally on horseback, though sometimes in his car ; and on the coast, " the pirates of Boodha" are depicted boarding from the shrouds.

In the Panjab, near Bamian, in Affghanistan, and near Kabul, the sepulchral monuments remaining of ancient times, are topes. They consist of a mound on which is erected a cupola, supported by walls of masonry more or less in a Grecian style of architecture. One near Manikyala is 80 ft. high and 320 ft. in circumference. In its centre were found vessels of gold, silver and copper, with coins of Rome and of the Bactrian Greeks. In a chamber sixty feet deep was a copper box containing animal remains.

Many cairns are found in different parts of Southern India and, prior to the Stupas, or Topes, this seems to have been a common mode of covering the dead; indeed, as Colonel Cunningham remarks, the Tope is only a cairn, regularly built. On the Neilgherry hills are found remains of cairns, barrows, cromlechs, kistvaens, and circles of upright loose stones, which are nearly identical with those found in Europe, in the ancient seats of the Celts. In these cairns or barrows, are found vases, cinerary urns, and other vessels of glazed pottery, which sometimes contain human bones, more or less charred, and mixed with ashes ; sometimes a little animal charcoal alone. They are met with in various districts in the Presidency of Bombay, in almost every part of the Dekhan and peninsular India, from Nagpore to Madura, in immense numbers on the Anamalay Hills, a range on the south side of the great Coimbatore gap, which forms the commencement and northern face of the Southern Ghauts, those on the Anamalay being of a more advanced order and a better condition than the Neilgherry barrows. Similar remains are found in Circassia and Russia, and circles of stones surrounding ancient graves are found on the South Arabian Coast and in the Somali country in Africa. Major Congreve directed much attention to those on the Neilgherry Hills, and Captain Meadows Taylor discovered and examined a large number of these remains at Rajan Kooloor, in Sorapoor and also at Siwarji, near Ferozabad, on the Bhima, and devoted much attention to the comparison of them with similar remains found in England. He calls them Scytho-Celtic or Scytho-Druidical. Neither the hill people, the Toda and Curubar, nor any hindu, know anything about the race to which these sepulchral remains belonged, and neither in Sanscrit literature, nor in that of the Dravidian languages is there any tradition on the subject. The Tamil people generally call these cairns pandu-kuri, kuri means a pit or grave, and pandu may refer to the Pandu or Pandavan brothers to whom so much of hindu mythology relates. The race who raised these cairns were probably dwellers in the country prior to the advent of the present Dravidian occupants, and were expelled by or ultimately became absorbed in the latter, or they may have been a nomade shepherd race who had wandered into India after it was peopled and settled, and then wandered out again or became absorbed amongst the people of the country. But the remarkable fact connected with the people, whose religious rites and usages of sepulture gave rise to these cairns, is that they have everywhere disappeared from Southern India, and not even a tradition of their existence survives. The resemblance of the barrow and their contents (with the cromlechs, &c.), to the Druidical remains which are discovered in the ancient seats of the Celtic race in Europe, is too exact and remarkable to be accounted for on any other supposition than that of their derivation from the same origin. Hence, the people who introduced such rites into India, must have brought them with them from Central Asia.—(*Dr. Caldwell's Grammar.*)

In the centre of Peninsular India, around Hyderabad in the Dekhan and at Bolarum and at Secundrabad, there are many burial places of that race of whose existence nothing is known : and about 20 miles S. E. of Secunderabad is one great resting place of the dead, a vast burial ground extending over miles, which must have been the place of interment of a vast number of people or through many centuries. The mode of interment, in all these, has been to select a large stone, beneath which a deriving tunnel or way had been excavated, and the remains of bones and urns, with weapons, are found deposited in a central cavity, a circle of large loose stones being drawn round. The circumference of some of these circles being between one and two hundred yards.

The people whose tombs are thus represented were undoubtedly nomades dwelling in tents, for not far off are the remains of a great nomade city, consisting solely of walls within which the tents must have have been erected, for no stone nor earth heap nor mound remain within the stone enclosure to indicate the former existence within of any building. The remains found within these, also, leave the impression that, as with the barrow burials, the wives and servants were slain and interred along with the chief person, and the hindu and rajput practice of Suttee would seem therefore to be merely a continuation of the ancient scythic sepulchral rites of immolating the favourite wife, the servant and the horse to accompany their master and serve him in the next world.

In British India, up till the year 1830, any widow was allowed to immolate herself on her husband's funeral, but it was then authoritatively put a stop to. In the feudatory states a widow, still, occasionally follows her husband in that manner, but the practice is now chiefly confined to the hindu islands of the Eastern Archipelago. In Lombok a widow is allowed to burn herself with her husband's remains, but when a rajah dies, some of his women are always burned, even if they should be but slaves, but they have the option of being kreesed or burned. It is always a near relative who gives the first wound with the kris but never the father or son.

The Jewish and Christian view of the future world is as a place of peace and rest and spiritual joys in the presence of the Creator. The buddhist and hindu and Chinese belief comes nearest to that, for they regard existence as a calamity and the extinction of being or annihilation as the ultimate hope and aim of the good, who shall then be at rest from the cares of this world in which all things are transitory, productive of unhappiness and unreal. The future worlds of other Eastern races are more or less of a physical character. But even the christian treatment of the dead is various — and in Europe, to this day, the indifference, not to say levity of the Italians, in all relating to their dead, contrasts strangely with the tenderness and sentiment of the Germans, both Romanist and Protestant, as displayed in their cemeteries. In Naples, where are two cemeteries, with a pit for each day of the year; the humbler are stripped, and after a priest has read prayers over the bodies, they are all thrown into a hole by the cemetry assistants, amidst oaths and jocularity and laughter. The richer dead are stripped, placed in dry sand to be shrivelled up, and when dry they are dressed in their usual clothes, ticketed and placed in a glass case. The German race, on the other hand, reverently dispose of their dead, and preserve in neatness the grounds and tombs of their cemetry, which they call Gotts aker, God's field.

In Ceylon after burning the bodies of the deceased kings of Kandy, their ashes were carried by a man in a black mask to the Mahawelli Gunga, where he embarked in a canoe. At the deepest part of the river, he clove the vase with a sword, scattered the ashes on the stream, and, plunging headlong after them, dived, arose near the opposite bank, whence he fled to the forest and was presumed to be never more seen. The canoe was allowed to drift away: the horse and elephants that accompanied the procession were set at liberty in the woods; and the women who had strewed rice over the remains were transported across the river and forbidden to return. Several of the hindu customs resemble practises mentioned in the old Testament, as in (*Jeremiah XVI.* 6.) ' Neither shall men lament for them, nor cut themselves.' For the hindoos, on the death of a relation, express their grief by loud lamentations, and not unfrequently in an agony of grief, bruise themselves, with whatever they can lay hold of. *Ezekiel XLIV.* 25. ' They shall come at no dead person to defile themselves,' and touching the dead defiles a hindoo, who must bathe to become clean again. *Job XXVII.* 19. "The rich man shall lie down, but shall not be gathered,' *i. e.* his soul shall be left in a wandering state. The hindoos believe that persons for whom funeral rites have not been performed, wander as ghosts, and find no rest. *Jeremiah XXXIV.* 5. ' So shall they burn odours for thee.' Scented wood and other odoriferous substances, are placed upon the funeral pile of a rich hindoo, and burnt with the body. *Matthew II.* 18. ' Rachel weeping for her children, and would not be comforted, because they are not.' The lamentations of a hindoo mother for her child are very loud and piercing; it is indeed almost impossible to conceive of a scene more truly heart-rending, than that of a whole town of such mothers wailing over their massacred children. "In Rama was there a voice heard, lamentation, and weeping, and great mourning."

As a rule, the dead of the Vaishnava hindus are burned. As death draws near, a lamp is lit at the bed head, and a " homa" sacrifice performed, with camphor and a coconut, and, as life dies away, the five elements are dropped into the mouth of the moribund from a tulsee leaf. Within two or three hours, the body is lifted, and this is done early as none of the household nor any of the neighbours can partake of food until the remains be disposed of. The pile of wood or cowdung cakes used is about two feet high and on it are placed some tulsee leaves, a little sandal wood, and the deceased is laid with his feet to the north. When laid on the pile, a cloth is placed over the face, and raw rice is placed on it over the mouth. The heir of the deceased places a charred bit of sandalwood or a tulsee branch at each corner of the pile, and a Vityan sets fire to the mat, using fire taken from the sacred fire lit at the bed side of the dying man. On the following day the heir and friends visit the pile, remove the skull and the bones, on which he and all with him pour water and wash them,—wash them with the sikai, anoint them with oil and honey and clean them with milk, and place them all on plantain leaves anointed with butter. A young cocoanut shoot is then placed on the skull, and the whole put into an unburned earthen pot and taken or sent to a river or to the sea—the person who conveyed it returning to the temple, where he pronounces aloud the deceased's name and adds " pray for him." Often they are sent to a holy river, even to the Ganges and Benares. The men relatives shave. The hair of the brahman widow's head is shaved. The body is not always carried through the doorway of the house. If it be an unauspicious day, or if the house door be so placed that the court yard has to be crossed, then the remains are carried through an opening broken in the wall. The remains of hindus are unclothed for the last rites.

Children under eight years of age and unmarried girls are buried as also are all who die of small pox, as the belief is that this ailment is a manifestation of the presence of the goddess Ammun, Mariatha, Mariamma, or Kali, and the anger of the goddess would revert on the family, if burned.

In the mode of disposing of the dead, the wish expressed by the deceased is attended to. Vedantists all bury, also all the Gosai, all the Lingait, or Vira Saiva, the five artizan castes the " Kansala" goldsmith, carpenter, ironsmith, brasier, and stone cutter, all the Byragi and Sanyasi, and the Gurus of the sects, the Pandarums, the Kashai, likewise all the non-arian races, and tribes not admitted into hinduism. The Vedantist dead and those of the Lingaet and artizans are placed seated, the latter in a grave five feet square with a ledge on the south.

As life becomes extinct, the body is made to assume the attitude to be preserved in the procession and in the grave. It is placed against a wall; the legs are crossed underneath in the usual sitting attitude and the head is fastened to a nail driven into the wall, and so retained till rigidity ensue.

They are borne to the grave in a car, on the shoulders of relatives or friends. On reaching the burial place, the Oodwan reads prayers, and the body is seated on the side ledge with its face looking northwards: salt and ashes of cowdung are placed on the head.

Amongst the Aryan hindu, the great bulk believe in spirits and worship them: their worship of ancestors " pitri" is continuous, they also believe in demons and evil spirits: transmigration through clean and unclean animals is a point of faith and a great majority regard the soul as an emanation from the deity, and look to reabsorption and annihilation as the point of attainment for the good.

The mahomedan when about to die, has his spirit calmed by the "Yasin" chapter of the Koran being read to him, and is either washed (Ghussal) at his own house, or taken within a few hours to a Ghussulkhana, specially built for the purpose near the cemetry, and where men or women washers perform the duty and then put on burial clothes and apply camphor and antimony. The body is conveyed in a box with much solemnity, with wreaths of flowers and perfume laid over the covering: the coffin is carried on men's shoulders, and from time to time is heard the Ty-eb part of the mahomedan creed " There is no deity but God, and Mahomed is the prophet of God," and on reaching the grave, funeral service is read consisting of the four portions of their creed (takbir) and a blessing (dua) is asked which all present repeat. After the Fatiha, the body is lifted from the coffin and gently lowered into the grave, laid with the head to the north and feet to the south, and turned on its side with the face towards Mecca. Each person then takes a little earth, and repeating the words in chap. 112 of the Koran " we created you of earth and we return you to earth and we shall raise you out of the earth on the day of resurrection," he puts the earth gently into the grave. The body is then protected with wood and covered in. The Fatiha is again repeated, and again at the door of the cemetry and at this juncture, two angels, Moonkir and Nikir, approach the dead, make him sit up and inquire who his God and prophet are and what his religion is. If he have been a good man, his answers are satisfactory and odours from paradise are diffused around the departed. But, if bad, he is bewildered and the angels torture him. They believe that the dead continue in a conscious state, and dogs and horses or other polluting animals are not allowed within the cemetry; women, also, do not enter lest the repose of the dead be disturbed. Mahomedans do not speak of a person as dead; they say he has passed away ; has taken his departure, and the living all believe in, and hope for, resurrection in a future state " They who believe and do that which is right, shall enjoy blessedness, and partake of a happy resurrection. *** Paradise *** is watered by rivers ; its food is perpetual and its shade also ; this shall be the reward of those who fear God ; (*Koran, Ch. XIII*) " Therein are rivers of uncorruptible water ; the rivers of milk, the taste whereof changeth not ; and rivers of wine pleasant unto those who drink ; and rivers of clarified honey and therein shall they have plenty of all kinds of fruits ; and pardon from their Lord. (*Ch. XLVII*) There shall be gardens with shady trees ; with fountains flowing, couches of silk interwoven with gold ; beauteous damsels with black eyes lying on green cushions and beautiful carpets, fruits, palm trees and pomegranates, (*Ch. LV.*)

The monuments or mahomedan tombs have usually been of earth, or of unbaked brick ; but every material and of the most enduring kind, is employed, and the names are sometimes written on the tombstones. The tombstone of a man is distinguished by a raised part in the centre, and that of a woman by a depression. In Turkey, a pillar with the carved figure of a turban distinguishes the grave of a man. The prevalent form in India of mahomedan tombstones of the rich is a dark or black tombstone with verses of the Koran engraved on it, and covered by a cupola. Some of these domes are very magnificent. Those of the Adal Shahi dynasty at Bijapore and Gogi have attracted much attention, as also have those of the Bahmani dynasty at Gulburgah and Kutub Shahi dynasty at Golcondah. The cupolas at Roza where Aurungzeb is buried have not any display, and that of Aurungzeb is the least ostentatious. His daughter's tomb at Aurungabad is magnificent and many of the tombs at Delhi and Agra are great structures. That of Mumtaz Begum, known as the Taj Mahal, is particularly remarkable. The reformers amongst the mahomedans consider that unbaked brick or earth should alone be used.

The christian doctrine that man, in all that he can do of good, is still without merit, is not shared in by any of these sects, the mahomedan, the buddhist or the hindoo, who all consider that a personal merit is gained by their good doing, and a mahomedan passing funeral of a mahomedan, turns with it a short way and lends his shoulder to convey the body to the grave, to bring a merit on himself.

The Parsi or Zoroastrian race are to be found scattered from Hongkong in the East, to Britain in the west, the small but intellectual remnant of the once great Median nation. A considerable body of them dwell in Bombay, in Guzerat and the western towns of India. They invariably expose their dead. Their sick are never allowed to expire on a bed. When the moment of passing away is near, the sick person is removed to the ground and bathed and washed. The reasons alleged for this removal are various; but the one ordinarily accepted amongst them is that a dead body is an unclean thing, necessitating that all who touch it shall destroy their clothes and whatever is touched by it must be destroyed. For these reasons, the dead, in Bombay, are carried by a class of Parsees called " Nessus salar,"—Nessus meaning unclean (Najis, Pers.) These men carry the remains to the Dokhma or tower of silence and lay the body on its raised upper floor. The Dokhma is without any roof covering,—is open to the sky, so that birds of prey, vultures, kites, have the freest approach. The raised floor has a deep well surrounded by a raised platform with channels converging to a well. The corpse is laid on a partition of the platform, and the decomposing matters flow along the channels into the well. When the well is full, the bones are removed and buried outside the Dokhma. The fire-priests are paid to pray for the dead, monthly, for a year, and thereafter on every anniversary of the demise. After the demise, and before the removal of the body, a dog is brought near to gaze on the departed. This is the " Sag-did" or dog-gaze, and, by one account, is said to be had recourse to with the object of ascertaining, from the dog's movements, the state of the soul of the departed ; by another account, it is practised from the belief that the dog is a naturally chaste animal, and the view of the chaste dog falling on the dead will expedite the translation of the soul to heaven.

The non-Arian races of British India are estimated at 12, 213, 222 souls, but except the great Gond nation, and the Kol, the Bhil, and the southern Shanars, most of them are in small tribes, and many are occupying forests and mountain fastnesses, or are dwelling on the outskirts of towns. They, in general, bury their dead.

The Sowrah race occupy the hill ranges of the Northern Circars—mostly those hills near Chicacole, near Kalabanda and southwards as far as Bradachellum, and they bury their dead with their weapons.

The Chenchwar race, further south, in the forests of the Nalla-Mallai, bury their dead and sometimes burn, but, like the Tartar races, they carry the deceased's weapons to the grave.

The Kuki race of Assam were much addicted to make inroads on the plains, not for plunder, but to procure heads, and they have been known to carry off fifty heads in a night. On the death of a chief, the body is smoke dried and kept for two months with the fa ly. If a rajah fall in battle, they immediately proceed on a head hunting expedition and bring in the heads of those they kill, hold feastings and dancings and, after cutting the heads into pieces, send a portion to each village. This is considered in the light of sacrifice to the manes of the deceased.

The race occupying the Khassya hills, 4,000 to 6,000 feet above the level of the sea, inter their dead on the undulatory eminences of the country. These are dotted with groups of huge unpolished squared pillars and tabular slabs, supported on three or four rude piers. Menhir are there, one of them 30 feet out of the ground, six feet broad and 2½ feet thick and in front of each is a dolmen or cromlech, of proportionately gigantic pieces of rock.

In Tibet, the sovereign lamas are deposited entire in shrines prepared for their remains which are ever afterwards regarded as sacred and visited with religious awe. The bodies of the inferior lamas are usually burnt and their ashes preserved in little metallic idols, to which places are assigned in their sacred cabinets. Ordinary persons are treated with less ceremony —some are carried to lofty eminences where they are left to be devoured by ravens, kites, and other carniverous animals. But they, also, have places surrounded by walls where the dead are placed.

The Mongols sometimes bury their dead; often they leave them exposed in their coffins, or cover them with stones,—paying regard to the sign under which the deceased was born, his age, the day and hour of his death, which determine the mode in which he is to be interred. For this purpose they consult some books, which are explained to them by the lamas. Sometimes they burn the corpse, or leave it exposed to the birds and wild beasts. Children who die suddenly are left by their parents on the road.—(*Timkowski's Journey to Peking, Vol. II. p.* 312.)

In Spiti, in the N. W. Himalaya, when a person dies, the body is sometimes buried, or burnt, or thrown into the river, or cut into small pieces and burnt, admonitions are made over the body to the departed spirit, such as do not trouble yourself, you cannot enter it (meaning the dead body) in summer it quickly becomes corrupt, in winter it freezes and is too cold for you.

Amongst the buddhist Burmese, whose religion teaches them to look on death as a release from the cares and troubles of the world, as a possible cessation of transmigrations and the longed for arrival of annihilation, the cremation of the remains of friends, relatives and teachers, are not seasons of grief, the spectators are often able to look on them with joy. The Rev. Mr. Marks went to see a sick pupil, whose mother met him at the door. To Mr. Marks inquiry as to her child's state, she replied, he is well, he is well, and skipping half joyfully, half hysterically, before him led him to an inner room, where the pupil lay dead, but the bereaved mother, full of faith, was still able to say "he is well." The remains of holy men, the Phoongie, are not soon removed. Their bodies are placed in honey, sometimes for a year or more. One at a Phoongie house in Kemmendine, adjoining my dwelling house, was kept in honey for a year, and then removed. In the process of embalming, the body is placed in honey for a few weeks, the intestines are then removed, and replaced by spices, and the body is encased in a sheathing of wax, which is coated with lac and this gilded with gold leaf. The body is then left to dry on a staging, under a white umbrella, and finally the coffin is placed on a model of a kneeling elephant, made of wood and paper. On the day appointed for that funeral, a great crowd assembled, and with two ropes attached to the car one part of the multitude pulled it towards the place of cremation, another pulled against them, and with shouting, and laughter, drumming and uproar, the remains at length reached the burning place and were burned. Looking quietly at the opposing multitudes their antagonism seemed a representation of some ancient idea of good and bad spirits, battling for the dead. But the object of this struggling to draw the car onwards and to retard it is unknown.

In September 1870, the remains of the queen mother of Burmah were burned between the inner and outer walls of the palace, to the north of the main entrance. A large space was enclosed by a fence or yazamat, in the centre of which the burning took place. Inside and outside of this, numerous temporary sheds were run up for the princes, queens, ministers, &c. Above, where the fire was to be placed, a lofty structure of bamboos was erected; this was covered with white cloth. The body of the late queen mother was laid out in state in one of the pavilions to the south side of the palace, the gardens being for the time open to all, the troops were under arms in the great square and other parts of the palace open to the public, a large space in front of the enclosure being kept clear for the king and his retinue. About 10 A. M. the first of the procession accompanying the coffin appeared at the inner gate of the palace and slowly marched towards the pyre all taking up their respective positions with order and regularity. Save the troops, all taking part were in white, but the numerous gilded palanquins, gold umbrellas, together with the splendid bier, with the white umbrellas joined to the green coats, red the troops; with the numerous elephants gaudily trapped, placed here and there, made the scene barbarously splendid. Following or preceding the bier were the princes and princesses, the queens with the Pakan Meng, the late king. He and the first queen, whose mother the deceased was, walked in front of the bier. About a quarter to eleven the great inner gates were again thrown open for the exit of the king and retinue. The king was seated in a large gilded palanquin, borne on the shoulders of some 40 or 50 men, and was accompanied by four of his daughters and one son, all young. He, like all the others, was dressed entirely in white. Advancing up to about ten yards from the front of the enclosure the palanquin was halted, the retinue and guards filing off right and left and forming a large hollow square. Prayers were said by several Phoongye, the king gave directions as to the exact minute at which the cremation was to commence, the bearers turned round, the procession was reformed, and moved inside the great gates which were again partially closed, while drums, tom-toms and cymbals were beaten, and trumpets (?) sounded, amidst a tumultuous noise. The queen, princes, Pakan Meng, &c., &c., returned to the palace shortly after the cremation was completed in the same order as they came out. The coffin was overlaid with gold to the extent of 7½ viss which was afterwards distributed among the Phoongye or to be applied to the building of a pagoda. Charcoal was employed at the burning of the body and was kept at a red heat by numerous bellows placed all round. The whole of the body with the exception of a small part of the back of the skull was reduced to ashes or at least consumed on the fire. This small piece, little bigger than a rupee, was placed in a gold cup closed by a lid studded with rubies, while the remains of the charcoal and ashes were placed in earthen-ware vessels to be carried to the river. The gold cup was confided to an official who took his place in the hearse. Having arrived at the river bank, those deputed for the purpose entered two gilded boats lashed together, but a little apart, which were rowed out into the centre of the stream. Here a halt was made, the bearer of the gold cup, with it rolled up in his putzoe, jumped into the water and while he was underneath let it go. At the same time the jars of ashes had their contents poured into the stream, the man was picked up and there was an end of the whole.

In Siam, the poor are buried or exposed to beasts of prey; if above the lowest class, the deceased after the bowels have been extracted, is laid in a wooden coffin, externally lacquered and gilt and this is placed for some days on a high table. In the mean time, the priests light up tapers, burn perfumes under the coffin, and chant funeral hymns at night. A procession of relatives and friends dressed in white and covered with white veils follow the corpse. Beside it, are borne figures of various animals or singularly shaped monsters carved out of bamboo and the accompanying talapoins exclaim we must all die, we are all mortal. The mourners attest their sorrow by their tears and often hire women for the express purpose. The body is then taken from the coffin and placed naked on the pile which is set fire to and the remains are scorched. The body is then replaced in the coffin and deposited under one of the pyramids erected about the temple. Graves are held sacred among the Siamese and their violation is considered as a heinous offence. They refuse the honor of burning to persons killed by accident, by lightning, to the still-born, to those who die in child-birth, or from smallpox, and to suicides. The remains of such are either thrown into the water or exposed to beasts of prey.

With the Chinese, when life has departed, the dead body is arrayed in robes of state, or in most costly apparel; ablutions are not performed, nor any unnecessary handling of the body suffered. White is the sign of mourning. The Chinese worship the spirits of the dead, and, amongst that nation, the desire to have a good coffin is universal. Many purchase for themselves that last tenement and keep it by them, and it is usually substantial, of metal or wood. In Burmah, where many Chinese are settled the best block of teak is selected and the upper portion being sawn off to form a lid, the block is hollowed and ornamented. These may be seen in Moulmein in every carpenter's shop.

In China, the coffin-maker's shops have a very gay, instead of a lugubrious appearance, as the coffins are usually painted red, or some equally bright colour, and the more expensive ones are decorated profusely with gilding; these coffins are placed on shelves one above the other, and the prices vary from one dollar up to four or five hundred.

The funeral customs of China, vary in the different districts. In Fo-Kien, the body is placed in a coffin soon after death, a fan is placed in the hand, a piece of silver in the mouth and a hole is sometimes made in the roof for the spirit to effect its exit. The tombs are on the hill sides, where lucky spots are chosen by geomancers. Paper images of clothes, horses, and other luxuries are cast into the grave and a sacrifice of cooked provisions is offered on the day of the funeral. Every year, in the month of April the whole population visit the tombs and worship the manes of ancestors. Sometimes a poor family will keep the coffin for many months in their house till able to purchase a tomb, but the very poor are buried *en masse* within enclosed buildings. The rite of respectful burial is however so revered that burial clubs exist in all the large cities. The monumental tombs are small raised truncated cylinders.

In China, the tombs of the opulent are decorated with statues of men and horses. They run into excess in mourning for the death of near relations. Every part of the ceremonial is exactly regulated ; even the period, manner, and degree of the mourner's grief being duly prescribed. The corpse being dressed in warm clothes, and deposited in a substantial coffin, is kept for several days above ground, whilst the survivors express their measured grief by gesture, dishevelled hair, sackloth, and mournful silence. When a lucky spot has been selected for the grave, the corpse is consigned to the bosom of our universal mother, earth. Building a tomb in the form of a horse-shoe, they inscribe thereon the name of the deceased, erect a tablet to his memory in the hall of his ancestors, and repair annually to the grave, in order to prostrate themselves before the manes, and to offer victuals to the spirits. In the temples, divine honours are paid to their memory. To supply their full wants, in the other world, they burn gilt paper, paper chariots and houses, with every necessary article of furniture, which are supposed to be changed in the other world into real utensils, whilst the gilt paper, when burnt to ashes, becomes so much ready money. The greater the personage the more protracted is the mourning; the emperor mourns three years for his parent and every good subject follows his august example. Mandarins resign their offices during this period of affliction ; literati avoid entering for the examinations ; and common people abstain for some time from their labour. Chinese suttee prevailed to a considerable extent up to the middle of the 18th century. It does not appear, however, to have been regarded as a compulsory rite, but was generally the widow's own choice to show her extreme fidelity, or to escape the hardships of widowhood, or in the case of dutiful sons, to save the life of a parent. Fire was never used, but opium, poison or starvation were the means of suicide employed. Yiun Chang was the first emperor who discountenanced those practices, which his immediate predecessors had encouraged ; and he forbade honorary tablets to be erected to self-immolating victims. In 1792 a memorial was presented to the emperor praying for the dedication of a tablet to a most dutiful son, who had cut out his liver in order to cure his mother's sickness. The imperial Board of Rites, after mature deliberation, respectfully observed that the practice of cutting out the liver is that of the ignorant, showing a contempt for their lives, and after all, but foolish devotion ; and a decree was issued discountenancing the custom.

The Chinese, like christians and mahomedans, plant trees in their cemetries and around the tombs. The cypress is a favourite with all these religionists and in northern Europe the yew is much planted.

The Japanese have a great respect for the dead. They place the remains inside a kind of square tube, and in a sitting posture. To obtain this position they are said to use the Dosio powder which, placed within the mouth of the corpse, is said to have the effect of relaxing all the muscles. The hollow square is carried in a chair or norimon by four men into the yard of the Terā, escorted by a few women dressed up in bright colours, wearing a veil of white crape on the head. They are here met by the Ochaushan and a quantity of minor canons who chaunt to the sounds of the tom tom, the whole company awhile moving with the body, around the temple, into which they at length rush with a great noise. Prayers are then read over the body, and it is removed to be burned. If the deceased have been a person of rank, the ashes are deposited in an urn and buried within the sacred precincts of the Tera. In the procession, there is very little affectation of sorrow ; they seem to regard it as a joyful occasion, and the whole ends with a feast at the house of the deceased.

BUSTI, Hind, a village, a town, from basna, to inhabit, to build.

BUSTI KHEIL, an Afghan tribe dwelling near the Afredi. See Bussi Kheil.

BUSTRINA, Sans. Andropogon nardus.

BUSUD, Arab. Coral : properly, Bassad.

BUT, a manner of pronouncing and writing the name of Budd'ha : also the name of the Bhot or Bot race. See Bhot, Buddha.

BUT, Pers, an idol. In the Hindi and several Indian tongues, Bu or But is a spirit, generally an evil spirit.

BUT, also BUR, Beng. ; Indian fig, or Banyan tree, Ficus Indica.

BUT, Beng. Hind. Cicer arietinum.

BUTA, Hind. Properly, Bhutta, head of the Indian Corn, the Zea mays.

BUTAI-MISWAK, Hind. Astragalus multiceps.

BUTAN, is also written Bhotan, Bhutan and Botan. The capital of it is Tassisudon. The country is broken up with valleys and glens with overlooking mountains covered with snow in June and July. The people are styled Lhopa, they are agricultural and industrious, employing artificial irrigation on their patches of soil in the valleys. The Lhopa are tall, many being more than 6 feet high, and fairer t[illegible] the people of the south of Europe black ; eye small, black, with pointed corners, as if artificially stretched. Eyebrow slightly shaded. Eyelashes scarce ; below the eyes, the face is broadest, and rather flat, but narrow from the cheekbones to the chin ; this character of the countenance being more developed in the characteristic Chinese further east, to whose features this is the first approach. The Lhopa is a paper maker, distiller. Lhopan, in dialect, differs from the true Tibetan, in being more Hindu. Notwithstanding this, the real ethnological differences between the Lhopa and the true Tibetans are small. The language is the same from the frontier of Kafiristan to that of Asam. The religion is the same from Asam to Bultistan.—*Latham's Ethnology.* See Bhot. Bhutan.

BUTANA, HIND. Pisum sativum.

Common Pea	ENG.	Puttanee	TAM.

The native country pea is sown after the rains in drills, and varies in price according to the quality ; when green they are tolerable as a vegetable, but are best in soup. Procurable in December and January.—*Riddell.*

BUTANI, a clan of the Baluch Maghazzi tribe, which has been located in Kachi for a long time. The Maghazzi are subdivided into four principal families or clans, of which the Butani of Jell are the most illustrious and give the chief or sirdar, to the whole. They boast of being able to muster 2,000 fighting men, and between them and the Rind a blood feud long existed. The Maghazzi and Rind are alike addicted to the use of ardent spirits, opium and bhang. See Kelat, p. 493. Jell.

BUTANI, an Afghan tribe dwelling in the Dehra Ismail Khan district. They were a robber tribe until they became British subjects.

BUTAQUILA STROPHIATA, Hodgs. syn. of Aquila pennata.—*Gmel.*

BUTASHA, HIND. Sugar cakes.

BUTAYAT, BURM. Ægyceras fragrans, Kon.

BUTCH ? Amomum zerumbet.

BUTCHER ISLAND, 3¾ miles from the shore in Bombay harbour. Its Hindu name is Depa-devi, or the Island of the gods, Holy Island : it is low, less than a mile from Elephanta, in the direction of Salsette.

BUTEA FRONDOSA, *Roxb. ; W. & A.*

Erythrinum monosperma, *Lam.*

This small tree occurs in most parts of India and produces large deep orange flowers in great clusters. A beautiful red juice issues from wounds and fissures in the bark, which hardens into a ruby coloured, brittle, astringent gum, called Butea Kino, which has been deemed valuable in chronic diarrhœa. Its large bunches of orange flowers attract attention, and Burman books describe the Himalaya forest as shining with the flowers of the Butea, like a flame of fire. An infusion of the flowers of this and also of B. superba, dye cotton, previously prepared with alum, a bright yellow, which may be changed by an alkali into deep reddish orange. The lac insect is frequently found on the smaller branches of the tree. It is this tree that was growing so abundantly on the battle plain which Clive occupied, against Suraj-ud-Dowlah, and from which it has been known as the battle of Plassey. The wood is not much used, but the bark and root afford a strong rope.—*Roxb. iii.* 224. *Ainslie, p.* 108. *O'Shaughnessy, p.* 296 *Honigberger, Voigt, Powell,* 265 ; 570 *Birdwood, Mr. Mendis, Dr. Gibson, Captain Macdonald, Royle, Ill. BUTEA PARVIFLORA. A scandent shrub, flowers small and white.

BUTEA SUPERBA, *Roxb. ; W. & A.*

Tige moduga	TEL.	Baranki Chettu	TEL.
Tivva moduga	,,		

An immense creeper with flowers resembling those of the Butea frondosa. It grows on the mountains of Coromandel in the Circars, the Kheree jungle and in the Dehra-dhoon and is not uncommon in the provinces of Tavoy and Mergui. It yields the same kind of gum as Butea frondosa.—*Eng. Cyc. p.* 703. *Voigt.*

BUTEES or BATIS, is sold in the Lahore bazar and is also called Atees ; all seem to be the Aconitum heterophyllum.—*Honigb. p.* 241.

BUTEONINÆ, a sub-family of birds, of the order Raptores or birds of prey. They are the buzzards, and the sub-family comprises one species of Archibuteo hemiptilopus of Tibet and the Himalaya ; Buteo pygmæus of Tenasserim ; B. rufinus of India and N. Africa, and B. vulgaris, the 'Common Buzzard,' of Europe, N. Africa, Asia Minor, higher mountains of India, common in the W. Himalaya, rare in the Nilgiris and replaced on the plains by B. canesbens. Rare, and to the northward and far west only, in America: mostly migratory in Scandinavia. B. Bacha, Franklin and B. melanotis, Jerd. are syns. of Spilornis cheela, Daud.

BUTHUS AFER, Linn. The great black scorpion of Ceylon, is as large as a little crayfish, its sting occasions a little inflammation.

BUTI, Hind, properly B'huta, a vegetable: many words are compounded from it, as

Buti ka mockka, Hind Boletus ignarius.
Awani buti, Hind. Ballota limbata.
Baggi buti, Hind. Stachys parviflora.
Dandi buti, Hind. Cleome ruta.
Farid buti, Hind. Farsetia Edgeworthii.
Gandi buti, Hind. Glinus lotoides.
Kauri buti, Hind. Trichodesma Indica, also Solanum gracilipes also Ajuga bracteata.
Khare buti, Hind. Oreoseris lanuginosa.
Mundi buti, Hind. Sphæranthus hirtus.
Pili buti, Hind. Abutilon Indicum.
Pipat buti, Hind. Heliotropium ramosissimum.
Popat buti, Heliotropium Europæum.
Resham buti, Hind. Berthelotia lanceolata.
San buti, Hind. Cassia obovata.
Tappal buti, Hind. Crozophora tinctoria.
Wadi buti, Hind. Ajuga bracteata.

BUT-KALE. Beng. Cicer arietinum.

BUTKUS. Mae. Elæodendron Roxburghii. *Linn.*

BUT MOOGRA, Beng. Duk. Jasminum sambac. *Ait.*

BUTHNI SAJJI, Hind. of Sirsa, 2nd quality of Sajji. See Barilla.

BUTLOE, Hind. The field-pea.

BUTOCERA RUBUS. Curuminga, Singh. A beetle which penetrates the trunk of the cocoanut tree near the ground and there deposits its eggs, and its grubs, when hatched, eat their way upwards through the centre of the tree, to the top, where they pierce the young leaf buds and do incredible damage. —*Tennent's Ceylon.*

BUTONICA. B. sylvestris alba; *Rumph*, syn. of Barringtonia racemosa, *Roxb.* B. speciosa, *Lam.* syn. of B. speciosa, *Linn.*

BUT PESH, Hind. Aplotaxis gossypina.

Butter is one of the components of milk, the others being curd or caseine, a species of sugar, and certain salts. The lighter matters suspended in milk, when it is allowed to stand, separate in the form of cream, which can be further separated by churning into butter and butter milk. The yield of cream is increased by dropping into the milk a small piece of zinc. Butter is naturally of a yellow colour, which is deepened when the cows feed in rich pastures, but it is often artificially heightened by arnotto. "Karra" or fresh butter, is seldom used by the natives of India: it is generally kept till it turns rancid, and then clarified by repeated boiling. This is called "roughun," in Persia and "ghee" in India. The ordinary drink of the Tartars is "kumys," a spirit made of mare's milk. They pour the milk into a large leathern vessel, and when they have got a considerable quantity, beat it till it begins to ferment like new wine. When it becomes quite sour, they beat it again violently and then draw off the buttery part. The fermented whey makes a brisk sort of liquor, with an agreeable almond flavour, very intoxicating to those not much accustomed to it. The Tartars also make, from goat's milk, a kind of butter, which they boil and keep for winter use in goat's skins, and though they put no salt in it, it never spoils. After they have taken off the butter, they boil the curd again to make cheese, which they dry in the sun, and which is as hard as iron; these cheeses they put into sacks for the winter store, and when the supply of milk becomes scanty, they put this hard sour curd into a leathern vessel, pour hot water upon it, and beat it till it liquifies; and with this acid drink they have to content themselves during the time of year so severely felt by pastoral nations. The Tartars live chiefly on their flocks, and the produce of the chase. —*Huc's Christianity, Vol. I. p. 209. Toml. McCull.*

BUTTERS, VEGETABLE, the name given to the concrete oil of certain vegetables, from its resemblance to the butter obtained from the milk of animals, and from being employed for similar purposes. The term is also occasionally, but improperly, applied to some vegetable products which are entirely of a waxy nature, such as the wax of Myrica cerifera. The name is likewise bestowed in Siberia on certain Algæ, species of the genus Nostoe, such as N. pruniforme. The most important Vegetable Butters are produced by the Bassia butyracea and other species of Bassia and certain palms, such as the Cocos butyracea and the Elais guineensis; the former of which is of great utility to the inhabitants of Brazil where it grows naturally, and to the negroes of St. Domingo, where it is cultivated: while the latter is very serviceable to the natives of Guinea. The generally known solid oils or vegetable butters are as follows:

Butter of cacao, from Theobroma cacao; 1,000 parts of the seed yield 300 parts of a concrete oil or butter, of a most agreeable flavour.

Butter of Cinnamon, from Cinnamomum verum or zeylanicum. By strong decoction, the fruit yields a concrete oil, called Cinnamon wax, used for candles, and which exhales while burning a most delicious odour.

Butter of Nutmeg from Myristica moschata; this is brought from the Moluccas, of two kinds, and is obtained by bruising the nutmegs into a paste which is compressed in bags between hot metallic plates.

Butter of Cocoanut from the Cocos nucifera. It is prepared by rasping the pulp of fresh ripe cocoa-nut, adding a little hot water, squeezing and boiling the milky juice until the water has evaporated, and filtering through paper. This oil separates into two portions, the one fluid and limpid; the other a solid concrete substance of a pure white color, which in the shade remains unliquidated at all temperatures. It may possibly be found that the process of manufacture affects the out-turn of the solid product.

Butter of Palm oil from Elais guineensis, a native of Africa and America. It is much esteemed in Europe for ungents and has been lately recommended for culinary purposes.

A new export from the Western Coast of Africa, has been large quantities of solid palm oil, of the consistence of hard butter. Shea Butter is from Bassia Parkii, or Pentadesmis butyracea.

Galam Butter from Bassia butyracea, Fulwa or Phulwara, Hind, of Nepal and Almora in Northern India.

Bassia latifolia oil separates into two portions, one on the surface, fluid, and of a pistacio green color; the other of a brownish green, and almost solid.

Bassia longifolia, the Illoopoo Oil. Of three samples, one separated into two portions; the upper, fluid, of a pale oil green, in color; and the lower, greenish white and of the consistence of ghee. Another specimen of the oil of this Bassia separated into three portions, the uppermost a golden yellow and fluid, the middle yellowish white, solid, and floating in the upper, and the lowest solid, and brown in color. A third sample was of the consistence of ordinary ghee and was sent as a material fit for the lubrication of railway carriages; a beautiful specimen, almost solid, from Tanjore, was of a light golden yellow color.

Chinese Vegetable Butter from Stillingia sebifera is much in use in China; the number of these trees in the province of Chekiang is immense.

Indian Vegetable Butter, Piney Butter, or Doopada solid oil, is from the Vateria indica; (Piney Marum, Tamil,) of the Western Coast and Canara. It is white or yellowish white, of the consistence of hard salt butter, and in the shade remains always solid. It can be procured in quantities in southern India. It is used for lamps principally, but is very suitable for soaps and candles. It is prepared by cleaning the seeds; then roasting and grinding them into a mass. To 5 seers of seed, add 12 seers of water, and boil until the oil rises to the surface. Remove the oil, stir the contents of the vessel, and allow it to stand until the following day, when more oil will be observed on the surface, which may be collected and the process repeated.

African Butter is from Pentadesmis butyracea in Sierra Leone.

Japan Wax is from Rhus succedaneum.

Almond Butter.

Cocum Butter from Garcinia purpurea?, one of the two species of Garcinia, G. pictoria and G. purpurea, the seeds of which produce solid oil, the former the Gamboge butter and the latter the Cocum butter:

Gamboge butter Mukke Tylum, Tam. Arasana Ghoorghy yennai, Can. is a product of the Garcinia pictoria, *Rox.* which grows abundantly in Mysore and the Western jungles.

Gamboge butters are solid and of a deep leek green color. The oil is procured by pounding the seed in a stone mortar and boiling the mass until the Butter or oil rise to the surface: 2½ measures of seed yield one seer of butter, and it is sold at the rate of Annas 1-4 per seer of Rupees 24, in the Nuggur division of Mysore, and is used as a lamp oil and as ghee.

Sterculia fœtida oil, (Vern: Tam. Coodiray yennai or Coodira pusjun yennai) is thick at all seasons of the year, and is obtainable probably in large quantities in the Nulla Mulla and Yella Mulla forests.

Butter of Laurel—Laurus nobilis.

Solid oils are obtained from the Dipterocarpi, in the Indian Archipelago.

Solid oil of the Horse-eyes and Cacoons of Jamaica, Fevillea scandens, is white and hard.

Kawan Solid Oil is procured from a species of Bassia from Singapore or Java.

Mijo or Japan Butter, from Dolichos soja.

Solid Oil from Myristica (Virola) sebifera, of British Guiana.

Solid Oil from the Demerara butter tree Saouari, Pekea tuberculosa.

Vegetable Wax from Shanghae.

Myrtle Wax from Cape of Good Hope.

Solid Oil of Bombay, from Salvadora persica or Vernonia anthelmintica.

Carap or Carab Vegetable Butter, from Carapa guianensis, a large tree in Trinidad, and British Guiana.

Butter of the Great Macaw Tree, from Acrocomia fusiformis.

Broonga Malagum Oil, from Masulipatam, separates into three portions, the uppermost, fluid, resembling brown sherry, the middle, o the consistence of ghee, and brownish yellow, and the lowest almost solid and of a hair brown color.

Mooragana or Mooroogana Butter or solid oil of Canara, is used for medicinal purposes and as an ointment for the wounds of cattle, injured by tigers. It is said to be produced from a forest tree growing in the Canara Jungles. The specimens are dark brown and quite solid. It is the most solid of the solid oils.

Odul or Adul oil of Travancore is separated into two portions; the upper, fluid, of the colour of golden sherry; the lower, reddish white, of the consistence of ordinary hard salt butter.

Shacotty oil of Canara is used for cutaneous eruptions. This oil in the Museum separates into two portions; the upper, yellowish and fluid, and the lower brownish red and of the consistence of hard ghee.

Hibavania oil under this Canarese name, there was exhibited at the Madras Exhibition of 1857, a solid oil from the Sampajoy district by Pedro Probhoo of a clove brown colour, a small phial was priced at Rupees 4½.

Camujay tree oil: a small bottle, priced Rupees 2½ from the same district, by the same exhibitor, was a dark gelatinous mass, of the consistence of blanc-mange.

Oil of Hydnocarpus inebrians, the thortay oil of Canara, used for sores, is a very valuable vegetable solid oil of the consistence of ordinary hard salt butter.

Terminalia bellerica, Vern. Tam. Thaneeka or Tannekae yennay. The oil separates into two portions—the one fluid, of a pale oil green color, and the other white, floccular, and of the consistence of ghee.—*Balfour Madras Museum Report, Simmonds, p.* 510-514.

BUTTER, Dr. D., a Bengal medical officer wrote on the Topography and statistics of Oudh Calcutta, 1839, I vol. 8vo. On public health in India—Planting of trees along the Himalayas. Bl. Med. and Phys. Trans. Calcutta Government Gazette, and As. Jl. 1829, vol XXVII. On the preparation of opium for the Chinese market in the Behar and Benares agencies.—*Bl. As. Trans.* 1836, *Vol. V.* 165.

BUTTERFLIES are very numerous in the *South and East of Asia, and many of them very* beautiful. They are classed by entomologists, in the insect order Lepidoptera. The largest and most gaudy of the Ceylon Lepidoptera, is the great black and yellow butterfly the Ornithoptera darsius, of Gray. Its upper wings, which often measure six inches across, are of a deep velvet black. Its caterpillar feeds on the Aristolochia and betel leaf, but the butterfly on the heliotrope. Papilio polymnestor, the black and blue butterfly, feeds on the ruddy flowers of the hibiscus or the dark green foliage of the citrus. Papilio Hector has crimson spots on the black velvet of the inferior wings. When examining the Lachen valley, Dr. Hooker found the caterpillar of the swallow-tail butterfly (Papilio machaon), common, feeding on umbelliferous plants, as in England; and a Sphynx (like S. euphorbiæ) was devouring the euphorbias; the English Cynthia cardui (painted-lady butterfly) was common, as were "sulphurs," "marbles," Pontia (whites,) "blues," and Thecla, of British aspect but foreign species. Amongst these, tropical forms were rare, except one fine black swallow-tail.—*Hooker, Vol. II. p.* 65. *Tennent's Ceylon.* See Lepidoptera.

BUTTERWORTH, Major General, C. B. an infantry officer of the Madras army. He served under Sir Thomas Pritzler, K. C. B. at the siege and storm of Copaldroog: served with the army in Burmah in 1825-6, and besides minor affairs was present at the capture of Melawn. He compiled the Madras Road book; served in 1834, as Assistant Quartermaster General, in the field force sent against Coorg, under the orders of Sir David Foulis, K. C. B. and was three times wounded while leading to the several stockades. He served under Brig. General Taylor, C. B. in Gumsur against the Khonds, was appointed Quartermaster General of the Madras Army and afterwards in 1843 Governor of the Straits Settlements. Born 10th January 1801. Obiit, 4th November 1856.

Buttons are made from metal, shell, wool, cotton thread, horn, bone, palm seeds, fruits, woods, glass, wire, mother of pearl: jet, precious stones; agates, linen, velvet; satin, florentine, and embroidered stuff of all kinds. Birmingham is the great seat of this manufacture. Those of metal are often gilt, and five grains of gold, and sometimes 2½ grains, are made to cover 144 one inch buttons: so great is the divisibility of that precious metal.—*Toml. McCulloch*.

BUTTOO-PASSALEI KIRAI, Tam. Basella cordifolia, *Lam*. B. alba *Linn*.

BUTUM, Arab. Pistacia terebinthus. Turpentine.

BUTWAS, Hind. Glycine.

BUTYRUM, Lat. Butter.

BUVUSHIRUM, Sans. Phyllanthus niruri.—*Linn*.

BU-WAH-PA, Bali. Nutmegs.

BUWAYA. See Crocodilidæ.

BUXUS, a genus of plants whose species afford the valuable Boxwood. Of the two European species B. sempervirens and B. Balearica, the former is the common Box, and forms a large evergreen bush or small tree, common all over the south of Europe from Spain to Constantinople, and reaching even so far as the north of Persia into the N. W. Himalaya. The Himalaya Box-wood is known as Pabur Lakri. Mr. Dunlop saw a jungle of this plant at Sem Kharrak, beyond Ramnee, the trees as tall as English firs and some of them as thick round as a man's body. The chief supply of Box-wood for Europe is derived from the southern parts of Europe, and from Asia Minor. A distinction is drawn between "Turkey" and "European" Box-wood. The latter is more curly, softer, and paler than the former. Dr. Royle has called attention to Buxus emarginatus, a native of the Himalayas. Several Asiatic woods have been discovered with much of the appearance of the common boxwood. The Karens furnished Dr. Mason with specimens of a wood not light, but scarcely to be distinguished from the box-wood of Europe; he had never seen the tree, though he named it a Murraya. Dr. Wallich found Nauclea cordifolia on the banks of the Irrawaddy, with "wood coloured like that of the box tree but much lighter, and at the same time very closegrained." One Tavoy tree, he says has a strong tough wood, in grain like box. —*Eng. Cyc. p*. 704. *Dr. Mason, Royle's Illust. Him. Bot. p*. 327. See Engraving.

BUXUS CHINENSIS, *Lam*. The China box tree.—*Voigt*.

BUXUS EMARGINATUS, *Wallich*. This Box-wood tree was introduced into Britain from *the Himalaya and the wood appears as good* and compact as that of the box-wood in use in Europe. But, on actual comparison, is found to be softer than the common kinds, though like them in other respects. Wood cuts have been engraved upon this wood which has the advantage of being of considerable size and thickness.—*Eng. Cyc. Royle, Ill. Him. Bot. p*. 327.

BUXUS SEMPERVIRENS.—*Linn*.

Chikni of Jhelum	Shanda, Leghune of Tr. Indus.
Samshad, Shumaj; Safed dhawi of Beas.	Papri, Papar of Sutlej and Ravi.
Paprang of „	

This grows in northern Persia, is abundant near Manikaran in the N. W. Himalaya, Dr. Stewart says from being lopped, it is generally seen as a shrub, but at times grows to a tree of some girth, locally only, on the Sutlej and Beas, upon the Rattan Pir, near Punch, above Rawul Pindi, in the Salt Range, and Trans-Indus. Mr. Watson, Madhopur Workshops, states that the wood is not equal to that of olive (see Olea), but he thinks the specimen must have been an inferior one or badly seasoned. It is carried to Umritsur and other places in the plains to be made into combs, but the supply is probably getting exhausted.

The leaves of the box are poisonous to the camel. Dr. Cleghorn says this is found in the Sutlej valley between Rampur and Sungnam at an elevation of 6,000 feet. Wood hard, heavy, and nearly as compact as the box-woods of Europe. Used in the Schools of Art throughout India for wood engraving and used for plugs for rifle bullets.—*Cleghorn, Punjab Report, p* 63. *Powell's Hand-Book. Dr. J. L. Stuart*, M. D.

BUYO of the Philippines is the betel, the sirih of the Malays and Piper betel of botanists. —*Crawfurd Dictionary, page* 78.

BUYO, in Tagala, Sweet potatoes.

BUYUR, Beng. Jujube, Zizyphus jujuba.

BUZ, Pers. a kind of antelope or long-horned mountain-goat, called Tish by the Arabs.

BUZA, Hind. Hordeum hexastichum.

BUZGUND, Hind. Gulpista. Pistachio nut.

BUZLI, Hind. Oreoseris lanuginosa.

BUZOTEE. The Sepah and Buzotee are small, but very brave Afghan tribes, the Buzotee numbering 500, and the Sepah 300 fighting-men. They live in tolerably close connexion with their more powerful neighbours, the Afridi, and manage to hold their own. After the British acquisition of the Punjab they acted up to their engagements in regard to the Khyber Pass and generally behaved well towards the British.

BUZAR-UL-BHANG also Sikran? Urmanikon. Arab. Henbane seed.

BWÆ, Burm. Careya arborea, *Ro*[illegible]

BWAI-JIN, Burm. Bauhinia angui[illegible] and B. racemosa, *L*.

BUZRAK-OTUNA, ? Arab, or Bu[illegible]ona, ? Arab. Plantago ispaghula. Spogel Seed.

BUZR-UL-SHIBET, [illegible] Seed.

BUZRUK, Arab. [illegible]

BYAH, a river nea[illegible] poor.

BYAKED, also BYAKOOR, Beng. Indian nightshade; Solanum Indicum.

BYANSE, a pass in Gurhwal, in which are nine villages and 184 houses, the people who occupy four of the Gurhwal passes are Bhot, those in the Darma pass are said to be Mongols left by Timur. See Gurhwal.

BYAT, a powerful tribe which came originally from Tartary with Chenghiz Khan. They were long settled in Asia Minor; and a number of them fought in the army of Bajazet against Timur. After his defeat, many of the families of this tribe were sent by the conqueror to the province of Diarbekir; but, having quarrelled with its ruler, they went to the territories of Baghdad, where they lived till the time of Shah Tamasp, who brought them into Persia. One half was settled at Souj-Bulàgh, a district of Teheran; and the remainder at Ashraff, in Mazenderan. They remained on these lands till Abbas II. transplanted a number of them to Khorassan. The Byat are still more numerous in Turkey than in Persia, but in the latter country, in the reign of the Suffavean monarchs, they were registered at forty thousand families. —*Malcolm's History of Persia, Vol. II, p.* 218, 219.

BYBLUS, the modern Djebail or Gebyle. Byblus was a considerable seaport town under the kings of Antioch. Djebail is enclosed by a wall about a mile and a half in circumference, of moderate height, with square towers at intervals; Djebail is one day's journey from Tripoli.—*Robinsons's Travels, Vol. II. p.* 52.

BYCE, a rajput race who claim to be one of the 36 royal tribes. They give their name to the Bycewara district in the Doab.

BYEW. Burm. Dillenia.

BYGOOL. See Canal.

BY-IT-ZIN. Burm. Antidesma paniculata.

BYLTÆ of Ptolemy, are the Balti people now inhabiting little Thibet. They have, on the east, the Khor country which is inhabited by a people supposed to be the Chaurandi Scythæ of Ptolemy.—*Cunningham.*

BYNEE ARRACK. Arrack from Caryota urens.

BYNGUN, Duk. Brinjal.

BYNSA, one of the seven branches of the Ba[illegible]gar race.

[illegible]AGI, Anglo-Hind. For Viragi (vi-pri-[illegible]aga, passion) hindu vaishnava ascetics; [illegible]wers of Ramanund and Kabir form t[illegible] principal sub-divisions. See Dadu; Kabir; Ramanund; Vairagi.

BYRD, amongst the Rajput races, the blessing of a bard to a ruler. Whenever a Suktawut chief[illegible] court of his sovereign, or takes h[illegible]g his brother chiefs, the bards sti[illegible]n with the dying words of Ballo Doonah datar, Chaogoonah joojar, Khorasan, Mooltan-ka-aggul, meaning double gifts, "fourfold sacrifice" that is to say with increase of their prince's favour the sacrifice of their lives would progress; and which, for the sake of euphony probably, preceded the byrd won by the founder,—"*the barrier to Khorasan and Mooltan.*" The byrd of the Chondawut is "Dos sehes Mewar ka bur kewar" the portal of the ten thousand [towns] of Mewar." It is related that Sukta, jealous of so sweeping a byrd, complained that nothing was left for him; when the master bard replied, he was "Kewar-ka-Aggul," the bar which secures the door, —*Kewar Tod's Rajasthan, Vol. I. p.* 358.

BYSOA, a river near Ghazepur cantonment.

BYSSUS, a long, delicate, lustrous, and silky fasciculus of filaments, by which some of the conchiferous mollusks, for example, the Mytilacea, mussels, and Malleacea, hammer oysters, are moored to rocks, &c. is an assemblage of muscular fibres dried up in one part of their extent, but still contractile and in a living state at their origin. The tendinous foot of Byssoarca and Tridacna seems to be a step towards the organisation of a true byssus. The byssus of the great Pinna of the Mediterranean is in a fleshy sac or sheath at the base of the foot, which is attached towards the middle of the abdominal mass of the animal. In Italy it is manufactured into various articles; and there are few museums without a glove or a stocking woven out of this substance. In the great Exhibition of 1851 a large number of articles were exhibited manufactured from this substance, as well as specimens of the silk for making up.—*Eng. Cyc. p.* 707.

BYTTNERIA, one species furnishes a wood of great elasticity and strength, the deflection with 1,351 lbs., being 3½ inches, the specimen was drawn through the supports, having only a bearing on each end of 1 inch; an invaluable wood for gun carriages —*Major Campbell.*

BYTTNERIA HERBACEA.

Aree-keeray, Tam.

A very common little herbaceous plant with red and yellow flowers, used as greens.

BYTURNEE, river rises near Lohardugga, in Lat. 23° 29: lon. 84° 55′ N. runs S. S. W.; S. E.; E., into the Bay of Bengal, by Dhumrah river. Length, 345m. It receives the Sunk, 95m. About 26,000 sq. m. are drained by the Brahminy and Byturnee. It is sacred in hindoo mythology, more especially at its source. It runs near Pudumpoor, in Cuttack.

BYZANTIUM of Ptolemy is supposed to be the Balabhi of Guzerat. See India, pp. 313, 314.

C. This English letter has sometimes an open, sometimes a hard, and sometimes a soft or sibilant sound, as in the English words commenced, city. There is no letter in Arabic, Persian, Urdu, Sanskrit, Hindi, Marathi, Guzarathi, Bengali, Urya, Telugu, Karnata, Tamul or Malayalam, with two such similar powers, and it is on this account that Cashmere is so often written Kashmir; Cabool, Kabool; Sanscrit, Sanskrit; Carnatic, Karnatik; Cutch, Kutch, &c., &c. The sounds produced by the English compounds of ch, as in child, have single letters with corresponding powers in all those tongues, and, in all but Tamil, ch'h also has equivalents modified in compound letters, but there is no letter which has two sounds of ch, as in character, child. See ch.

CAAT, or KAAT, or KAT, or CAATU in the Dravidian tongues means wild, uncultivated or crude.

CAAT-AMUNAK. TAM. Jatropha curcas.

CAAT-AMUNAK YENNAI. TAM. Jatropha curcas oil.

CAAT CARNAU-KALUNG. TAM. Dracontium polyphyllum.

CAAT KOORUNDOO. TAM. Trichilia spinosa.

CAAT-KUSTOORI. MAL. Abelmoschus moschatus.

CAAT MALLIKA VAYR. TAM. Jasminum root.

CAAT MOORANGY VAYR. TAM. Hedysarum sennoides.

CAAT-SIRAGUM. TAM. Vernonia anthelmintica; Fleabane.

CAAT SIRAGUM YENNAI. TAM. Oil of Vernonia anthelmintica.

CABAB-CHINI. GUZ. HIND. Cubebs.

CABBAGE. BRASSICA OLERACEA.—This vegetable is raised from seeds, and cuttings; requires a free open rich soil and plenty of water; the surface of the ground round the plants should be repeatedly hoed to keep it open and free of weeds. The seeds should be sown some time before the commencement of the N. E. Monsoon at Madras, in a well prepared bed, not too rich.—*Jaffrey.*

CABBAGE SEED OIL. See Oil.

CABAN. In the Philippine islands, a measure of capacity.

CABANIS. See Mirafra.

CABINET, little cabinets of silver are worn by all the Jungum sect of hindus, each containing the conical emblem of Siva, the lingum of the hindus, the phallus of the Greeks, and the priapus of the Romans. The tabernacle of Moloch, mentioned in Acts vii. 43, was doubtless a kind of cabinet, in which the object was enclosed; and the shrines of Diana were, most probably, of the same construction and for the same purpose. A medal, with a figure of Diana's shrine, shows pointed cones and a semi-lune. Bacchus brought his thyrsus from the East when he returned from his Indian expedition. It was said to have been surmounted by a fir cone or pine, but a recent writer in the "Edinburgh Review" thinks it was the date. This fruit, according to Pliny, was consecrated to the worship of almost every heathen divinity. The date palm is the scriptural emblem of all that is dignified, beautiful and good, and entered largely into the ornamentation of temples.—*Edinburgh Review, Milner's Seven Churches of Asia, p.* 130.

CABINET WORK. See Damascus.

CABLE. ENG.

Langar ki rassi. HIND. | Amar. TEL.
Tali-sawuh. MALAY.

In Southern Asia some cables for ships are made of coir, the requisite quantity being laid out at full length along the beach or other convenient spot: they are made up in strands, and twisted in a very simple machine; viz. a strong wooden frame, in a strong board, across which three or four pins are placed and turned like the screws of a carpenter's bench, by as many men; the further end of the cable is fixed to a large revolving pin, which is turned round in a similar manner. As the strands are twisted, the horse in which this is fixed is drawn nearer to the other. It is evident that cable strands thus laid are very unequally strained; the outer lines being tight while the inner ones are slack. By laying the strand and twisting it as each yarn leaves its separate reel, a strand is formed of which each yarn bears its due proportion of the strain. Huddart's patent rope was laid on this principle: the necessary apparatus for winding off the yarn might be readily made. Cables for the Shakespear bridges are formed of the country rattan. In the Red Sea those formed of the coating of the branches of the date tree are used; and the same material with a proportion of fibre of the Kaldera bush, the *Pandanus odoratissimus*, is used by fishermen in forming drag ropes for their nets at Oopada.—*Mr. Rhode, MSS.*

CABO NEGRO, Spanish, of the Phillipines, is obtained from the gomuti palm, Arenga saccharifera, and resembles black horse hair. **It is found between the trunk and branches, in a matted form, interspersed with black twigs. When separated from the latter, it is manufactured into a cheap and durable cordage chiefly used for cables and standing rigging. A single palm in its life-time yields two crops of this material, each amount-**

ing to about lbs. 9. The twigs are used as writing pens, and also as arrows. Under the hair-like material a soft substance is besides collected, used as oakum for caulkings, and as such exported to China.—*Walton's State*, p. 119. See Gomuto.

CABOOK. SINGH. Lateritious deposit, said to be the product of decomposed gneiss.

CABUL, the chief town of Affghanistan, where the chief Khan rules. The boundaries of Afghanistan have fluctuated with the vicissitudes of war from the middle of the tenth century. Rennell tells us (*Memoir*, pages 112 to 121) that Timur in his route from Cabul towards Hindoostan, according to Sherif-ud-din, went by way of Irjal, Shenuzan, Nughz, Banou (or Bunnoo), and thence to the Indus, at the very place where Jelal-ud-din, king of Kharazm, fought with Jengis Khan and so heroically swam the river after his defeat in 1221. Timur crossed an extensive desert in his way to Batnir. In his return from the banks of the Ganges, he proceeded to the north-west, along the foot of the Sewalik mountains, by Meliapur, Jallindhar, and Jummoo, to the Indus, which he crossed at the same place as before, and in the same manner; and returned to Samarcand by way of Bunnoo, or Banou, Nughz or Nagaz, Cabul, Bacalan, and Termed.

At the death of Timoor, Afghanistan comprehended the principalities of Cashmir, Lahore, Peshawur, Cabul, Balkh, Khulm, Kandahar, Multan, and Herat; those of Kelat and Beluchistan as well as Persian Khorassan, acknowledged her as suzerain. Sind also, though not having paid for five years the tribute agreed upon by Mir Fathah Khan, chief of the Talpooras, was nevertheless classed as amongst the number of her dependencies. Mr. Aitcheson tells us that at the beginning of the present century the Dooranee empire, extending from Herat to Cashmere, and from Balkh to Scinde, which had been built up by Ahmed Shah Abdallah, and remained undivided in the hands of his grandson Zeman Shah. Having incurred the enmity of the powerful Barukzai tribe, Zeman Shah was deposed and blinded by his brother Mahmood, who was supported by Futteh Khan and the Barukzai. He eventually died a pensioner of the British Government at Loodhiana. In 1803, Shah Mahmood was driven out by Sujah-ool-Mulk, the younger brother of Zeman Shah, and Shah Suja was still in possession of the undivided empire of Ahmed Shah at the time of Mr. Elphinstone's mission in 1808. This mission was sent for the purpose of concerting with Shah Suja the means of mutual defence against the threatened invasion of Affghanistan and India by the Persians in confederacy with the French. Mr. Elphinstone had scarcely left Cabool ere Shah Suja was driven out by Shah Mahmood with the aid of Futteh Khan. Wandering about for some years the sport of fortune, now a captive in Cashmere, now the prisoner of Runjeet Singh at Lahore, in September 1816 Shah Suja found an asylum in the British Territories at Loodhiana. In the meantime Futteh Khan Barukzai, who was the chief support of Shah Mahmood's power, having incurred the jealousy of that monarch, was blinded and slain. The death of Futteh Khan roused the vengeance of the Barukzai clan. Of the twenty brothers of Futteh Khan, one of the youngest, Dost Mahomed Khan, was foremost in avenging his murder. Shah Mahmood was driven from all his dominions, except Herat, the whole of Affghanistan was parcelled out among the Barukzai brothers, and in the confusion consequent on this revolution, Balkh was seized by the chief of Bokhara, the Derejat by Runjeet Singh, and the outlying province of Sind assumed independence. In the partition of Afghanistan, Ghuzni fell to the share of Dost Mahomed, but he soon established his supremacy at Cabool also, and thus became the most powerful of the Barukzai Sirdars. At the date of the invasion of the country by the British, which was undertaken in order to place Shah Suja on the throne, the kingdom consisted of four subdivisions, Cabul, the Huzara country, Candahar, and Herat. Taken in this extent, Afghanistan is bordered on the north by Bokhara, Kunduz, and Kaferistan; on the east by the British province of Peshawur and the Soliman range of mountains; on the south by Beloochistan; and on the west by Persia. Its greatest length from north to south is about six hundred miles; its breadth measures about the same distance. (*Townsend's Outram and Havelock*, p. 85.)

Shah Sujah, who had still a strong party in Cabool, had never lost hopes of recovering his kingdom, and the British undertook to restore him. This they accomplished. Cabul was occupied 5th August 1840, but on the 2nd November 1841 an insurrection and general rising drove out the British, and utterly destroyed their armies; it was however reoccupied by the British on the 16th September 1842, and on the 8th November the town was destroyed and the British evacuated the country.

The races occupying Affghanistan are distinguished by marked characteristics, moral as well as physical. General Ferrier tells us that the Affghans of Cabul consider themselves as Indian Affghans, whereas those of the Herat say they are Khorassani; one tribe repudiates another, and denies its Affghan origin, and there is not the least sympathy between them. According to Captain Raverty, the people who dwell about Cabul and Kandahar, Shorawak and Pishin are designated B'r-Pushtun or Upper Afghans; and those occupying the district of Roh, which is near India, are called L'r-Pukhtun or Lower Afghans. Persian is the official language of Afghanistan, but colloquially the Pushto is alike the common tongue of the uneducated people, of the families of the Sadozye kings, and of the dwellings of the Amir. There are however two divisions of the Afghans, termed Pushtun and Pukhtun, who speak Pushto and Pukhto respectively. The Pushto being the western dialect with affinity to Persian, and the Pukhto the eastern with many Sanscrit and Hindi words. The Pushto is spoken, with slight variation in orthography and pronunciation, from the valley of Pishin, south of Kandahar to Kafiristan on the north; and from the banks of the Helmund on the west, to the Attok, Sindhu or Indus river, on the east;—throughout the Sama or plain of the Yuzufzye,—the mountainous districts of Bajawar, Banjhkora, Suwatt and Buner to Astor, on the borders of Little Tibet,—a tract of country equal in extent to the entire Spanish peninsula. Also, throughout the British districts of the Derajat, Bann Tak, Kohat, Peshawar and the Samah or Plain of the Yuzufzye, with the exception of Dera Ghazi Khan, nine-tenths of the people speak the Afghan language. Since the invasions of Mahmud of Ghazni, in the twelfth century, there has been a constant influx into India of Afghans, as conquerors and settlers, and this has been so great from particular districts that some tribes have altogether disappeared from Afghanistan. In some localities in India, Afghan settlers have preserved the Pushto, almost in its purity, up to the present day, having from the outset married amongst themselves. In some parts of Bandalkand and in the territory of the Nawab of Rampur, whole towns and villages may be found in which the Afghan language is still almost exclusively spoken and is the medium of general communication. Captain Raverty considers that although, on numerous points, the Pushto bears a great similarity to the Semitic and Iranian languages, it is totally different in construction and idiom also from any of the Indu-Sanscrit dialects.

Cabul is the Urva of the Vendidad. Urva means the land of plains. Bunsen says Cabul is from Kah, Pers. grass, and bul a mutilated form of Urva. *Bunsen's Egypt*, III, 483. *Townsend's Outram and Havelock*, p. 85. *Raverty's Pushtoo Grammar. Aitcheson's Treaties. Ferrier's Journies. Rennell's Memoirs. Vigne A visit to Cabul, Ghuzni and Afghan-*

istan, by G. T. Vigne, Esquire, F. G. S. London, 1860.

CABUL RIVER, a tributary to Indus, rises in lat. 34° 15′ N., lon. 68° 10′ E. near Sir-i-Chusma, in Afghanistan, at an elevation of 8,400 feet. Its course generally is east through the valley of Cabul and plains of Jellalabad and Peshawur, into the Indus. Its length, about 320 miles. It receives the Punchshir, 120 miles; Tazao, 80 m.; Alishang, 120 m.; Soorkh-Rood, 70 m.; Koonér, 230 m.; Suwat, 150 m.; and about 42,000 square miles are drained. It is not navigable along the north base of Khyber Mountains, except on rafts and hides, but is navigable for boats of 40 or 50 tons to Dobundee.—*Rep. San. Com.*

CABOOSE. ANGLO-INDIAN.

Wooleve meen, TAM.	Ecsheegay duntee, TEL.

CABRAL, the commander of a Portuguese fleet of thirteen ships, which, with 12,000 men, sailed in 1499 to India. In his route he discovered Brazil, A. D. 1,500, and took possession of it, and then sailed to Calicut. He lost four ships, in one of which Bartholomew Dias perished. The Zamorin at first was cordial, but being instigated by the mahomedans, attacked their fort, and killed all the Europeans. Cabral retaliated by destroying ten mahomedan ships, and then returned to Lisbon in July 1501.

CABRAS OR GOAT ISLAND. On the west coast of Luzon, in lat. 13° 51′ N., long. 120° 7′ E., is a low flat woody island.—*Horsburgh.*

The leaves resemble the tongue of the buffalo, and the stalks are prickly and covered with white spots. While fresh, the leaves have a strong smell like hemlock; they are given in decoction in rheumatism, syphilis, and lepra: indeed, in the class of cases in which sarsaparilla is usually employed by European practitioners. In Bombay they seem to be highly esteemed. Honigberger (p. 246) states that Cacalia kleinia is much used by mahomedan and hindoo practitioners, but very little by English physicians; a water distilled from the leaves is kept for use. *O'Shaughnessy,* page 420. *Honigberg.*

CACAO. ENG., FR., IT., PORT., and SP. The chocolate nuts or seeds, termed cacao, are the fruit of a species of *Theobroma*, an evergreen tree, native of the Continent of America, but now naturalised in India. That commonly grown is *T. cacao*; but Lindley enumerates two other species, *T. bicolor*, a native of New Granada, and T. *guianensis*, with yellow flowers, a native of Guiana. The chocolate plant is sparingly cultivated in India, in the Philippines, and the northern peninsula of Celebes. In most of the Philippines it is cultivated, but only for home use, and the quality produced is inferior to that of Guayaquil and other parts of America. That of the island of Cebu is the best, being worth from 15 to 20 per cent. more than the produce of the other islands.—*Crawfurd Dicty.*, page 78.

CACAO BUTTER. Solid oil of Theobroma cacao.

CACARY KAI. TAM. Cucumis muricatus.

CACATUINA, or cocatoo, a sub family of Birds of the family Psittacidæ of the order Scansores. See Aves. Birds.

CACH. See Cutch.

CACHALOT, the Physeter macrocephalus, or sperm whale; the male ranges in length from 38 to 76 feet, and is about 60 feet in the average, but the female does not exceed 30 or 35 feet. The Cachalot is without symmetry, of a prevailing dull black colour, occasionally marked with white, especially on the abdomen and tail. They propel themselves round by striking and pulling against the water with the flashes of their tails. The lower jaw is diminutive, slender, and in form not unlike the mandible of a bird; the teeth of the upper jaw, wholly ivory, in aged males are of great solidity, and weigh from two to four lbs. each. It spouts a thick watery mist from its nostrils at intervals of ten or fifteen minutes. Its valuable fat or sperm is chiefly situated in the head. It is a solid mass of soft yellow oily fat, weighing between two or three tons, in a hollow of the head, bared on the upper jaw, and forming the front and lower part of the snout. The cavity, called *Case*, is situated to the right and beneath the spouting canal, and corresponds to nearly the entire length of that tube. It is filled with a very delicate well of cellular tissue, containing in large cells a limpid and oily fluid, which is liberated on the slightest force. The quantity, chiefly spermaceti, contained in this singular receptacle, is often very considerable, and nearly 500 gallons have been obtained from the case of one whale. It has been noticed in the Mediterranean, and a stray individual in the Thames.—*Hartwig.*

CACHAO, the capital of Tonking, is about 84 miles up the river. Till the end of the 17th century, there was a trade with this place by Europeans.—*Horsburgh.*

CACHAR, a district in Bengal, with its chief town, Silchar, a civil station 300 miles from Calcutta, built on the Barrak river. Cachar district is on the north and east of Silhet. The Burmese invaded it, but were again expelled during the first Burmese War, when the legitimate rajah, Govind Chunder, was restored by a Treaty. On the southern frontier of Cachar lies the territory of the Lhooshai Kookee, a most warlike tribe, who in 1848-49 drove up the Kookee from the south into Cachar, but Colonel Lister, by a judicious employment of the Kookies as soldiers, exerted such a salutary influence over the Lhooshai, that they have never given trouble since. The Lhooshai, however, are in their turn being pressed up northwards by another tribe still more powerful than themselves, called the Poi, who are approaching from the southeast. The hilly tract lying between Cachar and Chittagong is inhabited by the Lhooshai, who claim and hold all the tract of country to the south of the parallel of the latitude of Chatterchoora Hill, and east of Hill Tipperah to the Tepai River is the Burmese frontier.—*Aitchison's Treaties,* &c., page 77. *Ann. Ind. Adm. Vol. XII*, p.86. See India, p. 317,340, Krishna, p. 546, Kuki, Naga, Polyandra, 107, Tea.

CÆSALPINIA CORIARIA, WILLDE.

Poinciania coriaria, *Jacq.*

Libi Libi.	ENG.	Dibi Dibi.	ENG.
Divi Divi.	„	American sumach.	„

This small tree, met with in gardens in Madras, is now growing plentifully about Singapore, Salem, Bangalore, Hoonsoor and at Chicacole. It is a native of South America, but in 1842 was introduced by Dr. Wallich into the Botanical Gardens at Calcutta. From thence, seeds or young plants were sent to Madras and cultivated in the Horticultural Gardens. The seed pods have been extensively used for tanning leather, and for this purpose are considered superior to all the Indian astringents. Leather tanned in this way is considered equal to that of the best of Europe manufacture. The pods are oblong, compressed, somewhat obtuse, curved laterally, the inner side being concave and the other convex. It is to the curved pod that the commercial term of Divi-Divi, or Libi-Libi, is given. The average produce of pods from a full grown tree has been estimated at 100 lbs. weight, one-fourth of which consists of seeds or refuse, leaving about 75 lbs. of marketable matter. The " Divi Divi" pods are of a dark brown color externally, when ripe, and ¾ of an inch wide. Underneath the outer skin of the pods and separated from the seeds by a layer of woody fibre, is a considerable thickness of astringent matter of a light yellow color, almost pure tannin, slightly darker in color than that manufactured from galls, about 60 or 65 per cent. of the whole pod (excluding seeds). At an interval of six feet apart, an acre of ground will contain 1210 trees, yielding an average of 810 cwts., and 30 pounds of divi-divi, or above 20½ tons of marketable matter, worth, at only £5 per ton, £200. The quantity of mucilage it contains precludes it from the use of dyers, but it is largely used by curriers. One part of Divi-Divi is sufficient for tanning as much leather as four parts of bark, and the process occupies only one-third of the time. The selling price ranges from £8 to £13 per ton. The imports into the United Kingdom in 1844, were 3,900 tons ; in 1845 and 1846, about 1,400 tons each year ; during the subsequent three years the imports were merely nominal, but in 1850 a renewed demand seems to have sprung up, for 2,770 tons were imported into Liverpool, and a few tons into London. The ground in which this tree admits of being cultivated is that least adapted to the staple products of tropical agriculture; Guinea grass may be profitably raised beneath its shade. The wood is not known, but deserves attention.—*Voigt. M. E. J. R. Dr. Cleghorn's Reports. Markham, p.* 353. *Simmonds' Comm. Products, p.* 503. *Indian Annals, No. VII.,* page 120. *Juror's Report, Madras Exhibition* 1855, *article* "*Tanning Materials.*"

This tree, the Verzina of Cæsar Frederich, as the various names will show, grows widely over South-Eastern Asia, but its great value as a dye wood prevents it being used as timber. It is a very important article of commerce. The great value of this tree consists in its wood, which is called in commerce Bukkum or Sappan wood. 3,670 tons of this wood was imported into England in 1852, at £7 to £12 the ton. The Brazil-wood of commerce is, however, said to be furnished by two species. Fée considers the Sappan wood of the East Indies (*Cæsalpinia sappan*) to be one of the Brazil-woods of the merchants. But it is probable that it is the produce of many species, and possibly of more than one genus, for De Candolle and Sprengel doubt whether the *Cæsalpinia echina?* is not rather a *Guilandina.* The best Brazil-wood is said to come from Pernambuco, where it is called Pao da Rainha or Queen's Wood, on account of its being a royal monopoly. One Bukkum or Sappan wood of commerce is yielded by *C. sappan.* It grows in the North Arcot forests, in the Nallamallai of Cuddapah in the Kotah jungles, is a native of Siam and Amboyna, is found in the immediate vicinity of Prome, growing on the small hills of the place, but except near Thoungzai, in the northern part of the Rangoon district, where it is also seen in small quantity, Dr. McClelland had not found it in the interior of the province, or in the larger forests, so that it is perhaps scarcely entitled to a place amongst the natural productions of Pegu. It is cultivated in Palghaut for the purpose of dyeing the straw used in mat-making, and from its high price for this purpose, it is not used for carpentry. It grows to a larger size in China than India. It grows with great luxuriance in South Malabar, where it is cultivated rather extensively by the Moplahs, who plant a number of the seeds at the birth of a daughter. The trees require 14 or 15 years to come to maturity, and then become the girl's dowry. Dr. Cleghorn saw many on the banks of the Nellumbuor River, and thinks the dye-wood is damaged by being allowed to float in salt water. It grows there without any care. The tree is not indigenous in the Bombay forests, but the wood is imported in quantity from the Palghaut jungles (?) for dyeing purposes. It grows freely in their cultivated places without any care, but the heartwood is dingy, and wants that fine pinkish red which the imports from the southern forest have. Its extreme height in Ganjam and Gumsur is 36 feet, circumference 2 feet, and height from ground to the intersection of the first branch is 8 feet; is common in the Malayan countries. The heart of this being cut into chips, steeped for a considerable time in water, and then boiled, is used for dyeing there, as in other countries. The cloth or thread is repeatedly dipped in this liquid, and hung to dry between each wetting, till it is brought to the shade required. To fix the colour, alum is added; the common powder used at the Holee festival is extracted from the wood of this tree. The seeds are used for colouring milk. *Marsden's History of Sumatra, p. 95. Voigt, Captain Macdonald, Drs. Wight, McClelland, Gibson, and Cleghorn.*

CÆSALPINIA SEPIARIA, Roxb.

Reichardia ? decapetala, *Kottl*,

Hsoo-kyan-bo, Burm.	Chilloor. Hind.
Mysore thorn. Eng.	Kilgatch. ,,

Grows in Kumaon, Nepaul, Bengal, Ava, Tavoy, Mysore, Ajmire. It is a scandent strong armed shrub, used to fence around fields, and forming a splendid impenetrable hedge, covered with bright green leaves and large yellow spikes of flowers. Hyder Ali surrounded fortified places with it.—*Voigt, Dr. Irvine, Chow-Chow.*

CÆSAREA is surrounded by a wall and deep ditch, the ruins stand by the sea-side, and from the summit of a tower that is washed by the waves, a view is obtained of the whole coast of Palestine from Cape Blanco to Jaffa. When Skinner passed through, the area of this once proud city was used for a burial-ground. *Skinner's Overland Journey, Vol. I., p.* 155.

CAFE. Fr., It., Port., Sp. Coffee.

CAFIR, also Kafir, a term employed in India to designate the African race, usually the large featured, curly haired variety. La Bourdonnais enlisted many into his army, but the British in India have never employed them. They are numerous in the city of Hyderabad. A small number were employed in the Ceylon Rifle Corps; comparatively few of their children grow up, usually falling victims to pulmonary complaints.—*Forbes' Eleven Years in Ceylon, Vol. II., p.* 32. See Kafir.

CAFFREE CHILLEY. Capsicum minimum.

CAGAYANES ISLANDS, are two low woody islands of considerable size lying 54 miles westward of Negros.—*Horsburgh.*

CAGAYAN SOOLOO, in lat. 7° 0′ N., and 1° 30′ E. from Banguey Peak, is an island of considerable size, visible 21 to 24 miles.—*Horsburgh.*

CAGGAR, a river of the Rajputanah desert, also known as the Hakra, but now absorbed by the desert sands, which is said to have occurred many centuries ago. According to tradition, the stream took a westerly direction by Phoolra, where it is still to be traced, and fell into the Indus below Cutch. Its absorption occurred during the reign of Rao-Hamir, prince of Dhat, and caused great physical and political changes in the country. There are vestiges of large towns buried in the sands, amongst them is the Rung Mahal west of Bhutnair, with subterranean apartments still in good preservation. The tradition is that it belonged to a Powar prince in the time of Alexander the Great, Sikandar Roomi. The absorption of the Caggar river is named as one of the causes of the comparative depopulation of the northern desert of India. *Todd's Rajasthan, Vol.* II., *p.* 213-4. See Saraswati.

CAGOT. See Rhodia.

CAHAMILILE, Singh. In Ceylon, a very hard, fine, close, even-grained, heavy wood.

CAHLARA. Sans. Nymphæa lotus.

CAIA, also KOIA, MARAM. Tam. Psidium pyriferum.

CAIEPUT, or KAIUPUTI OLEUM. Cajaputi oil.

CAHOLOOR, in long. 75°47′ E., and lat. 11°26′ N.

CAIFA, or, as the Arabs called it, Haifa, is a walled city, and was so called in consequence of its having been founded, or at least restored by Caiphas, the high priest. The place of the sacrifice of Elijah is at the inner extremity of the neighbouring range, immediately over the brook Kishon.—*Skinner's Overland Journey, Vol.* I., p. 93.

CAIN, according to Bunsen (iv. 426), Qayin, is the type of the dwellers in towns. He was the progenitor of the city building Arian, as also of the vast Turanian wanderers, who move about, all but cut off from the rest of mankind. Cain is called Kabil by mahomedans, and is supposed by them to rest under Jub'l Shamshan, the highest wall of the crater at Aden, where he and his progeny, tempted by Iblis, erected the first fire temple. See Abu Kubays.

CAILLEA CINEREA, *G. & P.*

Syn.

Dichrostachys cinerea, *W. & A.*	Desmanthus cinereus, *Willde.*
Mimosa cinerea, *Linn.*	Acacia dalea, *D. C.*

Mavalinga maram, Tam.	Venuturu, Tel.

This small tree grows in Ceylon, in the Madras Presidency, and is common on sterile plains of the Dekhan, Delhi, Patna, and Paghamew. Wood not known.—*Voigt.*

CAIRN. Ganj. Hind. Birah. Mahr.

A heap of stones or tumulus piled over the resting place of the dead; many of these are found in different parts of Southern India, and have been written on by Major Congreve and others. Prior to the budhist stupas or topes, this seems to have been a common mode of covering the dead; indeed, as Colonel Cunningham remarks, the tope is only a cairn, regularly built. On the Neilgherry hills are found remains of cairns, burrows, cromlechs, kistvaens, and circles of upright loose stones, which are nearly identical with those found in Europe, in the ancient seat of the Celts; and whatever mystery may hang over those remains, and over the race of which they are the only surviving relics, there seems no reason for hesitating to style them, in a general sense, Druidical. In these cairns or burrows, vases, cinerary urns, and other vessels of glazed pottery are often found, which sometimes contain human bones, more or less charred, and mixed with ashes; sometimes a little animal charcoal alone. Research has shown that they are to be met with in various districts in the Presidency of Bombay, in almost every part of the Dekhan and peninsular India, from Nagpore to Madura, in immense numbers on the Anamalay Hills, a range on the south side of the great Coimbatore gap, which forms the commencement and northern face of the Southern Ghauts, those on the Anamalay being of a more advanced order and a better condition than the Neilgherry burrows. Similar remains are found in Circassia and Russia, and circles of stones surrounding ancient graves are found on the southern Arabian coast and in the Somali country in Africa. Major Congreve directed much attention to those on the Neilgherry Hills. All around Hyderabad and Secunderabad, in the Dekhan, are great numbers of cairns, many of which are to be found throughout the Hyderabad country. Captain Meadows Taylor discovered and examined a large number of these remains at Rajan Kooloor, in Sorapoor, and also at Siwarji, near Ferozabad, on the Bhima, and devoted much attention to the comparison of them with similar remains found in England. He calls them Scytho-Celtic or Scytho-Druidical. Neither the hill people, the Todas and Curubaras, nor any hindu, know anything about the race to which these remains belonged, and neither in Sanscrit literature, nor in that of the Dravidian languages, is there any tradition on the subject. The Tamil people generally call these cairns pandu-kuri; kuri means a pit or grave, and pandu refers to the Pandu or Pandavan brothers, to whom so much of hindu mythology relates. The races who raised these cairns were probably dwellers in the country prior to the advent of the present Dravidian occupants, and were expelled by or ultimately became absorbed in the latter, or they may have been a race of nomade Scytho-Druidical shepherds, who wandered into India after it was peopled and settled, about the Christian era, and then wandered out again or became absorbed amongst the people of the country. But there exists within 300 miles of the British capital of India, a tribe of semi-savages, who habitually erect dolmens, menhirs, cysts and cromlechs, almost as gigantic in their proportions, and very similar in appearance and construction to the so-called Druidical remains of Western Europe; and, what is still more curious, though described and figured nearly a quarter of a century ago by Col. Yule, except by Sir J. Lubbock, they are scarcely alluded to in the modern literature of pre-historic monuments. In the Bengal Asiatic *Journal* for 1844, is Colonel Yule's description of the Khasia people of East Bengal, an Indo-Chinese race, who keep cattle but drink no milk, estimate distances traversed by the mouthfuls of *pawn* chewed *en route*, and among whom the marriage tie is so loose that the son commonly forgets his father when the sister's son inherits property and rank. Dr. Thomson dwelt for some months among the Khasia people, and found Col. Yule's account to be correct in all particulars. The undulatory eminences of the country, some 4,000 feet to 6,000 feet above the level of the sea, are dotted with groups of huge unpolished squared pillars and tabular slabs, supported on three or four rude piers. In one spot, buried in a sand grove, were found a nearly complete circle of menhir, the tallest of which was 30 feet out of the ground, 6 feet broad, and 2 feet 8 inches thick; and in front of each was a dolmen or cromlech of proportionately gigantic pieces of rock, while the largest slab hitherto measured is 32 feet high, 15 feet broad, and 2 feet thick. Several that were seen had been very recently erected. The method of obtaining the blocks is by cutting grooves, along which fires are lighted, and into which, when heated, cold water is run, which causes the rock to fissure along the groove; the lever and rope are the only mechanical aids used in transporting and erecting the blocks. The objects of their erection are various—sepulture, marking spots where public events had occurred, &c. It is a curious fact that the Khasia word for a stone, "mau," is as commonly occurs in the names of their villages and places as that of man, maen, and men does in those of Brittany, Wales, Cornwall, &c.; thus Mausmai signifies in Khasia the stone of oath, Mauloo, the stone of salt, Mauflong, the grassy stone, &c., just as in Wales Penmaen Mawr signifies the hill of the big stone, and in Brittany a menhir, is a standing, and a dolmen a tablestone, &c. The resemblance of the burrows and their contents (with the cromlechs, &c.) to the Druidical remains which are discovered in the ancient seats of the Celtic race in Europe, is too exact and remarkable to be accounted for on any other supposition than that of their derivation from the same origin. Hence the people who introduced Druidical rites into India must have brought them with them from Central Asia, and they must have entered India at a period as early as the introduction of Druidical rites into Europe. Over vast wildernesses in the northern regions of Asia, along the banks of the Irtish and beyond the remote Jenesei, innumerabl tumuli are scattered, containing the remain of ancient art and long extinct races of men and it is a remarkable fact, that in this wintry region, where organic nature seems t struggle against the elements for a precariou existence, even the arts of decoration were studied in those times of yore which witnessed the erection of these tombs. Implements of silver, gold and copper, girdles of the precious metals, bracelets decked with pearls, fragments of porcelain, have surprised th travellers who have seen a few of the tumul excavated. Similar tumuli spread over the north of Europe, contain the remains either of the same people or of races more barbarous than the Asiatics. Hundreds of these have been rifled by treasure-hunters or by mere antiquaries little more enlightened, who have sought to make collections of curiosities without any view to promote science or history. Of late years, Esehricht, Nilsson and Retzius have attempted in Denmark and Sweden to identify in these relics the remains of different races supposed to have inhabited successively the north of Europe in early times. Their example has been followed by Dr. Wilde in Ireland and by M. M. Robert and Serres in France. We shall only observe, that in the opinion of the learned Swedes who have devoted their attention to this subject, the sepulchral remains of Northern Europe may be referred to three successive eras. They display different physical types and different stages of advancement in civilization. The oldest are the relics of a people with round heads, having the transverse diameter of the cranium large in proportion to the longitudinal. The implements and ornaments which are found in the tombs of this race indicate the greatest rudeness. They consist of tools and the heads of arrows and lances made of stone and bone, but nothing indicating a knowledge of the use of metals. Whether these oldest tombs were the sepulchres of a Celtic race, is a question not yet decided. It seems to be the opinion of Retzius and that of Nilsson, who has written a learned work on the antiquities of Scandinavia, (Scandinaviska Nordens Urinvanare. af. S. Nilsson, Lund. 1838-43,) that they were the burial places of a people much older than the Celts. Similar remains more recently discovered in France, have been supposed by M. M. Robert and Serres to be referrible in like manner to different eras, but to what successive races they respectively belonged is as yet only matter of conjecture. It seems, however, to have been observed in many parts of Europe, that the skulls, which, from their situation, and from the ruder character of the implements and ornaments buried, in them, may be supposed to have belonged to the most ancient class, are of a rounder and broader form than the crania discovered in tombs of a later date; and this observation tends to support the notion entertained by many persons, that the west of Europe had inhabitants previously to the arrival of Celtic colonies, and that these earliest people belonged to a family of different physical characters from those of the Indo-European race, and were more nearly allied to the nations of Northern Asia. Several objects seem to be in view when raising a cairn. The above practice was a reverence for the dead. Doorgawutee, queen regent of Gurh Mundela, was killed in action against the troops of Akbar. under Asuf Khan, or as an inscription of her family asserts.—(*As. Res. XV.*, p. 437.) "She was interred at the place where she fell," (*Ben. As. Soc. Journal VI.*, 628), "and to this day the passing stranger places as a votive offering, one of the fairest he can find of those beautiful specimens of white crystal in which the hills in this quarter abound. Two rocks lie by her side, which are supposed by the people to be her drums converted into stone; and strange stories are told of their being still occasionally heard to sound in the stillness of the night by the people of the nearest villages. The very ancient custom of casting a stone upon untimely graves is still observed throughout Spain, accompanied by a silent prayer for the dead, but even a mere stranger free from such motives, may find a gratification in adding a stone to the heap, in veneration for the dead. In the Alford district of Aberdeenshire are many cairns of enormous size; some people think they have been beacons to give warning in time of danger, but many of them are situated in low places, and they are supposed to be tombs of some great men. It is a common saying among the people of this country to this day, when any person makes them a gift, 'God I wat gin I live ahint you, 'se add a stane to your cairn,' and to this day many old people never pass by any of these cairns without throwing a stone to it. Many think that the spirit hovers about the place where the body is interred, and the higher the cairn is raised, the spirit is raised the higher from earth to heaven." The remarkable fact connected with the people, whose religious rites and usages of sepulture gave rise to these cairns, is that they have so largely disappeared from India, that not even a tradition of their existence survives. A cairn of considerable size on the road side at the top of the Adjunta ghaut, seems to have been a thank-offering for the ascent of the ghaut. We added, like the rest of our camp, one stone to the heap.—*Ras Mâlâ, Hindoo Annals, Vol. II., p.* 387. *Dr. Pritchard, Rep. Brit. Ass.* 1847, *p.* 236.

CAIRO, the capital of Egypt, in lat. 30°2′ N., lon. 31°15′ E., derives its name from the Arab epithet El Kahireh, "the Victorious," corrupted by Europeans into Cairo. The present city was founded by the Arabs A.D. 973, in the vicinity of the old Egyptian city El. Masr, the "Capital," since called Old Cairo, and to the peoples of the East, Cairo still known as "Misr." It was built out of the ruins of Memphis, the city of the Pharaohs. Cairo was captured by the Turks in 1570, with whom it remained until taken by the French in 1798, who in their turn were expelled by the British in 1801. It has since been the capital and residence of the Viceroy of Egypt. The citadel was built in 1176, by the famous Saladin (Salah-ud Din), who also erected the beautiful aqueduct seen from its walls. In the passage leading to the citadel, upwards of 400 mamelukes were massacred by Mahommed Ali on the 1st of March 1811. Emir Bey alone made his escape. Within the walls are the Pasha's palace, the arsenal, mint, and public offices, a mosque and a well 260 feet deep, known as Joseph's Well. It was not however Joseph, the son of Jacob, who sank it, but a ruler of that name about A.D. 1100. The population, including the suburbs of Old Cairo and Boulac, is estimated at about 250,000, of whom half are mahommedans, and the other half a mixture of Copts, Jews, Armenians, and Europeans. It occupies a space equal to three square miles. It is divided into eight districts, each of which is under the care of a Sheikh, or governor, who is answerable for its peace. These again are divided into quarters, named from the people who inhabit them. Thus, one is called Hart el Kobt, 'the Coptic quarter;' another, Hart el Yahood, the 'Jews' quarter;' and a third, Hart el Suggion, the 'Water-carriers' quarter.' The streets, as is the case in all Eastern towns, for the sake of protection from the sun, are extremely narrow, being not much wider than lanes or wynds, and the houses are so constructed, by the jutting out of the second storey, as nearly to come into contact at the top. *Bunsen II,* 52. *Ladies' Journal*; *Overland Guide.* See Kiang; Nicolo di Conti, Wahabi.

CAJAPUTI OIL. Eng.

Kayaputi-ka-tel.	Hind.	Kayapooti-tailam.	Tam.
Kayaputtie.	Mal.		

This oil is obtained from the leaves of two trees, the Melaleuca cajaputi of Maton and Roxburgh, and the M. leucodendron, to which latter pertain the Malay words kaya-putih, literally "white wood," from the colour of the bark of the tree. It most abounds in the island of Borneo in the Molucca Sea, where the essential oil is obtained by the distillation of the leaves.—Cajuputy oil appears to have been known only since the time of Rumphius, who describes two trees, 1 *Arbor alba major*, H. A. ii. t. 16, 2 *Arbor alba minor*, H. A. ii. t. 17. f. 1; and in 1798, Mr. Smith, of the Calcutta Botanic Garden, was sent to the Molucca Islands to obtain the true sort of Cayaputi plant. He obtained several of each of the trees, and they have since been distributed all over India, and this species, though a native of Molucca, is able to stand the cold of N. W. India, probably owing to the thickness of its bark. Mr. S. having also sent specimens to England, they were ascertained by Dr Maton to be those of the second kind, and named Melaleuca cajaputi in the London Pharmacopœia for 1809, a name which Dr. J. E. Smith afterwards unnecessarily changed to *M. minor*. The other species obtained by Mr. Smith in 1798, which the Malays also call Cayaputi, (In Murray, App. Medican, and has been named *Caieputi, Kaiuput Oleum*.) is the *Melaleuca leucodendron*, of which the leaves are larger, more falcate, 5-nerved, and smooth, but possess little or no fragrance, and are not known to yield any of this celebrated volatile oil. The *Melaleuca cajuputi*, according to Mr. Mason, is an elegant little tree, with birch-like bark. It is indigenous in the Karen forests and the southern provinces of Tenasserim, but he has not observed it north of the valley of the Palouk river, in latitude about 13°. Dr. Royle mentions that *Melaleuca cajuputi*, Roxb. (fig. 64), forms a small tree with an erect but crooked stem covered with thick, rather soft light-coloured bark; branches scattered, with slender twigs which droop like those of the weeping willow. A native of the Molucca islands, especially of Boeroe, Manipe and of the S. of Borneo. It is called *Daunkitsjil*, but also Cajuputi. The leaves are collected on a warm dry day in autumn, and placed in dry sacks, in which they nevertheless become heated and moist. They are then cut in pieces, macerated in water for a night and then distilled. Two sackfuls of the leaves yield only about three drachms of the oil. This is clear and limpid, of a light green colour, very volatile, diffusing a powerful odour, having a warm aromatic taste, something resembling that of camphor, followed by a sense of coolness. Sp. Gr. 0·914 to 0·927; soluble in Alcohol. It boils at 343°.—*Crawfurd's Dictionary, p. 79. O'Shaughnessy, Bengal Dispensary, Bengal Pharmacopœa, Royle, Mason.* See Melaleuca Cajaputi.

CALAMANDER WOOD.

Koulou-midrie.	Sing.	Kalumederiye.	Sing.
Koulmidrie.	,,	Calamander maram?	Tam.

A commercial term applied to the woods of two or three species of Dalbergia growing in Ceylon. It is scarce even in Ceylon, whence it has been occasionally brought by private individuals; it is probably the most beautiful of all fancy woods. The figure is between that of rosewood and zebrawood; the colour of the ground is usually a rich hazel brown described as chocolate brown with black stripes. It is a hard wood, and turns well; it is considered to be a variety of ebony. Mr. Rhode (MSS.) met with variegated ebony of rich lustre in logs of ebony cut in the Northern Circar hills: but whether this was owing to the wood being young, or whether the wood was from a distinct tree, he did not know, but there seems no doubt that very many trees yield an ebony. *Ain's. Mat. Med., p.* 211. *McCulloch. Rhode MSS. Holtzapfel, Mendis, Fergusson, Thwaites.* See Dalbergia.

CALAMARY, a species of Loligo, luminous at night.

CALAMBAC, Calambao, Calambeg, also called Aloes wood, is the Agallochum of the ancients, and the Agilla or Eaglewood of the moderns. It is produced in Siam and Silhet by Aquilaria agallocha. See Aquilaria. Eaglewood.—*Royle, Illustr. p.* 171.

CALAMBUCO. The name of one of the best timber trees of the Philippine Islands, the wood of which is largely employed by the natives in the fabrication of domestic utensils and agricultural implements.—*Crawfurd Dic. p.* 79.

CALAMPELIS SCABRA, one of the Bignoniaceæ, a plant of much beauty, well adapted for trellis-work, the orange coloured flowers being very showy.—*Riddell.*

CALAMUS. This genus of palm trees is indigenous to Southern Asia, and Dr. Griffiths enumerates 58 species; they abound in the Madras territories, along the foot of the Himalayas from Dehra Dhoon to Sylhet, in Assam, Chittagong, in the Malay peninsula, Siam, Cochin-China, Sumatra, and in the Eastern Archipelago. The species are mostly spreading shrubs or small trees, erect, or climbing to a considerable height, or trailing their weak stems several hundred feet along. They furnish the "Dragons-Blood," "Malacca Canes," and "Ratans of Commerce," for, some are formed into walking sticks; some, as the C. rotang and others, form the canes or rattans of commerce, of which the people of the Khassia hills make bridges 300 feet long, and those of the Animallai hills are formed into long looped ladders. Canes are extensively used: the hard flinty coating of their stems are readily split into strips, from which the bottoms of chairs and similar articles are manufactured. It is not, however, possible to say from what particular species the canes of the shops are obtained, it being probable that many are gathered indiscriminately; C. rotang has, however, been said to furnish the stouter, and C. scipionum the more slender sorts. But the C. tenuis of Assam, C. gracilis, C. extensus and others, all furnish the canes of commerce. The stem of *Calamus verus* is described as being 100 feet long, that of *C. oblongus* 300 to 400 feet, of *C. rudentum* upwards of 500 feet, and of C. *extensus* as much as 600 feet; Rumphius even states (Vol. V. 100) that one kind attains the extraordinary length of 1200 feet. It is closely covered over by the tubular bases of the leaves, through which it is drawn by the cane-gatherers when green; afterwards it is dried in the sun, and then is ready for the market. The Ground Rattan is distinguished by its straight head and altogether straight and stiff character, as well as by its pale colour, though some are at least an inch in diameter, and others not half that thickness. Some are distinguished by a hard, and others by a soft bark. It is not known whether the slender are of the same species as the thicker kinds, only growing in different situations, or from roots of different ages, but *Rhapis flabelliformis* is said to yield the Ground Rattan. Another kind of rattan is called Dragon Cane. This, both light and dark coloured, is thicker than the last, with long internodes and a hard bark, less flexible than the common Rattans, but strong, springy, and much valued. A variety, with soft bark, is called Manilla Dragon Cane. Other kinds of canes, imported from China, are known, one with stiff stems and large knots, by the name of *Jambee,* and one as *Whangee.* This has a pale, hard bark, and flexible stems, with internodes of about an inch and a half or two inches, and a number of little holes at the knots. Some of the canes of commerce, however, are produced by species of Bambusa, Saccharum and other grasses. The flesh that surrounds the seeds of this genus is a delicate article of food; limpid water flows from the stems when cut through; and the young shoots of some of them, while still tender, are fritted or boiled, chopped small, and, being fried with pepper and gravy, are said to furnish a very delicate dish. One of the kinds of Dragon's Blood or Jurnang, is the produce of species of Calamus, and those which chiefly yield it are the C. petræus (Lour.), C. rudentum (Lour), C. verus (Lour.), and C. draco (Willd.), of which the last three were by Linnæus reckoned mere varieties of the C. rotang (Linn.) —*Seeman, Voigt, Griffith's Eng. Cyc.*

CALAMUS ACORUS. See Acorus.

CALAMUS ARBORESCENS. An arboreous species of rattan common in the Burmah jungles. Griffith justly terms it "a very elegant palm."—*Mason.*

Dam-ul-Akhwain	AR.	Rotan-jarnang	MALAY.
Ky-eing-ni	BURM.	Kanda-murga-rattam	TAM.
Dam-ul-Akhwain	HIND.		

This tree grows in Burmah, the Malay Peninsula, Sumatra and the Eastern Archipelago, and is said to be the species which, as a natural secretion of its fruit, yields the best D'jurnang or Dragon's blood, an article of commerce from the earliest times, and still in demand. In the forest of Tenasserim, the natives call it "Red rattan," as it produces a red exudation like dragon's blood. It is little known in the Peninsula of India. The plants when young are elegant, and resemble small palm trees, after which they become scandent and overrun any neighbouring trees. The fruits are fleshy, red, and astringent. *Dragon's blood* is of more importance in the arts than in medicine, being chiefly used as an ingredient in varnishes and paints. In commerce, it occurs in powder, grains, masses, drops the size of an olive, and in sticks enveloped in the leaf of the talipot palm.—*O'Shaughnessy, page* 642. *Royle Fib. Pl. Mason.* See Calamus, Dragon's Blood.

This is said to furnish the stouter of the rattan canes of commerce. The hard flinty coating of their stems, which are readily split into strips, are extensively used for the caning in the backs and bottoms of chairs, sofas, and light carriages. In all the East, canes are made into matting, seats, sofas, baskets and cabinets, and throughout the eastern islands of the Archipelago and about Malacca, vessels are furnished with cables formed of cane twisted or plaited. They are likewise formed into ropes by the people of the forests to drag heavy weights and to bind wild elephants. The most common kind of cane, that employed for caning chairs, &c., is known in commerce by the name of Rattan Cane, and is yielded by a variety of the long trailing species which abound wherever the genus is found. The most northern one, *Calamus Royleanus*, no doubt yields the rattans collected in the Deyra Doon, while *C. Roxburghii* doubtless yields those collected in more southern latitudes. One kind of Rattan is called Dragon Cane. It is thick, both light and dark coloured, with long internodes and a hard bark, less flexible than the common rattans, but strong, springy, and much valued. The late Mr. Griffith named *C. Royleanus*, and applied the name of *C. Roxburghii* to the plant which Dr. Roxburgh called *C. Rotang*, common in Bengal and on the Coromandel Coast. Both, however, are called *bet*, and used for all the ordinary purposes of cane; as are *C. tenuis* of Assam, *gracilis, extensus*, and others. *C. rotang* has been said to furnish the stouter and *C. Scipionum* the more slender sorts of the canes of commerce. The flesh that surrounds the seeds of this genus is a delicate article of food; limpid water flows from the stems when cut through; and the young shoots of some of them, while still tender, are roasted or boiled, chopped small, and, being fried with pepper and gravy, are said to furnish a very delicate dish. Several species are copiouslydescribed in Rumphius' 'Herbarium Amboinense' (vol. v.) under the name of Palmijuncus. Canes form a considerable article of commerce, inasmuch as in some years between four and five millions of them have been exported from the territories under the government of the East India Company. Dampier says : Here we made two new cables of rattans, each of them four inches about. Our captain bought the rattans, and hired a Chinese to work them, who was very expert in making such wooden cables. These cables I found serviceable enough after, in mooring the vessel with either of them ; for when I carried out the anchor, the cable being thrown out after me, swam like cork in the sea, so that I could see when it was tight; which we cannot so well discern in our hemp cables, whose weight sinks them down—nor can we carry them out but by placing two or three boats at some distance asunder, to buoy up the cable, while the long boat rows out the anchor." The tow-ropes mentioned by Marco Polo as used by the Chinese for tracking their vessels on their numerous rivers and canals, seem also to have been made of cane—and not of bamboo, as sometimes stated—as they were split in their whole length of about thirty feet, and then twisted together into strong ropes some hundred feet in length. Mr. G. Bennet says, in his 'Wanderings,' ii, p. 121, that near Macao the rattans are split longitudinally, soaked, and attached to a wheel, which one person keeps in motion, whilst another binds the split rattans together, adding others to the length from a quantity carried around his waist, until the required length of the rope is completed."—*Bennet. Griffiths. Royle. Roxb.* iii, 777 *Voigt.* 639.

CALAMUS ROXBURGHII. Griff. See Calamus, Canes.

CALAMUS ROYLEANUS, Griffith. The most northern of the canes, being found in the Dehra Dhoon, where it abounds.

CALAMUS RUDENTUM of Loureiro, which this author describes as being twisted into ropes in the Eastern regions, and employed, among other things, for dragging great weights and for binding untamed elephants. In Java, Sumatra, and throughout the eastern islands, vessels are furnished with cables formed of cane twisted or plaited. This sort of cable was very extensively manufactured at Malacca. This large species is found in some of the gardens of the Deccan. See Calamus, Canes, Dragon's Blood.

CALAMUS SCIPIONUM, of Loureiro. Griffith considered this to be the species which yields the Malacca Cane, but the plant does not appear about Malacca. He was, however, informed that the canes are imported from Siak on the opposite coast of Sumatra. Some of these are simply mottled or clouded, others of a brown colour, in consequence, it is said, of their having been smoked. The more slender specimens with the longest internodes are those most highly valued.—*Griffith.*

CALAMUS TENUIS. See Calamus, Canes.

CALAMUS VERUS. See Canes, Dragon's Blood.

CALAMUS VIMINALIS.

The fruit.

CALANTIGA or ALLANG TEEGA ISLES. Near Strait Duryan in lat. 0° 29′ to 0° 31½′ S., long. 104° 5′ E. ; bearing nearly N. W. by W. from Pulo Varela—*Horsburgh.* See Tanjong Basso.

CALAPA. Malay. Cocoa-nut Palm. From this is derived the old word of Calaper, still usual amongst sailors.

CALANUS, a brahman who accompanied Alexander into Western Asia, he was an old man upwards of 80. He went along with Alexander through Gedrosia, the modern Mekran. But, at Pasargada, in Persia, he fell sick and ended his life by burning himself on a pile. According to Plutarch his true name was Sphones. *Cal. Rev.*

CALASTRY, in long. 79° 48′ E., and lat 13° 45′ N., the principal town of a hindu chief known as the Rajah of Calastry.

CALAYAN, one of the Five Islands. See Babuyan.

CALAZIRA, Hind. Fennel Seed.

CALCAREOUS SPAR. Eng. Safed Surma, Hind. The varieties of this mineral are Calc. spar, Iceland spar, Satin spar, Chalk, Rock-Milk, Calcareous Tufa, Stalactites, Stalagmite Limestone, Oolite, Pisolite, Argentine, Fontainbleau Limestone, white and clouded Marbles, Statuary Marble, compact Limestone, Stinkstone, Anthraconite, Plumbo Calcite, Mineral Agaric. This mineral is used in India medicinally, and they call it white antimony, probably from its rhombohedral fracture resembling that of galena, which is usually employed in lieu of antimony; and natives use this also for the eyes, just as they do sulphide of antimony. It is found all over India in one form or other. At Sankerydroog, 25 miles S. W. of Salem, a great quantity is burnt and sent to Salem and other parts for eating with betel, as betel-eaters hold it in esteem. It requires a much greater heat to burn it than the ordinary kinds of limestone, and is generally burnt in small circular kilns with a jungle shrub which burns with a great heat. When burnt it is much whiter than the usual chunam, takes a most beautiful polish, and is much used for the last coat of plaster in houses, &c., giving the appearance of the whitest marble when polished.

CALCIS CARBONAS. Chalk.

Biliary Calculus	ENG.		

occasionally found in the gall bladders of horned cattle in India. They are generally contained in a little bag, which holds two or three small calculi, each about the size of a tamarind stone, or one large one, as big as a marble. They are of a bright yellow colour, and are considered by native practitioners as highly valuable in certain indispositions of young children, owing to their cordial and alexipharmic qualities. A piece about the bigness of a mustard seed, is commonly given for a dose to a babe of two months old, in conjunction with an infusion of Womum or Siragum. This substance is also used together with Kadukai and Machakai, in preparing a mixture for cleansing the inside of the mouths of new-born infants. The Vyteans prescribe a solution of it in warm ghee, to be poured up the nose in cases of nervous head-ache, and they administer it too in Doshum (Typhus Fever), made into a draught with women's milk.—*Ains. Mat. Med. page* 85. See Bezoar.

CALCUTTA, in lat. 22° 33', long. 88° 20'·6; at the cistern of the barometer at the Surveyor General's Office, is 18 feet G. T. S. above the sea. It is the Capital of British India, built on the left or eastern bank of the Hooghly river. It is the seat of the Imperial Government, is a place of great trade, and has a mint, a cathedral, a governor's house, a fortress, a town-hall, great hospitals, schools and colleges, a botanical garden, custom office, high court, and public monuments to Sir David Ouchterlony, and Warren Hastings and others. Calcutta, Sans.; is from Kalika, (Kalee) and "ăt," to move, and it was the first concession to the British in that part of India. It was, when they obtained it, only a miserable village known as Kalee Ghat, of which some believe its present name is a corruption. It is now supposed to have 400,000 inhabitants at least. It is about 80 miles from the Bay of Bengal. On the 18th June 1756, it was taken by Suraj-ud-Dowlah. Messrs. Drake and Minchin made their escape along with the women and children, but Mr. Holwell held out for 48 hours longer, and he and 146 of the people were imprisoned in a small guard room, about 20 feet square, and on the following morning only 23 issued alive. The Guard-room was thenceforward known as the Black Hole of Calcutta. The Treaty of Calcutta was agreed to on th[illegible] 1757. Calcutta, in [illegible], had 416,000 inhabitants. Its Municipality exercises jurisdiction over seven square miles. The Mahratta Ditch, around Calcutta, was excavated by the British in the middle of the 18th century, as a protection against Mahratta inroads. In Mr. Strachey's Minute on the sanitary condition of Calcutta, it is stated that five thousand human corpses had been annually thrown into the Hooghly at Calcutta. Calcutta has been the nurse of many able statesmen, learned men, and philosophers—Warren Hastings, Sir John Shore, Sir William Jones, Dr. John Borthwick Gilchrist, Dr. Horace Hayman Wilson, Dr. Francis Balfour, Dr. N. Wallich, Dr. O'Shaughnessy, Lord Dalhousie, and Lord Canning, Mr. Carey, and Mr. Marshman.

CALDECOTT, JOHN, Astronomer, Trevandrum, wrote a description of the observatory built at Trevandrum by the Rajah of Travancore, in 1837, in the Mad. Lit. Trans. 1839, vol. VI. 56, and Horary meteorological observations at Trevandrum in the same journal.

CALENDAR of the Chaldæans was seen by Callisthenes, the favourite of Alexander. It commenced B. C. 2234. The Chinese calendar was reformed under the Han dynasty B. C. 1991. Nations have adopted different divisions of time, and no uniform calendar has been general throughout the world, from which history has presented difficulties and contradictions.

The Romans called the first day of each month Calend, from a word which signified "*called*," because the Pontiffs, on those days, called the people together, to apprize them of the days of festival in that month. Hence we derive the name of Calendar.

The Roman Calendar, which has, in great part, been adopted by almost all nations, is stated to have been introduced by Romulus, the founder of Rome. He divided the year into ten months only,—Mars, Aprilis, Maius, Junius, Quintilis, (afterwards called Julius), Sextilis, (afterwards called Augustus). September, October, November and December. Mars, Maius, Quintilis, and October contained 31 days, and each of the six other months 30 days, so that the ten months comprised 304 days. The year of Romulus was, therefore, of 50 days less duration than the lunar year, and of 61 days less than the solar year, and its commencement, of course, did not correspond with any fixed season. Numa Pompilius corrected this calendar, by adding two months, Januarius and Februarius, which he placed before Mars. Julius Cæsar consulted the astronomers of his time, and fixed the solar year as 365 days 6 hours, comprising, as they thought, the period from one vernal equinox to another. The six hours were set aside, and at the end of four years forming a day, the fourth year was made to consist of 366 days. The day thus added, was called intercalary, and was added to the month of February, by doubling the 24th of that month, or according to their way of reckoning, the sixth of the calends of March. Hence the year was called bissextile. This almost perfect arrangement, which was denominated the Julian style, prevailed generally throughout the christian world, till the time of Pope Gregory XIII. The Calendar of Julius Cæsar was defective in this particular, that the solar year, consisting of 365 days 5 hours and 49 minutes, and not of 365 days 6 hours, as was supposed in the time of Julius Cæsar, there was a difference between the apparent year and the real year, of eleven minutes. This difference at the time of Gregory XIII. had amounted to ten entire days, the vernal equinox falling on the 11th instead of the 21st of March, at which period it fell correctly at the time of the Council of Nice, in the year 325. To obviate this inconvenience, Gregory in 1582 ordained that the 15th of October should be counted instead of the 5th for the future. The solar, i. e., really the sidereal year called the "Shuboor Sun," or vulgarly, the "Soor Sun," that is the year of (Arabic) months, was apparently introduced into the Deccan by Toghluk Shah, between A. C. 1341 and 1344, and it is still used by the Mahrattas in all their more important documents, the dates being inserted in Arabic words written in Hindee (Mahrattee) characters. "Fuslee" or "harvest" year of other parts of India was not introduced until the reign of Akbar and Shah Jehan, and they mostly continue to this day to be used even by the British, in revenue accounts.—*History of the Sikhs. Captain Cunningham*, p. 34. *Bunsen*, ii. 402, 442. *T. of Ind. Cal.*

CALENDERING, Mora, *Tel.*, a term said to be corrupted from *cylindering*, cotton or linen goods being passed between *cylinders* or rollers, and made of a level and uniform surface. In India, an appearance similar to that produced by calendering is given to goods, particularly to such chintzes as were intended for the Persian market, by beating them and then rubbing them on a board with a shell slightly waxed. The texture is no doubt injured by it. The coarse cloths formerly largely exported were beaten with a heavy block on a log of wood before being made up in bales.—*Rhode, MSS.*

CALENDULA OFFICINALIS, LINN., Htat-Ta-ya, BURM.

CALF. ENG.

Basava, HIND. | Nandi, HIND.

The brazen calf, mentioned in Scripture as an object of worship by the Hebrews, is still worshipped by hindus in India. It is rarely if ever of wood, is often of brass, but oftener of stone. Colonel Tod tells us that the infant Bappa, son of Nagadit, when only three years old, was conveyed to the fortress of Bhandere, where he was protected by a

Bhil of Yadu descent. Thence he was removed for greater security to the wilds of Parassur. Within its impervious recesses rose the three-peaked (tri-cuta) mountain, at whose base was the town of Nagindra, the abode of brahmins, who performed the rites of the 'great god.' In this retreat passed the early years of Bappa, wandering through these Alpine vallies, amidst the groves of Bal, and the shrines of the brazen calf. The most antique temples are to be seen in these spots—within the dark gorge of the mountain, or on its rugged summit,—in the depths of the forest, and at the sources of streams, where sites of seclusion, beauty, and sublimity alternately exalt the mind's devotion. In these regions the creative power appears to have been the earliest, and at one time the sole object of adoration, whose symbols, the serpent-wreathed phallus (lingam), and its companion, the bull, were held sacred even by the 'children of the forest.' In these silent retreats Mahadeva continued to rule triumphant, and the most brilliant festivities of Oodipoor were those where his rites were celebrated in the nine days sacred to him, when the Jain and Vaishnava mix with the most zealous of his votaries: but the strange gods from the plains of the Yamuna and Ganges have withdrawn a portion of the zeal of the Gehlote from their patron divinity Eklinga, whose dewan, or vicegerent, is the Rana. The temple of Eklinga, situated in one of the narrow defiles leading to the capital, is an immense structure, though more sumptuous than elegant. It is built entirely of white marble, most elaborately carved and embellished; but lying in the route of a bigoted foe, it has undergone many dilapidations. The brazen bull, placed under his own dome, facing the sanctuary of the phallus, is nearly of the natural size, in a recumbent posture. It is cast (hollow) of good shape, highly polished and without flaw, except where the hammer of the Tartar had opened a passage in the hollow flank in search of treasure. Amongst the many temples where the brazen calf forms part of the establishment of Bal-Cesar, there is one sacred to Nanda alone, at Naen in the valley. This lordly bull has his shrine attended as devoutly as was that of Apis at Memphis; nor will Eklinga yield to his brother Serapis. The changes of position of the Apis at Naen are received as indications of the fruitfulness of the seasons, though it is not apparent how such are contrived. There are perhaps in India millions of the idol Nandi, the bull or calf, the Vahan of Siva, and it is always placed in a seated posture looking towards the lingum.—*Tod's Rajasthan, Vol. I., p.* 222. See Bull.

CALF-GRASS. Commelyna communis.

CALI, in hinduism, the expected 10th incarnation of Vishnu in the shape of a white horse with a human head. See Kali.

CALI, several rivers have this name in India. The fall of the Cali Sind through the rocks at Gagrown and the Parbutti (Googul) are well worthy of a visit.—*Tod's Rajasthan, Vol. I., p.* 16.

Cotton cloth, originally manufactured at Calicut on the Malabar coast. It is still largely made in India, but the bulk of that used is brought from Britain. Arrian, (i. 539) speaks of the beautiful white linens of India, probably the same with the modern calicoes. These formed, as they do at present, a great part of the people's clothing. The art of *Calico-printing* is one which was common to the Egyptians and Indians, and is still largely practised by the latter, and with a skill which in 1851 produced much to be admired, even in the midst of the productions of the world, and after so many attempts have been made to improve an art certainly imported from the East. Pliny was acquainted with the wonderful art by which cloths, though immersed in a heated dyeing liquor of one uniform colour, came out tinged with different colours, which afterwards could not be discharged by washing. The people of India were found practising the art when first visited by Europeans. They apply the mordaunts both by pencils and by engraved blocks, though it has been said that the former method was the only one employed. Blocks are however used throughout India, but silk handkerchiefs, some exhibited by Mr. Warrington to show the different stage of dyeing as practised in India, had the parts, where the round spots were to be, tied up with thread so as not to be affected by the dyeliquors. The cloth-printers at Dacca stamp the figures on cloth which is to be embroidered. The stamps are formed of small blocks of kantul (*Artocarpus*) wood, with the figures carved in relief. The colouring matter is a red earth imported from Bombay, probably the so-called "Indian earth," from the Persian Gulf. Though the art is now practised to much perfection in Britain, the Indian patterns still retain their own particular beauties and command a crowd of admirers. This is no doubt due in a great measure to the knowledge which they have of the effect of colours, and the proportions which they preserve between the ground and the pattern by which a good effect is procured both at a distance and on a near inspection. *Printing in gold and in silver* is a branch of the art which has been carried to great perfection in India, as well upon thick calico as upon fine muslin. The size which is used is not mentioned, but in the Burmese territory the juice of a plant is used, which, no doubt, contains caoutchouc in a state of solution.—*Royle Arts &c. of India, p.* 483. *Pennant's Hindoostan, Vol.* 1, p. 132. *McCulloch's Commercial Dictionary, p.* 215.

CALIAN. See Kalian.

CALICOIL, the stronghold of the rajah of the Kollari race, now ruled by the Puddacottah rajah. See Kollari.

CALICUT, a town on the Malabar coast in lat. 11° 15¼′ N., long. 75° 47½′ E. It is not visible from the ocean, the only building to be seen being a tall white lighthouse. Thick groves of cocoanut trees line the shore, and are divided from the sea by a belt of sand, while undulating green hills rise up behind and a background of mountains is often hidden by banks of clouds. The name is from Colicodu, a cock crowing, as Cheruman Permal gave his sword and all the land within cockcrow of a small temple to the Zamorin, or Rajah of Calicut, who attained considerable power in the 15th century, but in the early wars of the Portuguese, the British and the mahomedans of Mysore, that high place was lost; Tippoo Sultan destroyed its flourishing trade, expelled from the country the merchants and factors of the foreign commercial houses: caused all the cocoanut and sandal trees to be cut down, and ordered the pepper plants in the whole surrounding district to be torn up and hacked to pieces because these plants, as he said, brought riches to the Europeans and enabled them to carry on war against the Indians. Besides cocoanut products, Coffee, Pepper, Cardamoms, Ginger, Cocculus Indicus, Gingelly seed, Turmeric, Arrowroot, Croton Seeds, and Terra Japonica form articles of export. There are many of the Tiar and Moplah race in the Calicut district. Calicut was the first port at which Vasco da Gama arrived. It was subsequently visited in 1494 by Pedro da Covilham.—*Horsburgh. Bartolomeo's Voyage to the East Indies.* See Tiar, Moplah, Nicolo-di-Conti.

CALICUT MANCHE. A trading ship of the western coast of India. See Boat.

CALIFAH. A ruler, a vicegerent. See Calif, Khalifah.

CALIFORNIA. See Tree.

CALIMERE, a Cape or promontory in the district of Tanjore.

CALI-NADI, the boundary between Delhi and Canouj was the Cali-nadi, or "black stream;" the Calindi of the Greek geographers. Dehli claimed supremacy over all the countries westward to the Indus.—*Tod's Rajasthan, Vol. II, p.* 9.

CALINGA, an ancient kingdom on the eastern coast of the peninsula of India, at its upper end. The dynasty ruled at Rajahmundry and in the Northern Circars. The meaning of the word is, a country abounding with creeks; the town of Kalingapatam alone remains to indicate the rule of that dynasty, but the Kling or Kalen of Burmah and the hindu religion of the Javanese, seem to have come from them. See Kalinga; Krishna, p. 546.

CALINGAPATAM, a sea-port town in the district of Ganjam, in long. 84° 15′ E. and Lat. 18°14′ N.

CALINGULA. TAM. Chadr. Hind. A sluice, a weir, or waterway constructed in the bunds or dams of tanks to permit the escape of surplus water and thus guard against the accumulating waters overflowing the softer parts of the dam.

CALIF, from the Arabic "Khalifah," a vicegerent, was the title assumed by the mahomedan rulers at Bagdad, of whom the first after Mahomed were Umar, Abubakar and Ali. Under the Abbas dynasty, they attained to great power. In Central Asia, the sultan at Constantinople is, even now, universally called the Caliph of Rome.

Caliph Mamun, in A. D. 814, caused a degree of the earth's surface to be measured. This was done on the sandy plains of Mesopotamia, between Palmyra and the Euphrates, by which 56·66 miles were fixed as the equivalent of a degree of the heaven's circumference. Caliph Mamun, son of Harun ur Rashid, forced an entrance into the pyramids. Later, Salah-ud-din, the Saladin of Europeans, used their casings, at least, as stone quarries. Caliph Umar was the second caliph in succession to Mahomed. His time was a period of great extension of mahomedanism. The battle of Kadesia was fought and won by his general Saad, and put an end to the Persian empire of the Parsi. He imposed the khiraj on Syria, and died and was buried at Jerusalem where his tomb still is. *Bjornstjerna's British Empire in the East*, p. 97. *Bunsen* ii. 150. See Caliph, Khalif, Khalifab, Kadesia, Khiraj.

CALISAYA. See Cinchona.

CALLAM OR COLONG STRAIT, is form-

ed by Pulo Callam and its contiguous islands, and on the east side by the mainland and Pulo Loomat.—*Horsburgh.*

CALLEE KUSTOOREE. Beng. Hub-ool-mooshk. Abelmoschus moschatus.

CALLICARPA, a genus of plants of the order Verbenaceæ.

CALLICARPA AMERICANA. Lam. Syn. of Callicarpa lanata.

CALLICARPA ARBOREA, *Roxb.* A small tree of Nepaul, Kemaon, Oude, the Morung mountains, Goalpara, Chittagong and Moulmein. Wood not known.—*Voigt.*

CALLICARPA CANA. Linn. Syn. of Callicarpa lanata. *Roxl.*

CALLICARPA INCANA, Roxb.

Pattharman,	Jh.	Sumali,	Chen.

Massandari,	Beng.	Tondi ;	Maleal.
Aroosha fibre of Chitagong		Teregam,	,,
Bastra,	Hind.	Kat Komul,	Tam.

This plant is recommended by Dr. Royle, for its fibre. O'Shaughnessy says it is bitterish and rather aromatic. *Royle Fib. Plants, p.* 310. *O'Shaughnessy, p.* 456.

CALLICARPA TOMENTOSA. Lam. Syn. of Callicarpa lanata.

CALLICHROA PLATYGLOSSA. A border flower, yellow with a broad ray, it seldom exceeds a foot in height.—*Riddell.*

CALLINICUS, a surname of the second Seleucus, B. C. 246, and the fourth of the Syrian rulers, after Alexander. See Greeks of Asia.

CALLISTHENES, as the friend of Alexander was permitted access to the Babylonish records. See Babylon.—Calendar.

CALLIGONUM POLYGONOIDES. Linn.

Balauja Trans-Indus,		Phogally,	*Flowers,*
Berwaja ,, ,,		Tirni,	*Root.*
Phok or Phog, Cis-Indus.			

The shoots of this moderately sized shrub are greedily eaten by goats and camels, the wood is used as fuel, and in Bikanir the twigs are much used for huts and for linings of shallow wells. In the Cis Sutlej and Southern Punjab, the fallen flowers, are used as largely as in Mozaffargurh for food they are made into bread, or are cooked with ghi and eaten as a relish. *Dr. J. L. Stewart.*

CALI SIND. This river comes from Rangri, and its petty branch, the Sodwia from Raghoo-ghur. There are four rivers in India called Sind: first the Sinde or Indus; the Little Sinde ; the Cali Sinde, or "black river ;" and the Sinde rising at Latoti, on the plateau west and above Seronge.

CALI YUGA. See Yuga.

CALLA AROMATICA. Roxb. Homaonema aromatica.—*Schott.*

CALLAGOUK ISLAND, lat. 15°34.12′ N., long. 97° 38′ in the opening of the gulf of Martaban, is a small granite islandrising about 150 feet above the sea with few trees and with a small skirting shore, with indenting bay, in which mangroves grow. It has also the name of Curlew island : when we visited it in 1863, it had only as inhabitants, the labourers quarrying stones for the lighthouse at Cape Negrais.

CALLISTEPHUS CHINENSIS. Cass. D. C. Syn. of Aster chinensis. Chinese Star. This is very common in Ajmere gardens. Several species are named by Voigt as having been grown near Calcutta. *Genl. Med. Top., page* 206.

CALLITRIS QUADRIVALVIS. Vent ; or jointed Arbor vitæ, produces the juniper resin or sandarach of commerce.

CALLIOPSIS, a genus of flowering plants, esteemed in India. In sowing, dig and pulverise 18 inches deep, give abundance of manure. Water before sowing ; sow thinly and press, and cover with fine sand. *Riddell.*

CALLY-MOLIAN. Tam. Stapelia virgata.

CALMAGROSTIS KARKA. Gmel. Syn. of Amphidonax karka.

CALMUC, See Kalmuk ; Kalkas.

CALNAH, in long. 88° 24′ E., and lat. 25° 29′ N.

CALNEH, an ancient town, on the site of which it is supposed that C'tesiphon was built. See Kesra, Kalneh. C'tesiphon.

CALODIUM COCHIN-CHINENSE. Lour. Syn of Cassyta filiformis. *Linn.*

CALOEE. Sumatran. Rheea : China Grass. Boehmeria nivea.

CALŒNAS NICOBARICUS. The Nicobar Pigeon. It is of great size and splendour ; its appearance and habits exhibit a near approach to the gallinaceous birds. It lives chiefly on the ground, runs with great swiftness, and flies up into a tree when disturbed. Its nest is of the rude platform construction usual among the pigeon family; one of them was built in a tree about ten feet from the ground and contained a single white egg.—*Macgillivray's Voyage, Vol.* 1, *p.* 244.

CALOMEL, a chloride of mercury used in medicine by European and native medical practitioners. It is known in India as Ras-kapur, but is rarely free from soluble corrosive sublimate, which is often present in poisonous proportions, unfitting such for medicinal use.—*Powell.*

CALONYCTION GRANDIFLORUM, CHOISY.

SYN.

Convolvulus grandiflorus, *Linn.*

Nway-ka-zwon a phyoo,	BURM.	Chandnee,	HIND.
		Paudili Vankaia,	TEL.

This large flowered species of Ipomea, whose snowy blossoms open at sunset and shut at daylight, is sometimes seen carried over arbours and pandals on the Tenasserim Coast. It is

> ——— " the white moon-flower such as shows
> On Serendib's high crags to those
> Who near the isle at evening sail
> Scenting her clove trees in the gale."—*Mason.*

CALONYCTION SPECIOSUM, CHOISY.

SYN.

Ipomæa bona nox. *Linn.* Munda Valli *van Rheede.*

This species also with the same English name is seen in European gardens in Tenasserim.—*Mason.*

CALOOWELL. SINGH. Benjamin.

CALOPHYLLUM (from "Kalos" beautiful, and "phullon" a leaf), a genus of plants belonging to the natural order Garciniaceæ. C. angustifolium, inopyllum and tacamahaca, grow in S. E. Asia. Several species in Southern India have not as yet been determined, and possibly they may all be one or two species. They furnish useful timber; C. angustifolium yielding the Poon spars of commerce, or one of them; and C. calaba, the East Indian Tacamahaca, though C. Inophyllum is also quoted as the Tacamahaca tree. Voigt names C. angustifolium, C. inophyllum, C. polyanthum and C. tacamahaca. In the Tenasserim Provinces, house carpenters often use the timber of a species of calophyllum, which also furnishes spars. A species of Calophyllum, Poona marum, is a large tree common in the Western Ghauts of Peninsular India. Its wood is much used in house, and to some extent in ship, building. Calophyllum angustifolium grows in Penang. C. Blumii, Wight, in Java. C. Burmanni in Ceylon. C. decipiens in Travancore. C. longifolium in Bombay. C. Moonii in Ceylon. C. polyanthum, Wall, in the Khasya mountains, C. tacamahaca in Madagascar and the Seychelles, and C. tomentosum, Wight, in Ceylon.—*Voigt* 87, *Mason, McIvor.*

CALOPHYLLUM. *Species.*

Oondie. MAHR.

Common on the Bombay coast, growing on sandy sheltered spots close to the sea on the coast south of the Savitree, north of that river it is rare. The wood never reaches any size, and is always crooked. A good bitter oil is furnished by the seeds.—*Dr. Gibson.*

CALOPHYLLUM, a species of Tenasserim, which house carpenters often use as timber, and the tree also furnishes spars.

CALOPHYLLUM. *Species.*

Poonyet. BURM.

Firewood? of British Burmah. A cubic foot weighs 39 lbs. In a full grown tree on good soil, the average length of the trunk to the first branch is 60 feet, and average girth measured at 6 feet from the ground is 12 feet. It sells at 12 annas per cubic foot.—*Dr. Brandis Cal. Cat. Ex. of* 1862.

CALOPHYLLUM, *Species.*

Thu-ra-phe. BURM.

A wood of British Burmah, (Martaban? and Tavoy?) used for carving images, occasionally for canoes. A cubic foot of it weighs 57 lbs. In a full grown tree on good soil the average length of the trunk to the first branch is 20 feet, and average girth measured at 6 feet from the ground is 4 feet.—*Dr. Brandis.*

CALOPHYLLUM, *Species.*

Thu-ra-pee. BURM.

A large tree, used for masts and spars in Martaban.

CALOPHPLLUM, *Species.*

Turra-phee. BURM.

Used for masts, &c. in Tavoy. (These two seem identical with the above of Dr. Brandis.)

CALOPHYLLUM ACUMINATUM.

Waldombe. SINGH.

A tree of the western parts of Ceylon, the timber of which is used for common house building purposes. A cubic foot weighs 39 lbs. It lasts 20 years.—*Mr. Mendis.*

CALOPHYLLUM ANGUSTIFOLIUM, ROXBURGH. This is the Piney tree of Penang, where it grows. It occurs also in Coorg, Mysore, Canara, and along the ghats, northwards to Sawuntwarree, but rarely of any great size beyond the line of the Neelgoond ghat. It is a magnificent tree when growing in the ravines of the southern ghats of Canara. According to Dr. Gibson and Dr. Cleghorn, the Poon spars are obtained from this tree, but the trees are becoming scarce, and are perhaps more valuable than teak. Dr. Gibson says that, to the best of his knowledge, the Poon spars are furnished by Calophyllum angustifolium, which is a magnificent tree in the ravines of the southern ghats. In habit and appearance it is totally distinct from C. inophyllum. These spars are found along the ghats, from the Sawuntwarree border southward, but rarely of any great size till the line of the Neelcond ghat is passed. At another place he says that the Poon spars of the first class were not procurable in the jungles nearest to the coast, and probably owing to the continued extension of cultivation. It is rather from the inland forests of Canara, backed as these are by those of Coorg to the east, that the supply of Poon spars is principally drawn. On his way from the Mysore border to Sircee, he saw, in more than one place, immense spars of Poon standing as trees, but scorched, burned up, and rendered useless. Dr. Cleghorn tells us that young trees, especially such as are in accessible places, are most carefully preserved in Coorg, Mysore and Canara. In one case which came within his observation, several valuable spars were found in a bridge, the total estimate of which was 250 Rupees. But Poon spars, although highly prized for ship building, are ill suited for making bridges. This incident he remarks, illustrates the importance of officers in the Department of Public Works, Telegraph, &c., making themselves acquainted with the description of timber available and suitable for their wants. He also mentions that the Superintendent of Coorg had received several tenders for the supply of Poon spars and other timber at the distance of at least three miles from the Soolia river, showing the scarcity of such wood and the readiness of the Mangalore contractors to carry it several miles to the nearest water carriage. These opinions of Drs. Gibson and Cleghorn, that the *Poon* spars of commerce are obtained from the Calophyllum angustifolium are of great value. But in 1850, in the Proceedings of the Madras Central Committee for the Exhibition of 1851, the Poon of commerce was supposed by Dr. Wight to be from the Dillenia pentagyna, "Rowaden," Tel., a large timber tree. The wood of Dillenia pentagyna is said to be exceedingly strong and very durable, even when buried under ground, and it is a stately forest tree, common on the face of the W. Ghats. It is also a native of the Northern Circars and flowers in March and April. The similarity of native names between this and Calophyllum inophyllum, led Dr. Wight to suspect some confusion. Dr. Wight was satisfied that D. pentagynia is the tree which furnishes the Poon spars, being a tall, and Calophyllum inophyllum a short stunted tree. Dr. Cleghorn commends the strict conserving of C. angustifolium in Coorg and Canara.—*Drs. Gibson, Cleghorn and Wight, Mr. Rohde's MSS., Dr. Roxburgh, Tredgold. Markham, p.* 452. See Poon.

CALOPHILLUM APETALUM. WILLDE. Syn. of Calophyllum spurium, *Choisy.*

CALOPHYLLUM BINTAGOR. ROXB. Syn. of Calophyllum inophyllum.

CALOPHYLLUM BRACTEATUM. THW. A great tree, grows in the Saffragam District of Ceylon, by the sides of streams at no great elevation.—*Thw. Enum. Pl. Zeyl. I, p.* 51.

CALOPHYLLUM BRASILIENSE. See Calophyllum.

CALOPHYLLUM BURMANNI, WIGHT. Illust. I., 129. This tree grows in the hotter parts of the island of Ceylon, at no great elevation.—*Thw. En. Pl. Zey. I., p.* 52.

Bubbe mara,	CAN.	Gorrukeenee,	SINGH.
Calaba tree,	ENG.	Cheru Pinnai.	TAM.
Tsiru panna,	MALEAL.		

This is a native of the western provinces of Ceylon and of Travancore, and produces the true East Indian Tacamahaca resin. It grows to a height of 60 feet, and its timber is used for bullock carts, staves, cask headings and house buildings. In Canara and Sunda, it grows on the banks of rivers and streams, chiefly above the ghats. The wood is used for canoes. Sir J. Herschel seems to think the East Indian Tacamahaca to be the produce of C. inophyllum, for he says, specimens obtained from Calophyllum inophyllum, the Tacamahaca of Ceylon, are desirable in order to aid pharmacologists in accurately determining the Tacamahaca of European commerce.—*Herschel's Manual of Scientific Enquiry, p.* 414. *Dr. O'Shaughnessy, Mr. Mendis, Dr. Gibson, W. & A., p.* 103.

CALOPHYLLUM CALABIOIDES. DON. Syn. of Calophyllum spurium, *Choisy.*

CALOPHYLLUM CUNEIFOLIUM, THW. A great tree, grows at an elevation of 3000 to 4000 feet at Madamahanewera in Ceylon. —*Thw. Enum. Pl. Zeyl. I., p.* 51.

CALOPHYLLUM DECIPIENS. WIGHT. Ic. 128.

Var. a ; foliis obovato-oblongis, basi rotundatis.

Var. β ; foliis cordato-orbiculatis.

Var. a grows in the Ambagamowa District; *Var. β* grows at Hinidoon Corle, at an elevation of 1000 to 2000 feet.—*Thw. Enum. Pl. Zeyl. I., p* 51.

This beautiful tree, with an appropriate name, grows in the western part of Ceylon, where it is employed for masts and cross sticks of Yettra dhonies and fishing boats, and poles of bullock carts. A cubic foot weighs 40 lbs. Dr. Wight says, as to Coimbatore, that the tree is rare at that distance from the coast; the wood is coarse grained, but very strong and durable, and on the coast is used in ship building. In the alpine forests, it attains a great size and furnishes the *poon* spars so valuable for shipping ; so far as he could learn, there are two or three species of Calophyllum used for the same purpose under the general name of poon. The Alexandrian Laurel grows to a considerable size on the Malabar Coast, but is a still larger tree on the island of Balambangan and along the shores of Banguey and Sampamnangio, where it has got the names of Palo-Maria and Dancawn. It is also common in the Philippine islands, where the natives prepare oil from the fruit of it in the same manner as is done in Malabar. Near the Burman monasteries, this fragrant flowered species of Calophyllum is occasionally seen in cultivation, and is a remarkably handsome tree. It occurs in Ceylon and in all parts of India, and is in flower and fruit most part of the year. The tree is worthy of attention, as it grows well in sandy tracts close to the sea, where few others thrive ; it is rare at a distance from the coast. In the alpine forests, it attains a great size and it is said furnishes the poon spars so valuable for shipping. It yields fruit twice a year, in March and September, and frequently attains the age of 300 years. It is cultivated in Java for the sake of its shade and the fragrance of its flowers ; the wood is much used in house, and to some extent in ship-building. The wood is coarse grained, strong, durable and ornamental. Mr. Dalrymple tells us, that no tree is superior to this for knees and crooked timber. The seeds yield a valuable oil, and a resin is obtained from the roots, said by some authorities to be identical with the Tacamahaca of the isle of Bourbon. The flowers have the odour of Mignonette. The oil is manufactured and used at Bombay, Tinnevelly, and other parts of India, as a lamp oil. The seeds from which it is obtained are very oleaginous, and yield about 60 per cent. of their weight of oil. In the Samoan islands, the large ava-bowl is made from the tamanu, Calophyllum inophyllum, and occupies a conspicuous place.—*Capt. Elphinstone Erskine, Islands of the Western Pacific, p.* 46. *Drs. Wight, Gibson, Mason, Ainslie, O'Shaughnessy, Eng. Cyc., Roxb.* ii, 606, *Voigt. Thwaites* 1. 51. See Oils.

CALOPHYLLUM LANCEOLARIA. See Calophyllum longifolium.

CALOPHYLLUM LONGIFOLIUM.

The-ra-pi,	BURM.	Tha-ra-bi,	BURM.
Tha-na-bi,	,,		

In Pegu this is found near towns, together with two other species of the same genus, which are of smaller growth. It has a red wood adapted to cabinet making. It is abundant in Mergui, Tavoy, and in lesser quantities near the Attaran River and its feeders. Maximum girth 3 cubits. Maximum length 22½ feet. When seasoned, it sinks in water. It is there used for planking, masts and yards of junks ; it is excellent for helves, but not procurable at Maulmein in sufficient abundance. Strongly recommended to make models. —*Dr. McClelland. Captain Dance.*

CALOPHYLLUM TACAMAHACA. See Calophyllum.

CALOPHYLLUM MOONII, WIGHT, Illust, I. 129 ; Domba keena-gass. SING. A great tree of the Ceylon forests in the district between Galle and Ratnapoora ; not uncommon.—*Thw. Enum. Pl. Zeyl. I., p.* 52.

CALOPHYLLUM TOMENTOSUM, WIGHT Illust. I., 128 ; Keena tel. SINGH. A tree of Ceylon growing in the central province abundantly, at an elevation of 3000 to 5000 feet ; common. Its timber is valued for building purposes, and the seeds are collected in considerable quantities for the oil they contain. *Thw. Enum. Pl. Zeyl. I., p.* 51.

CALOPHYLLUM TRAPEZIFOLIUM, THW. A great tree of Ceylon in the Hunasgiria District, in the Central Province, growing at an elevation of 4000 to 5000 feet.—*Thw. Enum. Pl. Zeyl. I., p.* 51.

CALOPHYLLUM WALKERII, Wight. Illust. I, A tree of Ceylon growing at Newera Ellia, Adam's Peak, and other of the most elevated parts of the island. An oil is extracted from the seeds of this and the other species of the genus, which is used for burning.—*Thw. Enum. Pl. Zeyl. I., p.* 51.

CALOSANTHES INDICA, Blume. W. I.

Ak,	Hind.		

Rope or Coir.

Madar.	Hind.	Toondee coir,	Tam.
Lamb-dore,		Galum Taroo,	Tel.

There are two varieties of this shrub, *var. a*, alba; *var. β*, lilicina, which grow in Syria, Arabia, Persia, all India, and Burmah, and yield many valuable products. It will grow in barren places, and it has been suggested to plant it as a barrier to drift sands. It yields a kind of manna called *Shakur-al-ashur*, also *Ak* or *Mudar ka shukur* (sugar). Its milky juice has been prepared like caoutchouc and gutta percha. It is evaporated in a shallow dish, either in the sun or in the shade; when dry, it may be worked up in hotwater with a wooden kneader, as this process removes the acridity of the gum. It becomes immediately flexible in hotwater, but hardens in cold water, is soluble in oil of turpentine, and takes impressions. It is however a conductor of electricity. Mr. Monckton proposed making use of the downy substance contained in the follicles of the plant; and had paper made of it, as well pure as when mixed with two-fifths of the pulp of the hemp (Sunn?), which natives use for making paper. As the glossy and silky, but comparatively short fibre, is difficult to spin, a mixture of one-fifth of cotton was made, in order to enable it to be worked. A good wearing cloth, which stands washing and takes a dye, was produced. It is however well suited for stuffing pillows or coverlets. Mr. Monckton calculated that its cost would be one rupee a maund. This silky down of the pods is used by the natives on the Madras side in making a soft, cotton-like thread. It is susceptible of being spun into the finest yarn for cambric, and has been used for the manufacture of a light substitute for flannel by Messrs. Thresher and Glennie of London. It works well with either silk or cotton; it is also being tried by Messrs. Cowan and Co. of Edinburgh as a material for paper. The cleaned fibres are the Bowstring Hemp of India, one of the strongest fibres known. It possesses most of the qualities of flax, and can be worked with the same machinery, as the fibre splits to almost any degree of fineness with the hackle, and bears dressing and beating well. For many years this fibre was used by the wealthy natives for making strong cloths, cambrics, and lawns worn by the rajahs, and it is still employed for making fishing lines, nets, gins, bow-strings and tiger traps on account of its strength. It does not rot readily in water, as the resinous milky juice of the plant (a kind of substitute for gutta percha, but a conductor of electricity) seems to preserve it. The soft white fibre, though till lately unknown in England, has long been familiar to natives of India. Of two ropes made of the fibre, a piece of one, about 7 feet long, sustained for some time 540 lbs., and broke with 552. This was found the strongest of the cordage fibres tried in the Coimbatore district. The fibre is used everywhere in Asia to make fishing lines, being of extraordinary strength, and it is even considered better adapted for cloth than for cordage. The strength of the fibre exceeds that of all other vegetable substances, as the following experiments, of a three strand $\frac{2}{8}$ inch rope will show.

		Weight sustained.
1	Coir (Cocos nucifera)	224 lbs.
2	Pooley Maujee (Hibiscus Cannabinus)	290
3	Marool (Sanseviera zeylanica) ...	316
4	Cotton (Gossypium Herbaceum) ...	346
5	Cutthalay nar (Agave Americana)...	362
6	Junapum or (Sunn Crotolarca juncea)	407
7	Yercum nar (Calotropis gigantea) ...	552

Its fibre is valued at £30 to £35 a ton. The follicles are supposed by some to be the apple of Sodom. Its juice and the powdered bark of its roots, have long been employed as an alterative, by the natives of India, in leprosy and other cutaneous affections, and are no doubt possessed of active properties. Dr. Duncan obtained from it a principle which he called *Mudarine.* In Arabic authors on Materia Medica it is even supposed to have been known to the Greeks. —*Hooker's Him. Journ.* 1, 86; *Royle, Him. Bot.*, 275. *Drs. Riddell, Hunter, Mason, O'Shaughnessy, p.* 43, *Wight M. E. Reports of* 1857. *Royle Fib. Pl. Simmonds. Com. Prod. Burton* iii. 122. *Jour. Agri-Hort. Socy. of India*, viii. 107, 226. See Carbon. Cryptostegia grandiflora. Dipterocarpus lævis. Ficus, Hevea Guianensis.

CALOTROPIS HAMILTONII, Wight. This is the most common species in the upper provinces of India. The bark of the root and the dried milk possess similar properties to those of the C. gigantea; it is, however, far inferior as an emetic remedy. According to Dr. Wallich, this and C. gigantea are the same species.—*O'Shaughnessy, page* 454.

CALOTROPIS HERBACEA, Carey. Asclepias herbacea of Roxburgh.

Chota Akunda. *Hind.*

Their roots are employed to make gunpowder charcoal. The stem yields useful strong fibres, and the white silk-like materials of the pods has been successfully tried to mix with silk.—*Voigt. M. E. Proceedings.*

CALOTROPIS PROCERA, R. Brown.

Syn.

Spulmei	Punjab.	Jilledu	Tel.

This grows in Palestine, Abyssinia, Arabia, Peshawur, in the Punjab is quite arboreous, ten or twelve feet high, and in Sind four and five feet in girth. The bark is stripped and made into halters for cattle, ropes, netting, twine and fishing lines, all durable. The silky floss of its follicles is used for pillows. A manna, Shakr-ul-Ashar, and Shakr-ul-Tighal, obtained from it, is sold in the shops. Its acrid juice is applied to cutaneous ailments and in leprosy, and it is used by Rajputs to poison their infant daughters. The fresh bark of the root, also the powder of the root, are used in leprosy. The insect that causes the manna is called Galtigul.—*Royle. Ill. Ind. Bot.*, p. 275. *O'Shaughnessy*, p. 454. *Dr. J. L. Stewart.*

CALPA. Sansc. Creation or Formation. In hindu theogony, at the end of every Calpa (Creation), all things are re-absorbed in the deity, who, in the interval of another creation, reposes himself on the Serpent Sesha (duration), who is also termed Ananta (endless.) Agni Savarni, in hindu mythology, is one of the 14 Patriarchs who preside successively over the 14 Manwantara of the Calpa.—*Warren's Kala Sanhita*, p. 311.

CALPEE Pergunnahs have been under British rule since 1806.

CALPENTYN ISLAND, south of Cordiva, on the west coast of Ceylon, is low, abounding with cocoanut trees, and extends from lat. 7° 36′ N., to 8° 16′ N., the long tongue of land on the south almost touching the main.—*Horsburgh.*

CALPI, a hindu astronomical term of 4,320,000,000 years. See Calpa.

CALPICARPUM ROXBURGHII. Periwincle tree, *Eng.*

Syn.

Cerbera fructicosa.

Sa-lat,	Burm.	Gutti gunneru,	Tel.

A handsome flowering shrub, almost constantly covered with blossoms, like those of the rosy-periwincle, *Vinca rosea*, but larger and faintly fragrant."—*Mason.*

CALPETTY, a hamlet of Ceylon in the neighbourhood of Colombo.

CALTURA, in L. 80°4′ E., and L. 6°12′ N.

CALUMBA ROOT. Cocculus palmatus, *DeC.* Was first made known as a medicine by F. Redi about 1677. Semedus mentioned it before 1722 among medicines from India. In works on Materia Medica in use in India, it occurs by the name of Kalumb. It grows wild in the forests of Mozambique and Oibo in Eastern Africa.

CALUM TAROO. TEL. Calotropis gigantea.

CALURANA. SINGH. Helleborus niger.

CALUVERE, SINGH. Ebony. ?? ENG. A tree of the northern and eastern part of Ceylon, furnishing a fine black wood, used largely for buildings and furniture. A cubic foot weighs 71 lbs, and it lasts 80 years.—*Mendis.*

CALVARY, a mount or cone. The early christians believed that Adam and Eve were interred here.

CALYPTRÆA. A genus of Molluscs.

CALYA, OR CALINAGA, a serpent slain by Krishna.

CALYMERE POINT, on the Coromandel coast, in lat. 10° 18′ N., long. 79° 51½′ E., is low, and covered with cocoanut trees, with two pagodas near each other about a mile inland.—*Horsburgh.*

CALYPTOMENA VIRIDIS resorts to dense thickets when alarmed, but will sally out to feed on fruit, wild figs, &c. and mingle with barbets and other birds in so doing; the note is low and sweet; a mellow whistle, like the Eurylaimi, they are tame and stupid.—*Mr. Blyth in Bl. As. Soc. Journal.* See Rupicolina.

CALYPTORHYNCUS, VIGORS and HORSFIELD. A genus of birds of the sub-family Cacatuina, Calyptorhynchus galeatum; Vigors and Horsfield, Syn of Psittacus galeatum, Latham, and the Callocephalon australe, Lesson. See Aves. Birds.

CALYPTRANTHES CARYOPHYLLIFOLIA, *Willd.*; *Swartz.*

The tree.

Nawel wood tree	ENG.	Nawel maram,	TAM.
Jamoon,	HIND.	Neredi chettu,	TEL.
Battedombe,	SINGH?		

The fruit.

Jamoon ka phal,	DUK.	Batte dombe,	SINGH
Nawel fruit,	ENG.	Nawel pallam,	TAM.
Kaka jemboo,	SANS.	Neredi paudoo,	TEL.

A large growing timber tree. The wood is light, and chiefly used for making grain measures, but is also made into carriage frames, cots, &c., and in Ceylon, for common house building: a cubic foot weighs 45 lbs. and lasts 20 years. The bark is astringent, and is used in decoction by the natives for dysentery. The fruit when ripe, is of a very dark purple colour, and about the size of a large cherry. In taste it somewhat resembles the sloe, but is much sweeter. A variety of this tree,

Oojla jamoon ka phal,	DUK.	Vullay nawel pallam,	TAM.
Sweta jemboo,	SANS.	Tella neredi pandu,	TEL

has a fruit nearly similar to it in natural qualities, and has got its names from being of a different colour (white).—*Dr. Riddell, Mr. Mendis, Ainslie.*

CALYPTRANTHES CUMINI. ?

Mahadan. SINGH.

Grows in the northern and western provinces of Ceylon, where it is used for common house-building purposes, wheels, &c. A cubic foot weighs 36 lbs., and it lasts 20 years. The berries are eaten when full ripe. —*Mr. Ad Mendis.*

CALYPTRANTHES JAMBOLANA.

Jamoon.	HIND.	Turkolum.	TAM.
Alubo.	SINGH.		

This large and handsome tree flowers in February and March, and thrives in any good soil. It occurs in the central province of Ceylon, and is met with in gardens all over the peninsula of India. It is employed in Ceylon, for common house building. The fruit of the best sort is as large as a common blue plum, which it resembles in appearance; it has a rough astringent flavour, and should be soaked in salt and water before it is eaten. The fresh stone, if planted, grows immediately. —*Dr. Riddell, Mr. Mendis.*

CALYSACCION ANGUSTIFOLIA.

Soorpunni.	CAN.	Koolmara.	CAN.

Grows in Canara and Sunda, in ravines of the ghats and below in sheltered valleys; but is not common in North Canara or Sunda. The tree is used there for one of the "*Poon*" spars. It produces an excellent edible fruit. It is a tree which ought to be conserved everywhere and largely increased.—*Dr. Gibson.*

CALYSACCION LONGIFOLIA. ROXB. *Wight, Ill. I.* 130, *and Icon.* 1999.

CAMACHI-PILLU TYLUM. TAM. Lemon Grass Oil.

CAMACHYA, a hindu goddess, a form of Kali in her avenging character. Kali says, by human flesh, Camachya, Chandica and Bhairava, who assume my shape, are pleased one thousand years." See Kali.

CAMACOLLY, in L. 89° 43′ E., and L. 22° 31 N.

CAMA-CUMPA, SANSC. The vessel of desire, an ornamental vase on hindu temples, from which grain is represented as pouring. —*Tod.*

CAMA-DHWAJA, SANSC., the banner of Cupid.

CAMALA, Hind. The lotus flower.

CAMALA, a name of Lakshmi as the hindu goddess of prosperity. See Lakshmi.

CAMALINE, the Aba cloak of the Arabs. Cloaks made of this material woven of camel's hair. The Aba, or camaline as it is called in the Persian Gulf, is worn in Oman by all classes; it is the camel's hair cloak of Arab shaikhs, and is often striped white and brown. See Aba. Camoleen. Keifyet.

CAMALA DEVI was the wife of the Rajah of Guzerat, and was celebrated as the flower of India. On the fall of Nerwalla, the capital of Guzerat, her husband became a fugitive, and Camala Devi was taken prisoner and carried to Alla-ud-Din's harem; and, attracted by her beauty, wit, and accomplishments, he made her his queen. Her fascinations soothed that savage Pathan in his moodiest hours, and influenced him to a lenity hitherto unknown to him. Her daughter Dewal Devi had escaped with her father. Her reputation for beauty equalled that of her mother, and the son of Ram-deo, the rajah of Deogiri (Dowlatabad) had long sued for her, but her father, proud of his Rajput origin, would not accept a Mahratta, even though a prince. Camala Devi, however, having expressed to Alla-ud-Din a wish to be joined by her daughter, Alla-ud-Din sent a strong army under a general to bring Dewal Devi to Delhi. In this extremity, her father accepted the Mahratta prince, and sent off his daughter to Deogiri under an escort, but the escort was overtaken, the fair maiden seized and carried to Delhi, where Khizr Khan the son of Alla-ud-Din, married her. Their union was very happy, and the poet Khusroo praised them. But Khizr Khan's eyes were put out by Cafoor; a few years from the death of Alla-ud-Din, the throne of Delhi was filled by a converted hindoo, who filled the capital with hindoo troops, put to death all the survivors of Alla-ud-Din's family, and transferred Dewal Devi to his own zenana.

CAMAO RIVER, in Cambodia, is in lat. 8° 38′ N, long. 195° 0′ E.—*Horsburgh.*

CAMARI, according to Abulgazi, one of the eight sons of Japhet, whence the Camari, Cimmerii, or Cimbri. The Camari are one of the tribes of Saurashtra. The Camari of the *Saura* tribes, or sun-worshippers of Saurashtra, claim descent from garuda, the *bird-god* of Vishnu (who aided Rama to the discovery of Sita), and the *Macara* or crocodile, and date the monstrous conception from that event, and their original abode from *Sancodra* Bate, or island of Sancodra. Whether to the *Dioscorides* at the entrance of the Arabian Gulf this name was given, evidently corrupted from *Sanc'ha-dwara* to Socotra, need not be inquired into here. Like the isle in the entrance of the gulf of Cutch, it is the *dwara* or portal to the *Sinus Arabicus*, and the pearl-shell (*sanc' ha*) there abounds. This tribe deduce their origin from Rama's expedition, and allege that their crocodile mother landed them where they still reside. They seem to be a scythic race from Saka-dwipa and the Dast-i-Kipchak, and who, like the Takshak, Jit, Catti and Hun, have entered India.—*Tod's Rajasthan, Vol.* I., p. 604.

CAMBAIA, the name given to Cambay by Marco Polo, who travelled through it at the close of the 13th century, when on his return to Europe. See Marco Polo.

CAMBALU, an ancient name of China.

CAMBAY, in L. 72° 51′ E., and L. 22° 5′ N., is at the head of the bay which bears its name, on the estuary of the Mahi, between the mouths of the Sabarmati on the west and the Mahi on the east. It is the town in which Zarmonachagas was born. In an account of it in 1503, by Lewes Uertomenes, a learned gentleman of Rome (See As. Soc. Jl. 1824, vol. XVIII,) he says, "In this region is also a mountain where the onyx stone, commonly called the cornelian, is found, and not far from this, another, where chalcedony and diamond are found." It was visited in 1623 by Pietro de la Valle. Captain Hamilton, who visited Cambay in 1681, says:—"The cornelian and agate stones are found in this river, and nowhere else in the world. Of cornelian they make stones for signets, and of the agates cabinets entire, except the lids. I have seen some 14 or 15 inches long, and 8 or 9 inches deep, valued at £40. They also make bowls of some kinds of agate and spoons, and handles of swords, daggers and knives, and buttons and stone seals and snuff-boxes of great value."

Cambay still enjoys celebrity for its agates, mocha-stones, cornelians, and all the chalcedonic and onyx family brought from the ruins of Rajpipla, and here worked into every variety of ornament,—cups, boxes, necklaces, handles of daggers, of knives and forks, seals, &c. Cambay Stones,—the *Akeek* of the natives of Bombay, and by Europeans called agates—include all the kinds of quartzoze minerals found about Cambay and Baroach. They form in these districts a distinct geological formation, derived probably from the amygdaloid trap rocks drained by the Nerbudda and Taptee. They pass in Europe and America for Scotch, Irish, Chamounix, Niagra, Isle of Wight "pebbles," according to the place in which they are sold. The principal varieties sold in Bombay are "crystal," "milk quartz," "prase," a green variety, "moss stone," "mocha stone," "fortification agate," "calcedony," "cornelian," "chrysophrase ?" "heliotrope," "onyx," "obsidian" ? and very rarely "amethyst." These stones abound all over India, and indeed in all trap countries, the Brazils importing them as largely as India into Europe, where the terms "Brazilian" and "Indian agates" are used indifferently by the trade.

The fragments of a Murrhine cup,—the little Cambay stone cup still made in Cambay,—were exhibited in the theatre of Nero, as if, adds Pliny, they had been the ashes of "no less than Alexander the Great himself!" Seventy thousand sesterces was the price of one of these little Cambay cups in Rome in the days of Pompey. The price in Bombay ranges now from Rs. 18 to Rs. 75. Nero paid 1,000,000 sesterces for a cup, "a fact well worthy of remembrance," slily remarks Pliny, "that the father of his country should have drunk from a vessel of such a costly price!" The stones are sawn or ground down: for the native lapidary's wheel consists of a strong wooden platform sixteen inches by six, and three inches thick. In this are two strong wooden uprights. Between these is a wooden roller eight inches long and three in diameter, fastened into a head at the one end. This works on an iron spindle or axle at each end. On the one end the axle is screwed and fitted with a nut, by which the saw or grinding wheel can be made fast. The saw consists of a thin plate of iron,—the cutting material consisting of native emery or ground corundum—koorund as it is called. The lap wheels consist of two circular discs or cakes of lac with ground koorund, coarse or fine, according to the work—of a copper dice for polishing, and a wooden one for finishing the work. These are spun backwards and forwards by a bow, the string of which passes round the roller. The lapidary sits on his hams, steadying the wheel with his foot and holding on the stone with his left hand while he works the bow with his right. For very fine work, a small sized wheel, similar to the English lapidary's wheel, but of smaller size, is used. It is driven by a multiplying wheel, strap and pulley. The custom house returns give the value of the traffic in Cambay stones at an average betwixt £10,000 and £12,000 annually,—one per cent. of the stones finding their way to Europe. Gayni or Gajni was one of the ancient names of Cambay, and it was the port of the ancient Balabhipura, the ruins of which are three miles from Cambay. Near Cambay, says Pennant, "are the vestiges of another antient city called Nagra, perhaps the Comanes of Ptolemy. Almeyda, when he visited the coast of Cambay, observed a very ancient town, with a large mosque, and near it a spacious place, covered with tumuli. The most learned of the natives informed him, that they understood by their records that Hercules, in his expedition to India, had here two great engagements with an Indian prince, and was defeated, and that the tumuli were the graves of the conquered. —*Hamilton's new Account of the East Indies. Lond.* 1744. *Report of the Juries in* 1851. *Pennant's Hindoostan, Vol. I., p.* 64. *Tod's Travels.* See Nicolo di Conti, Pinjrapol, p. 24.

CAMBAY GULF is formed by the coast of Guzerat on the west, and the Peninsula of India on the east, and extends due north 80 miles, being about 3 miles wide at its entrance.

CAMBESSEDIA. W. AND A. Generic Syn. of Boueia, *Meisn.*

CAMBESSEDEA OPPOSITIFOLIA, W. & A.

Mangifera oppositifolia, *Roxb.*
Opposite-leaved Mango. ENG.

This indigenous tree of Tenasserim has a reddish coloured, hard, close-grained wood, said to be durable. It produces a fruit much like a plum. There are two varieties, one bearing an intensely sour fruit, and the other one as insipidly sweet.—*Mason. Voigt.*

CAMBODIA Town is nearly 240 miles up the river of the same name. It is the capital of a country of the same name tributary to Siam, and is often written Kambogia. The Cambodia River, in lat. 9° 34′ N., 54 miles N. by W. from Pulo Condore, discharges itself into the sea by three principal branches.

It is as mall kingdom lying between Siam and Cochin-China, containing about 500,000 people, of whom 4-5ths are the Native Kho. It has four provinces, Potisat ; Kampong-Suai ; Kampong ; and Kampot-Son. For the past three centuries, its independence has been lost, Siam on the one side and Cochin-China on the other having encroached on it. The river is one of the largest in Asia: it is said to rise from a lake in Yunnan.

In Cambodia is the great temple of Nakhon-Vat. It seems to have been built in the tenth century. It is 600 feet at the base and in the centre 180 feet high. Every angle of the roof, every entablature, every cornice bears the seven-headed serpent.—*Horsburgh.* See Kambogia. India, p. 309, 316, 344.

Oont.	HIND.		

Camels are mentioned in several parts of the Old Testament.—1 Kings, chap. iv, v., 29 ; Esther, chap. viii. v. 10 ; and Isaiah chap. lx. v. 6. They are still largely used as beasts of burthen, or to carry messages, and for war purposes in Egypt and in all the countries in the South of Asia, from Syria up to the Burmese countries and China. Two kinds are met with, that with one hump, and another kind with two humps. The species employed on the European steppes through which the Don and Volga flow to their respective seas are of the two-humped kind ; and Lieutenant Irwin distinguishes two races of two humped camels. Beyond the Jaxartes he remarks, "is the two-humped species, in the Turki language called *uzhri,* and by our writers 'Bactrian'; his height is far less than an Indian camel, his hair longer, he is not capable of bearing severe heat, and is not easily naturalized even at Bokhara. In Kokan he is the prevalent species. The camel called *Baghdadi* has also two humps ; but his height is equal to that of the Indian. He is found chiefly in the south-west of Khorasan, yet even there is much outnumbered by the Indian species" —meaning, we presume, the one-humped camel of Turkistan.

In Arabia there are three classes of camels with one hump, the largest and clumsiest, called "khowas," is used to carry heavy burthens at the slow and measured pace of a large caravan ; the second, called deloul, or saddle camels, are selected when young from the former, and are employed in journeys, singly, or with light caravans consisting of similar animals. The third bears the name of Hajin in Arabia, Maherry in Africa, Hurkary in Asia, and is the dromedary of the Hebrew Scriptures. It is lightly formed, and of a very pale brown, approaching a cream color. Being well trained, its speed with a man on its back and no baggage, is between eight and nine miles per hour, and it can accomplish at the utmost seventy miles in 24 hours for two or three days in succession. Wellsted tells us (i. 292) that Nejd is equally the nursery of the camel as of the horse ; but the camel of Oman in all ages is celebrated in the songs of the Arabs as the fleetest; their legs are more slender and straight, and their eyes more prominent and sparkling. The camel of Arabia has only a single hump, which is round and fleshy whilst the animal continues in good condition, but wastes away when out of condition. Wellsted had known £28 paid for one in Oman. Depth of chest and largeness of barrel constitute their chief points of excellency, but £6 to £10 is, however, their average price. General Ferrier tells us that the camels are of two kinds. Those from Turkistan and the country of the Hazarah are exceedingly large and strong, but not very active. Those from the Seistan are slenderly formed and wiry, but, though small, are as hardy an animal as can be found, and incredibly swift; they will travel five and twenty leagues in a day without feeling fatigue, and are never affected by the great heat of the sun; these are generally used for riding, and those of Turkistan as beasts of burden. The Bokhara camel, and the two humped kirghis camel are only surpassed in strength and swiftness by the Arab, and especially the camel of the Hajaz. Besides the Bactrian camel, the Turkomans have a mule breed between this and the Arabian animal, with a hump which can neither be called single nor double, though more near the latter than the former. This is a large, useful, and highly prized animal, capable of transporting from 1,000 to 1,200 lbs. with ease; but the creature is short-lived, and the Arabs do not breed from it, giving as a reason, that the progeny are intractable, and bad-tempered. Camels are extensively bred in Murwut, Meeanwullee and Esakhail, and are purchased by the Povindia and other itinerant traffickers. In Syria, the rutting season is in spring, and the males then become extremely unruly. The female carries twelve months, and breeds one at a time. The young camels are weaned at the beginning of the second year. Camels are known to attain to the age of forty years; but after twenty-five or thirty, its activity begins to fail, and it is no longer able to endure much fatigue. In the northern districts of Arabia, the hair is not shorn from the camel, like wool from sheep, but is plucked off, about the time it is naturally shed by the animal; and seldom amounts to more than two pounds. It is woven into stuffs for clothing.

M. Huc tells us that in Chinese Tartary the fur of an ordinary camel weighs about ten pounds; it is sometimes as fine as silk. That which the entire camel has under its neck and along its legs is rough, tufted, and black; but the hair in general is reddish or grey. The Tartars do not take any care of it, but suffer it, when it falls off, to be lost. The milk of the camel is excellent, both for butter and cheese: the flesh is tough, ill-tasted, and little esteemed by the Tartars. They make use, however, of the hump, which they cut in slices and take with their tea. It is said that Heliogabalus had camel's flesh served at his banquets, and that he was especially partial to the foot, but to modern taste, the flesh of the camel is detestable. A camel of Hajaz can carry from lbs. 250 to lbs. 500, and an ordinary burthen camel can walk about 2½ miles an hour, making daily a march of 20 or 30 miles. M. Fontaine mentions an instance of an Arab on his camel taking and returning with a message from Coseir to Canneh, a distance of 225 miles, in 28 hours, at the rate of 8 miles an hour continually, which seems incredible. Like the sheep and goat, their need for water to drink varies with the dryness or moistness of their food. A succulent grass, moist with rain or dew, and near the bank of rivers, of itself furnishes almost sufficient fluid for their wants, but a dry grass, an arid atmosphere, and a burnt-up soil, render them very thirsty and they then readily rush into water. Skinner mentions (ii, p. 112, 113) that his camels had been 19 complete days without drinking. But they can lay in a large store of food. Pottinger mentions that he allowed his camel lbs. 15 of flour daily, in addition to all the grass it eat. The camels eat the tamarisk and the camel thorn. In parts of the Punjab country, camels are fed in great numbers; they delight especially in "laná," plants of the Salsolaceous tribe, which are also useful for burning to get soda: there is often quite a rivalry of interest over a patch of salsola land, the camel feeder wants it for his animal, and the soda burner for his furnaces. The journeys which they perform are great and protracted. Colonel Chesney mentions that he crossed from Basrah to Damascus 958½ miles in nineteen days, or daily fifty miles.—*Powell's Handbook. Dr. J. L. Stewart, M. D. Chesney's Overland Route; Huc's Recollections of a Journey, p.* 130. *Postan's Personal Observations, p.* 108. *Mignan's Travels, p.* 27. *Wellsted's Travels. Burton's Pilgrimage. Pottinger's Belochistan and Sinde, p.* 1889. *Fontaine's Egypt. Robinson's Travels, Vol.* ii. *p.* 183.

CAMELLIA, a genus of plants from the east of India and China, of the natural order Ternstromiaceæ, and furnishing several species of ornamental flower plants, such as C. Japonica, C. malliflora, and C. reticulata. C. oleifera of China, yields a valuable oil, C. Kissi is a tree of Nepaul, and C. caudata is a shrub of the Khasya Hills.—*Voigt.*

CAMELLIA JAPONICA. The single red variety of this species grows spontaneously in the woods of China, from twenty to thirty feet in height, and with stems thick in proportion. Its elegant flowers are much admired by the people of its native country. The Chinese enumerate thirty or forty varieties, for each of which they have a separate name; many of these varieties are unknown out of China, and Chinese gardeners are likewise ignorant of a large proportion of those found in western conservatories. This elegant flower is cultivated solely for its beauty, but there are other species of Camellia raised for their seeds, the oil expressed from them being serviceable for many household and mechanical purposes. The Camellia bears the same Chinese name that the tea plant does, and the term "cha" is likewise employed, as tea is with ourselves, to designate any infusion.—*William's Middle Kingdom, p. 285. Fortune's Residence.*

CAMELLIA SESANQUA, called by the Chinese Tcha-wha, or flower of tea, grows in great abundance, and without much cultivation, on the hills of the southern provinces of China. The nut, or berry, much resembles, but is larger than the tea-seed, and yields by expression a very fine esculent oil, which the Chinese hold in high estimation.—*Macartney's Embassy, Vol. I.*, p. xxxiv.

There are two species of camel, C. Bactrianus and C. Dromedarius, the Bactrian and Arabian, both of which were known to Aristotle, the Bactrian with two humps, and the Arabian, the dromedary, with one. An instance of great endurance of the camel is mentioned by Captain Smith, who purchased one, named Tippoo Sahib, for three hundred Rupees, that carried him six hundred and eighty miles in 12 days across the desert of India from Joudpore to Sukkur in Sind. On another occasion, the same camel carried him 110 miles from Sukkur to Kotree without a halt, in thirty hours.—*Smith's 5 years at Nepaul, p.* 20 *and* 26. See Camel, Camelus bactrianus, Camelus dromedarius, Mammalia.

Its countries are Africa, Arabia, Persia, Beluchistan, Rajputanah. It is about 8 feet long, has one hump on the middle of the back, pale brown hair.—*Eng. Cyc.* See Camel.

CAMELUS MINIMUS. Syn. of Camelus dromedarius.

CAMELUS SIVALENSIS. A fossil species was discovered by Dr. Falconer and Capt. Cautley in the Tertiary deposits of the Sewalik Hills of Hindustan. Its crania, jaws, and teeth are in the British Museum. It was nearly related to the existing species, but exceeded them by at least one-seventh in height.—*Eng Cyc. page* 733. See Camel:

CAMELUS TURCICUS. Syn. of Camelus Bractrianus.

CAMELUS VETUS. Syn. of Camelus dromedarius.

CAMEO was the cyamea of Pliny. They are still largely manufactured in Italy from the large red shield shell, of the Maldive Islands, the Cassis rufa. It is brought from the Maldives to Ceylon as part of the tribute and is exported to Italy.—*Tennant. Ceylon.*

CAMERON, Colonel G. Poulett, C. B., K.C.T S., and knight of the order of the Military merit of the Conception, an officer of the Madras Army. He was the son of Captain Robert Cameron, R.N. who with all his boat's crew perished in 1807, under the batteries of Ft. St. Andero in the north of Spain. In 1824-25 he served with the force employed in restoring quiet in the Southern Mahratta country. In 1831, he took service under the Duke of Braganza, in the war of succession in Portugal, during which he was in six general actions, and was thanked for his conduct at the final battle of El Pastoleiro, receiving the Cross of the Conception, and the Order of the Tower and Sword was bestowed on him for his gallantry at the battle of the Quinta de Vanzella, on the 5th July 1832. He was subsequently, in 1836, 1837, and 1838, employed with the Persian Army, on the Russian and Turkish frontier. He published in the Army and Navy Gazette a narrative of his adventures in the Caucasus, Circassia and Georgia, which were afterwards collected in two volumes. He subsequently was granted the order of Commander of the Bath. On his return to India in 1862, he was appointed Political Agent at the Court of the Nabob of the Carnatic.

CAMERON, JOHN, Esq., F.R.G., author of our Tropical Possessions in Malayan India. London, 1865.

CAM-HI, an emperor of China who first subdued the hardy Mongol Tartars, which he effected more by kindness than by the sword.

CAMOENS. The Cave of Camoens, where the Portuguese poet is supposed to have written a portion of his Lusaid, is a place of universal interest and resort at Macao. It is picturesquely situated upon the summit of a small hill, on the margin of the inner harbor. Large granite rocks are here gathered in a confused cluster, which form a natural cave, from the entrance of which there is a wide prospect of the surrounding country. The banian, the pagoda, and other oriental trees unite their foliage and form a grove in which the rocky cave is embowered. Surrounding it are grounds cultivated with trees, creeping vines and flowering shrubs, charmingly arranged by the borders of winding paths, and upon the sides of the hills. Artificial terraces, ingeniously disposed, invite the visitor to the enjoyment of the view or to rest beneath the shade. Above the cave rises a rotunda, from which there is an enchanting prospect, and a marble monument, with a bronze bust and an inscription here record the fortunes, the genius, and virtue of Camoens, the poet. Camoens' visit to Macao was during his banishment from Portugal, in consequence of his pertinacious courtship of a lady of rank, whose parents did not affect an alliance with the poet, who, although of a respectable family, was poor and looked upon as an uncertain adventurer. In 1551, he proceeded to Goa, in India, where he again involved himself in trouble by writing his "Absurdities of India," and was banished to the Moluccas, and in the course of his exile he resorted frequently to Macao, which was a favorite residence of the poet. The cave was his chosen spot of retirement, where, in its "sweet retired solitude," he meditated his great work, the Lusaid. Camoens returned to Portugal, but only to live in misery and die in a hospital. —*American Expedition to Japan, page* 165.

The camphor of commerce is obtained from two trees, one of which, Dryobalanops camphora, grows in Sumatra, Borneo and Labuan: the other, the Camphora officinalis, or Laurus camphora, grows in China. In Spain, a camphor has been obtained from some of the Labiatæ, in Burmah, considerable quantities have been produced from the Blumea grandis, and a chemical product has been obtained in Europe, by passing a stream of muriatic gas through turpentine. The names for it, in all the languages of the world, are sufficiently alike to show that a knowledge of the substance came from one source, probably China or Sumatra, and the words Dutch, or Japan, or Tub camphor, Barus camphor, China camphor, Formosa camphor, have been added merely to indicate the place of production. The *unrefined or crude camphor* of commerce is the product of the Camphora officinalis, and is of two kinds, viz., *Dutch, or Japan, or Tub camphor*, so called from being brought from Batavia to Europe in tubs, containing 1 cwt. to 1¼ cwt., and is in the form of lumps of pinkish grains. The second kind is called ordinary crude camphor, China camphor, and Formosa camphor, much of it being produced in Formosa, shipped to China, and re-shipped to Europe in square chests lined with lead foil, and containing from 1¼ to 1½ cwt. In this crude state it consists of dirty greyish grains. This crude material is obtained by distillation from the roots and wood of the tree, which is chopped up and split up into billets, which are boiled in plenty of water in large boilers, with a conical or round straw cover smeared with clay outside; and, as the water boils, the crude camphor is deposited on the inner straw. Refined camphor is obtained from this product by distillation, which is carried on in various ways, but the whole process consists in using two round vessels, inverting one above the other, and adding 2 per cent. of quick-lime in order to absorb any oil, and distil from one vessel to another. Two earthen pots, luted together, answer perfectly; a very small aperture being left for the escape of air on the first application of heat. It is largely refined in Bombay.

The Borneo or Barus camphor, the Lung-naou-heang or "Dragon's-brain perfume," is a product of the Dryobalanops camphora, Colebrook, the D. aromatica, Gaert., which is found in Borneo and Sumatra. It is much esteemed in China, where it is said to be used for flavouring the Chinese camphor, an inferior article obtained from a different description of tree. It is called by the natives, and in commerce, the 'kapur barus,' or Barus camphor, to distinguish it from the product of the Laurus camphora, or Japan camphor. It derives its name of Barus from a place in Sumatra, where it is produced, and whence it was probably first exported. The Dryobalanops camphora, which yields it, has only hitherto been found in the Indian islands of Borneo and Sumatra, and only in the northern parts of these islands. The tree is said by Mr. Marsden to be very common in Sumatra, in the country of the Batta, but not to be found to the south of the line. In Borneo it was found at first towards the north; but has since been discovered in Sarawak. In Labuan it is common, and is one of the noblest of the trees in that fine jungle: it has a fine straight stem, from which the bark comes off in large flakes; the foliage is very dense, forming a well shaped head to the tree, the stem of which is frequently ninety feet to the first branches. As not one in ten trees is found to produce camphor, its presence must be caused by a particular state, either of vigour or disease, in the tree. And the camphor collectors cut notches in the trees, in order, before felling, to ascertain whether they are likely to produce camphor. It is said that in those which produce it, the younger and smaller trees are often found to be quite as prolific as the older and larger trees. The camphor is found in a concrete state in the crevices of the wood, so that it can only be extracted by felling the tree, which is afterwards cut into blocks and split into wedges, and the camphor, which is white and transparent, is then taken out. An essential oil is also found in hollows in the wood, which the natives crystalize artificially; but the camphor thus obtained is not so much esteemed as that found naturally crystalized. The tree is found on all the northern parts of Borneo, and is said to be particularly abundant in the country of the Kyan, in the interior, on the Bintulu and Rejang rivers. The produce, though so valued by the Chinese, is not much used by the natives, though it is occasionally taken inwardly as a medicine. The price in China of the Borneo camphor is said to be higher than that of Japan in the proportion of twenty to one: it has been supposed that this disproportion is caused more by some fancies of the consumer, than any real distinction of properties. The camphor occurs only in small fissures, from which the natives, having felled the trees and split up the wood, scrape it off with small splinters or with their nails. From the oldest and richest trees they rarely collect more than two ounces. After a long stay in the woods, frequently of three months, during which they may fell a hundred trees, a party of thirty persons rarely bring away more than 15 or 20 pounds of solid camphor, worth from 200 to 250 dollars. The variety and price of this costly substance are enhanced by a custom which has immemorially prevailed among the Batta race, of delaying the burial of every person who, during his life, had a claim to the title of Rajah (of which each village has one) until some rice, sown on the day of his death, has sprung up, grown and borne fruit. The corpse, till then kept above ground among the living, is now, with these ears of rice, committed to the earth, like the grain six months before, and thus the hope is emblematically expressed that, as a new life arises from the seed, so another life shall begin for man after his death. During this time the corpse is kept in the house, enclosed in a coffin made of the hollowed trunk of a Durinon, and the whole space between the coffin and the body is filled with pounded camphor, for the purchase of which the family of the deceased Rajah frequently impoverish themselves. The "camphor oil" is said to be collected by incisions at the base of the trunk, from which the clear balsamic juice is very slowly discharged. Baru camphor is getting scarce, as the tree must be destroyed to obtain it. About 800 piculs are annually sent to China. The proportion between Malay and Chinese camphor is as eighteen to one; the former is more fragrant, and not so pungent as the latter. Nine hundred and eighty-three tubs of camphor were exported from Java in 1843; 625 bales were imported in 1843, the produce of the Japanese empire, and 559 piculs exported from Canton in 1844. The price of unrefined camphor in the Liverpool market in July 1853, was £4 to £4 10s. the cwt. The altered relations with Japan and China will doubtless affect the course of trade. The total import into England is about 300 tons a year, and it sells at 90 shillings a cwt.

Borneo camphor, as found in the wood of the ryobalanops camphora, is in white crystaline fragments. Specific gravity 1,009. Its odour is not of so diffusable a nature; otherwise it closely resembles the camphor from the Camphora officinarum. The wood of the camphor tree is good timber, suited for house and ship-building. The liquid camphor of the same tree appears of the nature of Camphogen. Dr. A. T. Thomson, by passing a current of oxygen gas through it, converted it into camphor. The oil, both in a fluid and solid state, is found in the body of the tree where the sap should be, but not in all trees. The liquid oil is abundant, and little appreciated, but the concrete bears a very high price, which depends wholly on its scarcity, and the fancy of the Chinese and Japanese, who ascribe high medicinal virtues to it, which it probably possesses in no higher degree than the cheap article which they themselves obtain by the distillation of the wood of the Camphora officinalis, and which may be had in the same markets for about-one hundreth part of the price. It is largely employed in medicine.—*Low's Sarawak*, pp. 44-46. *Marsden's Hist. of Sumatra*, p. 150. *Royle's Materia Medica*, p. 536. *Crawfurd's Dictionary*, p. 81. *Simmond's Commercial Products. O'Shaughnessy Bengal Dispensatory. Mason's Tenasserim. Tomlinson*, p. 287 8. See Camphora officinalis; Dryobalanops camphora.

CAMPHORA, LAT. Camphor.

CAMPHORA, a genus of plants belonging to the Lauraceæ, of which three species, C. glandulifera, C. officinarum and C. porrecta occur in the south and east of Asia. *Voigt*.

CAMPHORA GLANDULIFERA, NEES. This is the Laurus glandulifera, Wall., and yields the Sassafras bark of Nepaul. It is a tree of the Nepaul mountains, with small yellowish green odoriferous flowers, and pale yellow light wood, smelling strongly of camphor while fresh, but weak and unfit for furniture. Its bark has been named the Sassafras of Nepaul. Dr. Royle says (*Ill. Him. Bot.*) the Camphora glandulifera, discovered by Dr. Wallich, contains solid grains of camphor in its wood.—*Voigt.*, p. 308. *Royle*, p. 324. *O'Shaughnessy*, p. 545.

CAMPHORA OFFICINARUM. BAUH. NEES.

SYN.

Laurus Camphora, *Linn.* Officinal Camphor tree.

A considerable tree of China, Formosa and Japan, growing straight below and branching out. It is a native of China principally near Chinchew in the province of Foken; also of Formosa and Japan. Mr. Williams states it is found in Kwang-si, Fuhkien, Formosa, and Cochin China, and affords both timber and gum for exportation and domestic use. The tree itself is large, furnishes excellent planks, beams, and boards, for ship building and for making trunks and other articles, and for the preparation of camphor, sawing of the timber, and the construction of trunks, articles of furniture, and vessels in whole or in part, occupy a great number of carpenters and shipwrights. Camphor-wood is valuable for the construction of chests and almirahs, as its powerful odour protects the contents from the ravages of white ants and other insects. Camphor is diffused through all parts of the plant, and is separated from the root, trunk, and branches, which when cut into chips, are boiled in water and then sublimed into inverted straw cones contained within earthen capitals. It is thus obtained in the form of *Crude Camphor*, chiefly from the province of Fokien and the opposite island of Formosa, but some of good quality is also procured from Japan. The Dutch exported from thence into Europe 310,520 lbs. in seven years. It is sometimes imported into Britain from Batavia.—*Williams' Middle Kingdom, Vol. II., page* 137. *O'Shaughnessy, page* 455.

CAMPHORA PORRECTA, LINN.

SYN.

A. parthenoxylon. *Nees.*
Laurus „ *Jack.*
„ pseudo sassafras, *Blain.*

CAMPHOR OF BAROS, See Camphor. Dryobalanops camphora.

CAMPHOR OIL, Kapur minyak, Malay, the liquid camphor of the Dryobalanops camphora tree.

CAMPHRE. FR. Camphor.

CAMPHOR-TREE. See Dryobalanops camphora. Laurus camphora.

CAMPHOR-WOOD of Sumatra is from the Dryobalanops camphora of which the wood is hard, compact and brownish-coloured. The fragrant, light coloured, soft wood of which the trunks and boxes of China are made, is supposed to be that of the Camphor tree of Japan, Laurus camphora, or Camphora officinalis. The Martaban Camphor-wood, Laurus Sassafras, is a very large tree, scattered sparsely throughout the Tennaserim provinces. Wallich wrote that it was very like Laurus glandulifera, which furnishes the sassafras and camphor-wood of Nepaul. The Karens call it the "tree galanga" from its fragrance.—*Holtz., Mason.*

CAMPORE RIVER, in lat. 0° 43′ N., long. 103° 8′ E.

CAM SING MOON, OR CUM SING MOON, a safe harbour in the Canton river, formed between the southern point of Keeow island, and a point of Macao island called Bluff Head. It was much frequented by opium vessels.—*Horsburgh.*

CAMTOZE, a tribe of the Kafir race. See Kush.

CAMULAPOOR, a town in India in long. 78° 45′ E., and lat. 11° 37′ N.

CAM-WOOD, a dye wood, from the Baphia nitida, of Africa, used in dyeing the bright red of English bandana handkerchiefs.

CANAAN, according to one authority, is from Chana, the ancient name of Phœnicia. According to another, Canaan or Palestine was so called after Canaan, the youngest son of Ham.

CANACUBYA, or CANOUJ, is one of the most ancient places in India ; it gave rise, and gives a name, to one of the greatest divisions of the brahmin class. Its capital was perhaps the wealthiest visited by the first mahomedan invaders, and its wars with the neighbouring state of Delhi contributed to accelerate the ruin of hindu independence. This kingdom appears in early time to have been called Panchala. It seems to have been a long, but narrow territory, extending on the east to Nepal (which it included), and on the west along the Chambal and Banas, as far as Ajmir. We know little else of its early history, except the Rajput writings and traditions collected by Colonel Tod, and the inscriptions examined by Professor Wilson, with those translated and discussed by Principal Mill. The former relate that it was taken from another hindu dynasty A. D. 470, by the Rathor rajputs, who retained it until its conquest by the mahomedans in A. D. 1193, when they withdrew to their present seats in Marwar. The identity of Canouj and Panchala is assumed in Menu II. 19. Its limits, as assigned in the "Maha Bharat," are made out by connecting notes (vol. iii. p. 135, vol. iv. p. 142,) in the "Oriental Magazine." These boundaries, enlarged a little on the south and on the west, are the same as those assigned by Colonel Tod to the same kingdom at the time of the mahomedan invasion.—*Elphinstone's History of India, Vol. I., p.* 402. See Canouj.

CANALS in Asia. The great canal of the world is that of Suez, connecting the Red Sea with the Mediterranean. It was commenced 25th April 1859, the first ships passed through it in the year 1867, and it was formally opened for traffic in December 1869. It had occupied ten years of labour to bring it to that state, and cost to that period thirteen millions sterling = thirteen crores of rupees. Canals are said to have been excavated, says Sir H. Elliot, by Feroz Shah, and by Ali Mardan Khan, but the historians of Timur do not mention them, and Baber states that in the Hindustan province there were none. Markham, in his Embassy, however, (p. iv) asserts that the irrigating canals of Feroze and Shah Jehan have been restored and improved, after centuries of decay and disuse, and a canal for irrigation and navigation, the largest work of the kind in either the old or the new world, now passes through eight hundred miles of the former empire of the great Moguls.

The Ganges canal is amongst the greatest works of India. It commences from Hurdwar, passes over a low tract of country, is borne across the Salani river by an aqueduct of stone of fifteen arches, through the volume of another river, and beneath the bed of a third and was planned to re-enter the Ganges at Benares. The Salani aqueduct leaves a clear water way of 700 feet, and cost £300,000. The total cost of the canal is not less than two millions sterling. It takes about 75 per cent. of the water of the Ganges, whose volume, however, is not diminished. It traverses the Doab, and by countless branches, dykes and channels, irrigates almost every village throughout a tract of country upwards of eight hundred miles in length, and is supplied to every tiller on payment of a water tax. At Hurdwar, the pass through which it issues, at the lowest ebb, discharges about seven thousand cubic feet of water every second.

The Ganges canal was opened on the 8th April 1854. It commences at Hurdwar, as the river Ganges issues from the mountains, and runs through the country on the right bank of the river. It has many branches, one of which re-enters the Ganges at Cawnpore, and another joins the river Jumna. This canal is carried by a great viaduct over the river Salani. This viaduct is three miles long. It is of earth, and is protected by a wall of masonry and a bridge of fifteen arches, each of fifty feet of span. It now consists of 653 miles of main canal, and 2,968 miles of rajbuha, or distributing channels. It is divided into seven executive charges. The gross income for 1865-66 was Rs. 13,50,000;

that of the preceding year was Rs. 9,90,866. It is not certain whether a permanent dam on the Ganges at the headworks above Hurdwar is absolutely necessary; but instructions have been given for at least completing the plans of the work without delay. The net receipts, excluding enhancement of land revenue, have reached 3½ per cent. If the estimate formed by the committee respecting the enhanced land revenue be correct, the canal is already paying five per cent. on the capital laid out, and when completed, the entire length of the work will be nearly 900 miles, independent of the many hundred miles of distributing water courses and minor channels. It was opened on the 8th April 1864.

The "*Jumna canals*" commence where this river descends from the Himalaya, and irrigate the country on both sides of the river until they re join it again at Delhi. The main canal on the eastern side is 130 miles long, with 610 miles of branch channels. The gross income for the year was Rs. 4,44,004; that of the preceding year was Rs. 3,39,458, on which, therefore, there is was increase of 30 per cent. due to enhancement of water-rates from the 1st May 1865. As on the Ganges canal, the increase over 1864 65 was nearly 68 per cent.

The *Doon canals* comprise five small canals in the Dehra Doon, aggregating 56 miles in length and 10 miles of rajbuha. The gross income for the year was Rs. 28,692, that for the preceding year was Rs. 27,357; the increase was therefore about 6 per cent.

The *Rohilcund canals* consist of the *Bygool*, 180 miles; the *Kitcha* and *Dhora* water courses, 32 miles; the *Paha* canal, 13 miles long; and the unfinished *Kylas* canal. The gross income for the year is Rs. 26,586, the income of the preceding year was Rs. 42,173, a decrease due to the destruction of the Bhanpore masonry dam. In addition to the above there are two other canals, the Nuggeena and the Nehtore, which are under the immediate control of the Collector of Bijnour. The gross revenue from them was Rs. 4,544; the previous year it was Rs. 5,564, a falling off due partly to serious damage to the head works of the Nehtore canal.

Agra Irrigation Works consist of the Futtehpore Seekree Reservoir and of the channels led therefrom.

The Humeerpore nad Jhansi Irrigation Works consist of lakes and reservoirs, partly natural, partly artificial, and are under the direct control of the Civil Authorities.—*Ann. Ind. Adm. Vol. XI., p.* 196.

The canal from the Sutlej to the Ganges was formed by the emperor Feroz Toghaluq, who ruled from A. D. 1351 to A. D. 1385, when he abdicated in favor of his son, who proved unworthy, and then to his grandson. In the Multan district there are no less than fifteen canals, of an aggregate length of 325 miles, the largest of which are from six to seven feet deep, and from twenty to thirty feet wide, and the smallest from two to five feet deep, and from six to ten feet wide.

In the Punjab, the inundation canals are fed from the river when swollen by the melting of the snows. They comprise 2109 miles of channel, and they are empty in the cold weather. The principal permament canal is that of the Baree Doab, with a central line of 247 miles and 219 miles of branches. It was opened on the 11th April 1859. The Eastern Narra canal in Sind was re-opened on the 7th May 1859.

In Madras are innumerable tanks or artificial lakes of various sizes formed in basins; that near Cummum being seven miles in circumference. The most northern of its rivers, the Godavery, at Rajahmundry, when about fifty-five miles from the sea, divides into two streams forming a delta of rich alluvial country. A little above this point the river is 2,000 yards broad, but it soon expands at Dowlaishwaram into a width of three times that extent, parted, however, by islands, into four branches. An anicut has there been thrown across the channel, the united lengths of the four dams being 3,955 yards. Upwards of two miles of stream is blocked up by a solid well protected mass of stone, in lime cement, with a breadth at the base of nearly 130 feet, and a height of twelve feet above the natural surface of the water. Along the left bank of the river. is one channel; another to Cocanada, and other channels, the total being 840 miles of main channel, irrigating 780,000 acres of land.

At Baizwarah, sixty miles from the sea, an anicut or dam 1,250 yards long, with a base of 305 feet, has been thrown across the Kistnah river, and its channels irrigate the Guntoor and Masulipatam districts, and when completed it is estimated that 290 miles of channel will exist. The Pennar anicut, 520 yards long, was finished in 1861. Across theColeroon river, (the northern branch of the Cauvery river) about 1,600 years ago, was constructed a famed anicut, the channels from which feed the Tanjore and Trichinopoly districts. It is 360 yards long, fifty feet broad and fifteen deep. But in 1836, it was modified.

The East Coast Canal from Madras to Sadras, is for traffic.

Canals, as water courses for cultivation, have only since 1862 been in progress in the Bombay Presidency. A weir of 1,550 feet has been thrown across the Girna river, in Khandesh, and one across the Panjur, In Sultanah a weir, 2,000 feet long, has been drawn across the Kistnah, to feed channels 45 miles long, and a large tank has been formed at Koorgaum near Barsec.

In Sind, cultivation is carried on by a network of irrigating channels leading water from the Indus river during its rise all over the face of the country. These are of ancient date, but since 1856 trunk channels have been dug from parts of the banks which were permanent. These run parallel to the course of the river, and carry a supply from the river when it is at its lowest level, cutting across and supplying the ancient channels; and under Sir Bartle Frere's administration, the ancient channel of the Narra, 120 miles long, was re-opened on the 7th May 1867, to distribute water over the vast plain of Meerpore. Canals of the Ganges, Jumna and Baree Doab have but given a profit of 5 per cent. Col. Cotton says, that the average return on all the new irrigation works in the Madras Presidency for the last fourteen years, is seventy per cent. per annum. Many of these canals are of sufficient size for navigation. *Indian Annals. Markham's Embassy, p.* 4. *Powell's Hand-book. Annl. Idn. Adm., Vol. XI., p.* 197. *Report on the Administration of the Punjab. Powell's Handbook, Econ. Prod. Punjab, p.* 206. See Irrigation.

CANAMO. SP. Hemp.

CANNANORE, a seaport town in India in long. 75° 26′ E., and lat. 11° 54′ N., known to the natives by the name of Kouryal-bandar. Proceeding along the sea coast, says Bartolomeo, you then arrive at Cannanore, a town with a castle, and subject to the government of queen Collatiri, by the Europeans called Collastri. This city is of great antiquity, and the king of Collatiri belongs to the first class of the Indian princes." * * * The capital of the kingdom of Cannanore, called also Colanada, lies in the latitude of 11° 50′, and is distinguished by the same name. The whole surrounding district, which extends towards the north as far as Mount Delly, is inhabited by the Molandi, who live merely by piracy. These sea-robbers are mentioned by Pliny, Arrian, Ptolemy, and other ancient authors. They unite themselves to other pirates who reside on the Angedib islands, near Goa, and capture all the small vessels which sail from Goa to Cochin. The huts in which their wives and children live, stand on the eastern side of Mount Delly. This mountain, which forms a cape or head-land, lies in the latitude of 12° 5′; and here Malabar or Malayala, properly so called, ends." Cannanore is now in British territory held by a body of European and native soldiers; it is a place of large trade.—*Voyage to E. Indies.*

CANA OF GALILEE, 6 miles from Nazareth, is a poor small village. Its fountain, the christians of Palestine say, has the purest and best water in the world. The road to Tiberias is full of interest. The mount of beatitudes, whence our Saviour delivered his sermon is near. It stands very little above a green plain of the stillest possible appearance.—*Skinner's Overland Journey, Vol. I., p.* 281.

CANAPE. IT. Hemp. Canvas. Cannabis sativa.

CANARA, a narrow strip of land, about 20 to 40 miles broad, extending for about 200 miles, lying between the Western Ghats and the sea. It is usually divided into North and South Canara, and the three eastern talooks of North Canara, being on the higher land on the eastern side of the ghats, are known as the Balaghat, in distinction to the Payen-ghat, below the ghat. Canara Balaghat is well wooded. North Canara has been transferred to the Bombay Presidency. Canara lies between the rivers Alega and Cangrecora. The bulk of the people of Canara follow one or other of the hindu sects, and some of them follow the rule of Maruma-ka-tayam, or descent from mothers, the descensus ab utero of the Locrians, who drove the Sicilians out of that part of Italy. The forests of N. Canara continue to furnish large quantities of the best timber produced in Southern India. In 1837, Col. Frith gave a list of 29 woods of Canara. In 1865 6, Dr. Gibson gave a list of 164 timber trees and fancy woods of Canara and Soonda, with scientific, Canarese and Mahratta names. It is as follows, and the descriptions will be found alphabetically arranged.

In South Canara, the jungles bear no comparison to those of Malabar or North Canara, where there are large tracts of forest uninhabited. In South Canara, the jungles are thickly populated by farmers; there are several lines of good forest which are called merchi wurg (Pepper wurg), and the ryot pays a beriz on the wurg of five pie per pepper vine. When the koomki land and merchi wurgs are separated, there is but little of Government jungles left, and on his little, ripè trees are few and scattered.—*Dr. Gibson, Mad. Cat. Ex. of 1862; Rep. Con. For. of* 1862, *p.* 30. *Madras Conservator's Report*, *p.* 3. *M. E. Jur. Report.* See Aka Podwal, India, p. 324; Kerala; Mahratta Governments, Polyandra, page 108-9.

CANARIUM, a genus of plants of the natural order Burseraceæ, of which Voigt mentions five species, C. Bengalense, commune, nigrum, strictum and sylvestre. Wight says the resinous juice of the Canarium commune has properties similar to Copaiva, while the kernels of the seed afford by expression a bland edible oil. The Canarium strictum of Roxburgh is known in Malabar under the name of the "black dammer tree," in contra-distinction to the Vateria, which is the "white dammer tree." This tree is rather common in the alpine forests about Courtallum in the Tinnevelly district, and is regularly rented there for the sake of its dammer. The dammer is transparent, and of a deep brownish yellow or amber color when held between the eye and the light, but when adhering to the tree has a bright shining black appearance. The fruit is a very hard, three-celled oval nut, tapering at each end.

Under the names Dhoop and Googul, **Can.** **Mahr.**, Dr. Gibson mentions two species of Canarium, in Canara and Sunda, one on the ghats above, and the second species of great size seems to be cultivated near Bilgil, and at Siddapore. The choice gum resin afforded by these trees is extensively used in the arts, and exported both inland and to the coast.—*Wight. Ill. Dr. Gibson.* See Resins.

CANARIUM BALSAMIFERUM. **Willde.** Syn. of Boswellia glabra.

CANARIUM BENGALENSE. **Roxb.** An immense forest tree of Assam, Sylhet and the adjacent mountainous countries, flowering in May and June. From fissures or wounds in the bark, a large quantity of very pure, clear, amber coloured resin exudes, which soon becomes hard and brittle, and is not unlike copal. But in the Calcutta bazar it was only valued at from 2 to 3 Rs. for seven maunds of eighty pounds each. Native name of the resin. Wood not known.—*O'Shaughnessy, p.* 285. *Voigt, p.* 149. *Roxb.* iii, 136. *Royle's Him. Bot.* p. 177.

Colophonia Mauritiana, D. C.
Bursera paniculata, *Lam.*, *Rumph.*

Java Almond.	**Eng.**	Jungli Badam.	**Hind.**
Bois de Colophane.	**Fr.**		

Grows in the Mauritius, Ceylon, the Peninsula of India, the Moluccas, and the Indian Archipelago. It was brought from the Moluccas to the Calcutta Botanic garden, but in Roxburgh's time did not thrive, owing to the coldness of the winter months. The bark yields

an abundance of limpid oil with a pungent turpentine smell, congealing into a buttery camphoraceous mass. It has the same properties as balsam of copaiba for which it could be substituted ; and is said to yield East Indian elemi. Its nuts are three-cornered and edible, but apt to produce diarrhœa.—*Roxb* iii. 177. *Dr. O'Shaughnessy, p.* 258. *Voigt,* 148-9

CANARIUM GENICULATUM. This is a large and valuable timber tree found in the Pegu valley, but it is scarce. Wood white colored, adapted to every purpose of house-building.—*McClelland.*

CANARIUM HIRSUTUM. Syn. of Boswellia thurifera.

CANARIUM MEHENBENTHENE. GÆRT. Syn. of Canarium commune.

CANARIUM NIGRUM, ROXB.

Marignia acutifolia, *D. C.*
Dammara nigra, *Rumph.*

A tree of Amboyna and the Moluccas ; a reddish soft viscid heavy-smelling substance exudes from wounds in its bark.—*Voigt,* 149.

CANARIUM ODORIFERUM. Syn. of Boswellia thurifera.

CANARIUM STRICTUM. ROXB. iii. 138.

SYN.

Dammara nigra legitima, *Rumph.*
Dhoop of Bhore Ghat

Black Dammer Tree	ENG	Thelli mara.	MALEAL.
Canari.	MALAY.	Kongilam maram.	TAM.

This is the Black Dammer tree of Tinnevelly and Malabar, and is so named in contradistinction to the Vateria Indica, which is called the white dammer tree. The Canarium strictum is common near Courtallum, where it is rented for its dammer. While adherent to the tree, it gives a bright shining black tint, but by translucent light, is of a deep brownish yellow or amber colour. The balsam exudes in a very fluid state and trickles down the trunk where it gradually hardens by exposure to the sun, the fresh resin continuing to flow over that already hardened, gives the stalactytic appearance of the huge lumps of resin in which form the resin is brought in the market. It is perfectly homogeneous, has a vitreous fracture. It is insoluble in cold, but partially soluble in boiling alcohol on the addition of camphor; when powdered, it is readily soluble in oil of turpentine. Powdered and burnt on the fire, it emits a more resinous smell, and burns with more smoke than white dammer. The size of the lumps of this resin, together with its color and the peculiarity of shape already mentioned, suffice to distinguish it from other Indian resins.—*M. E. J. R. Voigt.* 149. *Roxb.* iii. 138.

CANARIUM SYLVESTRE, GÆRTN.

C. Sylvestre alterum, *Rumph.*
Schinus Bengalensis.

A tree of Chittagong and Assam. Timber hard, tough, and close grained, used for furniture.

CANARIUM ZEYLANICUM, BLUME.

SYN.

C. Balsamiferum. MOON. | Kakoona-gass. SINGH

Occupies the warm, moister parts of Ceylon, up to an elevation of 1,500 feet. A resinous balsam exudes copiously from the trunk of this tree, which, mixed with paddy chaff, is used by the natives for burning, as the smoke drives away snakes from the domicile.—*Thw. Enum. P. Zeyl. I., p.* 79.

Almost all the candles in use in British India, are imported from Europe and America. The natives use oil lamps, of various shapes, often of metal fixed on an iron spike which they stick into the ground. Wax and tallow candles are made in several parts of India; in Vizagapatam, Goa, Malabar, Patna, Calcutta, Peddapore and Burhampore; but the large importations of candles from Europe have caused the manufacture to decline considerably. It is a great improvement to place two thin instead of one thick wick in each, and the wicks should be plaited not twisted. Wax candles improve with age. The candles used in Japan are made of an oil said to be pressed out of the seeds of the Rhus succedanea? This oil becomes, when concrete, of the consistence of tallow, and is not so hard as wax. The province of Fetsigo, more particularly, produces this tree, and consequently supplies the greatest quantity of this oil. In the eastern parts of China, the product of the tallow tree, Stillingia sebifera, and beef and hog's tallow in the south, are used in the manufacture of candles. Wax is only employed to incase the tallow or lard, which, from the heat of the climate and its unclarified condition, never becomes hard *Royle Arts &c. of India, page* 484. *Thanberg's Travels, Vol.* iii. *p.* 188. *Rhode MSS.*

Nathur.	GUZ.	Bed.	PERS.
Bet.	HIND.	Perambugal.	TAM.
Rotan.	MALAY.	Bettamulu.	TEL.

Canes are the produce of the Calamus genus of palms, the species of which are numerous in the Islands of the Indian Archipelago, in the Malayan Peninsula, in the

Madras territories, in the forests of the districts of Chittagong, Silhet, and Assam, along the foot of the Himalayas as far north as the Deyra Doon, where a species is found which the late Mr. Griffith named *C. Royleanus*, and he applied the name of *C. Roxburghii* to the plant which Dr. Roxburgh called *C. Rotang*, common in Bengal and on the Coromandel Coast. Both are used for all the ordinary purposes of cane; as, also, are C. tenuis of Assam, C. gracilis, C. extensus, and others. But those of the shops are gathered indiscriminately; and it is not possible to say from what particular species they come. C. rotang has however been said to furnish the stouter, and C. Scipionum the slenderer sorts. Mr. Griffith considered C. Scipionum of Loureiro to be the species which yields the well known Malacca Cane, but the plant does not appear about Malacca and the canes are stated to be imported from Siak, on the opposite coast of Sumatra. Even this does not, however, seem to be correct, as the Malacca Committee for the Exhibition of 1862 sent Malacca canes, as cut from the jungle, previous to being subjected to the process of smoking which gives the cane the rich brown tint so much admired in Europe. The stem of Calamus verus is described as being 100 feet long, that of C. oblongus 300 to 400 feet, of C. rudentum upwards of 500 feet, and of C. extensus as much as 600 feet. Rumphius even states that one kind attains the extraordinary length of 1200 feet (vol. v. 100). In the Tenasserim Provinces, there are numerous species indigenous in the forest, and the Karens have different names for seventeen species or varieties used extensively instead of cordage. The stays of the masts in native boats are usually made of rattans, and they are split up into strings for the innumerable purposes to which cord and twine are usually applied. All that gives stability to bamboo houses, is the ratan which ties them together. The Calamus rudentum of Loureiro is manufactured at Malacca into cables, and is employed for dragging great weights and binding wild elephants. A cane bridge over the Temishang in the Khassia hills is 312 feet long and 50 feet above the river. It oscillates greatly.—*Mason's Tenasserim*; *Royle, Ill. Him. Bot.*: *Royle Fib. Pl.*: *Cat. Ex.* 1862. See Calamus.

CANEVAZZA, also LONA, It. Canvass.

CANFORA, It. Camphor.

CANGUE, a wooden yoke, by which Chinese criminals are punished and are led about the streets as a spectacle to the people. It consists of two large pieces of wood fitting into each other and having one to three openings, through which the head and one or both hands are drawn, according to the greatness of the crime. Such a yoke weighs from lbs. 50 to lbs. 100, and presses so heavily upon the back and shoulder that the criminal is unable to feed himself, and must wait till some compassionate person lifts the food to his mouth. Such punishment is inflicted for periods varying from a few days to several months, and in the latter case it is almost always fatal. This instrument of torture makes a man resemble the foot of a huge heavy table.—*Sinnett's Lady's Voyage*, p. 49; *Huc, Chinese Empire*, vol. I. p. 272.

CANGRECORA, a river, on the southern boundary of Canara.

CANGOO, Tam. A Tinnevelly wood of a whitish brown colour. Used for hand-spikes and wheelwright's work.—*Col. Frith.*

CANHOES, Port. Cannons.

CANIATCHI. Cani 'land,' and atchi, 'heritage,' in the south of India, land property. Tod thinks the "atchi" like the *ote* and *awut*, Rajpoot terminations, implies clanship.—*Tod's Rajasthan*, vol. I., p. 496.

CANIFS, Fr. Penknives.

CANINO, Prince of, a learned ornithologist: a relative of the Bonaparte family.

CANIS, Lat. a genus of mammal animals, of which the common dog, Canis familiaris and its many varieties; the wolf, Canis lupus, and the jackal, Canis aureus, occur in India. The wild dogs of India have been removed to the genus Cuon. The following have at times been noticed under Canis.

Canis ægypticus, Canis cauda, Canis dukhunensis, Canis familiaris borealis, Canis familiaris lagopus, Canis himalaicus, Canis hyæna, Canis mexicanus, Canis pallipes of Sykes, Canis pictus, Canis primævus, Canis quao sumatrensis, Canis sumatrensis, Canis thous.

CANIS AUREUS, Linn.

Canis aureus Indicus, *Hodgson.*
Lupus aureus, *Kæmpfer.*

Nari	Can.	Kola	Mahr.
Shighal	Duk.	Shighal	Pers.
Jackhals	Dut.	Srigala	Sansc.
Jackal	Eng.		

The jackal is found in a great part of Asia, Syria, Arabia, Persia, and in all India west of the Brahmaputra. Along the line of the Ganges, in lower Bengal, they move in packs and eat indiscriminately. In the Peninsula, they are of larger size, and seen singly or in pairs, and in the Dekhan, live much on wild fruits, the coffee bean of the plantations is largely eaten by them. Their cry when moving at night is very disagreeable, and even when clicketing their call is unpleasant.—*Cat. of Mammalia.* See Mammalia.

CANIS FAMILIARIS, Linn.

C. familiaris, var. Indica.

Pariah Dog.	Brinjara Dog.
Polygar Dog.	Tibetan Mastiff.

The Brinjara dog is a large powerful animal, in shape and with limbs somewhat resembling the Persian grey-hound, only much more powerful. The breed seems, however, to be disappearing from amongst the brinjara tandas, and replaced by the ordinary pariah. In 1868, we met a great tanda on the march at Adjunta, but only pariah dogs amongst them. Indeed between the brinjara dog and many of the pariah dogs there is so great a resemblance as to impress with the belief that they are the same race. In many villages are pariah dogs in no way distinguishable from the brinjara. The large brinjara dog is an eager hunter of the larger game, a faithful, intelligent, and good watch dog, but does not crave attention. The Poligar dog is large and powerful, and is peculiar in being without hair. The Beder race of Zorapore and Ghurghunta hunt the wild boar with a large powerful breed of dogs. A peculiar breed is raised by the rajah of Rampore, seemingly between the Persian grey hound and the Tibetan mastiff. The Tibetans have a mastiff, a terrier and a poodle, and the two last are pets, and the poodle is often fed for the table. The Chinese dogs from Japan, the original of the King Charles Spaniel, is sometimes seen in India. The C. Ægyptius, C. cauda, C. Dukhunensis, do not need separate remark.

CANIS LUPUS. Linn.

C. Palipes, *Sykes.*

Tola	Can.	Landga	Hind.
Wolf	Eng.	Bherija	„
Indian wolf	„		

The wolf roams in Central and Southern India, they are never seen singly, but always in large or small packs. If a single one appear, it may be assumed that others of the pack are near. They are bold, even in the vicinity of towns, scarcely moving off from a horseman, and in Central India, Oudh and the Punjab, they destroy large numbers of children. Their ordinary prey are deer, sheep, and in pursuit, they display great sagacity, throwing out flanking parties and surrounding games. Recently we witnessed a sambur run close up to a railway train in Berar, halt as the train moved on, and it then fled off at speed: looking beyond, a body of wolves were seen in pursuit.

CANIS ? In Penang, a large tree; used for door frames.—*Col. Frith.*

CANJARA, Tamil. Malayala. A tree which grows to about two feet and a half in diameter, and from twenty-five to thirty high, of little use or durability. The natives value its fruit, which is very intoxicating, and used by them as a medicine.—*Edye. M. and C.*

CANJARA. Sans. Daucu carota.

CANJAROTE POOYA, a river which formed originally the southern boundary of Canara, separating it from Travancore. See Keerala Cangrecora.

CANMORTA, one of the Nicobar Islands.

CANNA, a genus of flowering plants, of the order Marantaceæ, of which the C. Indica, or Indian shot, is one, but there are many, species. Voigt enumerates sixteen as having been in the Calcutta gardens, also C. edulis of Peru and C. lagunensis of Mexico.

The hemp plant is grown in Persia, Syria, Arabia, and throughout India. In some places for its fibre; in others, and, generally, for its intoxicating products. In Kangra and the Punjab, it grows spontaneously, and in abundance everywhere in the submontane tracts in the Sutlej valley, between Rampur and Sungnam, at an elevation of 3,000 to 7,000 feet, but is cultivated for the fibre only in the eastern portions of Kangra, and in the Simla Hills. In 1859, an experimental consignment of two tons of Himalayan hemp was valued in the English market at from 30*l*. to 32*l*. per ton. The price at Lahore is about 15*l*. or 16*l*. per ton. Of the intoxicating products,

Charras is the concreted resinous exudation from the leaves, slender stems, and flowers, collected in the Himalaya, Yarkand and Herat.

Ganjah, the dried hemp plant which has flowered, and from which the resin has not been removed ; also the whole plant.

CANNEH of Scripture, (Ezekiel xxvii. 21 to 23.) the Cane Emporium of the Romans, is the modern Makulla. The inspired writer speaking of Tyre, says "Arabia, and all the princes of Kedar, they occupied with thee, in lambs and rams and goats : in these were thy merchants. The merchants of Shebah and Raamah, they were thy merchants : they occupied in thy fairs with chief of all spices, and with all precious stones and gold. Haran, and Canneh and Eden, the merchants of Shebah, Asshur and Chilmad, were thy merchants."

CANNEL COAL. See Coal.

CANNELLE. Fr. Cinnamon.

CANNER-KA-JHAR. Duk. Nerium odoratum.

CANNING. Charles John Canning was born at Gloucester Lodge, Brompton, in 1812. He was the third son of the celebrated George Canning, and was educated at Christ Church, Oxford. Lord Dalhousie was Governor General of India from the beginning of 1848 Lord Canning succeeded him early in 1856. Lord Canning entered upon public life in 1836, as member for Warwickshire. In the following year his mother died, and he went to the Upper House. When Sir R. Peel came into power, in 1841, he was appointed Under Secretary for Foreign Affairs. He held this post till 1846, in spite of the inconvenience of having both the Secretary and the Under-Secretary of the same department in the House of Lords. For a month or two, in the reconstructed Ministry of Sir Robert Peel, Lord Canning was Chief Commissioner of Woods and Forests ; but in July, 1846, he resigned with his party, and declining high office at the hands of Lord Derby, returned with the Coalition Ministry in 1853. In the Government of Lord Aberdeen Lord Canning was Postmaster-General, and distinguished himself by his administrative capacity. He worked very hard, made many changes in the internal organization of the department, and set on foot the practice of submitting annually to Parliament a report of the work, and especially the progress, achieved by the Post-office. He held the same appointment for a short time in Lord Palmerston's Cabinet, but it became necessary, as the year 1855 wore on, to select a successor to Lord Dalhousie, and none seemed so fit to send out as his college friend Lord Canning. The Governor-Generalship was the destined prize of which his father had been baulked, for he had received the appointment, and was on the eve of starting for India, when Lord Castlereagh committed suicide, and the Foreign-office was left without a head. George Canning, a comparatively poor man, gave up the chances of acquiring a fortune in the splendid post of Viceroy, in order to win a name for himself at home, and perhaps to reach the Premiership. Both of these objects were attained, but he died in the effort. His son, Lord Canning, began his rule in India on the last day of February, 1856, and had scarcely taken his place, when in 1857, the army of Bengal revolted and much of northern India rebelled, under the guidance of Nana Rao of Cawnpore, and of the emperor of Dehli. The years 1857, 1858, 1859, 1860, and 1861, were employed in destroying the mutineers, and suppressing the mutiny, in which he displayed great boldness and self reliance, and when the embers of the insurrection alone remained, he was the first to urge clemency. During his administration several servants of Government, Sir John Lawrence, Sir Colin Campbell, Sir Nevil Chamberlain, Colonel Balfour, Sir Hugh Rose, Sir Robert Napier, Sir Hope Grant, by their labours in war and in peace did the state service and won higher honours for themselves. Earl Canning, on his return home, was appointed a Knight of the Garter by letters patent, dated Balmoral, May 21, but he died at London on the 17th June 1862.

CANOES are largely used in India as ferry-boats, and have shapes and forms to suit the rivers and waters. Canoes at Calicut are hewn out of the trunk of the Jackfruit tree, Artocarpus integrifolia. Canoes of Point de Galle and the Malabar Coast have weather-boards on an outrigger in the form of a smaller canoe ; they are sharp at both ends, and beat to windward without tacking. The Jangar of the Malabar coast, for rivers, is a kind of canoe. The rivers of the Northern Circars are crossed by a double canoe, formed out of two pieces of a cocoanut or a palmyra tree hollowed, and kept apart by cross ties of wood. Canoes scooped out from single trees are in universal use in Burmah, the Malay Peninsula, and the Malay and Eastern Archipelago. See Boats, Java.

The cannons used for war in Eastern and Southern Africa by the Eastern nations, or by the Europeans in the East, are either imported from Europe and America, or are cast in the foundries of the several countries of the South and East of Asia. The British have a considerable foundry near Calcutta,but guns of the more recently invented forms are all imported from Britain. From the Persian term Top, is the Hindi term Top khana, a battery of artillery. The British in India have mounted batteries drawn by bullocks, ponies. horses and mules, camel batteries and elephant batteries and mountain trains.

CANOON-GO. ARAB. PERS. The village clerk, an expounder of the terms, literally, Rule-teller.

CANOUJ, in the province of Agra, a celebrated hindoo city, said to have existed from 1000 B. C. It is stated to have contained 30,000 shops for the sale of betel nut alone, but this is figurative, to indicate a great number. It is said to have been founded by two sons of Cush, who named it Mahadya, afterwards changed to Kanya kubja. It was not unfrequently called Gadhipoora. It retained its celebrity until the invasion of Shahab-ud-din (A.D. 1193), when it was laid prostrate. It was held by the Rahtore dynasty from the close of the 5th to that of the 12th century, and terminated with Jeichund. Canouj fell A. D. 1194. In S. 1268 (A. D. 1212), eighteen years after its fall, Seoji and Saitram, grandsons of Jeichund, abandoned Canoj, and with two hundred retainers, journeyed westward to the desert, aoourding to some of the chronicles, on a pilgrimage to the shrine of Dwarica; but according to others, to carve their fortunes in fresh fields. Seoji on the banks of the Looni, exterminated, at a feast, the Dabeys of Mehwo, and soon after killed Mohesdas, chief of the Gohils of Kherdhur. One of the chronicles asserts that it was Asothama, the successor of Seoji, who conquered "the land of Kher" from the Gohils, and he established his brother Soning in Eedur, a small principality on the frontiers of Guzerat, appertaining, as did Mehwo, to the Dabey race; it was during the "maatum," a period of mourning for one of its princes that he young Rahtore destroyed the clan. His escendants are distinguished as the Katonia Rahtore. The third brother, Uja, caried his forays as far as the extremity of the urashtra peninsula, where he decapitated Beekumsi, the Chawara chieftain of Okamunala, and established himself. From this act is branch became known as the "Badhail;" and the badhail are still in considerable number in that farthest track of ancient induism.—*Tod's Rajasthan, Vol. II, p.* 13, *As. Jl.* 1817, *Vol. II.*

CANOUJIA, a race or clan of Gour brahmans. Also, tribes or races in the North West of India, who trace their origin from the city of Canouj. The Canouj brahmans are met with from the Himalaya to the Nerbudda and Bay of Bengal. They have many sub divisions, but the khutkool or six-houses, the (1) Sandel got, (2) Oopmun-got, (3) Bharadwaj.got, (4) Bhuradwaj-got, (5) Koteayun or Visvamitra-got, (6) Kusip-got, and (6½) Sakrint-got are chief. The honour of an alliance with the privileged khut-khool is such, that, like the Koolin brahmans of Bengal, some of them have as many as twenty or twenty-five wives. Amongst them are included the Sunaluk'hee, who are said to have been made brahmins by Raja Ram Bug'hel, when he was in a hurry to make a sacrifice, but as he could not perform it without assembling a lac and a quarter of brahmins, he collected people from all classes and parts, and invested them with the Juneoo, or sacred thread. Others say that Manik Chund, the brother of the famous Jye Chund Rat'hore, others that one of the Surneyt rajahs, others, that the redoubtable Ram Chunder himself was the manufacturer. However this may be, they rank very low in the scale of brahmins.—*Gloss. Elliot. Supp.*

Found as a small shrub on many of the barren wastes of the Deccan, and on hill ridges, and Dr. Gibson had never seen it of a size sufficient for any economical purpose. Captain Beddome describes it, on the Godavery, as a dark-colored, hard, and pretty wood; good for turning small objects. This corresponds with Dr. Wight's experience at Coimbatore, where he says it occurs as a small tree or rather moderate sized shrub; wood close grained and hard, well fitted for turning small objects. In a verse of the Bharata, where Krishna, having been fed by a hunter or savage, his attendant asks: Is the Balusukura which you received from Panchalikudu equal to Salyodanam (fine rice), apupa (cakes), saka (vegetables), supam (pulse)? It is a common proverb also. Whilst life remains, I can subsist on the leaves (kura) of the Balusu:—implying submission to any necessity however grievous.—*Drs. Wight & Gibson. Captain Beddome. Fl. And.*

CANTON, a large town in the south-west of China, built on a river of same name. At an early date after the Hejira, the Arab mahomedans established a factory at Canton, and their numbers were so great by the middle of the 8th century that in 758, they attacked and pillaged and fired the city, and fled to their ships. In their commercial transactions with the Chinese, the natives of Eurpe were long restricted to this town.

CANVAS, Eng.

Zeildock,	Dut.	Canevazza,	It. Port.
Sail Cloth,	Eng.	Parussina,	Rus.
Tent „	„	Parussnoe polotno,	„
Toile a voile,	Fr.	Lona,	Sp.
Segeltuch,	Ger.	Kittan,	Tam. Tel.
Lona,	It. Port.		

In Europe, canvas woven from hemp, is used as sail-cloth for ships sails, and a finer kind is made for towels, and common table cloths. Canvas is manufactured at Pondicherry and at Cuddalore, and sold in boits containing 40 yards, at from 20 to 25 Rupees, and a coarser at 8 to 15 Rupees a bolt. Canvas of excellent quality is manufactured in Travancore. Eurcpean canvas, though much dearer, is generally preferred in India to the native material. Europe material selling at Rs.24-5-6, per bolt, while the ordinary country can be had for Rs. 16. At the Madras Exhibition of 1855, Mr. Underwood exhibited fibres of the Agave Americana in a number of different stages of preparation, as in dressed fibre, plain and colored yarns, cloth, and damask, checked, colored, and striped canvas, imitation horse hair cloth, and taboret, all made from the same fibre. Dr. Riddell also exhibited some good plain and penelope canvas, colored cloth, brushes, white and colored ladies' shoes made from the fibres of the Agave Americana. The canvas and ladies shoes were of excellent quality, and the cloth of brilliant colors. *M. E. J. R.* A coarse description of very hard brown canvas has been for some time produced in Bengal. At present in some parts of the Madras Presidency, cotton canvas of very good quality is produced: two or more threads are placed together, sometimes the threads of the web are twisted either wet or dry. Native vessels have all their sails made of an inferior description obtained in the northern parts of Madras Presidency at the rate of 6 to 8 Rupees a maund of 25 lbs. The better description would probably be more suitable than European canvas for sails which are only occasionally used. If well washed, previous to use, to get rid of the dressing it would be less liable to mildew, would be lighter and more easily handled; but the best could not be procured much under the price of ordinary English canvas.—*Rhode, MSS.*

India Rubber,	Eng.	Chirit murai,	Malay.
Caoutchou,	Fr.	Boracha,	Port.
Federharz.	Ger.	Resina elastica, Ule,	Sp.

Caoutchouc, or Indian Rubber, is the product of several trees, native of South America, Peru, the Brazils, of India, Assam, Burmah, Penang, and the Malayan and Eastern Archipelago. In 1836, Dr. Royle reported fully on the Assam caoutchouc, which is obtained from the Ficus elastica; and the banyan tribe generally yield a milky juice which, for many purposes to which caoutchouc is applied, might be rendered serviceable. The *Ficus elastica*, has been introduced into the Tenasserim provinces, and appears to grow as well as an indigenous plant. In the Tenasserim provinces, also, Echites, an indigenous creeper, yields caoutchouc not at all inferior to that which is obtained from the elastic fig tree. The Agricultural and Horticultural Society, in reporting on a specimen sent them by Major Macfarquhar of Tavoy, observed: "With care in preparing, it would be equal to the best South American." Caoutchouc is also procurable from the Nerium grandiflora, a beautiful climbing shrub often met with in gardens. From wounds in the bark of the "Urceola elastica" of Sumatra and Pulo-Penang, a milky fluid oozes, which separates into an elastic coagulum and a watery liquid of no use. This coagulum, after some months keeping, is described as having the properties of Indian rubber. Poisonous properties are attributed to the juice of this plant. Caoutchouc is also yielded in abundance by Vahea gummifera, and Willoughbya edulis, and is also produced from the Siphonia elastica. the Loranthi abound in Malabar, and a similar substance might readily be procured, as obtained from Urceola elastica in Penang and the Archipelago. Ficus religiosa, the Indian Fig Tree, Ficus Indica, Hippomane biglandulosa, Cecropia peltata and the Jintawan of Borneo. It is dissolved by turpentine and Spt. Eth. Sulphur. For England it is chiefly obtained from South America and Singapore, and about 300 tons are annually imported at an average price of £130 a ton. In Britain there are about twenty factories where this article is made into shoes, boots, capes, cushions, elastic bands.—*Poole's. Statistics of Commerce. Mr. Rohde, MSS. Royle, Product. Resc. of Ind., p.* 76. *Mason's Tenasserim.* See Jintawan. Gum. India Rubber.

Cappari.	IT.		

The capers of commerce are the unexpanded buds of Capparis rupestris of Greece, Capparis fontanesii of Barbary, and C. Ægyptiaca of Egypt. Several species of capparis grow in south eastern Asia. C. Roxburghii, C. floribunda, C. aphylla, brevispina, Heyneana, horrida, sepiaria and urophylla, and the berries of C. aphylla, are pickled by the natives of Guzerat. It is very abundant in parts of the Panjab, where the fresh bud is cooked as a pot herb; the fruit is about the size of a marble, and is gathered both green and ripe by great numbers of the natives, who eat it largly. But the caper of commerce is brought from Europe. They are preserved in vinegar, but the quality of the product depends on the age at which they are gathered. See *Capparis.*

CAPI-COTTAY. TAM. Coffee.

CAPILA, also Capilapodi. TAM. Rottlera tinctoria.

CAPILLAIRE. A syrup prepared with leaves of the Adianthum Capillus Veneris, and A. caudatum. The last grows in Ceylon, amongst the Courtallum hills in the India Peninsula, Cochin China, and at Amboyna; the first is called by Rumphius Micca Miccan Uttan.—*Ainslie's Mat. Med., p.* 297.

CAPOETA MACROLEPIDATA, a fresh-water fish of Tenasserim, Penang, and Java, with a large swimming bladder, of which isinglass is made. See Isinglass.

CAPOOR. MAL. Quick Lime.

CAPOOR CUTCHERRY. HIND. Hedysarum spicatum, Zedoary. Likewise, the root of a plant called also "*Kakhur*" sent to India and Persia for medicinal purposes, and for perfumery, and to preserve clothes from insects. It is about half an inch in diameter, and cut up when brought to market; it has a pungent bitterish taste, and slightly aromatic smell.—*Middle Kingd., Vol. II, p.* 400.

CAPOOROO. SING. Camphor.

CAPOTE. See Capers.

CAPPADOCIA and Pontus in Asia Minor: their original inhabitants were the Lud or Ludi, as far as the Halys, where the historical Lydians were seated. The Lud or Ludi were a Semitic race.

CAPPARIDACEÆ, the Caper tribe of plants, sixty-four species of which occur in the East Indies, of the genera Gynandropsis, Cleome Polanisia, Cratæva, Niebuhria and Capparis.

CAPPARIS APHYLLA, ROXB.

Karu.	HIND.	Doro (unripe fruit).	SINDH
Kirrur.	SINDH.	Pukko (ripe ,,).	
Kareel.	,,	Pusse (flowers).	

This plant grows on the banks of the Jumna, in Tinnevelly, Deccan, Guzerat. On his journey to Cabul, the Honorable Mr. Elphinstone found it growing in the midst of the desert. It grows in varying abundance all over the Punjab, where its flower buds are cooked as a pot-herb; its unripe fruits are gathered, made to assume the acid fermentation, and made into a pickle with pepper. mustard and oil, and eaten with bread. Its wood is durable and not eaten by insects.—*Roxb. Voigt. Dr. J. L. Stewart.*

CAPPARIS BREVISPINA, D. C.

SYN.

C. acuminata, *Roxb.* ii. 566.

In Europe this plant furnishes the caper. It generally grows in the Punjab, exactly as a recent traveller has described it on Sinai, viz., "in bright green tufts hanging down from the clefts of the rocks," and adorned with very handsome large flowers. It is found near Multan, in the Salt Range, along the Trans-Indus hills to Peshawar, and in the valleys of some of the great rivers, ascending to 5,000 feet at Wangtri, on the Sutlej (8,000 feet, Thomson), and on the Indus above Iskardo to about 10,500 feet (Jacquemont and Thomson,) and it occurs to 12,000 near Leh. Ripe fruit is made into pickles by the natives of the Salt Range, &c., but in some places at least eaten only by hindus. Mr. Edgeworth prepared the buds in the European style as capers, and found them first-rate. In Ladak the leaves are used as greens. They are eaten by goats and sheep, and in Kangra the roots are said to be applied to sores.—*Dr. J. L. S. Stewart,* 616.

CAPPARIS TRIFOLIATA. Three-leaved caper. Cratœva Roxburghii. Tikto-shaq, BENG. The three-leaved caper tree grows in the two peninsulas of India, produces large handsome terminal heads of flowers, with numerous purple stamens and white clawed petals, that change to cream color.

The varieties or species of this genus of plants are very largely used by the various races in the south and east of Asia. It is this lant, and not any of the genus Piper, which is the peppery condiment of all the inhabitants of India and the Asiatic islands in Eastern Asia; the latter, indeed, being little used, and mostly raised for exportation. Foreign species or varieties of Capsicum have been introduced into the Archipelago, and are named Chabe China, the Capsicum of China; and Chabe Sabrang, the Capsicum of India, literally, of "the other side of the water." There are now numerous varieties of chillies in India, many of which have been introduced. They are raised from seeds that have been kept for one year, for if fresher, the crop is generally a lure. One species called "devil's pepper,' introduced by Lord Harris, from Trinidad, is so intensely hot that the natives can hardly manage to use it. It is cultivated during the old months. In the Tenasserim Provinces they have large quantities of Cayenne-pepper, f which two or three species enter into all he native dishes, not in the form of pepper, ut the fruit, stewed or roasted, is eaten with he food. In India, the dried fruits of several species and varieties of Capsicum are the

This tree grows on the Malabar side of India, in the Konkans, in the Circars, Kemaon, Silhet, Chittagong, Pegu and Mergui. In Ceylon up to 3,000 feet. On the Bombay side, it is a handsome tree, pretty frequent in the forests of the South Konkan; not seen elsewhere. Wood hard, close-grained, and might be used in turning. It is seldom large enough for any other purpose. Thwaites says it is rather ornamental and adapted for furniture. It is a large common tree, north of Rangoon and throughout Pegu. Wood of a peculiar structure, thick medullar rays going through from the centre to the circumference; colour red, used for planks and rice pounders, and may possibly be found useful for cigar boxes. A cubic foot weighs lbs. 60. In a full grown tree on good soil, the average length of the trunk to the first branch is 50 feet, and average girth measured at six feet from the ground is 10 feet. It sells at 8 annas per cubic foot. In the southern forests of Pegu, it is a plentiful tree of large girth, and in Calcutta, is employed in house-building under the name of *Kierpa.*—*Drs. Gibson, McClelland and Brandis, Voigt.*

CARALLUMA ADSCENDENS. Culleemoolayan, TAM. This curious looking fleshy plant, with angular stems, belonging to the natural order Asclepiadæ, is used by the natives in making pickles, and sometimes in chatney.—*Jaffrey.* See Vegetables of Southern India.

CARBON, when pure, is diamond; less pure, is plumbago, coal and charcoal.

CARBONAS POTASSÆ. LAT. Potash.

CARBONATE DE MAGNESIE. FR. Magnesia alba.

CARBONATE OF COPPER. See Copper.

CARBONATE OF LIME. This is a very abundant mineral in the Tenasserim provinces, and embraces several varieties of which stalactical carbonate of lime is one. All the limestone caves have stalactites hanging from their roofs; and stalagmites raised on their floors. The Siamese Karens often bring over bits of limestone of the shape of a shell, and when broken, a shell usually of the genus Melania appears, that has been encrusted with carbonate of lime. Much of the alabaster of which ornaments are made is stalagmite; but all the alabaster images of that coast are made of marble: and not of compact gypsum, which they much resemble. *Mason.* See Calcareous spar; marble, fossil, nummulite. Chalk. Dolomite.

CARBONATE OF POTASH. See Potash; Dyes.

CARBONATE OF SODA. This has been noticed under the head Barilla. Sajji, or Barilla is an impure carbonate of soda, prepared by burning plants of the Salsola and other species, and collecting the ashes, which melt into dark colored mass. "Sajji lota" is a somewhat purer kind, but still contains an immense amount of organic and other foreign matter, such as the sulphates of soda and lime, chloride of sodium and potassium, sulphide of sodium, sulpho-cyanide, and ferro-cyanide of sodium, together with silica and clay. The "Kangan khár" plant yields the best alkali. The pure sajji, from this plant, is called "lota sajji," and the residue mixed with ashes, is called "Kangan khar sajji." The other two plants yield only a dirty and inferior substance known as "Bhutni sajji," "devil's soda." This is black in color and sold in pieces like lumps of ashes. The plant burned in the Panjab is termed "Khar," or in Persian "Ashkhar." The scientific name is Coronylon Griffithii. There are many square miles densely covered with this last, whereas the Khar is comparatively rare.

"Khar," is applied to various herbs belonging to the natural order Chenopodiacæ, particularly the Anabasis multiflora and the Coronylon Griffithii. The ashes which fuse run into a pot placed beneath the burning heap. This occurs as an efflorescence in some parts or other of almost every district in India. Muriate of soda and carbonate of lime exist in the soil, and the natron is found on the surface of the moist earth or mud. Near Gundycottah, on the banks of the Pennar, common salt is interstratified with the upper schistose strata of the argillaceous limestone on which the sandstone rests ; and on the surface of the neighbouring soil, natron, contaminated with much muriate of soda, is collected.—*Powell, Dr. J. L. Stewart.*

The cardamoms of the shops are the produce of several genera of plants, the Alpinia, Amomum, Elettaria and Renealmia. The round seeds of Amomum cardamomum of the Birmah forests, Sumatra and Malacca, are used by the Malay in lieu of the true cardamom. A. angustifolium of Madagascar supplies some of the cardamoms, A. maximum of the Malay Islands and Nepaul, and Ceylon, also produces a cardamom of an inferior character. Alpinia cardamomum of the Western Coast of India in the Travancore forests, produces a cardamom in great request. Amomum grana Paradisi of Madagascar and Ceylon, yields an inferior sort. Elettaria cardamomum of the hilly parts of Malabar and Travancore and Canara, yields the true cardamom. At the Madras Exhibition of 1855, the Elettaria cardamomum was exhibited from Mysore, Coorg, Canara and Travancore.

The true cardamoms of the Elettaria cardamomum are either cultivated or gathered wild. In the Travancore forests they are found at elevations of three to five thousand feet. The mode of obtaining them is to clear the forest of trees, when the plants spontaneously grow up in the cleared ground. Roxburgh states that in Wynaad, before the commencement of the rains in June, the cultivators seek the shadiest and woodiest sides of the loftier hills, the trees are felled, and the ground cleared of weeds, and in about three months the cardamom plant springs up. In four years the shrub will have attained its full height, when the fruit is produced and gathered in the month of November, requiring no other preparation than drying in the sun. The plant continues to yield fruit till the seventh year, when the stem is cut down, new plants arising from the stumps. They may also be raised from seeds. Cardamoms are much esteemed as a condiment, and great quantities are annually shipped to Europe from Malabar and Travancore. In commerce there are three varieties, known as the short, short-longs, and the long-longs. Of these the short are more coarsely ribbed, of a brown colour, and are called the Malabar cardamoms or Wynaad cardamoms. They are reckoned the best of the three. The long longs are more finely ribbed, are of a paler colour, and the seeds are white and shrivelled. The short-longs merely differ from the latter in being shorter or less pointed. It is usual to mix the several kinds, together, when ready for exportation. Some care is required in the process of drying the seeds, as rain causes the seed vessels to split and otherwise injures them, and if kept too long in the sun their flavour becomes deteriorated. In Travancore they are chiefly procured from the high lands overlooking the Dindigul, Madura, and Tinnevelly districts. In these mountains the cultivators make separate gardens for them, as they thrive better if a little care and attention be bestowed upon them. Cardamoms are a monopoly in the Travancore State, and cultivators come chiefly from the British provinces, obtaining about 200 or 210 Rupees for every candy delivered over to the Government. The average number of candies for the years 1845 54 was about 300 candies. It is in the forests on the western slopes of the Coorg mountains, that cardamom cultivation is carried on to a great extent. In February, parties from Coorg start for these western mountains, and selecting a slope facing west or north, mark one of the largest trees on the steepest declivity. A space about 300 feet long and 40 feet broad, is then cleared of brushwood at the foot of the tree, which is cut down about 12 feet from the ground, and carries with it a number of small trees in its fall. Within three months after its felling during the first rains of the monsoon, the cardamom plants in the soil begin to show their heads all over the cleared ground, and before the end of the rainy season, October, they grow two or three feet. The ground is then carefully cleared of weeds and left to itself for a year, and then, 20 months after the felling of the great tree, the cardamom plants are the height of a man, and the ground is again carefully and thoroughly cleared. In the following April, the low fruit-bearing branches shoot forth, and are soon covered with clusters of flowers, and afterwards with capsules. Five months afterwards, in October, the first crop is gathered, and a full crop is collected in the following year. The harvests continue for six or seven years, when they begin to fail, and another large tree must be cut down in some other locality, so that the light and air may cause a new crop to spring up. The harvest takes place in October, when the grass is very high and sharp, sorely cutting the hands, feet and faces of the people, and concealing numerous large leeches. The cultivators pick the cardamom capsules from the branches, and convey them to a temporary hut, when the women fill the bags with cardamoms, and carry them home, sometimes to distances of ten or twelve miles. Some families will gather twenty to thirty maunds annually, worth from Rupees 600 to Rs. 1.000. Cardamom tracts of Travancore are almost all granitic and gneiss. The cardamoms of commerce are the capsules which are gathered as the seeds ripen, dried in the sun, and they are then fit for sale. The smaller capsules, or lesser cardamoms, are the most valuable. The Karen forests of Tavoy and Mergui abound with cardamom plants; and while subject to the Burmese government, the Karen were required to collect the seeds and pay them in as tribute; but they now employ their time more profitably; when they did collect, they were in the practice of mixing a spurious kind of cardamom with the true, produce of a plant belonging to the genus amomum, believed to have been A. cardamomum. Cardamoms are also extensively grown in the woods north of Nuggur in Mysore, and are exported to all parts of Southern India. The Ellettaria cardamomum is also cultivated in Ceylon, and a species occurs wild. Cardamoms are known in the Malay and Javanese languages by two names, Kapulaga and Puwar, which appear to be native words. Of the cardamom called by the Chinese *Yang chun-sha*, the hairy China cardamom of pharmacologists, is said to be produced in the province of Kwang-tung, and it may be a native of Cochin China The plant bearing scitamineous fruit, to which the name, large, round China cardamom has been given, and which is known to the Chinese as *Tsaou-kow*, continuous unknown, and the same remark applies to the bitter-seeded cardamom, *yih-che-tsze*, and ovoid China cardamom, *Taou kwo* or *Qua leu.* It is probable that all of them are productions of the south of China, or of Cochin China.—*Madras Ex. Jur. Rep. Drs. Mason. Voigt. Crawfurd Dictionary, Thwaites En. Drury, Cochin*: *Roxb.* I. 72.

CARDAMOMEN. Dut. Cardamom.

CARDAMOMES. Fr. Cardamom.

CARDAMOMI. It. Cardamom.

CARDAMOM PLANT. Eng. Syn. of Ellettaria cardamomum. *Moton.*

CARDAMOMS, Bastard or wild.

Kapulaga,	Bali. Jav. Malay.	Kurrocha,	Guz. Hind.
Wild or Bastard Cardarmoms,	Eng.	Hil kilau,	Pers.

Are much larger than the true cardamom, more pungent but less aromatic, with a strong camphoraceous taste. They are not much esteemed, and are only used by the poorer classes of natives as a substitute for real cardamoms. They are brought to Bombay from the Malabar Coast. The wild or bastard cardamom of Siam is produced by Amomum xanthioides, Wallich; the seeds have been imported into England, while the empty capsules are found in the drug shops of China. The latter are exported from Siam to China. *Faulkner.*

AMOMUM GRANA PARADISI. Paradise grains, Malaguetta pepper. A native of the coast of Guinea near Sierra Leone.—*O'Shaughnessy, page* 650.

AMOMUM GRANDIFLORUM, yields seeds of camphor-like flavour.—*O'Shaughnessy, page* 650.

This tree grows in most parts of India, of good size, and in many places abundant ; and except Drs. Riddell, Wight and Cleghorn, its timber is praised by all who have noticed it as a good serviceable wood, having a good tenacity of fibre and durable It occurs in the south and west of Ceylon, in Coimbatore, is very common in the inland and coast jungles of Bombay, is found in the Dekhan, in Ganjam and Gumsur, is one of the most numerous trees throughout the province of Pegu, and is abundant in Tenasserim, Amherst, Tavoy, and Mergui. Dr. McClelland says that in Pegu the timber is large, the wood red and equivalent to mahogany, and there forms the chief material of which the carts of the country are made, Dr. Mason adding that it is a useful timber for house building, and Dr. Brandis mentions that it is used for gun-stocks, house posts, planks, &c. a cubic foot of the Pegu wood weighs 55 lbs. In a full grown tree on good soil the average length of the trunk to the first branch is 20 feet, and average girth, measured at 6 feet from the ground, is 9 feet. It sells, in Pegu, at 12 annas per cubic foot. Captain Dance says it is abundant in Amherst, Tavoy and Mergui, with a maximum length of 15 feet and maximum girth of 3 cubits : that its timber, when seasoned, floats in water, is useful, durable, and tough, and for ordnance purposes he recommends it for helves. Dr. Gibson tells us that it is not much used on the Bombay side, but that the timber stands the action of water well. As it is generally crooked, he thinks it merits trial for the crooks of boats, corners of carriages, &c. In Ceylon, it is used for the axles of bullock carts and in buildings. Its fibrous bark is used as matches for matchlocks, guns, &c., and in Ganjam, according to Capt. Macdonald, the scant clothing of the byragi and other hindus affecting peculiar sanctity, is made of the fibrous bark of this tree. In Ceylon, a cubic foot of its wood weighs 35 lbs., and it lasts 10 to 20 years. In Ganjam and Gumsur, according to Captain Macdonald, its extreme height is 36 feet, circumference 3 feet, and height from the ground to the intersection of the first branch is 6 feet. Its large greenish flowers are officinal, being given by hindus after childbirth. *Dr. J. L. Stewart, M. D., Wight, Cleghorn, Brandis, Mason, McClelland, Gibson and Riddell, Captains Macdonald and Dance, Major Beenon.* *Roxb.* ii. 638. *Voigt.*

This plant is found throughout India, and grows without much care. The fruit is gathered in a green state, is dressed as curry and in tarts, when ripe it is used as a dessert. It contains in its centre dark colored seeds which taste like the water cress. The fruit is large and oblong, suspended upon the leafless part of the trunk, like the jack fruit ; the surface when ripe is a pale orange yellow. A milky juice exudes on incision from the rind, and the rind and seeds are deemed in the Mauritius a powerful vermifuge. Tough meat, rubbed with this juice, becomes tender, without any injurious property being communicated to it. The flesh of animals fed on the leaves and seeds is said also to be remarkably tender, but thus seems unlikely. It is even asserted that dead animals, hung from the branches of the tree, undergo change, in Bengal. Mahomedan table servants use the juice with the view of softening beefsteaks and old fowls. The leaves are used by the negroes in washing linen, as a substitute for soap. As to the anthelmintic virtue of the juice, it has been given in doses of from 20 to 60 drops, without observing any marked effects. Dr. Roxburgh says the leaves are a substitute for soap. Pulp of the fruit eaten with pepper and salt. Juice of the unripe fruit a vermifuge ; contains fibrine ; juice of the pulp removes freckles. Animal food rubbed with the fruit or exposed to its vapour is said to become tender. *Roxb.* iii. 824. *O'Shaughnessy, page. Drs. J. L. Stewart, Ainslie. Mat. Indic. Dr. McClelland. Roxb.* iii. 824. *Voigt.* 83.

CARICAL, OR KARIKAL, a small settlement belonging to France, between Tranquebar and Nagore.

CARICATURE PLANT, or face plant, Justicia picta, the white portions on its green leaves present caricatures of the human face. Riddell.

CARIMATA OR KRAMATA, a high island about 10½ miles long, in lat. 1° 36½' S. long. 180° 54½' E., has a peak estimated from 2,000 to 2,986 feet.—*Horsburgh.*

CARIMON. Two small islands, Great and Little, off the Malay coast, near Pulo Pisang.—*Horsburgh*.

CARIMON, or Java-islands in the Java sea, cover a space of 36 to 39 miles E. and W., and 15 miles N. and S. The largest and highest of these islands are Crimon, Komodian and Parang, which are discernable at a great distance. The flag-staff at Crimon, where is a Dutch settlement, stands in 5° 54′ S., and 110° 31½′ E.—*Horsburgh*.

A large thorny bush, cultivated for its fruits which taste when stewed like currants. The plant grows abundantly wild in the Kotah jungles, and in March and April fills the air with the fragrance of its blossom. This plant forms beautiful and impassable hedges. It grows wild in most parts of the Deccan, bearing a dark blue coloured berry when ripe and sold in the bazar. The fruit when ripe is sometimes eaten by Europeans, and in the green state is made into tarts, jellies, and pickles: the jelly is considered inferior to none made of other Indian fruits. This species is a marked exception to the generally poisonous nature of the family. The fruit is about the size of a large olive, and when ripe is black, and has a very pleasant taste somewhat like a damson.—*Ainslie, p.* 230, *O'Shaughnessy, p.* 444. *Med. Top., page* 185. *Mason. Dr. Stewart. Capt. Macdonald.*

CARMA. SANSK. The name of one of the Kanda or general headings of the Vedas. This chapter relates to "Works," the other two, "Gnyana" and Upashana, relate to "Faith" and worship. See Vidya.

CARMEL, a small range of hills extending six or eight miles inland, in a S. E. direction from the bay of Acre. Mount Carmel is a termination of the chain of hills commencing at the plain of Esdraelon to the south-east, the extent of which is about eight miles. The valley of Martyrs and the garden of Elias are near. The valley of Martyrs is a very narrow dell open to the sea. Carmel has scarcely a tree of any size upon it, is thickly studded with shrubs. The convent of St. Bertoldo stood near the head of the valley. The holy fountain of Elijah is close. The cistern seems to have been hewn in the rock, and is about six feet deep, full of clear delicious water.—*Skinner's Overland Journey, Vol. I., p.* 101. *Robinson's Travels in Palestine and Syria, Vol. I., p.* 196.

CARMINIUM. Lat. Carmine.

CARNATIC. Its ancient kingdoms were the Pandyon, Chera, Chola, and Calinga. B. C. 75, an expedition left the eastern side of the peninsula, from ancient Calinga, and formed a colony in Java. At present it is a province of the peninsula of India on the Coromandel coast, about 500 miles long from north to south, and averaging about sixty miles broad. In the beginning of the eighteenth century, Sadut Oollah was ruler of the centre of the Carnatic, from 1710 to 1732, and was succeeded by his nephew Ali Dost. Ali Dost was killed in battle against the Mahrattas, and was succeeded by his son Sufdar Ali. Of his two daughters, one married Chunda Sahib. Chunda Sahib seized on Trichinopoly in 1736, but the place was besieged and taken by the Mahrattas, and Chanda Sahib was taken prisoner, and lingered for eight years in prison, where he was murdered by the rajah of Tanjore. Sufdar Ali was assassinated by his brother-in-law Murtuzza Ali, leaving a minor son, but this youth also was assassinated, while Anwar-ud-din was his guardian, and Anwar-ud-Din succeeded to the throne as Nabob of the Carnatic. During the conflicts for supremacy in Hyderabad and the Carnatic, between the French and English, naval and land battles were fought at Damalachery near Madras, at Amboor on the Pennar river, near Gingee, at Valconda on the Arni, at Cauverypauk, at Vicravandi Bahur, at the Golden rock, Sugar rock of Trichinopoly, and at Wandewash, also off Negapatam, Tranquebar, and at Fort St. David. Anwar-ud-din when about one hundred years old fought and fell at the battle of Amboor, in 1749, his son Mahomed Ali fled to Trichinopoly. After the defeat of the French in the Carnatic, Mahomed Ali, son of Anwar-ud-din, succeeded to the throne, and was recognised by the treaty of Paris in 1763. From that time till his death in 1795, the Carnatic was occasionally under his rule, and at times under the Civil and Military administration of the British. In 1795, he was succeeded by his eldest son, Oomdat-ul Umra, who died in 1801, when the British put aside *Oomdat-ul Umra's son, and placed his nephew* Azim-ud Dowlah on the throne. The British in 1856, on the demise of Mahomed Ghous, grandson of Azim-ud-Dowlah, finally abolished the titular Nabob, from which followed long efforts to seat the second son of Azim-ud Dowla. The people of the Carnatic are of the Dravidian stock, and speak the Tamil and Teluguoo languages.—*Malleson's French in India.* See Caroor.

CARNATIONS. Dianthus caryophillus. These pretty flowering plants embrace about 130 species, besides a host of florist's varieties.

CARNELIAN. Quartzoze gems so called, because some kinds are of a flesh colour, from Carnis, Latin, for flesh; others are white. In Japan they exist in vast quantities, and they are also collected in the province of Guzerat, at Cambay. Many of the antique gems are engraved in carnelian, and it is now much used for seals. Carnelian is very common in Burmah, and has been found at Moopoon and Mergui. One of its Burman names means "Fowl's blood." See Cambay stones.

CAR-NICOBAR, the most northerly of the Nicobar Islands. See Nicobar.

CARNIVAL. It. A festival of Italy held in honour of Carneus, the sun. See Sun.

CARNIVORA, a family of the mammalia constituting flesh-eating animals. They include the genera felis, hyæna, cuon, canis, vulpes and others.

CAROLINAS, an extensive chain of islands which stretch nearly east through the middle of the Pacific ocean, betwixt the parallels of Lat. 7° to 10° N.

CAROOKUVA ELLY. Tam. Leaf of Zizyphus trinervus.

CAROONUCHI. Tam. Gendarussa vulgaris.

CAROOR, in L. 78° 9′ E., & L. 10°50′ N. has a strong fortress, 50 miles from Trichinopoly, on the bank of the Cauvery. It was the capital of the ancient Chira kings. See Carnatic.

CAROXYLON GRIFFITHII. Moq.
Salsola Griffithii.

Lagkame	Hind.	Khar	Hind.

A Central Panjab plant, furnishes by lixiviation some of the sajji or carbonate of soda of commerce. *Stewart.* See Carbonate of Soda.

CARP, the genus cyprinus of fishes. The gold carp of China is the Puntius (cyprinus) auratus.—*Linn.*

CARPENTER BEE. Xylocopa tenuiscapa, *Westw.* Another species found in Ceylon is the X. latipes. *Drury. Tennent's Sketches of the Natural History of Ceylon,* p. 418. See Bee, Beetle. Xylocopa.

CARPENTERS are one of the five hindu artizan castes of India, and wear the poitu or onar. They do not reverence brahmins, but worship chiefly Visvakarma, the artificer of the hindu gods. Those of Travancore follow the law of descent by the sister. See Hindoo Poitu; Polyandry.

A variety of carpets are made in different parts of India, both of cotton and wool. Climate influences every thing relating to the clothing or habitation of man, and coverings for the floor are necessarily included. In a cold, wet climate, it is hardly possible to use the floors of rooms without some kind of covering; and therefore we read in earlier times, of the floors in Europe being covered with straw, rushes, hay, or heather. In warm countries, on the contrary, it is more the habit to sit in the open air under the shade of trees, and it is there desirable to have some covering, over the sandy or dusty earth, either to sit or lie down upon. It is not surprising therefore, that the invention of carpets should have originated in Eastern countries. Mats are the most agreeable in hot weather; and for these, India is famous, as well for their variety as for their fineness of pattern. Carpets, either of cotton, silk, or wool, are employed in all Eastern countries, from the south of India to Turkey in Europe, for praying on, and for occasions of state. The carpets employed by the ancients are thought to have been of the nature of tapestry, and used for covering couches rather than floors. True carpets seem to have been first employed in Persia; and those called Turkish were probably originally of Persian manufacture, whence the manufacture might have been introduced into Turkey, and where, as well as in Egypt, it is still practised. The Persians still remain unrivalled in the happy combination of colour and pattern for which their carpets have long been distinguished, whence the most varied hues and deepest tints are brought into close approximation, and, far from offending the eye, please by their striking, because harmonious contrasts. The places, in India, where a regular manufacture and trade are carried on, are Benares, Mirzapore, Allahabad, and Gorruckpore in Bengal; North Arcot, Tanjore, Ellore, and Malabar in the Madras Presidency; and also at Mysore, as well as at Shikarpore, Khyrpore, and Hydrabad in Sind. Those of Bengal commend themselves by extraordinary cheapness; they are extensively used throughout India, and also somewhat largely exported. In point of texture and workmanship, however, the rugs from Ellore, Tanjore, and Mysore, though they are comparatively much dearer, are greatly preferred. The carpets of India are made either of wool and cotton, and almost all in use are manufactured in India. The carpets of Kermanshah are a manufacture which adds much to the wealth of its province: none can be more rich, soft and beautiful. Persian carpets are made also at Meshed, and in Turkomania and Khorasan, and are justly celebrated for the beauty of the patterns, the fineness of the wool, and the durability of the colours—vegetable dyes, a green not made elsewhere, conjectured to be saffron and indigo. Some of them fetch high prices as £6 or £8 for one of 2 yds. square in the country itself. The finest are made at Sena, and there is a famous manufacture carried on at Ferahoun, near Teheran, which belonged to the late sirdar Baba Khan. Carpets of any size can be made there. The finest carpets of all used to be made at Herat, and there are some splendid ones in the Chăhăl Minar, at Ispahan, one of which was 140 feet long and 70 feet wide. Large numbers were exported to England through Trebizonde before the late war, and they were sold nearly as cheap in London as in Persia, owing probably to the course of trade. Persian and Turkey carpets, as has been said, are most esteemed, but those made in Axminster, Wilton, and Edinburgh, are believed to be very little, if any, inferior to those of Persia and Turkey. Though printed calicos of large size, and suitable patterns are sometimes used for covering the floors in India, yet the most common carpets employed there are those made of cotton, and shatrunjees of different colours, usually blue and white, in red or orange stripes, squares, or stars; some of large size, and well suited for halls and tents. They are thick and strong in texture, the two surfaces alike, smooth and without pile. They are manufactured in different parts of India, at Moorshedabad, Rungpore, Agra, &c., and at many places in the Madras presidency. Another kind of cotton carpet is that with a pile of cotton, and similar in appearance to a Turkey carpet, manufactured at Sasserim,—white with a centre and border of blue—and they are made with every variety of coloured pattern also in the Hyderabad country. Silk is another material of which carpets are made in the East; and the pile being of silk, imparts both softness and richness to the surface, while the colours are clear and brilliant. They are beautiful as specimens of variety in pattern, brilliancy in colouring, as well as of pleasing harmony in the whole. Silk carpets, of small size, are made in Tanjore, Hyderabad, and Khyrpore. Woollen carpets, of large size, and of beautiful and well-coloured oriental pattern, are made at Mirzapore and Gorukpore, and many parts of Madras. The former is most famous in India for its carpets, which are frequently sold in Britain as Turkey carpets. The rugs from Ellore are universally admired for their general characteristics of oriental pattern and colouring; and these, as well as the large carpets from Mirzapore, all in the same style, seem well adapted for sale in Europe. At the Madras Exhibition of 1857, there was a large display of carpets and rugs, the manufacture having been brought to considerable perfection in several parts of Southern India. There were four distinct branches in these contributions; 1. The imitation Axminster, or close nap woven carpet; 2. The short velvet pile or tapestry carpet and woollen rug; 3. The long velvet pile or imitation Turkey carpet; 4. The silk or velvet pile carpet. Of the Axminster carpet, there were some very good specimens of close nap carpets from Warungul, the colours clear and bright, but a sameness in the patterns. The carpets were strong, soft, and very close in the weaving. The chief of the manufactures, and the only one for which Warungal is famed, is that of Persian carpets, which are made of all sizes and of worsted, cotton, or even of silk. The weavers are all mahomedans and are congregated principally at Mutwarrah, although there are a few looms within the Warungal fort. [illegible] weavers are drunken, turbulent, ignorant mahomedans, possessing no capital, and dissipating in excess the little money they may procure on accomplishing a piece of work. Carpets chiefly of a small size, about two yards long and a little more than a yard in breadth, are made for the Hyderabad market, money being advanced to the weavers by the dealers there. A worsted carpet of this size and shape costs at Warungul from Rupees 2¾ to Rupees 2½. A cotton carpet is twice the price of a worsted one. A silk one is very highly priced. A common trick among these weavers is to substitute hemp for worsted. Of the Velvet Pile Carpets, some large and creditable specimens were exhibited from Ellore and Tanjore. The former were closely woven, bright, and harmonious in color, and the patterns more varied than those from any other locality. Some of the rugs from Tanjore were also very tasteful. The long velvet pile, or Turkey carpet, was but poorly imitated at Bangalore and Trichinopoly. There was considerable variety and boldness in the patterns of these carpets, but the wool was dirty and coarsely dyed and the weaving loose. The carpets are cheap, but it was doubtful if they would wear well as the wool seemed to be easily pulled out.—(*Madras Exhibition Juries Reports.*) At Iyempettah in Tanjore, they make very handsome carpets of silk. In Southern India, the cotton carpets used for tents are made at Cumbum, Rajahmundry, and other parts, the price being under one rupee the square yard. They are generally in broad stripes of red and shades of blue. Small carpets of this description are produced in almost every district, and are used by sepoys and others for sleeping on: they are somewhat less in price in proportion than the larger ones. Carpets of a small description, woven with wool, in stripes on a stout cotton web, are made at about the same cost. Mr. Rhode has no doubt but that a fabric, woven like striped cumbly in sufficient lengths would sell for carpeting in the colonies, as it could be sold at one-fourth the price of English carpets, and would be well suited to the colonist's wants. Silk carpets are made in Ramnad and at Tanjore.—(*Rhode MSS.*) The best rugs and carpets are produced at Ellore, the better descriptions varying in price from 2½ to 4 or 5 Rupees a yard; they are of dyed wool upon a cotton web, the colours being arranged much in the same manner as a printer's composer sets up type; the colours are not so bright as those given in Europe. Commoner descriptions of the size of small hearth rugs, are exported thence to England and Persia. Carpets of an inferior description are produced in Mysore, North Arcot collectorate, and other parts. Dr. Walker in the Asiatic Journal, No. 113, gives the following description of carpet weaving at Hunumcoonda, which is generally applicable. "The carpet loom is nothing more than the common native loom placed vertically instead of horizontally. The waft is of thick strong cotton twist, being arranged by no wafting mill, but by one of the workmen going round and round two stakes fixed in the ground, and dropping the thread at each as he passes; in the loom it is kept on the stretch by two strong billets of wood, the threads being attached by separate loops of cotton fixed to a bamboo, which is elevated or depressed at the will of the weaver. The worsted is held in the left hand, and a crescent shaped knife in the right, the fingers of both being left free. The inner thread of the waft is then seized, the worsted wound round the outer, crossed on itself, and the extremity drawn out, by which it is made to descend in the form of an open figure of eight to be snipped by the curved knife. It is superfluous to say that this is the work of an instant. When the pattern is new or difficult, the order and position of the worsted threads is changed by a reader in a kind of rhyme. On a row being completed, the warp, in the shape of a cotton thread, dyed dark brown by the bark of the Swietenia febrifuga, is forced down by means of an iron toothed comb, in form something like an adze; the whole is completed by cutting the worsted to its proper length by large scissors held steadily against the waft. Infant labour is employed and preferred in Warungal carpet weaving, it being averred that their more limber finger joints are best fitted for the finer parts of the work. Dried sprigs of Toolsee (Ocimum sanctum) and bunches of Lepidigathis indica are attached to the loom frames; the workmen say that these make their labour go on more cleverly. Twelve different worsteds are employed. The *blue* is produced from indigo, the *yellows* and the *sulphur yellow*, from boiling the sulphur yellow in water impregnated with carbonate of soda, in which a little turmeric has been mixed; the deepest yellow is produced by dipping the same in the potash ley. The *reds* are all produced by lac dye dissolved by tamarind juice with sulphate of alumina and potash as a mordant. The depth of colour depends in three cases upon the original black, brown, or white colour of the wool; in the fourth, on the length of time the last description of wool was allowed to remain in the dye. The greens are produced by immersion in indigo, and then in pulas or turmeric; their degrees also depend on the original colour of the wool. Bengal Indigo is always preferred to the home manufactured by the worsted dyers. Cotton carpeting is also prepared in the same way as the woollen. As a general rule, the lighter worsteds wear the longest. The red seems to render the wool brittle, and some destructive agent seems to be employed in preparing the wool. If the weavers would be induced to wash the wools thoroughly with soap, both before and after dyeing, the carpets would probably be far more desirable. Messrs. Watson and Bell of Broad Street have lately imported into England the Ellore carpets, furnishing flax for the web which, at an additional cost of about 8 annas a yard ensures a very superior article. By offering high rates for superior articles, they have done much to improve the manufacture. Contrary to Mr. Rhode's expectation, they find it best to purchase none of inferior quality, the charges, probably, precluding their profiting by the common but generally bulky articles. The Indian cotton carpets most commonly met with are blue, red, and white. Some few made of cotton and silk for great potentates, are extremely beautiful. The chief places in Northern India in which carpets are manufactured, are Lahore, Meerut, Bareilly, Jubbulpore, Gorruckpore, Mirzapore, Rungpore and Benares, in the Presidencies of Bengal, the North-west Provinces, and the Punjab. At Jubbulpore, the manufacture of carpets, rugs, and shatrangees (cotton carpets), has been regularly carried on for years, chiefly in jail. The Jubbulpore carpets are considered of extremely good texture, and are remarkable for their cheapness. Their prices are as follows:

Turkey carpets. 4 Rs. or 8*s.* 0*d.* per sq. yard.
Scotch carpeting 1 „ 8 As. or 3*s.* 0*d.* per yd.
3 feet wide.
Shatranjees 1 Rs. 2 As., or 2*s.* 3*d.* per sq. yd.
Kidderminster 1 „ 2 „ or 2*s.* 3*d.* per yard.
1 yard wide.

The places which supply the greater portion of India, as well as the export demand, are Gorruckpore, Mirzapore and Benares. There is no specific price per yard, as carpets both at Mirzapore and Benares are generally sold at so much a piece. The Mirzapore carpets are noted for excellent staple and durability of wear, but are dearer than those from Jubbulpore. The manufacture of rugs is very extensive, and comprises many localities. At Peshawur, Bareilly, Shahpore, Sealkote, and Sirsa, the manufacture is entirely confined to the jails.

The use of rugs throughout India is extensive, every native who can afford to purchase one uses it to sit upon and smoke his hookah. The rugs made in Bengal vary in length from 3 to 3½ feet, their average width being 1¾ feet, and their value from Rs. 1 to Rs. 1-10. The rugs from Ellore, Tanjore, and Mysore are made of various sizes and are valued from Rs. 2 to Rs. 4 each; those from Shikarpore and Kyrpore, as well as from Hydrabad (Sinde), are of a lighter texture, but excellent workmanship; their width is generally uniform, but in length and consequent cost they vary from Rs. 2 to Rs. 5 each.

The finest articles of this description, however, are the silk rugs from Tanjore and Mysore, the blending of colours and workmanship being excellent. They are made of all sizes, even up to squares of 10 feet; but being too costly for general adoption, this manufacture is very limited. Carpet making is not a trade in which European manufacturers are likely to enter into competition with Indian weavers; but were the patterns and disposition of colour in the native articles better known, many useful lessons might be learned from them. Woollen carpets are rarely used by hindus, and the manufacture is, seemingly, entirely confined to mahommedans.

Shatrangees, or cotton carpets, are entirely made of cotton, they are used by every European or native throughout India, and the annual manufacture is consequently very considerable, especially in Bengal, where they form a large and important branch of inland trade. They are of all sizes, from that of the largest carpet to the smallest rug, but generally of one and the same pattern throughout India, the only difference being the colour. Blue and white, and red and white stripes constitute the prevalent patterns, but, in some, one colour of darker and lighter hues is employed. In Meerut, Bareilly and Patna, new patterns have of late been tried with considerable success, but though preferred by the Europeans, are not so by natives, who like the striped patterns, because they wear better in daily use, and do not lose the freshness of colour by washing. The principal localities where shatranjees are manufactured are Agra, Bareilly, Patna, Shahabad, Beerbhoom, and Burdwan. Those manufactured at Agra are considered the best, and the value of its annual production is about £10,000. In Shahabad, the quantity manufactured one year was nearly £7,000 ; and the same may be assumed to have been produced in the other places abovementioned. Shatrangees vary in price according to size and quality. The small ones are valued from 3*s.* to 15*s.*, and the larger ones (carpet size) from £1 10*s.* to £4., the price in many cases being regulated by weight.

The Shahabad rugs are made wholly of cotton, and are almost invariably striped ; they are cool and pleasant, and are in invariable use by the better class of natives, and by all Europeans. The smaller kinds are used as quilts for beds, and of late the Government has given them to its European soldiers for that purpose. The manufacturers, called in this district Kalleeum Bap, are almost invariably mahomedans, who will make carpets of any size and pattern given, in stripes. The two local seats of manufacture in Shahabad are Bubbooah and Sasseeram. In the former place, from 10,000 to 12,000 Rupees worth are yearly manufactured and sold, and in the latter from 30,000 to 40,000 Rupees. These dhurree, or carpets, are sold readily in all the bazaars around, and at all the neighbouring fairs, particularly at Berhampore and Hurrier, Chutter, or Sonapore; probably two-thirds of the whole quantity made are exported from the district, while the annual expenditure in the district will vary from 20,000 to 25,000 Rupees worth per annum.

The dhurree is the name of the carpets generally made for sale, and are of four kinds : six yards long, and two yards broad, thick and strong, of any colour, and are sold at from six rupees to six rupees eight annas. A small kind used as quilts, weigh from two to three pounds each, and are 1¼ to 1½ yards broad, by about two yards long ; they sell at from 14 annas to 1 rupee 8 annas each, according to thickness and quality. The Hauzhassica is the name of the better kind of carpet, and often displays much taste in the arrangement of the striped colours. It is made of any size to fit any room, and is always sold by weight. The price varies according to quality, from one rupee four annas to one rupee twelve annas, and sometimes as high as two rupees four annas per seer. It is sold in all the fairs, and in all the large cities around, such as Patna, Ghazeepore, Daadnuggur, Gyah, &c. No merchants' or bankers' shop, or rich natives' reception room, is complete without these being spread. This is the kind generally used by Europeans for their drawing and public rooms. The fourth is a small kind of carpet made for use in zemindaree and other small cutcherries, and much used from its portability. It is from three to four yards long, and from one and a half to two yards broad, and sells at fron 3 Rs. to 4 Rs. each carpet. It is generally made from five colours, from which cause it obtains the name of Dhurree Panch Rungha.

Galeecha carpets are only manufactured in Sasseeram, and are almost always woollen, of florid but neat patterns, in imitation of the Persian carpet. They are used to a considerable extent by the rich natives in their zenanas, but by Europeans also. The size usually manufactured is two yards long by one yard broad, and they sell at from two Rs. to four Rs. eight As. per carpet. Any other sizes and patterns can be made according to order, and some of the patterns are extremely pretty.

The European carpet manufacturer could not compete with these as to price and actual value, as the wool costs but little in India, and the native dyes answer admirably for the purpose, while also the coarse local wools, which would not pay for exportation, answer for carpet work. The colours are harmonious, and there is but little doubt that it would pay any enterprising merchant to export these to Europe. The annual manufacture at present in Sasseeram is about 10,000 to 12 000 Rs.

Another kind, in imitation of the above, but wholly of cotton, is also made, prices nearly the same. The patterns are pretty, but they rapidly become spoiled by dirt and dust. They are invariably made of only two colours, blue and white, ornamental carpets of thread with a woollen, and sometimes with a silken pile, are made up in Mooltan, Peshawur, Umritsur, Bhawulpore, and Kashmere. Those of Mooltan are perhaps most celebrated. *Dr. Watson's Report. Mr. J. Rhode, MSS.*

The seed.

Kardoo seed.

The safflower is grown very abundantly all over India. The plant is propagated by seed sown in drills at 1½ feet distance from each other. The young plants appear in about a month, and after the second month are hoed and thinned, each plant being left a foot from the other. The richer the land, the larger the proportion of colouring matter afforded by the flower. On the opening of the flowerets, they are rapidly gathered without being allowed to expand fully. They are then dried in the shade with great care. The produce of Paterghauta and Belispore is considered, in the London market, as the best that is exported from India. The Dacca safflower ranks next to that of China, which is reputed to be of a superior quality. Safflower is widely grown on the banks of the Irawaddy, and may be occasionally seen on the banks of the Salwen. Its flowers furnish the best yellow dye in the country, and, mixed with other ingredients, they are used to dye red, and to give a variety of tints and in dyeing pink and scarlet. The yellow principle is worthless as a dye. It is soluble in water, is removed by washing, and thrown away as the first step in the preparation of the valuable red product. The red dye is an acid resinous substance of superb colour, insoluble in water and in acid solutions, little soluble in alcohol, and not at all in ether. It is dissolved freely by aqueous alkaline solutions, which it neutralizes. Its salts (carthamates) are crystalizable, and quite colourless; acids precipitate the carthamic acid from solutions of these salts. To obtain it on large scale, after the separation of the yellow matter, the dried flowers are treated by a solution of carbonate of soda, and lemon juice added; the carthamic acid precipitate is collected by subsidence, washed, and carefully dried at a gentle heat. The most lovely tints are imparted by this dye, to silk and cotton; rouge is a mixture of the dry carthamic acid, and finely powdered talc. The pink saucers used for giving a flesh tint to silk are prepared from this dye with a small portion of soda. 8 oz. of the prepared petals, and 2 oz. carbonate of soda are acted on by 2 gallons of water. 4 lbs. of prepared chalk are added, and the colour precipitated upon this by citric or tartaric acid. The Chinese card-rouge is a carthamate of soda, colourless when rubbed on, but by the salt being decomposed by the acetic acid secreted by the skin itself, the carthamic acid separates in the most perfect rosy tint which can be imagined. The seeds yield abundance of fixed oil which is used as an external application in paralytic affections, and for bad ulcers; and small seeds are reckoned by the Vyteans amongst their laxative medicines. The dye of the "Kong-wha," a variety of safflower or carthamus tinctorius, which grows in China, is held in high esteem by the Chinese, and is used in dyeing the red and scarlet silks and crapes which are so common in the country, and so much and justly admired by foreigners of every nation. Large quantities are annually produced in the Che-kiang province near Ningpo.—*Ains. Mat. Ind. p.* 195. *O'Shaughnessy, p.* 411. *Drs. Mason, McClelland.*

CARTICAY, or Cartiga, in hindu astronomy, the seventh hindu solar month, when the sun is in the sign Tula, answering to the Tamil Arpesi. In the southern parts of the peninsula the Tamil month Cartiga is the eighth of the solar year. Lastly, Carticay is also the eighth lunar month of the Luni-solar year. This month is peculiarly sacred to *Lacshmi*, the goddess of wealth, the *Juno Moneta* of the Romans. The 13th is called the *Dhunterus*, or thirteenth day of wealth, when gold and silver coin are worshipped, as the representatives of the goddess, by her votaries of all classes, but especially by the mercantile classes. On the 14th, all anoint with oil, and make libations thereof to *Yama*, the judge of departed spirits. Worship ("*Pooja*") is performed to the lamp, which represents the god of hell, and is thence called *Yamadewa*, the lamp of Yama; and on this day partial illuminations take place.—*Tod. Warren, Kala, Sanhita, Cole. Myth. Hind. p.* 379. See Kartikey.

CARVING, in wood, horn, and ivory, must have been practised in India from very early times, for the idols which they worship, and for calico-printing, for which they have long used wood-blocks. They are fond of carving many of their ordinary utensils as spinning-wheels &c. ; but their skill, according to European taste, is shown in carving the blackwood and ebony furnitures of Bombay and Madras, especially in the elegance of the patterns of the backs of the chairs and sofas, in the side-boards and book-cases. Such furniture is well adapted for even the best English houses. Carvings in ivory in different parts of India are much to be admired, whether for the size or the minuteness, for the elaborateness of detail or for the truth of representation. Among these the ivory carvings of Berhampore are conspicuous. A set of chessmen from India, at the Exhibition of 1851, carved from the drawings in Layard's "Nineveh," were excellent representations of what they could only have seen in the above work ; and showed that they are capable of doing new things when required ; their representations of an elephant and other animals were true to nature. The carvings in the same material in the state chair from Travancore were greatly admired, and for the truth of representation on a minute scale, where an elephant was enclosed in the shell of a pea, Chouries, or fly-flappers, from Calicut, where the ivory, or sandal-wood, is cut into long hair like threads, are also specimens of their mechanical skill. Their skill in wood-carving was conspicuously displayed in the elaborate details of the sandal-wood boxes from the Malabar coast. The skill of the Indian carver is also conspicuously shown in the beauty of the figures and buildings in the pith like stems of the marsh-plant called shola (*Æschynomene aspera.*) In the latter all the elaborate detail of the richly ornamented hindoo architecture of the South of India is carefully brought out. For this work only two tools seem to be employed,—one a large and heavy knife and one with a fine sharp cutting edge. Besides these, cocoanut shells and gourds are carved and made into cups, vases, and snuff-boxes, also the kernel of the cocoa-nut is variously cut, for making garlands for state occasions. The natives of India display great skill and neatness, as well as habitual taste, in their work (and other) boxes of ivory, horn, or porcupine-quill, ebony and sandal-wood, their fans and umbrellas, chouries, and khus-khus or other baskets, hookah-snakes, imitation fruits and flowers, toys, and puzzles. The skill is remarkable with which the unyielding substance of a hard thick shell is converted into necklaces for men and into bracelets for women. The manufacture of shell bracelets is one of the indigenous arts of Bengal, in which the "Sankari" caste at Dacca excel. The *chanks* of which they are made are the large species of Turbinella, from six to seven inches long, and of a pure white colour. They are imported into Calcutta from Ramnad and South India, opposite to Ceylon, and from the Maldive Islands. *Ivory* for Chinese carvers comes to China principally from Cochin-China and Africa, via Bombay, and always finds a ready sale at Canton ; the largest and best tusks weigh from 16 to 25 pounds each, decreasing to five or six pounds. The cuttings and fragments also form an article of trade, as the workmen can employ the smallest pieces. *Bones* and *horns*, especially the long horns of buffaloes, are in China worked into handles, buttons, &c. Rhinoceros' horns are brought from Burmah, from Sumatra, and from Africa through Bombay ; they are highly valued by the Chinese from a notion that cups made from them sweat whenever a poisonous mixture is poured into them. A perfect horn sometimes sells as high as $300, but those that come from Africa do not usually rate above $30 or $40 each. The principal use of these horns is in medicine and for amulets, for only one good cup can be carved from the end of each horn ; and consequently the parings and fragments are all preserved. The hard teeth of the walrus, lamantin, and other cetaceous animals, also form an article of import into China from the Pacific, under the designation of *seahorse* teeth ; they weigh one or two pounds a piece, and the ivory is nearly as compact, though not so white, as that of the elephant. The delicate carving of Chinese workmen is well known, and has often been described ; many specimens of it are annually sent abroad. Few products of their skill are

more remarkable than the balls, containing ten or twelve spheres cut out one within another. The manner of cutting them is simple. A piece of ivory or wood is first made perfectly globular, and then several conical holes are bored into it in such a manner that their apices all meet at the centre, which is usually hollowed out an inch or less after the holes are bored. A long crooked tool is then inserted in one of the conical holes, so bent at the end and stoppered on the shaft that it cuts the ivory at the same distance from the surface when its edge is applied to the insides of the cone. By successively cutting a little on the insides of each conical hole, their incisures meet, and a sphericle is at last detached, which is now turned over and its faces one after another brought opposite the largest hole and firmly secured by wedges in the other holes, while its surfaces are smoothed and carved. When the central sphere is done, a similar knife, somewhat larger, is again introduced into the holes, and another sphere detached and smoothed in the same way, and then another, until the whole are completed, each being polished and carved before the next outer one is commenced. It has been supposed by some that these curious toys were made of hemispheres nicely luted together and they have been boiled in oil for hours in order to separate them and solve the mystery of their construction. Fans and card-cases are carved of wood, ivory, and mother-of pearl in alto-relievo, with an elaborateness which shows the great skill and patience of the workman, and at the same time his bad taste in drawing, the figures, houses, trees, and other objects being grouped in violation of all propriety and perspective. Beautiful ornaments are made by carving roots of plants, branches, gnarled knots, &c., into fantastic groups of birds or animals, the artist taking advantage of the natural form of his materials. Models of pagodas, boats, and houses are also entirely constructed of ivory, even to representing the ornamental roofs, the men working at the oar, and women looking from the balconies. Baskets of elegant shape are woven from ivory splinths; and the shopmen at Canton exhibit a variety of seals, paper-knives, chessmen, counters, combs, &c, exceeding in finish and delicacy the same kind of work found anywhere else in the world. The most elaborate coat of arms, or complicated cypher, will also be imitated by these skilful carvers. The national taste prefers this style of carving on plane surfaces; it is seen on the walls of houses and granite slabs of fences, the woodwork of boats and shops, and on articles of furniture. Some of it is pretty, but the disproportion and cramped position of the figures detracts from its beauty. Burmese carpenters carve in a rough but bold style and find employment principally in carving for the exteriors of monasteries. The ivory carvings, ebony and other hard wood ornaments, the bronzes and porcelain specimens, are all exquisitely worked; the value attached to them in England varying from 4*l.* and 5*l.* —*William's Middle Kingdom*, *Vol.*, II, *pages* 141 *and* 408. *Yule's Embassy*, *p.* 59. *Hodgson's Nagasaki.*

CARVOES DE TERRA. Port. Coal.

CARYA.—? See Hickory.

CARYOCAR BUTYROSUM. Syn. of Pekea butyrosa. It is the Sonaria, Sawarrow, or Surwha Nut tree of Demarara, might be introduced into India.

CARYOCAR NUCIFERUM. The Sawarrow trees of Guiana.

CARYOCAR TOMENTOSUM. Syn. of Pekea.

CARYODAPHNE DENSIFLORA, BLUME, *Kiteja.* JAVA. A tree sixty to eighty feet high, leaves gratefully aromatic, used in infusion like tea against spasms of the bowels, and in puerperal convulsions—*O'Shaughnessy, page* 547.

CARYON.—? Juglans regia.

CARYOPHYLLUS AROMATICUS. LINN.

Eugenia caryophyllata. *Thunb.*

The dried berries.

Mother Cloves.

This small tree of the Moluccas grows in Amboyna and Ternate, but is cultivated in the Malay Peninsula, the South of India, Mauritius, Bourbon, Cayenne. It is an elegant evergreen about eighteen feet high, and has a smooth grey bark. The best cloves are obtained from the Moluccas; they are unexpanded flower buds, and three pound weight of cloves contains about 5,000 flowers. They are used as a spice, and the valuable oil obtained by distilling them is used in medicine. —*Royle. O'Shaughnessy. Voigt.*

CARYOTA HORRIDA, GARDN. MOON'S CAT.

Areca horrida, *Thwaites, Hooker.*

Katu kittul. SING.

A tree of Caracas, introduced into Ceylon and into the Calcutta gardens. In Ceylon it often rises to a height of fifty feet, and has a coating of thorns for about six or eight feet

from the ground, each about an inch in length, and so densely covering the stem, that the bark is barely visible.—*Voigt. Thwaites.*

This very ornamental palm grows in Ceylon and Malabar, in Canara, Sunda, on the Godavery, in Ganjam, Gumsur, Assam, Sumatra, and Borneo. It grows to a height of forty feet with a ringed, tall and slender stem, of more than a foot in diameter. It is found on the sea-shore, and ascends the mountains of Sikkim to the height of 5,000 feet. Its outer wood (outside the pith) is nearly as hard as flint, of which, like all the grasses and palms, it contains a considerable quantity. Where it grows in abundance, it is one of the most useful of trees. The root is hollowed for the buckets used in irrigation, and the trunk, when hollowed, by freeing it from the inner pith, forms a convenient and economical water conduit. In Ceylon, Sumatra and Borneo, it is used for rafters, reepers, window bars, posts, &c., but is little durable, rarely lasting above 3 or 4 years. Its pith or farinaceous part is filled with starch granules equal to the best sago, which are extracted by the people and made into bread or pottage. Its spathes yield a toddy or palm wine, "*Koondel panai kallu,*" Tam., and, during the hot season, a single tree will yield at the rate of a hundred pints in the 24 hours. This is used as an intoxicating liquor, as yeast in baking bread, is converted into the spirit called "Bhyni Arrack," and into sugar or the jaggery called *Koondel panei vellum*, Tam. Its cabbage is preferred to that of the cocoanut. Its leaves are very large, measuring eighteen or twenty feet in length, and from ten to twelve across; from their fibre, the "kittul fibre" of commerce, ropes of great strength, brushes, brooms, caps, and similar articles are manufactured; the kernel is used for buttons and beads: the woolly material found on the petioles is used as oakum for caulking ships. In a recent account of the "Vegetable Products of Ceylon" by Mr. Ondatjee, it is said that the *black fibre* from the leaf-stalks, manufactured into rope of great strength and durability, is used for tying wild elephants. The Rodyahs, a forest race among the Kandyans, make this rope generally with considerable skill, as it is both regular and compact. At the Madras Exhibition of 1855, its fibre was exhibited from Cocanada, Nellore, Masulipatam and Travancore. It is much used by the natives for making fishing lines and bow-strings, is very strong, and resists water for some time, but is liable to snap if suddenly bent or knotted. It resembles black horse hair, and might be employed similarly. In Borneo, the outer part is split into the form of lathes which are used as the rafters to which the roof covering and the open flooring are tied. These are two inches apart, but kept together by rattans, interwoven amongst them. Dr. Gibson says it is one of the most useful trees in the country, and he had heard that the farm of this tree, throughout the single district of Yellapore in Soopah, yielded Rs. 30,000 per annum.—*Drs. Wight, Gibson, Royle, Hooker, Marsden, and Ainslie, Mr. Mendis, Captain Macdonald, M. E. J. R. Seeman. Mr. Low.*

CASEARIA, a genus of plants of the natural order Samydaceæ. Eighteen species growing in the Circars, Himalaya, Assam and Penang, and Voigt (p. 78) mentions six species, shrubs or small trees, of Northern India. C. canzeala, glabra, glomerata, lanuginosa, tomentosa, vareca, and Thwaites mentions two moderate sized trees of Ceylon, C. coriacea and C. championi.—*Voigt*, 78. *Thwaites.*

CASEARIA, *Species.*

Peda-kal-mesura. Tel.

A large tree of the Godavery, leaves ovate-oblong, glabrous, serratulate, flowers 8 anthers, capsule 3 valved with 3 ridges on the outside of fruit. Wood of a light colour, hard, does not warp, and is worthy of attention. Fruit used to poison fish.—*Captains Beddome, Macdonald.*

CASEARIA, *Species.*

Dr. Gibson says, a species of Casearia, not elliptica, may be seen growing at Darebae Wurgaum, on the horse road from Jooneer to Nuggur, and which he had not seen elsewhere. It is of a size fit for house building.—*Dr. Gibson.*

CASEARIA CAUZIALA, Wall.

Samyda cauziala,	Buch.	Ana vinga,	Maleal.

A large tree growing in Assam and Bengal, very bitter. Its leaves are used in baths, and the pulp of its fruit as a diuretic.

CASEARIA ELLIPTICA.

Bhogara,	Mahr.	Klaare maram,	Tam.

This, in Coimbatore, is a large shrub, rather than a tree. On the Bombay side it occurs as a small tree, not uncommon near the Ghats, but much less so elsewhere. The wood is smooth, fine grained and yellow coloured, but from its small size is unfit for timber purposes, and can only servo as an ornamental wood.-*Drs. Wight and Gibson.*

CASEARIA ESCULENTA. Roxb.

Jiru kaneli	Maleal.	Konda pragara	Tel.
Konda junguru	Tel.		

A large shrub, growing in the mountains of the Northern Circars. Its leaves are eaten by the people, and its roots are employed by the hill people as a purgative. *Useful Plants.*

CASEARIA PENTANDRA.

Tha-byai-ywet-kya. Burm.

Found in the Pegu district, but scarce. Timber strong and close-grained, adapted for fancy work and cabinet making.—*Dr. Mc-Clelland.*

CASH. In the old Madras currency, a small coin, of which ten = to 1 Doodie, now valued as two pice, and 80 cash going to a fanam; 45 fanams being equal to 1 star pagoda. In Britain "Cash" has come to mean ready money, also copper or silver money. In India it is, along with the cowrie, used to indicate a small sum : In China ? a Cash of iron is the 5320th part of a dollar, and it is a saying "for as many beads make the necklace, so many cash make a cobang," a gold coin equal to four dollars and a third.

CASH. Chin. A Chinese coin about eight to a halfpenny.

CASH, the ancestors of the Chasdim or Chalybes, the mountainous territory, in Central Armenia, a little to the north of Erzroom. The Sabæan followers of Cash are to be distinguished from those descendants of Shem, who at a later period occupied part of the mountains of Assyria. See Chaldea.

CASHICUTTEE — ? Gambier.

CASHEF or **KASHEB**, of the mahomedans of Kashmir, is the Brahma of the hindus, the grandfather of Kasyapa who drained the valley. See Kashmir.

CASHEW APPLE OIL. Anacardium occidentale. This powerfully vesicating oil is obtained from the pericarp of the cashew apple. It resembles in its properties the acrid oil obtained from the marking nut Semecarpus anacardium—*M. E. J. Rep.* See Oil.

CASHEW GUM. Anacardium occidentale. The trunk and branches of this tree, on being wounded during the ascent of the sap, yields a transparent gum similar in appearance to gum arabic, for which it is a good substitute. This gum is sub-astringent, and is particularly adapted for use, where the depredations of insects require to be guarded against.—*M. E. J. R.* See Resins.

CASHEW. NUT. Eng.

Cashew nuts have been noticed when describing the Anacardium occidentale, the tree from which they are obtained. They are kidney shaped, attached to the under part of fruit of the tree, are articles of food, and an ingredient in chocolate.

CASHEW-NUT OIL.

Kajo ka tel,	Hind.	Munta mamidi nuna,	Tel.
Mundri cottay yennai	Tam		

The light, yellow, sweet tasted, and edible oil obtained from the *nut* of this tree, is in every respect equal, if not indeed superior, to either olive, or almond oil. It is very seldom prepared, the nuts being used as a table fruit. —*M. E. J. R.*

CASHEW-NUT TREE. Eng. Anacardium occidentale.

CASGAI. A wandering tribe in the south of Persia, between Shiraz and Darab.

CASHGAR, Khoten, Turfan and Yarkand: according to Lassen, the old original inhabitants of these places and of the adjacent highlands are the Tajik, who speak Persian, and are all agriculturists. The Swedish chronicles bring the Swedes from *Cashgar*, and the affinity between the Saxon language and Kipchak is great.—*Bunsen, Tod.* See Kashgar.

CASHMERE. The Kashmir territory, as

at present formed, comprehends Jammu, Kashmir, Kishtwar, Zangskar, Ladakh and Balti. A chronicle exists which was composed in A. D. 1125, but gives a general historical account of Cashmir from B. C. 1182. The Abissares, a chief who, with rich presents, conciliated Alexander as he approached the Indus, is supposed to have ruled about Cashmir. The rajas of Cashmere of the line of Kuru in the Lunar race, were worshippers of the Naga or Snake. The early chronology of Cashmere is full of doubts, though Professor Wilson, Captain Troyer and Major Cunningham all coincide in regard to the proper period of the initial date of the Naga dynasty. The line is taken from the Raja Tarangini which commences with an account of the desiccation of the valley by Kasyapa muni: supposed to allude to the deluge. Kashmir was colonized by Kasyapa B. C. 2666. There were many dynasties of Kashmir;—kings of the Kaurava race, 1266 years, with one of whom, Gonerda, authentic history commenced in B. C. 2448. Lava in 1709 B. C., was the Loo of mahomedan historians.

Surendra B. C. 1600, was cotemporary of Bahman of Persia.

The Gonerdiya dynasty 1013 years, or 378 years after adjustment, W.

The Aditya dynasty, 192 years.

The Gonerdiya Line restored, 592 years, or 433 adjusted.

The Naga or Karkota dynasty 260 years, five months.

The Utpal dynasty, 84 years, five months.

The Bhota dynasty.

The Mahomedan kings.

Kashmir was annexed to the Moghul empire under Akbar in 1586. A.D., but it has since been ruled from Affghanistan, by the Durani and Barukzye chiefs, but was taken from them in 1819 by ranjit Singh, and is now held by a Dogra Rajput, the chief of Jummo, who holds sway over Cashmir, Jummu, Kishtwar, Zangskar, Ladakh and Balti.

After the close of the Sutlej campaign, the Treaty of Lahore, dated 9th March 1846, left the British Government in possession of the country, hill and plain, between the rivers Beas and Sutlej, and of the hill country between the Beas and the Indus, including the provinces of Cashmere and Hazara. The British Government conferred on Golab Singh, territories on the hills, and recognized his independence. Golab Sing began life as a horseman in a troop commanded by jemadar Khooshal Sing, then the favourite chamberlain of Runjeet Singh. He soon raised himself to an independent command, in which he distinguished himself by making prisoner Agur Khan, chief of Rajaoree. For this service the principality of Jummoo was conferred on his family, and Golab Sing took up his residence in Jummoo, whence he soon extended his authority over his Rajpoot neighbours, and eventually into Ladakh. He took an important part in the negociations which followed the battle of Sobraon. A separate Treaty (No. CXXIV) was concluded with him at Umritsir on 16th March 1846, which put him in possession of all the hill country and its dependencies between the Indus and the Ravee, including Chumba and excluding Lahoul, on payment of seventy-five lakhs of Rs., and in exchange for the Cis-Ravee portion of Chumba. By a subsequent arrangement in 1847, Chumba came again entirely under the British Government. In 1857 Maharajah Golab Sing died, and was succeeded by his son Runbeer Singh, to whom the right of adoption was guaranteed to the Maharajah by a sunnud.

The general level of the valley of Cashmere is about 5,500 feet above the sea, but at the Waler lake and gardens of Srinuggur is only 5,146 feet in L. 34·46 and L. 74·48. The chief town, Srinuggur, on both banks of the Jhelum, has 40,000 people. Islamabad on the Jhelum is a seat of the shawl manufacture. Those fruits which attain maturity are the apple, pear, quince, peach, apricot, plum, almond, pomegranate, mulberry, walnut, hazelnut, pistachio and melon. The cherry "gilas" is indigenous and is cultivated in orchards. The bullace "Prunus insititia," is found nowhere else in a wild state. The vine is extensively cultivated. The recent manufacture of cider by the Maharaja upon a large scale is worthy of notice. The Kashmir trade, including the produce of Yarkand and Khutan, and other remote provinces, comes by the route of Le, &c., and also the imports from Ladakh and Lahaul. The principal routes by which the merchandize of Cashmere enters India, are, from Srinagar, by the Bahnihal pass; to Jammu and Amritsar; by the Pir Panjal, and Bhimbar to Gujrat; also by Akhnur and the Budhil pass; and lastly, from Srinagar to Peshawur, by Manserah, Muzafarabad and Baramulla. The great Punjab mart for Cashmere is Amritsar. The largest import is of pashmina goods, consisting of shawls, needle-worked goods (amlikar), embroidered chogas, &c., and plain pashmina cloth. *Prinsep's Antiquities, by Thomas. Cleghorn, Punjab Report, p.* 171. *Aitcheson's Treaties, &c.* See Chumba, Cash, Koheukka, Kuppoorthoolla, Cab, Mundee, Sookeit, Visvamatra.

CASHMIR, a very beautiful woollen fabric, until recently, manufactured solely in the kingdom of Cashmere, but now, in other towns, in the form of shawls, coats, scarfs. The manufacture of Cashmir shawls was long peculiar to that province, formerly the shawls were exquisitely woven, with unrivalled elegance and chasteness of design, softness and finish in quality, arrangement of colours and use of dyes, which the finest Paisley and French shawls do not approach. These exquisite shawls of Cashmir become rarer and rarer every year, and their place has been usurped by hand embroidered fabrics of lower value, with more showy and more vulgar patterns. In the Panjab and in Delhi, of late years, workmen have commenced to embroider Kashmir cloths and net with floss silk and braid, but solely for sale to Europeans, who wear them as tunics, jackets, scarfs, and the like. In the hand worked Kashmir shawls, as also in the Delhi work, wooden needles of hard wood are used, slightly charred, with a hole in the centre of the needle to receive the yarn. Cashmere weavers have settled at Umritsir and Jellalpur and other places, and have flourished.—*M. E. J. R. Dr. Watson.* See Shawls. Wool.

CASI, the hindu name of Benares, a city which, according to hindu geography, lies in 27° 35' of lat. N., and 4° 37' E. of Lanca. See Benares.

CASIA. See Affghan.

CASNONIA. See Coleoptera.

CASPIAN SEA, an inland sea with Russian territory on the north and west, and Persia on the south. According to Strabo (*lib.* xi), all the tribes east of the Caspian were called Scythic. The Dahæ were next the sea; the Massa-getæ and Sacæ more eastward; but every tribe had a particular name. All were nomadic; but, of these nomades, the best known are the Asi, the Pasiani, Tachari, Saccarandi, who took Bactria from the Greeks. The Sacæ made irruptions in Asia, similar to those of the Cimmerians, and possessed themselves of Bactria and the best district of Armenia, called after them Sacasenæ. Of the first migrations into India of the Indu Scythic Gete, Tahshak and Asi, that of Sehesnag from Sehesnagdes (Takshac from Tacharisthan) six centuries before Christ, is the first noticed by the Pooranas. About the same period a grand irruption of the same races conquered Asia Minor and eventually Scandinavia, and not long after the Asi and Tachari overturned the Greek kingdom of Bactria. The Romans felt the power of the Asi, the Catti and Cimbri from the Baltic shore. Colonel Tod supposes the Asi and Tachari to be the Aswa and Takshac or Toorshka races of the Pooranas of Saca-dwipa, the Dahæ to be the Dahya, one of the 36 Royal Rajput tribes, now extinct, and he supposes these to be the descendants of Baldeva and Yudishtra, returned under different appellations. The country on the east is still occupied by the Turkoman race.—*Vol. I, p.* 259. See India, p. 308. Iran. Kelat, 492. Khiva. Kirkook; Kizzelozan, Koh, Kosi, Kuvir, Shawl-goat, Turkoman, Viswamitra.

CASPICUM. See Rheum.

CASSA-CASSA. TEL. Poppy-seed.

CASSADA ROOT. Janipha manihot.

CASSAREEP, the concentrated juice of the bitter cassava forms the basis of the West India dish pepper pot. One of the remarkable properties of cassareep, is that meat placed in it is preserved longer than by any other process of cooking. See Cassava; Manioc.

CASSAVA, or Bitter cassava, ENG. are the West Indian names of the Janipha manihot, and of the Cassava or Manioc starch prepared from that plant, and from it also is prepared the Cassava meal or flour, or Brazilian arrowroot, and cassava cakes or bread. The Cassavate, called in Brazil "mandisca." The Janipha manihot is a plant about six or eight feet high, with a tuberous root, weighing up to 30 lb. The acrid milky juice when fresh is poisonous. For food, the roots are washed and scraped, ground or grated into a pulp, and the juice pressed out and preserved. The pulp or meal that remains is called *couaque*, and is made into cassava cakes or cassava bread. The expressed juice, by standing, deposits a white powder, which, when washed and dried, forms what the British call Tapioca meal or Brazilian arrowroot, by the French "*Moussache*," and in Guiana "Cypipa," and when this is dried on hot plates, the grains of fecula burst and adhere together and form Tapioca. The expressed juice is sometimes fermented with treacle into an intoxicating fluid. Pearl Tapioca is not from this plant, but from potato starch. *Sweet cassava* is prepared from the Manihot aipi, which is similar to Manihot, but has no deleterous properties.—*Hogg.* See Jânipha.

CASSAVA, flour or meal, from which cassava bread is made, is obtained from the Jatropha manihot, by grating the root, expressing the juice by pressure, and then drying the residual cake and pounding. It is called Moussache by the French.—*Birdwood.*

CASSAVA STARCH, called also Tapioca, is prepared from the starch of the bitter cassava, by washing and granulating on hot plates, by which the concretions are formed, as seen in commerce.

CASSE-EN BOIS. FR. Cassia lignea.

CASSE-FISTULENSE. FR. Cathartocarpus fistula.

CASSIA, a genus of plants belonging to the natural order Fabaceæ of Lindley. It is an extensive genus, 24 species pertaining to the genus belong to the East Indies, and Voigt enumerates 35 as having been grown near Calcutta, viz. :—

Several important products are obtained from species of this genus. Dr. Royle was unable to distinguish the three kinds of Senna from C. elongata, C. lanceolata, and C. acutifolia, and these are all included by him in the C. officinalis.

Cassia ovata, of Merat. It is the C. Æthiopica of Guibourt, found in Nubia and Fezzan.

Cassia Forskalii, is the C. lanceolata of Forskal and Lindley. Grows in Fatme, Surdud and Mor, and called "Suna" by the Arabs.

Cassia obovata, Culladon. A native of Africa, from Senegal to the Nile. Grows in Fezzan, Egypt, from Cairo to Assouan, Nubia, in the Adel country near Sultailli, Desert of Suez, Syria, Kaira in Guzerat, Dekhan near Delhi, in the Rangurh Valley near Peshawar, and in Mysore.

The Sennas of commerce are called (1.) *Tinnevelly Senna*, arranged into Saharunpore, Madras, and Tinnevelly. (2.) *Bombay or common Indian Senna* (Suna Mukhi). (3.) *Alexandrian Senna*. (4.) Tripoli Senna. (5.) Aleppo Senna.—*Voigt. Royle. Mat. Med.*

CASSIA, *Species.*

Ngoo-tha, BURM.

A tree of Moulmein, made into house posts. Fruit and bark used medicinally.—*Cal. Cat. Ex.* 1862.

CASSIA, *Species.*

Gnoo-gyee, BURM.

Common in the plains and on the hills of Pegu, wood used for bows, axles of carts, &c., &c. A cubic foot weighs 57 lbs. In a full grown tree on good soil, the average length of the trunk to the first branch is 15 feet, and average girth measured at 6 feet from the ground is 4 feet.—*Dr. Brandis.*

CASSIA, *Species.*

Tanghani, URIA.

A tree of Gumsur and Ganjam; extreme height 40 feet, circumference 3 feet, height from ground to the intersection of the first branch 18 feet. Used in Ganjam for posts and rafters, and burnt for firewood. It is tolerably common in Bodogoda, but seems to be scarce in Gumsur.—*Captain Macdonald.*

Tanner's cassia	ENG.	Avarai maram	TAM.
Mayhari	SANS.	Tangedu chettu	TEL.
Its wood.		Its bark.	
Tangada karra.	TEL.	Averai patte.	TAM.

Grows abundantly in the sterile tracts of the Madras Presidency, and in all parts of the Deccan. The bark is used for tanning, and the stems to make native tooth-brushes; with the bark a soft and durable leather may be turned out. On the whole, it is perhaps the best of the indigenous astringents of Southern India for this purpose. All parts of the plant have much astringency, and seem to possess no other property. In the south of Ceylon its leaves are infused as a substitute for tea. Its twigs are held in the hand, or applied to the head for the coolness they impart.—*O'Shaughnessy, p.* 309. *Ainslie*, 1132, *M. E. J. R.*

CASSIA BARK. Cassia lignea. Lat.

Kwei Pe	Chin.	Ketsioth of Ps. xlv. 8	Heb.
Darchini	Duk.	Kayu manis	Malay.
Kiddah of Ex. xxx. 24	Heb.	Lawanga pattai	Tam.
Kinnamon	,,	Do. patta	Tel.

Cassia is mentioned in Exodus xxx. 24, Ps. xlv. 8, and Ezek. xxvii. 19, under the words kiddah and ketsioth, but it is not yet decided what plants produce the cassia of commerce. Dr. Wight is of opinion that coarse barks of the cinnamon tree, which could not be passed as true cinnamon, are classed as cassia. The Chinese cassia is from Cinnamon aromaticum, Nees and Esenb, and Cinnamomum Zeylanicum; and Dr. Royle, who discusses the subject at some length (p. 542). concurs as to the Chinese cassia being one of the producing plants, but adds that there are several distinct sources. At present this bark is produced in Java, on the Malabar coast, in the South of China, and in Cochin China, and Dr. Hassall mentions that the several kinds of cassia are thus described in Pereira's "Materia Medica."

" 1. *China Cassia-lignea*, sometimes called China cinnamon, is the best kind. It is usually imported from Singapore, rarely from Canton direct. Mr. Reeves says vast quantities of both cassia buds and cassia lignea are annually brought to Canton from the province of Kwang-se, whose principal city (Kwei Sin Too), literally the city of the forest (or grove) of cassia trees, derives its name from the forests of cassia around it.

"The Chinese themselves use a much thicker bark (which they call Gan Kwei Pe), unfit for the European market, but they esteem it so highly as to pay nearly ten dollars per pound for it. A very fine quality is occasionally met with, and commands the enormous price of 100 dollars per catty (one pound and three quarters). A specimen of it furnished by Mr. Reeves, is straight, semi-cylindrical, eleven inches long, rather more than an inch wide, and about one-sixth or one-eighth of an inch thick. Externally it is warted, and covered with crustaceous lichens. Internally it is deep brown, its odour and flavour are those of cassia. Mr. Reeves also mentioned that the best cassia-lignea is cut in the third or fourth moon, the second sort in the sixth or seventh moon.

" 2. *Malabar Cassia-lignea.* This is brought from Bombay; it is thicker and coarser than that of China, and is more subject to foul-packing; hence each bundle requires a separate inspection. It may, perhaps, be coarse cinnamon, for Dr. Wight states that the bark of the older branches of the genuine cinnamon plant is exported from the Malabar Coast as cassia.

" 3. *Manilla Cassia-lignea.*—This, he was informed, is usually sold in bond for continental consumption. He had received a sample of bark ticketed 'cassia vera from Manilla,' the epidermis from which was imperfectly removed.

" 4. *Mauritius Cassia-lignea.*—This is occasionally met with."—*Royle, p.* 542. *Harris, Nat. Hist. of Bible. Hassall's Food and its Adulterations.*

CASSIA BERRIES, or Dalchini Berries,

are produced in the Nuggur districts of Mysore from the same plant as the Cassia buds. The berries are an article of trade in the Nuggur division of Mysore.—*Dr. J. Kirkpatrick. Rohde. MSS.*

CASSIA BICAPSULARIS. Linn.

Syn.

Senna bicapsularis. *Roxb.*

Six-leaved Cassia, Eng.

A shrub of the West Indies and South America, domesticated in India.

CASSIA BRACTEATA. Linn. Syn. of Cassia alata. *Linn.*

CASSIA BUDS.

Kwei tsze	Chin.	Flos Lauri Cassiæ	Lat.
Kasielblameu	Dut.	Flores de cassia	Port.
Nagkessur	Guz.	Sirnaga-pu	Tam.
Tejput-ka-phul	Hind.	Nagesh-alu	Tel.

Cassia buds are the immature fruits of a Cassia or Cinnamomum, native of Cochin China, and an inferior kind of cassia buds, known as *Lavunga-pu*, is found in Malabar. What are the genus or species that afford it are as yet undetermined. Cassia buds are now being largely exported from the Western Coast of India, and it is a spice growing in favour, but still less known than it deserves. *M. E. J. R. Dr. Cleghorn's Reports. Drs. Royle. Ainslie.*

CASSIA BURMANNI, Syn. of Cassia obovata.

CASSIA CINNAMOMUM.

Dawol kurœndo. Singh.

Under these names, Mr. Mendis describes a wood, used for common house building purposes. The tree grows in the central province of Ceylon. A cubic foot weighs 39 lbs., and it is esteemed to last 20 years.—*Mr. Adrian Mendis.*

CASSIA COROMANDELIANA. JACQ. Syn. of Cassia sophora. *Linn.*

CASSIA CUNEOPHYLLA. KOEN. Syn. of Cassia glauca. *Linn.*

CASSIA ELONGATA. LAM. LISANE.

„ senna. *Roxb. H. B.*
Senna officinalis. *Roxb. Fl. Ind.*

Senna plant	ENG.	Sanna makhi	ARAB,
Tinnevelly senna	„		HIND.

This is found in many parts of India, and the general opinion is that the plant is indigenous, but others believe it to be only naturalized, and are of opinion that this is identical with the Cassia lanceolata of Forskal. Dr. Royle cultivated this plant at Saharunpore, and Dr. Gibson near Poonah, Dr. Wight near Madras, and Mr. Hughes near Tinnevelly. Dr. Burns also noticed it near Kaira. The plants in these situations yield a drug quite equal in value to the best imported senna. Dr. Royle remarks that Cassia elongata, C. lanceolata, and C. acutifolia seem the same. The senna of commerce is obtained from several plants, viz :

1. CASSIA OFFICINALIS, called Bombay Senna, also Sunna Mukki.

SYN.

Cassia lanceolata, *Forskal.*
Cassia medica, *Forskal.*
Sennæ meccæ Lohajæ, *Forsk.*

Cultivated in Arabia and Northern India. The three following plants *a*, *b*, *c*, seem the same, viz. :

(*a*) CASSIA ELONGATA. Tinnevelly senna.

SYN.

Cassia lanceolata. *Royle.*
Cassia officinalis. *Gærtn.*

Cultivated by Dr. Royle at Saharunpoor, by Dr. Gibson near Poonah, by Dr. Wight near Madras, and Mr. Hughes near Tinnevelly, also noticed by Dr. Burns near Kaira.

(*b.*) CASSIA LANCEOLATA. *Acutor.* Alexandrian Senna.

SYN.

C. acutifolia. *Hayne. Nees. Eber.*

This grows in the valley of the desert, south of Syene.

(*c.*) CASSIA ACUTIFOLIA. *DeLile. Esen. Eberm.*

Bombay Senna. Grows in Araba and Africa.

2. CASSIA OBOVATA. MERAT.

SYN.

Cassia æthiopica. *Guibourt,*
Senna of Tripoli.
Sene de Tripoli.

Grows in Nubia and Fezzan.

3. CASSIA FORSKALII.

Chakunda	HIND.	Tantepu chettu	TEL.

Common all over the plains of India and in Tenasserim, it is one of the most abundant weeds in the country. Its leaves are fetid, mucilaginous and gently aperient. They are much used for adulterating senna, and in various external applications. The seeds, ground with sour butter-milk, are used with excellent effect in itchy eruptions, and they are used in preparing a blue dye, generally fixed by lime-water. The root rubbed to a pulp with lime-juice has almost specific powers in the cure of ringworm. Like all the allied species of cassia, this seems to owe its virtues to its astringency alone.—*O'Shaughnessy, p.* 309.

The leaves are put into butter-milk, as seasoners, and are chiefly in use amongst the brahmins in the southern parts of the peninsula.—*Ainslie's Mat. Med. p.* 263.

CASTALIA EDULIS. SALISB. Syn to Nymphæa edulis, *D. C.*

CASTACALA, a division of time equal to the $\frac{1}{600}$th put of a Vicala.—*Warren.*

CASTANIA, a genus of plants of the natural order Corylaceæ, inhabiting the colder parts of South Eastern Asia. Voigt names C. Chinensis, C. Indica, C. Roxburghii, and C. tribuloides. Fortune says that among the woods, he met with the Chinese-chesnut for the first time in China. Dr. Mason says, an indigenous chesnut tree grows in Burmah on the uplands, which yields abundantly, and whose fruit is sold in the bazar, but they will not compare with the French chesnuts, nor even with the American chincapin. There are two species cultivated on the China hills. One somewhat like the Spanish, produces fruit quite equal, if not superior, to Spanish chesnut. The other is a delicious little kind, bearing fruit about the size and form of the common hazel-nut. Large quantities of both kinds were procured by Fortune, and sent on to India in Ward's cases, and many hundreds of plants reached India. The Chinese chesnut may now be considered naturalized on the hills of India, and in a few years will no doubt make its appearance in the markets amongst other fruits.—*Fortune's Residence. Mason. Voigt.*

CASTANEA INDICA. ROXB.

Theet Khya. BURM.

A tree of Nepaul and the Himalaya, of Chittagong, Khassya, Rangoon, Pegu and Tounghoo, the edible nut, *Nikiri*, Hind, is compared to indifferent filberts ; the wood is red and equivalent to mahogany.—*Drs. Royle, p.* 345. *McClelland, Mason. Voigt.* 276. *O'Shaughnessy, p.* 607.

CASTANEA TRIBULOIDES. LINDLEY.

Wet-theet-kya. BURM.

A tree of the Nepaul and Khassya Hills, and of Burmah.

CASTANOSPERMUM AUSTRALE.

Moreton Bay Chesnut. ENG.

This tree grows to a height of thirty or forty feet, and has been introduced into India from Australia.

CASTE. The first institution of hindoo society which forces itself upon the attention of the stranger, is that of caste. When Mr. Borradaile counted the castes in Surat in A. D. 1827, he found 207 in that city. Each of them was more or less restricted from private intercourse with all the rest ; they could not intermarry, nor even eat the same food, nor drink the same water. The date of the origin of caste, and the objects in view are alike obscure. Bunsen (in 589) says the system of caste seems to have become completely formed B. C. 3000, during the formation of the kingdom of the Puru, and the system of caste, he adds, was in full force when the Code of Manu was composed. In the Vedic hymns nothing appears of a priesthood, properly so called. In some, brahmans officiate, but are evidently subject to the Kshatriyas as chaplains to the noblemen. The allusion to castes is very vague, as when the five classes of beings are mentioned, which may mean the four castes of Aryans, and a fifth of the barbarians. But there is one hymn in the Veda, known as the Purusha Sukta, which represents the brahman as superior ; though it does not correspond with the legend on that subject in its latter form. It is given as follows in Mr. Muir's Sanscrit texts (p. 7), and is a mystical description of existences from original being, under the similitude of a sacrifice or as a mental sacrifice. Ver. 7. This victim Purusha, born primevally, they immolated on the sacrificial grass : with him as their oblation, the Gods, Sadhyas, and Rishis sacrificed. 8. From that universal oblation were produced curds and clarified butter. He produced the animals, of which Vaya is the deity, both wild and tame. 9. From that universal sacrifice were produced the hymns called Rich and Saman, the Metres, and the Yajus. 10. From that were produced horses and all animals having two rows of teeth, cows, goats and sheep. 11. When (or offered up) Purusha, into how many parts did they divide him ? What was his mouth ? What were his arms ? What were called his eyes and feet ? 12. The Brahman was his mouth, the Rajanya was made his arms ; that which was the Vesya was his thighs : the Sudra sprang from his feet. 13. The moon was produced from his mind (Manas) the Sun from his eye : Sudra and Agni from his mouth ; and Vaya from his breath. 14. From his name came the atmosphere ; from his head the sky ; from his feet the earth ; from his ear the four quarters, so they formed the worlds." The comparatively late date of this hymn, is evident from the mention of the Sama and Yajur Veda, (Ver. 9) but it is older than other accounts which are given us in Manu and the Mahabharata, when the mystical significance of the story disappears, and the castes are represented as literally proceeding from Brahma's body. Even when this origin of the castes had been received, and the supremacy of the brahmans established, it was still considered possible to rise by means of mortification from the Kshatriya to the Brahmanical caste. The fact of Visvamitra and other Kshatriyas having been inspired Rishis, to whom some of the hymns of the Rig Veda had been revealed, was so stubborn, that the brahmans even after this ascendancy could only parry its force by accounting for it in their own way.

Sir Henry Elliot says that about the sixth and seventh century, the divisions of castes were secular, not religious. In former times, he says, the four classes existed, equally amongst the buddhist and hindus of India, as they do at this day amongst the buddhists of Ceylon, and amongst the Jains of the peninsula, in whose temples even brahman priests may be found officiating (*Elliot's Hist. of India.*) With the persons of almost every separate calling, or separate race belonging to separate castes, only a notice of a few can be made. The tradesmen and artizans of India are mostly all associated in classes or sects or castes, who do not intermarry, and seldom eat with others. Amongst these, may be named the Banjara, or wandering grain merchant ; the Bhatthari or cook ; Chichri or scavenger ; the Dhor or currier and leather worker ; Dhangar or shepherd ; Erkalvadu or basket maker ; Gaoli or dairyman ; Kalaigar or tinman ; Kassar or brazier ; Khanjar or poulterer ; Ladaf or Cotton seller ; Lar-kassai or beef salesman ; Lal begi or scavengers ; Lohar or blacksmith ; Mookre or mealman ; Muchi, leather worker ; Rangrez or dyer ; Saikalgar or cutler ; and Sonar or goldsmith. There are also many wandering tradesmen and tribes, mostly predatory.

In the south of India, the five artizan classes are called kammalan, kamalar or comsalar, and Professor Wilson thinks the word Comsallar may be derived from the Sanscrit and Hindi *Kans*, Bengali *Kansya*, a mixed metal. In Madras the artizans of the Tamul race are of the five left-hand castes, but the konsala is the goldsmith, and chief of the five left hand castes; the other four are the kanchari or brazier, kammari or blacksmith, vadlangai or carpenter, and kasi or stone mason. These intermarry and eat together, and all wear the zonar. The distinction of right and left hand castes is peculiar to the south of India. It is supposed by Professor Wilson to be of modern origin, and to have been introduced at Conjeveram, as a part of civil policy to divide the people and undergo the powers. But Sir Walter Elliot is of opinion that the separation into right and left hand castes, had its origin in the violent conversion of the ancient races from buddhism to hinduism, and he has been shown a figure of Budha, which the artizan caste worship. At present they seem to worship Viswakarma, but the bulk seem to recognise Saiva as their supreme deity. They all bury their dead and in a sitting posture like that of Budha, sitting with the head of the dead close to the surface, and looking to the north, and their dislike to the brahmins is intense. In the Peninsula, caste had certainly nothing to do with religion, but related solely to race. It is amongst the Tamulian people that the right and left hand sections appear. The Idan-kai or Idan-gai, are the left hand caste, and the Valan-gai are the right hand caste, and according to Professor Wilson, the names and appellations of right hand castes vary in different parts of peninsular India, but are usually supposed to be eighteen in number. Professor Wilson names them

1. Banijaga or trader.
2. Okhaliga or cultivator.
3. Jotiphana or oilmaker, employing one bullock.
4. Rangajiva, dyer or calico printer.
5. Ladaru, mahomedan traders and artificers.
6. Gujerati, bankers from Guzerat.
7. Komati, merchant shopkeepers of the Vaisya.
8. Jaina, Jains.
9. Kurubar, shepherds.
10. Kumbar, potters.
11. Agasa, washermen.
12. Besta, fishermen employed as palanquin bearers.
13. Padma Shalaysa, weaver.
14. Naindu, a barber.
15. Upparanu, a tank digger.
16. Chitragara, a painter.
17. Golla, a cowherd.
18. Walla, or Pareyan, or Paria, who is the champion for the right hand caste, as is the Madaga or Sikeli for the left hand caste.

The Left Hand caste.

Edagai,	KARN.	Idangai,	TAM.
Edagakula,	,,	Idam.	,,
Eddayai,	,,	Idakai.	,,

The Karnatic enumerations furnish nine, viz.

1. Panchala or artizans.
    - *a.* Kammaranu, blacksmiths.
    - *b.* Badage, carpenters
    - *c.* Kansagar, braziers.
    - *d.* Kallurtiga, stone cutters.
    - *e.* Akasale, goldsmiths.
2. Bersetti, traders.
3. Devangada, weavers.
4. Ganigar, oil-makers.
5. Gollur, money carriers.
6. Paliwan, and Palawan, cultivators.
7. Beda, hunter, fowlers.
8. Madiga, tanners, curriers, and shoemakers.

The hindu races, those professing some part or other of the brahminical creeds, though kept apart from each other by the castes to which their various origins gave rise, their sectarian religious views are now also sources of separation. In the physiological worship of the hindus, for instance, while one class of sectarians, the Saivava and the Lingaet, worship the form of lingam, another set of sectarians, the Sakta, worship the Yoni, in accordance with the doctrine of the Tantras. The Sakta are divided into two classes, the Dakshina chari, or right hand Sakta, and the Vama chara, or left hand Sakta. The right hand worship is public, and addressed to the goddesses usually adored, but especially to the forms of Durga, Bhawani and Parvati, also to Lakshmi and Maha Lakshmi and others. But in the worship of the left hand divisions, the Tantraka impersonations of Durga as Devi, Kali, Syama, &c., or a living woman representing the Sakta, the worship is private and impure, and is said to have the most numerous followers. The Vira Saiva, who are known as the jungam, also as the Lingaet or Lingbadari, from wearing the lingam always, and who are very numerous in the Canarese-speaking tract, ought not, according to the tenets of their sect, to have any caste distinctions; but they are the most bigoted of all the hindu sects, and their caste distinctions are those of trade and avocation, and are rigidly adhered to. Among the Jains, whose religion consists principally in the practice of austerities, and in avoiding to destroy life, caste restrictions are not prescribed, nevertheless they too retain the practice of caste divisions and the Shrawuk practice many usages common to other hindoos. If a Jain come into contact with an outcast, he, like the hindu, touches fire or water to purify himself; if he have occasion to receive any thing from a pariah, he causes the pariah to set it down on the ground, and purifies it with fire or water, before he takes it up. Even shepherds and Koolees incur pollution by touching the dherrace, which they remove in a similar manner. In the course of evidence before a criminal court in Goozerat, in August 1853., "the shepherds, Bhugwen and Rodo," said a Koolee, "came to me, and said they had both touched dhers, and became impure, and asked me to give them fire. I took a lighted coal out of my hookah, and each of them touched his forehead with it. I threw it down, and they then took my hookah, and smoked." In other words, they were then purified, otherwise he could not have given them his hookah. If a Sudra hindoo ask a drink of a brahmin, it will be given in a brass vessel, but from a distance, the brahmin stretching forwards and placing the pot between. It is returned similarly, but before receiving it back, water is poured over to purify it. No one of the helot races can enter the house of a hindoo, but he will stand at a distance and shout out his message. These are all illustrations of the usual operation of caste in India, which has held its own in the religious, social, and political changes of 3000 years. Since railways and steam boats have been running, and the educational system of the British has equalized all classes, much of the dread of caste defilement has disappeared, but it is still the prominent feature in every-day hindoo life.—*Forbes' Rás Malá or Hindoo Annals, Vol.* II., *p.* 237-38. *Wilson's Glossary. CASTEL PELEGRINO. The modern village Atlieb is the first place towards Jaffa; it is the Castel Pelegrino of the Crusades, and the Dor of the Hebrews. Beyond that, its columns and buttresses, a confused mass, stretching into the waves, over which the surf breaks, is the celebrated city of Cæsarea. —*Skinner's Overland Journey, Vol.* I., *p.* 96.

CASTIGLIONIA LOBATA. RUIZ. and PAV. Syn. of Jatropha curcas. *Linn.*

CASTILLEJIA. A genus of ornamental plants grown in India.

CASTING OF METALS, in India, is very largely practised, and the processes are of great simplicity. The natives generally prepare a model in wax, which is embedded in moist clays which, after being dried in the sun, is heated in the fire, the wax run out, and the metal run in. A much better plan, where accuracy is required, as in casting a brass nut or box for a large screw, is to cast the model in lead, and, having bedded it in clay, it may, when the mould is dry, be melted and run out, and the metal run in. Wax models allow the moulds to shrink in drying, and the thread of a screw box so formed, of course does not correspond. The best specimens of native casting Mr. Rohde had seen, were a set of figures cast at Pettapore, about 30 years ago for the zemindar, who had whole armies of such in bronze. In Maunbhoom, in Chota Nagpore, much ingenuity is displayed in the mode of casting articles of this kind in hollow net work, &c. A core is made of plastic clay, all carefully shaped to the internal form of the fish or other object to be imitated. This core is then baked and indurated. On this, the pattern designed to be represented is formed with clean bees' wax. This done, and the wax having cooled, it becomes tolerably hard. Soft clay is moulded over all. The whole is then baked, the heating indurating the outer coating of clay, but softening the wax, which all runs out of the mould, leaving empty the space occupied by it. The mould being sufficiently dried, the molten brass is then poured into the empty space, and, when cool, the clay is broken away, when the figured casting is seen. These are untouched after the casting, excepting on the smooth and flat surfaces which are roughly filed.—*Mr. Rhode MSS. Calcut. Cat. Ex.* 1862.

CASTING NETS made of cotton or other fibrous substance are in extensive use in all the rivers and on the sea shores of the South and East of Asia.

Olio di Ricino	It.		

Castor oil is obtained by expression from the seeds of the Ricinus communis or Palma christi, which grows in all the warm countries of the world, and in the south of Europe. It is usually described as "*Cold drawn Castor Oil*," which is understood to express that the oil has been obtained without the aid of heat; and *hot drawn castor oil*, when the seed is subjected to slight dry heat, and then pressed, but it may be doubted if any of the castor oils of commerce are ever expressed from the seeds without prior dry or subsequent water heating. There are, however, two varieties of the castor oil plant grown in India, the large and the small, and the mode of obtaining their respective oils may, perhaps, vary in different districts. One mode of obtaining the oil is to separate the seeds from the husks by children throwing them against a wall, then bruise them by tying them up and beating them in a grass mat. In this state, they are put into a boiler and boiled until all the oil is separated, which floats at the top, and the refuse sinks to the bottom; it is then skimmed off, and put away for use. The purest oil is said to be obtained by crushing the seeds in horse-hair bags, by the action of heavy iron beaters. The oil, as it oozes out, is caught in troughs, and conveyed to receivers, whence it is bottled for use. Castor oil is used for lamps in the East Indies, and the Chinese are said to have some mode of depriving it of its medicinal properties, so as to render it suitable for culinary purposes. That which the people of Britain import from the East Indies comes from Bombay and Calcutta and Ceylon, and is obtained at a very low price. It is exceedingly pure, both in color and taste. Castor oil is largely imported into Bombay from Cutch and other ports in the Presidency, and is re-exported to England and France. The Palma christi, or Castor-oil plant, is very extensively propagated by the Karens, who have two or three varieties. Until they were informed, however, by the missionaries, they were not at all aware of the medicinal properties of the plant; their object in planting the tree being, to obtain the seeds to mix with their dyes, and fix their colours. The plant is cultivated at Lucknow as a mixed crop. It is sown in June by almost all the villagers, not extensively, but principally for their own use. Its cultivation can be extended all over Oude. This oil is extracted by bruising the seeds, and then boiling it in water; the oil is afterwards skimmed off. This is the only seed out of which the oil is extracted by boiling, as in this case it is found cheaper than the method used for other seeds which is by pressure. The cost of the seed is one Rupee per maund, and the price of the oil is from 2 to 5 seers per rupee, according to the abundance of the crop in the season. The proportion of the oil yielded is about half the weight of the seeds boiled; it is only used for burning. In Cuttack, the plant is grown all over the province, a good deal in patches of newly cleared land in the jungles of the Tributary States and Sumbulpore. The oil is extracted in two ways. It is used for burning and culinary purposes, and medicinally also. The native methods of extracting oil are wasteful and tedious, and therefore expensive. The oil obtained from the large seeded variety is sometimes drawn cold, and its straw-colored specimens are scarcely distinguishable in quality from the oil of the small seeded variety. It is, however, more usually extracted by heat, and forms the common "lamp oil" of the bazar. In its *preparation*, the seeds having been partially roasted over a charcoal fire, both to coagulate the albumen and to liquify the oil, are then pounded and boiled in water until the oil rises to the surface. The roasting process gives it a deeper red colour and an empyreumatic odour. The price of this oil varies in different parts of the country from Rs. 1-10-0 to Rs. 3-13-6 per maund of 25 lbs. The average of nineteen large stations, in all parts of the Madras Presidency for the quarter ending 31st October 1854, was Rs. 2-8-6 per maund. The average exports of six years, Galls. 227,561 per annum. The small variety is employed to make the castor oil used in medicine. For a fine kind of castor oil for domestic purposes, take five seers of the small castor oil nuts, and soak them for one night in cold water. Next morning strain this water off, throw it away, and put the nuts into a second quantity of fresh water, and boil them in it for two hours; after which, strain the water off, and throw it away as in the first instance, the husk or outer covering being removed, the nuts are then to be dried in the sun, on a mat, for three days, at the end of which time they are to be well bruised in a mortar; add to the nuts, thus bruised, ten measures of water, and set them on the fire to boil, taking care to keep continually stirring the contents of the pot, until all the oil appears at the top, when it is to be carefully strained off, and, after being allowed to cool, put into a bottle for use. The quantity of nuts mentioned in the above receipt ought to yield about one quart bottle full of oil. In place of the ten measures of plain water, the same quantity of cocoanut water may be used: it is supposed to make the castor oil of a paler and finer colour. As with other coloured substances, filtering and light soon decolorizes the coloured castor oil. The best filtering material is animal charcoal, and the sun's rays finally remove all shade of colour.—*Rhede MSS. Cal. Cat. Ex.* 1862.

CASUARIA POMANDRA.

Tha-byai-ywet-kya. BURM.

This is found in the Pegu districts, but scarce. Timber strong and close-grained. Wood white coloured, adapted for fancy work and cabinet making.—*McClelland.*

CASUARINA. Several species of this genus of trees, called oaks by the colonists, grow in Australia, the C. quadrivalvis or "Oak," C. torulusa or "Forest Oak," C. paludosa or Swamp Oak or Fir, and C. suberosa or Cork-bark Oak, from the peculiar appearance of its bark. One of the casuarinas, known as the Arroo tree, from their resemblance are usually called firs by the Europeans. The Madagascar name is Filaof. Whilst every other kind of vegetable and meat is eaten with the fingers, cannibal food is touched only with forks, generally made of the wood of the Nokonoko (Casuarina equisetifolia, *Forsk.*) or the vesi (Afzetia bijuga, *A. Gray*), bearing curious, often obscene names, and having three or four long prongs. The reason given for this deviation from the general mode of eating is a widely spread belief, that fingers which have touched bokola are apt to generate cutaneous diseases when coming in contact with the tender skin of children. *Galton's Vacation Tourists, p.* 268.

Chouk maram. TAM.
Serva chettu. TEL.

This tree was introduced into India about the beginning of the nineteenth century and is now well established, growing freely and ripening seed in great abundance. In general appearance, it much resembles the Larch Fir,—it grows in 10 years to the height of about 30 feet. It generally grows very straight, and, where the main shoot is broken or lopped off, throws out secondary shoots readily which are usually straight and erect. It thrives best in sandy tracts along the sea shore, and it would be desirable to plant it largely on the sand hills north and south of Madras, where some numbers have already been grown. The wood is reddish in colour: in density and appearance it somewhat resembles Trincomallee. It bears a great strain, is well adapted for posts, and is said to bear submersion in water very well. The bark contains tannin, and a brown dye has lately been extracted from it by M. Jules L'Epine of Pondicherry. On the whole, this tree well deserves extensive cultivation on sandy tracts, where it grows readily. It is a favourite avenue tree; and, kept stunted, forms a beautiful hedge. Much of the sandy coast of the eastern side of the peninsula of India might be planted with it. This tree has been very extensively and profitably planted in various parts of the Madras Presidency, on the coast and inland, but the larva of a large species of Acheta has caused much injury to plantations near Madras. It appeared suddenly in September 1867. The larvæ burrow in the sand in subterranean passages, and during the night the larvæ emerge from the sand, and crawl up the young trees, generally biting off the young shoots. —*M. E. J. R.*

H'ten-roo. BURM.
Fir Tree of the English in India.
Tinian Pine. „
Beef wood. ENG.
Club wood of Tahiti.
Hari. HIND?

This is grown in all parts of the Dekhan, where it was introduced about 1830. It is a native of Chittagong, is the only species indigenous to the Tenasserim coast, and has been diffused over Bengal. In Tenasserim, it is found only in the loose sandy soil of the sea board and never inland. In general outline it resembles the pine, but it is of a more slender figure, and more elegant in appearance. Dr. Mason tells us that in Tenasserim, it is a remarkable tree, growing eighty feet high and spreading out without a leaf of covering; but its numerous fine knotted branchlets, mantled with brilliant green, and hanging in drooping bunches, or floating out lightly upon the breeze like long skeins of green silk, adorn it with the most graceful drapery, and make it one of the most desirable trees for embellishing a Tenasserim park. It grows 60 to 80 feet high, with trunk 3½ feet in circumference four feet above the ground. The wood is very hard and durable, and the Tahitians in their war days, chose it for the manufacture of their ingeniously carved war-clubs; hence they termed it the club-wood. They also fashioned valuable fishing hooks from its roots. Dr. Mason further informs us that the Casuarina muricata or Beefwood, is imported into the United States in considerable quantities, for various purposes where a hard heavy wood is required, and the Casuarina on the Tenasserim coast can furnish almost any quantity of this timber, but it is very little used. Roxburgh says it resembles toon in appearance. The natives of Tenasserim call it by the same name as the pine.—*Drs. Roxb.* (vol. iii., p. 59). *Riddell and Mason.*

CASUARIUS, the Cassowary, a genus of great birds belonging to the section Struthionidæ. Of this genus there are three species known, *C. galeatus*, a native of Ceram; C. Australia, inhabiting the Cape York district of Australia; and C. Bennettii, whose domicile is New Britain. Crawfurd says that it was erroneously supposed to be a native of the Sunda Islands, being known to the inhabitants of these countries only as an imported stranger. The Malay name is Suwari, from which, most probably, the European one is taken. Casuarius galeatus inhabits the island of Ceram only, and like the cockatoos, crown pigeons, and birds of paradise, of the last island, was made known to the inhabitants of the west through the Malay and Javanese, who have immemorially carried on a trade with the country of the Papuans. It is a stout, strong bird, standing five or six feet high, and covered with long hair-like feathers. Its head has a large horny casque or helmet.—*Crawfurd Dictionary, p.* 84. *London Athenæum No.* 1512, *December* 12, 1857, *p* 1551.' *Wallace*, ii. 86.

CASUARIUS BENNETTII. GOULD. This is the Cassowary of the island of New Britain, near to New Guinea, where it is called Mooruck. The height of the bird is three feet to the top of the back, and five feet when standing erect. Its colour is rufus, mixed with black on the back and hinder portions of the body, and raven black about the neck and breast. The loose wavy skin of the neck is beautifully colored with irisdescent tints of bluish purple, pink, and an occasional shady green, quite different from the red and purple caruncles of the *Casuarius galeatus*. The feet and legs, which are very large and strong, are of a pale ash colour. This bird also differs from the *C. galeatus* in having a horny plate, instead of a helmet-like protuberance on the top of the head: which callous plate has the character of and resembles mother of pearl darkened with black-lead. The form of the bill differs considerably from that of the Emu, *Dromaius Novæ Hollandiæ*, being narrower, larger, and more curved, and in having a black or leathery case at the base. Behind the plate of the head is a small tuft of black hair-like feathers, which are continued in greater or lesser abundance over most parts of the neck. The egg is about the same size as that of the Emu, and is of a dirty pale yellowish green colour. The bird appears to Dr. Bennett to approximate more nearly to the Emu than to the Cassowary, and to form the link between these species. In its bearing and style of walking it resembles the former, throwing the head forward, and only becoming perfectly erect when running; it also very much resembles the Apteryx in its body, in the style of the motion, and in its attitudes. Its bill presents a great deal the character of that of a rail: It utters a peculiar chirping whistling sound, but also a loud one resembling that of the word 'Moork," whence, no doubt, is derived its native name —*Dr. Bennett, in a letter dated Sydney* 10*th Sept.* 1857.

CASUARIUS GALEATUS, the helmeted Casuary of Ceram, is so called from the horny helmet which surmounts the head. Its rudimentary wings consist of five long bristles like blunt porcupine quills. It runs swiftly with a bounding motion. It feeds on fruits, birds' eggs, insects, crustacea, and tender herbage. It is a stout and strong bird, standing five or six feet high, and covered with long, coarse, black hair-like feathers. The head has a large horny casque or helmet, with bright blue and red colours on the bare skin of the neck. These birds wander about in the vast mountain forests that cover the island of Ceram. The female lays three to five large and beautifully shagreened green eggs, on a bed of leaves. The male and female sit alternately on the eggs for about a month. Dromaius Novæ Hollandiæ rises to a height of seven feet. It lives on fruits, eggs and small animals.

CAT.

Si-mi Bhotia,	SOKPA.	Maida.	PERS.
Billi,	HIND.	Poné,	TAM.
Min-khyeng,	KAMI.	Pilli,	TEL.

Cats are found throughout South-Eastern Asia. They are mentioned in a Sanscrit writing two thousand years old, and there are figures of them on the monuments of Egypt of a much prior age. Mummy cats have been identified with the Felis chaus, and with Felis caligulata, H. bubastes, both still found in Egypt, wild and domesticated. Pallas, Temminck and Blyth believe that the domestic cats are descendants of several wild species which readily intermingle. F. sylvestris is wild in Scotland. F. Lybica is the wild cat of Algiers, in S. Africa, F. Caffra is wild. In India are four wild species, of which F. chaus has a lynx-like tail. F. ornata or torquata occurs at Hansi, F. manul occurs in Central Asia. In the Isle of Man, cats are tailless, and have long hind legs. The domestic creole cat of Antigua is small with an elongated head, and that of Paraguay, also small, has a lanky body. In the Malayan Archipelago, Siam, Pegu, and Burmah, all the cats have truncated tails with a joint at the end. In China a breed has drooping ears [illegible] large Angora or Persian cat, is su[illegible] to be the descendant of the Felis m[illegible] of Middle Asia; it breeds freely with I[illegible] cats. There is a wild cat in Borneo; but, in Australia, there was no feline animal, no apes, monkeys, cats, tigers, wolves, bears or hyenas, no deer or antelopes, sheep or oxen, and no elephant, horse, squirrel, or rabbit; but it has marsupials only, kangaroos, opossums, and the duck-billed platypus. Whittington, so long the hero of a favourite nursery-tale of England, is rivalled by the story of the Florentine "Messer Ansaldo degli Ormanni." In a letter of "Conte Lorenzo Magalotti" in the "Scelta di Lettere Familiari," published by Nardini. Lond. 1802, (p. 139), his two cats, "due bellissimi gatti, un maschio, una femmina," soon relieved the king of an Island (Canaria) on which he had been cast by a violent tempest, from the plague of mice, and he was recompensed "con richissimi doni."—*Earl, p.* 233. *Darwin's Animals and Plants. CATARACTS IN INDIA. Where the river Shirhawti falls into the Gulf of Arabia, it is about one-fourth of a mile in width, and in the rainy season some thirty feet in depth. This immense body of water rushes down a rocky slope for 300 feet, at an angle of 45°, at the bottom of which it makes a perpendicular plunge of 850 feet into a black and dismal abyss, with noise like the loudest thunder. The whole descent is therefore 1,150 feet, or several times that of Niagara; but the volume of water in the latter is somewhat larger than in the former. The principal cataracts or waterfalls in India, are near Simorree, in Rohilcund; at Gokak, on the Gutpurba; on the Gairsuppa, where from top of fall to surface of basin is 888 feet, and the depth of basin is 300 feet—1,188 feet, and from 300 to 600 feet across during the rains. Yena in Mahabaleshwar, 600 feet; Cauvery, 370 and 460 feet. Cataracts of Suboonreka, Chota Nagpore, and Hurroree Ghaut—the falls, 15, 20, and 400 respectively; about 500 feet across crest—*Curiosities of Science, Dr. Buist's Catalogue.*

Several astringent extracts are now known to be prepared from the wood, bark, and fruit of various plants, and which are known as catechu, form articles of commerce, and are employed in tanning. That called *Kut* or *Kutch* by the natives of the East, and Cutch, and Terra Japonica in commerce, is properly an extract prepared from the wood of the Acacia catechu; but the term is now applied also to other extracts similar in appearance and properties. The mode of preparing catechu, by cutting into chips the inner brown coloured wood of the Acacia catechu, and making a decoction which is afterwards evaporated to a proper consistence, was first accurately described by Mr. Kerr, as practised in Behar; it is the same on the confines of Nepal, and in North-West India, on the Malabar coast, and also in Burmah, from the same tree. But there seems to be no doubt that the extract from the Uncaria gambier is also known in the market as kutch, as also is the extract from the nuts of the Areca catechu. "The *Kutt* manufacturers, from the Acacia catechu, move to different parts of the country in different seasons, erect temporary huts in the jungles, and selecting trees fit for their purpose, cut the inner wood into small chips. These they put into small earthen pots, which are arrayed in a double row along a fire-place built of mud ; water is then poured in until the whole are covered. After a considerable portion has boiled away, the clear liquor is strained into one of the neighbouring pots, and a fresh supply of material is put into the first, and the operation repeated until the extract in the general receiver is of sufficient consistence to be poured into clay moulds, which in the Kheree Pass and Doer, where he had seen the process, are generally of a quadrangular form. This catechu is usually of a blood-red colour, and is considered there to be of the best quality. By the manufacturers it is conveyed to Saharunpore and Moradabad, whence it follows the course of commerce down the Ganges, and meets that from Nepal, so that both may be exported from Calcutta. Catechu has long been employed in India for tanning skins; its tanning properties are stated to be so great, that skins are tanned by it in five days. It has also been used in India to give a brown dye to cotton ; and catechu has lately been very extensively employed in the calico-printing works of England. The salts of copper with sal-ammoniac, cause catechu to yield a bronze color, which is very permanent. The proto-muriate of tin produces with it a yellowish brown. A fine deep bronze hue is also produced from catechu by the perchloride of tin, with an addition of nitrate of copper. Acetate of alumina gives a brown, and nitrate of iron a dark-brown. For dyeing a golden coffee-brown, catechu has entirely superseded madder, one pound of it being equivalent to six pounds of that root.

The catechu prepared from the nuts of the Areca catechu is wholly used as a masticatory. The nuts, however, yield two astringent preparations, both of which are known as catechu, and both of a very inferior quality. The preparations are respectively called, in Tamil, Katha Kambu and Kash Katti, in Telugu Kansi, and in the Dekhan Khrab Katha and Acha Katha. The former, Katha Kambu, is chewed with the betel leaf, the latter, Kashi Kathi is used medicinally. For preparing this substance, the nuts are taken as they come from the tree, and boiled for some hours in an iron vessel. They are then taken out, and the remaining water is inspissated by continual boiling. This process furnishes Kassu, or the most astringent terra japonica, which is black and mixed with paddy husks and other impurities. After the nuts are dried, they are put into a fresh quantity of water and boiled again ; and this water being inspissated, like the former, yields the best or dearest kind of catechu. See Acacia Catechu. Areca catechu : Betel-nut. Gambier. Uncaria gambier. —*Royle.*

CATECHINE. See Catechu.

Khat	ARAB.	Abyssinian Tea	ENG.

One of the Celastraceæ, grows in Arabia, where its leaves are eaten green, and are supposed to give such increased wakefulness, that a man could watch all night. The Arabs carry a twig about with them as an antidote against plague infections. Playfair says it is much used by the inhabitants, furnishing a drug which forms a pleasurable excitant. The leaves and tender shoots, when chewed, are said to produce hilarity of spirits and an agreeable state of wakefulness.—*Playfair's Aden. Hogg.*

CATHARTOCARPUS. A genus of plants of the natural order Fabaceæ, of which Voigt names, as Indian species, C. fistula, Javanicus, nodosus, rhombifolius.

CATHARTOCARPUS FISTULA. PERS.

Cassia fistula, *Linn.*

The tree and its product.

A tree from twenty to forty feet high, met with all over Southern Asia, with a girth of three or four feet, and the height to the first branch ten to fifteen feet. It is uncommonly beautiful when in flower : few trees surpassing it in the elegance of its numerous, long, pendulous racemes of large bright yellow flowers, intermixed with the young lively green foliage. It bears a striking resemblance to the laburnum. It varies in size in different localities ; in Combatore, being too small for useful timber, but in Malabar it attains sufficient size to be adapted for the spars of native vessels. The wood weighs lbs. 66 to the cubit foot, is close grained and of moderate strength ; in Coimbatore used for tom-toms. In Ganjam and Gumsur, where it is tolerably common, it is made into plough-shares and rice-pounders. It is common on the hills and plains of Pegu, where it is used for bows, axles of carts, &c. It has long cylindrical pods, from 9 inches to 2 feet in length, internally divided into partitions, each with a flat seed, surrounded by a soft pulp. Two pounds weight of the fruit yield eight ounces of the concrete pulp : which forms an article of commerce. Its bark is used in tanning. The bark of the root is a strong purge.—*Drs. Wight, Gibson, Irvine, and Brandis, Mr. Rohde, Roxb.*, 333.

CATHARTOCARPUS JAVANICUS, PERS.

Cassia Javanica. | Horse cassia, ENG.

A native of Java and the Moluccas, with legumes above two feet in length, containing a black cathartic pulp used, in India, as a horse medicine.—*Eng. Cyc.*

CATHARTOCARPUS NODOSUS.

Cassia nodosa.

Guu-thei-ni	BURM.	Knotted cassia.	ENG.

Remarkable for its large pink coloured flowers. It is highly esteemed in Bengal, and is found in the Tavoy forests.—*Dr. Mason. Voigt.*

Cat's eye, is chiefly found in Ceylon, but specimens are also obtained from Quilon and

Cochin, and in the neighbourhood of Madras. Cat's eye is much valued in India. It is a transparent quartz full of minute fibres of asbestos and is cut in a highly convex form. It is of a yellow hue, slightly tinged with green. The cat's eye is often set in rings, and is brought to Tenasserim from Burmah. Comstock says: "It is in great request as a gem, and bears a high price:" but those seen in Maulmain market are not much valued. A small one may be purchased for two rupees, and one of ordinary size for five; while ten rupees is the highest price given for the best. —*Mason.*

CAT-SKINS, are used chiefly dyed, and sold as false sable. The fur of the wild cat is more esteemed than that of the domestic cat. —*Faulkner.*

CATTAPPA. Malay. Terminalia catappa.

CATTLE.

Πωυ	Greek.	Faihu	Old High Germ.
Pecu	Italian.	Gai Goru	Hind.
Faihu	Germ.	Para	Sans.

The cattle of India have been noticed under draught cattle; in India they are chiefly bullocks, and they are driven from the horns or by means of the reins led through the nose cartilage. Iago says in Othello, "He will as tenderly be led by the nose as asses are," indicating that in Shakspear's time a similar mode prevailed of driving asses. In the middle of the 19th century, a severe cattle plague carried off vast quantities of cattle in Europe, and shortly after a similar plague in India carried off great numbers. The characteristic symptoms were drooping, cold ears, hair standing on end, frequent weak pulse, running at the eyes and nose, scanty high coloured urine and purging, terminating in a bloody flux. As the disease advanced the body became covered with pustules, the disease generally proving fatal in a few days; but when the membranes of the brain were affected the animal died in a few hours with the symptoms of apoplexy.

CAUBUL, a town in Afghanistan in long. 69° 12' E., & lat. 34° 7' N. See Kabul.

CAUCASIAN IBEX. See Capreæ.

CAUCASUS, the numerous ranges of Caucasus take their rise from one immense body of mountains, which stretches diagonally between the Euxine and Caspian seas. This parent stem rises boldly to the westward, in the neighbourhood of the Turkish port of Anapa, then takes a sweep nearly in the form of the eastern shore of the Euxine, and runs along as far as the confines of ancient Colchis, now called Immeretia. Thence it suddenly stretches in a line almost directly east, for upwards of 300 wersts; then it shoots off to the south-east, taking the shape of the western shore of the Caspian, and terminating amidst the sublime ruins of the Guebre altars at Badku. This principal range boasts the gigantic Elburz and Kasibeck, towering over the loftiest summits of its other mountains. The heads of these two celebrated mountains are almost always obscured with clouds; and when they are partially discerned by the exhalation, or rolling away of their fleecy covering, winter or summer, still we see an eternal snow upon their peaks. The *second branch* is distinguished by the name of the Mossian Hills, and was the Mooschici montes of Ptolemy. It stretches along, from the vicinity of a Turkish fort called Battoumi, in a nearly parallel direction with the first range, though at a great distance, till it reaches the banks of the Araxes, and is lost in the plains of Mogan. This branch is again connected with the primary chain, by a series of mutual ramifications, forming rich valleys; and spreading out into the fertile plains of Akhiska, Immeretia, Kartelania, and Georgia, reaching down to Shirvan. And, running onward to the third, whose wild steeps embank the shores of the Euphrates, it thus connects the whole. This *third range*, known to Ptolemy by the name of the Mons Paryardes, in some respects vaster, and, perhaps, more interesting than the other two, takes a direction along with the Euphrates to the south west, forming a third parallel chain of the Caucasus, till it terminates that answering line in Armenia: and that at the point where the stupendous Ararat towers above every other mountain. Thence the chain makes an abrupt angle; and, diverging suddenly due south, shoots out into all those various branches which spread themselves over Persia and Asia Minor.

That great Paropaisan range of mountains which separates the provinces Azerbijan and Irak from those of Mazunderan and Gheelan, is known in some parts by the appellation of Koh-i-Caucasan, but more generally by that of Elburz; and is connected with the mountains of Armenia, and consequently with the great chain of Caucasus. Preserving an easterly course, it is continued through the northern part of Khorasan, sending various ramifications to the southward, till, passing north of Mushed, and branching out into the highlands of Hazarah and Balai Moorghab, it extends to the southward of Balkh, into the remote province of Budukshan, and is lost in that great mountainous tract north of Caubul, which is continuous with the ranges of Hindoo Coosh and Himalaya, and in which the largest rivers of Asia take their rise. The Amazon country of the ancients is generally referred to the neighbourhood of the Caucasus. Herodotus (I, c. 203 and IV. 100-117) speaks of them. They are mentioned in the Maha Bharata, in the story of the Aswa-medha and Klaproth (Trav. Cauc. and George xxx) summarises the existing information. *Wh. Hist. of I., p.* 419. *Porter's Travels. Vol.* I., 152. See Beer-us-Somal; Somal, India, p. 310, 317. Inscriptions, Kaffir, Kasyapa, Kazazilbash, Koh; Persia; Sati; Semitic Race.

CAUCHOONDA. Hind. Tricosanthes anguina, the snake gourd.

CAUCHORI VAYR. Tam. Tragia involucrata.

CAUKRI-KAI. Maleal. Cucumis sativus.

CAULIFLOWER. Brassica oleracea. *var.* An excellent vegetable, but does not flower in Madras. In the Deccan, the seed should be sown at the latter end of August. Removing the plants, occasionally, prevents their quick growth. In England the market gardeners seldom water cauliflowers, and once in four days is amply sufficient in the Deccan; no injury will accrue even if watered less frequently. In India, white brocoli is often taken for the cauliflower. Brocoli, both red and white, should be cultivated in the same manner as cauliflower.—*Riddell.*

CAULY NUDEE, a river of the plain of Dharwar, lat. 15° 33′, lon. 74° 47′ South 61 m; west 30 m. into Indian Ocean. Length, 91 m. Navigated by the largest patimars for 20 m. from Mullapoor to Shedashegur, rendered easy by uniformity of channel. The words mean black stream, spelled variouly, "Cali," "Kali." There are many "black rivers" in India.

CAUTH, or KUTH, or CUTCH. Guz. Hind. Catechu.

CAUTLEY, Sir Proby Thos., k. c. b., entered the Bengal Artillery in 1819. He was employed in the field during the years 1820 and 1821, in the reduction of numerous forts in the kingdom of Oude. In 1825 and 1826 he served at the siege of Bhurtpore. He was subsequently employed as a civil engineer on the eastern Jumna Canal in the North-west Provinces of India, and was the projector and the executor of the great Ganges Canal Works, which were opened in April 1854. Sir Proby T. Cautley carried on extensive researches in conjunction with Dr. Falconer, in the fossil remains in the Sewalik hills. He presented to the British Museum an extensive collection of fossil mammalia from the Punjaub, duplicates of which are in the Museum at the East India House. He wrote on a submerged city, twenty feet under ground, near Behut, in the Doab. Bl. As. Tr. 1834. On fossil quadrumina. Ibid. Use of wells, &c. in foundations, as practised in the Northern Doab. Structure of the Sevallick hills. Notice of a fossil monkey from the Sevallick hills. Coal and lignite in the Himalayas. Description of Sivatherium giganticum, fossil crocodile, Sevallick hills, fossil ghurial, fossil hippopotamus, fossil camel, fossil tiger, fossil bear, Gold washings in the Goomti river, in the Sevallick hills, between the Jumna and Sutlej rivers. On a new species of snake. Mastodonta dentetroites. Mastodons of Sevallicks. Manufacture of tar in the Sevallick hills. Panchukki or corn mill. Fossil giraffe. Dam sluices. Remarks on the fortress of Aligurh. Caramssa bridge.—*Gleanings of Soc. Beng. As. S. Tr.* 1834. *Parlby's Military Repository Lond. Geol. Soc. Tr.* 1840.

CAUTOVANGA, a dark coloured, and very strong wood of Palghat, used for wheelwright's work.—*Col. Frith.*

CAUVERY, a river of the peninsula of India, which rises in the mountains of Coorg, 50 miles from Mangalore, in L. 12° 25′ N., and L. 75° 35′ E., and after an easterly course of 472 miles, it disembogues into the Bay of Bengal. It receives in its course the Magunmurchy, 40 miles; Bhovani, 120 miles; Noyel, 95 miles; the Hennavutty; Leechman-Teert; Cubbany; Shimska; Aikavati; Ambrawuty. and about 36,000 square miles are drained, The towns of Seringapatam, Trichinopoly, Tanjore, and Tranquebar are on its banks, as it passes through Mysore to the coast. At Trichinopoly, it forms the island of Seringham, and a mound at Coiladdy prevents the rejunction of the Cauvery and Coleroon, and the stream is led into numerous large irrigating channels that are conducted all through Tanjore. The largest of these are the Vettar, the Vellar and Arselar, all of which enter the

Bay of Bengal. Navigable for craft through the low country during the inundation. The Gungan Zooka fall, 370 feet, Burr Zooka, 460 feet, occur in its course.

CAUVERYPAUCK, a place midway between Conjeveram and Arcot. Clive gained a battle here in February 1752, and the place surrendered to him.

CAVE. Eng.
Koo, Burm. | Ghar, Arab. Pers.

CAVA or Kava, also called Ava Pepper, is from the Macropiper methysticum of the Pacific. Its root produces a stimulating liquor.

CAVATUM PILLOO. Tam. Syn of Andropogon citratum.

CAVE TEMPLES, and monasteries in India, are very numerous. They consist of stupendous excavations and monolithic structures made many centuries ago for religious and monastic purposes. These remains are found more especially in Western India and the Nizam's dominions, but some are near Prome in Burmah; there are a few in the Madras Presidency; a number in the Bombay Presidency; several in the Hyderabad dominions; many in Bengal, others in Behar, in Malwa, in the valley of the Indus, among the wild mountains of Beloochistan and Affghanistan and Bamean. There are carved hills and a long series of cave-temples, full of elaborate sculptures representing half-human, half-bestial shapes, and lordly forms of races which have now passed away from earth. In Western India alone, including the Nizam's dominions, there are at least thirty series of cave-temples which have been examined by Europeans, besides a number of others which, on native information, are reported to exist. The excavations in the Ajunta ravine are very remarkable, and are the most important of the Buddhist caves. The excavations of Adjunta are entirely Buddhistic, and do not serve to illustrate the Jain and Brahminical cave-temples. The Kylas at Ellora is a wonderful work of art—is one piece of rock— in fact, a small hill, cut into a temple. The caves of Elephanta overlook the harbour of Bombay; those of Karli are close to the high road from Bombay to Poona. The most splendid cave temple in India which could be selected for reproduction by art is the principal excavation at Karli, and it is also interesting as the oldest Indian work of the kind known to exist. The caves of Kennery are in the island [illegible]ette, and the monastic system of the [illegible] has its finest illustration in the [illegible] dormitories, chapels, halls, and te[illegible]ery, which the strange life of the Bu[illegible]tem created, and which was at once its highest glory and the cause of its decay.

The Ajunta caves are on the face of the mountain, in a narrow ravine in Kandeish, and were described by Dr. Bird and Mr. Fergusson along with those of Bajah and Beera in Bom. As. Trans. 1842, vol. i., 438. Account of Baugh in Malwa, by Captain Dangerfield, in Bom. Lit. Trans, vol. ii., 194. Hamilton's Account of Keneri, in Description of Hindostan, vol. ii., 171. Mr. Erskine wrote on the Temples of Western India in Bom. Lit. Trans. vol. ii. Dr. Bird's Account of Cave Temples, vol. i., plates. Bombay 1848. Dr. Stevenson wrote on Elephanta in Bom. As. Trans. 1852.

In the caves at *Karli near Poona*, are numerous inscriptions in the Pali language, of date B.C. 543, (*Dr. Wilson,*) but if the Salivahana era be intended, then the date A.D. 176 (*Dr. Stevenson,*) the character used in those inscriptions is slightly modified Lat. The religion, or divinities or sages mentioned are buddhist, the invocation is to the Triad; no doubt meaning Buddha, Dhurma, Sanga. Of the kings or princes mentioned, Dr. Wilson says, Vijara; Dr. Stevenson, Arodhana, lord of India, Garga, ruler of the Shaka. Drs. Wilson and Stevenson are not quite agreed about the reading. Of the numerous Buddhist inscriptions in the cave temple at Karli, Garga, the "ruler of the Shaka" (Sakya, Buddha's tribe), is mentioned. Dr. Stevenson mistakes the language for Sanskrit, which Mr. Prinsep, from copies sent by Col. Sykes, proved to be Pali. The excavation of the temples, and gifts by individuals in aid, are mentioned. *Vol.* iii., *p.* 499.

The cave temples in the southern part of India are classed by Mr. Fergusson into

(*a*) The Vehara or monastery caves, which consist of (1) natural caverns or caves slightly improved by art. These are the most ancient, and are found appropriated to religious purposes in Behar and Cuttack. Next (2) a verandah opening behind into cells for the abode of priests, as in Cuttack and in the oldest Vehara caves. Ajunta (the third) has an enlarged hall supported on pillars. The most splendid of these caves are those of Ajunta, though the Dherwarra at Ellora is also fine, and there are some good specimens at Salsette and Junir.

(*b*) Buddhist Chetya caves form the second class. These are the temples or churches of the series, and one or more of them is attached to every set of caves in Western India, though none exist on the eastern side. Unlike the Vehara, all these caves have the same plan and arrangement. The Karli cave is the most perfect in India

All these consist of an external porch or music gallery, an internal gallery over the entrance, a central aisle which may be called a nave, roofed by a plain waggon vault, and a semi-dome terminating the nave, under the centre of which always stands a Dahgopa or Chaitya. In the oldest temples, the Dahgopa consists of a plain central drum, surmounted by a hemispherical dome crowned by a Tee, which supported the umbrella of State of wood or stone. These two classes comprehend all the Buddhist caves in India.

(*c*) The third class consists of Brahminical caves properly so called. The finest specimens are at Ellora and Elephanta, though some good ones exist also on the island of Salsette, and at Mahabalipur. In form many of them are copies of and a good deal resemble the buddhist vihara. But they have not been appropriated from the buddhists, as the arrangement of the pillars and position of the sanctuary are different. They are never surrounded by cells as all Veharas are, and their walls are invariably covered or meant to be covered with sculpture, while the Veharas are almost as invariably decorated by painting, except the sanctuary. The subjects of the sculpture of course always set the question at rest.

(*d*) The fourth class consists of rock cut models of structural and brahminical temples. To this class belong the far-famed Kylas at Ellora, the Saivite temple at Doomnar, and the Ruths at Mahabalipur. This last is cut out of isolated blocks of granite, but the rest stand in pits.

The Indra Subha group at Ellora should perhaps form a fifth, but whether they are Brahminical or Jaina is undecided.

The fifth or true Jaina caves occur at Khandagiri in Cuttack and in the southern parts of India. But are few and insignificant. In the rock of Gwalior Fort, there are cut in the rock a number of colossal figures, some thirty to forty feet high, of one of the Thirtankara, some sitting, some standing. Their dates are about the tenth or twelfth century before Christ.

The Behar caves are in the neighbourhood of Rajahgriha. The Milk maid's cave, and Brahman girls cave, have inscriptions in the Lath character. They are of about 200 B.C., and are the most ancient caves of India. The Nagarjum cave and Haft Khaneh or Satghur group are situated in the southern arm of the hill at some little distance from the Brahman girl and Milkmaid's cave. Another group is the neighbouring Karna chapara and Lomas Rishi cave.

The caves of Udyagiri and Khandagiri hill, about twenty miles from Cuttack, and five from Bcban Eswara, are next in antiquity to those of Behar. They are built on the hills of Udyagiri and Khandagiri. The former are Buddhist and the older; the latter, probably, are Jaina. Many of the inscriptions are in the Lath character, and this gives their age as anterior to the Christian era. The frieze sculpture in the Ganes gumpha is superior to any in India, and resembles that of the Sanchi tope at Bhilsa. In it there are no gods, no figures of different sizes nor any extravagance. On the buddhist caves here, there are no figures of Buddha, or any images. In a Jaina cave on Khandagiri, the twenty-four Thirtankara; with their female energies, are sculptured.

The Ajunta are the most complete series of buddhist caves in India, without any mixture of brahmanism and contain types of all the rest. They are in a ravine or small valley in the ghat south of the Taptee. At Baug in a ravine or small valley in the ghat on the north side of the valley of the Taptee, are three ancient buddhist caves.

Those of Karli are not so extensive as the Ajunta, but still purely buddhistical, and containing the largest and finest chaitya cave in India, Karli is about halfway between Poona and Bombay on the right hand side of the valley, as you proceed towards the sea.

The Salsette or Kenneri caves in the island of Salsette are also purely buddhist, but very inferior to the former. The Kenneri caves are excavated in a hill situated in the midst of an immense tract of forest country, and Mr. Fergusson supposed their date about the 9th and 10th century of the Christian era.

Dhumnar, about 40 miles south east from Nemuch, but close to Chundivassa, contains buddhist caves with a brahmanical rock temple behind.

The Ellora caves are excavated in a porphyritic greenstone or amygdaloid. The Elephanta caves are cut in a harder rock than those at Ellora. Those of Dhumnar and Ellora contain a strong admixture of Brahmanism, and those of Elephanta are entirely Brahmanical, though perhaps of the same age as those of Ellora. Mahabalipuram, or Seven Pagodas between Covelong and Sadras, south of Madras, have been described by Dr. Babington in Vol. 11 Trans. R. A. S. p. 258; by Messrs, Chambers and Goldingham in A. R. Vol. 1, p. 145, and V. p. 69, by Mr. Charles Gubbins in Bengal As. Soc. Journal. and these reports have been completed by Major Carr. The Mahabalipur caves are entirely Brahmanical, and have been excavated after all the other series were formed.—*Fergusson's Rockcut Temples of India, Vol. III, p.*

Caviar,	„	Balachau Trasi	„
Kaviar,	Ger.	Ikra,	Rus.
Caviario,	It.	Caviario,	Sp.
Caviale	„		

Caviare, a substance prepared in Russia, consisting of the salted roes of large fish. The best, which is made from the roe of the sturgeon caught in the Volga, in the neighbourhood of Astrachan, appears to consist entirely of the eggs: it is packed in small kegs, but the inferior sort is made into the form of dry cakes. It is highly esteemed in Russia, and also forms an article of considerable export; 30,000 barrels having been exported from Astrachan in a single season. The manufacture consists in separating the roe from its membranes, then washing in vinegar or white wine, and drying by spreading it out on a board in the air. Salt is then well rubbed in, and it is next put in a bag and the liquor pressed out. It is then packed in kegs for sale. During the three annual seasons of fasting in Russia, the consumption of caviare is very great, as it is also in Italy during the fasts of the church. It is eaten on bread, with oil and lemon juice or vinegar.—*Tomlinson, page* 354. See Balachan.

CAVIARIO. It. Sp. Caviare.

CAVIARIUM. Lat. Caviare.

CAVITA VIRKSEA. Can. Feronia elephantum.

CAVITE, in lat. 14° 29′ N., the port and marine arsenal of Manilla, where ships are built and repaired.

CAWA-ARANG, a light brown or pale brown coloured wood of Penang, from a very large tree; used for furniture and ornamental work.—*Frith.* (Qu. Kaya arang.)

CAWNEE, from Kani, Karn. Tam. Tel. In Cuttack a handsbreadth. In the south of the peninsula of India a land measure. At Madras the standard cawnie is twenty-four Manai or Grounds, each of 2,400 square feet. The cawnie is therefore 57,600 square feet=1·322 of an English acre. Another measurement, however, makes it somewhat less than an acre.—*Wilson.*

CAWNPORE, a military station and town on the bank of the Ganges river, in the Allahabad district of the N. W. Provinces of India, 140 miles north-west of Allahabad. On the 26th June 1857, it capitulated to the rebels under Nana Rao, under promise of safe escort, but the garrison, under General Wheeler, were all destroyed, and on the 15th and 16th July all their wives and children were destroyed and thrown into a dry well. In and above the well at the entrenchment, and in the well of the slaughter-house, lie the bones of no less than 420 civilians, military officers and their wives, 400 private soldiers and their wives, and musicians, besides infants. If to these we add the Futteghur party and those who perished outside the entrenchments, we have not less than a thousand christians, the majority of whom were murdered in cold blood by order of Nana Rao. Seven christian men, including Delafosse and Thomson, twelve women and six faithful natives, who entered the entrenchment, alone ultimately escaped. Nineteen christians and five children, who remained in Cawnpore, escaped by aid of the natives, besides a few drummers. Nana Row seems to have died in the forests of Nepaul. Cawnpore was retaken by General Havelock on the 17th July 1857.

A commercial term given to the woods of several distinct kinds of forest trees, the timbers of which are distinguished as Red and White Cedar; Barbadoes, and Bermuda cedar; Cedar of Lebanon, Pencil cedar, Bastard cedar, &c., some of them growing in America, some in Europe, and some in Asia. The cedar of Lebanon, so famous in Scripture, was, in ancient times, much employed in the construction of temples, and for other religious buildings and purposes. It is usually supposed to be Pinus cedrus, called Cedrus Libanus or Cedar of Lebanon. The lofty Deodara, a native of the Himalayas, with fragrant and almost imperishable wood, and often called the Indian cedar, is sometimes referred to the genus Pinus, and sometimes to Abies, Cedrus or Larix, with the specific name of deodara. But Dr. Hooker is of opinion that the Deodar and the cedar of Lebanon are identical. The cedar wood of scripture is supposed to be the sandarach tree, Thuja articulata. The woods of several of the Conifera are called cedars. But, in India, the term Bastard cedar is applied to the Guazama tomentosa; while in New South Wales, the term white cedar is applied to Melia azaderach, and red cedar to that of Flindersia Australis, and the name of Cedar is also given in India to the woods of the Cedrela toona and Chickrassia tabularis. In China, a kind of cedar, probably a cypress, called Nan Mah, or southern wood, which resists time and insects, is considered peculiarly valuable, and is especially reserved for imperial use and buildings, and the cedar-wood of Japan, according to Thunberg, is a species of cypress. The cedar of Guiana is the wood of Icica altissima. The White Wood or White Cedar of Jamaica is Bignonia leucoxylon. The word "cedar," in the United States, is applied to various genera of the pine family. The White Cedar of the southern swamps is a cypress; the wood of Juniperus virginiana is called Red or Pencil cedar, that of J. Bermudiana is called Bermuda cedar, and that of J. Barbadensis is called Barbadoes cedar, while the Juniper of the north of Spain, and south of France and of the Levant, is from J. oxycedrus. The white cedar of North America, a less valuable wood than the red cedar, is yielded by Cupressus thyoides. The cedar of New Zealand is Hartighsea spectabilis. The cedar of the Amazon is from the Cedrela odorata of Von Martius. Under the term cedar, Colonel Frith describes a reddish coloured wood of Palghat, specific gravity 0·507, as a large tree, wood aromatic and used for furniture, and under the name of cedar-root, a very aromatic wood, used for ornamental furniture in Palghat. These two are possibly from the Cedrela toona. The wood of the Cedar of Lebanon, as now met with, is not in much esteem, but that of the Cedrus deodara of the Himalayas, really possesses all the good qualities for which those of Lebanon were praised. Specimens of the wood of the Indian cedar, Cedrus deodara, and of the cypress, "Cupressus torulosa" from the Himalayas, were shown by Dr. Royle at the Exhibition of 1851: the former has been introduced into England as a beautiful ornamental tree, but appears to promise well as a useful timber tree, as the wood works well and freely.—*Faulkner, Dr. Hooker, Holtzappfel, McCulloch, Williams' Middle Kingdom, p.* 275. *Burton's City of the Salt Lake. CEDED DISTRICTS, a territory in the Madras Presidency in the very centre of the peninsula, now apportioned into the Bellary, Cuddapah and Kurnool collectorates. This tract of country belonged to the Mysore sovereign Tippu, and after his death, fell to the share of the Hyderabad state. Shortly afterwards, under the treaty of 1803, this share was ceded to the British on their agreeing to provide a subsidiary force of about ten thousand soldiers. Their numbers in 1868 did not exceed 5,000, and were all stationed at Secunderabad, six miles from Hyderabad in the Dekhan.

This large and valuable tree grows at the foot of the Himalayas and to the south, in Bengal and both peninsulas of India, in varying abundance. It is said to be abundant in Travancore. A specimen of wood sent by General Cullen, as of this tree, showed the grain and polish remarkably well: it was however of a brighter colour, and apparently of a denser quality than any met with in the market, inducing a doubt as to its being of the same species. It was stated to be abundant 25 miles north-east of Trevandrum. The tree is found in the Mysore and Salem jungles in large quantities, also along the crest of the hats from Travancore to Goa. In Coimba- [illegible] timber tree of large size, and its reddish coloured wood is used for cabinet-making purposes. It or an allied species is known also in Coimbatore under the name of Wunjoolî maram; but, as this is a very heavy and strong hard wood, said to be admirably fitted for pestles and mortars and other purposes demanding great strength, but not for cabinet purposes, Dr. Wight suspected Roxburgh's toona and the wunjooli to be different trees. Dr. Gibson reports that he had found this choice tree in one situation, viz., inland of Koorsulee; but adds, it probably exists all along close below the ghats; and, at another place, he says that it is not a common tree in our forests, but found in some of the greenwood jungles about the ghats, and also in the hill range abutting on the Rajpooree Creek to the south. The wood is a choice one for cabinet purposes, but is not used for any others, except for house beams when it is procurable in sufficient quantity. In the raees of the south Konkan and lower Canara, the tree is more common. It is, in as far as he was aware, never found inland. And again, he says it grows abundantly in some of the deep ravines in western Kandesh, and it grows in the ravines of the Concan. . In Ganjam and Gumsur, where it is known as Mahalimbo, its extreme height is 70 feet, circumference 5 feet, and height from the ground to the intersection of the first branch 22 feet. Under this trees' name, Captain Sankey describes a Nagpore timber as averaging 10 to 12 feet long and 3½ to 4½ feet in girth, and selling at 16 annas the cubic foot. At the Tambur river, in East Nepal, the vegetation in some spots is exceedingly fine, and several large trees occurred. Dr. Hooker measured a Toon tree (*Cedrela*) thirty feet in girth at five feet above the ground. In Kulu and Kangra, the wood, of a red color is esteemed for furniture, being very durable. The Jaswan Dun was once famous for toon wood, but scarcely a tree is left. Dr. Cleghorn urged the zemindars and English settlers to plant it along the banks of water courses in Kangra valley. South-easterly, Lieut Nuthall, as quoted by Captain Munro, mentions toon as one of the woods of Arracan, under the name of "thit-ka-do." A tree is found, also, Dr. Brandis tells us, on the hills and on the plains of British Burmah, plentiful in some districts and, if not identical with the Toon of Bengal, is certainly nearly related to it. A cubic foot of the Burmah wood weighs lbs. 28. In a full grown tree on good soil the average length of the trunk to the first branch is 40 feet and average girth, measured at 6 feet from the ground is 8 feet. It sells in Burmah at 8 annas per cubic foot. It will be seen from the above, that it has a wide range throughout India, furnishes a beautiful wood, in the northern provinces, made into furniture of all kinds, and much admired for its close grain and beautiful colour, resembling mahogany, though lighter than it and not so close grained, but to which it is deemed equivalent. It is called BastardCedar from an aromatic resin exuding from it, resembling that of the American cedar. It is often sold in Madras under the general name of "Chittagong wood," and is the most valuable of the woods known by that commercial name. The true Chittagong wood, however, being Chicrassia tabularis. Cedrela tuna has an erect trunk of great height and size, with smooth grey bark. The flowers are very numerous, small, white and fragrant, like honey. The seeds are numerous, imbricated, winged. It seems probable that the trees known "commercially" as Toon are at least different species; but the woods sold under this name are all red coloured, of varying hues. It is used all over India by cabinet makers for furniture. The Gumsur "*Mahalimbo*" wood, said to be this tree, and to be tolerably common, is described as not liable to be attacked by insects, and is, on that account, used for making boxes, &c. The fruit and bark are used medicinally in fever and rheumatism. The bark is powerfully astringent, but not bitter. The native physicians use it in conjunction with the powdered nut of the Cæsalpinia bonducella, an intense bitter. M. Nees von Esenbeck has published an account of some experiments on the bark, which indicated the existence of a resinous astringent, a brown astringent matter, and a gummy brown extractive matter resembling *ulmine.* The bark was used in Java by Blume, in epidemic fevers, diarrhœa and other complaints. Horsfield gave it in dysentery, but only in the last state, when inflammatory symptoms had disappeared. Its flowers, in conjunction with safflower (koosumbha) are used by the inhabitants of Mysore for dyeing the beautiful red colour called there Gul-i-Nari.—*Drs. Keling	„

The weight of scientific evidence goes to prove that the Himalayan cedar is identical with that of Lebanon and Taurus in Asia Minor. This is one of the Coniferæ, and grows in the N. W. Himalaya, in Kullu and Kangra, along with several others, of which Dr. Cleghorn names the following, viz:

Kelu, Cedrus deodara, Deodar or Himalayan cedar. Grows on the north slope of Dhaola Dhar, and in Kullu.

Kail, Pinus excelsa, Lofty pine, in Kullu, not in Kangra.

Chil or Chir, P. longifolia, Long-leaved pine. Grows luxuriantly on north slopes, timber best at 4-5000 feet.

Neoza, P. gerardiana, Gerard's, or edible pine. A few trees across the Dhaola Dhar, near Ulassa on the Ravi.

Tôs, Picea Webbiana, Webb's pine or silver fir. The wood is not much valued; its shingles are laid on the roofs of houses.

Rai, Abies Smithiana. Himalayan spruce. The rai is often 100 feet high, and 5 feet in diameter.

Deodara, Cupressus torulosa, Twisted cypress. At the head of the Parbati (*Longden*).

Bramhi or Rakhab, Taxus baccata, Common yew. In Kullu, very scarce.

Leuri or Suri, Juniperus excelsa. Pencil cedar. On the crest of Dhaola Dhar and in Lahul.

He is of opinion that plantations of the indigenous pines would not answer. At present, he says we have no record of the growth of Himalayan conifers, but we know that they grow very slowly. Mr. Batten states "it is difficult in a garden, with every means of watering at hand, to show a good sized chir tree, Pinus longifolia, after ten years of care," and the Rev. Mr. Parker furnishes the following approximate rate of the growth for this tree, Pinus longifolia. He writes, "I think that trees of the diameter named below have the ages assigned to them or nearly so. 6 inches in 20 years, 9 in 30, 12 in 45, 15 in 55, 18 in 70."

The distribution of the Himalayan pines he adds is very remarkable. The Deodar has no been seen east of Nepal, nor the *Pinu Gerardiana, Cupressus torulosa* or *Juniperu communis*. On the other hand, *Podocarpus* i confined to the east of Katmandoo. *Abies Brunoniana* does not occur west of the Gogr nor the larch west of the Cosi, nor funere cypress (an introduced plant howeve the Teesta, in Sik and Bhotan *Coniferæ* (including yew, juniper, and *Podocarpus*), eight are common to the North-west Himalaya (west of Nepal) and four are not: of the thirteen natives of the North-west Provinces, again, only five are not found in Sikkim, and he adds, I have given their names below, because they show how European the absent ones are, either specifically or in affinity. I have stated, he continues, that the Deodar is possibly a variety of the Cedar or Lebanon. This is now a prevalent opinion, which is strengthened by the fact that so many more Himalayan plants are now ascertained to be European than had been supposed before they were compared with European specimens; such are the yew, *Juniperus communis*, *Berberis vulgaris*, *Quercus ballota*, *Populus alba*, and *Euphratica*, &c. The cones of the Deodar are identical with those of the Cedar of Lebanon; the Deodar has, generally, longer and more pale bluish leaves and weeping branches, but these characters seem to be unusually developed in English gardens; for several persons, well acquainted with the Deodar at Simla when asked to point it out in the Kew Gardens, have indicated the Cedar of Lebanon, and when shown the Deodar, declared that they never saw that plant in the Himalaya.—(*Hooke's Him Jour.* Vol. II., p. 41.) If this be identical with the Abies cedrus, the Cedar of Lebanon, the Pinus Cedrus, *Linn.*, *Lamb.*, it grows also in Lebanon and the Taurus range of Lebanon, but the cedar wood of Scripture is supposed to have been from the Sandarach tree, the Thuja articulata. The Cedrus deodara is a magnificent tree with a trunk from 12 to 30 feet in girth, growing on the mountains of Kedar Kantha, Nepaul and Thibet, up to heights of 7,000 and 12,000 feet, as also in the woods of Almorah, at Kullu, Kangra and Kaghan, but in Hazara it is scarce. It resembles the cedar of Lebanon, but, unlike it, the resinous wood of the Deodar is very durable, lasting from 200 to 400 years. It has succeeded well in England. The tract in the Sutlej valley producing deodar, lies between 77° 59′ and 78° 31′ east longitude, and 31° 23½′ and 31° 40′ north latitude. (*Punj. Rep.* p. 4.) The deodar is not abundant in Hazara (except in Kaghan), and is becoming scarce. Dr. Cleghorn only observed it on the north side of the Mochpura range, towards the Jelum, and sparingly on Thandiani. Dr. Cleghorn says that Mr. Strong measured a deodar tree in the deodar forest at Nachar after felling 122 feet long, the but end girth 14 feet 6 inches, and the top 12 feet 4 inches another standing about 150 feet high, girth, at bottom 18 feet, 4 inches; these are not exceptions. Some he measured 26 feet in girth. The average, taking the whole forest, is not less than 15 feet girth at bottom. The soil is black loam, very rich, and the trees are full of turpentine. Cedrus deodara timber is very useful for railway purposes, and 12,000 tons were sent down the Chenab in one year. Deodar is abundant in Bussahir. In the territories of Mandi and Sukhet, and in the Hill states of Koti Kamharsen, and Bagi, which overlook the lower Sutlej, all the good deodar trees ("Kelu") have of late years been removed from within three miles of the river, but the interior hills of Bussahir are extensively clothed with the finest deodar, particularly on the upper parts of the northern slopes, commencing at Nachar, and terminating near the Hangarang ridge, which forms the northern limit of this beautiful tree; and indeed, of all arboreous vegetation, except birch and junipers.

In the Nachar forest, Dr. Cleghorn measured one tree twenty-eight feet in circumference, at four feet from the ground. A remarkable tree in this locality was mentioned by Drs. Thomson and Hoffmeister as thirty-six feet in girth, but it divides into two trunks. In travelling along the Hindustan and Tibet road, many Cedars may be seen twenty feet in girth, and 100 to 130 feet in height. The remaining forests of the deodar should be carefully preserved. Its wood is fragrant, of a reddish yellow colour, highly resinous and inflammable; very durable, yields valuable timber, it is also not subject to warp. The natives of the hills venerate the groves surrounding their temples and religiously conserve them, whilst to the state, the wood is of the greatest importance for house and bridge building.—*Eng. The Leaves.

Kataj	Hind.	Kuter	Hind.

A large scrambling shrub, grows in most parts of India. Seeds have a very hot biting taste, and yield an empyreumatic oil by destructive distillation, either alone or in combination with other ingredients. It was at one time much used in the treatment of Beri-beri. The red seeds are given to cattle and are officinal, being considered hot and administered for rheumatism. The leaves also are officinal, and a deep scarlet colored oil, obtained by expression from the seeds, is rubbed and given internally in rheumatism; the oleum nigrum, an empyreumatic black oily fluid, is obtained by the destructive distillation of the seeds, but it does not differ in any sensible degree from the empyreumatic products of the distillation of the common fixed oils, containing naptha and other carburets of hydrogen. Large quantities would doubtless yield paraffine and creosote. In Ajmere the seed is imported from Marwar and Godwar, is there considered sudorific, and generally heating, and is swallowed whole in rheumatism. It is used in horse mesalihs.—*O'Shaughnessy, p.* 271, *Genl. Med. Top. p.* 146. *Dr. J. L. Stewart. Malcolmson, p.* 312.

CELASTRUS ROTHIANA. Schult. Syn. of Celastrus paniculatus. *Willd.*

CELASTRUS SCANDENS. Celastrus Senegalensis, Celastrus venenatus. See Celastrinæ.

CELEBES, an island in the Eastern Archipelago, in configuration has been compared to a star-fish, from which the radiating limbs on one side have been removed; and this very singular form also distinguishes Gilolo, an island not far distant from it to the eastward. Mr. St. John describes its climate as salubrious, restores to health the constitutions impaired by residence on the marshy plains of the less elevated regions of India. Celebes occupies the centre of the tropical zone, and lies in the Molucca sea. Its length and breadth it is difficult to estimate, being composed of four peninsulas, with an area of 3578 miles. (*Melville de Carnbee, Moniteur des Indes Orientales*). Its coast presents a great number of bays, gulfs, and capes of eccentric outline. The surface is lofty, with considerable hills, and towards the north are several active volcanoes. Some of the mountains rise seven thousand feet above the level of the sea (*Temminck, Coup de Œil sur les Possessions Neerlandaises*, iii, 81), usually with round or flat tops. Though a mountainous island, Celebes presents along the borders of the sea wide plains covered with verdure and beautiful valleys, some of which enclose magnificent basins of limpid water, raised on a smooth plateau, encircled by a rim of low hills. Thick forests cover the hills and large tracts of the level country with oaks, maples, sycamores, cedars, teak-trees, and the upas. Celebes is less populous in proportion to its extent, than many other islands of the Archipelago.

Klabat is a conical volcanic mountain, rising 6,500 feet above the sea in the northern peninsula of this island; the two southern prongs of this island form the Gulph of Boni, which stretches three degrees northward into the centre of the island. Its entrance is about eighty miles wide, but narrows to thirty miles, till at its head it again expands to forty-five miles. Celebes, on its eastern coast, is fronted by islands, and many islands are scattered over the bays of Tolo and Tominie, or Goonong Tella. Celebes, on its north coast, is in general high, bold land. Its extreme point is called Cape Coffin, and the whole of the islands that stretch from it to Menado bay are sometimes called Banca islands.—(*Horsburgh.*) The tongue of land in the north of Celebes, known administratively under the name of the Dutch Residency of Menado, comprehends all the northern extent of the island, from the bay of Palos in the west, to the cape of Taliabo in the east, and comprises the great bay or arm of the sea of Gunong-tello, which stretches in a westerly direction between the two peninsulas. The Dutch Residency of Menado includes under its jurisdiction the whole federative states of Minahassa; the small kingdom of the northern coast; the very extensive districts in the west part of the peninsula, where Government exercise sway, besides the islands of Sangir and Talaut to the north, as well as the lesser island of the west coast and the large gulf of Tomini.

The population is composed of native christians, Malays, and Chinese. In 1840 there were reckoned in Minahassa :—

Natives.	78,700	The districts of Gorontalo.	50,000
Christians.	5,687	Sangir & Talaut islands.	40,000
Malays.	2,875		
Chinese.	510		
Free & Slaves.	500		
		Total...	178,272

Without taking into account the number of the Alfoura population of the interior, which cannot be very considerable, seeing that the elevated and woody parts of Kayeli, Toradja and To-meiku appear to be thinly peopled.

The Minahassa confederation in the north of Celebes counts 286 villages; the principal districts are Tondano, Langoang, Kakes, Temehon, Sonder, Kawakkoang, Tompasse, Amurang, Belang and Kema. They are all under the direct authority of the Dutch Government; the Resident and three other European civil employes, assisted by an indeterminate number of native functionaries, administer the Government. The resident is under the orders of the governor of the Moluccas, the head-quarters of which is Amboyna.

Sangir, and the numerous islands of this group occupy a superficies of 13 square leagues; the Talaut and the Meangis islands united are 18 square leagues; these archipelagos, formerly subject to the authority of the Sultans of Ternate, now make part of the Residency of Menado.

Several extinct volcanoes, and some still in full action, are found in the Sangir group; the devastations which they commit from time to time have often been fatal to the inhabitants. The eruption of Duwana, in 1808, completely annihilated the village of Tagalando, destroyed all the surrounding forests, and suddenly deprived the inhabitants of all means of livelihood, by the destruction of their fields. The Gunong-api causes numerous ravages in the island of Sjauw; its peak, 6000 feet above the level of the sea, forms the culminating point of this group. Gunong-abu covers with its base all the northern part of Sangir-besar: this volcano has not been active since 1812, when the torrents of lava destroyed the extensive forests of cocoanut trees with which this part of the island was covered, and caused the death of many of the inhabitants. These islands furnish more than twenty-five kinds of wood suited for building and furniture. Two harbours, sheltered from all winds, exist in the larger Sangir, one in the Bay of Taruna, the other, called Midelu, on the eastern side.—(*Journ. Ind. Arch. for Dec.* 1850, *page* 764.)

It will be seen from the above that Celebes consists of a small irregular central area, with four long peninsulas. The two on the south are separated by the Gulf of Boni; in the S. W. peninsula, two languages are spoken, the "Mangkasa" or "Mangkasara," and (of which word the Netherland capital Macassar is only a corruption of the Dutch), and the "Wugi" or "Bugi" which originally was more particularly limited to the coast of the Gulf of Boni. North of Macassar, in the most western part of the island, is another people, the "Mandhar," who speak a third language. On the island of Buton, which may be regarded as a part of the peninsula east of the gulf of Boni, a fourth tongue is spoken. In the northern peninsula are the people speaking the "Gorontalo" and the "Menado" languages (*Bikmore*, 97). Minahassa is in the northern extremity of Celebes. In the interior are a people whom the coast tribes call Turaju, who are said to be cannibals, and head hunters. (*Bikmore.*) This was stated many years ago by Dr. Crawfurd, who says (Vol. i. p. 243) "some of the savages of Borneo destroy their prisoners and devour their flesh. One nation of Sumatra acquainted with the art of writing and possessed of books, are well known to be cannibals. Among other tribes, the skulls of enemies are held as trophies round their habitations. Among the people of Celebes, when an enemy falls wounded on some occasions, they actually devour his heart, and there is hardly a warrior of note who at some time or other has not partaken of the horrid repast. Crawfurd had seen several who had done so, and one person told him it did not differ in taste from the offal of a goat or buffalo." Macassar is the most notorious place in the Eastern Archipelago for the Bugi people to run amok. On the average one or two occur in the month. It is in fact the national mode of committing suicide, amongst the natives of Celebes, and is therefore the fashionable mode of escaping difficulties. Ten or twenty persons are some times killed and wounded at one of the amok. Stabbing and killing at all he meets, the a-mok runner is at last overpowered and dies in all the excitement of battle. It is a delirious intoxication, a temporary madness, absorbing every thought and action. (*Wallace* i. 174.) Macassar men is a common name of the Bugi race. The Macassar people were taught mahomedanism in the early part of the 16th century, but the Portuguese arrived A. D. 1525, and they embraced Christianity. (*Bikmore* 99.) The Bugi are now the great navigators and traders of the Eastern Archipelago. In the beginning of the western monsoon, they go in great numbers to the Arru islands, which is the principal rendezvous for the people of Ceram, Goram, the Ki islands, Tenimber, Baba, and the adjacent coast of New Guinea, a distance from Macassar of upwards of 1,000 miles. They carry English calicoes, cotton goods of their own manufacture, Chinese gongs, and arrack, and the return cargoes are tortoise-shell, mother of pearl shell, pearls, birds of paradise, and tripang, the Malay term for all the kinds of Holothuriæ or Sea Cucumbers. Of tripang alone, about 14,000 piculs are yearly shipped from Macassar, of a value of 600,000 dollars, or £150,000. It is estimated that the annual value of goods carried by the Bugi to the Arru islands from Macassar alone is 80,000 dollars, or 200,000 guilders, and of those taken to the Arru group from other places 20,000 dollars, or 50,000 guilders. (*Bikmore*, 101.)

The Bugi are the most enterprising race of the Eastern Archipelago. Although they bear some personal resemblance to the Malays, arising probably from a common origin, in every quality but courage they are essentially different. Exposed to the same temptations, and most skilful and adventurous navigators, they have never adopted the occupation of piracy, but abhor and resist it, and defend themselves against the Malay prahus with the most heroic and desperate valour whenever they are attacked, proceeding, if overpowered, to blow up their vessels rather than submit. The poorest of these hardy islanders is as impatient of a blow as a European gentleman; and it is permitted to any one to avenge an affront by the death of the person who offers it. A more than Spartan training is bestowed on children. The males at the age of five or six are removed from their parents, lest they should be made effeminate by indulgence, and they are not restored to their family until they are of an age to marry. They are the Phœnicians of the Indian Archipelago, and there is not a coast from the northern shores of the Australian continent to the Malay peninsula where their ships are not habitually seen. These adventurers leave their country in the beginning of the eastern monsoon on a trading voyage, and proceed westward until they reach Singapore. With vessels of peculiar build, of from forty to fifty tons burthen, they conduct almost the whole carrying trade of the Archipelago. They own at least 1,000 ships, the outward cargoes consisting of cotton cloths, gold dust, edible bird's nests, tortoise shell, trepang or sea slugs for Chinese epicures, scented woods, coffee, and rice; and in spite of the jealous and restrictive policy of the Dutch, they have greatly contributed to diffuse British manufactures throughout the islands of the Eastern Seas. (*Quarterly Review, No.* 222, *p.* 502.)

The population of Celebes was estimated by Mr. Crawfurd at 900,000: if it were as well peopled as Java, it would number 14,000,000 inhabitants.—(*Quarterly Review, No.* 222, *p.* 503.) But at present, according to St. John (i. p. 351), it does not exceed 1,104,000 people. Its cotton tape, silk tape and embroidered tape, was exhibited at the Exhibition of 1862. It produces Teak. The people of Minahassa, in the north-east part of Celebes, differ much from all the other people in the Archipelago. They are of a light brown or yellow tint, often approaching the fairness of a European, of a rather short stature, stout and well made, of an open and pleasing countenance, but disfigured, as age advances, with projecting cheek bones, and with the usual long, straight, jet black hair of the Malays. The coast people, where there has been intermixture, are coarse; but in inland villages, where the race is pure, both men and women are remarkably handsome. They are quiet and gentle, submissive to authority, and are easily induced to learn and adopt the habits of civilized life; they seem capable of acquiring a considerable amount of intellectual education, and they are clever mechanics. Up to the early part of the 19th century, up to 1822, this people lived in tribes each under its own chief, always at war with each other, speaking different languages, unintelligible to each other. They built their houses on lofty posts, to protect themselves, they were head-hunters like the Dyak of Borneo, and were said to be cannibals. Human skulls were the great ornaments of a chief's house, and when a chief died, two skulls of an enemy, or failing that, of his slaves, were placed at his grave, and they worshipped deities in the mountain, the torrent, the lake, and certain trees and birds, and wore only a strip of bark. In 1822, the introduction of coffee planting and a settled Government altered all that, and the people, though still speaking different tongues, are now the best clothed, best housed, best fed and best educated in the Archipelago. Much of this has been due to the tractable nature of this people, for near Menado is a race called Bantek, strong, but intractable, who have hitherto resisted all efforts to improve them. There are some of the less civilized tribes which have semi-Papuan features and hair; while in some villages, the true Celebes or Bugi physiognomy prevails. The plateau of Tondano is chiefly inhabited by people nearly as white as the Chinese, and with very pleasing semi-European features. The people of Siau and Sanguir much resemble these, and Mr. Wallace believes them probably to be immigrants from some of the islands of North Polynesia. The Papuan type will represent the remnant of the aborigines. The languages contain a Celebes Malay element, and a Papuan element, along with some radical peculiarities derived from the Siau and Sanguir islands further north, and therefore probably derived from the Philippine Islands.

The natural history of Celebes has been much investigated. M. Forsten, a Dutch Naturalist, spent two years in the north part about 1840. The L'Astrolable, French ship of discovery, touched there, and procured specimens. The Dutch naturalists Rosenberg and Bernstein also collected there and in the Sula islands, and Mr. A. R. Wallace and Mr. Allen, his assistant, both collected there. It has also been described by Dr. Crawfurd, Mr. St. John, and Professor Bikmore. According to Professor Bikmore (378), gold is found in great quantities in Celebes. It occurs over all the northern peninsula from the Minahassa south to the isthmus of Palas. Of the birds of Celebes, 191 species are known, of which 128 are land birds. Livistonia rotundifolia is supposed by Mr. Wallace to be the fan-palm, of the leaf of which the people of Celebes make water buckets and baskets. According to Mr. Wallace, Celebes has the Carpophaga luctuosa, a fine cream-coloured pigeon, also the Coracias Temminckii. Phænicophaus callirhyncus is one of the finest known cuckows. Its bill is of a brilliant yellow red and black. Ornithoptera remus, the largest and most beautiful of all the butterflies, is found in Celebes. (*Wallace*, p. 284.)

Accipiter trinotatus, a beautiful hawk with elegant rows of large round white spots on the tail. Strix Rosenbergii and S. Javanica, the latter in all the islands up to Lombok, Phlegænas tristigmata, the ground dove of Celebes.

The Maleo, or Megacephalon rubripes, deposits its eggs in the loose sand of the sea beach, in holes just above high-water mark ; the female lays one large egg, which she covers over and returns to the forest ; but many birds lay in the same hole. A dozen eggs are often found together. One egg fills an ordinary teacup, from 4 to 4½ inches long, and 2¼ to 2½ wide. They are very good to eat, and much sought after. The hen-bird takes no further care of the eggs, which the young bird breaks through about the 13th day, and runs at once to the forest. Each hen lays six or eight eggs in a season of two or three months. Cittura cyanotes, the forest king-fisher. Meropogon Forsteni. Carpophaga Forsteni a fruit pigeon of North Celebes. Buceros cassidix, the great hornbill of Celebes. Trichoglossus ornatus, a beautiful brush-tongued paroquet. Corvus advena, a rare black and white crow. Anoa depressicornis, (Sapi utan, *Malay*) the wild cow of Celebes. It is smaller than other wild cattle. It is found in the mountains. Cynopithecus nigrescens, the black baboon monkey. Tachyris zarinda, a rare butterfly, with cinnabar red wings. Idea tondana, a semi-transparent butterfly of Celebes. Papilio androcles, one of the largest and rarest of swallow-tailed butterflies. Cicindela heros, and C. gloriosa also occur, the latter of a rich velvetty green colour.—*Quarterly Review, No.* 222, *p.* 503. *Professor Bikmore's Travels, pp.* 101 *to* 378. *Crawfurd's Dictionary of the Archipelago, Vol.* i., *p.* 243. *St. John's Indian Archipelago, Vol.* i., *p.* 351. *Wallace's Malay Archipelago, Vol.* i., *p.* 175. *Horsburgh. Serangani Islands.

CELERY, Eng. Apium graveolens.

Kurufs. Ar.

Cultivated by the Europeans all over India. The seed is usually sown at the commencement of the rains, and transplanted into trenches, and blanched by earthing up. The root only of this is eaten : it forms rather a large white bulb, nearly the size of a parsnip, and has an exceedingly fine flavour. Kurufs, *Arab*, are the seeds of Apium graveolens, used in Indian medicine. Celeriac is a variety of celery, and managed similarly. Celeriac root is used for stews, rather than eaten raw.—*Riddell. Jaffrey. O'Shaughnessy.*

CELEBACY. The Sherif families of Mecca affect marrying female slaves, thereby showing the intense pride which finds no Arab noble enough for them. Others take to wife Bedouin girls ; their blood, therefore, is by no means pure. The worst feature of their system is the forced celibacy of their daughters : they are never married into any but Sherif families ; consequently they often die in spinsterhood. The effects of this custom are most pernicious, for though celibacy exists in the East, it is by no means synonymous with chastity. Here it springs from a morbid sense of honour, and arose, it is popularly said, from an affront taken by a Sherif against his daughter's husband. But all Arabs condemn the practice. *Burton's Pilgrimage to Meccah. Vol. III., p.* 33.

CELOSIA. A genus of plants of the order Amarantaceæ, of which Roxburgh (i, 678, 9) mentions C. argentea, C. ceruna, C. comosa, and C. cristata. Their names will suffice.

CELOSIA ALBIDA. Lin. *Riddell.*

CELSIA. A genus of ornamental plants, growing from two to six feet high, colours yellow and orange. C. Coromandelina is a native of India.

CELT. The name of a branch of the Indo-Germanic family who occupied the northern shores of Europe. They are part of the great Asiatic European stock.

CELT, implements of agriculture and for domestic purposes, used by ancient pre-historic races of the world. They have been discovered in Europe and India. Mr. Allan Hume, C.B., discovered many in Hindostan, and Colonel Meadows Taylor others at Lingsoogoor in the Raichore Doab. They are of flint or chalcedony. Mr. W. Theobold found Celts or stone weapons in the country extending upwards of 200 miles east of the Toris river, and accumulated at Karo in Kirwee. They seem to be almost identical with those found in Europe. Belonging to an aboriginal race of which they are now the only relics, the explanation of their occurring in heaps under peepul trees and in temples, is probably some superstition which induced men of old time to convey them to the shrines where they are now so abundant. Very few of the Celts offer any evidence of their ever having been fixed in handles, and where such has been the case, it was probably by a race of far more recent date than the original fabricators, for it is difficult to conceive a form less adapted for such a purpose than the typical Celt. The natives of Kirwee have adorned some of the Celts with a daub of red paint as Mahadeo. Major Haughton sent some spears of the stone utensils now used by the Andamanese for purposes of comparison, but most of the stone chips seem to be arrow heads for shooting fish, and intended to be used with the fingers in dividing fish and flesh.

CELTIC APOLLO. Near the town of Avaranches, on the coast of Normandy, is a rock called Mont St. Michel, in ancient times sacred to the Gallic or Celtic Apollo, or Belenus; a name which the author from whom we quote observes, "certainly came from the East, and proves that the littoral provinces of Gaul were visited by the Phœnicians." " A college of Druidical priestesses was established there, who sold to seafaring men certain arrows endowed with the peculiar virtue of allaying storms if shot into the waves by a young mariner. Upon the vessel arriving safe, the young archer was sent by the crew to offer thanks and rewards to the priestesses. His presents were accepted in the most graceful manner; and at his departure, the fair priestesses, who had received his embraces, presented to him a number of shells, which afterwards he never failed to use in adorning his person." When the early Christian warrior consecrated this mound to his protector St. Michel, its name was changed from *Mons Jovis* (being dedicated to Jupiter), to *Tumba*, supposed from *tumulus*, a mound; but as the Saxons and Celts placed pillars on all these mounts, dedicated to the Sun god Belenus, Bal, or Apollo, it is not unlikely that *Tumba* is from the Sanscrit *t'humba*, or *st' humba*, 'a pillar.' *Tod's Rajasthan, Vol. I., p.* 525. *Tour through France.*

CELTIS. A genus of plants belonging to the Ulmaceæ. C. australis and C. Caucasia, are the "Batkar," *Hind.* of Kaghan. C. dysodoxylon, Thw.; the Gonnadugas of the Singhalese. A small tree, grows up to 5,000 feet in the Central Province.—*Cleghorn's Punjab Report. Thw. En. Pl. Zeyl., p.* 267.

CELTIS ERIOCARPA.

Nettle tree	Eng.	Koo	Punjab.

This is found in the Sutlej valley between Rampur and Sungnam, at an elevation of 6,000 feet. Bark used for making shoes.—*Cleghorn Punjab Report, p.* 67.

CELTIS CAUCASIA. Willde.

Batkar	Panj.	Tago	Panj.

Brumj	„	Bingu	„
Brimla	„	Kharg	„
Takbum	„	Wattaman	

Fruit.

Kangal Mirch	HIND.	Indarba	HIND.

This fine tree, says Dr. Stewart, is common, wild, from 2,500 to 8,500 feet in the Punjab, Himalaya, and occurs in Trans-Indus, down to 1,500 feet, and Dr. Griffith says it is cultivated in Affghanistan. It attains 16½ feet in girth; but trees of seven or eight feet are not uncommon. Its timber is white, light, soft, weak and subject to the attacks of insects. It is chiefly used for zemindar's work, charcoal and fuel. Dr. Bellew mentions that in the Peshawur valley it is often made into charms to keep off the evil eye from man and beast, and Dr. Cleghorn states that its bark is used for sandals.—*J. L. Stewart, M.D*, *p.* 209.

CELTIS NEPALENSIS PLANCH.

Batkar	*T. J. Punjab.*	Tagho	*T. J. Punjab.*

This is much more rare than C. Caucasia is. Dr. Stewart found it in parts of the Jhelum basin and Trans-Indus at about 2,500 to 3,500 feet. The Pathans are said to use its tough wood for churn-sticks.—*Dr. J. L. Stewart, M. D.*

CELTIS ORIENTALIS. LINN.

A tree which is pretty common all over India, and in Kullu planted in avenues. Dr. Buchanan Hamilton says the under bark of this tree, like that of the West India kind, consisting of numerous reticulated fibres, forms a kind of natural cloth, used by the Garrow for covering their nakedness. ('Lin. Trans.,' xvii, p. 209). He also describes it in his report on Assam, as a kind of rug worn by the Garrows in the cold weather, and serving them as a blanket by night. Captain Reynolds sent a specimen of it to the Agri-Hortic. Society; the Garrow make several such cloths of different colours from various barks. The Garrow who come to the plains, generally buy some small ends of cloths from the Bengalees, to attend the *hauts* (fairs) in, not as clothing to protect them from wind and weather."—*Royle Fib. Pl.* 317. *Cleghorn. Kullu*, 80.

CELTIS WIGHTII. WIGHT. IC.

Not uncommon in the hot drier parts of Ceylon.—*Th. En. pl. Zeyl.*, *p.* 268

CEMENTS. At the Madras Exhibition of 1855, there were shown Lime, Concrete, Septariæ, Dolomite, Magnesite, Gypsum and other substances used in manufacturing cements, and there is an abundant supply of minerals of this class all over Southern India. The shell lime of Sooloorpett is well known it is a pure carbonate of lime. The Kunkur or Nodular lime stones are more durable though not so white. The Septariæ or Parker's cement stones, occur in Southern India, though the beds are not extensive: they accompany the strata of blue and white Potters' clay and kaolin that are so common in this Presidency. The best hydraulic septariæ occur at Awady near Madras, Bangalore and Chingleput. A very fine natural pydraulic cement occurs on the banks of the Godavery and has been extensively used in the construction of the Godavery and Kistna Anicuts. A very good pydraulic limestone occurs along with the blue slate of Cuddapah—and the Dolomites of the Ceded Districts and the Northern Circars make good cements. The Magnesite of Salem, Bangalore, and Vizianagram, would probably improve the qualities of some of the other limestones in certain proportions, as it acquires great hardness of surface but is deficient in adhesiveness. Numerous experiments have been tried with this mineral which certainly possesses some good hydraulic properties, but has disappointed the expectations at first formed of its usefulness.

The ordinary Indian cement is chunam in its various forms; the only building stones which differ materially from those of the rest of the world are laterite, concrete and kunkur. Kunkur is a limestone mostly nodular—always fresh water and recent,—in most cases in the act of being formed under our eyes. It is sometimes found in thick stratified beds like the travertine near Rome, and seems in this case to have been formed by calcareous springs: more generally it is met with in clay or alluvial soil, in the shape of small pieces from the size of peas or filberts to that of the hand. In the blue clay which stretches along the Indian shores, it is found in vast abundance generally assuming the most fantastic forms —indeed it abounds in every rice-field and open soil all over the country. The more recent varieties seem to be formed by the agency of the rains: when the earth abounds with vegetation, the tepid waters are charged with fixed air and dissolve the lime prevailing in the soil everywhere around,—the mineral being again thrown down as the advancing season dispels the excess of gas. It in this state absorbs the clayey matter around and cements it into kunkur. This is collected by the lime-burner, placed with firewood in small-sized conical kilns, and burnt in the usual way. It contains 72 of carbonate of lime, 15 of sand, and 11 of clay and oxide of iron. Mixed with half its weight of river sand it makes an excellent mortar, burnt in pieces of a cubic inch or so in size, and then powdered without slaking, it forms a first rate water cement, setting in a few minutes, and becoming as hard as stone. At Poona the finer varieties of kunkur are burnt with charcoal all throughout the city, in neat pigmy looking kilns 2½ feet high and about as much in diameter at the base. These hold about a cubic foot of material, or about 36lbs. of charcoal and kunkur in equal parts. When burnt, it is slaked and then made up into bricks, which are sold in the bazaar for the purpose of whitewashing.

The finer kinds of lime and cement on the coast are made from shells. A piece of ground about ten feet square is laid down even and floored over with clay: an upright pole is placed at each end of this, and a sheet stretched out with back stays spread between the poles, which are steadied with strings. On the floor a bed of shells and rice-chaff alternately, about ten inches thick and eight feet by six, is spread neatly out. Some firewood is placed along the windward side of this, and when the sea breeze sets in the wood is kindled. As the heat extends to leeward, and the shells become calcined, the limeburners draw off the fore parts of them with a stick, and so soon as they have cooled on the floor sufficiently to allow them to be handled, they are placed in a scoop basket and the dirt and epidermis winnowed from them. The shells, now white and pearly, are next thrown into a small sized vat partially filled with water: here they for some time boil from the effects of the heat and slaking. The whole in a short time settles down into a fine semi fluid mass, which is taken out and slightly dried, and is now ready for use. A good hydraulic cement is formed of the blue clay of Madras, and shell lime.

Bitumen or asphalte seems to have been employed in Babylon. The works of salt and bitumen even yet around Hit, give a most singular appearance to the country, and the most learned geographers are of opinion that the town of Hit is the Is of Herodotus, whence the Babylonians drew the bitumen in which they set their bricks.

All over the East they make an exceedingly hard cement, which they use as mortar, and to form the lining of baths and reservoirs. It is made with equal parts of wood ashes, thoroughly sifted, and powdered lime; and by others with two parts of lime to one of ashes, but in either case these materials are well mixed. Water is then poured upon them, and they are well kneaded, after which the mass is beaten for six days by two men with large sticks, uninterruptedly, except at night: when it becomes a little solid on one side, it is turned over and beaten on the other, care being taken to moisten it occasionally lest it should become too dry. When thus well mixed, it is folded and turned, and beaten again and again till the sixth day, when it is ready for use. In building, this cement is laid between the bricks, which are tightly pressed upon each other; for lining it is laid upon the surface that is to be covered, and spread with a flat and polished flint, for it must not be touched with the hand, as it would burn. Three layers are put on successively, and the third is washed over with oil, but of what kind is immaterial; when it is dry, nothing can equal the beauty and solidity of this cement, which is called "saroodj." There is another description called "saroodj maghrebi," but it is not so much used: this is composed of one-third of hot lime, one of sifted sand, and one of pounded brick.—*Ferrier His. of Afghan. p.* 296-9. *Skinner's Overland Journey, Vol. II., p.* 113. *Dr. Buist in Bombay Times.*

CENOBITÆ, a genus of hermit shells.

CENOBITA RUGOSA. See Paguridæ.

CENSUS, a rough census of the population called "Khaneh-Shumari," was always made under the native princes. The dislike to a census in the east appears to arise from the necessity of mentioning their women, also a vague fear that Government is plotting some mischief against them, and a superstitious aversion to assist in rousing Divine wrath by what they consider such a display of pride as that of numbering the people.—*Burton's Sindh, p.* 381-382. See British India, Caste.

CENTAUREA. A genus of ornamental flowering plants commonly to be seen in India. The flowers are fragrant and of different shades of colour, purple, blue, yellow, white, red, brown, &c.

CENTAUREA ATROPURPUREA. The sweet Sultan.

CENTAUREA BEHEN. *Linn.*

Behen-abiad,	Arab.	Suffaid Behmen,	By.
Saw-leaved centaury,	Eng.		

CENTAUREA MOSCHATA. Musk Centaury. *Hind.* Shah-pusund. Cultivated as a flower.—*Gen. Med. Top. p.* 206.

CENTENO. Sp. Rye.

CENTIPEDES, are very common in India. The most frequent kinds are two or three inches long, but some are double that size; they are generally supposed to be poisonous, but such is not the case.

CENTRAL ASIA is a term used differently by geographers, ethnologists, and politicians, but is usually applied to the region intervening between Russia in Asia, and British India, and lying to the west of Chinese Tartary. Its western boundary is the Caspian Sea and the river Ural. On the east, is the lofty table-land of the Bolor, (the mountains which form the western boundary of Chinese Turkestan and Dzungaria), and the river Irtisch; and the northern boundary is western

Siberia, and it has Afghanistan on the south east. The northern half of Central Asia consists of the Kirghiz desert, which is mountainous and rugged on the east, and full of saline steppes on the west. In the midst of the southern half lies the sea of Aral, on the western side of which, up to the Caspian Sea on the west, there stretches a broad tract of desert. But, on the eastern side of Central Asia, is a fertile tract, watered by the great rivers the Jaxartes and the Oxus, and it is in this fertile tract that the conquests of Russia, were made between 1864 and 1868. After long years spent in fortifying posts, in 1864. Russia made a sudden irruption into the upper valley of the Jaxartes, and in that year took three forts of Kokand, viz., Aoulietta, Turkestan and Chemkend. In the spring of 1865, the chief of Kokand fell in battle, and in June 1865, the city of Tashkend was stormed. On the 20th May 1866, they fought and won the battle of Irdjar, against the Bokhariotes, and later in the year captured the forts of Oratepe and Juzak, within 40 miles of Samarcand. On the 13th May 1868, a great battle was fought under the walls of Samarcand, and the city surrendered, and later in the year Bokhara yielded. (*Fortnightly Review, July* 1868.) The whole country of Central Asia between India and Tartary is one broad mountain range, the Himalaya forming the southern crest, and the Kuen-luen the northern. The interior has some lovely valleys like Kashmir, but it is more usually broken into rocky ravines, through which the affluents of the Indus force their way towards the plains; or else stretches away in those vast treeless uplands, which are one of the chief characteristics of the range through its whole extent. The direction of this range is from east to west, trending slightly to the north, while the parallel chain that bounds Siberia to the south, and the outer crest of which is the Thian Shan, trends somewhat to the south; so that at a short distance to the west of Yarkand and Kashgar, the great interior depression of Chinese Tartary terminates, and the boundary ranges coalesce in the elevated tableland of Pamir. The ascent from Yarkand and Kashgar, westward to the table-land of Pamir, is almost imperceptible: and when that lofty position is gained, where the average elevation is probably as much as 15,000 feet above the sea, a vast open plain is seen, which stretches from the valley of the Jaxartes in one direction, across the head streams of the Oxus, to the top of the Kashgar or Chitral Valley in another. This plateau may be 700 or 800 miles in extent. It is studded throughout with lakes, and from it descend four great river systems. The Narym, which is the main stream of the Jaxartes, runs through a long, luxuriant valley, between the culminating ridge and outer range of the Thian Shan, and drains all the northern range of the plateau. The Oxus, rising in the Siri Kul or Yellow lake of Pamir, at least 300 miles to the south of the Jaxartes, receives from its right bank a multitude of small streams, which run to the south through rugged valleys, on the south-western face of the Pamir uplands. The western face of Pamir between the Jaxartes and the Oxus, is far more precipitous than the eastern. Ridges run out as far as Samarcand and Karshi and the streams from the upland which twine amongst these ridges form the Zarafshan and Karshi part of the water system of the Oxus, though before they reach that river they are entirely consumed in irrigation.

The water system of the Indus is formed on the south-eastern extremity of Pamir, where the table land is lost in the rocky summits of Muz Tagh, and a number of streams drain off to the southward, forming two subsidiary Indus systems. A culminating ridge, Pusht-i-khar or Asses Back, which runs out from the south east corners of Pamir, is the true water shed between Thibet and Kabul, the streams flowing to the southward being separated by the shoulder which joins the Hindu Kush, from the streams descending through Vakkam and Baddakhshan to the Oxus, and forming the Kabul river, which falls into the Indus at Attock, while those that flow to the south-east and are divided by the Muz Tagh range from Tartary, descend through a series of rocky valleys and precipitous gorges into the Upper Indus at Little Thibet.

From the eastern face of the Pamir again, which slopes off very gradually into the plains of Tartary, is supplied a fourth water system, in the form of a series of small streams, which passing by Yarkhand and Kashgar are ultimately lost in the sandy desert, or in some cases reach the central lake of Lob Nur.

Central Asia has a hardy peasantry, dwelling in the mountain region with its vast upland downs, well suited for summer pasture, partly descendants of the original inhabitants, and in part of the many migratory races who have swept through the country. At the foot of the mountains, in the tracts of surpassing fertility, Turk, Bokhariot, Kalmuck, Kirghiz, Oigur, Manchu, Chinese, Armenian and Indians dwell in the well watered plains. Beyond these, in every direction, is the pathless desert, which has been tenanted by pastoral nomads ever since the earth was peopled. From the Vendidad opening chapters there seems in ancient times to have been a great kingdom in Central Asia. An eastern branch, with its primæval seats on the Oxus. The Iranian people, who were settled between the Oxus and the Jaxartes, as early as the time of the Judges of Israel, still held their ground in the country, under the names of Tat, Tajik, Sert, Galsha and Parsiwan; a primitive and not impure Iranian population might be found in almost every district from the Indus to the Jaxartes, and throughout the valleys of the Oxus.

The Paropamisan chain, which bounds the Kohistan on the west, extends three hundred and fifty miles from east to west, and two hundred from north to south. The whole of this space is a maze of mountains, and though it affords a habitation to the Eimak and Hazarah, it is so difficult of access, and so little frequented, that no precise accounts of its geography are to be obtained. It is certain, however, that the range of Hindoo Coosh is there no longer so lofty as to be conspicuous among the mountains by which it is surrounded, and that no continued line of perpetual snow can any more be traced. The eastern half of this elevated region is inhabited by the Hazarah, and is cold, rugged, and barren; the level spots are little cultivated, and the hills are naked and abrupt. The western part, which belongs to the Eimak, though it has wider valleys and is better cultivated, is still a wild and poor country. The northern face of these mountains has a sudden descent into the province of Balkh: their acclivity is less on their other extremities, except perhaps on the west or south-west. On the north-west they seem to sink gradually into the plain which borders on the desert. The slope of the whole tract is towards the west. To the north of this, extending eastwardly and to the west, are the elevated plains of Tartary, the Asiatic dominions of Russia, Chinese Tartary, and China, and the regions occupied by several Turkoman nations. To the south is India with its two peninsulas and its archipelagos on the east, with the dominions of Persia and Turkey in Asia and Asia Minor, and the peninsula of Arabia on the west. The Caspian Sea, inland sea with Russian territory on the north and west, and Persia on the south. According to Strabo (*lib.* xi.), all the tribes east of the Caspian were called Scythic. The Dahæ were next the sea: the Massa-getæ and Sacæ more eastward, but every tribe had a particular name. All were nomadic; but, of these nomads, the best known are the Asi, the Pasiani, Tachari, Saccarandi, who took Bactria from the Greeks. The Sacæ made irruptions into Asia, similar to those of the Cimmerians, and possessed themselves of Bactria and the best district of Armenia called after them Saca-senæ. Of the first migrations into India of the Indu Scythic Gete, Takshak, and Asi, that of Sehesnag from Sehesnagdes (Takshac from Techaristhan) six centuries before Christ, is the first noticed by the Poorana. About the same period a grand irruption of the same races conquered Asia Minor, and eventually Scandinarva, and not long after the Asi and Tachari overturned the Greek Kingdom of Bactria. The Romans felt the power of the Asi, the Catti and Cimbri from the Baltic shore. Colonel Tod (*Vol.* I. *p.* 49.) supposes the Asi and Tachari to be Aswa and Takshac or Toorshka races of the Poorans of Sacadwipa. The Dahæ to be the Dahya, now extinct, one of the 36 Royal Rajput tribes, and he supposes them to be the descendants of Baldeva and Yudishtra, returned under different appellations. The country on the east is still occupied by the Turkoman race.

The geography of the Vedic hymns confirms the theory that the Arian race migrated from Central Asia about seventeen centuries before Christ, entered India by the north west, dwelt during the earliest Vedic portion in the Punjab, and migrated or fought their way into Hindustan and Central India during the five centuries that succeeded. From the frequent mention of the Suraswati and other rivers, we learn that the Punjab was at one time the locality of the Vedic Arians. The fathers of the Arians originally inhabited Iran Proper, the Land of Pleasantness, and they left it only in consequence of a convulsion of nature, by which a great alteration in the climate was caused. When the climate was altered by some vast disturbance of nature, the Arians emigrated. They did not, however, follow the course of the Oxus, or they would have come in the first instance to Bactria, and not to Sogd. Their course, therefore, was more northerly. Its present climate is precisely what the record describes it to have been when the changes produced by the above commotion took place. It has only two months of warm weather. In the course of the Arians, after their expulsion from the primeval country between Sogdiana and the Sutlej, they formed, by the conquest of fourteen countries, as many kingdoms in the whole of the eastern part of Central Asia and India Proper, in the country of the Indus and its confluence. In the intervening countries, they passed amongst the Turanians (Scythians and Turcomans), and there is evidence that the inhabitants whom they found in India were likewise Turanians. The main direction of these travellers was southerly, and on the southern bank of the Caspian is a group the nucleus of the Arian Media. Amongst the Arian hindu, the sacrifice of a horse, the Aswamed'ha, seems to have been practised in their religious rites. There are two hymns in the Rig Veda describing the rite, and which leave no doubt, that in the early religion of the race, this sacrifice, as a burnt offering to the gods, was had recourse to. It was even then, however, falling into disuse, and was existing as a relic of an ante vedic period, imported from some foreign region, possibly from Scythia, where animal victims, and especially horses, were commonly sacrificed. And in still later times, the Aswamed'ha consisted in certain ceremonies ending in the liberation of the horse, as throughout Southern India is still practised with a bull or cow, many of which are met with in every village, freed or let loose in the name of Siva or Vishnu.

The Eimak who graze their flocks in the Parapamisus, are brave and relentless, and Affghans when travelling, whether proceeding from Balkh, Kabul, Kandahar or Herat, never enter into the mountain districts of these intrepid nomad tribes. One of the Eimak tribes is known as the Feroz Kohi after the city of that name about 63 miles from Teheran. Timur, exasperated at the depredations which they committed, transported the whole of them into the mountains lying between Persia. According to Prof. A. Vambery, the Uigur are the most ancient of the Turkish tribes, and formerly inhabited a part of Chinese Tartary, which is now occupied by a mixed population of Turk, Mongol and Kalmuck. They were the first who reduced the Turkish language to writing, borrowing the characters from the Nestorian Christians, who came to their country as early as the fourth century of our era. The manuscripts of this language, written in the characters mentioned, afford, therefore, the most ancient and valuable data in investigating the history of Central Asia—nay of the whole Turkish race. But these monuments are of great scarcity; he believes he has collected all that has been discovered of the Uigur language, though the Uigur had a literature, and were very fond of books at a time when the Western world was involved in ignorance and barbarism. The most valuable manuscript he obtained bears date 1069, and was written in Kashgar; it treats of ethics and political subjects, and forms a kind of manual of advice to kings how to govern with justice and success. It reveals the social condition of this people, and forms the basis of the later regulations by which all Turks are governed. He believes that the Tartars of ancient time were not such barbarians as they now are. Since the year 1864, Russia has been making great progress in absorbing the kingdoms of Central Asia. In their operations, the Russians used only 2,000 and 3000 men, and never had more that 15,000 in all Turkestan. Many emeralds come from Russia, Siberia, and Central Asia to India.—*Powell Handbook. CENTRAL INDIA was the Madhya-desa, the middle region or Aryavarta, the Arya country. In a slokam in the Sanskrit work, the Amarakosha, the ancient boundaries of it are thus defined,

" Ariavartaha punia bhumi hi
Mad'hiam Vindhya Himava yoho,

i. e, the Arian country, the sacred land (lies) between the Vindhya and Himalaya," in this way indicating both the ruling race and the boundaries of the country held by them, at the time that Amaru Sinha wrote the Amarakosha. The first dynasty was the Bharata so called from the first king Bharata, and the last of the dynasty was Samvarama, who was driven westward by the Panchala of Canouj B. C. 589. The Bharata kingdom seems to have been established B. C. 2600 to B. C. 2200. Central India is a table-land of uneven surface, from 1,500 to 2,500 feet above the sea, bounded by the Aravalli mountains on the west, and those of the Vindhya on the south, supported on the east by a lower range in Bundlecund, and sloping gradually on the north-east into the basin of the Ganges. It is a diversified but fertile tract. The *Patar,* or plateau of Central India, is distinct from the Vindhya to the south and the Aravalli to the west, and its underlying rock is trap. Aravalli means the refuge of strength, and these hills have afforded protection to the most ancient sovereign race in the east or west—the ancient stock of the Suryavansa, the Heliadæ of India, or children of the sun, the Princes of Mewar, who when pressed were wont to retire to its fastnesses, only to issue again when occasion offered. The Aravalli are hills connected by lower ranges with the western extremity of the Vindhya mountains on the borders of Guzerat, and stretching up to a considerable distance beyond Ajmir, in the direction of Delhi; forming the division between the desert on the west and the central table-land. It would be more correct to say the level of the desert, for the south-eastern portion, including Jodpur, is a fertile country. Amarkantak, a great plateau, forms the watershed of the Mahanadi, Son, Tons, Johilla, and Nerbudda. The rivers, though large and full of water even half way from their mouth, are very irregular in the slopes of their beds, and are disturbed by frequent rapids, so that owing to these impediments, increased still further by the rocky character of the river beds or their banks, navigation is limited for the most part to the lower portions of their course. Many parts of Central India are covered with dense jungle, and the trees in some of these tracts approach to a size which would almost warrant their being described as forests; but with the exception of Rewah, of the forest capabilities of which state there is no accurate information, the timber to be obtained from these tracts is rarely of a valuable or even useful description. (*Ann. Ind. Adm. Vol. XI.*, p. 319). The principal states in Central India are six in number,—Gwalior, Indore, Bhopal, Dhar, Dewas, and Jowra, of which two, Bhopal and Jowra, are mahomedan, and the rest Mahratta. Besides these there is a multitude of petty states held under the immediate guarantee of the British Government, but having feudal relations with one or other of the larger states, and occasionally with more than one. The multiplicity of petty chiefs, and the peculiarity of the tenures on which they hold their states, founded as they are on the measures adopted for the pacification of the British Government in Central India and Malwa, necessitate a more minute interference in the affairs of the chiefs than it is usual or expedient to exercise in the states of Rajpootana. Under the Mahrattas, as had previously been the case under the mahomedan governors, the petty chiefs in Central India exercised but limited powers within their respective states; and on the establishment of British supremacy in these provinces, the officers of the British Government naturally assumed the position of arbiters of all differences by which the public peace could be disturbed, and of high judicial functionaries, to whom all sentences of life and death were referred, except in the case of offences committed within the jurisdiction of the larger states, which had vitality enough to preserve peace within their limits. In the case of substantive states, it is only when the offender belongs to one state and the plaintiff to another, that the representative of the British Government adjudicates the case. Jurisdiction, moreover, always rests with the Political Agents both in Central India and Rajpootana, and with respect to the larger as well as the minor states, where British subjects, Native or European, are either plaintiffs or defendants, except in cases provided for by Acts I of 1849 and VII of 1854. In 1863 the Begum of Bhopal appealed against the exercise of such powers by the Political Agent at her court as a violation of the 9th Article of the Bhopal Treaty of 1818, and claimed the right, under certain arrangements, made with the Political Agent in 1847, to try in her own courts British subjects guilty of offences within her territories, and the surrender of British subjects guilty of such offences when apprehended in British territories.—(*Treaties, Engagements, and Sunnuds. Vol.* IV, *pp.* 195, 196 & 197.)

At the close of the Pindaree war, the districts in Central India and Malwa were left in a disorganized state, the Mahratta chiefs had parcelled out amongst themselves the possessions of the Rajput chiefs and the smaller states were all subject to Sindia, Holkar or the Puar, and sometimes to all three. Many of the smaller chiefs had been driven from their possessions, and had sought refuge in the jungles and mountains where they robbed or levied Tankkhah or blackmail from the larger states. These robber chiefs were twenty-four in number at Sir J. Malcolm's time.

The feudatory territory, consisting of 71 states supervised by the Central India Agency, the head quarters of which is Indore, forms three grand divisions. The North East division comprises the native states of Bundlecund and Rewah. The Northern division consists of the Northern and Central districts of the Gwalior States. The South West division comprises the table-land known in modern times as Malwa, though far within the ancient limits of the province of that name, and the submontane territory between it and the Nerbudda, as also a considerable tract south of that river, extending to the Kandeish frontier. The first, extending from the Bengal Presidency in the east to the Gwalior State in the west, includes Rewah and 35 other states and petty chiefships. Its area is about 22,400 square miles; its population about 3,170,000 souls, and its public revenues aggregate about Rupees 63,58,000. The 2nd or Northern division extends from Bundlecund and the Saugor district, and has an area of about 19,505 square miles; its population is about 1,180,000 souls, and its public revenue about Rupees 67,65,000. The 3rd or South West division goes on westward to the Bombay Presidency, and contains the remainder of Gwalior, Holkar's states, Bhopal, Dhar, Dewas and other small states. The area of this division is about 41,700 square miles, its population about 3,320,000 souls, and its public revenues about Rs. 1,30,00,000. The states and petty chiefships in the whole territory comprised within the Central India Agency are thus classed (*Ann. Ind. Adm. Vol.* XI. *p.* 340)

* *Sic* in origin.

Their aggregate general statistics are in area about 83,600 square miles; population 7,670,000 souls, annual revenues Rs. 2,61,23,000.

The country and people vary greatly in their character. Nothing can be a greater contrast than the desolate wilds and jungles of the Western Sathpoora hills and parts of the country extending from them to the Vindhya with their savage inhabitants, the Bheel tribes, who abhor field, or, indeed, any other manual labour, and the adjoining richly cultivated plains of Malwa, extending, with occasional intervening tracts of hill and jungle, from the Mhye on the west, to Bhilsa on the east, a stretch of close on 200 miles, and from the crest of the line of the Vindhya to Mundissore and Oomutwarra, a distance of from 100 to 120 miles, and populated by a thrifty, agricultural people. This is succeeded by the more hilly and jungly land of Oomutwarra, Seronje, and Keechiwarra, with their scanty population. Northwards towards Gwalior, the country becomes more open, except on the wild border tracts of Kotah of Bundlecund till we come to the carefully cultivated plain of Gwalior, stretching for a distance of 140 miles between the Chumbul, Pahooj, and Sind rivers. A vast portion of Bundlecund is hilly and unproductive, forming the northern slope of the tableland of the Vindhya; but the scenery is strikingly grand. (*Ann. Ind. Adm., Vol.* XI., *p.* 341.)

Rewah is almost unknown to Europeans. It possesses great mineral wealth. Its plains are fertile, but the valley of the Soane to the south of the Kymore range is desolate. The people of Rewah are described as indolent and untrustworthy; and they, and the country generally, are certainly far less civilised than the neighbouring states and people of Bundlecund. Though widely different in other respects, there is one characteristic common to the Baghel of Rewah, the Boondela of Bundlecund, and the Rajpoot of Gwalior and Malwa,—a dislike to labour or service away from their homes, so that they do not generally take an active part in the business of tilling the soil, such being, as a rule, left to the inferior and servile classes.

They are throughout the territory generally regarded as the local heads of society or of the village communities to which they belong, and many of them possess much influence amongst those around them as the representatives of the ancient families of the respective clans, but the condition of the Rajpoots in the states of Central India is most miserable and pitiable.

The numerous settlements mediated under Sir J. Malcolm's authority, were principally on behalf of the hereditary claims of the heads of these classes, who having been dispossessed of their estates, and in many instances driven to the jungles, were at that period (under the designation of "Grassiahs" and "Londiahs") the local, as the Pindarees were the general, pests of the country, their whole subsistence being obtained by violence and marauding. (*Ann. Ind. Adm., Vol.* XI, *p.* 312.)

In Bundlecund and Rewah—differing in this respect from Central India—there is no decadence among the clansmen, the old families still hold the land. (*Ann. Ind. Adm., Vol.* XI, *p.* 343.)

Trade is chiefly carried on in Malwa and at Gwalior. In Malwa the principal marts are Indore, Bhopal, Oojein, Mundissore, Rutlam, Dhar, Jowra, Augur, Neemuch, Shoojawulpoor, and Bhilsa. Opium chiefly is sold, except at Bhopal and Rutlam, where there is cotton. (*Ann. Ind. Adm., Vol.* XI., *p.* 347.)

The ruling races are Jats or Jit (the ancient Getæ), Rajput, Mahratta, hindu, mahomedan, Gond, Bhil and Ho. The Bheel inhabit the northern part of the chain of ghauts running inland parallel with the coast of Malabar. On one side they are bordered by the Kuli, and on another by the Gond of Gondwana. They are considered to have been aborigines of Central India; and like the Kuli, Gond, and Ramusi, are bold, daring, and predatory marauders, and occasionally mercenaries, but invariably plunderers. The northern part of the chain of ghauts, and the country at its base, is inhabited by Bheels; that part to the south of Banglan and the country at its base, as far south as Bassein, is inhabited by Kuli, a tribe somewhat resembling the Bheel, but more civilized and less predatory. The Bheel possess the eastern part of the range, and all the branches that run out from it towards the east, as far as south of Poona; they even spread over the plains to the east, especially north of the Godavery, and the neighbourhood of the Wurda. On the north, they extend beyond the Taptee and Nerbudda. Both the Bheel and the Kuli are numerous in Guzerat. South of Poona the Bheel are succeeded by the Ramusi, a more civilized and subdued tribe, but with the same thievish habits as the Bheel. They have no language of their own, are more mixed with the people, and resemble the Mahratta in dress and manners; whereas the Bheel differ from the rest of the people in language, manners and appearance. Of the latter Mr. Elphinstone remarks, that although they live quietly in the open country, they resume their wild and predatory character whenever they are settled in a part that is strong, either from hills or jungle. The Ramoosi do not extend farther south than Kolapore, or further east than the line of Bejapoor. The Bheel, the Kuli of Guzerat, and the Gond, are considered to be remains of aborigines of India. The two latter classes here alluded to, have maintained more of their original character than the Bheels: they have probably been less disturbed. The Bheel, however, have constant accessions to their numbers from the plains; and wretches of desperate fortune, such as have by crime and misfortune been ejected from their caste or profession, flock to their standard. Hence a variety of feature is observed: hindus of all descriptions, mahomedans of every sect, are here mingled together, and engaged in the same pursuits. They all indiscriminately eat beef and pork, and drink toddy and arrack.—*Coleman.*

The physical features of Central India, including Oodeypore, Malwah, Bhopal, Bundlecund, and Shahabad, may be thus epitomized.

It extends by the Aravalli, Dongupoor, Vindhya, Bindyachal, Panna, and Bandait ranges, 73° to 84°, about 700 miles long; breadth very various, greatest from Amjherra to Ajmeer, 250 miles; from Mhow to Mokundurra, 150 miles; at Saugor and Dumoh, 75 miles; afterwards very narrow.

It is highest towards S. and W.; average of Oodeypore, 2,000 ft., Malwah, 1,500ft. to 2000 ft., Bhopal, 2,000 ft., Bundlecund, about 1000 ft., Shahabad, 700ft., Plain of Ajmere, 2,000ft., Oodeypore town, 24°37′; 73° 49′; 2,064ft. slope to N.E., the Banas river flowing in that direction; gradual fall also to the valley of the Chumbul river, where it rises to Malwah; Mhow, 2,019ft. Dectaun, 1,881ft. Dhar, 1,908ft. Indore, 1,998ft. Crest of Jaum ghaut, 2,328ft. Oojein, 1,698ft. Adjygurh, 1,340ft. Amjherra, 1,890ft. Saugor, 1,940ft. Rhotosgurh, 700ft. Sonar River, at source, 1,900ft. From the Vindhya range, the surface has a generally gradual, but in some places abrupt descent; as at Mokundurra, and the Bindyachal hills, where the rivers occasionally fall over the brow in cascades. Shahabad district is very rocky and uneven. Tin and copper are found in Oodeypore. In Bhopal the prevailing geological formation appears to be trap overlying sandstone. Minerals are few and unimportant. Water is very plentiful. The mineral resources of Bundlecund appear to be considerable.—*Ann. Ind. Adm. Vol.* XI., *p.* 312, 343. *Treaties, Engagements, Sunnuds, Vol.* II., *p.* 195, 197.

CENTRAL PROVINCES, is a term by which, under a Resolution of the Government of India during Lord Canning's rule, the provinces of Nagpore and the territories of Saugor and Nerbudda were united under a Commissioner of the Central Provinces. They consist of perhaps the grandest plateau on the face of the globe, more than half of which is covered by the densest jungle, where the wild beast finds its lair and the Gond savage a precarious subsistence. The plateau is in the very centre of the peninsula. From it, as a focus, radiate the great rivers of the Deccan. To the north flow the Soane into the Ganges, the Cane, the Betwa, the Sindh and the Chumbul into the Jumna. To the west are the Taptee and Nerbudda, and to the East the Wein Gunga, Wurda and Pein Gunga, which form the Godavery. What the Kuen Lun mountains are to the river system of Central Asia and the Himalaya to Northern India, that is the Mahadeo range to the Deccan. It is true that the Godavery and Nerbudda series of rivers are little more than mountain torrents, but engineering science will do much for their navigation, and railways with their feeders will supplement them. On this vast tableland there is soil of surpassing fertility: wood, whether useful like teak or ornamental like ebony, which, with proper conservation, is inexhaustible, and such mineral resources as coal, iron, precious stones and gold. Here, but for the want of population, all the emigrants of England for the next decade might settle and grow rich. The area is 111,238 sq. miles, of which 47,299 are unculturable, and in 1868, about half of the remainder was under cultivation. In 1862, they yielded 80 lakhs a year, but in 1867, the revenue had increased to 120 lakhs. The Satpura range runs 1800 miles, with an average breadth of 60 miles. The Chouradadur plateau is 100 sq. m., and the Nowagaon lake is second only to the Deybur lake in Oodeypoor.

CENTRE DIVISION, a term applied to a Madras military command around that city; there are six military cantonments in it: Madras, St. Thomas' Mount, Arcot, Palaveram, Vellore, Poonamallee, with about 5,600 soldiers, and it provides for the Chinglepput, Nellore, N. and S. Arcot Collectorates.

CENTRANTHUS RUBER.

Jallukree, HIND. | Valerian. ENG.

An ornamental annual, colours of different species are red, blue and white. Valerian grows wild in some of the upper parts of Bengal.—*Riddell.*

CENTROPUS CHLORORHYNCHOS. See Aves. Birds. Ornithology.

CEPHAELIS IPECACHUANA. The roots of this plant are the part used. It is a native of New Granada in Brazil, and its emetic effects were known from time immemorial; it received from the Portuguese the name of 'rais d'oro,' or golden root. The father of the celebrated Helvetius established its utility, and was rewarded by Louis XIV. with a thousand *louis d'or*. The roots of the *Viola parviflora*, the *Psychotria emetica*, and several other plants, have been occasionally used to adulterate ipecachuana.—*O'Shaughnessy, page* 381. For Indian substitutes for ipecachuana, see Calotropis, Crinum, Randia, Pæderia, &c. &c.

CEPHALANTHUS PILULIFER. LAM. Syn. of Nauclea parviflora. PERS.

CEPHALOPODA. The fossil Cephalopoda of the cretaceous rocks of Southern India are thus enumerated by Prof. Oldham, Superintendent of the Geological Survey of India:—

Belemnites fibula, *Forbes*, at Ootatoor, Trichinopoly, B. stilus, *Blandford*, B. seclusus, *Blandford.*

CEPHALUS. In the Greek mythology was Phæton the son of Cephalus and Aurora. The former answers to Aruna, the hindu bird-headed messenger of the sun. The hindu Aruna is the Aurora of the Greeks, who with more taste have given the dawn a female character. —*Tod's Rajasthan.* See Arun. Saraswati.

CERA. SP. IT. LAT. Wax.

CERALLACCA, also, CERA DI SPAGNA. IT. Sealing Wax.

CERAM. The cluster of islets lying at the south-east extremity of the large island of Seran as it is called by the natives, or Ceram, as it is laid down in the maps, are known by this appellation. They are situated in latitude 30° 55′ south, and in L. 133° E., and form one of the most remote trading stations to the eastward, from which the produce of the Archipelago is conveyed in native vessels to this port. The Island of Ceram is the second in size of the Moluccas, having an estimated area of about 10,000 square miles. The mountains are from six to eight thousand feet in height, sending down innumerable streams to the sea. The vegetation is every where luxuriant, and the trees gigantic. Admiral Keppel had in his possession a circular slab of wood from the Island, three and a half inch thick, eight and a half in diameter. The sago palm in particular is more abundant and productive, than on any of the adjoining islands. Cloves and nutmegs grow wild. (*Keppel's Ind. Arch., Vol. II, p.* 196.) The names of the several islets which compose the Ceram group are Seraureh, Gesir, Kaliwaroo, Gorong, Manokoo, and Malomgee. Of these, the two largest are Gorong and Manokoo, and are the only ones of the group which exhibit any appearance of fertility: they are represented to be hilly and covered with wood, except where cleared for the purposes of cultivation, which however seems confined to the little rice which is grown on them. They produce fruit trees in considerable abundance, and among them the durian and mangoosteen, as also the wild nutmeg, the cocoanut and sago palm, the latter supplying to the natives the chief article of subsistence. Ceram has on its western side the three islands Bonoa, Kelang and Manipa. The various articles of commerce, the produce both of sea and land, which are brought from these islands consist of tortoise shell, mother o'pearl shell, beche de mer, wild cinnamon, wild nutmegs, and birds of paradise. The natives themselves, however, of the Ceram Laut islands have never visited this port, the trade to it from thence being exclusively carried on by the Bugi, the Phœnicians of the Eastern Archipelago, of whom a few are settled on the island, while others resort there as a trading station. (*Bikmore*, 253.) Ceram is the largest island of the Moluccas; and, next to Celebes, of all the Archipelago. It is 162 miles long, but its greatest breadth is only 42 miles. The island is one long mountain chain that sets off transverse spurs, and some of the peaks are 5,000 or 6,000 feet in height. (*Bikmore*, 210.) The people of Ceram approach nearer to the Papuan type than those of Gillolo. They are darker in colour, and a number of them have the frizzly Papuan hair; their features are harsh and prominent, and the women are far less engaging than those of the Malay race. The Papua or Alfuro man of Ceram gathers his frizzly hair into a flat circular knot over the left temple, and places cylinders of wood, as thick as one's fingers and coloured red at the ends, in the lobes of the ears. They are very nearly in a state of nature, and go almost naked, but armlets and anklets of woven grass or of silver, with necklaces of beads or small fruits, complete their attire. The women have similar ornaments, but wear their hair loose. All are tall, with a dark brown skin, and well marked Papuan physiognomy. (*Wall.* ii. 41.) The Alfuro of Papuan race are the predominant type in the island of Ceram. Of twenty-eight words of the language of Ceram, nine of the words are Malay, two Javanese, and seventeen are common to these two languages. Casuarius galeatus inhabits the island of Ceram only, and like the cockatoos, crown pigeons, and birds of paradise, of the last island, made known to the inhabitants of the through the Malay and Javanese, who have immemorially carried on a trade with the country of the Papuans. It is a stout strong bird, standing five or six feet high, and covered with long hair like feathers. Its head has a large horny casque or helmet. The Ceram box manufacture has recently excited a degree of interest from the close resemblance it bears to the ornamental work of the North American Indians. A corresponding manufacture is met with in Borneo, with similar ornamental work of shells or wampum, but coarser. See India, p. 319 and 350. Keffing Islands. Kyaboka. Ceram Laut, New Guinea, Papuans.

CERAMBYCIDÆ. In about two months in 1854, Mr. Wallace collected 700 species of beetles in Singapore; a large proportion of these were quite new, and among them were 130 distinct kinds of the elegant longicorns. —*Wallace, I.* 24.

CERAMIC MANUFACTURES. The manufacture of China Porcelain, Earthenware, &c. is an art that may still be said to be in its infancy in India, as no great perfection has been attained in any branch.

Earthenware or Common Pottery.—There are three distinct branches of this manufacture, which though similar in their manipulation, are different in their results. The most common kind is the red porous earthenware used for pots and cooking vessels, the black used for similar purposes and the fine white which resembles some of the biscuit earthenware of Europe.

The red porous earthenware differs very materially in quality according to the locality from which the clay is selected—some are made of a common coarse earthy loam which has very little tenacity, and yields a brittle kind of pottery neither susceptible of much finish nor of being glazed. Most of the pottery of India is of this description, it is made on a curious principle which is unknown in other countries, but which has probably been followed for many centuries in India. The vessels which are mostly of a round form are thrown thick in the neck and upper parts or sides. They are cut off the wheel and left open in the bottom with vertical sides, they are then allowed to harden a little in the necks, and as soon as they will bear to be handled the sides are thinned out by beating with a flat mallet upon a rounded stone or very hard round piece of wood held inside the vessel, which is turned about and beaten till it is closed. This is a very tedious and unsatisfactory mode of working, and the only recommendation is, that it makes a thin light vessel, but at a great sacrifice of time; from 10 to 28 of these is a good day's work, while a skilful European thrower will turn out 800 in the same time. Good samples of this quality of earthenware were exhibited from Travancore, at the Madras Exhibition, they were made from a fine smooth micaceous loam and the general forms are good though heavy. A finer description of this ware was exhibited from Hyderabad, made from a tough smooth plastic clay, and the articles were remarkable for elegance of form and extreme lightness of throwing. Some of the vessels are ornamented with gold leaf and coloured lac varnishes; others had been made in imitation of Bederi ware, some were painted white on a red ground; a few appeared to have been glazed and coloured with a soft lead glaze. On the whole this collection exhibited a marked improvement on the ordinary manufactures of this class; tasteful forms and light throwing being combined, and a good effect having been produced with simple means. Captain Ivie Campbell, Offg. Deputy Commissioner, E. Dn. R. Doab, thus remarks upon the pottery sent from Raichore to the Madras exhibition, "There is but one family in Raichore which can make this description of pottery, they are christians long established here, and the party to whom the amount of prize has been paid was, by Rajah Chundu Lall, presented (probably on account of his skill) with a small ruined hamlet in Mukta, and which has been continued to him by order of the Resident. A brother of his resides at the Beebee ka Chushma at Hydrabad, but the same quality of clay is not procurable there, and his work is stated to be inferior; much of what he sells in the city, gilt chillums, &c., he receives from his brother here. How far his account of the composition of the glaze used can be depended on I cannot say, he states that no lac is used except in fixing the gold leaf. The following is the account given by him :—

24 parts Moordar Sing or Litharge.
3 do. Gar ke Puttur, a stone resembling white quartz common here.
1 part Copper.

Sendoor, or the red oxide of lead, may be substituted for the Litharge. The Gar ke puttur should be well burnt, slaked in cold water and afterwards reduced to a fine powder and mixed with the litharge. The copper is mixed with its weight of finely powdered sulphur and heated in a crucible till a green scale has formed on it, it is then finely powdered and mixed with the Gar ke puttur and litharge. The whole is again heated and reduced to a fine powder once more. A small quantity of this powder is well mixed with wheat starch and kneaded well for some time, water is then added and it is strained through a fine cloth, and the glaze is gently rubbed in with the hand, after which the pottery is baked." This process of glazing pottery is very similar to that practised in Italy, Germany and some parts of England, where paving tiles, green flower pots and common red earthenware, are manufactured. The Gar ke puttur is probably either white felspar or pegmatite, a variety of granite very abundant in Southern India, and composed of three parts felspar and about one part of quartz, but at the bangle works at Loonar lake, the stone is chalcedony. The clay which is employed is probably more refractory than the common red clays of India, most of which begin to lose their shape or to become spongy at the temperature for melting such glazes.

Antique pottery.—The finest specimens of common earthenware are the ancient funeral, domestic and cooking vessels, dug out of the old tombs in the districts of Coimbatore and South Arcot. This kind of pottery has been found in many parts of India in tombs usually arranged in circles, each tomb being built of six slabs of stone and occasionally surmounted by large mounds of loose stones and earth. They have been thought to resemble the Druidical tombs of England, and are supposed to be of great antiquity, there being no records of them extant. The pottery found in them usually consists of tall narrow cinerary urns of 18 or 20 inches in length, with three or four clumsy feet, four inches in length, and of a variety of round oval and flattened vessels of different shapes and sizes, some having apparently been used for cooking and others as drinking vessels. The tall urns usually contain burnt human bones, teeth and ornament of brass, or copper, they are made of a coarse clay, and have not been finished with care, some of the flattened oval and rounded vessels are made of a fine dense clay that has been carefully prepared, the surfaces are variously ornamented with wavy or crossed lines of red and yellow, carefully painted. The pottery appears also to have been smeared (it resembles the potterie antique vernissee et lustree figured by M. Brongniart.) There is great purity of form in most of the vessels, which resemble the Etruscan in the precision of the curves and in the angles at which the different surfaces meet. The art of pottery appears to have deteriorated in India since these samples were made, and one branch of it is apparently lost, viz., the smearing or thin glazing on the surface.

Black Earthenware.—This is a mere variety of the Red, and in most instances it is the same kind of pottery blackened by the simple process of damping or checking the fire when it is beginning to decline, and thus throwing a great deal of smoke amongst the wares when the heat is not sufficiently intense to burn it off. A better and stronger kind of black earthenware is manufactured at Bangalore from a fine dense clay that contains both manganese and iron. This approaches the black stoneware of Egypt, and is strong and sonorous when struck; some good samples were also exhibited in the collection of colored Terra Cottas from the Madras School of Arts.

White Earthenware.—Some light and elegant samples of goglets, butter pots and vases, were exhibited by the Arcot Local Committee. These were considered deserving of a Second Class Medal. This branch of the Art differs from the others in being conducted with more care and cleanliness, some attention being paid to the sifting of the materials and to the ornamenting and finishing of the articles. The material selected is a decaying white granite resembling the Cornish stone of England or the grauen of Germany. This is carefully washed and decanted to free it from sand or impurities ; it is then allowed to subside, the water is poured off and the soft clay is collected on a clean cloth and laid on a heap of white wood ashes to dry ; a small per centage of alkali is thus absorbed through the cloth and is incorporated through the mass by kneading. This clay or decayed white granite is the true kaolin or porcelain earth of China and Europe. It is particularly abundant in India and occurs in beds of enormous extent and of every variety of color. It possesses the valuable qualities of combining with a large percentage of silica, felspar, baryta or other stony bodies and of resisting the most intense heats, but in India it is employed alone and produces a soft brittle porous ware which is not susceptible of being well glazed. Numerous attempts have been made to glaze this description of pottery, but the glaze crazes or cracks all over the surface and allows water to penetrate to the body. The reason is that the kaolins require flint, felspar, or stone to open them, and exposure to a long continued and steady heat before they are thoroughly burnt in the biscuit state. They also require a hard fritt or porcelain glaze, which cannot be prepared without expensive machinery, the firing also involves a great consumption of fuel as the heat must be kept up steadily for 40 or 60 hours.—*M. E. J. R.*

CERAM LAUT. A cluster of islets lying off the south-eastern extremity of the large island of Seran, or Ceram in lat. 3° 55′ S. and 133° E. They produce tortoise shell, mother o'pearl shell, beche de mer, wild cinnamon, wild nutmegs, and birds of paradise. Ceram Laut is the most westerly and the largest of the range of small islands which extend 15 or 18 miles E. & W. Ceram Laut means Ceram lying to seaward. The islands are low. The Keffing group consist of 17 islands. Their inhabitants resemble those of the S. coast of Ceram, and are not of the Papuan or negro race ; they are great traders and constantly visit New Guinea and purchase birds of paradise. Luri, crows, pigeons, megapodiidæ and scented woods. Ceram Laut is the great place to which the Bugi carry the Papuan slaves whom they steal from New Guinea. Ceram Laut, and Goram are seldom visited by Europeans. The natives of the Ceram Laut islands repair chiefly to the northern coast of Papua, or the island of New Guinea, from which they are distant only about a day's sail, to procure the various articles of produce we have mentioned—that part of this vast island being called, by the Bugi, Papua Nothing. Mother o'pearl shells are however procured by the Bugi themselves in greater quantities at the Aroo islands. The Papuans of New Guinea, it seems, have not yet been made acquainted with the use of firearms among themselves; they have the sumpit or blow-pipe, but their principal weapons are the bow and arrow, and a light spear or lance. Although the inhabitants of the Aroo islands are represented by the Bugi as being of the same race as the Papuans, they enjoy as much more unrestricted intercourse with the inhabitants, who trade freely with them and permit them to settle. Mother o'pearl shell is obtained here in great quantities, and tortoise shells and trepang or beche de mer, are also procured. The Aroo people employ their Papuan slaves in diving for the mother o'pearl shell, and in fishing for beche de mer. The people of the Ceram isles appear to have themselves little or no communication with the Aroo islands.—*Journ. of the Ind. Arch. December* 1852, *p.* 690 691. *Horsburgh. Bikmore* 242.

CERASTIUM INDICUM. *W. & A.* Chickweed. *Eng.*

CERASUS, a genus of plants of the Natural order Amygdaleæ, which, in Britain, are arranged into the true Cherries, the Bird Cherries and the cherry laurels. Wallich and Roxburgh mention C. Nepalaisis of Nepal and Kamaon. Puddum of the Himalaya, and C. triflora of China. Dr. Cleghorn mentions "Gilas" the Kashmir cherry, as one variety of cerasus, and Aru ballu, the Kabul cherry, as another variety of cerasus, both grown in gardens of the N. W. Himalaya. Voigt says there is a species of cerasus or cherry, "a native of Maulmain," but Mr. Mason has never happened to meet with it. He had however good authority for the statement, (and Griffith remarks), that there is in the Tenasserim Provinces one species of the almond tribe "which abounds in prussic acid."—*Mason.*

CERASUS CAPRONIA ? Cherry tree. A native of Europe, the Himalaya, Caucasus, &c. In Cashmere it is called *Aloo bal*[illegible]. The kernel of this fruit contains the elements of hydrocyanic acid, and is accordingly much used for communicating its peculiar flavour to brandy and liqueurs.

CERASUS CORNUTA. ROXB.
Prunus padus. *Linn.*

Bird Cherry,	ENG.	Jamuna,	PUNJAB.
Himalaya Bird Cher.	,,		

This is found in the Sutlej valley between Rampur and Sungnam at an elevation of 7000 to 10,000 feet about Simla. It grows to a large size and its wood is esteemed.—*Cleghorn Punjab Report, p.* 65.

CERASUS JAPONICA, the Dwarf Almond, a native of Japan, but long known in English gardens as the Double Dwarf Almond. It is one of the most beautiful objects that appear in the month of March.—*Eng. Cyc. page* 827.

CERASUS LAURO-CERASUS. The Cherry laurel, a native of Trebizond and Afghanistan, cultivated in Europe. The distilled water of the leaves is much used in Europe as a vehicle for opiates and other anodyne medicines. It is given in doses of from half an ounce to one ounce. The distilled fluid is a most dangerous poison.—*O'Shaughnessy, page* 827. See Cinnamomum.

CERASUS PSEUDO-CERASUS. The Chinese Cherry.—*Eng. Cyc. page* 827.

CERASUS PUDDUM.

Prunus puddum. LINDLEY.

Common Bird Cherry	ENG.	Paddam	PUNJAB.
Cherry	,,	Chumiari	„
		Amulguch	„

This is found in the Sutlej valley between Rampur and Sungnam at an elevation of 3000 to 7000 feet. Occurs in Kaghan as far as the Indus. It is a sacred tree among the hindus. The bark is called *pudmak*, and used in medicine by the natives, as it is also in America.—*Clegh. Punj. Report on Kullu and Kangra, p.* 65, 81.

CERASUS SERRULATA, the Fine-toothed Cherry. A native of China.—*Eng. Cyc., page* 287.

CERASUS VULGARIS. *Prunus Cerasus*, LIN. The common Cherry. Is found wild in the woods of Asia Minor, where it acquires a very large size. Dr. Royle considers the cherry to be wild in Cashmere.—*Eng. Cyc. page* 826.

CERATONIA SILIQUA. W. Carab Tree.

Carab Tree	ENG.	Nubtee	ARAB.
Khirnoob shamee	ARAB	Kharroub	„
Saint John's Bread.		Carab tree Fruit.	

The Carab tree has been introduced at the Saharunpore gardens. The pods sell in the bazar at ten rupees a seer, or five rupees a pound.—*Spry's Suggest, p.* 54. *Ains. Mat. Med. p.* 39.

CERATOPHORA STODDARTII. A native of the Kandyan Hills. This lizard is remarkable for having no external ear; and it has acquired its generic name from the curious horn like process on the extremity of the nose. This horn, as it is found in mature males of ten inches in length, is five lines long, conical, pointed, and slightly curved up. *Tennent's Sketches of the Natural History of Ceylon, pp.* 279, 280.

CERBERA, a genus of plants belonging to the natural order Apocynaceæ. C. ahorai has the properties of C. Manghas. C. fruticosa is a large shrub, native of salt marshes, the fruit is a deadly poison. C. Manghas, Kulloa, *Burm.* Is a common plant in the East Indies, occurring in wet situations. The kernels are described by Lindley as emetic and purgative. Waiz states that the leaves are used in Java as an excellent substitute for senna. The milky sap is also said to be purgative; fruit used extensively by the Burmese, to make an oil which they burn in their lamps, and use to anoint their heads. The medicinal properties are unknown in Tenasserim, and Dr. Mason thinks their existence may be doubted.—*Dr. Mason, Eng. Cyc. p.* 330. *O'Shaughnessy, p.* 447.

CERBERA TANGHIN, the Tanghin tree was formerly used in Madagascar for the trial by ordeal.—*O'Shaughnessy, p.* 446.

CERBERA THEVETIA. A large shrub with leaves like the oleander, and bell-shaped yellow flowers. Its milk is poisonous, bark bitter and purgative, also said to be powerfully febrifuge, "two grains being affirmed to be equal to a common dose of cinchona." According to Royle perfectly naturalized in India.—*O'Shaughnessy, p.* 447. *Riddell.*

CERBERA ODALLAM. GÆRTN.

Cebera manghas, *Sime in Bot. Mag.*
Tanghina odallam. *Don.*

Odallam Tree	ENG.	Kat-arali	TAM.
Odallam	MALEAL.		

Common on the Western Coast of India. Wood white and spongy. Nut narcotic and poisonous. The green fruit is employed to kill dogs.

CERBERA MANGHAS, *Linn.*

C. lactaria, *Buch.* | C. quaternifolia, *Roxb.*

Kulloopa. BURM.

This tree grows in Pegu, Tenasserim, Tavoy, Penang, Singapore, Java, Moluccas and the adjacent islands in wet situations. The wood is said not to be used. Its fruit is used very extensively by the Burmese, to make an oil which they burn in their lamps and use to anoint their heads. The kernels are described as emetic and purgative. The leaves are said to be used in Java as a substitute for senna, and the bark is said to possess similar properties.—*Voigt. Dr. Mason, Eng. Cyclop.*

CERBURA, a varied coloured dog, one of the dogs of Yama. He has a second dog called Syama, or black. Cerbura is undoubtedly the Cerberus of the Greeks. Cerbura has other names, all meaning spotted, but it is also called Tri-sera, or Three-headed. See Yama.

CERCIS SILIQUASTRUM. See Cæsalpineæ.

CERCOLEPTES CANDIVOLVUS. See Viverridæ.

CERCOTRICHAS, a genus of birds in India, known as bulbul, C. erythropterus, C. Luzoniensis, C. macrourus. See Bulbul.

CERDAS, also Setas. Sp. Bristles.
